Aḥmad was probably born in Fez in 596/1199-1200, and he seems to have been the youngest of seven or eight children. His mother was called Fāṭima, his father ʿAlī (al-Badrī); the occupation of his father is not mentioned. His genealogy was traced up to ʿAlī b. Abī Ṭālib. In his early youth Aḥmad went with his family on a pilgrimage to Mecca where they arrived after four years' travelling. This is placed in the years 603-7/1206-11. In Mecca his father died. Aḥmad is said to have distinguished himself in Mecca as a daring horseman, and he received there, according to tradition, the surnames al-ʿAṭṭāb, "the intrepid horseman", al-Ghaḍbān, "the furious, raging one". His name Abu 'l-ʿAbbās may be a miswriting for Abu 'l-Fityān; and the latter would have much the same meaning as al-ʿAṭṭāb. Other names that were given him later are al-Ṣammāt, "the silent" and Abū Farrādj, "liberator", namely of prisoners. About 627/1230 he seems to have undergone an inner transformation. He read the Ḳurʾān according to all the seven readings and studied some Shāfiʿite law. He gave himself up to devotion and declined the offer of a marriage. He retired from men, became taciturn, made himself understood by signs. According to some authorities Aḥmad was summoned in 633/1236 by three consecutive visions to visit ʿIrāḳ, and he went there in company with his eldest brother Ḥasan. They visited the tombs of the two great "poles" Aḥmad al-Rifāʿī and ʿAbd al-Ḳādir al-Djīlānī and of many other saints. In ʿIrāḳ he is said to have subdued the indomitable Fāṭima bint Barrī, who had never yet surrendered to any man, and to have refused her offer to marry him. This incident has been turned into a highly romantic story in popular Arabic literature; it may go back to ancient Egyptian mythology. In 634/1236-7 Aḥmad had another vision which told him to go to Ṭanṭā in Egypt. His brother Ḥasan returned from ʿIrāḳ to Mecca. In Ṭanṭā Aḥmad entered on the last and most important period in his life. His mode of life is described as follows : He climbed in Ṭanṭā to the roof of a private house, stood there motionless and gazed up into the sun so that his eyes went red and sore and looked like fiery cinders. Sometimes he would maintain a prolonged silence, at other times he would indulge in continuous screaming. He went without food or drink for about forty days. (The forty days fast is also known from the legends of Christian saints. The standing on the roof is reminiscent of Symeon Stylites, and the name of the followers and disciples of Aḥmad : Suṭūḥiyya or Aṣḥāb al-Saṭḥ, "the roof men", of the Christian "pillar saints", the followers of Symeon.) Those saints who were still worshipped at the time of Aḥmad's arrival in Ṭanṭā (such as Ḥasan al-Ikhnāʾī, Sālim al-Maghribī and Wadjh al-Ḳamar), found themselves eclipsed. His contemporary, the Mamlūk sulṭān al-Ẓāhir Baybars, is said to have worshipped him and to have kissed his feet. A boy called ʿAbd al-ʿĀl came to him when he was searching for a cure for his sore eyes, and this boy became afterwards his confident and his *khalīfa* (successor); the saint is therefore called Abū ʿAbd al-ʿĀl in popular literature. Aḥmad died on 12 Rabīʿ I 675/24 August 1276.

Aḥmad al-Badawī is the author of (i) a prayer (*ḥizb*); (ii) a collection of prayers (*ṣalawāt*), commented by ʿAbd al-Raḥmān b. Muṣṭafā al-ʿAydarūsī under the title of *Fatḥ al-Raḥmān*; and (iii) a spiritual testament (*waṣāyā*), containing admonitions of a rather general character.

Aḥmad al-Badawī is a representative of the lower type of the dervishes, and his intellectual qualities seem to have been of small importance.

After his death ʿAbd al-ʿĀl (d. 733/1332-3) became his *khalīfa* and built a mosque over his tomb. The veneration of Aḥmad and the pilgrimage to Ṭanṭā were often disapproved by more highly educated scholars and other opponents of the ṣūfīs. These

opponents were partly men who were averse to all ṣūfism, partly politicians who objected to the ṣūfīs as rulers of the people. We hear twice of the murder of a *khalīfa* of al-Badawī (Ibn Iyās, ii, 61, iii, 78). In 852/1448 the *ʿulamāʾ* and pious politicians caused the sultan al-Ẓāhir Djaḳmaḳ to forbid the pilgrimages to Ṭanṭā, but this edict had no effect because the people would not forsake their old customs. The sultan Ḳāʾitbay seems to have been an admirer of the saint (Ibn Iyās, ii, 217, 301). Under Ottoman rule the outward splendour of the cult of Aḥmad seems to have diminished, because it annoyed the powerful Turkish orders. But this political attitude could not prejudice his veneration amongst the Egyptians. The *darwish* order of the Aḥmadiyya founded by him is, together with the Rifāʿiyya, the Ḳādiriyya and the Burhāmiyya, among the most popular orders in Egypt. The banner and the turbans of the Aḥmadiyya are red. There are several "branches" of the Aḥmadiyya, such as the Bayyūmiyya [*q.v.*] etc. [cf. ṬARĪḲA].

The place where Aḥmad al-Badawī is venerated is the mosque at Ṭanṭā [*q.v.*], which was built over his tomb. On this E. W. Lane says (*An Account of the Manners and Customs of the Modern Egyptians*, London 1846, i, 328): "The tomb of this saint attracts almost as many visitors, at the period of the great annual festivals, from the metropolis, and from various parts of Lower Egypt, as Mekkah does pilgrims from the whole of the Muslim world". Many Egyptians who make the pilgrimage to Mecca first go to Ṭanṭā, and therefore Aḥmad is called *bāb in-nebi*, "the door of the Prophet". The three great festivals (*mawālid*, plural of *mawlid* [*q.v.*], *mūlid*) are (i) on the 17 or 18 Jan.; (ii) on or about the vernal equinox; (iii) about a month after the summer solstice, when the Nile has risen considerably, but the dams of the canals are not yet cut. They are, as Lane says, "great fairs as well as religious festivals". The dates are reckoned according to the Coptic calendar, and it is very likely that in these festivities and pilgrimages old Egyptian and Christian practices have survived; the date of the first festival corresponds to the time of the Christian Epiphany. Goldziher (*Muh. Stud.*, ii, 338) suggested a connection between the pilgrimages to Ṭanṭā and the ancient Egyptian processions to Bubastis described by Herodotus.

Festivals in his honour are also held in other places in Egypt, in Cairo, but also in small villages (cf. e.g. ʿAlī Mubārak, ix, 37). It is somewhat doubtful if all the sanctuaries bearing the name of "al-Badawī" refer to Aḥmad. Such sanctuaries occur, e.g. near Aswān; in Syria near Tripoli (J. L. Burckhardt, *Syria*, 166); at Gaza (Goldziher, *Muh. Stud.*, ii, 338; *ZDPV*, xi, 152, 158).

Many legends are told in Egypt about Aḥmad al-Badawī: miracles that he did while he was alive; miracles that he performed from his tomb; miracles that he did reviving from the dead; miracles in favour of those who celebrated his festivals. What many people still nowadays believe of him is shown by the song taken down in Cairo by Littmann (see *Bibl.*). In this song incredible miracles of Aḥmad are told; it is also said that he began to speak on the day on which he was born, and that he was an unusually heavy eater. He is especially renowned as a saint who brings back prisoners and lost persons or goods. Therefore he is known as *gāyib il-yasīr*, "bringer of the prisoner", and when a public crier announces the loss of a child, of an animal or of a piece of property, he invokes Aḥmad al-Badawī. Spoer (in *ZDMG*, 1914, 243) tells of a miracle in Palestine by this saint.

Bibliography: Biographies by Maḳrīzī (MS Berlin 3350, no. 6) and Ibn Ḥadjar al-ʿAsḳalānī (MS Berlin 10,101); Suyūṭī, *Ḥusn al-Muḥāḍara*, Cairo 1299, i, 299 f.; Shaʿrānī, *Ṭabaḳāt*, Cairo 1299, i, 245-51 (he was a particular admirer of the saint and called himself al-Aḥmadī; see Vollers, *Cat. Leipzig*, no. 353); ʿAbd al-Ṣamad Zayn al-Dīn, *al-Djawāhir al-Saniyya fi 'l-Karāmāt al-Aḥmadiyya*, repeatedly printed (this important compilation, written in 1028/1619, quotes, in addition to the above-mentioned, many lost works); ʿAlī al-Ḥalabī (d. 1044/1634-5), *al-Naṣīḥa al-ʿAlawiyya fi Bayān Ḥusn Ṭarīḳat al-Sāda al-Aḥmadiyya*, MS Berlin 10,104; Ḥasan Rāshid al-Mashhadī al-Khafādjī, *al-Nafaḥāt al-Aḥmadiyya*, Cairo 1321; *Ḳiṣṣat Sīdī Aḥmad al-Badawī wa-mā djarā lahū maʿ al-Thalātha al-Aḳṭāb*; *Ḳiṣṣat al-Sayyid al-Badawī maʿ Fāṭima bint Barrī wa-mā djarā baynahumā min al-ʿAdjāʾib*; *Ḳiṣṣat al-Sayyid al-Badawī maʿ Fāṭima bint Barrī wa-mā djarā lahumā min al-ʿAdjāʾib wa'l-Gharāʾib* (the last three are small pamphlets printed in Cairo; the second and the third have much the same text). He is frequently treated together with the other *aḳṭāb*, so e.g. by Muḥammad b. Ḥasan al-ʿAdjlūnī (ca. 899/1494), MS Berlin 163; Aḥmad b. ʿUthmān al-Sharnūbī (ca. 950/1543), ibid. no. 337. A poem on Aḥmad, ibid. no. 5432, 8115/3. ʿAlī Mubārak, *al-Khiṭaṭ al-Djadīda*, xiii, 48-51 is mainly based on Shaʿrānī and ʿAbd al-Ṣamad. A *Madīḥ is-Sayyid il-Bedawī we-Bayān Karāmātu 'l-ʿAẓima* has been edited and translated in E. Littmann, *Aḥmed il-Bedawī. Ein Lied auf den ägyptischen Nationalheiligen*, Mainz 1950. See also Brockelmann, I 450, S I, 808. (K. VOLLERS-E. LITTMANN)

AḤMAD BEY, bey of Tunis (1837-55), tenth ruler of the Ḥusaynid dynasty. He proclaimed himself commander-in-chief of the army and attempted to modernize it; he sent Tunisian officers to Europe for instruction, and obtained European military advisers and French officers to act as instructors, but the latter were unable to instil habits of discipline into the troops or to form them into reliable regiments. When Aḥmad decided to send a contingent of 10,000 men to take part in the Crimean war, this force was quartered in the Caucasus, where epidemics decimated its ranks and shattered its morale.

With the Bey's permission, a French topographer made a careful survey and drew up a map of the Regency. The Bey also founded, in 1838, a polytechnic institution, with the object of training a cadre of specialist and administrative officers. This institution ceased to function after the campaign in the East.

Aḥmad also wanted a navy. He purchased twelve ships abroad and resolved to create a naval station at Porto Farina. A frigate was built there, but proved permanently unseaworthy, and the port was soon silted up by the Medjerda. Towards the end of his reign, the Bey contented himself with modernizing the arsenal at La Goulette (Ḥalḳ al-Wādī). He showed no interest in improving the commercial ports.

Aḥmad resisted the claims of Turkey, which seized every opportunity to reassert its suzerainty over Tunisia, to demand gifts, and to press for payment of an annual tribute which would at least have been tangible evidence of the Bey's vassal status. As England supported Turkey, Aḥmad sought the aid of France, which, to maintain security

in Algeria and to put an end to the illicit arms traffic, took care that the Porte should not interfere in Tunisian affairs. In 1846, Aḥmad went to France and was warmly welcomed in Paris. As a reward for his stubborn resistance, he succeeded in obtaining from the Porte in a *khaṭṭ-i sherīf* which recognized him individually as an independant sovereign.

Ten miles from Tunis, on the banks of the Sebkha Sedjūmī, Aḥmad built the Muḥammadiyya palace, a huge mass of enormous buildings which were still incomplete at the end of his reign and which soon fell into ruins.

This extravagances, and the prodigality of the Bey's favourites, the Genoese Raffo, the minister of foreign affairs, and above all the Greek Muṣṭafā Khaznadār, minister of finance from 1837 to 1873, exhausted the Treasury. The farming of the tax on tobacco and increased taxation generally caused revolts in 1840 at Tunis and in the region of Ḳābis, and in 1842 at La Goulette. They were suppressed, but the Bey was unable to impose his will on the mountain tribes. Beneath an outwardly brilliant display, a love of ostentation coupled with chaotic administration set Tunisia on the road to decadence.

It must nevertheless be recognized that Aḥmad, sincere in his desire to confer on his country western institutions, introduced some beneficial reforms. In 1841 he prohibited the sale of negroes, and emancipated his household slaves. In 1846 he formally abolished slavery throughout the Regency. He abrogated the laws discriminating against Jews. Finally, he promoted the development of education. The abbé Bourgade, in charge of the chapel of Saint Louis of Carthage, the construction of which had been authorized by Aḥmad, founded a hospital in 1843 and, two years later, built the Saint Louis College, which was open to boys of all creeds and to which a nursery school was attached, as well as a small printing press. The abbé later opened other schools and dispensaries. Various archaeological excavations were begun. French influence became dominant in Tunisia, as a result both of their educational activities and of the flourishing trade conducted by the merchants of Marseilles.

AḤMAD BĪDJĀN [see BĪDJĀN AḤMAD].

SAYYID **AḤMAD BRĒLWĪ**, a militant religious reformer of Muslim India, was the son of Muḥammad ʿIrfān and the 36th direct descendant of Ḥasan, the son of ʿAlī. He was born on 6 Ṣafar 1201/28 Nov. 1786 at Bareilly (Brēlī), where he received his early education. He then went to Lucknow and after a few months' stay there, he proceeded about 1219/1804 to Delhi, where he became a disciple of the famous divine Shāh ʿAbd al-ʿAzīz [*q.v.*], the eldest son of Shāh Walī Allāh [*q.v.*], and received formal instruction from his younger brother Shāh ʿAbd al-Ḳādir [*q.v.*]. About 1222/1807, he returned to Bareilly, where he married. In 1225/1810, he left for Radjpūtāna, where he served for seven years in the army of Nawāb Amīr Khān, who subsequently became the ruler of Tonk.

In 1232/1817, he left the service of the Nawāb and returned to Delhi. Roused by the religious and political degradation of his co-religionists, he started on a missionary tour as a religious teacher and reformer. His tenets bore a great similarity to those of the Arabian Wahhābīs in the adoption of a pure and simple form of religion, free from superstitious innovations and exaggerated veneration for prophets and saints. His reputation spread far and wide, and thousands of Muslims adopted his views. His chief disciples and constant companions in his chequered career were Mawlawī Muḥammad Ismāʿīl, the nephew of Shāh ʿAbd al-ʿAzīz, Mawlawī ʿAbd al-Ḥayy, the son-in-law of Shāh ʿAbd al-ʿAzīz, and Mawlawī Muḥammad Yūsuf of Phulhat, a descendant of Shāh Ahl Allāh, the elder brother of Shāh Walī Allāh.

In 1236/1821, Sayyid Aḥmad set out on a pilgrimage to Mecca, staying a few months at Calcutta on the way. On his return to India in 1239/1824, he began to make active preparations for a *djihād* or religious war. It is clear from his letters that the ultimate object of his reformist movement was to overthrow the rule of the British and the Sikhs and restore Muslim dominion in India. His first aim was to oust the Sikhs from the Pandjāb. Having enlisted the sympathy and promised aid of his co-religionists at Kābul and Ḳandahār, he started on his expedition in 1241/1826 with an army of enthusiastic followers, and reached Peshāwar via Radjpūtāna, Sind, Balūčistān and Afghānistān. He attacked and repulsed the Sikh army at Akora Khattak (20 Nov. 1826); but lost the battle of Saydo through the desertion of Yār Muḥammad Khān Durrānī and his brothers. Although he succeeded in occupying Peshāwar in 1830, he was discouraged by the treachery of the Durrānīs and other local khāns, and decided to proceed to Kashmīr. On the way, however, he was encountered by the Sikhs in 1246/1831 at Bālākot where he was killed along with Shāh Muḥammad Ismāʿīl and his army was dispersed. Nevertheless, the remnants of his army continued their struggle in the North-West Frontier Province for the cause for which their leader had laid down his life.

His numerous disciples continued his reformist movement in India, and were responsible for the production of a vast religious literature. In order to reach the masses, they adopted the Urdu language as their medium and were incidentally instrumental in promoting the growth of a simple, direct and vigorous style. His adherents preferred to engage themselves in commercial pursuits rather than seek service under the British government.

A few short epistles and pamphlets on religious topics are credited to Sayyid Aḥmad. He is also said to have inspired the composition of *Ṣirāṭ Mustaḳīm*, a work written in Persian by his two foremost disciples, Shāh Muḥammad Ismāʿīl and Mawlawī ʿAbd al-Ḥayy. Several collections of his letters (in Persian) also exist in manuscript.

Bibliography: Sayyid Aḥmad Khān, *Āthār al-Ṣanādīd* (in Urdu, Delhi 1847); *Waqāʾiʿ Aḥmadī* also known as *Taʾrīkh Kabīr*, consisting of reports made by a number of the close associates of Sayyid Aḥmad, recorded in Urdu at Tonk, covering about 2,000 large folios, still in manu-

script; Garcin de Tassy, *Hist. de la Litt. Hindouie et Hindoustani*², Paris 1871, iii, 32-7; W. W. Hunter, *The Indian Musalmans*, London 1871; M. Dja'far Thānesarī, *Tawārikh ʿAdjība* or *Sawāniḥ Aḥmadī* (in Urdu), Delhi 1309; Sayyid Djaʿfar ʿAli Naḳawī, *Ta'rīkh Aḥmadī* (in Persian), MSS at Tonk and Lahore); Sayyid Muḥammad ʿAlī, *Makhzan Aḥmadī* (in Persian), Agra 1299; Abu'l-Ḥasan ʿAlī Nadwī, *Sīrat Sayyid Aḥmad Shahīd*, 1939, 1941; Muḥammad Ikrām, *Mawdj Kawthar*, Bombay, 7-48; M. T. Titus, *Indian Islam*, London 1930, 181-6; W. C. Smith, *Modern Islam in India*, Lahore 1943; Ghulām Rasūl Mihr, *Sayyid Aḥmad Shahīd* (in Urdu), Lahore 1954, a critical and exhaustive work on the subject.

(SH. INAYATULLAH)

AḤMAD DJALĀ'IR [see DJALĀ'IR].

AḤMAD-I DJĀM, "Aḥmad of Djām", also AḤMAD-I DJĀMĪ, Persian ṣūfī in the Saldjūḳ period, contemporary of al-Ghazālī, ʿAdī b. Musāfir, ʿAyn al-Ḳuḍāt al-Hamadhānī, and Sanā'ī, in full SHIHĀB AL-DĪN ABŪ NAṢR AḤMAD B. ABI 'L-ḤASAN B. AḤMAD B. MUḤ. AL-NĀMAḲĪ AL-DJĀMĪ. He is also known by the nickname of Žanda Pīl, "Elephant-colossus". He claimed descent from the Prophet's Companion Djarīr b. ʿAbd Allāh al-Badjalī (Ibn Saʿd, vi, 13), but although of Arab origin had a ruddy complexion, reddish beard and dark-blue eyes. Born in the village of Nāma or Nāmaḳ, in Turshīz (Ḳūhistān), in 441/1049-50, he led as a youth, according to the legend, a somewhat wild life, until, when 22 years of age, in 463/1070-1, as he was driving an ass laden with wine homeward to a drinking-bout, he was converted by a supernatural voice and withdrew to the solitude of the hills of his native village. After twelve years spent there in ascetic exercises, and visits to some cities of Khurāsān, he settled as the result of an inner call in the mountains of B(P). z.d-i Djām (in Ḳūhistān), where he built a *masdjid-i nūr* and entered into active intercourse with men. He stayed here for six years. At the age of 40, i.e. in 481/1088-9, he moved to the village of Maʿaddābād of Djām and built here a convent (*khānḳāh*) and a Friday mosque. He travelled widely in eastern Persia, to Sarakhs, Naysābūr, Harāt, Bākharz, etc., and is said also to have visited Mecca. The sources speak also of a personal connection with sultan Sandjar. He died in his convent as the leader of a considerable body of disciples in Muḥarram 536/Aug. 1141, and had himself buried outside Maʿaddābād at a place which a friend had seen in a dream. A mosque and convent were later built over the grave, followed by a complex of buildings which became the centre of a new, and still existing, place called Turbat-i Shaykh-i Djām [*q.v.*], "Mausoleum of the Shaykh of Djām". One of his 14 surviving sons (out of 39), Burhān al-Dīn Naṣr, took over the leadership of the group of disciples. Shams al-Dīn Muḥammad al-Kūsawī al-Djāmī, a ṣūfī who died in Harāt in 863/1459 (Djāmī, *Nafaḥāt al-Uns*, 574 f.), was descended from a daughter of this Burhān al-Dīn and her cousin Sirādj al-Dīn Aḥmad, another grandchild of Aḥmad-i Djām.

Aḥmad-i Djām had no regular novitiate training, but sought his own way in solitude. He had nevertheless relations with a certain Abū Ṭāhir-i Kurd, who is said to have been a disciple of Abū Saʿīd b. Abi 'l-Khayr and even to have given Aḥmad the latter's patched robe (*khirḳa*). That a famous shaykh gives his own robe to the care of a friend, together with a description of certain signs by which he may recognize its future authorized wearer, is a wellknown motive of ṣūfī hagiography, and can generally be shown up as an invention (cf. *Firdaws al-Murshidiyya* (Meier), introduction, 18 ff.). This may well be the case here. The above-mentioned al-Kūsawī is later said to have claimed to wear the same robe.

Aḥmad wrote the following works, all in Persian: *Uns al-Tā'ibīn*, *Sirādj al-Sā'irīn* (professedly written in 513/1119), *Futūḥ al-Ḳulūb* (= *Futūḥ al-Rūḥ*?), *Rawḍat al-Mudhnibīn*, *Biḥār al-Ḥaḳīḳa*, *Kunūz al-Ḥikma*, *Miftāḥ al-Nadjāt* (written in 522/1128). Of these only the first and last-named works have so far been recovered, although Mīrzā Maʿṣūm ʿAlī Shāh (1901) had still read the second. The biographers' information on the dates of the first six writings (Ivanow, in *JRAS*, 1917, 303 f., 349-52) must be false in part, since all these works are listed in *Miftāḥ al-Nadjāt*, and must be earlier than 522/1128, unless the list is an interpolation or the works mentioned were subsequently revised. There has been preserved further a *Risāla-yi Samarḳandiyya* (also called *Su'āl u-Djawāb*), in reply to a question. Two or three other works listed by the biographers, together with the *Futūḥ al-Rūḥ*, are said to have perished in Djām in consequence of the Mongol invasion. Only the library (in Dihlī) of Fīrūzshāh, of the Tughlaḳid dynasty (752-90/1351-88), still possessed all Aḥmad's works. The *Miṣbāḥ al-Arwāḥ* (MS Riḍā Pasha 3009), mentioned in the *IA*, s.v. Cami, is probably not a work by Aḥmad.

On his conversion Aḥmad, as he himself says, possessed no theological training, and what he later learned and published on this subject was professedly acquired by revelation. This is to be taken *cum grano salis*. Even his early dicta betray some theological knowledge and still more his writings, where he positively requires it. His views, or at least his formulations, are, however, not exempt from contradictions and inconsequences. His theology is firmly grounded on Ḳur'ān and Sunna, and on the *sharīʿa* in the ṣūfī sense, and in it he shows himself a pronounced Sunnī; he allows, for example, the *masḥ al-khuffayn*. Right action includes, however, also *ḥudjdjat*, i.e. inner reasoning; unlawful conduct accompanied by *ḥudjdjat* is, according to him, better than lawful conduct without *ḥudjdjat*. His doctrine of the *ṭarīḳa* recognizes the purification of the soul through the stations *ammāra*, *lawwāma*, *mulhama*, up to *muṭma'inna*, and aims to clarify the relation of the last stage to the heart (*ḳalb*); Aḥmad defines the "soul at rest" (*muṭma'inna*) as the sheath in which the heart is fixed (*ghilāf-i dil*). The aim of mystical endeavour is according to him—to pick out only one of many expressions—to find the "spirit" (*rūḥ*, *djān*), the "real being" *ḥaḳīḳat-i tu*), to which only two ways lead: remembrance of God (*dhikr Allāh*) and waiting (*intiẓār*) until God in His grace discloses this being to one. An assumption of God's qualities *in concreto*, as certain ṣūfīs had taught, is regarded by Aḥmad, in agreement with al-Sarrādj, al-Kalābādhī, and al-Ḳushayrī, as impossible, since this implies indwelling (*ḥulūl*), and only effects (*āthār*) of God's qualities, not these themselves, can inform the creature (incommensurability of the eternal and the temporal). True belief in *tawḥīd* consists in Aḥmad's view of referring all action and event back to the one original cause, God (*muḳaddarāt — taḳdīr — ḳudrat — ḳādir*). For the rest, conditions in mystical love are much the same as in ordinary love; no person can really become one with another. The representation which one may take on oneself from the Beloved is rapidly dissipated,

and one immediately returns to daily life. Should it reappear, so in reverse one loses again one's connections with the world. Together with this, however, Aḥmad expresses the dignity and the spiritual power of ṣūfī life in poetic tones. He cites the case of Fuḍayl b. ʿIyāḍ who, when converted from highway robbery, returned their possessions to those whom he had robbed and when he had nothing more left, still brought gold from beneath his robe for a Jew, the earth having been turned into gold. One who is converted, he says in the same treatise (*Miftāḥ al-Nad̲j̲āt*, which was written on the occasion of the conversion of one of his sons), him does the water praise over which he journeys; him do the stars praise and for him they pray. The *ṣiddīḳ*, *abdāl*, *zāhid*, is the sun, from whom all men derive their light. The ṣūfī should distil a dew of blessing around him, as musk and aloes distil their scent. True poverty (*faḳr*) is, according to Aḥmad, the elixir which has the faculty of colouring everything which comes into contact with it.

The picture of Aḥmad's spiritual personality acquired from his prose writings and sayings is in contradiction with the *Dīwān* which goes under his name, and which would make him out to be an ecstatic pantheist intoxicated with self-deification. As already remarked by Ivanow (*JRAS*, 1917, 305) and expressed in a private letter by H. Ritter, there is room for suspicion that the *Dīwān* is at least partly a falsification, but the question still awaits fuller investigation. It is preserved in several MSS, not all of which are complete (list in Meier, *Bibl.*), and has been lithographed (Cawnpore 1898, Lucknow 1923). *Tak̲h̲alluṣ* Aḥmad and Aḥmadī. A book of "Poems" is also mentioned, however, by his biographers.

Bibliography: Biographies: (1) Raḍī al-Dīn ʿAlī b. Ibrāhīm-i Tāʾabādī, a contemporary of the *s̲h̲ayk̲h̲*; it is not preserved, but was used by: (2) Sadīd al-Dīn Muḥammad b. Mūsā al-G̲h̲aznawī, also a contemporary and a disciple of the *s̲h̲ayk̲h̲*, *Maḳāmāt S̲h̲ayk̲h̲ al-Islām ... Aḥmad b. Abi 'l-Ḥasan al-Nāmaḳī t̲h̲umm al-D̲j̲āmī*, composed ca. 600/1204, MS Nāfid̲h̲ Pas̲h̲a, Istanbul, 399, 38v-132v. It is almost worthless for Aḥmad's real biography and thought, being full of miraculous legends appealing to the primitive masses; al-G̲h̲aznawī must have interpreted in a concrete sense certain poetical utterances of his master. It is, however, interesting for the typical forms of the ṣūfī legend and for certain historical circumstances, as well as geographical names, of eastern Persia. (3) Aḥmad-i "Tarak̲h̲istānī", a contemporary of the *s̲h̲ayk̲h̲*, whose work is apparently not preserved, but was used, together with that of al-G̲h̲aznawī, by: (4) Abu 'l-Makārim b. ʿAlāʾ al-Mulk-i D̲j̲āmī, *K̲h̲ulāṣat al-Maḳāmāt*, written in 840/1436-7 and dedicated to S̲h̲āhruk̲h̲, MS of the Asiatic Society of Bengal (Ivanow's Cat., i, no. 245), and two incomplete MSS in Russia, one of which was published by Ivanow, in *JRAS*, 1917, 291-365. (5) ʿAlī of "Būzd̲j̲and" (probably = Būzd̲j̲ān), of 929/1523, probably depending of Abu 'l-Makārim, was used by Khanikoff.—The articles in D̲j̲āmī's *Nafaḥāt al-Uns* (Calcutta 1859, 405-17) on Aḥmad-i D̲j̲ām and Abū Ṭāhir-i Kurd, as well as certain other parts, are derived from al-G̲h̲aznawī.—See also Ibn Baṭṭūṭa (Defrémery-Sanguinetti), iii, 75 ff.; Mīrzā Maʿṣūm ʿAlī S̲h̲āh, *Ṭarāʾiḳ al-Ḥaḳāʾiḳ*, Lith. AḤMAD D̲J̲AZZĀR [see D̲J̲AZZĀR PAS̲H̲A].

AḤMAD D̲J̲EWDET PAS̲H̲A eminent Ottoman writer and statesman, born on 28 D̲j̲umādā ii, 1237/22 March 1822, at Lofča (Lovec) in northern Bulgaria, of which his father, Ḥād̲j̲d̲j̲ī Ismāʿīl Ag̲h̲a, was a member of the administrative council, and where his earliest known ancestor, a native of Ḳïrḳlareli (Ḳïrḳ Kilise), had settled after taking part in the campaign of the Pruth in 1711. Aḥmed early displayed unusual aptitude and diligence, and in 1839, on reaching the age of seventeen, was sent to continue his education in a *medrese* at Istanbul. There, as well as following the traditional *medrese* courses, he not only studied modern mathematics, but devoted his spare time to learning Persian with the poet Süleymān Fehīm and himself took to composing verse in the traditional style. It was from Fehīm that he received the *mak̲h̲laṣ* D̲j̲ewdet that he thenceforth added to his name.

After obtaining the *id̲j̲āzet* that permitted him to enter the judicial profession, he received his first paid but nominal appointment as *ḳāḍī* in 1260/1844-5. When Muṣṭafā Res̲h̲īd Pas̲h̲a, on becoming Grand Vizier in 1846, applied to the office of the *S̲h̲ayk̲h̲ al-Islām* for an open-minded *ʿālim* to provide him with the knowledge of the *s̲h̲arīʿa* necessary for the proper drafting of the new *ḳānūns* and *niẓām-nāmes* he had it in mind to promulgate, it was D̲j̲ewdet who was chosen. From this time to Res̲h̲īd Pas̲h̲a's death thirteen years later D̲j̲ewdet remained closely attached to him, even living in his house and becoming his children's tutor. During this period he also became acquainted with ʿĀlī and Fuʾād Pas̲h̲as, and under Res̲h̲īd's influence was persuaded to undertake political and administrative duties. In August 1850 he received his first appointment proper as Director of the recently founded *Dār al-Muʿallimīn*, with membership, as its chief secretary, of the *Med̲j̲lis-i Maʿārif*.

During his directorship of the *Dār al-Muʿallimīn*, which seems, however, to have come to an end in the following year, D̲j̲ewdet achieved reforms in the admission, maintenance and examination of the students attending it; and as secretary of the *Med̲j̲lis-i Maʿārif* he wrote the report that led to the foundation in July 1851 of the *End̲j̲ümen-i Dānis̲h̲*, to which, after accompanying Fuʾād Pas̲h̲a on a state visit to Egypt in March 1852, he devoted his attention, beginning his best known work, the *Taʾrīk̲h̲-i Waḳāyiʿ-i Dewlet-i ʿAliyye*, of which he completed the first three volumes during the Crimean War, under its auspices. On his presenting these to ʿAbd al-Med̲j̲īd he received promotion to Süleymāniyye rank; in February 1855 he was appointed *waḳʿa-nüwis*; in 1856 he was appointed *molla* of Galata; and in 1857 he attained Mecca rank in the judicial hierarchy. Meanwhile, during the war, he was made a member of a commission set up to compose a work on the prescriptions of the *s̲h̲arīʿa* regarding commercial transactions, which was dissolved, however, after publishing only a *Kitāb al-Buyūʿ*. In 1857 he was appointed to the Council

of the *tanẓīmāt*, taking a lead in the composition of a new criminal *ḳānūn-nāme*, and, as a president of the *Arāḍī-yi Seniyye Komisyonu*, participated in that of a *ḳānūn-nāme* on *ṭapu*.

After the death of Reshīd Pasha in 1858 it was suggested to Djewdet by ʿĀlī and Fuʾād Pashas that he should abandon the learned profession in favour of the government service by accepting the *wālīliḳ* of Vidin. It was not for another eight years, however, that he took this step, although in the interval he was twice charged with important administrative missions as an "Extraordinary Commissioner", the first in the autumn of 1861 to Ishḳodra, and the second (in company with a general commanding a division) in the summer of 1865 to Ḳozan in the Taurus region, to pacify those areas by the introduction of needed reforms. So successful was he in the first that he was sent in March 1863 as *müfettish*, with the judicial rank of *ḳāḍī-ʿasker* of Anatolia, to Bosnia, where he was again markedly successful during the ensuing eighteen months in restoring order. During this period he was also made a member, first of a commission appointe to reform the official newspaper *Taḳwīm-i Waḳāyiʿ*, and secondly of the *Medjlis-i Wālā*. His abandonment of the learned profession took place in Jan. 1866, when he ceased to be *waḳʿa-nüwīs*. His "learned" rank was then replaced by that of vizier, and he was appointed governor of the *wilāyet* of Aleppo, as reconstituted under the Ordinance of *wilāyets*. In Febr. 1868, however, he was recalled to the capital to become president of the *Dīwān-i Aḥkām-i ʿAdliyye*, one of the two bodies that then replaced the *Medjlis-i Wālā*, the other being the *Shurā-yi Dewlet*. It was chiefly owing to Djewdet's efforts in this post that the Niẓāmī courts were instituted; that this *Dīwān* was in due course divided into a Court of Appeal (*Temyīz*) and a Court of Cassation (*Istiʾnāf*); and that the presidency was converted into a ministry. It was also during this his first term as a Minister of Justice that on the one hand Djewdet instituted law courses at the Ministry for the better instruction of judges and the improvement of judicial procedure, and, on the other, a beginning was made with the composition of a legal code (*Medjelle* [*q.v.*]) based on Ḥanafī *fiḳh*, under the auspices of a society for the purpose. In securing approval for such a code (that is one based on Islamic prescriptions) Djewdet had the support of Fuʾād and Shirwānī-zāde Rüshdü Pashas in opposition to ʿĀlī Pasha, who favoured rather the adoption of the French *Code Civile*.

Djewdet Pasha (as he now was) remained Minister of Justice up to the end of April 1870, by which time four volumes of the *Medjelle* had been published. Just as the fifth was completed, however, he was dismissed, and though appointed *wālī* of Brusa, was almost immediately relieved of that post also. He remained unemployed until August of the following year, when he was recalled to the presidency of the *Medjelle* society and of the *tanẓīmāt* department of the *Shūrā-yi Dewlet*. In the interval, as well as the fifth volume of the *Medjelle*, a sixth, in which Djewdet had had no hand, had been published. It was largely the deficiencies of this volume, which he at once superseded by a new version, that led to his recall; and from this date until the publication of the final volumes in 1877 he continued to supervise the composition of the code, though also otherwise employed in a variety of important offices, sometimes in the provinces. One of the chief of these was his appointment in April 1873 as Minister of Education, in which capacity he achieved a reform of the primary schools for boys (*ṣibyān mektebleri*); drew up curricula for the Rüshdiyye, and the still to be created Iʿdādiyye, schools—measures that necessitated the composition of new manuals of instruction, three of which he wrote himself; and reorganized the *Dār al-Muʿallimīn* to meet the demands of these three educational grades. On 2 Nov. 1874, however, after the appointment as Grand Vizier of Ḥüseyn ʿAwnī Pasha, who was apparently already meditating the deposition of Sultan ʿAbd al-ʿAzīz, Djewdet was made *wālī* of Yanya (Jannina) in order to remove him, as a likely opponent of the move, from the capital; and it was not until June of the next year, after Ḥüseyn ʿAwnī's fall, that he was restored to his former post. In Nov. 1875 he became for the second time Minister of Justice, and as such secured the transference to his Ministry of the commercial courts, which had till then depended on the Ministry of Commerce. But he incurred the displeasure of Maḥmūd Nedīm Pasha, during the latter's second Grand Vizierate, by opposing his grant of customs concessions to foreign capitalists; and after first being sent on a tour of inspection through Rumelia in March 1876, he was dismissed from the Ministry of Justice and was on the point of proceeding to Syria as *wālī*, when on the fall of Maḥmūd Nedīm he was for a third time made Minister of Education.

Djewdet played no part in the deposition of ʿAbd al-ʿAzīz, which occurred at the end of May, and in November, after the accession of ʿAbd al-Ḥamīd II, he returned to the Ministry of Justice. It was now that he and Midḥat Pasha became permanently estranged, owing to what Midḥat regarded as Djewdet's reactionary attitude to the constitution, in the discussions upon which the latter began by taking part. Yet throughout his Grand Vizierate Midḥat maintained Djewdet in office; and it was only on Midḥat's disgrace and replacement by Sakîzlî Edhem Pasha that Djewdet left it for newly created Ministry of the Interior. In this he remained until near the end of the war of 1877 with Russia, the involvement of the Porte in which he disapproved, when after a short term as Minister of the Imperial *Ewḳāf*, he was for a second time appointed *wālī* of Syria.

He remained in Syria nine months, during which, having special knowledge of the area, he repressed in person another revolt at Ḳozan. In December of the same year he was replaced by Midḥat and recalled to the capital to preside over yet another ministry, that of Commerce. On the dismissal of the Grand Vizier Khayr al-Dīn Pasha in Oct. 1879 Djewdet acted for ten days as President of the Council of Ministers, and on the appointment of Küčük Saʿīd Pasha he was for a fourth time made Minister of Justice. This was, so far, his longest term in that position, lasting three years. It was during it that Midḥat was put on trial. Djewdet appears already to have denounced him as treacherously pro-Christian, and went out of his way, as *ex-officio* head of the body appointed to arrest Midḥat and bring him to the capital, himself to travel for the purpose to Smyrna.

His fourth tenure of the Ministry of Justice came to an end in Nov. 1882, on the appointment of Aḥmed Wefīḳ Pasha as Grand Vizier; and it was only in June 1886 that he was given office again, for the last time, in the same post. He held it on this occasion for four years, during which he also became one of the three members of the special conclaves

convened by ʿAbd al-Ḥamīd for the discussion of political problems, and presided over a commission set up to compose a *firmān* embodying various modifications in the regulations for the government of Crete, introduced after the suppression of the rebellion of 1889. In May 1890 he resigned, owing to differences with the Grand Vizier Kāmil Pas̲h̲a; and thereafter played no further part in public affairs. During the last thirteen years of his life, nine of which were spent in retirement, he devoted most of his attention to literary work of various kinds, including the last volumes of the *Taʾrīk̲h̲*. He died on 25 May 1895 after a short illness at his *yalî* at Bebek.

D̲j̲ewdet Pas̲h̲a, both in his conduct and in his works, exhibited a curious mixture of the progressive and the conservative. While he consistently advocated the greater enlightenment of Ottoman society and fiercely condemned any manifestation of ignorance, bigotry and self-seeking in the ruling class and the erroneous beliefs prevalent among the people, his outlook was fundamentally shaped by his early *medrese* education. Whereas in the writings of his earlier years he criticizes the shortcomings of his contemporaries in a hopeful tone, those of his declining age exhibit a disillusionment with the *tanẓīmāt*, about which his language is often bitter. It would appear that this change of attitude was due at least in part to his quarrel with Midḥat, who antagonized him in particular by mocking D̲j̲ewdet's imperfect command of French and consequently of European thought. Thenceforth he would seem to have been more or less forced by events, and above all by the unhandsome part he played in connection with Midḥat's trial, into a reactionary attitude, which harmonized all too well with the prevailing spirit of the Ḥamīdian regime.

Of D̲j̲ewdet Pas̲h̲a's numerous works the most important are historical. Apart from his *Ḳiṣaṣ-i Enbiyā we-Tawārīk̲h̲-i K̲h̲ulefā*, an educational compilation in 12 vols. (starting with Adam and ending with the sultan Murād II), which he composed towards the end of his life, and *Ḳîrîm we-Ḳawḳāz Taʾrīk̲h̲česi* (largely based on the *Gülbün-ü K̲h̲ānān* of Ḥalīm Giray), three deserve particular mention. These are (i) his *Taʾrīk̲h̲*, commonly called *Taʾrīk̲h̲-i D̲j̲ewdet*, also in 12 vols., covering the period between 1774 and 1826 (from the Treaty of Küčük Kaynard̲j̲a to the abolition of the Janissaries). Thirty years elapsed between his beginning and finishing it, during which his outlook altered with the great contemporary changes that took place in Ottoman life. This is exemplified in particular by his adoption from vol. 6 onwards of a simpler, less traditional style. In most of the various editions brought out as the composition of the work progressed, while making corrections and additions, he followed his original plan. But in the final edition (*tertīb-i d̲j̲edīd*), completed between 1885 and 1891-2, the whole was more radically altered, so that in it, for instance, the original vol. 1 figures wholly as an introduction. (ii) The *Ted̲h̲ākir-i D̲j̲ewdet*, a collection of memoranda made by him on contemporary events as *waḳʿa-nüwīs* and for the most part handed over by him to his successor Luṭfī. Only four of those so handed over have survived. They have been published in *OTEM*, nos. 44-7 and in the *Yeni Med̲j̲mūʿa*, ii, 454. The memoranda he retained are preserved in manuscript in the Şehir ve İnkilâp Müzesi at Istanbul, but form the basis of his daughter Faṭma ʿAliyye K̲h̲anîm's *D̲j̲ewdet Pas̲h̲a we-Zamanî*. (iii) His *Maʿrūḍāt*, a long series of observations submitted to ʿAbd al-Ḥamīd at the sultan's request on the events of the period 1839 to 1876, in 5 parts, the 2nd, 3rd and 4th of which have been published in *OTEM*, nos. 78-80, 82, 84, 87-9, 91-3. Part 1 appears to be lost. Part 5 deals with the fate of ʿAbd al-ʿAzīz.

D̲j̲ewdet's purely literary works date from his *medrese* days and are of little interest. Most of the poems that he collected at ʿAbd al-Ḥamīd's request into a *Dīwānče* were composed at this early period. Of more consequence were his Turkish grammars: the *Ḳawāʿid-i ʿOt̲h̲māniyye* (the first version of which he wrote in collaboration with Fuʾād Pas̲h̲a in 1850); an introduction to the same work for primary schoolboys called *Medk̲h̲al-i Ḳawāʿid*; and a much simplified version of the first called *Ḳawāʿid-i Türkiyye* (1292/1875). Other works are the *Belāg̲h̲at-i ʿOt̲h̲māniyye*, a manual on eloquence composed for his students at the Law School; the *Taḳwīm-i Edwār* (1287/1870-1), in which the question of calendar reform was first raised; and his completion of Pīrī-zāde Meḥmed Ṣāʾib's Turkish translation of the *Muḳaddima* of Ibn K̲h̲aldūn, by which D̲j̲ewdet's own historical writing was much influenced. The publication from 1862-3 of the collection of *ḳānūns* called *Düstūr* was also due to D̲j̲ewdet's initiative; and, as has been indicated above, he took the lead in the composition of the *Med̲j̲elle-yi Aḥkām-i ʿAdliyye*.

AḤMAD G̲H̲ULĀM K̲H̲ALĪL [see G̲H̲ULĀM K̲H̲ALĪL].

AḤMAD GRAÑ B. IBRĀHĪM, leader of the Muslim conquest of Abyssinia, whence he was called *ṣāḥib al-fatḥ* and *al-g̲h̲āzī*. The Amharans nicknamed him *Grañ* 'the left-handed'. According to tradition he was of Somali origin. Born (c. 1506) in the Hūbat district of the state of Adal he attached himself to *al-D̲j̲arād* Ābūn, leader of the militant party opposed to the pacific policy of the Walas̲h̲maʿ rulers towards Abyssinia. On Ābūn's death Aḥmad became leader of the opposition, defeated and killed Sultan Abū Bakr b. Muḥammad, and assumed the title of *imām*. His refusal to pay tribute to the Negus Lebna Dengel precipitated the war. After defeating the governor of Bāli he welded his Somali and ʿAfar troops into a powerful striking force, won a decisive victory over the Abyssinians at S̲h̲emberā Kurē (1529) and within two years had gained control of Shoa. Six more years of remarkable campaigns sufficed for him to conquer most of Abyssinia. But he was unable to consolidate his successes. The centrifugal forces working within his army of nomads and the setback given by the early successes of the Portuguese force which had arrived in 1542 after Lebna Dengel's death, led him to send to the Pas̲h̲a of Zabīd for disciplined musketeers.

With their aid he defeated the Portuguese, but then sent away his mercenaries. The new Emperor Galāwdēwos, joining up with the Portuguese remnant, took the offensive and won a decisive victory at Zānterā in 949/1543, when Aḥmad's death in battle brought about the complete collapse of the nomad invasion.

(J. S. Trimingham)

AḤMAD ḤIKMET (1870-1927), Turkish novelist and journalist, was surnamed Müftī-Zāde, his ancestors having long served as *muftīs* in the Peloponnese. Born in Istanbul on 3 June 1870, he began his career as a writer while still a pupil at the Galatasaray lycée. He entered the Foreign service after leaving school (1889) and held several consular and vice-consular appointments, until 1896, when he was transferred to the Foreign Office. He crowned a distinguished career by becoming director-general of the Consular department (1926). At the same time he had been teaching literature at his old school and, from 1910 onward, at the Dār ül-Fünūn. For a time he acted at Ankara as head of the cultural section of the *Türk Ocaklarï*.

He wrote for *Iḳdām* and *Therwet-i Funūn*, but did not conform to the prevailing literary fashion: his style and themes were Turkish and he was a pioneer of the language reform movement. A volume of his stories was published under the title of *Khāristān we-Gülistān* (Istanbul 1317/1899-1900); German translations of three of these, by Fr. Schrader, were published as *Türkische Frauen* in vol. vii of Jacob's *Türkische Bibliothek*, Berlin 1907. Some of his later writings appeared as a volume entitled *Čaghlayanlar*, Istanbul 1922. His subtle humour is best exhibited in his monologues, a genre which he introduced into Turkish literature. He died at Istanbul on 20 May 1927.

(F. Giese-G. L. Lewis)

AḤMAD IḤSĀN (Ahmet İhsan Tokgöz), Turkish author and translator, was born in Erzurum on 24 Dhū'l-Ḥidjdja 1285/7 April 1869. Passing out from the school of administration (*Mülkiyye*) at the age of 17, he was appointed interpreter to the Commander-in-Chief of the artillery, but soon abandoned this post, despite strong family opposition, to become a journalist. At the age of 18 he founded a shortlived fortnightly, *ʿUmrān*, and at the same time embarked on his career as a translator of French novels, including many of the works of Jules Verne and Alphonse Daudet. While working as a translator on the staff of *Therwet*, a Constantinople evening newspaper, he conceived the idea of publishing a weekly illustrated magazine. He persuaded his Greek employer to let him bring out a scientific supplement to the paper, under the title of *Therwet-i Fünūn*. A year later, this acquired a separate existence under the ownership of Aḥmad Iḥsān. The first issue, in March 1889, was described as "an illustrated Ottoman newspaper" devoted to "literature, science, art, biography, travel and novels". The new review for the most part fought shy of politics. Realizing the potentialities of an illustrated magazine as a propaganda weapon, the authorities at first gave it every assistance, including financial subsidies, but this support was soon transferred to another illustrated paper, Baba Ṭāhir's *Muṣawwar Maʿlūmāt*. *Therwet-i Fünūn* continued to devote itself to making known and imitating the intellectual life of the west, especially of France. Almost all the young literary men of the time wrote for it: Ekrem Bey, Khālīd Ḍiyā (Ziyā), Aḥmad Rāsim and Nabī-zāde Nāẓim were among the regular contributors and in 1896 Tewfīḳ Fikret was given full editorial control. But in 1901 he quarrelled with Iḥsān and resigned; their estrangement lasted till 1907. In 1901 a worse disaster befell: the sultan's anger was roused against the paper because of a translation by Ḥüseyn Djāhid of a French article, some sentences in which touched on the French Revolution and were held to be seditious. *Therwet-i Fünūn* was closed down for some weeks but then reappeared, thanks to the influence of Meḥmed ʿĀrif, a member of the Palace staff who had been at school with Iḥsān. But all the writers who had worked for the paper severed their connection with it, and although Iḥsān continued to publish it the old enthusiasm was gone.

Iḥsān's original literary production was not outstanding. An account of his travels in Europe was published in 1891, and under the title of *Matbuat Hatïralarï*, Istanbul 1930-1.

Late in life he became a member of the Grand National Assembly and died in 1942.

(K. Süssheim-G. L. Lewis)

AḤMAD KHĀN, educational reformer and founder of Islamic modernism in India (1817-98). Aḥmad Khān (often called after his two titles of honour Sir Sayyid) sprang from an ancient Muslim family of high nobility. His forefathers came from Persia and Afghānistān, settled down in India about the reign of Shāh Djahān (1628-66), and became closely connected with the Mughal Court. He was born on 6 Dhu'l-Ḥidjdja 1232/17 Oct. 1817 at Delhi. His mother, a sensible woman, gave him a good education, but the schooling he had was no more than that taught in a *maktab*. On the death of his father Mīr Muttaḳī in 1838, the emoluments from fictitious posts at the Court stopped, and Aḥmad Khān had to seek his livelihood. He entered the service of the East India Company and had to content himself with a minor clerical appointment in the court of justice at Delhi. Soon, however, his industry and sense of duty were rewarded with promotion to the rank of *munṣif* (sub-judge).

To his first literary products belong half a dozen religious treatises, mainly in defence of Sunnī belief. More important are the historical and archeological studies he published in this period. The best known of them is the work on the old buildings and monuments in Delhi and its environs *Āthār al-Ṣanādīd* (1847). Its translation into French by Garçin de Tassy in 1861 won him fame. Three years later on he was elected an honorary Fellow of the Royal Asiatic Society of London.

A second decisive change of his life and outlook was effected by the Indian Revolution, known as

the Mutiny (1857). The unhappy outcome of it, especially for the Indian Muslims, decided him to work for the future of his compatriots, in the first place by earnest attempts at reconciliation between the British and the Indian Muslims, who, rather than the Hindus, were considered to have been the actual rebels. Aḥmad Khān, who himself had proved his loyalty to his government by saving the European colony in Bidjnawr through personal intercession, wrote two treatises to calm the resulting passions, viz. *Asbāb Baghāwat Hind*, 1858, and *Loyal Muhammadans of India*, 1860-1. He put the blame on both sides, and in his opinion the Mutiny was caused by the Indian people's misunderstanding of English rule as well as by the government's ignorance of the conditions of the ruled.

Keeping aloof from political agitation he sought the uplift of his nation with spiritual means derived from 19th century European mode of life. On a visit to England (1869-70), he had been much impressed by the standard of civilization of the ordinary Englishman. Back in India he started a periodical *Tahdhīb al-Akhlāḳ* with the object of educating the public by removing prejudices. His next and still more admirable achievement was the establishment of a Muhammadan Anglo-Oriental College at Aligarh ([*q.v.*] 1878), modelled after Oxford and Cambridge (in 1920 raised to the rank of a university). Thirdly he instituted The Muhammadan Educational Conference (1886), which held annual meetings in various cities and afforded opportunities for exchange of thought and propagation of reforming ideas.

Aḥmad Khān perceived that in the process of westernization religious ideas needed to be reconsidered. In a speech at Lahore (1884) he argued: "To-day we are, as before (i.e. when Islam came into close contact with the Greek world of ideas), in need of a modern *ʿilm al-kalām*, by which we should either refute the doctrines of the modern sciences or undermine their foundations, or show that they are in conformity with the articles of Islamic faith". The last way of approach, however, gained so much the upperhand in his own re-interpretation of Islam, that it was felt to injure the specific character of religion, in spite of his sincere intentions to counter secularism. The axiom of his theology was the adage: "The Work of God (Nature and its fixed laws) is identical with the Word of God (Ḳur'ān)".

A violent reaction was provoked in the camp of the *ʿulamā*, who heaped abuse on him as a *Nečarī* (Urduized form of Naturist), and fiercely attacked his demythologizing of the Ḳur'ān and his teaching about the *duʿā* (the effect of it would be merely psychological, i.e. of setting the mind at rest, and not "real", in the sense of exerting any influence on the divine decrees), but in the end his tenacity and disinterested work for the welfare of his people overpowered the opposition. About the eighties he became the acknowledged leader of his community. This found expression, when in 1887 he advised the Muslims not to join the National Congress and the bulk of them followed his advice. His loyalty to the British was rewarded by nomination in 1878 as a member of the Viceregal Legislative Council and his appointment in 1888 to be a Knight Commander of the Star of India; in 1889 he received an honorary degree from the University of Edinburgh.

He rendered great services to his countrymen in the field of social and educational reform; but also his significance as a religious reformer is not to be neglected. In a mitigated form his modernistic views re-emerge regularly in writings of the present generation. The greatest benefit, however, which Aḥmad Khān rendered to his country was that he restored the despairing Muslims of his age to faith in themselves. In this respect—and not for the communalism imputed to him—he may be regarded as a forerunner of Pakistan.

Bibliography: (a) His main writings (beside the above-mentioned): a Bible commentary *Tabyīn al-Kalām*, 1862; *Essays on the Life of Mohammed*, 1870 (cf. Nöldeke, in *Academy*, i, 312-4); *Review on the Book of Dr. Hunter*, 1872; *Tafsīr al-Ḳur'ān*, 1880-95. AḤMAD KÖPRÜLÜ. [See KÖPRÜLÜ].

AḤMAD AL-MANṢŪR, sixth sovereign of the Moroccan dynasty of the Saʿdids [*q.v.*], son of the second sultan of the dynasty, Muḥammad al-Shaykh al-Mahdī (d. 964/1557), was born at Fez in 956/1549. He held various military commands, but was driven into exile at Algiers with his elder brother, ʿAbd al-Malik. The latter, on acceding to the throne in 983/1576, designated Aḥmad as his heir presumptive. Two years later Aḥmad took part in the famous battle of Wādī 'l-Makhāzin, in the vicinity of al-Ḳaṣr al-Kabīr [*q.v.*] in the N.W. of Morocco. This battle, which took place on the last day of Djumādā I 986/4 August 1578, ended disastrously for the troops of King Sebastian of Portugal, who was killed, while a great number of Portuguese noblemen were taken prisoner. In his turn, the sultan ʿAbd al-Malik, who was very ill, died in his litter during the battle. The same day Aḥmad was proclaimed sultan by the victorious troops, to whom he promised pay and rewards; he took the honorific *laḳab* of al-Manṣūr, "the victorious."

The new sovereign acceded to the throne under the most favorable auspices. From all sides, felicitations poured in, from the Grand Turk, the *pasha* of Algiers, even from Spain and France. Nevertheless he had to overcome many difficulties at home; these he faced with skill and energy, reinforced by the considerable sums which he realized by the ransom of the prisoners of Wādī 'l-Makhāzin. With this money he engaged, in the customary manner of Islamic rulers, a reliable bodyguard commanded by morisco officers and organized in the Turkish fashion, and built fortifications in Tāza, Fez and the *ḳaṣaba* of Marrākush. At the same time, he turkicised to a certain degree his court and administration (*makhzen* [*q.v.*]), as well as his military cadres, under the command of *beys* and *pashas*. He also had to repress various troubles stirred up by the Arab tribes and to overcome the opposition of some members of his family who rose against him. But in general, Aḥmad's reign, which lasted for a quarter of a century, was peaceful and allowed Morocco, at last, to enjoy for a time a relative tranquillity.

It was in foreign affairs that Aḥmad al-Manṣūr showed real diplomatic talent. We have ample materials at our disposal for estimating his abilities in the incomparable collection of documents made by H. de Castries in his *Sources inédites de l'histoire du Maroc*. First of all, the sultan had to give some

pledges to the Porte, without completely yielding to its demands; then he had to negotiate with Philip II of Spain, and he did this in such a way that Spain achieved no positive results. On the contrary, the practically-minded sultan encouraged the development of smuggling, or even piracy. In 1585 a "Barbary Company" was founded by British merchants in order to monopolize the external trade of Morocco. After the destruction of the Armada in 1588, Aḥmad al-Manṣūr gave up the friendship with Spain and entered into relations with Queen Elisabeth.

To Aḥmad's credit stands also the conquest of the Sūdān, which, though it was ephemeral, gained for this ruler, greedy for riches, a considerable booty in gold and procured him his second surname of al-D̲h̲ahabī, "the golden". It was prepared by reconnoitring and the conquest of the oases of Tūwāt (Touat) and Tīgūrārīn in 990/1581 and was decided upon by the advice of al-Manṣūr's Morisco general staff. It is related in detail by all the historians of the Saʿdid dynasty and by three Sudanese chronicles. The expedition, commanded by the *pas̲h̲a* D̲j̲awd̲h̲ar, left Marrākus̲h̲ in the autumn of 999/1590 and reached, not without difficulties, the Niger three months later. The Sudanese *askia* of Gao, Isḥāḳ, after a battle near that town, had to ask for peace and shortly afterwards the Moroccan troops entered Timbuktū [*q.v.*]. After the *pas̲h̲a* D̲j̲awd̲h̲ar had been replaced in his command by another morisco officer, Maḥmūd Zarḳūn, the conquest of the whole country was continued, while the most important *faḳīhs* of Timbuktū, amongst them Aḥmad Bābā [*q.v.*], were deported to Marrākus̲h̲. Thereafter, for some years, there was an incessant afflux of gold and captives to the Saʿdid capital.

Aḥmad al-Manṣūr, who hardly left Marrākus̲h̲ during the whole of his reign, wanted to build there a residence worthy of himself: the palace called al-Ḳaṣr al-Badīʿ, the construction of which was begun soon after his accession and lasted for about twenty years. This sumptuous mansion was later mutilated by the sultan Mawlāy Ismāʿīl. At the same time, the Moroccan ruler made a point of assembling a literary court, in which shone various writers, especially the secretary of the chancery, ʿAbd al-ʿAzīz al-Fis̲h̲tālī [*q.v.*], author of a panegyrical chronicle, *Manāhil al-Ṣafā*ʾ.

The last years of Aḥmad al-Manṣūr's reign were troubled by the intrigues of his sons to obtain the succession, and by an epidemic of cholera which began, from 1007/1598-9 onwards, to decimate the population of the capital. Deserting Marrākus̲h̲ to escape the scourge, the sultan went to the north of the country, and soon after his arrival at Fez he died there on 11 Rabīʿ I 1012/20 August 1603. His body was transferred to Marrākus̲h̲ and buried in the sumptuous mausoleum which he had built for himself and his family and which still exists.

Bibliography: Arabic sources enumerated in Lévi-Provençal, *Chorfa*: Ifrānī; Fis̲h̲tālī; Ibn al-Ḳāḍī, *al-Muntaḳā al-Maḳṣūr*; Anonymous chronicle (ed. by G. S. Colin, Rabat 1934); Nāṣirī, *Istiḳṣā*ʾ, Cairo 1312 (translated by the son of the author in *AM*, xxxiv, Paris 1936). European sources: H. de Castries, *Les sources inédites de l'histoire du Maroc*, 1st series, i-v. See also *EI*¹, iii, 250 ff., and the bibliography of the articles SAʿDIDS and SŪDĀN. (E. LÉVI-PROVENÇAL)

AḤMAD MIDḤAT, Ottoman Turkish writer, was born in Istanbul in 1260/1844, the son of a poor draper called Sulaymān Ag̲h̲a and a Circassian mother. He lost his father in early childhood, and was for a while apprenticed to a shopkeeper. When he was 10 years old the family moved to Vidin, where his half-brother Ḥāfiẓ Ag̲h̲a was the *mudīr* of a *ḳaḍā*. Ḥāfiẓ, however, fell into disgrace, and in 1859 Aḥmed returned to Istanbul, where he began his schooling. In 1277/1861 Ḥāfiẓ Ag̲h̲a, having won the favour of Midḥat Pas̲h̲a, was reinstated and given an appointment in Nish, to which he brought the family. Aḥmed entered the Rüs̲h̲diyye school there, and graduated in 1280/1863. In 1281/1864, when Midḥat Pas̲h̲a took over the newly constituted *wilāyet* of Tuna, the family followed him to its capital, Rusčuk, where Aḥmed was apprenticed as a clerk in the provincial chancery (*wilāyet mektūbī ḳalemi*). While working, he continued his studies privately, and also studied French and western knowledge under the guidance of a Christian colleague. He won the favour of Midḥat Pas̲h̲a, who gave him his own name, and, after appointing him to various offices, made him, at the age of 24 or 25, editor-in-chief of the *wilāyet* newspaper *Tuna*. In 1285/1868, when Midḥat Pas̲h̲a became *wālī* of Bag̲h̲dād, Aḥmad Midḥat followed him there, taking charge of the government printing-press and newspaper (*Zawrā*ʾ). During his stay in Bag̲h̲dād he continued his private studies, and began to write school-books and stories. In 1288/1871 his brother Ḥāfiẓ, who had meanwhile become *mutaṣarrif* of Baṣra, died, and Aḥmed returned with the whole family to Istanbul. Abandoning the state service, he devoted himself entirely to writing and printing. For several years he contributed articles to various papers, and also ran a printing-press where he himself printed and published his numerous books. His journalistic activities brought him into an apparently fortuitous association with the Young Ottomans, and in 1289/1872 he was arrested and summarily exiled to Rhodes, together with Abu'l-Ḍiyā Tewfīḳ. There he wrote a number of books, some of which were published in Istanbul under a pseudonym. In 1293/1876, after the deposition of Sultan ʿAbd al-ʿAzīz, he was pardoned, and returned to Istanbul, where he resumed his activities as a writer and printer. His cautious attitude during the following months won him the good will of Sultan ʿAbd al-Ḥamīd, and in 1294/1877, after publishing the *Uss-i Inḳilāb* (an historical justification of ʿAbd al-Ḥamīd's accession), he was given the directorship of the official gazette and printing-press. This led to a permanent breach with the Young Ottomans. During the reign of ʿAbd al-Ḥamīd he held various state offices, and from 1295/1878 onwards edited the *Terd̲j̲ümān-i Ḥaḳīḳat*, a periodical of some importance in the intellectual history of that time. In the summer of 1888 he went as official Ottoman representative to the International Congress of Orientalists in Stockholm, and spent some 3½ months in Europe. (This trip is described in his *Awrupada bir D̲j̲ewelān*, Istanbul 1307/1891.)

In 1908, after the Young Turk revolution, he was retired from his official positions under the age-limit, and was subjected to vigorous attacks. He attempted to resume the literary work which he had long since sacrificed to his official career, but abandoned the attempt in the face of hostile opinion and altered tastes. For a few years he held teaching posts at the University, the Woman Teachers' Training College, and the School for Preachers. He died in Muḥarram 1331/Dec. 1912-Jan. 1913.

Besides playing an important role in the development of Turkish journalism in the 19th century,

Aḥmed Midḥat also wrote an enormous number of books, estimated at about 150. These fall into two main groups, fiction and popularised knowledge. His novels and short stories, many of them first published as serials in periodicals, were widely read among the generation of Turks that grew up under the *tanẓīmāt*, and played no small part in developing new tastes and interests among a public still entirely unacquainted with western literary forms and aspirations. His novels were in every sense popular, simple in both style and sentiment, intended to entertain and sometimes also to instruct a reader of unsophisticated and unliterary tastes. Some are romances of adventure, others deal with his own and the immediately preceding periods, and at times manage to achieve a certain liveliness and realism. Aḥmed Midḥat was much influenced by the French popular novelists, and also translated a number of their works. Apart from fiction he wrote or adapted a considerable number of popular and semi-popular works on history, philosophy, religion, ethics, science, and other subjects, the purpose of which was to bring modern European knowledge to his compatriots in a simple and attractive form. The most important of his historical works are *Uss-i Inḳilāb* (2 vols., 1294-5/1877-8), already cited, and *Zubdet ül-Ḥaḳā'iḳ* (1295/1878), an attempt to explain the Turkish defeat in the war of 1877-8. He also wrote a universal history in 3 volumes (1303-5/1880-2), and a series of separate histories of European countries (*Kā'ināt*, 14 vols, 1292-1303/1871-1881).

Bibliography: *IA*, s.v. (by Sabri Esat Siyavuşgil), on which much of the foregoing is based. Further Turkish publications are cited there. A contemporary judgment will be found in ʿAbd al-Raḥmān Sheref's obituary notice, published in *TOEM*, 3rd year, 1328 [sic], 1113-9. See further P. Horn, *Geschichte der Türkischen Moderne*, Leipzig, [1st ed. 1902] 1909, 12-30; Babinger, 389-91; O. Hachtmann, *Die türkische Literatur des zwanzigsten Jahrhunderts*, Leipzig, 1916. For two sharply contrasted judgments by European contemporaries see M. Hartmann, *Unpolitische Briefe aus der Türkei*, Leipzig 1910, 70, 208; J. Østrup, *Erindringer*, Copenhagen 1937, 41-44.

(B. Lewis)

AḤMAD b. Khālid b. Ḥammād al-**NĀṢIRĪ** al-**SALĀWĪ**, Abu'l ʿAbbās Shihāb al-Dīn, Moroccan historian, born at Salé (Salā) 22 Dhu'l-Ḥidjdja 1250/20 April 1835, died in the same town 16 Djumādā I 1315/13 Oct. 1897. The genealogy of this writer descends in a direct line from the founder of the Moroccan brotherhood of the Nāṣiriyya, Aḥmad b. Nāṣir, who was buried at his *zāwiya* at Tāmgrūt in the valley of Wādī Darʿa (Drā). He pursued his studies at Salé, and, without neglecting his religious and juridical studies, delved deeply into Arabic profane literature. At the age of about 40, Aḥmad al-Nāṣirī entered the judicial branch of the Sharīfī administration as a notary or as a steward of State lands. Intermittently, he held relatively important posts. He lived first at Dār al-Bayḍā' (Casablanca), from 1292-3/1875-6, and had two periods of residence at Marrākush, where he was employed in the Steward's department of the royal household. Later, he lived for a time at al-Djadīda (Mazagan), as a customs official. He then stayed successively at Tangier and Fez, and, at the end of his life, returned to his native town, where he devoted himself to teaching. At his death, he was buried in the cemetery at Salé situated outside the gate known as Bāb Maʿallaḳa. In short, al-Nāṣirī was a minor official under the Sharīfs, and at the same time a man of letters and a historian. Apart from his historical writing, which gained him a name even outside Morocco, he left several works which without doubt would have sufficed to draw attention to him and to assure him an honourable place among contemporary Maghribī men of letters. These are, in addition to six short works (*Chorfa*, p. 353 n. 1); 1) a commentary on the Shamaḳmaḳiyya, a poem by Ibn al-Wannān, which he called *Zahr al-Afnān min Ḥadīḳat Ibn al-Wannān* (lithographed at Fās in 1314/1896); 2) a survey of the schisms and heresies of Islam, entitled *Taʿẓīm al-Minna bi-Nuṣrat al-Sunna* (Ms. Rabat; cf. *Catalogue*, i, 23); 3) a monograph on the alleged sharīfī house of the Nāṣiriyya, to which he himself belonged, entitled *Ṭalʿat al-Mushtarī fi'l-Nasab al-Djaʿfarī* (lithographed at Fās; French summary by M. Bodin, *La Zaouïa de Tamagrout*, *Archives Berbères*, 1918). This work, which the author completed in 1309/1881, is an excellent history of the *zāwiya* of Tāmgrūt, containing a great deal of interesting information which compensates for the lengthy arguments by which the author seeks to demonstrate the authenticity of the family's genealogy.

The major work of Aḥmad al-Nāṣirī is the *Kitāb al-Istiḳṣā li-Akhbār Duwal al-Maghrib al-Aḳṣā*. Its publication was an unprecedented event in Maghribī historiography. The author produced, not a chronicle of limited scope, but a general history of his country, printed, moreover, in the Orient. Hailed, ever since its appearance, by the orientalists of Europe, this work speedily attracted the attention of the North African historians, who frequently had recourse to it in the course of their studies—the more so when a French translation, in the *Archives Marocaines*, rendered the last part of the work, containing the history of the ʿAlid dynasty, available even to non-Arabists.

It was quickly realised that this chronicle was akin to other productions of western Arab historiography; it was no more than a compilation, the main virtue of which was to have combined in a connected narrative the fragments of political history scattered throughout the chronicles and the biographical anthologies previously produced in the country. But it must be recognized that al-Nāṣirī was the first of his countrymen to deal exhaustively with a subject which his predecessors had treated only in part. This however, was not his original aim. Elsewhere (*Chorfa*, 357-60) it has been explained that the starting-point for the compilation of the *Kitāb al-Istiḳṣā* was a work of considerable length on the Marīnid dynasty of Morocco, composed mainly with the aid of the historical works of Ibn Abī Zarʿ and Ibn Khaldūn, and entitled *Kashf al-ʿArīn fi Luyūth Banī Marīn*. His successive transfers from one capital of Morocco to another enabled him to extend his knowledge of the sources for the history of other Moroccan dynasties, and he conceived the idea of writing a full history of Morocco. He completed his work on 15 Djumādā II 1298/15 May 1881, and dedicated it to the reigning prince Sulṭān Mawlāy al-Ḥasan, but received no reward for his action. On the death of this ruler, the author decided to have his history printed at Cairo, after bringing it down to the accession of Sulṭān Mawlāy ʿAbd al-ʿAzīz, and the *Istiḳṣā* duly appeared at Cairo in four volumes in 1312/1894.

For an analysis of the Arabic historical sources of al-Nāṣirī, and for a list of the works from which he adapted or quoted verbatim numerous passages, the work previously cited should be consulted. It is

sufficient to say here that, apart from documenting his work from the Arabic sources, he was the first Moroccan chronicler to call on European sources which, however, only became known to him by chance. These were the history of Mazagan under Portuguese domination, entitled *Memorias para historia de praça de Mazagao*, by Luis Maria do Conto de Albuquerque de Cunba, Lisbon 1864, and *Description historica de Marruecos y breve reseña de sus dinastias*, by Manuel P. Castellanos, Santiago 1878; Orihuela 1884; Tangier 1898.

In the presentation of his history, al-Nāṣirī follows the usual method of his fellow-countrymen but he does occasionally demonstrate a critical sense. On the whole, however, he gives the impression of being a historian by accident, but a man of letters by vocation. Sometimes he gives indication of considerable intellectual independence and breadth of outlook. His style is lucid and polished, and he rarely resorts to the artificial use of metaphor and rhymed prose. He gives the impression of being the modern Moroccan historian who has perhaps handled his language with the greatest ease and elegance.

Vol. iv of the Arabic edition of the *Istiḳṣā* has been translated by E. Fumey, with the title of *Chronique de la dynastie ʿalaouie au Maroc*, in *Archives Marocaines*, Vols. ix and x, Paris 1906-7. The remainder has been translated in the same journal, Vols. xxx ff., Paris, 1923-35, by A. Graulle, G. S. Colin, I. Hamet and the sons of the historian himself.

Bibliography: Lévi-Provençal, *Chorfa*, 350-368; Brockelmann, S II, 888-9 (new edition of *al-Istiḳṣā*, Rabat 1954.) (E. LÉVI-PROVENÇAL)

AḤMAD PAS͟HA, Ottoman governor of Bag͟hdād, son of Ḥasan Pas͟ha [*q.v.*], also governor of Bag͟hdād. In 1715 he was appointed governor of S͟hahrizūr and Kirkūk, and subsequently of Baṣra; in 1719 he was made vizier. After the death of his father (at the beginning of 1724) he was appointed governor of Bag͟hdād and charged with the continuation of the expedition undertaken by the former against the Persians. In the spring of 1724 he took Hamadān, and although he was defeated (owing to the desertion of the Kurdish chieftains) by As͟hraf, the G͟halzay ruler of Persia, he achieved in 1727 favourable terms, acquiring for the Ottoman empire Kirmāns͟hāh, Hamadān, Tabrīz, Rawān, Nak͟hičewān and Tiflīs. After losing these conquests to the Ṣafawid Tahmāsp, Aḥmad Pas͟ha undertook another campaign and captured Kirmāns͟hāh and Ardalān, and in 1732, after winning the battle of Ḳurid͟jān, reached Hamadān. By the treaty of 1732, some of the conquered territories were kept by the Ottomans, others returned to Persia. Hostilities, however, were soon resumed and Aḥmad Pas͟ha had to defend Bag͟hdād itself from Nādir S͟hāh. In 1733 he was made governor of Baṣra in addition to Bag͟hdād. The following year he was transferred first to the governorship of Aleppo, then to that of Raḳḳa. After the death of Köprülü-zāde ʿAbd Allāh Pas͟ha, he, though retaining the governorship of Raḳḳa, was made commander-in-chief in the east and succeeded in reaching an armistice with Nādir S͟hāh. He was appointed governor of Bag͟hdād for the second time, and was engaged, in addition to the Persian affairs, in subduing rebellious tribes. He died in 1747, on his return from an expedition against the Bābān ruler Salīm, and was buried at the side of his father near the tomb of Abū Ḥanīfa. He had governed Bag͟hdād first for a period of eleven, and on the second occasion for twelve years.

Bibliography: Rās͟hid, *Taʾrīk͟h*, iv, 57; Čelebi-zāde ʿĀṣim (continuation of the former), Istanbul 1282, passim; Sāmī, S͟hākir and Ṣubḥī, *Taʾrīk͟h*, Istanbul 1198, passim; ʿIzzī, *Taʾrīk͟h*, Istanbul 1199, passim; Kātib Čelebi, *Taḳwīm al-Tawārīk͟h*, Istanbul 1146, 153 ff.; Naẓmī-zāde Murtaḍā, *Güls͟hen-i K͟hulefā* (MS of M. Cavid Baysun; the passage on Aḥmad Pas͟ha not in printed ed.); *Dawḥat al-Wuzarāʾ* (continuation of former), Baghdad 1246, index; Niebuhr, *Voyage en Arabie*, ii, 254-6; *Sid͟jill-i ʿOt͟hmānī*, i, 250, ii, 149; Hammer-Purgstall, index; C. Huart, *Histoire de Bagdad*, 145-6; S. H. Longrigg, *Four Centuries of Modern Iraq*, 75, 127 f., 131-62, 165 f., 346. (M. CAVID BAYSUN)

AḤMAD PAS͟HA, ḲARA, Ottoman grand-vizier under Sulaymān I. He was of Albanian origin, was educated in the palace and rose to the posts of *ḳapīd͟jī bas͟hī*, *mīr-i ʿalem* and (in 927/1521) *ag͟ha* of the Jannisaries. He was appointed *beylerbeyi* of Rumelia and took part in the campaign in Hungary, taking (950/1543) Valpo and Siklós and being present at the capture of Esztergom (Usturgun, Gran) and Székesfehérvár (Estūn-i Belg͟hrād, Stuhlweissenburg). In 955/1548 he was appointed commander-in-chief against the Persians and raised to the rank of second vizier. He put the Persians to flight in 1549 near Kamāk͟h and took numerous fortresses in E. Anatolia and Georgia. After the loss of Lippa in Hungary (959/1552) and the vain siege of Temesvár (Tems͟hwar) by Sokollu Meḥmed Pas͟ha, he was transferred to the post of commander-in-chief in Hungary and took Temesvár (defended by Stephan Losonczy) after a siege of 35 days. Subsequently he captured Szolnok, but was unsuccessful in the siege of Eger (Eg͟hri, Erlau) undertaken by him together with Sokollu. During the war against S͟hāh Tahmāsp (960/1553) Sulaymān deposed the grandvizier Rustam Pas͟ha and appointed in his stead Aḥmad Pas͟ha. The latter took part in the campaigns of Nak͟hičewān and Ḳarabāg͟h. After the treaty of Amasya (1555) which ended the war, and the sultan's return to Istanbul, Aḥmad was arrested during a meeting of the *dīwān* and decapitated (13 D͟hu'l-Ḳaʿda 962/28 Sept. 1555). Though the reason given was his intrigue against ʿAlī Pas͟ha, governor of Egypt, the sultan's main motive seems to have been his wish to reappoint Rustam Pas͟ha, his son-in-law, to the grand-vizierate.—According to *Ḥadīḳat al-D͟jawāmiʿ*, i, 143; *Sid͟jill-i ʿOt͟hmānī*, i, 259, Aḥmad Pas͟ha married Fāṭima Sulṭān, daughter of Selīm I. He began to build a mosque near Top Ḳapī, which was, however, finished only after his death.

AḤMAD PAS͟HA BONNEVAL. Claude-Alexandre Comte de Bonneval was born in 1675 into a noble family of the Limousin. After serving with

great distinction in the French army at the beginning of the War of the Spanish Succession, in 1704, regarding himself as insulted, he changed sides and soon won a European reputation as a general in the Austrian service under Eugène of Savoy in a succession of campaigns against his own countrymen, the Pope, and finally the sultan, being wounded at Peterwardein in 1716 and participating in the siege of Belgrade in the following year. He later, however, fell out with Eugène and, after being imprisoned for a year, in 1727 fled to Venice, whence, after offering his services in vain to various powers inimical to Austria, he resolved to place them at the disposal of Aḥmed III. In 1729 he accordingly travelled by way of Ragusa to Bosna Sarayî, where, to avoid being extradited to Austria, he turned Muslim, taking the name Aḥmed; and after the accession of Maḥmūd I was first given a daily allowance while resident at Gümüld̲j̲ine in Thrace, and then, in Sept. 1731, summoned by the grand Vizier Ṭopal ʿOt̲h̲mān Pas̲h̲a, who aimed at training the Ottoman army on European lines, to reform the *od̲j̲aḳ* of the *k̲h̲umbarad̲j̲îs*. Although on ʿOt̲h̲mān Pas̲h̲a's fall in the following April, Bonneval was at first neglected by his successor Ḥekīm-og̲h̲lu ʿAlī Pas̲h̲a, in 1733 the latter sought his advice on the course to be followed by the Porte in relation to the problem of the Polish succession, and in Jan. 1735 appointed him *K̲h̲umbaradjî Bas̲h̲î* with the rank of a *pas̲h̲a* of two *ṭug̲h̲s* (*mîrmîrān*). After the dismissal of ʿAlī Pas̲h̲a in July of the same year, however, Bonneval was excluded from the counsels of the Porte until 1737, when he was again called on by Muḥsin-zāde ʿAbd Allāh Pas̲h̲a to advise on the conduct of the war against Austria. But although he eventually accompanied the next Grand Vizier Yeg̲h̲en Meḥmed Pas̲h̲a to the front, a plan he had put forward for the fomentation of a revolt in Hungary was a failure, and on his return to Istanbul in 1738 he fell from favour and in the following year was deprived of his command and exiled to Ḳastamonu. Moreover, although he was restored in less than a year, he never regained his former influence, and up to his death in 1747, by which time he was casting about for means to return to France, he was employed only in the continued management of the *k̲h̲umbarad̲j̲îs* and in furnishing the Porte with comments (some of which have been preserved in Turkish translation) on European political developments. He was buried in the cemetery of the Mewlewī-k̲h̲āne in Galata, and succeeded in his command by his adoptive son, also a French convert, who went by the name of Süleymān Ag̲h̲a.

Bibliography: Meḥmed ʿĀrif, *K̲h̲umbarad̲j̲î Bas̲h̲î Aḥmed Pas̲h̲a Bonneval*, *OTEM*, nos. 18-20; Prince de Ligne, *Mémoire sur le comte de Bonneval*, Paris 1817; A. Vandal, *Le Pacha Bonneval*, Paris 1884; idem, *Une Ambassade Française en Orient*, Paris 1887, index; *IA*, s.v. (M. Cavid Baysun).

(H. Bowen)

AḤMAD PAS̲H̲A, called **BURSALÎ**, Ottoman poet of the second half of the 15th century, the most important after S̲h̲eyk̲h̲ī and before Ned̲j̲ātī. He was the son of the *ḳāḍī ʿasker* Welī al-Dīn b. Ilyās (who claimed descent from Ḥusayn) and was most probably born in Adrianople (according to some authorities in Brusa). He was appointed *müderris* at the *madrasa* of Murād II in Brusa and in 855/1451 succeeded Mollā K̲h̲osrew as *ḳāḍī* of Adrianople. After the accession of Muḥammad II he became *ḳāḍī ʿasker*, and tutor of the new ruler, obtaining the rank of vizier. He accompanied the sultan during the conquest of Constantinople. Though his wit made him a great favourite of the sultan, he fell into disgrace (allegedly because of a love affair with a favorite of the sultan, but possibly merely in consequence of the sultan's well known captiousness) and was held in custody, but was pardoned and appointed as *mütewallî* of the Ork̲h̲ān and Murād mosques in Brusa, afterwards even as *sand̲j̲ak beyi* of Sulṭān Önü, Tire and Anḳara, and after the accession of Bāyazīd II, as *sand̲j̲ak beyi* of Brusa. He took part in the suite of Sinān Pas̲h̲a, *beylerbeyi* of Anatolia, in the battle of Ag̲h̲ačayîrî against the Mamlūks (8 Ramaḍān 893/17 August 1488; cf. Saʿd al-Dīn and Hammer Purgstall). He died in 902/1496-7 in Brusa; the ruins of his *türbe* could be seen not long ago in that town.

Among his poems there are many composed for Muḥammad II, Bāyazīd II and Sulṭān D̲j̲em; he also composed a dirge on the death of Muḥammad II's son, Muṣṭafā. He was closely connected with various scholars of his time, and while governor of Brusa, he drew into his entourage poets such as Ḥarīrī, Resmī, Mīrī, Čak̲h̲s̲h̲ird̲j̲i S̲h̲eyk̲h̲ī, and S̲h̲ehdī.

Aḥmad Pas̲h̲a was influenced by Turkish poets such as Aḥmedī, Niyāzī, Melīḥī and especially S̲h̲eyk̲h̲ī and ʿAṭāʾī (cf. *Yeni Med̲j̲mūʿa*, 1918). Like the other poets of his age, he was also under the influence of Persian poetry (his models were especially Salmān Sāwad̲j̲ī, Ḥāfiẓ, Kamāl K̲h̲ud̲j̲andī and Kātibī); on the other hand, the very widespread opinion (which we find for the first time in the *Ted̲h̲kere* of Ḥasan Čelebi) that he began his poetical career by making *naẓîres* on some poems of ʿAlī S̲h̲īr Nawāʾī is quite erroneous (cf. M. Fuad Köprülü, in *Türk Yurdu*, 1927, no. 27; idem, *Türk dili ve edebiyati hakkînda araştirmalar*, Istanbul 1934, 264 ff.). Aḥmad Pas̲h̲a was acknowledged as the greatest poet of his day and was imitated by many poets of the late 15th and early 16th century; and his influence can be felt even after his poetry lost its preponderant position owing to the new trends initiated by Ned̲j̲ātī and especially by Bāḳī.

Apart from his *diwān*, which was compiled by order of Bāyazīd II, and the numerous manuscripts of which are rather different from each other, Aḥmad Pas̲h̲a's poems (some of them written in Arabic and Persian) are to be found also in the great *naẓîre* collections of the 15th and 16th centuries.

(Halil Inalcik)

AḤMAD PAS̲H̲A GEDIK, Ottoman Grand Vizier. Born in Serbia, he was taken into Murād II's palace as an *iç-og̲h̲lanî* and became for a short time *beglerbegi* of Rūm (Toḳat) under Meḥmed (Muḥammad) II before being appointed *beglerbegi* of Anatolia in 1461. He kept this post until he was made a vizier in 1470. He played a decisive role in consolidating the new conquests in Anatolia against the Ḳaramanids and Aḳ Ḳoyunlus. He first distinguished

himself by capturing Koylī Ḥiṣār (1461). In 1469-72 he subdued the mountainous part of Ḳaraman-ili and its coastal area, taking ʿAlāʾiyya in 1471, Silifke, Mokan, Gorigos and Lulye (Lullon) in 1472. In 1472 a dangerous attack of the Aḳ Ḳoyunlu forces, which, led by the Ḳaramanid prince Pīr Aḥmad, had advanced as far as Ḥāmid-ili, was repelled by Gedik Aḥmed, who subsequently reconquered Ḳaramān-ili. According to Neshrī, 211, he played an important part in the victory over Uzūn Ḥasan [*q.v.*] in 878/1473. Later we find him in Ič-ili fighting successfully against the Ḳaramanid princes who had retaken it with the help of a Christian fleet. During this campaign Aḥmed captured Minan, Silifke, massacred or banished the local chieftains in Ṭash-ili (1473-4). Having been the second vizier up to this time, he became the first after the execution of the Grand Vizier Maḥmūd in 1474 (Kemāl Pasha-zāde). He was sent by Meḥmed II against the Genoese in the Crimea, where he took Kaffa (June 1475), Soldaya and Tana, and besieged Mangup (which was to be captured later by Yaʿḳūb Beg (December 1475)). Aḥmed also signed an agreement with the new *khān* Mengli Girāy whom he had saved from prison in Kaffa, by which Mengli Girāy accepted the sultan's protection. Aḥmed's self-confidence roused the sultan's displeasure and when he dared to disagree with the sultan on the subject of an expedition to Scutari in Albania, he was imprisoned in Rumeli Ḥiṣār (1477). In 1478 he was released and made *Kapudan* of the fleet. In 1479 he seized Santa Maura from Leonardo Tocco (who fled to Apulia), and setting sail from Valona, he captured Otranto on 11 August 1480. When in the next spring he gathered in Valona a new army to make further conquests from Otranto, he was persuaded to uphold the new sultan, Bāyezīd II, against his brother Djem Sulṭān, and played a decisive part in securing the throne for Bāyezīd. But as he would not, or could not, capture Djem in his flight to Mamlūk territory, the suspicious sultan put him into prison. This, however, led to a tumult among the *ḳapi-ḳulu*, so that he had to be rehabilitated. After the failure of Djem's second attempt to seize the throne, Bāyezīd felt himself strong enough to put Aḥmed to death (6 Shawwāl 887/18 Nov. 1482), though this caused a new tumult among the *ḳapi-ḳulu*.—A district in Istanbul is called after Gedik Aḥmed because of his pious foundations there and the mosque of Gedik Aḥmed in Afyon is a fine example of old Ottoman architecture.

Angiolello), *Historia Turchesca*, Bucarest 1910; Hammer-Purgstall, index; S. Fisher, *The Foreign Relations of Turkey*, Urbana 1948; Fr. Babinger, *Mehmed der Eroberer*, Munich 1953; *IA*, s.v. (by M. H. Yinanç). (Halil Inalcik)

AḤMAD PASHA KHĀʾIN, Ottoman Vizier. Georgian in origin, Aḥmed entered Selīm I's palace as *ič-oghlani*; later, as *büyük emīr-i ākhūr* he took part in the campaign against the Mamlūks in 1516-7 and became *beglerbegi* of Rūm-ili in 1519. In the campaign of Süleymān I against Belgrade Aḥmed's plan of operations was accepted. Accordingly he took Bögürdelen (Sabacz) (2 Shaʿbān 927/8 July 1521) and invaded Syrmia. As a reward for his services in the siege of Belgrade the sultan appointed him vizier of the *dīwān* (autumn of 1521). In the campaign against Rhodes he, as commander-in-chief, was responsible for the successful operations during the landing and the siege. Subsequently he negotiated with the knights of St. John the terms of surrender of the castle (2 Ṣafar 929/21 Dec. 1522). Aḥmed Pasha was instrumental in causing the fall of the Grand Vizier Pīrī Meḥmed Pasha [*q.v.*] and expected to be promoted from the third viziership to the first, as the second vizier was in Egypt. But, contrary to custom, the grand vizierate was given to the *khāṣṣ oda-bashī* Ibrāhīm [*q.v.*]. Deeply disappointed Aḥmed asked the sultan for the governorship of Egypt (19 August 1523). There he reconciled the discontented Mamlūks as well as the bedouin chieftains who were in a state of great agitation after the death of Khayrī Beg. Süleymān, still under Ibrāhīm's influence, appointed Ḳara Mūsā governor of Egypt and charged him with Aḥmed's execution. On discovering this, Aḥmed decided to declare his independence with the title of Sultan (January 1524). He massacred and dispersed the Janissaries in the castle of Cairo and established relations with the Christian powers against the Ottomans. Süleymān sent an army to Egypt under the vizier Ayās Pasha, while Aḥmed's troops were secretdly encouraged to turn against him. One of his officers, Ḳāḍī-zāde Meḥmed Beg, made an attempt on his life in a public bath. Though wounded, Aḥmed succeeded in escaping to the Banū Bakr Bedouins, who, however, finally delivered him to be beheaded.

Bibliography: Djelāl-zāde Muṣṭafā, *Ṭabaḳāt al-Mamālik we-Deredjāt al-Masālik* (MS Fātiḥ 4423); Süheylī, *Taʾrikh-i Miṣr al-Djadīd*, Istanbul 1145; Ferīdūn Beg, *Münsheʾāt*, Istanbul 1274, 507-40; Pečewī, i, 71-9; Marino Sanuto, *I Diarii*, vols. xxxv-xxxviii, Venice 1879-1903; Hammer-Purgstall, index; J. W. F. Stripling, *The Ottoman Turks and the Arabs*, Urbana 1942.

(Halil Inalcik)

AḤMAD RAFĪḲ (he assumed the family name of Altīnay), Turkish historian. He was born in Beshiktash, Istanbul, in 1880, and educated in the Kuleli military lycée and the military school (*Ḥarbiyye Mektebi*), became an officer, but for most of the time was engaged in teaching geography and French. In 1909 he was appointed to the General Staff, as editor of the *ʿAskerī Medjmūʿa*, in which he himself published articles on military subjects. After becoming a member of the *Taʾrikh Endjümeni*, he retired and devoted himself entirely to his studies. From 1917 to 1933 he was professor of history in the University of Istanbul. He died on 10 Oct. 1937.

He wrote a very large number of historical books, partly of a scholarly, partly of a more popular character, and published many documents concerning Ottoman history from the archives. Among his best known books are those on life in old Istanbul (*Hicri X uncu*—or respectively *XI inci*, *XII inci*, *XIII üncü—Asirda Istanbul Hayati*), and the series of monographs: *Gečmish ʿAṣirlarda Türk Ḥayāti*. Numerous articles by him were published in *TOEM*, *Yeni Medjmūʿa*, *Ḥayāt*, *Edebiyat Fakültesi*, *Türkiyat Mecmuasi*.

Bibliography: Reşad Ekrem Koçi, *Ahmed Refik*, Istanbul 1938; Ismail Habib, *Edebiyat Tarihi*, Istanbul 1942, 384; O. Spies, *Die türkische Prosaliteratur der Gegenwart*, Berlin 1943, 83-7 (with full list of his works). (A. Tietze)

AḤMAD RĀSIM, Turkish writer, b. 1864 in Sarīgüzel or Sarīgez, a quarter of Fātiḥ, Istanbul, d. 21 Sept. 1932 in the island of Heybeliada and buried there. In early life he lost his father Bahā al-Dīn, who belonged to the family of Mentesh-oghlu from Cyprus, and was brought up by his mother.

From 1292/1875 to 1300/1882-3 he attended the school Dār ül-Shafaḳa in Istanbul, where he was attracted to art and literature and decided to become a writer; and to this profession (or, as he himself calls it, "the Sublime Porte Road", *Bāb-i ʿĀlī Djaddesi*) he remained faithful throughout all later political changes. Like many other writers he began as a journalist, and almost all the more important Turkish papers received contributions from his pen. He afterwards collected his numerous articles and sketches, for example in the two volumes of *Maḳālāt we-Muṣāḥabāt* (1325) and the four volumes entitled *ʿÖmr-i Edebī* (1315-19). The latter is not an account of his life but reflects his spiritual development and the feelings and emotions reflected in his publications of different years.

Aḥmad Rāsim's output became in time very extensive; in all, he is said to have produced about 140 works of larger or smaller size. Nevertheless he was not a polygraph in the depreciatory sense of the word; before dealing with a subject he always studied it thoroughly and then wrote on it seriously, or sometimes in the lightly humorous fashion of which he was a master, or again in a pleasing conversational way, but always with artistic feeling and in his particular style, which was new and independent of existing schools and coteries. He had a great success with his public; he himself created a school of writers, and his influence has been strongly felt in Turkish literature.

His literary work in the fields of the novel, short story and tale, includes his early novels *Meyl-i Dil* (1890) and *Tadjārib-i Ḥayāt* (1891) (short analysis of both in P. Horn, *Gesch. der Türkischen Moderne*, 46 f.), the patriotic novel *Mashāḳḳ-i Ḥayāt* (1308), the stories *Tedjribesiz ʿAshḳ* (1311) and *Mekteb Arkadashlm* (1311), a little later *Nākām* (1315) and another patriotic novel *ʿAsker-oghlu* (1315) and the more lyrical *Kitābe-yi Ghamm* (1315) and *ʿAndalib* (in verse).

At the same time he had from the first a preference for history and sought to arouse an interest in it among his fellow-countrymen by presenting his carefully prepared compilations in popular form. After earlier works on the history of Rome, of civilisation, etc., he devoted himself to the history of Turkey, and produced a work on Turkish history from Selīm II to Murād V, entitled *Istibdāddan Ḥākimiyyet-i Milliyyeye* (1341-2), and a general survey, *ʿOthmānlī Taʾrīkhi* (1326-30). A valuable supplement to these is formed by his "City Letters", *Shehir Mektūblarī* (1328-29), which contain an unsurpassed description of old Istanbul life in all its variety, written in a vivid and stimulating manner. In *Menāḳib-i Islām* (1325) the Muslim festivals, mosques, and other religious matters are dealt with. To the history of literature belongs his book on Shināsī [*q.v.*], which was intended as an introduction to the history of the Turkish Moderns (*Maṭbūʿāt Taʾrīkhine Medkhal. Ilk büyük Muḥarrirlerden Shināsī*, 1927). *Maṭbūʿāt Khāṭīrlarīndan* (1924) contains his personal recollections of Turksh writers, and *Falaḳa* (1927) of his own schooldays and the old system of education in general.

Aḥmad Rāsim was also a prolific writer of school books on grammar, rhetoric, history, etc., and composed also a work on model letters (*ʿIlāweli Khazīne-yi Mekātīb yahod mükemmel Münsheʾāt*, 5th ed. 1318). In addition he translated many western works, and a large collection from his early period is called "Selections from Western Literature" (*Edebiyyāt-i Gharbiyyeden bir Nebdhe*, 1887). He was a talented composer as well, and left 65 songs now preserved in the Dār ül-Shafaḳa library.

For this great literary activity Aḥmad Rāsim required a measure of freedom which did not exist under ʿAbd al-Ḥamīd II, and such as he could hardly have enjoyed at all as a state official. He was, however, twice a member of a commission of the Conseil de l'Instruction Publique (*Endjümen-i Teftīsh we-Muʿāyana*), but only for a short time. He showed his interest in religious matters in 1924, when after the abolition of the caliphate he wrote an article in *Waḳit* on 4 March 1924 on the relics (*amānāt, mukhallafāt*) of the Prophet, cloak (*khīrḳa*), banner (*liwāʾ*), praying-carpet (*sadjdjāda*) etc., which also appeared in Cairo and Damascus in Arabic. He proposed to make these relics accessible to the public in a museum (cf. C. A. Nallino, in *OM*, 1924, 220 f.). From 1927 he was a deputy for Istanbul along with men like ʿAbd al-Ḥaḳḳ Ḥāmid and Khalīl Edhem (cf. *OM*, 1927, 416; 1931, 227 and Meḥmed Zekī, *Encyclopédie biographique de Turquie*, i, 1928, 23 and ii, 1929, 88), but suffered from ill-health in his last years.

Bibliography: *Newsāl-i Millī*, i, 1330, 265-7; Ismāʿīl Ḥabīb, *Türk Tedjeddüd Edebiyyātī Taʾrīkhi*, Istanbul 1925, 567-9; *Tanzimattanberi*, 1940, 358-64; Ali Canip, *Edebiyat*, 1929, 171-4; idem *Türk Edebiyatī Antolojisi*, 1934, 98-120; Bulḳurluzade Riḍā, *Muntakhabāt-i Bedāyiʿ-i Edebiyye*, 1326, 347-50; Basmadjian, *Essai sur l'histoire de la littérature ottomane*, 1910, 217; Hüseyin Djāhid, *Kagawlarīm*, 1326, 259-90; Ahmet Ihsan, *Matbuat hatīralarīm*, 1930, 76; Wl. Hartmann, *Unpolitische Briefe aus der Türkei* (*Der islamische Orient*, vol. ii), Leipzig 1910, index, p. 252; Ibnülemin Mahmud Kemal, *Son asir türk şairleri*, viii, 1939, 1358-62; Reşat Ekrem Koçī, *Ahmed Rasim, hayatī, seçme şiir ve yazīlarī*, 1938; Ibrahim Alâettin Gövsa, *Türk meşhurlarī ansiklopedisi*, 24; Nihad Sami Banarlī, *Resimli türk edebiyatī tarihi*, 328-9; *IA*, s.v. (by S. E. Siyavuşgil); Suat Hizarcī, *Ahmed Rasim* (Türk Klasikleri, 30), 1953. (W. Björkman)

AḤMAD RASMĪ, Ottoman statesman and historian. Aḥmad b. Ibrāhīm, known as Resmi came from Rethymno (Turk. Resmo; hence his epithet?) in Crete and was of Greek descent (cf. Hammer-Purgstall, viii, 202). He was born in 1112/1700 and came in 1146/1733 to Istanbul, where he was educated, married a daughter of the Reʾīs Efendi Taʾūḳdji Muṣṭafā and entered the service of the Porte. He held a number of offices in various towns (cf. *Sidjill-i ʿOthmānī*, ii, 380 f.). In Ṣafar 1171/Oct. 1757 he went as Ottoman envoy to Vienna and on his return made a written report of his impressions and experiences. In Dhu'l-Ḳaʿda 1176/May 1763 he was again sent to Europe, this time as ambassador to the Prussian court in Berlin. He also wrote a very full account of this mission, which early attracted attention, in the West also, for its views on Prussian policy, its description of Berlin and its inhabitants and all sort of observations on related topics. After filling a number of important offices he died on the 2 Shawwāl 1197/31 August 1783; on this date cf. Babinger, 309, note 2) in Istanbul. His tomb is in the Selīmiyye quarter of Scutari.

In addition to the descriptions already mentioned of his embassies (*sefāret-nāme's*) to Vienna and Berlin, Aḥmed Resmī wrote in connection with the Russo-Turkish war and the peace of Küčük

Ḳaynardje (1769-74) a treatise entitled *Khulāṣet ül-Iʿtibār*, in which as a participator in the campaign and eye-witness, he gave his impressions of this important period in the history of Turkey. Of especial value are his biographical collections, particularly his *Khalīfet ül-Rüʾesāʾ* (composed in 1157/1744) with the biographies of 64 *reʾīs ül-kuttāb* (*reʾis efendiler*) and his *Ḥamīlet ül-Küberāʾ*, in which he gives the lives of the chief eunuchs of the imperial *ḥarem* (*ḳîzlar aghalarî*). Of a similar nature is his continuation (written in 1177/1766) of the *Wefayāt* of Meḥmed Emīn b. Ḥādjdjī Meḥmed called Alay-beyī-zāde, in which he gives in twelve lists the deaths of famous men and women (cf. the accurate list of contents in Hammer-Purgstall, ix, 187 f.). He also wrote several other works on geology and proverbs.

Bibliography: *Sidjill-i ʿOthmānī*, ii, 380 f.; Brusalî Meḥmed Ṭāhir, *ʿOthmānlî müʾellifleri*, iii, 58 f. (with list of works); Babinger, 309-12 (add to the list of the MSS of his *sefer-nāme's*: Berlin, Or. 4° 1502, fol. 27v-46v (incomplete), Paris, Suppl. Turc 510 (?); Paris, collection of Cl. Huart and the MSS described in *İstanbul Kitaplîklarî Tarih-Coğrafya Yazmalarî Kataloglarî*, i, no. 483; add also the Polish transl. *Podroż Resmi Ahmed-Efendego do Polski i poselstwo jégo do Prus* 1177 (according to Wāṣif, *Taʾrīkh*, i, 239 ff.) in J. (F. Babinger)

AḤMAD AL-RĀZĪ. [See AL-RĀZĪ].

AḤMAD SHĀH is the name of various Muslim monarchs in India. The most notable are:

1. Aḥmad Shāh Bahādur Mudjāhid al-Dīn Abū Naṣr, son and successor of Muḥammad Shāh, Grand Mughal of Delhi. He was born in 1138/1725 and came to the throne in 1161/1748. The actual ruler during his reign was Ṣafdar Djang, Nawāb of Oudh, who was also appointed vizier of the new emperor. In order to check the Rohēlas he called upon the Marāṭhās for help, which resulted in their plundering the provinces of his realm, while the Afghāns devastated the Pandjāb. Aḥmad Shāh himself was an incapable ruler and lived for pleasure. After the dismissal of the vizier Ṣafdar Djang his reign soon came to an end; another vizier, ʿImād al-Mulk Ghāzi 'l-Dīn Khān caused him to be declared unworthy to govern, had him put into prison and had his eyes put out 1167/1754. Aḥmad Shāh died in 1189/1775.

2. Aḥmad Shāh I, II and III, Bahmanid rulers; see BAHMANIDS.

3. Aḥmad Shāh b. Muḥammad Shāh Shams al-Dīn, prince of Bengal (835-46/1431-42); see RĀDJĀ GANESH.

4. Aḥmad Shāh I and II, rulers of Gudjarāt, see GUDJARĀT.

5. Aḥmad Shāh, founder of the dynasty of the Niẓām Shāhs; see NIẒĀM SHĀHS.

AḤMAD SHĀH DURRĀNĪ, the first of the Sadōzay rulers of Afghānistān and founder of the Durrānī empire, belonged to the Sadōzay section of the Popalzay clan of the Abdālī [*q.v.*] tribe of Afghāns. In the early 18th century the Abdālīs were to be found chiefly around Harāt. Under their leader Zamān Khān, the father of Aḥmad Khān, they resisted Persian attempts to take Harāt until, in 1728, they were forced to submit to Nādir Shāh. Some time later they rebelled under Dhu'l-Fiḳār Khān, the brother of Aḥmad Khān, but were once more defeated by the Persian ruler who, in 1731, captured Harāt. Recognizing the fighting qualities of the Abdālīs he enlisted them in his army, and, in 1737, after the expulsion of the Ghilzays, he allowed the Abdālīs to settle in Ḳandahār. Aḥmad Khān Abdālī distinguished himself in Nādir's service and quickly rose from the position of personal attendant (*yasāwal*) to the command of Nādir's Abdālī contingent, in which capacity he accompanied the Persian conqueror on his Indian expedition. In Djumādā II 1160/June 1747, Nādir Shāh was assassinated by Ḳizilbāshī conspirators at Kučān in Khurāsān. This prompted Aḥmad Khān and the Afghān soldiery to set out for Ḳandahār. On the way they elected Aḥmad Khān as their leader, hailing him as Aḥmad Shāh. This election was facilitated by the withdrawal in his favour of Hādjdjī Djamāl Khān, the chief of the Muḥammadzays or Bārakzays, the great rivals of the Sadōzays. Aḥmad Shāh assumed the title of *Durr-i Durrān* (Pearl of Pearls), after which the Abdālī tribe were known as Durrānīs. He was crowned at Ḳandahār where coins were struck in his name. Like the Persian conqueror who served as his model, he organized a special force dependent on himself, known as the Ghulām Shāhīs, a heterogeneous body recruited from Tādjīks, Ḳizilbāshes, and Yūsufzays; but he naturally relied chiefly on his immediate followers the Durrānīs. With Ḳandahār as his base he easily extended his control over Ghaznī, Kābul, and Peshāwar. His aims were to consolidate his power in Afghānistān and to increase his prestige and provide employment for his turbulent followers by means of foreign wars in which course he was favoured by the anarchical conditions prevailing in India. Regarding himself as heir to Nādir Shāh's eastern dominions, he laid claim to the provinces which Nādir had wrested from the Mughal emperor. In accordance with this policy, but with no intention of founding an empire in India, he invaded India nine times between 1747 and 1769. He set out from Peshāwar on his first Indian expedition in December 1747. By January 1748 Lahore and Sarhind had been captured. Eventually Mughal forces were sent from Delhi to resist his advance. Lacking artillery and greatly outnumbered he was defeated at Manupur, in March 1748, by Muʿīn al-Mulk, the son of the *wazīr* Ḳamar al-Dīn, who had been killed in a preliminary skirmish. Aḥmad Shāh retreated to Afghānistān and Muʿīn al-Mulk was appointed governor of the Pandjāb. Before Muʿīn al-Mulk could consolidate his position, Aḥmad Shāh, in December 1749, again crossed the Indus. Receiving no reinforcements from Delhi Muʿīn al-Mulk was forced to come to terms. In accordance with instructions from Delhi, Aḥmad Shāh was promised the revenues of the *Čahār Maḥāll* (Gudjrāt, Awrangābād, Siālkot, and Pasrūr) which had been granted by the Mughal emperor Muḥammad Shāh to Nādir Shāh in 1739. While he had been absent in the Panjāb, Nūr Muḥammad Alīzay, a former Afghān general of Nādir Shāh, had conspired to dethrone him. On his return to Ḳandahār the conspiracy was suppressed and Nūr Muḥammad executed. He next turned his attention to his western frontier. By 1163/1751 Harāt, Mashhad, and Nīshāpūr had been captured. Mīrzā Shāhrukh, the grandson of Nādir Shāh, was forced to surrender several districts bordering on Harāt and to acknowledge Afghān suzerainty on his coins. In the same year Aḥmad

S͟hāh came into conflict with the rising Ḳād͟jār power but was repulsed at Astarābād beyond which he was unable to advance. He was more successful across the Hindū Kus͟h where he annexed Balk͟h and Badak͟hs͟hān after which the Oxus roughly formed his northern frontier.

The non-payment of the revenues of the *Čahār Maḥāll* was the reason for his third Indian expedition of 1751-2. Lahore was besieged for four months and the surrounding country devastated. Muʿīn al-Mulk, without reinforcements, was defeated in March 1752, but was reinstated by Aḥmad S͟hāh to whom the emperor formally ceded the two *ṣūbas* of Lahore and Multān. During this expedition Kas͟hmīr was annexed to the Durrānī empire. By April 1752 Aḥmād S͟hāh was once more back in Afg͟hānistān. Muʿīn al-Mulk found the Pand͟jāb a troublesome charge and his death in November 1753 only served to intensify the anarchy. All power was for a time in the hands of his widow Mug͟halānī Bēgam whose profligacy led to constant rebellions. The Mug͟hal *wazīr* ʿImād al-Mulk took advantage of this anarchy to recover the Pand͟jāb for the empire and entrusted its administration to Adīna Beg. Aḥmad S͟hāh immediately set out to recover his lost provinces. Lahore was reached towards the end of December 1756, and, after an unopposed march, Delhi was entered on 28 January 1757. The city was plundered and the defenceless inhabitants massacred. A similar fate befell the inhabitants of Mathurā, Brindāban, and Āgra. Towards the end of March 1757, an outbreak of cholera amongst his troops forced Aḥmad S͟hāh to leave India. Before leaving he married Ḥaḍrat Bēgam, daughter of the late emperor Muḥammad S͟hāh, while his son Tīmūr was married to Zuhra Bēgam, daughter of the puppet emperor ʿĀlamgīr II. The territory of Sarhind was annexed to his empire. Nad͟jīb al-Dawla, the Rohilla leader who had supported him, was left in charge of Delhi and Tīmūr remained as viceroy of the Pand͟jāb. He had no sooner left India than the Sikhs, together with Adīna Beg, rose in revolt against Tīmūr. Early in 1758 Adīna Beg invited the Marāṭhās to expel the Afg͟hāns from the Pand͟jāb. This was accomplished by the Marāthās who actually crossed the Indus and held Pes͟hāwar for a few months. (The evidence which corroborates Grant Duff's *History of the Mahrattas*, 1921, 507, is to be found in the Persian manuscript *ak͟hbārāts* (news-letters) in the archives of the Bharat Itihasa Samahodhak Mandal and in the *Chandrachuda Daftar*, i, 1920, ii, 1934. See also H. R. Gupta's *Studies in Later Mughal History of the Panjab*, 1944, 175-6.) These events brought Aḥmad S͟hāh to India a fourth time (1759-61). Before setting out he marched against Naṣīr K͟hān, the Brahūī chief of Kalāt in Balūčistān who had declared his independence. Despite Aḥmad S͟hāh's failure to capture Kalāt, Naṣīr K͟hān agreed to acknowledge his suzerainty and to furnish contingents for his army. The Marāṭhās rapidly evacuated the Pand͟jāb before the Afg͟hān advance and fell back on Delhi. Sadāshiv Bhāu, the brother of the Marāṭhā *pes͟hwa*, was entrusted with the formidable task of ousting the Afg͟hāns from northern India. The Marāṭhās had not only to face a coalition of the northern Muslim chiefs who had joined forces with Aḥmad S͟hāh but they had to fight without the assistance of the Rād͟jputs and other Hindu powers whom their extortionate demands for *chauth* and *sardeshmukhi* had estranged. The Marāṭhās occupied Delhi (22 July 1760) but it was of little use as a base since food, fodder, and money were unprocurable. The situation, so far as supplies were concerned, was temporarily relieved by the capture of Kund͟jpura (17 October 1760). But this advance proved disastrous as the Afg͟hān army crossed the D͟jumna cutting off Marāṭhā communications with Delhi. The Bhāu now decided to entrench his forces at Pānīpat. Deprived of all supplies by more mobile forces he was compelled to leave his entrenchments and attack the Afg͟hāns. Although the Marāṭhās fought desperately they failed to withstand the fierce Afg͟hān onslaught under Aḥmad S͟hāh's expert generalship and were routed with enormous losses at Pānīpat on 14 January 1761. Aḥmad S͟hāh made no attempt to consolidate his position and in March of the same year was once more on his way back to Afg͟hānistān. The Afg͟hān victory at Pānīpat had far-reaching consequences. It enabled the Niẓām to recover from his defeat at Udgīr (1760), and probably saved the state of Hyderabad from extinction. It also contributed to the rise of an independent Muslim power in Mysore under Ḥaydar ʿAlī. It is usual to regard Pānīpat as a temporary set-back from which the Marāṭhās rapidly recovered. This view ignores the real importance of the victory which granted the English the respite needed for the consolidation of their power in Bengal.

After Pānīpat the main factor in the history of northern India was the growing strength of the Sikhs whose attacks on Aḥmad S͟hāh's lines of communication gradually led to a cessation of the Afg͟hān menace. It was against the Pand͟jāb Sikhs that his sixth expedition (1762) was directed. They were defeated with enormous slaughter near Gūd͟jarwāl in a battle known to Sikhs as the Ghallūghārā. Aḥmad S͟hāh remained in the Pand͟jāb for nine months during which Kas͟hmīr whose Afg͟hān governor had revolted was re-annexed to his empire. But the Sikhs were by no means crushed. Their attacks on Afg͟hān garrisons necessitated three more expeditions between 1764 and 1769. Aḥmad S͟hāh had also to contend with serious revolts nearer home. The Aymāḳ near Harāt rebelled in 1763, and, in 1767, serious disturbances broke out in K͟hurāsān. At Aḥmad S͟hāh's death, in 1184/1773, his empire roughly extended from the Oxus to the Indus and from Tibet to K͟hurāsān. It embraced Kas͟hmīr, Pes͟hāwar, Multān, Sind, Balūčistān, Persian K͟hurāsān, Harāt, Ḳandahār, Kābul, and Balk͟h. Even in his lifetime it was apparent that he would be unable to maintain distant conquests like the Pand͟jāb. Balūčistān was practically independant, and K͟hurāsān was obviously destined to become a Ḳād͟jār possession. Under his successors the Durrānī empire rapidly disintegrated.

AḤMAD AL-**SHAYKH** (known locally as AMADU SÊKU) Tokolor (Takrūrī) ruler, son of al-Ḥādjdj ʿUmar Tal [*q.v.*] the Tokolor conqueror of Western Sudan. Before he proceeded to the conquest of Māsina which cost him his life, ʿUmar left Aḥmad in charge of the Bambara kingdom of Segu, and appointed him *khalīfa* of the Tidjāniyya *ṭarīḳa* for the Sudan. ʿUmar died (1864) before he was able to consolidate his conquests and left Aḥmad to face, not only a heritage of dynastic troubles and revolts of subjected peoples, but also the steady advance of the French. His titular inheritance to the paternal power was not seriously contested, but the unity of the military empire was weakened because the various governors ruled their regions in practical independence. These were his brothers Ḥabīb (ruling Dingiray) and Mukhtār (at Koniakari), his cousin al-Tidjānī (who ruled Māsina independently from 1864 to 1887), and his father's slave Muṣṭafā at Nyoro. Aḥmad's vain attempt to avert the break up involved him in continual warfare. His early years were occupied in dealing with the Bambara of his own kingdom, who were never crushed. His Tokolor chiefs intrigued with his relatives, the revolt of Ḥabīb in 1868 being only one of many. In 1874 he assumed the title of *amīr al-mu'minīn*. The period from 1878-84 witnessed the steady penetration of the French into the Sudan. The anarchy into which the country had fallen gave Aḥmad no chance of offering effective opposition, whilst hostility between him and Samori [*q.v.*] enabled the French to attack and defeat them separately. Aḥmad's brother, ʿAdjību, ruler of Dingiray, allied himself with the French. In 1884, feeling his life in danger at Segu from discontented Bambara and Tokolor, he moved to Nyoro, dispossessing his brother Muntaḳa whom he had installed there in 1873. On 6 April 1890 Segu was occupied by the French Colonel Archinard, and the following year he fled from Nyoro (occupied by Archinard on 1 Jan 1891) to Bandjagara where his defeat on 26 April 1893 brought an end to Tokolor dominion over the Sudan. He fled to the Sokoto region in Hausaland where he died in 1898.

SHAYKH **AḤMAD SIRHINDĪ**, generally known as MUDJADDID-I ALF-I THĀNĪ, an eminent divine and mystic of Muslim India, who contributed in a considerable measure towards the rehabilitation of orthodox Islam, after the heterodoxies of the Emperor Akbar (1556-1605) had had their day. He was born at Sirhind (Patiāla State, East Pandjāb) in 971/1564, being the son of Shaykh ʿAbd al-Aḥad, who traced his descent from the Caliph ʿUmar b. al-Khaṭṭāb. He received his early education from his father and later pursued a course of higher studies at Siyālkōt. He later went to the capital, Agra, where he frequented the society of the chief minister Abu 'l-Faḍl [*q.v.*] and his brother Fayḍī [*q.v.*]. It was probably during these days that he wrote among other things a tract, entitled *Tahlīliyya* in refutation of Shīʿite views. (This tract was, subsequently, translated into Arabic by Shāh Walī Allāh al-Dihlawī, with a prologue on the religious trends of the court of Akbar and the activities of Shaykh Aḥmad.) After some years, he returned to his native town. In 1008 he was initiated into the Naḳshbandī order of Ṣūfīs by Khwādja Bāḳī bi'llāh (d. 1012), who was then living in Delhi. The energy with which he controverted the doctrines of the Shīʿa, who were at that time in favour at the court of the emperor Djahāngīr, rendered him particularly odious to them and they represented his activities as dangerous to the state. An ecstatic utterance of his caused him to be summoned in 1028/1619 to the court at Agra, where his unbending attitude incurred the displeasure of the emperor, who ordered him to be confined in the fort of Gwalior. The emperor was, however, soon reconciled to him, for he not only released him after a year but bestowed upon him a *khilʿa* and a gift of money. Thereafter, the Shaykh kept in close touch with the Imperial camp, till he died in 1034/1624 and was buried at Sirhind, where his tomb is an object of veneration to this day.

Shaykh Aḥmad wrote a number of tracts on religious topics, viz., *al-Mabdaʾ wa'l-Maʿād* (Delhi 1311); *Risāla Tahlīliyya*, published as an appendix to the Lucknow edition of his *Maktūbāt*; *Maʿārif Laduniyya*; *Mukāshafāt Ghaybiyya*; *Risāla fi Ithbāt al-Nubuwwa*; *Ādāb al-Murīdīn*; *Sharḥ Rubāʿiyyāt Khwādja Bāḳī bi'llāh*, etc. But he is chiefly remembered for Letters (*Maktūbāt*), which he wrote (in Persian) to his disciples and other persons and in which he explained a large number of points, ranging over a wide area of Islamic faith and practice. These letters have exercised a great influence in favour of orthodoxy and, in their collected form, constitute one of the most important classics of religious literature produced in Muslim India. It was in recognition of his services to the cause of orthodox Islam that Mullā ʿAbd al-Ḥakīm al-Siyālkōtī [*q.v.*] gave him the title (*laḳab*) of *Mudjaddid-i Alf-i Thānī*, i.e., the Renovator of Islam who appeared at the beginning of the second millenium of the Islamic era. Even in his life time, his influence spread as far as Afghānistān and Central Asia. After his death, it deepened still further, when his descendants and disciples, now called Mudjaddidīs, were dispersed, as a result of the unfavourable conditions produced by the rule of the Sikhs in the Pandjāb.

Although Shaykh Aḥmad was connected with several ṣūfī orders, he avoided their extravagances, especially their pantheistic tendencies; and in fact he tried to bridge the gulf between the monotheistic and pantheistic groups of ṣūfīs by putting forth the theory of *waḥdat al-shuhūd* [*q.v.*] in place of *waḥdat al-wudjūd* (pantheism). This theory is regarded as his special contribution in the field of religious thought.

Bibliography: The *Maktūbāt*, about 530 in number, have been repeatedly lithographed in India (Lucknow 1913; Delhi 1288, 1290; Amritsar 1331-4); Urdū translation by Ḳāḍī ʿĀlim al-Dīn, Lahore 1913; *Tūzuk-i Djahāngīrī*, Aligarh 1864, 272-3, 308; ʿAbd al-Ḳādir Badāyūnī, *Muntakhab al-Tawārīkh*, Calcutta 1868; Muḥammad Hāshim Kashmī, *Zubdat al-Maḳāmāt*, composed in 1037, lithographed at Cawnpore, 126-282; Badr al-Dīn Sirhindī, *Ḥaḍrāt al-Ḳuds* composed in 1057, still in MS, Urdū translation by Aḥmad Ḥusayn Khān, Lahore 1922; Muḥammad Amīn Naḳshbandī, *Maḳāmāt-i Aḥmadiyya*, composed in 1068,

still in MS, Urdū translation published at Lahore; M. Ra'ūf Aḥmad, *Djawāhir ʿUlwiyya*, Urdū translation published at Lahore; Muḥammad Bāḳir, *Kanz al-Hidāya*, composed in 1075, still in MS, Urdū translation by ʿIrfān Aḥmad Anṣārī published at Lahore; M. INAYATULLAH)

AḤMAD TĀ'IB [see ʿUTHMĀN-ZĀDE].

AḤMAD TAKŪDĀR [see ILKHĀNIDS].

AḤMAD WAFĪḲ PASHA, (AḤMED WEFĪḲ PASHA), Ottoman statesman and leading Turkish Turcologist, born 23 Shawwāl 1238/6 July 1823, died at Istanbul 22 Shaʿbān 1308/2 April 1891. He came of a family of interpreters, grandson of Bulgar-zāde Yaḥyā Nādjī, a dragoman of the Porte converted to Islam, of *rūmī* origin according to the historian Shānī-zāde ʿAṭā Allāh Efendi, of Jewish origin according to A. D. Mordtmann. Aḥmed Wefīḳ accompanied his father Rūḥ al-Dīn Meḥmed Efendi, the Turkish chargé d'affaires in Paris, studied for three years at the Lycée Saint-Louis, and returned at the age of 14 to Turkey where a full and varied career lay before him (for details see *Sidjill-i ʿOthmānī*, i, 308). After initial employment on the interpreting staff, his most important posts were as follows:—ambassador in Paris (1860); inspector of the Western Anatolian provinces; legendary president of the first and ephemeral Ottoman Parliament of 1876, with the rank of *wezīr* and title of *pasha*; twice Grand Vizier (for periods of 25 days and one day respectively); governor-general of Brusa. As a diplomat, he successfully defended Turkish interests at the time of the Russian occupation of the Danubian principalities and the French occupation of the Lebanon. He edited the first Imperial Year Book (1293/1876), and the newspaper *Taṣwīr-i Efkār* (in collaboration with Shināsī). He was responsible for the restoration of the Yeshil Djāmiʿ mosque at Brusa (by the French ceramist Parvillé), and for effecting the transfer of the Burgaz Owa estates in the Izmir region, which were granted to Lamartine by ʿAbd al-Madjīd (1849). It was he who was responsible for the celebrated incident in the Paris theatre concerning the production of Voltaire's *Mahomet*.

A strong personality, he was an energetic, honest and conscientious man, frank to the point of rudeness; at the same time he was whimsical and an eccentric, and possessed a dry wit. Extremely studious, and with long periods of leisure at this disposal as a result of being debarred from office by the enmity of ʿAlī Pasha, he immured himself in the library of his famous villa in Rumeli Ḥiṣār, and there produced works to which, however, he scorned to subscribe his name. Turkish studies were his special province. He was self-taught, but acquainted with western studies which, paradoxically, he underestimated; as one of the first "Turkicists", he made an impressive contribution to the Turkish purist movement. His *Lehdje-yi ʿOthmānī* (1st edition 1293/1876: 2nd edition 1306/1890), the first Turkish dictionary in Turkish worthy of the name, a concise work of which the fullest use has not yet been made, formed a basis for the work of Shams al-Dīn Sāmī Bey Frasherī and many others (see the preface to the *Supplément* of Barbier de Meynard, i, p. v). His translation, or rather adaptation, of sixteen comedies of Molière (2nd edition in Latin script, 1933) is a masterpiece. (He produced them on the stage at Brusa.) He also translated *Télémaque*, *Gil Blas de Sentillane* and the *Micromégas* of Voltaire. In eastern Turkish, he published Abu 'l-Ghāzī and, in collaboration with Belin, the *Maḥbūb al-Ḳulūb* of Mīr ʿAlī Shīr Nawā'ī (1289/1872). A collection of proverbs (*Atalar Sözü*) figures among his other works. For his historical works, see Babinger (see below) and Enver Koray, *Türkiye tarih yayinlari bibliyografyasi*, Ankara 1952.

Aḥmed Wefīḳ was buried in the Ḳayalar ("Rocks") cemetery at Rumeli Ḥiṣār, allegedly by order of ʿAbd al-Ḥamīd II, but once again there are probably no grounds for this assertion. Aḥmed Wefīḳ's grandfather, who owned estates in the neighbourhood, was buried in the same cemetery. The Sultan's displeasure may be explained by the fact that Aḥmed Wefīḳ had sold land to the American institution Robert College.

AḤMAD WĀṢIF [see WĀṢIF].

AḤMAD YASAWĪ, Turkish ṣūfī shaykh of Central Asia. His life story is shrouded in legend like those of many popular saints. Son of a certain Shaykh Ibrāhīm, he was born at Sayrām (Isfīdjāb) in Turkistān during the second half of the 11th century. He lost his father at the age of seven and the family settled at Yasī. There, he began his education (it is said as a disciple of Arslan Baba),

later moving to Bukhārā where he became a disciple of the great Shaykh Yūsuf Hamadhānī, and eventually succeeded him in 555/1160. He returned to and remained in Yasī until his death in 562/1166.

Aḥmad Yasawī's tomb became a place of pilgrimage for kings and princes and was especially venerated by the Turks of Central Asia and the Volga region. A sumptuous mausoleum was erected in Yasī (later known as Turkistān) by Tīmūr [see YASĪ] and the cult of Yasawī has never decreased. Among the Turkish nomads Yasawī's doctrine was adapted to local trends and was strongly influenced by pre-islamic Turkish creeds and rituals. The *shaykh*'s first *khalīfa* was Arslan Baba's son, Manṣūr Ata (d. 594/1197) great-grandfather of Zengi Ata [*q.v.*]; the second, Saʿīd Ata (d. 615/1218), the third Ḥakīm Ata [*q.v.*] (d. 582/1188). His other successors also bore the title of *ata*. Yasawism established itself in Eastern Turkistān, later spread to Mā warā al-Nahr, Khwārizm, as far as Bulghār, Khurāsān and Persia, and penetrated into Anatolia with the migration of Yasawī shaykhs, among whom Ḥādjdjī Bektāsh and Sarī Saltuḳ [*qq.v.*] are outstanding.

We know that Aḥmad Yasawī wrote vernacular Turkish verse in the old syllabic metre in order to popularize and spread his mystic doctrine. But the poems to be found in the extant collection called *Dīwān-i Ḥikmet* attributed to him (*ḥikmet* = "religious poem"), can hardly be genuine. The original work of Aḥmad Yasawī has not come down to us and the oldest MSS belong to the 17th century. But we can safely assert that these poems reproduce the true spirit and style of Aḥmad Yasawī, since we know that the verses of many a mystic leader were often faithfully imitated, for centuries, by later disciples (cf. Yūnus Emre and his followers). The poems in the *Dīwān-i Ḥikmet* are of a didactic character and express, in popular language, Islamic and mystic precepts. They gave rise to a new *genre* in Turkish literature : mystic folk literature which, in the following centuries, flourished side by side with secular folk literature and classical literature.

ADĪB **AḤMAD YUKNAKĪ** (the *nisba* may possibly refer to the village of Yūghnāk, south of Tāshkent), early Turkish poet of the 12th century, author of the didactic poem in quatrains, *ʿAybat al-Ḥaḳāʾiḳ*, dedicated to a certain Dād Sipāhsālār Beg. Its subject matter is related to that of Yūsuf Khāṣṣ Ḥādjib's [q.v.] *Kutadghu Bilig*; its language is also akin to, though not identical with, that of the *Kutadghu Bilig*. The content is, however, more Islamic in character, and more Arabic and Persian words are used. It was edited by Nedjīb ʿĀṣim, under the title *Hibet al-Ḥaḳāʾiḳ*, Istanbul 1334. Critical edition by R. Rahmati Arat, Istanbul 1951.

Fuad Köprülü, in *MTM*, v, 369-80; idem, in *Türkiyyāt Medjmūʿasi*, 255-7; idem, *Hibet al-Ḥaḳāʾiḳ ḥakkında yeni bir wethiḳa*, *Türkiyyāt Medjmūʿasi*, 1926, 546-9; idem, *Türk Dili ve Edebiyati hakkinda Araştirmalar*, Istanbul 1934, 45 ff. (reprint of the aforementioned articles and two new ones: *Hibet al-Hakayik hakkinda yeni bir vesika daha*, and *Hibet al-Hakayik tetkiklerinin bugünkü hali*).

AḤMADĀBĀD is the capital of the district of that name in India (Presidency of Bombay), on the river Sābarmatī. In 1901 the town numbered 185, 899 inhabitants, of which about 1/8 were Muslims, the district (3,816 square miles = 9,883 square kilometres) containing 795,967 inhabitants. Aḥmadābād is one of the most beautiful towns in India and is famous for the manufacture of gold and silver brocade, of silk, cotton and satin (*kamkhāb*) materials. It is equally noted for its brass and bronze works, and for the manufacture of mother of pearl ornaments, of japanned goods and wood-carving (e. g. betel-boxes, *pāndān*). There are also a great many monuments of ancient Muslim art, amongst others mosques and mausoleums of the 15th and 16th centuries.

Aḥmadābād was founded in 1411 by Aḥmad Shāh I sultan of Gudjarāt [*q.v.*], (who made the old Hindu town of Aṣaval his capital), and was enriched by him with countless buildings. In the first century of the Gudjarāt dynasty it rapidly attained prosperity. But after that it fell into decline; it enjoyed another period of prosperity under the reign of the Mughal emperors, until, in the 18th century, it again deteriorated. In 1818 the English took possession of the town.

AḤMADĪ, TĀDJ AL-DĪN IBRĀHĪM B. KHIḌR, the greatest Ottoman poet of the 8th/14th century. His place and date of birth are not known: the weight of the evidence is in favour of Germiyān, before 735/1334-5. After learning all that Anatolia had to teach him, he went to Cairo to study under Akmal al-Dīn (al-Bābartī), commentator of the *Hidāya*; he also made friends with Ḥādjdjī Pasha and Molla Fenārī. Returning home, he entered the service of the Germiyān-oghlu in Kütahya, Sulaymān Shāh, a well-known patron of poetry, who ruled over the principality from c. 769/1367 to 788/1386. (He wrote for him the *Iskander-nāme*, the final version of which was, however, presented to Sulaymān Čelebi.) Later he joined the court of his patron's son-in-law, the Ottoman sultan Bāyezīd I, and was especially favoured by his son, Sulaymān Čelebi. If the traditional account is to be believed, he met Tīmūr after his victory at Ankara. What is certain is that the poet seized the earliest opportunity of rejoining Sulaymān Čelebi at his court in Adrianople, although from several hostile references in his poems to the people of Brusa it appears that Aḥmedī spent some years in the latter city. This hostility is understandable in view of Aḥmedī's devotion to Sulaymān, as the people of Brusa sided with Meḥmed Čelebi (Muḥammad I). His *dīwān* contains many panegyrics on Sulaymān, to whom he also dedicated the final version of the *Iskender-nāme*, *Djemshīd we-Khurshīd*, and *Tarwīḥ al-Arwāḥ*. At the end of his moving

elegy on the death of Sulaymān (814/1411) the poet did not neglect to add a prayer for the new sultan, Meḥmed, to whom he subsequently dedicated some of his poems. He died at Amasia in 815/1413.

His main works are the following. (1) *Iskender-nāme*, on the life and deeds of Alexander the Great, the subject matter of which is borrowed from Firdawsī and Niẓāmī, but is expanded by many didactic digressions. The language is singularly pure Turkish and the metre is the native *parmak ḥisābī*. The poem ends with a trivial sketch of Islamic history, the last part of which, however, is a highly important versified history of the Ottomans, the first we have, on which later historians frequently drew. (The story is brought down to different dates in different versions.) (2) *Djemshīd we-Khurshīd*, a *mathnawī* on the theme of the love of a Chinese prince for a Byzantine princess, based on Salmān Sāwadjī's poem of the same title. (3) *Tarwīḥ al-Arwāḥ*, a didactic *mathnawī* on medicine and preservation of health, apparently written for the edification of Sulaymān Čelebi. (4) A *dīwān*.

AḤMADĪ [see SIKKA].

AḤMADĪLĪS, a dynasty of princes of Marāgha. Distinction must be made between the eponym Aḥmadīl and his successors. Aḥmadīl b. Ibrāhīm b. Wahsūdān al-Rawwādī al-Kurdī was a descendant of the local branch of the originally Arab family of Rawwād (of Azd) established in Tabrīz (see RAWWĀDIDS). In the course of time the family became Kurdicized, and even the name Aḥmadīl is apparently formed with an Iranian (Kurdish) diminutive suffix *-īl*. Aḥmadīl took part in the anti-Crusade of 505/1111. During the siege of Tell Bāshir, Jocelyn made an arrangement with him and he withdrew from the town (Kamāl al-Dīn, *Taʾrīkh Ḥalab*, *RHC*, iii, 599). Shortly afterwards he left Syria altogether in the hope of winning the succession to the Shāh-i Arman [*q.v.*] Suḳmān (d. 506/1112). As Suḳmān had subjugated Tabrīz, Aḥmadīl was probably interested in recapturing the basic fief of his ancestors. According to Sibṭ b. al-Djawzī (*RHC*, iii, 556), Ahmadīl could muster 5,000 horsemen and his revenue amounted to 400,000 dinars yearly. In 510 (or 508) he was assassinated in Baghdād by the Ismāʿīlīs, to whom he had caused much harm (*RHC*, ibid.; Ibn al-Athīr, s.a. 510).

The study of his successors is complicated by the variants of their names and titles used in different sources. Aḥmadīl was apparently succeeded by one of his slaves, bearing the Turkish name Aḳ Sunḳur "al-Aḥmadīlī", who is often mentioned in the struggles between the sons of Sultan Muḥammad (d. 511/1118). In 514 Masʿūd b. Muḥammad appointed his former *atābek* Ḳasīm al-Dawla al-Bursuḳī to Marāgha, but Sultan Maḥmūd b. Muḥammad restored Aḳ Sunḳur (who had come to Baghdād) to Marāgha. After the death in 515/1121 of Kün-tughdi, *atābek* to Malik Ṭughril b. Muḥammad, Aḳ Sunḳur was anxious to succeed him; Tughril ordered him to raise 10,000 horse and went with him to conquer Ardabīl. During the unsuccessful siege of this town, Marāgha was occupied by Djuyūsh-beg, sent by Sultan Maḥmūd. Under 516/1128 the Georgian chronicle (Brosset, i, 368) mentions the defeat of the "*atābek* of Arrān" Aghsunthul (*Aḳ Sunḳur), whom Ṭughril had directed to carry out a raid in Sharwān. In 522 he was employed to frustrate the intrigues of the Mazyadid Dubays. Under 524 we hear of Aḳ Sunḳur, *atābek* to Dāʾūd b. Muḥammad, supporting the candidature of this prince. In 526 Ṭughril defeated his nephew Dāʾūd and occupied Marāgha and Tabrīz (al-Bundārī, 161). Aḳ Sunḳur fled to Baghdād and then helped Dāʾūd's other uncle Masʿūd to reoccupy Ādharbaydjān. He also captured Hamadhān but in 527/1133 was killed by Ismāʿīlīs instigated by Ṭughril (ibid., 169).

Aḳ Sunḳur's son and successor is usually called Aḳ Sunḳur (Ibn al-Athīr, xi, 166, 177; *Taʾrīkh-i Guzīda*, 472), but is called also Arslān b. Aḳ Sunḳur (*Akhbār al-Dawla al-Saldjūḳiyya*), and referred to by ʿImād al-Dīn as Nuṣrat al-Dīn Khāṣṣ-bek (al-Bundarī, 231, and even, p. 243, as Nuṣrat al-Dīn Arslān-Aba ?). At this time the authority in Ādharbaydjān was divided between Eldiguz, *atābek* to Arslān b. Ṭughril, and Aḳ Sunḳur II, who was associated chiefly with the family of Malik Muḥammad b. Sultan Maḥmūd. An enemy of Aḳ Sunḳur, Khāṣṣ-bek Arslān b. Beling-eri, besieged Marāgha in 541/1146 (al-Bundārī, 217). In 547/1152 Sultan Muḥammad executed Ibn Beling-eri, but in point of fact this execution alerted the two lords (*ṣāḥibān*) of Ādharbaydjān, Eldiguz and Aḳ Sunḳur, who proclaimed another candidate (Sulaymān). When Muḥammad was restored he appointed Aḳ Sunḳur as *atābek* to his son Dāʾūd. This led to a rift with Eldiguz. With the help of the Shāh-i Arman, Aḳ Sunḳur defeated Pahlawān b. Eldiguz on the Safīd Rūd. In 556/1161 he supported Inandj of Rayy, who was hostile to Eldiguz, but this *amīr* was defeated by Eldiguz in 557, and Aḳ Sunḳur subsequently accompanied Eldiguz on his expedition to Georgia (557/1162). In 563, however, Aḳ Sunḳur obtained from Baghdād the recognition of his charge, Malik Dāʾūd, and this led to a new clash with Pahlawān (Ibn al-Athīr, xi, 218). Soon afterwards, Aḳ Sunḳur fades out of the picture. According to *Taʾrīkh-i Guzīda*, 472, his brother Ḳutlugh revolted in Marāgha, apparently with the encouragement of the *amīr* Inandj of Rayy (d. 564/1168-9; see Ibn al-Athīr, xi, 230). Pahlawān suppressed the revolt and left Marāgha to Aḳ Sunḳur's brothers ʿAlāʾ al-Dīn and Rukn al-Dīn.

Under 570 Ibn al-Athīr (xi, 280) mentions in Marāgha Falak al-Dīn, son of Aḳ Sunḳur (II), who must have cherished some designs on Tabrīz, but after a clash with Pahlawān had to desist from this claim, although the hereditary rift between the two families persisted. In 602/1205-6 the lord of Marāgha ʿAlāʾ al-Dīn made a pact with the lord of Irbil Gökbüri to depose the incapable Eldiguzid Abū Bakr, but the latter, with the help of the former slave of the family Ay-doghmïsh, expelled ʿAlāʾ al-Dawla from Marāgha, giving him Urmiya and Ushnū in compensation. In 604 ʿAlāʾ al-Dawla (whom Ibn al-Athīr, xii, 157, 182, this time calls Ḳara Sunḳur) died, and a courageous servant of his took charge of his minor son who died in 605. The servant remained in the castle of Rūyīn-diz, while Abū

Bakr occupied the remaining territories of Marāgha. It seems certain that ʿAlāʾ al-Dawla was the patron to whom Niẓāmī dedicated his *Haft Paykar* (completed in 593 ?) and whom the poet calls ʿAlāʾ al-Dīn Krb (*Körp*-"young")-Arslān (see Rieu, *Cat. Pers. MSS*, ii, 567, and *Suppl.*, 1985, 154). Niẓāmī refers to his two sons Nuṣrat al-Dīn Muḥammad and Aḥmad (one of whom may be the son who according to Ibn al-Athīr died in 605).

After this we find the line continued by women. When in 618/1221 the Mongols took Marāgha the mistress of the town survived in the fortress of Rūyīn-diz. In 624/1224 Sharaf al-Mulk, *wazīr* of the Khwārazm-shāh Djalāl al-Dīn, besieged Rūyīn-diz, whose mistress was a granddaughter of ʿAlāʾ al-Dīn Kraba (Nasawī, 129; possibly *Körp-apa ?). She was married to the deaf-mute son of the Eldiguzid Uzbek (called Khāmūsh, "silent"), but probably was separated from him because Khāmūsh had joined Djalāl al-Dīn and later went over to the Ismāʿīlīs (Nasawī, 129-30). The princess was ready to wed Sharaf al-Mulk when Djalāl al-Dīn himself arrived on the spot, married her, and appointed his own governor to Rūyīn-diz (ibid., 157). Khāmūsh had a numerous family and it is not clear whether his son "*atābek* Nuṣrat al-Dīn" was born to him of the Aḥmadīlī princess. According to Djuwaynī, Nuṣrat al-Dīn was hiding in Rūm, but towards 644/1246 he obtained an *āl tamgha* from Güyük Khān for the governorship of Tabrīz and Ādharbaydjān.

(V. Minorsky)

AḤMADIYYA is the name (i) of an organized religious community, standing in continuity with its eponym, Mīrzā Ghulām Aḥmad of Ḳādiyān; and (ii) of a small organization or movement derived from (i).

Ghulām Aḥmad was born into the leading family of the small town of Ḳādiyān, Gurdāspur district, Pandjāb, India, about 1255/1839. The title *Mīrzā* relates to the family's having come in with the conquering Mughals, in this case under Bābur. The boy received a good traditional education, in Arabic and Persian, and was from childhood studious and reflective. Rather than follow his father as *ḥakīm*, or this father's wishes by going on in British government service or practising law, he soon gave himself up (on his landlord income) to quietude in his native place. Along with meditation and religious study he developed apparently a propensity for hearing voices. At the age of about forty he began to publish (1880) a considerable work *Barāhīn-i Aḥmadiyya*, which was well received. On 4 March 1889 he announced that he had received from God a revelation authorizing him to accept *bayʿat*; and a small group was forthcoming of formal disciples, who were devoted and in some cases remarkably able men. Opposition from the Muslim community began two years later when he announced that he was the *Masīḥ* and the *Mahdī*. From that date (1891) until his death (24 Rabīʿ II 1326/26 May 1908) there was continuous increase both in opposition to him and in his own claims; also in his following. Controversy raged; chiefly with Muslims, though also with Hindus and Christians. He claimed to receive revelations (both *ilhām* and *waḥy* are used), including foreknowledge; to perform miracles (including both raising the dead to life, and *vice-versa*: he boasted of bringing about, through prayer, the death of rivals); and to be an *avatār* of Kṛṣṇa (1904) as well as Jesus returned to earth and the Mahdī; also the *burūz* ("re-appearance") of Muḥammad. Whether he claimed to be a *nabī*, and if so what he meant by it, is disputed between the two groups into which his followers later divided (see below). His teachings, over his last twenty years, are multifarious: sometimes curious (as, e.g., that Jesus died and is buried in Srinagar) or well-informed, sometimes inconsistent, often polemical and crude, sometimes remarkably spiritual. One discerns in them, in addition to peripheral Hindu concepts and a reaction against Christian influences, but more especially in the pattern of his life and the positive response evoked, a late Indian ṣūfī version of Islam activated by modern-Western infiltrations.

When he died, his followers thereby ceased to be a body of disciples; they became instead a community of believers, and, rather than disintegrating, elected a *khalīfa* (Mawlawī Nūr al-Dīn) and proceeded to exist as an independent community. The validity of this, or at least of its form, was doubted by some; and when this first *khalīfa* died (1914), most of the executive and westernized minority seceded, to set up at Lahore a society propagating the new teachings (as they saw them), while the majority remained at Ḳādiyān rather as a community embodying those teachings (and propagating itself). There was a political difference also: the secessionists (dissociating themselves less from the wider Muslim community) were beginning to feel and to participate in the nascent anti-imperialism of Indian Islam (Kānpur mosque incident, 1913), while the major group explicitly clung to the traditional loyalty of the founder and his family. They chose the founder's twenty-five-year old) son as *Khalīfat al-Masīḥ II*. The forty years of his *khilāfat* have been the story of the gradual forging of the virtually new movement that exists to-day. Similarly in the case of the Lahore party, which had as leader a young lawyer and religious intellectual, it has been rather the gradual working out of a virtually new system of ideas.

Both groups were—and are—dynamic, and have developed much, each in its own way. They have travelled far, from their common starting point, and also from each other. They will, accordingly, be separately described.

(i) The community. Name: Urdū, Djamāʿat-i Aḥmadiyya; English, Ahmadiyya Movement in Islam. An Aḥmadī is also commonly referred to as *Ḳādiyānī* (which since 1947 has become less appropriate; see below), and sometimes—usually to his own annoyance—as *Mirzāʾī*. Membership is by birth within the movement, or by joining, on formal profession of faith and acceptance of duties. According to their own figures, there are some half-million members; about half of these being in Pakistan, the rest somewhat evenly divided between India and the remainder of the world (chiefly West Africa; but there are Aḥmadī congregations from Indonesia to the Arab world, with small bands of converts also in Britain, the continent of Europe, and the United States). Members pay monthly dues (from each a minimum of $^1/_4$ % of his income is required; with various further contributions expected and often given). The movement accordingly handles considerable sums; and its organization is strong and centralized. The community also operates and enforces (on traditional "Islamic" lines) its own internal judiciary (*ḳaḍāʾ*) so far as feasible. New headquarters of the community are at Rabwah, Pakistan. There is a central Advisory Council (*Madjlis-i Mushāwarat*), largely elected; and a strong central secretariat. However, all power is finally vested in the head of the movement, who for the last

forty years has been, as already indicated, the founder's son, Ḥaḍrat Mīrzā Bashīr al-Dīn Maḥmūd Aḥmad (b. 1306/1889). So largely have direction and control been in his hands that the movement in its present form may be said to be in significant degree his creation.

The above organization binds the community together; and strikingly vigorous, well-planned missionary activity throughout the world continues to expand it. These externals, however, are manifestly informed by a spiritual quality, a faith and religious life. Four, overlapping, aspects of this may be noted: the memory of the founder, reverence for the present head, doctrine, and the intensity of corporate life. The teachings are those of the founder, as interpreted (expanded, modified) by the present head. At the present stage of development they are most effectively presented in his *Aḥmadiyyat or the True Islam* (1924: 3rd ed., Washington 1951; also available in other languages), and in his vast Ḳur'ān commentary, now in process (*Tafsīr-i Kabīr*, in Urdū). In the formula currently signed on joining the movement, a statement addressed to the head, these sentences figure: "I bear witness that God alone is to be worshipped. He is One having no partner. /... I will try my best to act upon all the Laws of Islam. /I will obey you in everything good that you tell me. /I consider the Holy Prophet Muhammad to be the Seal of the Prophets, and also believe in all the claims of the Prophet Aḥmad of Qadian (peace be on them) ..." (from the English version used in the Washington, D. C., mosque). The core of Aḥmadī belief is that their community embodies the only true form of Islam (the one true religion, sent by God), it having been launched in this revitalized and newly revealed form by Aḥmad, who was sent by God for the purpose, and it is being further divinely guided through its present head. Other Muslims, by rejecting this heaven-sent re-formation, are pronounced *kāfir*. Of the veneration in which the present head is held by his followers a compelling illustration is the reasoned tribute by one who is to-day a world figure: Zafrullah Khan, *The Head of the Ahmadiyya Movement in Islam* (offprint, Chicago, n.d. [c. 1945]).

The activities of the community, apart from their zealous and efficient propaganda, include such internal matters as the establishing and running of schools and colleges (the former centre, Ḳādiyān, appears to have been much the most literate town in India, with almost total feminine literacy). They produce great quantities of literature (see below); have their own exclusive mosques; and sustain a telling *esprit de corps*.

Aḥmadī relations with Hindus and Sikhs have been chiefly attempted proselytism, with very limited success; with Christians there was also at first a spirited polemic on both sides, not without acerbity, though the situation appears gradually to have improved. It is with other Muslims that the Aḥmadiyya have had primarily to deal: from them has come the overwhelming body of their converts, and also their opposition, often bitter and at times violent. The ambiguities of their situation became particularly vexed with the establishment in 1947 of Pakistan, into which both geographically and ideologically they almost, but not quite, fit. They transferred their headquarters perforce from Ḳādiyān (in India, because of the controversial Radcliffe award) to a site, previously barren, in Pakistan, which they named Rabwah (cf. Ḳur'ān, ii, 265) and where they are now constructing a town (about 90 miles south-west of Lahore). The political issue was less easily settled: wether they, who called other Muslims *kāfir*, should be fully admitted into the Muslims' new state, was a question that flared up in 1953 and brought riots, bloodshed, and the fall of governments.

The *Bibliography* is enormous. The most important source is the movement's own voluminous publications. A few of the founder's more than 75 books (in Arabic, Persian, Urdū) have been republished by the present community in several languages (perhaps most important to-day: *The Teachings of Islam*, various editions); the first *khalīfa* wrote some half-dozen, and the present head is the author of over thirty works (two most important noted above; add: *Introduction to the Study of the Holy Quran*, London 1949; *Economic Structure of Islamic Society*, Qadian 1946). Other members have written about the community, and its leaders; also lives of Muḥammad, etc. (e.g. Sufi M. R. Bengalee, *Life of Muhammad*), and translations of the Ḳur'ān in several lanquages. Moreover, the community has produced and produces large numbers of periodicals—daily, weekly, and monthly—from India, West Pakistan, East Pakistan, Ceylon, Indonesia, Lagos, Israel, Zurich, London, Chicago, Washington, and elsewhere. Sunnī Muslim and Christian missionary writing on the movement has often, though not always, been polemical; the former often important and revealing (e.g. Muhammad Iqbal, *Islam and Ahmadism*, Lahore, 1936), the latter often informative (e.g. H. A. Walter, *The Ahmadiya Movement*, Calcutta and London 1918; numerous other studies; articles in *MW* every few years). Almost all books on Indian Islam (e.g. M. Titus, *Indian Islam*, 1930, 226 ff.; W. C. Smith, *Modern Islam in India*, 1946, 298 ff.) or Modern Islam mention the community. Objective descriptive studies, of an academic sort, do not seem to have appeared in significant or comprehensive form since L. Bouvat, in *JA*, 1928, 159-81.

(ii) The Aḥmadiyya Andjuman Ishā'at-i Islām (headquarters in Lahore). This group accepts Ghulām Aḥmad as *mudjaddid*, not as prophet, and affirms that he never claimed to be a prophet. It has always been incomparably smaller than (i); but comparably zealous in its activities. It has differed, for instance, in trying more to win converts to Islam than to itself. It has been active in a systematic and effective fashion, chiefly in three overlapping fields: publishing, organized foreign missionary work, and leadership in intellectual modernism (liberalism) in Islam, especially of English-reading Islam. It has produced and circulated throughout the world (chiefly in English and Urdū, but also in a half-dozen and more other European and well over a dozen Asian languages) translations of the Ḳur'ān, lives of Muḥammad, impressive expositions of Islam, many monographs and essays, and innumerable pamphlets. Its foreign mission stations, in London, Berlin, Indonesia, have been influential; especially the first (the Woking Mission, an independent entity from 1930, but from 1947 again semi-officially related to the Lahore movement). The leader of the movement from its inception until his death in 1951, prolific author of much of its literature, and chief creator of its distinctive intellectual contribution was Mawlānā Muḥammad 'Alī. Also to be mentioned is the equally prolific but shorter-lived *imām* of the Woking mosque, Khwādja Kamāl al-Dīn (1870-1932).

Bibliography: The movement's own publications are again the main source: see the writings

of Muḥammad ʿAlī (chiefly his *English Translation of the Holy Qur'an with Arabic Text, Commentary and Index*, Lahore, several editions; over 50,000 copies have been distributed; *The Religion of Islam*, Lahore 1936; *Muḥammad the Prophet*, 1924, Urdū original, *Khayr al-Bashar*, ibid., 1917; etc. etc.), and also of Kamāl al-Dīn (e.g., *the Ideal Prophet*, London 1925; *Islam and Christianity*, ibid., 1932; and many others). For external sources, see the bibliography of (i) above.

(WILFRED CANTWELL SMITH)

AḤMADNAGAR is the capital of the district fo that name in India (Presidency of Bombay) on the river Siva. In 1901 the town numbered 42,000 inhabitants, the district (6586 square miles = 17,058 square kilometres) 837,695 inhabitants. The town was built in 1494 by Aḥmad Niẓām Shāh, the founder of the dynasty of the Niẓām Shāhs [*q.v.*], who reigned for about a century in Aḥmadnagar, until, after a brave defence by Čānd Bībī, the place was taken by Akbar's troops and annexed to the Mogul empire. After the death of Awrangzīb, Aḥmadnagar became subject to the Marāṭhās, and in 1803 Dawlat Rao Sindhiya was obliged to surrender the town to the Duke of Wellington.

Bibliography: *Bombay Gazetteer* xvii-B (1904).

AḤMADU [see AḤMAD AL-SHAYKH].

AḤMADU LOBBO (SHAYKH AḤMAD, SEKU AḤMADU (ḤAMADU) LOBBO, SHEKU AḤMADU SISE), Ful religious chieftain, of the Bari clan (or Saugare or Daebe, corresponding to the Mandingo clan of the Sise) a native of Malangal or Mareval in central Māsina, actually called Ḥamadu Ḥamadu Lobbo, that is to say the son of Ḥamadu Lobbo. The latter was a pious Muslim living at Yogunsiru (district of Uro Modi in central Māsina), a native of Fituka (the region to the east of Niafunke), called Lobbo after the name of his mother. Māsina was then occupied by the Ful, who were mostly pagan or superficially Muslim, and were ruled by *ardos* of the Dyallo dynasty, vassals of the Bambara rulers of Segu, and only Djenne was occupied by Moroccan troops. Aḥmadu Lobbo, a disciple of the marabout Kunta of the order of the Ḳādiriyya Shaykh Sīdī Muḥammad, who died in 1826, accompanied ʿOthmān dan Fodio on his successful expeditions intended to propagate Islam (about 1800), and took up residence in a hamlet near Djenne. He was expelled by the Moroccans, who distrusted his reputation for learning and his influence, and settled in Sebera, birthplace of his mother, where he gathered round him many students. An incident between these students and the son of the *ardo* of Māsina, Gurori Dyallo, incited Aḥmadu to open revolt. A Bambara army which was sent against him was defeated by a ruse, the Dyallo dynasty was dethroned (1810) and all the Ful of the region placed themselves under his command. He took Djenne after a siege lasting nine months, defeated Geladjo, the leader of the Kunari, (whose exploits are still the subject of a popular ballad, see G. Vieillard, in *Bull. du Comité d'études hist. et scient. d l'A.O.F.*, 1931, 151-6) and built a new capital in that district, on the Bani, called Ḥamdallāhi (fulbe: Hamdallay) (1815). He conquered Isa Ber from the Touareg (1825), Timbuktū (1827), and extended his authority eastwards as far as the first ranges of Tombo, and to the south-east as far as the confluence of the Black Volta and the Suru.

He adopted the title of *amīr al-muʾminīn* and devoted himself to propagating orthodox Islam according to the Ḳādiriyya order, demanding strict observance of its religious requirements; he demolished the tribal mosques and local places of worship, placed a ban on tobacco, established relations with the sultan of Istanbul, and, about 1838, welcomed al-Ḥādjdj ʿUmar Tal [*q.v.*] on his return from Mecca. He organized his dominions along orderly lines. Vi lages, districts and provinces were governed by officials, appointed by himself, who could be impeached before the *ḳāḍī* (fulbe: *algāli*) of the region. The State owned lands and flocks, and received a portion of war booty, fines etc. Taxation comprised the *zakāt* (fulbe: *d'akka*, tithe on grain crops, proportion of flocks); a surtax on the rich (1/40 on gold, cowry and bar salt); the *kharādj* on food crops; the *muddu* in millet at the festival of the breaking of the fast; a contribution from slaves for the provisioning of the army; the *ʿushr* (fulbe: *usuru*), a 10% customs duty. Every spring military expeditions were organized. Each village had to provide a fixed quota of men for these military operations, a third of this quota being mobilized each year by roster. The troops, free men, received subsistence for the maintenance of their families during their absence. There were five high-ranking military officers, each responsible for the defence of a particular sector. There existed a right of appeal from the regional *ḳāḍīs* to the *ḳāḍī* at Ḥamdallāhi, and from the latter to Aḥmadu himself, aided by a "marabout tribunal" in an advisory capacity.

Aḥmadu I died in 1844 and his son Aḥmadu (Ḥamadu) II succeeded him, despite the native customary law of succession. In 1846 he reimposed, in a modified form, the sovereignty of Māsina over Timbuktū, which had rebelled at the death of his father. Aḥmadu II was similarly succeeded in 1852 by his son, Aḥmadu III. He tried, by diplomacy or by force, to check the expansion of the great Tokolor conqueror, al-Ḥādjdj ʿUmar Tal, but the latter took Ḥamdallāhi in June 1862. Aḥmadu III fled towards Timbuktū, but was captured and put to death at ʿUmar's orders. His uncle Ba Lobbo continued the fight against ʿUmar and his successors. The Māsina State had been a centre of strict Islām, inimical to infidels, as the European travellers René Caillé and Heinrich Barth had discovered.

AḤMAR, BANU 'L-, genealogical name of the naṣrid dynasty [see NAṢRIDS].

AL-**AḤNAF** B. **ḲAYS**, the usual cognomen of a Tamīmite noble of Baṣra named ABŪ BAḤR ṢAKHR (sometimes, but erroneously, called al-Ḍaḥḥāk) B. ḲAYS B. MUʿĀWIYA AL-TAMĪMĪ AL-SAʿDĪ, of the family of Murra b. ʿUbayd; through his mother, he was descended from the Bāhilite clan Awd b. Maʿn. He was born before Islam and, probably at an early age, lost his father, killed by the Banū Māzin. His biographers state that he was deformed from birth and that he had undergone an operation. His cognomen (*al-aḥnaf*) derives from the fact that his feet were misshapen, but he also had other abnormalities (see the description of his physical appearance in al-Djāḥiẓ, *al-Bayān* (Hārūn), i, 56).

At the advent of Islam, the Tamīmites did not respond immediately to the Prophet's overtures, and it was al-Aḥnaf who was instrumental in procuring their conversion. He then presented himself to ʿUmar, and was among the first inhabitants of Baṣra, where he soon emerged as spokesman and leader of the Tamīmites who, during the 1st/7th century formed the intellectual, religious and political élite of the city. Under the command of Abū Mūsā al-Ashʿarī, he took part, notably in 23/644 and 29/649-50, in the capture of Ḳumm, Kāshān and Iṣfahān. He was later one of the best generals of ʿAbd Allāh b. ʿĀmir [*q.v.*], under whose orders he conquered Ḳuhistān, Harāt, Marw, Marw al-Rūdh, Balkh and other districts (near Marw al-Rūdh, his memory was perpetuated by the Ḳaṣr al-Aḥnaf and the Rustāḳ al-Aḥnaf). He even led his troops as far as the plains of Ṭukhāristān, thus preventing the last king of Persia from organising further resistance against the Muslims. For a time governor of a district of Khurāsān, he afterwards returned to Baṣra where his position as head of the Tamīmites enabled him to play an important political role. Although a neutral at the battle of the Camel (36/656) between the partisans of ʿAlī and those of ʿĀʾisha, he fought on the side of ʿAlī the following year at the battle of Ṣiffīn. From then on he appears to have devoted himself to local political affairs, but the Umayyads considered his influence to be such that they consulted him on general political problems, and it was in this way that he came to give his opinion on the question of Muʿāwiya's successor. At Baṣra there was latent hostility between the Rabīʿa faction, represented by the Bakr b. Wāʾil, and the Muḍar faction, represented by the Tamīm. Al-Aḥnaf was sufficiently adroit to prevent bloodshed, but he did not succeed in extinguishing smouldering animosities. At the death of Yazīd b. Muʿāwiya (64/683) a rising occurred there, and the governor ʿUbayd Allāh b. Ziyād [*q.v.*] placed an Azdite, Masʿūd b. ʿAmr al-ʿAtakī, in charge of the city, but the latter was assassinated shortly afterwards. The Azd faction then allied themselves with the Bakr and the ʿAbd al-Ḳays against the Tamīm, whom al-Aḥnaf had exhorted to adopt a moderate policy towards the Azd. The situation remained extremely confused for several months; finally al-Aḥnaf agreed to a compromise favourable to the Azd, and contributed from his own funds to an indemnity for the Azdite victims. When order was restored, he devoted his energies to achieving an alliance of the various tribes at Baṣra against the common enemy in the shape of the Khāridjites who were threatening the city, and it was he who, in 65/684-5, proposed that the Azdite al-Muhallab [*q.v.*] should be entrusted with the command of an expedition against the Azraḳites which the populace hoped to induce him to undertake. In 67/686-7 the Shīʿite agitator al-Mukhtār [*q.v.*] succeeded in recruiting supporters at Baṣra, but al-Aḥnaf took his stand against the Shīʿites, and succeeded in evicting al-Mukhtār's partisans from the city. He then assumed command of the Tamīm contingent of the Baṣra forces which, under the orders of Muṣʿab b. al-Zubayr, marched to attack al-Mukhtār at Kūfa. It was there that he died, at an advanced age.

His line soon came to an end, but his memory was kept alive by the Tamīm who considered him one of their greatest leaders. He was something of a poet, but above all he left a reputation for sagacity, which is conveyed by a large number of aphorisms and maxims, some of which have become proverbs; his *ḥilm* is compared to that of Muʿāwiya, and is also proverbial; hence the saying: *aḥlam min al-Aḥnaf* (al-Djāḥiẓ, *al-Ḥayawān*², ii, 92; al-Maydānī, i, 229-30).

(CH. PELLAT)

AL-AḤSĀ [see AL-ḤASĀ and HUFHŪF].

AL-AḤSĀʾĪ, SHAYKH AḤMAD B. ZAYN AL-DĪN B. IBRĀHĪM, founder of the theological school (later, after his excommunication by the Shīʿī *mudjtahids*, more properly speaking "sect") which, from his designation, took the name of Shaykhī [*q.v.*]. He was born in al-Aḥsāʾ (Arabia) in 1166/1753. His biographers record his great piety from his years of infancy. At the age of twenty, already learned in the religious sciences, he went on pilgrimage to the Shīʿite sanctuaries in al-ʿIrāḳ, where he had his first successes, obtaining from their *mudjtahids* "licences" to teach the religious sciences. After establishing himself with his family in Baḥrayn, and later in Baṣra, he made several journeys in al-ʿIrāḳ and, from 1221/1806 onwards, also in Persia, where he made the pilgrimage to Mashhad and, on his return, settled at Yazd as a teacher, enjoying the greatest veneration. Even the shāh (Fatḥ ʿAlī Shāh Ḳādjār) summoned him to Teheran, and loaded him with honours. This, together with his great popularity, roused the jealousy of the divines of Yazd, and several reports began to circulate on the unorthodoxy of Shaykh Aḥmad's teachings; more particularly challenged were his eschatological doctrines, in which, according to the 'orthodox' Shīʿite theologians, he had denied the resurrection of the body and interpreted it as a purely spiritual resurrection (see SHAYKHĪ). After a final pilgrimage to Karbalāʾ, he settled in 1229/1814 in Kirmānshāh, whence he made several journeys (into al-ʿIrāḳ and, in 1232/1817-8, to Mecca). His definitive rupture with the *mudjtahids* took place at Ḳazwīn about 1239-40/1824, after his return from another pilgrimage to Mashhad, in consequence of a discussion with the fiery Ḥādjdjī Mullā Taḳī Barakānī, uncle of the famous Bābī poetess Ṭāhira (or Ḳurrat al-ʿAyn, see BĀBĪ). The hostility of the *mullās* towards him steadily increased, and he was even accused of professing theories which never entered his head (e.g., the divinity of ʿAlī, the doctrine of *tafwīḍ*, according to which God had entrusted the care of the worldly creation to the *imāms*, etc.). After many wanderings, interspersed with teaching and the composition of his numerous works, he died in the course of a pilgrimage to Mecca, at the age of 75 years, near Medina, in 1241/1826, and was buried there. His theological works (including minor treatises) number about a hundred. For his doctrines see art. SHAYKHĪ. The school founded by him was guided by his successor Sayyid Kāẓim Rashtī [*q.v.*], and out of it there developed at a later date the Bābī [*q.v.*] movement.

Bibliography: A. L. M. Nicolas, *Cheikh Ahmad Lahçahi*, Paris 1910 (*Essai sur le Cheikhisme*, i); Brockelmann, S II, 844-5. For further bibliography see SHAYKHĪ. (A. BAUSANI)

AḤSANĀBĀD [see GULBARGA].

AL-**AḤWAṢ** AL-ANṢĀRĪ, ʿABD ALLĀH B. MUḤ. B. ʿABD ALLĀH B. ʿĀṢIM B. THĀBIT, Arabic poet, of the Banū Ḍubayʿa b. Zayd (a clan of al-Aws), born about 35/655; he spent his life mainly in the refined society of Medina. The noble-born inhabitants of Medina had grown rich during the first conquests, acquired great wealth by the sale of historical buildings and gardens in the town and were, in addition, subsidized by the caliphs. They were, however, not allowed to take part in government and in political life and thus lived in a sort of political exile. Affluence and the exclusion of political aspirations exercised an influence also on the social life of Medina, which was dominated by worldly pleasures. In this milieu arose the urban poetry of love, of which ʿUmar b. Abī Rabīʿa, al-ʿArdjī, and al-Aḥwaṣ were the main representatives.

The first personal relations of al-Aḥwaṣ were with al-Walīd, whose guest he was on various occasions. ʿUmar b. ʿAbd al-ʿAzīz, when he was governor of Medina, had him whipped for an amorous adventure (*Aghānī*[1], vi, 53-4). During the last years of al-Walīd's reign began his quarrel with Ibn Ḥazm, who was first *ḳāḍī* (94/713), and then governor (96/715) of Medina. Al-Aḥwaṣ slandered him in the presence of the caliph and also attacked him in his verses. This was aggravated by other political and moral offences, such as his love-affairs, his mentioning of noble ladies (e.g. Sukayna bint al-Ḥusayn) in his poems, his conflict with the Islamic aristocracy, the suspicion of paederasty, immoral utterances, and perhaps also the circumstance that he was the member of a family which had taken an active part in the rising in Medina. On the instigation of the governing circles and by order of the caliph Sulaymān he was whipped, put in the pillory, and exiled to the island of Dahlak in the Red Sea (*Aghānī*[1], iv, 48, [2]iv, 246; [1]iv, 43, [2]iv, 233; [1]iv, 45, [2]iv, 239). He remained there during the reigns of Sulaymān and ʿUmar II, i.e. for four or five years, although the Anṣār, whose mouth-piece he was, interceded on his behalf. Yazīd II released him and conferred on him rich gifts; al-Aḥwaṣ became his boon-companion and supported his political aims by a satire against the Muhallabids. Nothing more is known of al-Aḥwaṣ after his relations with Yazīd; he died after an illness in 110/728-9.

The judgements about al-Aḥwaṣ's character are negative: he had neither *muruwwa* nor *dīn* (*Aghānī*[1], iv, 43, [2]iv, 233). He was, however, highly appreciated as a poet. He excelled chiefly in love poetry, *fakhr*, *madḥ* and *hidjāʾ*. He is praised for the ease of his diction, good sense, beautiful and agreeable expressions, and the well-ordered structure of his poems. He is, however, less original than ʿUmar b. Abī Rabīʿa; this is shown in his preference for the old themes of the *ḳaṣīda* and the old metres. His language is influenced by the dialect of Medina (cf. K. Petráček, in *ArOr*, 1954, 460-6).

Bibliography: *Aghānī*[1], iv, 40-7, [2]iv, 224-68 and *Tables*, s.v. al-Aḥwaṣ; Ibn Ḳutayba, *Shiʿr*, 329-32; *Khizāna*, i, 232-4; Djumaḥī, *Ṭabaḳāt*, Cairo 1925, 334-45; Ibn Ḥazm, *Djamhara*, 313. AL-**AHWĀZ** (or AHWĀZ), a town, is situated (31°19′ N, 48°46′ E) on the Kārūn river at the point on the Khūzistān plain where it cuts through a low sandstone ridge; this ridge causes rapids which impede navigation and necessitate the trans-shipment of goods from vessels on the lower river to those on the upper or *vice versa*. Attempts have been made to identify Ahwāz with the town of Aginis mentioned by Strabo, but it is more likely that it stands on the site of Tareiana where, in Achaemenian times, the royal road connecting Susa with Persepolis and Pasargadae crossed the river by a bridge of boats. Nearchus anchored his fleet just below this bridge after his memorable voyage up the Persian Gulf. (Cf. Pauly-Wissowa, s. vv. Aginis and Tareiana.)

Tareiana was rebuilt by the Sāsānian king Ardashīr I, who renamed it Hormuzd Ardashīr and began the construction of the great dam across the rapids. Under him and his successors the town prospered greatly and became capital of the province of Susiana in place of Susa. (Cf. Th. Nöldeke, *Gesch. d. Perser und Araber zur zeit d. Sasaniden*, 13, 19; I. Guidi, in *ZDMG*, 1889, 410.)

When the Muslim Arabs conquered Susiana (Khūzistān) and took Hormuzd Ardashīr, they renamed the town Sūḳ al-Ahwāz, meaning "the market of the Hūzī" (Ahwāz is the Arabic plural of Hūzī, i.e., Khūzī or Khūdjī, in Syriac Hūzāyē, a warlike tribe which has been identified with the Οὔξιοι of the classical writers; hence also Khūzistān [*q.v.*]).

Ahwāz continued to prosper under the Umayyad and ʿAbbāsid Caliphates. It was the centre of extensive sugar plantation [cf. SUKKAR], but the serious Zandj rebellion caused a decline towards the close of the 3rd/19th century. A recovery was subsequently made, but the collapse of the great dam some five and a half centuries later brought about the virtual ruin of the town and it ceased in consequence to be the provincial capital. At the beginning of the present century it had about 2000 inhabitants, but the discovery of the important oilfields in Khūzistān restored its fortunes to such an extent that it again became the capital of Khūzistān in 1926. The town has also benefited greatly from the opening of the Trans-Persian railway; the line crosses the Kārūn by a fine bridge which has for its foundations the remains of the great dam. Further downstream is an imposing road bridge. In 1948 the population of Ahwāz exceeded 100,000. [See also KHŪZISTĀN, for the history of the province.]

Bibliography: F. Wüstenfeld, in *ZDMG*, 1864, 424 ff.; Le Strange, 233 ff.; Schwarz, *Iran*, 315-24; K. Ritter, *Erdkunde*, ix, 219-30; J. de Morgan, *Mission scientifique en Perse*; ii (*Etudes géographiques*), 275 ff.; A. Kasrawī, *Taʾrīkh-i Pan-Ṣad Sāla-yi Khūzistān*. (L. LOCKHART)

AI . . . [for words beginning with AI, see under AY].

ʿĀʾILA (A), "family". From the root ʿWL or ʿYL, this word is not found in the Ḳurʾān except (ix, 28) as a variant reading for *ʿayla* "poverty", but a marginal gloss in the *Ḳāmūs al-Muḥīṭ* (2nd ed., iv, 24) and a *ḥadīth* quoted by al-Ghazālī attest the meaning "family". The modern neo-classic language uses it freely, perhaps influenced by the Ottoman civil code (*Madjalla*), for example *ḥuḳūḳ-i ʿāʾile ḳarār-nāmesi*, "Ottoman family law", (*J. O.*

Ottoman, 14 Muḥarram 1336), but the polished style to-day prefers *usra*.

Sociological theories. The collective work of the Arab genealogists is based implicitly on the assumption that the tribe is a family on a larger scale. Robertson Smith has made a just appreciation of this over-simplified conception, which is ostensibly based on common sense, and, more recently, Bichr Farès (*L'Honneur chez les Arabes*, Paris 1932, 49-50) has recognized "that it appears impossible to study the social morphology of the ancient Arabs". This picture corresponds to that given by the nomads regarding their social structure. But does it correspond to reality? The existence of ancestor-worship and of the cult of the dead among the Semites, disputed by Renan, has been proved by A. Lods as regards biblical antiquity, and by I. Goldziher as regards the Arab world. The cult of the dead concerns the family because the natural ministers of such a cult are recruited from within the family, and because it implies a posterity for its own perpetuation. It is not impossible even that this cult may have played some part in the formation of the family, and especially in establishing it as a religious unit, endued with social functions. Easily-recognizable traces of the cult of the dead, to which Islam has been opposed since its inception, persist even to the present day, with unmistakable signs of propitiatory rites. The need, still felt to be imperative, for descent in the male line could be a final relic of this cult. On the other hand, to liken saint-worship and the veneration of holy places to ancestor-worship is to invite disagreement. The inter-connexion between divine and human genealogies has been amply demonstrated by Dhorme (*La Religion des Hébreux nomades*, Brussels 1937, Ch. xviii). It confirms the identification of legal relationships involving protection or alliance, with kinship, an idea which still exists among the nomads, and which is typical of the patriarchal system.

The basic social unit among the Semites was the clan (Hebrew *mishpaḥa*, Arabic *ḥayy* [*q.v.*]). The totemistic theory of an exogamous organization between maternal clans has been brilliantly developed by Robertson Smith (*Kinship and Marriage in early Arabia*, Cambridge 1885). In his review of this work, Nöldeke (*ZDMG*, 1886, 148-87) disputes the importance of the naming of clans after animals "which occurs, relatively speaking, much rarer than the exposé of the author would imply". But, in addition to the linguistic arguments based on the words indicating the clan by allusion to a uterine relationship, and on two parallel series of names of kinship, agnate and cognate, all the facts so far advanced hardly seem to provide a better explanation. Marriage customs of a matriarchal character seem to have persisted relatively late in the Peninsula. The lack of a prohibition of incest in the paternal line is also adduced as evidence by R. Smith (ibid., 163), but Wellhausen (*Die Ehe bei den Arabern, Nachr. von d. königl. Ges. d. Wiss. u. d. Georg-August Univ. zu Göttingen*, 1893, 431-82) is of the opinion (441) that this has not been sufficiently proved. Even if one admits the existence of a totemistic period during remote antiquity, the patriarchal régime is firmly established from the dawn of the historical era, and the notable survivals of earlier practices pose a difficult problem. According to Gertrude H. Stern (*Marriage in Early Islam*, London 1939), certain marriage alliances of a political nature, contracted by the Prophet with the tribes, were of a different character from the others, and the women continued to reside amongst their own clan (appendix A, 151-7). In fact it is possible to find, up to the contemporary epoch, evidence of this type attested in Assyrian legislation. It is, however, indisputable that the family regime has become patriarchal.

The family in Islam. Islam did not create the practices of the social milieu in which it appeared, and to begin with it concerned itself only with improving the moral standards governing these practices. In the second period, at Medina, the Prophet, now head of the State, is led to dispense justice and to create, in progressive stages, a system of rules, called into being by judgements in individual cases, with the force of statutory law. The work by G. H. Stern quoted above shows that he followed a plan of reform, by unifying the chaotic practices of pagan Arabia. This unification could not have been completed, as is clear from monographs on present day customs. Elements borrowed from conquered peoples have been incorporated in the original Arabic background. But if the lack of unity displays itself in a marked discrepancy between fact and theory, the overall picture nevertheless reflects the type of patriarchal family which has maintained its position with remarkable stability throughout the Near East, and which is already depicted in the ancient Hittite, Babylonian, Assyrian and Sumerian systems of law. In its most primitive forms, the authority of the head of the family is entirely unrestricted; it becomes weaker among the settled populations of the great cities. This patriarchal authority is the origin of the laws on divorce, polygamy etc. The veil (*ḥidjāb* [*q.v.*]), which goes back to remote antiquity, is not strictly relevant to the subject of family institutions, although it is in keeping with their patriarchal character. In short, the Muslim family recalls in certain respects though with some notable points of difference that portrayed in European literature in the heyday of the Middle Ages. See also ḤARĪM, MARʾA, NIKĀḤ, ṬALĀḲ.

Bibliography: In addition to the works mentioned above, the following works on Semitic antiquity should be consulted: Robertson Smith, *Lectures on the Religion of the Semites*, London 1889 (re-ed. S. A. Cook, 1927); I. Goldziher, *Le Culte des ancêtres et le culte des morts chez les Arabes*, in *RHR*, 1884, 332-59; A. Lods, *La croyance à la vie future . . .*, and especially *Le Culte des morts dans l'antiquité hébraïque*, Paris 1906; for the modern period, see H. A. R. Gibb, *Modern Trends in Islam*, Chicago 1947 (French trans. Paris 1949); R. Paret, *Zur Frauenfrage in der arabische-islamischen Welt*, Stuttgart 1934; Lane, *Manners and Customs of the Modern Egyptians*, London 1895; Kâzem Daghestâni, *Étude sociologique sur la famille musulmane contemporaine en Syrie*, Paris n. d.; for a full bibliography, see J. Lecerf, *Note sur la famille dans le monde arabe et islamique*, *Arabica*, 1956/I. (J. LECERF)

ĀʾĪN, Persian word meaning "law, rite, institution." Among the works translated from Pahlawī into Arabic by Ibn al-Muḳaffaʿ in the middle of the 2nd/8th century, the *Fihrist*, 118, mentions an *Āʾīn-nāma* (sometimes rendered in Arabic as *Kitāb al-Rusūm*). This work which, like the *Khudāy-nāma*, was of a quasi-official character, presumably contained an account of the organisation of the Sāsānid state, of the privileges and prerogatives of the classes, and of court life and etiquette (Christensen calls it "le vieil almanach royal"), much of its contents being of a sententious and didactic nature. Fragments

of the *Āʾīn-nāma*, translated by Ibn al-Muḳaffaʿ, are preserved in the *ʿUyūn al-Akhbār* of Ibn Ḳutayba, and the most important of these, relating to military tactics, archery and polo, have been studied by Inostranzev. It is possible that, co-existent with the large official *Āʾīn-nāma*, there were lesser works of a specialized nature dealing with each branch of court education. This belief arises from other titles quoted in the *Fihrist*, namely, *Āʾīn al-Ramy* and *Āʾīn al-Ḍarb biʾl-Ṣawālidja*, although these could be considered merely as portions of or extracts from the larger work. The Sāsānid *Āʾīn-nāma* is also mentioned by al-Masʿūdī (*Tanbīh*, 104-6); (pseudo?)-Djāḥiẓ, in the *Kitāb al-Tādj fī Akhlāḳ al-Mulūk*, which has very full materials concerning the manners and etiquette of the Sāsānids, also refers to, but does not quote directly, an *Āʾīn al-Furs*. The title of *Āʾīn* was used later in other works on Persian Islamic history and institutions, such as the *Āʾīn-i Akbarī*, being that part of the *Akbar-nāma* of Abuʾl Faḍl ʿAllāmī [*q.v.*] (16th century) which is devoted to the institutions of Akbar's court.

(F. Gabrieli)

AĪR (ayr), also called Asben, mountainous district of the Sahara, falling between lat. 17°-21° N., and long. 7°-9° E. It comprises three distinct regions: 1) the northern Aïr, consisting wholly of plateau and plain; 2) the central Aïr, which is a homogeneous unit, has a rugged landscape, with peaks rising to 5,000 ft.; 3) the southern Aïr, consisting of rocky plateaus sloping towards the Sudan. The rainfall, more abundant in the Aïr than in the rest of the Sahara (rainy season from June to August) feeds underground basins which support a fairly rich vegetation (gum trees); agriculture is, however, on a small scale, and the country owes its important place in the economic life of the Sahara primarily to its position on caravan routes (*azalay*). It possesses strata of slate, and hot springs; primitive handicrafts are still carried on.

The population of the Aïr is composed of two main elements: negroid (Hausa) and Berber—the Kel Aïr who form one of the seven principal Tuareg groups; they comprise the Kel Geres and the Kel Ui (Ewey), the latter having intermarried to a considerable extent with the Hausa. According to the censuses of 1933-8, the Kel Aïr number 27,765. They are a semi-settled people, and live in villages or in primitive encampments. The most important town is Agades. Founded in the 15th century, it became after 1515 the capital of the sultanate of the Kel Ui who, in the Aï, had just supplanted the Kel Geres. Agades is now the chief town of a region (Niger Territory) of which the Aïr is part.

The whole population is Muslim (the Kel Geres since the 9th/15th century), and religious activity is relatively keen, owing to the presence of religious brotherhoods with considerable numbers of adherents.

(G. Yver-R. Capot-Rey)

ʿĀʾISHA BINT ABĪ BAKR, the third and favourite wife of the Prophet, was born at Mecca about 614. Her mother, Umm Rūmān, came from the tribe of Kināna. Muḥammad gave ʿĀʾisha the *kunya* Umm ʿAbd Allāh, after the name of her nephew ʿAbd Allāh b. al-Zubayr.

The usual story of her marriage to Muḥammad is that the initiative came from Khawla bint Ḥakīm, wife of ʿUthmān b. Maẓʿūn, who possibly helped Muḥammad in domestic matters. Some time after the death of Khadīdja, Khawla suggested to Muḥammad that he should marry either ʿĀʾisha, the six-year old daughter of his chief follower, or Sawda bint Zamʿa, a widow of about 30, who had gone as a Muslim to Abyssinia and whose husband had died there. Muḥammad is said to have asked her to arrange for him to marry both. It had already been agreed that ʿĀʾisha should marry Djubayr b. Muṭʿim, whose father, though still pagan, was friendly to the Muslims. By common consent, however, this agreement was set aside, and ʿĀʾisha was betrothed to Muḥammad. Since Muḥammad had a political aim in nearly all his marriages, he must have seen in this one a means of strengthening the ties between himself and Abū Bakr, his chief follower. The marriage was not consummated until some months after the *hidjra* (in Shawwāl 1 or 2/April 623 or 624). ʿĀʾisha went to live in an apartment in Muḥammad's house, later the mosque of Medina. She cannot have been more than ten years old at the time, and took her toys to her new home. Muḥammad sometimes joined in her games with them. She seems to have possessed great beauty, both as child and as young woman, and to have remained Muḥammad's favourite even after he had married several other beautiful women. Her position as principal wife, however, may partly depend on her father's position in the community.

A serious crisis developed out of an incident on the return from the expedition against Banu ʾl-Muṣṭaliḳ in 5/627, on which ʿĀʾisha accompanied Muḥammad. At the last halt before Medina ʿĀʾisha, who had gone a little way from the camp to satisfy a natural need, dropped a necklace and spent some time searching for it. She was so light in weight that the men who loaded her litter on the camel had not noticed her absence from it, and the whole caravan had moved off before she returned to the camp. She sat down to wait, and was eventually found by a handsome young man, Ṣafwān b. al-Muʿaṭṭal al-Sulamī, who escorted her back to Medina. In the circumstances of the time, especially in view of the imposition of the *ḥidjāb* on Muḥammad's wives, this was highly improper. Gossip was magnified, however, not merely by personal enemies of ʿĀʾisha and her family, but by ʿAbd Allāh b. Ubayy, the leader of the Munāfiḳūn or Hypocrites. Already during the expedition he had given expression to his dissatisfaction with the growing power and prestige of Muḥammad. It became clear at length that there was no solid evidence against ʿĀʾisha, and Muḥammad received a revelation

(Ḳurʾān, xxiv, 11 ff.) implying her innocence and rebuking those who had gossiped. ʿAbd Allāh b. Ubayy was publicly humiliated.

A number of stories about ʿĀʾis̲h̲a have been preserved from the later years of Muḥammad's life. They depict Muḥammad as having genuine affection for ʿĀʾis̲h̲a, and ʿĀʾis̲h̲a as being devoted to him. They do not, however, justify the view (cf. H. Lammens, *Le Triumvirat Abou Bakr* etc., *MFOB*, iv) that she engaged in political intrigue and influenced Muḥammad's decisions. Nevertheless, there seem to have been two factions among Muḥammad's wives, one led by ʿĀʾis̲h̲a and Ḥafṣa, the daughter of ʿUmar, which supported the policy of their fathers, and another led by Umm Salama of the Meccan clan of Mak̲h̲zūm; but their rivalry probably had little political effect. When Muḥammad realized that death was near, he asked his wives to agree that he should go to ʿĀʾis̲h̲a's chamber and remain there. She nursed him for the few days of his illness, and his grave was made in the floor of her chamber. Abū Bakr and ʿUmar were also buried there.

As Muḥammad's power increased, his wives had a more comfortable life and a higher status in the community, including the title "mothers of the believers" (cf. Ḳurʾān, xxxiii, 6); but they were forbidden to remarry (ibid. v, 53). ʿĀʾis̲h̲a was thus left a childless widow about the age of 18. For two years her father was caliph, and then for ten ʿUmar, with whom she was on good terms, but she does not seem to have played any part in public affairs. As opposition grew against ʿUt̲h̲mān, the third caliph, however, ʿĀʾis̲h̲a came to have a leading part in it, though she was not in agreement either with the group of insurgents responsible for ʿUt̲h̲mān's assassination nor with the party of ʿAlī. She openly declared her opposition to the killing of ʿUt̲h̲mān, but left Medina for Mecca to take part in the pilgrimage. Many motives have been alleged for this flight by ʿĀʾis̲h̲a at a critical juncture. Perhaps the chief one was to help in organizing in Mecca a party of likeminded persons.

ʿUt̲h̲mān was assassinated in D̲h̲u 'l-Ḥid̲j̲d̲j̲a 35/June 656. About four months later ʿĀʾis̲h̲a left Mecca for Baṣra along with about 1,000 men of Ḳurays̲h̲, professing to be taking vengeance for ʿUt̲h̲mān. Shortly before this she had been joined by Ṭalḥa and al-Zubayr. The three were now leaders of a movement in opposition to ʿAlī. They obtained control of Baṣra, and with many of the Muslims of that city marched to the outskirts to meet ʿAlī who had meantime left Medina for Kūfa, and was advancing against them. The battle (in D̲j̲umādā II 35/December 656) came to be known as the Battle of the Camel, since the fiercest struggle was round the camel bearing ʿĀʾis̲h̲a's litter. ʿAlī was victorious, and the opposing army was scattered. ʿĀʾis̲h̲a herself was treated with respect, but Talḥa and al-Zubayr lost their lives.

After this failure ʿĀʾis̲h̲a lived quietly in Medina for over twenty years. She took no further active part in politics, but became reconciled to ʿAlī and did not oppose Muʿāwiya. Her approval and disapproval, however, still seem to have counted for something. She died in Ramaḍān 58/July 678. In later times she was depicted as a model of piety, but it is difficult to know what is the basis of fact for this view.

It is said that 1210 traditions were related on her authority, but barely 300 of these were retained by al-Buk̲h̲ārī and Muslim. She is said to have had a codex of the Ḳurʾān, and a few readings are given on her authority (cf. A. Jeffery, *Materials for the History of the Qurʾān*, Leiden 1937, 231-3). She was noted for her knowledge of poetry and ability to quote it, and also for her eloquence; and she was versed in Arab history and other subjects.

(W. Montgomery Watt)

ʿĀʾIS̲H̲A BINT ṬALḤA, one of the most famous of Arab women. Daughter of a Companion of the Prophet, Ṭalḥa b. ʿUbayd Allāh al-Taymī [*q.v.*], who had already won great renown, grand-daughter of Abū Bakr through her mother Umm Kult̲h̲ūm, and niece of ʿĀʾis̲h̲a, the Prophet's favourite wife, she combined nobility of birth with an imperious spirit and a rare beauty, which she was anxious should not go unnoticed. By nature a coquette, she courted the praises of the *g̲h̲azal* poets (ʿUmar b. Abī Rabīʿa, i, 80; Kut̲h̲ayyir ʿAzza, Ibn Ḳutayba, *S̲h̲iʿr*, 322; ʿUrwa b. al-Zubayr, *Ag̲h̲ānī*, x, 60), and knew how to use to the best advantage the emotions which she inspired. She even occasioned the dismissal of the Governor of Mecca, al-Ḥārit̲h̲ b. K̲h̲ālid al-Mak̲h̲zūmī, who had agreed to postpone the hour of prayer in order to allow her to complete her *ṭawāf* (*Ag̲h̲ānī*, iii, 100, 103, 113; see D̲j̲āḥiẓ, *Big̲h̲al*, (ed. Pellat, in course of preparation) § 20, and *Ag̲h̲ānī*, x, 60, for an anecdote concerning the brilliant retinue which she had obtained from the caliph for the purposes of her pilgrimage). She is reckoned as one of the *mutazawwid̲j̲āt*, i.e. women who have had several husbands; she married successively her cousin ʿAbd Allāh b. ʿAbd al-Raḥmān b. Abī Bakr, Muṣʿab b. al-Zubayr, and after the latter's death, ʿUmar b. ʿUbayd Allāh b. Maʿmar al-Taymī. The date of her death is not known.

ʿĀʾIS̲H̲A BINT YŪSUF [see AL-BĀʿŪNĪ].

ʿĀʾIS̲H̲A AL-MANNŪBIYYA, Tunisian saint of the 7th/13th century whose name was ʿĀʾis̲h̲a bint ʿImrān b. al-Ḥād̲j̲d̲j̲ Sulaymān. The *nisba* by which she became known derives from her native village of Mannūba (La Manouba), situated 5 m. W. of Tunis. She is also commonly known, especially at Tunis, by the reverential title of *al-Sayyida*. The contemporary historians of the Ḥafṣid dynasty, under which she lived, maintain complete silence about her, but we possess a small anthology of her *manāḳib* written, in a style strongly influenced by the colloquial, by an anonymous semiliterate author; the latter appears to have made use of another anthology, composed during the saint's lifetime or soon after her death by an *imām* of the mosque at Mannūba. While still young, ʿĀʾis̲h̲a gave evidence of her future vocation by a number of *karāmāt*. When she reached a marriageable age, her mystical ideal caused her to refuse the cousin whom her parents wished her to marry and to flee to Tunis, where she took refuge in a *ḳaysariyya* (a kind of caravanserai) situated outside the old Bāb al-Fallāḳ (S.E. of the

town, later known as Bāb al-Gurdjānī). There she passed her life, enjoying, especially among the lower classes, a great reputation for saintliness, although certain doctors of law showed hostility towards her. Oral tradition relates that she received mystical teaching from the celebrated ṣūfī Abu'l-Ḥasan al-Shādhilī, who was at Tunis during her lifetime, but neither the *manāḳib* of the saint herself, nor those of the disciples of Abu'l Ḥasan, make any reference to this. She died at an advanced age, 21 Radjab 655/20 April 1257, or 16 Shawwāl 653/19 Nov. 1255. She was buried in the cemetery which, in her time, was known as Maḳbarat al-Sharaf, and at the beginning of this century, a fervent devotee believed he had discovered her tomb. He erected there a wooden mausoleum which soon became a place of pilgrimage for the women of Tunis. However, the locality where ʿĀʾisha lived continues to attract believers, especially women, and to-day bears the name of al-Mannūbiyya. Around the old *ḳaysariyya* has grown up in the course of centuries a small group of buildings comprising an oratory, rooms for visitors, private dwelling-houses, and even a few shops. The visit (*miʿād*) to the sanctuary is performed by men on Thursdays, by women on Mondays. The house in the village of al-Mannūba where the saint was born has similarly been made the object of special veneration. During the reign of the Ḥusaynī Bey Muḥammad al-Ṣādiḳ (1859-82), it was converted into a huge building containing a *zāwiya*, private apartments, and a large covered courtyard where the religious fraternities held their meetings. To-day, the decline in saint-worship has meant the abandonment of the buildings at al-Mannūba. Much religious poetry in dialectal Arabic has been composed in honour of al-Sayyida Lallā ʿĀʾisha al Mannūbiyya; Sonneck (*Chants arabes du Maghreb*, i, 5-7, ii, 36-9) has given examples of this verse. The cognomens al-Mannūbiyya and al-Sayyida are frequently given to girls, especially in Tunis, and even a masculine cognomen, al-Mannūbī, has been formed from the *nisba* of the Saint.

Bibliography: Anon., *Manāḳib al-Sayyida ʿĀʾisha al-Mannūbiyya, Tunis* 1344/1925, 44 pp. (several Mss. of this work exist in Tunis itself); Muḥammad al-Bādjī al-Masʿūdī, *al-Khulāṣa al-Naḳiyya fi Umarā Ifriḳiya*, Tunis 1323/1905, 64; Ḥ. Ḥ. ʿAbd al-Wahhāb, *Shahīrāt al-Tūnusiyyāt*, Tunis 1353/1934, 77-8; R. Brunschvig, *Ḥafṣides*, ii, 329. (H. H. ABDUL-WAHAB)

AÏSSAOUA [see ʿĪSĀWA].

AJARAFE [see AL-SHARAF].

AḲ DENIZ [see BAḤR AL-RŪM].

AḲ ḤIṢĀR (T. "white castle"), name of several towns.

1. The best known is Aḳ Ḥiṣār in Western Anatolia, formerly in the *wilāyet* of Aydln, since 1921 in that of Manisa, situated in a plain near the left bank of the river Gördük (a sub-tributary of the Gediz), 115 m. above sea level. Known as Thyatira (see Pauly-Wissowa, s.v.) in antiquity and Byzantine times, it owes its Turkish name to the fortress on a neighbouring hill. Annexed by the Ottomans in 784/1382, it was lost again during the disorders which followed Tīmūr's invasion, and recaptured from the rebel Djunayd [*q.v.*] by Khalīl Yakhshī Beg in 829/1425-6 (see Ḥādjdjī Khalīfa, *Taḳwīm al-Tawārīkh*). Before 1914 Aḳ Ḥiṣār had 12,000 inhabitants, of whom three-quarters were Muslims; in 1935 they numbered 21,000. The *ḳaḍā* of Aḳ Ḥiṣār in the *wilāyet* of Manisa had, according to Cuinet (*Turquie d'Asie*, iii, 548 f.), 31,746 inhabitants; in 1935 it had 91,000.

2. Aḳ Ḥiṣār in the Marmara district, now called Pamuk-ova, in the *ḳaḍā* of Geyve, *wilāyet* of Izmid (Kodja-eli), situated on the left bank of the Ṣaḳarya river, and a station on the Anatolian railway. It was captured by the Ottomans in 708/1308-9. The fortress, now deserted, commands a vast plain. The remains of many ancient columns and other buildings in the town and its neighbourhood bear witness to its earlier prosperity, but its ancient name is unknown. In 1935 it had 1,668 inhabitants, and its *nāḥiye* 9,324.

3. Aḳ Ḥiṣār was formerly also the name of a small locality in Bosnia west of Sarajevo, at the outlet of the Prusekota in the Semeskilitza; its modern name is Polnyi (i.e. Lower) Wakuf. It was conquered by Muṣṭafā Pasha in 907/1501-2 (J. von Hammer, *Rumili und Bosna*, 166; Ch. Perturier, *La Bosnie*, Paris 1822, 222). (K. SÜSSHEIM*)

4. Town in Northern Albania, called also in Turkish Aḳče Ḥiṣār, and in Albanian Krujë, Kroya, "well-spring", and formerly in the *sandjak* of Shkodra. Mentioned by the name of Kroas in the chronicle of Acropolites (13th cent.), it was in 1343 a Venetian possession and in 1395 passed into the hands of Constantine Castriota. It became famous as the residence of Scanderbeg (Iskender Beg [*q.v.*]), and withstood vigorous sieges in 1450, 1466, and 1468, before it was finally taken by Muḥammad II in 883/14-15 July 1478. Later on it was the centre of the Bektāshī [*q.v.*] order of darwīshes in Albania. One of the graves of Ṣarī Ṣaltīḳ Dede [q.v.] is shown in Kroya and the number of graves of Bektashī saints around the town is considerable. Special reverence is paid to the tombs of Ḥādjdjī Ḥamza Baba and Baba ʿAlī (with a *tekke*). The citadel was demolished in 1248/1832 by order of Rashīd Pasha. In the Albanian state the town became the centre of a sub-prefecture, and had in 1938 4,500 inhabitants, mostly Muslims.

Kruje. — For the date of the capture of the city see especially the contemporary chronicler Benedetto Dei (in *Della decima e delle altre gravezze, della moneta, e della mercatura de' Fiorentini*, ii, Lisbon-Lucca 1765, 270 f.).

(K. SÜSSHEIM-F. BABINGER)

AḲ ḤIṢĀRĪ, nisba of several authors originating from one of the places called Aḳ Ḥisār. To Aḳ Ḥiṣār in Aydln belong:

(a) Ilyās b. ʿIsā, commonly called, IBN ʿĪSĀ B. MADJD-AL-DĪN, author of a Turkish book of prophecies (*Kashf-i Rumūz-i Kunūz*) which, composed in 965/1557-8 when the Ottomans had reached the summit of their power, foretold the continuation of their empire until the end of the world and, from the numerical value of the letters of proper names, predicted the fate of the nation until the year 2035 A.H. (Cf. Pertsch, *Cat. Berlin*, No. 45, 9; Krafft, *Cat. Vienna Acad.*, No. 301; Flügel, *Cat. Vienna*, No. 1502). A few other works of his in prose and in verse are mentioned by Ḥādjdjī Khalīfa (Flügel), iii, 480, iv, 155, 412, 440 and by Meḥmed Ṭāhir (see bibliography). He died in 967/1559-60.

Bibliography: Bursalī Meḥmed Ṭāhir, *ʿUthmānlī Muʾallifleri*, i, 18.

(b) MUḤAMMAD B. BADR AL-DĪN, Muḥyi 'l-Dīn al-Munshi', also called al-Ṣārūkhānī, al-Rūmī, or al-Mufassir. It was at his suggestion that Sūdī wrote his commentary on Ḥāfiẓ. His main work is a popular commentary on the Ḳur'ān with the title *Nazīl al-Tanzīl* (or *Tanzīl al-Nazīl*), begun in Aḳ Ḥiṣār in 981/1574 and completed in 999/1590. The author dedicated it to Sultan Murād III. He became *Shaykh al-Ḥaram* in Medina in 982/1574, was later in Damascus, where in 998/1589-90 he wrote an Arabic commentary on the *Burda* of al-Būṣīrī (Ahlwardt, *Cat. Berlin*, No. 7798), and died in Mecca towards the end of the year 1000/1592 (sic, according to the oldest sources).

Bibliography: Brockelmann, II, 439, S II, 651; ʿAṭā'ī, *Ḥadā'iḳ al-Ḥaḳā'iḳ*, 321; Naʿīmā, *Ta'rikh*, 40; Ḥādjdjī Khalīfa (Flügel), ii, 380, iv, 528, vi, 339; Muḥibbī, *Khulāṣat al-Athar*, iii, 400; Meḥmed Ṭāhir, ii, 20.

(c) NAṢŪḤ, called NAWĀLĪ, became in 990/1582 tutor to the future Sultan Muḥammad III, when the young prince was governor of Maghnisa. For him he wrote a *Faraḥ-nāme* on the duties of a ruler (Rieu, *Cat. Br. Mus.*, 117); this work claims to be the Turkish version of the *Kitāb al-Ri'āsa wa'l-Siyāsa*, allegedly written by Aristotle for Alexander the Great (Ḥādjdjī Khalīfa, (Flügel), iv, 411, v, 89). He also translated the *Akhlāḳ-i Muḥsinī*. To Nawālī is further attributed one of the Turkish translations of al-Ghazzālī's *Kīmiyā' al-Saʿāda*, but this is perhaps a confusion with the work of Muḥammad b. Muṣṭafā al-Wānī (d. 1000/1591). Naṣūḥ died in 1003/1594-5.

Bibliography: ʿAṭā'ī, 390; Meḥmed Ṭāhir, ii, 43.

To Aḳ Ḥiṣār in Bosnia belong:

(d) ḤASAN, called KĀFĪ. He was born in 951/1544 and died in 1025/1616, having been *ḳāḍī* in his native town for more than twenty years. His tomb became a place of pilgrimage. He took part in the campaign of Egri (Erlau) in Hungary in 1004/1595, and during the campaign composed in Arabic a treatise on good government and on the necessity of reforms in the Ottoman administration, entitled *Uṣūl al-Ḥikam fī Niẓām al-ʿĀlam*. In the following year 1005/1597 he translated it himself into Turkish, at the request of high officials. He further wrote a popular compendium of theology, directed against the Ṣūfīs and other innovators, called *Rawḍāt al-Djannāt fī Uṣūl al-Iʿtiḳādāt* (completed in 1014/1605), to which he himself wrote a commentary called *Azhār al-Rawḍāt* (completed in 1015/1606), a commentary on the *ʿaḳīda* of al-Ṭaḥāwī entitled *Nūr al-Yaḳīn fī Uṣūl al-Dīn*, and a commentary on the *Mukhtaṣar* of al-Ḳudūrī.

Bibliography: Brockelmann, II, 443, S II, 659; Babinger, 144; ʿAṭā'ī, 304; Ḥādjdjī Khalīfa (Flügel), index, s.v.; Ewliyā' Čelebi, *Siyāḥat-nāme*, v, 445 ff.; Meḥmed Ṭāhir, i, 277. For printed editions and French, German, and Hungarian translations of the treatise on government, see Babinger, loc. cit.

(e) Ḥādjdjī NASĪM-OGHLU Aḥmad b. Ḥasan described in 1186/1772-3, whilst prisoner in Germany, the campaign and the subsequent events in Bosnia of 1148-1156/1735-1744 (cf. Babinger, 276, n. 1).

(K. SÜSSHEIM-J. SCHACHT)

AḲ KIRMĀN (KERMĀN), "White City" (or "White Emporium"), in Rumenian Cetatea Albă, in Russian Belgorod, town on the western bank of the Dniester estuary. In antiquity it was called Tyras. According to Constantine Porphyrogenetus (ed. and transl. Moravcsik-Jenkins, 168, 62), the fortress was called "the White Castle". The anonymous "Toparcha Gothicus" (in B. Hase's ed. of Leo Diaconus, 496 ff.), however, calls it Maurokastron, "Black Fortress". Subject to the Mongols after 1241, the town was frequently visited by Genoese traders, who called it Maurocastrum (Malvocastrum, Moncastrum), but also Album Castrum. Abu 'l-Fidā', following Ibn Saʿīd, calls it Aḳča Kirmān; ʿĀlī (*Künh ül-Akhbār*, iv, 218) referring to Abu 'l-Fidā', writes : "Aḳča Kirmān is known at present as Aḳ Kirmān". In the 14th century Maurocastro-Moncastro was a Genoese fortress, under the administration of the Officium Gazariae (= Khazaria), which comprised the Genoese colonies on the northern shores of the Black Sea. The Genoese fortress was restored by the Moldavians and the Turks, and still exists. Towards the end of the 14th century the town was occupied by the ruler of the newly established state of Moldavia (in Turkish Boghdān [*q.v.*]), and remained under Moldavian domination until 1484. The fortress was attacked by an Ottoman fleet in 1420, and another attack was made in 1454. In 1455 the Voivoda Petru III recognized Ottoman sovereignty over Moldavia; the sultan Muḥammad II, by a *firmān* dated 5 Radjab 860/9 June 1456, gave the merchants of Cetatea Albă permission to frequent Adrianople, Brusa and Istanbul.

The town was captured by Bāyezīd II on 4 August 1484; the sultan directed the operations in person. (Cf. *Fetiḥ-nāme-yi Ḳara Boghdān*, MS Cairo, *adab turkī*, 131, 103 f; I. Ursu, *Stefan cel Mare*, Bucarest 1925, 202-4; I. Bogdan, *Cronice inedite atingătoare de istoria Românilor*, Bucarest 1895, 43, 58). Most of the inhabitants of the town were deported to Istanbul and Anatolia, and Aḳ Kirmān became a *sandjaḳ* under the jurisdiction of the *beylerbeyi* of Rumelia. It was included in the *eyālet* of Özü [*q.v.*], when this was created in 1593. According to ʿAyn-i ʿAlī, *Ḳawānīn-i Āl-i ʿOthmān* (Istanbul 1280, 12), the *sandjaḳ* contained 914 *tīmārs*. The custom duties of the port were regulated at the same period. The town is described by Ewliyā Čelebi (v, 108 f.) who visited it in May 1658. He mentions the fortress (read *darūn* instead of *bīrūn*), mosques built by Bāyezīd II, Mengli Girāy Khān, Selīm I, a Wāʿiẓ Djāmiʿi, a *medrese* built by Selīm I, and a *ḥammām* built by Bāyezīd II. He also mentions (vii, 501) the sanctuary of Mayak Baba Sulṭān near the ford of the Dniester. Muḥammad Efendi Aḳ Kirmānī, a well-known Turkish philosopher, was a native of the town (cf. Bursalī Meḥmed Ṭāhir, *ʿOthmānlī Mü'ellifleri* i, 214). In addition to the original inhabitants, Aḳ Kirmān and its district was inhabited by Turks and Crimean and Nogay Tatars; the Tatars were settled there after the attempt of the Voivoda Aron of Moldavia to capture the fortress in 1595.

In 1502 the last chief of the Golden Horde, Shaykh Aḥmad, fled to Aḳ Kirmān, in order to rally his forces. Selīm I made Aḳ Kirmān the base for his operations against his father Bāyezīd II (1 April 1511). The brothers Meḥmed Girāy and Shāhīn Girāy of Crimea in 1610 made the town their basis for raiding the Ukraine; they were, however, ousted by their brother the Khān Djānbey Girāy (cf. I. H. Uzunçarşılı, *Osmanlı Tarihi*, iii/i, 176). Between 1618 and 1636, Kantemir, Pasha of Silistria, controlled the region between the Danube and the Dniester and defeated the *kalgay* Ḥusām Girāy, "in the plain of Aḳ Kirmān" (Ḥādjdjī Khalīfa, *Fedhlaka*, ii, 187); Murād IV, however, had his head cut off (Uzunçarşılı, 180). Ewliyā Čelebi (vii, 497) describes the battle between the Tatars of Meḥmed Girāy Khān

and those of ʿĀdil Girāy, under the walls of Aḳ Kirmān.

In 1683 the Cossack chief Kunicki advanced as far as Aḳ Kirmān, but was pushed back by the *serdār* Bosnak Ṣarl Süleymān Pas̲h̲a (Fındıklılı Meḥmed Ag̲h̲a, *Silāḥdār Taʾrīk̲h̲i*, Istanbul 1928, i, 397, ii, 127, 185). The Russian general Igelström captured the town in 1770, but it was returned to the Porte by the treaty of Küčük Ḳaynard̲j̲a (art. 16). The fortress was repaired in 1780 (Topkapı Arşivi, E 10, 416; for other repairs from 1646 onwards, see ibid. E 5880, 6237). In 1789 Potemkin occupied the town again (D̲j̲ewdet, *Taʾrīk̲h̲*², iv, 332), but it was returned to Turkey in the peace of Yassi (1792), after which the fortress was strengthened.

In 1806 the town was captured by the Russian colonel Förster and Prince Kantakuzino; the Tatars left the district and passed to the eastern bank of the Dniester. In the peace of Bucarest (1812), Aḳ Kirmān was transferred to Russia. It was there that the short-lived Convention of Aḳ Kirmān between Russia and Turkey, concerning the Rumanian principalities and Serbia, was signed in 1826. Subsequently the town shared the vicissitudes of Bessarabia.

AḲ ḲOYUNLU, "those of the White Sheep", federation of Turkmen tribes, which rose in the region of Diyār Bakr in post-Mongol times (in the 14th century) and lasted till c. 908/1502. The name (cf. Chalcocondyles, ch. ix: Λευκοὶ Ἀσπρο‹προ›βατάντες) is unknown in earlier times. There is some uncertainty about the origin of the name, whether it refers to the breed of sheep, or to some kind of totem; the tumular stones of the Turkmens have often the form of rams, but such a symbol is absent in Uzun Ḥasan's banner, see Uzunçarşılı, pl. 49. The federation consisted of various Og̲h̲uz (Turkmen) tribes (Bayat, Döger, Čepni, etc.) who had apparently arrived with the Sald̲j̲ūḳs but, under the Mongols, led an inconspicuous existence. Among these clans must be particularly distinguished the Bayundur clan, to which belonged the rulers, who, with their immediate followers, must have taken the leadership and organised the federation. The early period of these Turkmens (both Aḳ and Ḳara Ḳoyunlu) is reflected in the Turkish epic poem *Dede Ḳorḳut* (Rossi), Vatican 1952, 46-9. The Bayundur family ("the *amirs* of Āmid") are first mentioned by the Byzantine chroniclers in 1340. They several times attacked Trebizond, and in 1352 Ḳutlu Beg son of Ṭur ʿAlī married a princess of Trebizond, as later did his son Ḳara Yoluḳ (sometimes: Kara Yülük, "black leech") ʿUt̲h̲mān. This latter was the real founder of the Aḳ Ḳoyunlu power. For a long time, as a soldier of fortune, he took service with the local rulers of Erzind̲j̲ān and Sīwās and even with the sultans of Egypt. He succeeded in destroying two rivals: the chief of the Ḳara Ḳoyunlu, Ḳara Muḥammad (in 791/1389) and Burhān al-Dīn of Sīwās (towards 799/1397). He submitted to Tīmūr and, at his side, took part in the battle of Anḳara (805/1402), for which Tīmūr gave him the whole of Diyār Bakr. However, till his death in 839/1435 he was unable to take a firm stand on the Armenian plateau.

The Aḳ Ḳoyunlu were hampered in their expansion by the rise of the rival federation of the Ḳara Ḳoyunlu (whose original centres lay north of Lake Wān) especially when the latter's chief Ḳara Yūsuf, after the death of Tīmūr, returned to his principality and even ousted (in 813/1410) his former protectors, the D̲j̲alāyirs.

After a period of struggles between Ḳara ʿUt̲h̲mān's sons, ʿAlī and Ḥamza, the Aḳ Koyunlu came again to the fore with Uzun Ḥasan [*q.v.*], son of ʿAlī (871-83/1466-78), who failed in his attempts to contain the eastward expansion of the Ottomans, but had brilliant successes in the east (he defeated the last Ḳara Ḳoyunlu, D̲j̲ihāns̲h̲āh, in 872/1467, and the Tīmūrid Abū Saʿīd, in 873/1468) and extended his dominions to Bag̲h̲dād, Harāt and the Persian Gulf. His son Yaʿḳūb (883-96/1478-90) was, on the whole, a successful ruler, but after his death struggles began between his children and his nephews. Meanwhile, the Ṣafawids were sapping the position of the Sunnite Aḳ Ḳoyunlu by their S̲h̲īʿa propaganda carried on among the Turkmen tribes. In 908/1502, in a pitched battle in S̲h̲arūr (near Nak̲h̲ičewān) S̲h̲āh Ismāʿīl defeated Alwand b. Yūsuf b. Uzun Ḥasan. For some years the struggle was continued by Yaʿḳūb's son Murād who had to flee to the west. He accompanied Sultan Selīm during the latter's invasion of Persia in 920/1514 but finally died in the same year near Urfa.

For some time an autonomous Aḳ Ḳoyunlu principality existed in Mārdīn: princes Ḥamza b. ʿUt̲h̲mān, D̲j̲ihāngīr b. ʿAlī and Ḳāsim b. D̲j̲ihāngīr. About 909/1503 the latter was killed by Alwand retreating from S̲h̲āh Ismāʿīl.

In its heyday (under Uzun Ḥasan and Yaʿḳūb) the Aḳ Ḳoyunlu power cut a figure in world affairs, and with the transfer of the capital to Tabrīz, Persia was on the way to regain her political entity. The European powers (especially Venice) and the Pope sought alliances with the Aḳ Ḳoyunlu against the prevailing Ottomans. Uzun Ḥasan's agrarian census (*ḳānūn-i Ḥasan pādis̲h̲āh*) was maintained for a time both in eastern Turkey and in Persia.

The following is the genealogical tree of the Bayundur rulers:
The chronology is as follows. Ḳara ʿUthmān was killed in 839/1435 at the age of eighty. Of his sons who disputed his succession ʿAlī died in 842/1438 and Ḥamza in 848/1444. Djihāngīr ruled in the west 848-74/1444-69. Uzun Ḥasan, b. 828/1424, ruled from 857/1453, overthrew the Ḳara Ḳoyunlu in 872/1467 and died in 882/1478. Yaʿḳūb ruled 883-96/1478-90; Bāysunḳur 896-7/1491-2; Rustam 897-902/1492-7; Aḥmad Gövde 902-3/1397. After Aḥmad Gövde's death the struggle went on (903-7/1497-1502) between Muḥammad, Alwand and Murād. Alwand, defeated by Shāh Ismāʿīl in 907/1502, retreated to Diyār Bakr and died in 910/1504. Murād, defeated by Shāh Ismāʿīl in 908/1503, fled to Baghdād, where he ruled for four and a half years, and then went to Diyār Bakr and Turkey. He died at the age of 25 and with him the dynasty came to an end.

Bibliography: The special history of the beginnings down to Uzun Ḥasan is the *Taʾrīkh-i Diyārbakriyya* by Abū Bakr Tihrānī (being prepared for publication in Ankara by F. Sümer); for the reign of Sultan Yaʿḳūb *ʿĀlam-ārā-yi Amīnī* by Faḍl Allāh b. Rūzbihān (MSS in Paris and Istanbul—unpublished). Detailed general survey in Ghaffārī, *Djihān-ārā* (with additions in MS Br. Mus. Or 141, fols. 190v-196v) and *Münedjdjim-bashi*, *Ṣaḥāʾif al-Akhbār* (in the abridged Turkish translation, iii, 154-67). Numerous facts in historical works and documents in Persian, Turkish, Georgian, Armenian, Italian and Spanish; see bibliography in V. Minorsky, *La Perse entre la Turquie et Venise*, 1933; W. Hinz, *Irans Aufstieg*, 1936 (early relations with the Ṣafawīs); I. H. Uzunçarşılı, *Anadolu beylikleri*, 1937, 63-9, and index; V. Minorsky, *A soyūrghal of Qāsim b. Jahāngīr (903/1498)*, *BSOS*, 1939, 927-60; idem, *A civil and military review in Fārs in 881/1476*, *BSOS*, 1939, 141-78; idem, *The Aq-qoyunlu and land reforms*, *BSOS*, 1952, 449-62; *IA*, s.v. (by M. H. Inanç; many new facts). On Aḳ Ḳoyunlu refugees in Turkey see T. Gökbilgin, *Türkiyat Mecmuası*, 1951, 35-46.—See also UZUN ḤASAN.

(V. MINORSKY)

AḲ MASDJID, "White Mosque", name of two towns:

1. Town in the Crimea (local pronunciation: Aḳ Mečet), founded in the 16th century by the *khāns* of the Crimea in order to protect their capital, Bāghče Sarāy, from nomad incursions. It was the residence of the crown prince (*kalghay sulṭān*), whose palace was outside the town, according to Ewliyā Čelebi, vii, 638-41. The town was destroyed by the Russians in 1736, and rebuilt in 1784 under the name of Simferopol (although the local population continued to use the Turkish name).

2. A fortress on the Sīr Daryā, which belonged to the Khānate of Khōḳand. It was captured by the Russians under general Perovsky on 9 August (28 July) 1853, and rebuilt in the same year under the name of Fort Perovsky. Renamed Perovsk, it became the capital of a district in the province of Sīr Daryā. In 1924, its name was changed into Kïzïl Orda; it was the capital of the Republic of Ḳazaḳistān until 1928, when it became the capital of a province. (W. BARTHOLD)

AḲ SARĀY (AḲ SARĀ), "White Palace", town in inner Anatolia. Its ancient name was Archelais (see Pauly-Wissowa, s.v.). Aḳ Sarāy was an important place in the Saldjūḳ period and the castle, now in ruins, was built under Ḳïlïdj Arslān II. Subsequently it passed under the dominion of the Ḳaramān-oghlus and the Ottomans. The great part of the inhabitants was transferred by Muḥammad II to Istanbul after its conquest and a quarter in the capital received the name of Aḳ Sarāy after them. The town is an agricultural centre and has an important carpet industry, already mentioned by Ibn Baṭṭūṭa, ii, 286; it is the capital of a *ḳaḍā* belonging to the *wilāyet* of Nigde and had in 1935 8,300 inhabitants (the *ḳaḍā* 19,000). Noteworthy monuments are the Ulu Djāmiʿ (beg. of 15th century, with a Saldjūḳ *minbar*), the Zindjirli *medrese* (first half of the 15th century), the Kadiroghlu *medrese*, built under the Saldjūḳs and restored by the Ḳaramān-oghlu Ibrāhīm Beg, the Naḳḳāshī Djāmiʿi (modern, but with a minaret from the 14th century) and various *ḥammāms*; on the Erwal Tepe near the town there is a *türbe* in briquets from the 13th century.

Ramsay, *Asia Minor*, 284; Ewliyā Čelebi, ii, 191.

(F. TAESCHNER)

AḲ SARĀY, palace near Gurgāndj (Urgenč), still mentioned in the "Shaybāniade" (ed. Vámbéry, 392). For the palace of the same name erected for Tīmūr in Shahr-i Sabz, see KASH.

AḲ SHAMS AL-DĪN, properly MUḤAMMAD SHAMS AL-MILLA WA'L-DĪN, saint of the Bayrāmiyya [*q.v.*] and discoverer of the tomb of Abū Ayyūb al-Anṣārī near Constantinople. He was the son of a certain Ḥamza, who acquired fame in Syria as a worker of miracles and later died in the district of Ḳawaḳ (near Amasia). Aḳ Shams al-Dīn was born in 792/1389-80 in Syria (Damascus) and came with his parents to Ḳawaḳ in 799/1396-7. After the early death of his father (when Shams al-Dīn was seven years old) he engaged in theological studies; Badr al-Dīn b. Ḳāḍī Samawnā is reputed to have been among his teachers. Later he obtained a post of Ḳurʾān teacher (*müderris*) in ʿOthmāndjïk. Not satisfied with the rational outlook of orthodox Islam, he sought a spiritual leader, undertaking for this purpose long journeys, extending to Persia and Transoxania. He gave up, following an exhortation in a dream, an attempt to attach himself to Zayn al-Dīn al-Khawāfī, and about 830/1426-7 he turned, after some initial hesitations, to Ḥādjdjī Bayrām [*q.v.*], who shortly afterwards appointed him to his succession (*khilāfet*). The scenes of his later activities as *shaykh* of the order and nature-healer were Begbāzār (west of Ankara), where he built a small mosque and a mill, the district of Isklīb (near ʿOthmāndjïḳ) and Göynük (near Brusa). The dates of his seven pilgrimages to Mecca are not known. Between 851/1447-8 and 855/1451-2 he was called to Adrianople, to treat Sülaymān Čelebi, *ḳāḍī ʿaskar* of sultan Murād II. He took part in the conquest of Constantinople as a preacher in the army; according to a later legend he discovered the tomb of Abū Ayyūb al-Anṣārī [*q.v.*] and worked other miracles of *firāsa*. He healed a daughter of Meḥmed II and in general gained the favour of the sultan. After the conquest Aḳ Shams al-Dīn returned to Göynük, where he died at the end of Rabīʿ II 863/1459. The story of his interpretation of a dream of the sultan before the battle of Terdjān against Uzun Ḥasan (1 August 1473) cannot refer to him and seems to be a forgery of Ferīdūn. Aḳ Shams al-Dīn had seven, according to others twelve, sons, the most

important of whom was the poet Ḥamdī [*q.v.*]. He also wrote several medical and ṣūfī works, which have not yet been published. In the history of the Bayrāmiyya, Aḳ Shams al-Dīn seems to have played a fatal part, because a quarrel between him and some of his companions caused the great secession of the Malāmatiyya, which could not fail to hamper considerably the development of the whole order.

AḲ SHEHR, in modern Turkish orthography Akşehir, "White Town":

(i) Town in inner Anatolia situated at the foot of the Sulṭān Dagh. In antiquity it was known as Philomelium (see Pauly-Wissowa, s.v.). In old sources the name of the town occurs as Aḳshar, Akhshar or Akhshehir. It was under Saldjūḳ and Ḳaramān-oghlu dominion and was annexed by Bāyezīd I. In the 16th-17th centuries it is mentioned by the travellers Ghazzī, Makkī and Ewliyā Čelebi. The town, capital once of a *sandjaḳ*, now of a *ḳaḍā* in the *wilāyet* of Ḳonya, gained its importance from its situation on the Istanbul-Baghdād road (now on the railway line), and is also an agricultural centre; in 1935 it had 10,335 inhabitants (some of them immigrants from Greece and Yugoslavia); the *ḳaḍā* 60,000. Its mosque was founded by Bāyezīd I, the Ṭash Medrese has an inscription of the Saldjūḳid Kaykā'ūs I (613/1216) but is of a later time. Other monuments are a *tekke* with an inscription of Ṣāḥib 'Aṭā from the time of Kaykā'ūs II (659/1260-9); the tomb of Sayyid Maḥmūd Khayrānī, with an octagonal pyramid (621/1224; restored in the beginning of the 15th century); the Ulu Djāmi' (beg. of 15th century); Iplikči Djāmi' (738/1337); and an *imāret*. The modern tomb of Naṣr al-Dīn Khodja [*q.v.*] bears the date of 386/926.

(CL. HUART-F. TAESCHNER)

(ii) AḲ SHEHIR (also AKSHAR or ASHKAR; Pizzigani, 1367, writes Azcar), town in north-east Anatolia, on the Kelkit Irmaḳ between Ḳoylu Ḥiṣār and Sushehri; it is often mentioned by early authors, and occurs as late as in Kātib Čelebi's *Djihān-nümā*, 627. It is probably identical with the modern village of Güzeller or Ezbider. The name was preserved, even longer than for the town, for the plain (Aḳ Shehir Owasi), which is regularly mentioned in the iteneraries of the Ottoman armies on their campains against Persia and Georgia.

Bibliography: F. Taeschner, *Das anatolische Wegenetz*, ii, 2 (with further references). (F. TAESCHNER)

AḲ ṢU (T.), "white water", (1) technical term for the original bed of a river (also *aḳ daryā*), from which a canal (*ḳara ṣu* or *ḳara daryā*) is derived; (2) name of several rivers in Turkish-speaking countries; they are sometimes better known under other names. The following are some of the rivers that bear in Turkish the name of Aḳ Ṣu: (i) one of the source rivers of the Amū Daryā [*q.v.*], also called Murghāb [*q.v.*] or the "River of Kūlāb"; (ii) the "southern" Bug (in Ukrainian: Boh) in the Ukraine (so regularly in the Ottoman historians), which forms at its issue into the Black Sea a common estuary with the Dnieper; (iii) a rapid mountain stream in Eastern Turkistān (Sin-kiang), which, coming from the T'ien-shan, flows in a S. E. direction towards the Tarim (Yārkand Daryā) and reaches it somewhat above its junction with the Khotan Daryā near Sil. The town of Aḳ Ṣu (see next article) receives its name from this stream. (B. SPULER)

AḲ ṢU, town in Eastern Turkistan (Sin-kiang), about 6 km. to the north of the river of Aḳ Ṣu (see preceding article), approximately opposite to its junction with the Tawshḳan Daryā; 1006 m. above the sea, 41°14, 7' N, 80° E; on the northern caravan route, between Maralbashī and Kučā. A little upstream from the modern town lies another settlement called Aḳ Ṣu, and N. E. of both is the "Old Town", which possibly both correspond to older settlements with Chinese names of their own (see below). Aḳ Ṣu is first mentioned with its Turkish name in the 8th/14th century only; the usual identification (current since Deguignes) with Auzakia in Ptolemy is therefore more than doubtful. Its identification with various Chinese toponyms is not yet finally settled. W. Barthold had identified it (mainly on the basis of its present Chinese name, see below) with the Wön-su of the Han period and the B.nčūl (B.nčūk ?) of the *Ḥudūd al-'Ālam* (ed. Minorsky, 98) and Gardīzī (in Barthold's *Otčët o poyezdkye v Srednyuyu Aziyu*, St. Petersburg 1897, 91); later, however, he gave up this view. P. Pelliot identified Aḳ Ṣu with the Ku-mo of the Han period (Pa-lu-kia in Hsüan-tsang, Po-huan in the T'ang period; al-Idrīsī's "Bākhuwān"). Chinese merchants in Aḳ Ṣu are mentioned already about 1400 (Niẓām Shāmī, *Ẓafar-nāma*), but even in 1475 its importance was small in comparison with other towns of Eastern Turkistān (W. Barthold, *12 Vorlesungen*, Berlin 1935, 220); according to Ḥaydar Mīrzā's *Ta'rīkh-i Rashīdī*, however, it was about 1547 one of the capitals of the country. In modern times the importance of the town (which did not reach, however, that of Yārkand, Kāshghar and Ṭurfān) lay in its role as a commercial centre and a junction of roads between China, Siberia, Eastern and Western Turkistān, Kashmīr, Ladakh and India. It had also a military importance. It is said that at one time the town had 6000 houses, six caravansarays, five *madrasas*, and a wall with four gates. As the town was almost completely destroyed by an earthquake in 1716, no old buildings have been preserved. By the travellers of the 19th century (A. N. Kuropatkin, 1876-7; N. M. Prževal'skiy, 1885-6; Carey, 1885-6; F. E. Younghusband, 1886; Sven Hedin, 1895) it is described as having about 15,000 inhabitants and being about 2 km. in circumference. The livelihood of the inhabitants was based on metalwork, cotton materials of very good quality (*bazz*), saddles, bridles, jewellery and the breeding of camels, horses

and cattle. Between 1867 and 1877 Aḳ Ṣu belonged to Yaʿḳūb Beg [*q.v.*] of Kās͟hg͟har, since 1877 again to China (Chinese name: Wön-su-chow); the Chinese chose the town for the residence of the president (*tao-tʿai*) of the "Four Eastern Towns" (Aḳ Ṣu, Kučā, Ḳara S͟hahr and Üč Turfān). In the 20th century it shared the changing fortunes of Eastern Turkistan. The number of the inhabitants (presumably mostly Sunnī Eastern Turks) is at present given as between 20,000 and 40,000, who occupy themselves also with carpet weaving.

Bibliography: P. Pelliot, *La ville de Bakhouan dans la géographie d'Idriçi*, *Tʿoung-pao*, 1906, 553-6; idem, *Notes sur les anciens noms de Kučā, d'Aq-su et d'Üč-Turfān*, *Tʿoung-Pao*, 1923, 126-32; the materials are put together in *Ḥudūd al-ʿĀlam*, 293-7, cf. also 27 f. and the map, 279; Brockhaus-Efron, *Entsiklopedičeskiy slovar*[1], St. Petersburg 1890, i, 307 f.; A. AḲ ṢU (AḴH ṢU), village near S͟hemāk͟hī, (Russian Shemakhā) in Soviet Ād͟harbayd͟jān, with a mosque, a bazar and with the ruins of "New S͟hemāk͟hī" [*q.v.*]. (B. SPULER)

ĀḲ SUNḲUR, "White Falcon", the name of many Turkish officers, of whom the following are the most important:

1. ĀḲ SUNḲUR B. ʿABD ALLĀH ḲASĪM AL-DAWLA, known as AL-ḤĀD͟JIB, mamlūk of Malik-s͟hāh [*q.v.*], who appointed him to the government of Aleppo in 480/1087. He at first supported the efforts of the Sald͟jūḳ prince Tutus͟h [*q.v.*] to establish himself in Syria, but after Malik-s͟hāh's death he, with the other governors in northern Syria and the D͟jazīra, declared for Barkiyāruḳ, and was defeated and executed by Tutus͟h near Aleppo in D͟jumādā I, 487/May 1094. He was the father of Zankī [*q.v.*], afterwards atābeg of Moṣul, and is highly praised for his justice and good government.

Bibliography: Ibn al-Ḳalānisī (Amedroz), 119-26, trans. Le Tourneau, *Damas de 1075 à 1154*, Damascus 1952, 15-27; Ibn al-At͟hīr, x, 98, 149-51, 157-8; Ibn K͟hallikān, no. 99; Ibn al-ʿAdīm, *Taʾrīk͟h Ḥalab*, ii, Damascus 1954, index.

2. ĀḲ SUNḲUR AL-AḤMADĪLĪ [see AḤMADĪLĪ].

(H. A. R. GIBB)

ĀḲ SUNḲUR AL-BURSUḲĪ (ABŪ SAʿĪD SAYF AL-DĪN ḲASĪM AL-DAWLA), originally a mamlūk of Bursuḳ [*q.v.*], and one of the principal officers of the Sald͟jūḳid sultans Muḥammad and Maḥmūd. He became prominent firstly through his activities as military governor (*s͟hiḥna*) of al-ʿIrāḳ, and later, at the end of his life, as governor of Mosul, which office he held simultaneously with the former. Appointed *s͟hiḥna* in 498/1105. his main task was to oppose the Mazyadite Arabs of Dubays [*q.v.*], who were infesting the environs of Bag͟hdād. In his first government of Mosul (507/1113) his chief duty was the organization of the Holy War in the name of the sultan against the Franks in Syria, combining with this an effort to restore the Sald͟jūḳ authority in Diyār Bakr and up to the Mediterranean. After several setbacks, due essentially to the suspicions aroused by these ambitions, and which led to his spending the years 509-512/1116-8 in partial disgrace at his fief of al-Raḥba on the Euphrates, he finally succeeded, after saving Aleppo from an attack by the Crusaders supported by Dubays, in taking over the government of the entire province (518/1125), by agreement with the leading citizens of Aleppo. He thus realized that union of a part of the D͟jazīra with northern Syria which had served as the basis of Ḥamdānid power, and was to support that of Zankī [*q.v.*]. His life was cut short by the Bāṭinīs of Alamūt, one of whose allies he had opposed in al-ʿIrāḳ, in 519/1126, before he could display his abilities, and it fell to Zankī to realize, with greater solidity, the task thus begun. But already al-Bursuḳī had combined, as Zankī was also to do, Sald͟jūḳid legitimism, represented by his dignity as *atābek* of a prince, with an almost complete *de facto* autonomy at Mosul, and had effected that reinforcement of Muslim north Syria by the forces of the D͟jazīra which was to permit the former to break the Frankish encirclement and explains its readiness, despite its particularism, to accept his authority.

Runciman, *A History of the Crusades*, ii, Cambridge 1952; Ibn al-Ḳalānisī (Amedroz; tr. Le Tourneau, index, s.v. al-Borsoqî); Ibn al-At͟hīr, x, 272, 290, 350-3, 374, 378-80, 415, 439-40, 446-7; Ibn K͟hallikān, no. 100; Ibn al-ʿAdīm, ii, Damascus 1954, index; Ibn Abī Ṭayy; and, among non-Muslim authors, Matthew of Edessa; other sources quoted by Cahen, *op. cit.*, introduction. (CL. CAHEN)

AL-ʿ**AḲABA**, a mountain-road, or a place difficult of ascent on a hill or acclivity. There are many places of this name: the best-known is that between Minā and Mecca. Here, according to traditional accounts, Muḥammad had secret meetings with men from Medina at the pilgrimages of the years 621 and 622 A. D. In 621, at "the first ʿAḳaba", twelve were present, and they gave to Muḥammad an undertaking known as 'the pledge of the women' (*bayʿat al-nisāʾ*); at "the second ʿAḳaba" seventy-three men and two women promised to defend Muḥammad, if necessary, by arms, in what is known as 'the pledge of war' (*bayʿat al-ḥarb*). Some Western writers have held that there was only one meeting at al-ʿAḳaba, since only one is mentioned by al-Ṭabarī (i, 1224 f.), and since the wording of "the pledge of the women" in the extant sources is based on Ḳurʾān, lx, 12, which is admittedly later (cf. F. Buhl, *Muhammed*, Leipzig 1930, 186). It is likely, however, that the delicate negotiations involved would require more than one meeting. (For the stone-throwing that takes place at al-ʿAḳaba as part of the pilgrimage, see AL-D͟JAMRA and ḤAD͟JD͟J.)

Bibliography: Yāḳūt, iii, 692 f.; Ibn His͟hām, 288-300; Ṭabarī, i, 1209-27; G. Mélamède, in *MO*, xxviii, 17-58; Montgomery Watt, *Muhammad at Mecca*, Oxford, 1953, 144 ff.

(W. MONTGOMERY WATT)

AL-ʿ**AḲABA**, the sole seaport of the Hās͟himite Kingdom of Jordan, lying on the eastern side of the head of the Gulf of ʿAḳaba at the foot of the D͟jabal Umm Nuṣayla.

Al-ʿAḳaba is the successor of Ayla [*q.v.*], from which it developed as the town grew further to the southeast. The name al-ʿAḳaba is a shortened form of ʿAḳabat Ayla, "the Pass of Ayla", which refers to the pass through the D͟jabal Umm Nuṣayla traversed by the route from al-ʿAḳaba northeast to Maʿān through the Wādī It͟hm and the Wadi Ḥismā. This pass, which was improved under the Ṭūlūnid K͟humārawayh (884-95), ultimately gave its name to the town itself. The term ʿAḳabat Ayla appears as early as the time of al-Idrīsī (d. 1166), but the town was still generally known as Ayla. Ibn Baṭṭūṭa

1304-77), however, knows it only as ʿAḳabat Ayla (i, 256, iv, 324) and by the time of the 16th century historian Ibn Iyās it was called by its present name of al-ʿAḳaba.

At the very end of the Mamlūk period (920/1514-5) Sultan Ḳansawh al-Ghawrī, through the agency of his architect Khāyir Bey al-ʿAlāʾī, erected the present ruined fortified *khān* at al-ʿAḳaba in order to protect pilgrims from the attacks of predatory bedouin bands.

Under Turkish rule (1516-1917) al-ʿAḳaba, by the beginning of the 20th century, was reduced to a village of some fifty mud-and-stone huts, the inhabitants of which lived from the produce of their gardens and from the fruit of date palms, the latter of which they divided equally with the Ḥuwayṭāṭ bedouin, to whom the palms still belong. The opening of the Suez Canal in 1869 and the building of the Ḥidjāz railway in 1908 had deprived al-ʿAḳaba of its only remaining importance as a pilgrimage station. When Musil visited the town in 1898 it was the seat of a Turkish garrison guarding the frontier with British occupied Egyptian Sinai. (It belonged to the province of the Ḥidjāz and was the seat of a *muḥāfiẓ* subordinated to the *wālī* in Djidda.)

During the sea bombardment by British and French warships which preceded the capture of al-ʿAḳaba by Anglo-Arab forces on 6 July 1917, the town was severely damaged. Following the end of World War I, al-ʿAḳaba was part of the Ḥidjāz, but with the fall of the Ḥidjāz to the Saʿūdī Arabian forces in Oct. 1925 the town, along with the Ma'an district, was annexed to Transjordan. Little change took place in the condition of al-ʿAḳaba until 1942, when new construction was undertaken by the British forces to prepare the port as a supply port in the event of the fall of Egypt to axis armies driving from Libya. At this time a paved road was constructed from al-ʿAḳaba to the railhead at Naḳb Shitār S. W. of Maʿān. Following the Palestine war of 1948-9 the town grew rapidly in population and in 1954 it was projected to develop the port as Jordan's outlet on the Red Sea.

Y., 1952, 116.

(H. W. GLIDDEN)

ʿAḲABAT AL-NISĀʾ, a name for the pass of Baghrās or Baylān [see BAGHRĀS].

ʿAḲĀʾID [see ʿAḲĪDA].

ʿAḲĀL [see ʿIMĀMA].

AKANṢŪS ABŪ ʿABD ALLĀH MUḤAMMAD B. AḤMAD, Moroccan historian and man of letters originating from the Berber tribe of Idā ū-Kansūs which inhabited Sūs in southern Morocco, where he was born in 1211/1797. He studied at Fez under teachers of repute, and then obtained a post at the Sharīfian court as secretary. Promoted to the rank of vizier in 1236/1820, he was entrusted by the Sulṭān Mawlāy Sulaymān (Mūlāy Slīmān) with several official missions, but lost his post on the latter's death (1238/1822). He retired to Marrākush, where he devoted his time to the composition of poetical and historical works and became one of the most prominent representatives of the Tidjāniyya *ṭarīḳa*. He died, at an advanced age and afflicted with blindness, on 29 Muḥarram 1294/14 Febr. 1877, in the same town. His tomb, situated outside the Bāb al-Rabb, is still visited by initiates of the Order.

The major work of Akanṣūs is a general history of Islām up to his own era, in which pride of place is given to the history of his own country and, even more specifically, to that of the ʿAlid dynasty (ʿAlawiyya) of Morocco, from its origins up to 1282/1865. This voluminous work, a limited number of copies of which were lithographed at Fez (1336/1918), is entitled *al-Djaysh al-ʿAramram al-Khumāsī fī Dawlat Awlād Mawlānā ʿAlī al-Sidjilmāsī*. Its chief merit lies in the fact that it constitutes the first chronicle of the reigns of the sultans ʿAbd al-Raḥmān b. Hishām and Muḥammad b. ʿAbd al-Raḥmān, and was subsequently used extensively by Aḥmad b. Khālid al-Nāṣirī [*q.v.*] in his *al-Istiḳṣāʾ*. For the earlier period, the *Djaysh* plagiarizes most frequently the chronicles of al-Ifrānī [*q.v.*] and al-Zayyānī [*q.v.*].

Bibliography: E. Lévi-Provençal, *Chorfa*, 200-13 (with bibliography, 200 n. 1); idem, *Extraits des historiens arabes du Maroc*[3], Paris 1948, 8-9 and 126-7; Brockelmann, S II, 884-5.

(E. LÉVI-PROVENÇAL)

ʿAḲĀRIB (see ʿAḲRABĪ].

ʿAḲARḲŪF group of ruins 30 kms. west of Baghdād; its identification by H. Rawlinson with the town of Dur Kurigalzu, founded by the Kassites in the 14th century B. C., has been confirmed by the excavations of 1942-5 (see T. Baqir, in *Iraq*, Suppl. 1944, 1945; 1946, 73 ff.). The high tower (the ruins of the ancient *zikkurat*) drew the attention of the Arabs, and is referred to in connection with the Arab conquest as *al-manẓara* (al-Balādhurī, *Futūḥ*, 250; cf. also al-Ṭabarī, ii, 917, iii, 943). It was said to be the tomb of the "Kaynānī" dynasty (Ibn al-Faḳīh, in Yāḳūt), or to have been built by Kay Kāʾūs (Ḥamd Allāh, *Nuzha*, 39) or by ʿAḳarḳūf, son of either Ṭahmūrath (Yāḳūt, al-Ḳazwīnī) or of Fāris b. Ṭahmūrath (Ibn al-Faḳīh, 196) or of Sām (Abū Ḥāmid). According to a legend (already found in Ḥamd Allāh) the stove into which Namrūd threw Abraham [see IBRĀHĪM] was at ʿAḳarḳūf; for this reason it was sometimes called Tell Nimrūd. Abū Nuwās mentions ʿAḳarḳūf in a verse (*Dīwān*, Cairo 1898, 100) and al-Maḳdisī (258) quotes from al-Kalbī a Persian tradition naming it among the seven towns of al-ʿIrāḳ noted for intelligence (cf. Ibn al-Faḳīh, 210). There was also a village, a prominent family being the descendants of Saʿd b. Zayd al-Khazradjī (Ibn Saʿd, iii/2, 93; al-Samʿānī, Yāḳūt). The European travellers of the 16th century and later who mention ʿAḳarḳūf (see Ritter, *Erdkunde*, xi, 847-52; Tuch, *De Nino urbe*, Leipzig 1845, 4) usually call it the "Tower of Babel".

Bibliography: Yāḳūt, iii, 697-8; Samʿānī, 395r; Abū Ḥāmid al-Gharnāṭī, *Tuḥfat al-Albāb*, 79; Ḳazwīnī, *Āthār al-Bilād*, 284-5; Ibn ʿAbd al-Ḥaḳḳ, *Marāṣid al-Iṭṭilāʿ*, i, 211, ii, 267-8, 227; Le Strange, 67; G. Awwad, in *Sumer*, 1949, Arabic part 81 ff.

(S. M. STERN)

AL-**ʿAKAWWAK**, "thick-set", sobriquet of the poet ʿALĪ B. DJABALA. Born at Baghdād in 160/776, of a family of Khurāsānī *mawālī*, al-ʿAkawwak seems to have spent most of his life in ʿIrāḳ, where he was the panegyrist of Abū Dulaf al-ʿIdjlī [*q.v.*], Ḥumayd

b. ʿAbd al-Ḥamīd al-Ṭūsī, and the vizier al-Ḥasan b. Sahl [*q.v.*]. The exaggerated and almost sacrilegious eulogies addressed to the two first-named excited, it is said, the hostility of the Caliph al-Maʾmūn, who had the poet's tongue torn out. Al-ʿAkawwak died as a result of this mutilation in 213/828. His *dīwān*, a work of considerable proportions (see *Fihrist*, 164₁₈), has not come down to us, and his poetry is known to us only through the quotations of anthologists; the long poem quoted by al-Thaʿālibī, *Yatīmat al-Dahr*, Damascus edition, iii, is ascribed to him, but this is questionable. Al-Djāḥiẓ had a great admiration for the way in which he recited poetry (see al-Khaṭīb al-Baghdādī and also Ibn Khallikān); but this prolific and catholic writer quotes al-ʿAkawwak once only in his *Kitāb al-Bayān wa'l-Tabyīn*. On the other hand, contemporaries of al-Djāḥiẓ such as Ibn Ḳutayba and Abu'l-Faradj al-Iṣfahānī consider al-ʿAkawwak to be a poet of exceptional merit.

Bibliography: Ibn Ḳutayba, *Shiʿr*, 550-3; *Aghānī*, xviii, 100-14; Ibn ʿAbd Rabbih, *al-ʿIḳd*, (ʿUryān), i, 238, 243; al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, xi, 359; Ibn Khallikān, Cairo, 1310, i, 348, ed. Cairo 1948, no. 434; Brockelmann, S I, 120.

(R. Blachère)

AKBAR, Abu 'l-Fatḥ Djalāl al-Dīn Muḥammad (15 Oct. 1542-16 Oct. 1605), the greatest of the Mughal emperors of India, was born at Umarkot in Sind while his father Humāyūn, who had been ousted by the Afghān usurper Shīr Shāh Sūr, was escaping to Persia. A grandson of Bābur, he was both a Tīmūrid Turk and a Čaghatāy Mongol. His mother, Ḥamīda Bānū, was a Persian. After thirteen years of exile Humāyūn, because of the decline of Sūr power, decided to attempt the reconquest of Hindūstān. Little however had been accomplished before his death on 24 Jan. 1556. In fact there was no Mughal empire before Akbar, only an attempt to create one. In his early struggles Akbar owed much to his able guardian and regent Bayram Khān [*q.v.*]. In addition to the Sūr claimants the most dangerous of his rivals was a usurping Hindu minister named Hēmū who had assumed the title of Rādjā Vikramaditya. Hēmū's forces were routed at Pānīpat on 5 Nov. 1556. The following year saw the surrender of Sikandar Shāh Sūr. In 1560 Bayram Khān fell from power, after which Akbar remained for about four years under the pernicious influence of the ladies of the harem and of a faction controlled by his foster relatives, the *atga khayl* of contemporary Muslim historians. His personal rule therefore dates from 1564.

His annexations. In 1561 his kingdom comprised the Pandjāb and Multān; the basin of the Ganges and Djumna between Pānīpat and Allāhābād; the country between the Gumti and the foothills of the Himalayas; Gwalior in Central India and Adjmēr in Radjputana. The country around Kābul was held by his half brother Muḥammad Ḥakīm. Ḳandahār belonged to Persia. Outside his dominions were the Muslim states of Gudjarāt and Khāndesh; the five Deccani sultanates of Berār, Bīdār, Aḥmadnagar, Bidjāpūr and Golconda; and, to the south of the river Tungabhadra, the Hindu empire of Vidjayanagar. Kashmīr, Radjputana, and Gondwana were under independent chiefs and rādjās. Bihār and Bengāl acknowledged an Afghān ruler, Sulaymān Kararanī. The Portuguese were firmly established at strategic points along the coast.

Between 1562 and 1576 he added to his dominions Malwā (1562), the Gond kingdom of Garha-Katanga in Gondwana (1564), Čhitor (1568), Rantambhor (1569), Kalandjar in Bundelkhand (1569), and Gudjarāt (1573). The annexation of Bengāl in 1576 made him master of the whole of northern India with the exception of lower Sind. Subsequent additions to his empire were Kashmīr (1586), Sind (1591), part of Orissa (1592), Balūčistān and Makrān (1594), and Ḳandahār (1595). As a result of his Deccan campaigns Berār, Khāndesh, and part of Aḥmadnagar were annexed between 1595 and 1601. At his death, in 1605, his empire comprised the following fifteen *ṣūbas* (provinces): Kābul (including Kashmīr), Lahore, Multān (including Sind), Delhi, Oudh, Agra, Adjmēr, Aḥmadābād, Malwā, Allāhābād, Bihār, Bengāl, Khāndesh, Berār and Aḥmadnagar (not fully subjugated).

Administrative policy. Akbar was not merely a conqueror. He was in addition endowed with a genius for administration to which the structure of both his central and provincial government bears testimony. The ideas of Akbar can be traced back to his immediate predecessors the Sūr Afghāns and the sultans of Delhi. The chief lesson he learned from the past was the danger of the unlimited wazirate. In 1564, therefore, the central government was reorganized by entrusting the financial functions of the *wakīl-i muṭlaḳ* to the *dīwān* or *wazīr*. From this time onwards the power of the *wakīl* was eclipsed by that of the *dīwān* and the importance of the office was further lessened by keeping it vacant for long periods. Other important officers of the central government under Akbar were the *mīr bakhshī*, the *mīr sāmān*, and the *ṣadr al-ṣudūr*. It is extremely difficult to define the functions of the *mīr bakhshī*, who has been referred to as the Paymaster-General or as the Adjutant-General, but the more fitting modern equvalent would be Quartermaster-General. Under Akbar the *mīr bakhshī* as administrative head of the military department was responsible for all transport arrangements during campaigns and could be placed in command of an army in the field. In accordance with Akbar's policy of separation of powers it was only on active service that the *mīr bakhshī* actually paid the troops. Normally this was the work of the *dīwān*. The *mīr sāmān* was in charge of the *buyūtāt* department and was responsible for the organization of the *kār-khānas*, the factories, workshops, and stores maintained by the emperor. The *ṣadr al-ṣudūr*, the chief spokesman of the *ʿulamāʾ*, was the Chief *Ḳāḍī* and head of the judiciary. In the early part of Akbar's reign this official had extraordinary powers. His reading of the *khuṭba* in the name of a new sovereign legalized the accession. He also exercised the right of patronage recommending deserving cases to the king for *madad-i maʿāsh* grants. It is incorrect to assert that in 1581 Akbar abolished this office. It is true that six provincial *ṣadrs* were appointed but the office of *ṣadr al-ṣudūr* continued, though shorn of its former extraordinary powers. All important officials, whether civil or military, were graded as *amīrs* or *manṣabdārs* on a military basis. They were divided into 33 classes and their rank and precedence were regulated by nominal commands of horse, ranging from 10 to 5000. Under Akbar there was evidently some connection between an officer's rank and the number of troops he entertained, but the exact meaning of the terms *dhāt* and *suwār* is controversial.

The provincial government was administered by a hierarchy of officials corresponding to those at the centre. The *ṣūbas* (provinces) were divided into *sarkārs* (districts) which were further subdivided

into *parganas* or *maḥalls*, the lowest fiscal unit in the empire. Distance and the backwardness of communications necessitated elaborate precautions to prevent fraud and rebellion. The provincial governor was a bureaucratic head and was not allowed to develop into a feudal baron. Not only was the governor's tenure of office short but important provincial officials like the *dīwān* and the *fawdjdār* (executive head of a *sarkār*) were appointed by the central government. There was also an elaborate system of espionage carried out by the *wāḳiʿa nuwīs* (reporter) and other officials.

Akbar's revenue policy was the outcome of three experiments. In each case a different set of assessment rules was adopted but in all three the assessment was based on the area sown and varied with different crops. The first two experiments failed and it was not until the 24th regnal year (1579-80) that a stable system was introduced. This was known as the *dah sāla* system because the assessment was based on the average of the previous ten years. An attempt was made to deal directly with the peasants who had to pay one-third of their gross produce to the state. It was enforced only in the six central provinces which formed the original nucleus of his empire.

His religious policy was chiefly dictated by political and dynastic considerations. His policy of *ṣulḥ-i kull* (universal toleration), his abolition of the *djizya* and of the tax formerly levied on Hindu pilgrims were aimed at securing the loyalty of his Hindu subjects, who formed the bulk of the population. It was also inextricably bound up with his conception of sovereignty and was an assertion of the supremacy of the state politically, economically, and financially. With this object he curbed the powers of the *ʿulamāʾ* by the so-called Infallibility Decree of 1579 by which he was recognized as the chief authority in the realm on religious matters. Although illiterate he was genuinly interested in the study of Comparative Religion and built an *ʿibādat-khāna* (House of Worship) where learned men of all religions assembled to discuss theological problems. These discussions convinced Akbar that there was good in all religions and prompted him to promulgate a new eclectic faith called the *dīn ilāhī* which he vainly hoped would prove acceptable to his subjects. It was the reversal of his policy of conciliation by his immediate successors and their gradual departure from the main principles of his rule that led to the decline of the Mughal empire.

AKBAR, SAYYID **ḤUSAYN ALLĀHĀBĀDĪ,** Indian Muslim poet, who wrote in Urdu under the pen-name of Akbar. Born in 1846 in Bāra, a small village near Allāhābād, he received a casual and desultory schooling. After several years' practice as a lawyer, he spent many years of his life as a judge in the service of the British government, till his retirement in 1903. He died in Sept. 1921.

His chief characteristic is his use of humour and satire to enforce his views on political and social subjects. The employment of *jeux de mots*, of which he made frequent and effective use, greatly added to his popular appeal. His command of pure Urdu was matched by his ability to bend to his purpose strange words, whether English or vernacular. From the sociological point of view, the main interest of his poetry lies in the fact that it may be regarded as a running commentary on the social foibles of his contemporaries and the political and religious trends of his times. This rôle of a humorous commentator on contemporary life earned him the title of *Lisān al-ʿAṣr* or "the Mouthpiece of the Age." His criticism is not, however, the result of deep or sustained sociological thought, but is the impulsive reaction of a conservative mind to that Westernization of Indian life, which as a matter of fact had been in progress for a long time past. The shafts of his wit and ridicule simply touch the surface of things, and as the phases of life criticised by him pass away in a changing society, a considerable part of his poetry is likely to lose its topical interest for the coming generations.

His poetical compositions have been collected in four volumes and frequently published under the title of *Kulliyyāt-i Akbar*. The first volume was published in 1909, the fourth in 1948. His letters, too, have been published in several collections. Shortly before his death, he composed *Gāndhī-nāma*, in which he set down the political views of the various parties, which took part in the anti-British movement led by M. K. Gandhi. It was edited by M. Naʿīm al-Raḥmān, Allahabad 1948.

(SH. INAYATULLAH)

AḲČE, meaning "small white", was the name given in Turkish to the Ottoman silver coin habitually referred to by European writers as the

aspre or *asper*, from the Greek *aspron*. The term was already in use under the Saldjūḳids of ʿIrāḳ during the 12th century (see al-Rāwandī, *Rāḥat al-Ṣudūr*, 300, where a gift of 1,000 *aḳčes* is recorded); and since, when applied to the first Ottoman coin to be struck, under Orkhān in 727/1327, it was qualified by the epithet "ʿOthmānī", it would appear to have continued in use either for some other coin or as signifying "money" in a more general sense. In later Ottoman times it certainly came to bear this wider sense, as in such phrases as *selāmet aḳčesi*, *ʿawāriḍ aḳčesi*, and to have been generally used by all the northern Turkish-speaking peoples in both senses (cf. Radloff, *Wörterbuch*, s.v.). During the 14th and 15th centuries the Ottoman coin was usually called simply "ʿOthmānī", but from the reign of Selīm I onwards, this usage being abandoned, it came to be known simply as the *aḳče*.

The earliest Ottoman *aḳče* was modelled on the *dirham* of the Saldjūḳids of Rūm; and although in one issue or another of the sultans down to Murād II there appear most of the elements that were later to make up the final formulae of the *aḳče's* inscriptions, it was not until the reign of Meḥmed II that these were all regularly, though not always identically, combined.

The *aḳče* of Orkhān weighed 6 *ḳīrāṭs*, or one-quarter of a *mithḳāl*, was 90% silver, and measured 18 mm. in diameter; and down to the reign of Murād II, though the *aḳče* was somewhat reduced in size, its standard of purity and even its weight were pretty well kept up. Under Meḥmed II, Bāyazīd II, and Selīm I, however, its standard was reduced by 5% and its weight to 3³/₄ *ḳīrāṭs*; and although under Süleymān I and Selīm II this decline was retarded, it continued, till, under Murād III and his successors down to ʿOthmān II, though retaining the same standard and more or less the same diameter, it was reduced by fits and starts to a weight of no more than 1¹/₂ *ḳīrāṭs*, becoming thinner and thinner. Moreover, under Murād IV, Ibrāhīm, and Meḥmed IV, its silver content was reduced first to 70 and then to 50%, though its weight and size remained roughly the same. The effect of these various debasements on its value was that, whereas 40 *aḳčes* went to the first Ottoman gold piece, of Meḥmed II, by the reign of Muṣṭafā II, when a currency reform resulted in the first coining of the Ottoman *ḳurūsh*, the rate of the gold piece (whose own weight and standard had been pretty well maintained) had risen to as much as 300 *aḳčes*. The *aḳče* continued to be minted thereafter down to the reign of Maḥmūd II; but from the end of the 17th century its value, which gradually declined still further, was so slight that it became little more than a conventional unit, used chiefly for accountancy purposes; and in the *tanẓīmāt* period it was abandoned, except in connection with *waḳfs*, even for that.

ʿAḲD. The *ʿaḳd*, in Muslim law, is properly the legal act, whether it relates to a contract or to a simple unilateral declaration, such as a will. More especially, however, the term *ʿaḳd* denotes the legal act which involves a bi-lateral declaration, namely the offer (*īdjāb*) and the acceptance (*ḳabūl*). The offer by itself has no obligatory character, in Ḥanafite law. Mālikite law differs on this point. At all events, the *ʿaḳd* is formally constituted at the moment when the acceptance is given.

It is necessary at this point to distinguish clearly between the *ʿaḳd* or contract, and simple promises (*ʿidāt*) and also allowances (*ibāḥāt*), which are not binding.

The *ʿaḳd* is not merely a simple expression of agreement. Every *ʿaḳd* requires a *ṣīgha*, or form, by which the wishes of each of the parties are expressed. These wishes must in principle be expressed verbally, unless a mute is involved. Writing cannot be used unless the parties are not in the presence of each other. But there is no question of an inflexible formalism. The *ṣīgha* is not confined to a stereotyped form. Any mode of expression (*ṣūra*) is valid, provided it gives the required meaning. It is necessary however to realise that *verba de futuro* can in no way validly express the will to contract. *Verba de praesenti* only bind the contracting party if the will to contract is established independently. There is no necessity to try to establish this intention (*niyya*) if the *verba* are in the past tense.

The *ʿaḳd* should therefore reflect a mutual understanding which has already been reached. It is concluded in order to secure for this agreement its legal effects. Thus the effect of a contract of sale is the immediate transfer of the ownership of the object of sale to the vendee. This conveyance cannot be deferred. In the definition of the *ʿaḳd*, there is no question of obligations being incurred by one party or the other by virtue of the contract. The *ʿaḳd*, in Muslim law, is not so much an act giving rise to obligations as a legal act creating a new legal situation or modifying an existing one. The vendor is naturally obliged to deliver the object of sale, just as the purchaser is obliged to pay the price. These obligations, however, are not considered to be effects (*ḥukm*) of the contract, but are properly considered to be contractual rights (*ḥuḳūḳ al-ʿaḳd*).

If the obligations of the two contracting parties are discharged as soon as mutual agreement is reached, then this does not constitute an *ʿaḳd*, but only a *muʿāṭāt*, a mutual delivery of the object of sale and of the sale price. This delivery is certainly valid for *res viles*. It is also valid, according to some legal doctrines, for articles of value, if there has been an effective fulfilment of the contract by at least one party. But, in principle, the *ʿaḳd* postulates a *ṣīgha* which necessarily creates, in law, a new situation.

It should also be noticed that, in certain contracts, the material delivery of the object of sale is regarded as a condition of the fulfilment of the *ʿaḳd*. This position obtains as regards loan of fungible and not fungible things, pledge and gift which, in Muslim law, are equivalent to "real" contracts.

The *ʿaḳd* must comply with a condition of unity in time and space. The *ʿaḳd* constitutes an indivisible whole. The *negotium* (*ṣafḳa*) is one and indivisible, in the sense that the offer cannot be accepted in part, even when it involves two distinct things. Similarly, the offer cannot be accepted by one of its recipients to the exclusion of the other. Finally, the contract is rendered null and void if one of the objects of the contract proves to be an asset *extra commercium*. This conception of the contract as an inviolable unit gives great rigidity to the structure of the *ʿaḳd*. Thus the *ʿaḳd* cannot comprehend more than one

negotium. On the other hand, the *ʿakd* must be concluded at one and the same sitting (the contractual meeting or *madjlis al-ʿakd*). In short, the contracting parties must assemble in one and the same place. The contractual act thus takes place under the symbol of the three unities (see Ch. Chehata, *Théorie générale*, no. 116).

From this it follows that any clause added to the contract will be declared inoperative unless it is implied by the nature of the contract itself, so that it can be smoothly integrated into its structure. Such clauses are termed *essentialia* and *naturalia*. All other clauses (*accidentalia*) will be considered invalid. Thus the inalienalibity clause added to a contract of sale will be deemed null and void.

Does this mean that contracts in Muslim law are all formulated contracts, and that the parties cannot, by mutual agreement, conclude contracts which have not been anticipated by the Law (*sharʿ*)? The answer usually given is that Muslims are bound by their stipulations (*shurūṭ*) [*q.v.*]. But at the same time every type of contract is considered on its merits and pronounced legal or otherwise on the basis of the Ḳurʾānic texts, the *hadith* or the *idjmāʿ*. It must moreover be realised that the conditions governing the formation of contracts are tantamount to prescripts of an authoritative nature, and that the various regulations laid down by jurists concerning contracts entail the sanction of nullity, which considerably limits the area of contractual freedom. On the other hand it should not be forgotten that the Muslim social order, in matters concerning contracts, is based on two main principles; the struggle against usury and any suspicion of usury (*ribā* and *shubhat al-ribā*), and the exclusion of all risk (*gharar*) from transactions.

The *ʿakd*, once drawn up in accordance with the requisite conditions, cannot in principle be vitiated by some fault in the agreement, unless there is a question of constraint (*ikrāh*). Constraint is usually the subject for a separate chapter in works on *fikh*. The party which has suffered constraint can revoke its contractual obligations. In the case of fraud, on the other hand, the contract can be challenged only if the fraudulent actions have inflicted on the deceived party excessive loss (*ghabn fāhish*). Errors, such as a fault in the agreement, pass almost unnoticed. The party which is deceived as to the quality of the article can only withdraw from its contractual obligations if the quality has been made the subject of a special stipulation in the contract. The contract will then have to be cancelled, not on account of the error, but on the basis of the resolutory clause.

An *ʿakd* which does not satisfy the required conditions is in principle ineffective, and is termed null and void (*bāṭil*) [*q.v.*]. Ḥanafite doctrine distinguishes, however, between the invalid contract and the irregular (*fāsid*) contract. The contract will be considered null and void only if one of the conditions (*rukn*) regulating the conclusion of the contract happens to be unfulfilled. In all other cases, the contract will simply be irregular. The irregular contract, however, is, like an invalid contract, an act devoid of legal consequences. The advantage of the distinction between these two categories appears only when the protection of a third party is involved. Thus a person acquiring property by virtue of a *fāsid* contract can validly alienate it in favour of a third party, if he has previously taken possession of it. The alienation in this case arises from a *non dominus*, but it is considered valid, because the third party, which has acquired the property from its owner, could be ignorant of the irregularity (*fasād*) attaching to that owner's title. This measure of protection is at the basis of the theory of *fāsid* contracts in Ḥanafī Muslim law. (See Ch. Chehata, in *Travaux de le Semaine de Droit Musulman*, Paris 1953, 36 ff.)

It should, however, be noted that certain contracts are neither valid nor invalid, but belong to a third category. The *ʿakd* is then said to be *mawkūf*, as, for example, in the case of a contract concluded, without the *auctoritas* of his guardian, by a minor who is not without powers of discrimination. Unless gratuitous transactions are involved, transactions concluded by minors who are not without powers of discrimination are not null and void. They are simply non-effective (cf. Art. 108 of the German civil code). The ratification (*idjāza*) of the guardian gives them full and absolute effect. Similarly a contract agreed to by a *non-dominus* is considered simply to be non-effective, prior to the ratification of the *verus dominus*. In the meantime, the contract has no legal effects whatever. It is in a state of suspense (*mawkūf*) between the parties and equally as regards any third party.

If an *ʿakd* is to have effect on other than on the contracting parties, representation is required. In Ḥanafī Muslim law the agent (*wakīl*) does not, in principle, represent his client. In order that the *ʿakd* may produce its effect directly on the client, the agent must act in the name of his client (*alieno nomine*). But he then assumes the role of a messenger a spokesman pure and simple (*rasūl*). If he acts in his own name (*proprio nomine*), which is the usual function of an agent, the *ʿakd* will still produce its effect in regard to the client, but the obligations arising from the contract will not be binding on the client; they will be binding on the agent alone. Thus the legal representative of a person acquiring property will find himself bound to pay its price himself, while the property will go directly to his client. The distinction, already noticed, between the effects of the contract (*aḥkām*) and rights arising from the contract (*ḥukūk al-ʿakd*) is clearly illustrated here. (See Chefik Chehata, *La représentation dans les actes juridiques en droit musulman hanéfite, d'après les textes de Shaybānī*, to appear in the Proceedings of the Congress of Comparative Law, Paris 1954.)

The effective *ʿakd* is in principle binding (*lāzim*). There are, however, several exceptions to this rule; for instance agency, gratuitous loan, pledge, partnership, suretyship, security and gift are considered, among others, to be contracts which are essentially revocable. In all these contracts one of the parties is free, depending on the circumstances, to withdraw from its contractual obligations by a simple unilateral declaration. (In the case of gift, however, a judicial decree is necessary.) Moreover, contracts of lease can always be rescinded if one of the parties lodges a plea (*ʿudhr*) on any grounds whatever. Finally, a special clause can be inserted in general in any contract, to confer on one party, or on both parties equally, the right to withdraw (*jus paenitandi*, called in Muslim law *khiyār al-shart*).

In conclusion it may be mentioned that mutual agreement between the parties can always put an end to a contract. This is termed *iḳāla* (*mutuus dissensus*), and is discussed at length in works on *fikh*. But the *ʿakd* cannot in principle be cancelled on the grounds of non-fulfilment. Thus the vendor, in default of a special clause, cannot demand the rescission of the sale in a case where the purchaser has not paid the agreed price. [See also SHURŪṬ.]

(Chafik Chehata)

AKDARIYYA is the name of a well-known difficult law-question about inheritance which belongs to the *masāʾil mulaḳḳaba* (i.e. questions "called by special names"). When a woman leaves behind as her heirs: 1. her husband, 2. her mother, 3. her grandfather, and 4. her sister (whether she be her *shaḳīḳa*, i.e. her full sister, or her *ukht li 'l-ab*, i.e. her half-sister on the father's side), then her husband gets $^1/_2$, the mother $^1/_3$ (cf. Ḳurʾān, iv, 12-13), so that there would only remain $^1/_6$ of the inheritance for the grandfather and the sister. The latter two are generally considered, when they inherit together, as *ʿaṣabāt*, that is the sister inherits half of the grandfather's part, and together they get everything that remains when the *aṣḥāb al-farāʾiḍ* (i.e. the heirs to whom the Ḳurʾān grants a definite part of the inheritance) have been satisfied.

Now the grandfather can, according to the current interpretation of Ḳurʾān, iv, 12, in any case lay claim to a sixth part of the whole inheritance. But then the sister would get nothing. This is actually the doctrine of the Ḥanafīs. According to them, the grandfather here excludes the sister from the inheritance. But the other schools of *fiḳh* are of opinion that in this case the grandfather and the sister are not to be regarded as *ʿaṣabāt*, but that in the same way as the husband and the mother, they get the parts to which the Ḳurʾān entitles them. Then the division is as follows:

the husband inherits	$^1/_2 = ^3/_6$
the mother inherits	$^1/_3 = ^2/_6$
the grand-father inherits	$^1/_6 = ^1/_6$
the sister inherits	$^1/_2 = ^3/_6$

By means of *ʿawl* [*q.v.*] these nine sixths are reduced to nine ninths.

Then the husband would receive	$^3/_9$
the mother	$^2/_9$
the grand-father	$^1/_9$
the sister	$^3/_9$

But as the sister can after all only lay claim to half the grandfather's part, the right proportion between these two parts has again to be re-established. Together they inherit $^4/_9 = ^{12}/_{27}$, but the grandfather receives $^8/_{27}$ and the sister $^4/_{27}$.

About the meaning of the name *akdariyya* the Muslim scholars hold different opinions. Some say that the question itself is *akdar* (i.e. troubled, obscure), or that the otherwise generally accepted principles are "troubled, disturbed" in this case; others believe Akdar to be the name of a man, to whom ʿAbd al-Malik b. Marwān submitted this question.

AKH [see ʿĀʾila, ikhwān, muʾākhāt].

ĀKHĀL TEKKE was between 1882 and 1890 the name of a district (*uězd*) in the Russian territory (*oblastʾ*) of Transcaspia, which had been conquered by the Russians in 1881. It comprised the sub-districts of Atek [*q.v.*] (chief place: the village of Kaakhka) and Durūn [*q.v.*] (Darūn; chief place: Bakharden). Since 1890 the district is called ʿAshḳābād [*q.v.*] — The name Ākhāl (which is of modern origin) applies to the oases on the northern slope of the Kopet Dagh and Küren Dagh; Tekke refers to the Tekke or Teke [*q.v.*] Turkmen, the present inhabitants of this region. The Islamic geographers of the Middle Ages have no special name for the region, which was inhabited by Iranians, masters in the art of irrigation. Here was situated the town of Nasā [*q.v.*] or Nisā, now in ruins, the border fortress of Shahristān (three parasangs to the north of Nasā) and Farāwa (Afrāwa) near the present Ḳïzïl Arwat. In the 16th-17th century the country came under Uzbek rule and was called Tagh Boyu ("mountain side") in contrast to Ṣu Boyu, "water side" (i.e. Khʷārizm proper). At that time the town of Nasā seems to have still existed, but subsequently it was completely ruined owing to the neglect of irrigation; Durūn (Darūn) is also mentioned at this time. At the time of the Russian conquest the country had no towns; ʿAshḳābād and Ḳïzïl Arwat came into being only under Russian rule. The district suffers from earthquakes (for instance in 1893, 1895, 1929, 1948).

AKHALČIKH [see akhiskha].

AKHARNAR [see nudjūm].

AKHBĀR [see taʾrīkh].

AKHBĀR MADJMŪʿA, title of a short anonymous chronicle recording the conquest of al-Andalus by the Arabs, the period prior to the foundation of the Marwānid amirate of Cordoba, and the history of the amirate itself up to the reign of ʿAbd al-Raḥmān III al-Nāṣir. This text, published on the basis of the *unicum* of the Bibl. Nat. in Paris, and translated into Spanish by Lafuente y Alcantara (Madrid 1867), has had little documentary

interest since the discovery of the greater part of the *Muḳtabis* of Ibn Ḥayyān. It is an ill-proportioned and relatively late work, probably contemporary with the reconquest of Valencia. In it are found lengthy passages from earlier chronicles, notably from that of ʿĪsā b. Aḥmad al-Rāzī. The fact that this text does not refer to the sources which it transcribes or transposes has deceived Dozy (preface to his edition of the *al-Bayān al-Mughrib* of Ibn ʿIdhārī, Leiden 1848-51, 10-12) and Ribera (introduction to his translation of the *Iftitāḥ* of Ibn al-Ḳūṭiyya, Madrid 1926, XIII ff.) into supposing it to be an original work. The extremely debatable study and problematical conclusions reached by by the non-Arabist Spanish historian Cl. Sanchez Albornoz, in his work *El "Ajbār maymūʿa", cuestiones historiográficas que suscita*, Buenos Aires 1944, need only be mentioned here.

(E. LÉVI-PROVENÇAL)

AL-**AKHḌAR**, "the green", a vulgar form currently used in North Africa for the personal name al-Khiḍr [*q.v.*]. Various santons, especially at Constantine, are known by this name.

AL-**AKHḌARĪ**, ABŪ ZAYD ʿABD AL-RAḤMĀN B. SAYYIDĪ MUḤAMMAD AL-ṢAGHĪR, Algerian author of the 10th/16th century. He wrote (1) *al-Sullam al-Murawnaḳ* (composed in 941/1534), a short versification of al-Abharī's [*q.v.*] *Īsāghūdjī* on logic; this little work soon became extremely popular and acquired numerous commentaries (one by the author himself) and glosses; it has often been lithographed or printed, in Fās, Būlāḳ (editio princeps of 1241 in *Madjmūʿ Muhimmāt al-Mutūn*), Cairo and Lucknow; French transl. by J. D. Luciani, *Le Soullam*, Algiers 1921. Very popular, too, is his (2) *al-Djawhar al-Maknūn fī Ṣadaf al-Thalātha al-Funūn*, a versification of the *Talkhīṣ al-Miftāḥ* (Brockelmann, I, 353), to which the author himself supplied a commentary (composed in 950/1543); in this form, or with commentaries by other writers, it has often been lithographed or printed in Cairo (first in 1285). Also printed or lithographed are (3) *al-Durra al-Bayḍāʾ fī Aḥsan al-Funūn wa'l-Ashyāʾ*, a metrical treatise on arithmetic, inheritance and legacies (composed in 940/1533), (4) *Naẓm al-Sirādj fī ʿIlm al-Falak*, a metrical treatise on astronomy (composed in 939/1532-33), and (5) a *Mukhtaṣar fī 'l-ʿIbādāt*, a popular elementary treatise on ritual duties according to the Mālikī school. Several other works of his exist in manuscripts. He is buried in the *zāwiya* of Bentiyūs (al-Bakrī, *al-Mughrib*, 52, 72), the modern Ben Thious, s.w. of Biskra, and his tomb is still visited.

(J. SCHACHT)

AL-**AKHFASH**, ("nyctalope" or "devoid of eyelashes"), cognomen of a number of grammarians listed by al-Suyūṭī (*Muzhir*, Cairo, undated, ii, 282-3), viz.: Abu 'l-Khaṭṭāb, Saʿīd b. Masʿada and ʿAlī b. Sulaymān, see below; ʿAbd. Allāh b. Muḥammad al-Baghdādī, pupil of al-Aṣmaʿī; Aḥmad b. ʿImrān b. Salāma al-Alhānī, died before 250/863, author of a *Gharīb al-Muwaṭṭaʾ*, grammarian, lexicographer and poet (see Ben Cheneb, *Classes des savants de l'Ifrīqiya*, 34); Hārūn b. Mūsā b. Sharīk, d. 271/884-5; Aḥmad b. Muḥammad al-Mawṣilī, tutor of Ibn Djinnī; ʿAbd al-ʿAzīz al-Andalusī, tutor of Ibn ʿAbd al-Barr; ʿAlī b. Muḥammad al-Idrīsī, d. after 450/1058; Khalaf b. ʿAmr al-Yashkurī al-Balansī, d. after 460/1068; ʿAlī b. Ismāʿīl b. Radjāʾ al-Fāṭimī. To this list may be added ʿAlī b. al-Mubārak (Brockelmann, S I, 165), and a traditionist named al-Ḥusayn b. Muʿādh b. Ḥarb, d. 277/890 (see Ibn Ḥadjar, *Lisān al-Mīzān*, ii, 313-4). The three following are the most famous; the first two of these belong to the school of al-Baṣra.

I. — AL-AKHFASH AL-AKBAR, ABU 'L-KHAṬṬĀB ʿAbd al-Ḥamīd b. ʿAbd al-Madjīd, d. 177/793, pupil of Abū ʿAmr b. al-ʿAlāʾ; he was the first, it is said, to provide ancient poems with an interlinear commentary, and he collected together numerous dialectal terms; his principal pupils were Sībawayh, Abū Zayd, Abū ʿUbayda and al-Aṣmaʿī [*qq.v.*].

Bibliography: Sīrāfī, *Akhbār al-Naḥwiyyīn* (Krenkow), 52; Zubaydī, *Ṭabaḳāt*, Cairo 1954; Suyūṭī, *Muzhir*, ii, 248, 249; Ibn Taghrībirdī, i, 485; Brockelmann, S I, 165.

II. — AL-AKHFASH AL-AWSAṬ, Abu 'l-Ḥasan SAʿĪD B. MASʿADA, the most famous of all the Akhāfish, *mawlā* of the Tamīmite clan of Mudjāshiʿ b. Dārim; born at Balkh, he was a pupil of the Muʿtazilite Abū Shamr, but more particularly of Sībawayh, whom he survived although superior to him in age, and it was he who gave instruction on the *Book* and made it widely known; he died between 210 and 221/825-835. Nothing has been preserved of his own works (*Fihrist*, i, 52). Al-Thaʿālibī (d. 427/1035) made use of his *Kitāb Gharīb al-Ḳurʾān*, and his *Kitāb al-Muʿāyāt* is frequently quoted in the *Khizāna* of al-Baghdādī (i, 391; ii, 300; iii, 36, 527).

Bibliography: Ibn Ḳutayba, *Maʿārif* (Wüstenfeld), 271; Azharī, in *MO*, 1920, 12; Ibn al-Anbārī, *Nuzha*, 184-8; Zubaydī, *Ṭabaḳāt*; Sīrāfī, *Akhbār al-Naḥwiyyīn*, 49-51; Ibn Khallikān, no. 250; Yāḳūt, *Irshād*, iv, 242-4; Yāfiʿī, *Djanān*, ii, 61; Suyūṭī, *Bughya*, 258; id., *Muzhir*, ii, 253, 287; Brockelmann, S I, 165.

III. — AL-AKHFASH AL-AṢGHAR, ABU 'L-ḤASAN ʿAlī b. Sulaymān b. al-Mufaḍḍal, pupil of al-Mubarrad and Thaʿlab; he gained distinction by introducing the grammatical studies of Baghdād into Egypt, where Aḥmad al-Naḥḥās was his pupil; a grammatical work which he wrote was studied and annotated in Spain (see *BAH*, ix, 313-4). He died in 315/927.

Bibliography: Brockelmann, S I, 165. On the subject of these grammarians, see also Flügel, *Die grammatischen Schulen der Araber*, 61 ff.

(C. BROCKELMANN-CH. PELLAT)

AKHĪ, designation of the leaders of associations of young men organized as guilds in Anatolia in the 13th-14th centuries, who adopted the ideals of the *futuwwa* [*q.v.*] and were recruited mainly among the craftsmen. Ibn Baṭṭūṭa (ii, 260) connects the name with the Arabic word for "my brother"; if this explanation is based on anything more than an identity of sound, it would offer an instance of a "title in forms of address" similar to A. *sayyidi*, T. *khānum*, *begum*, etc. It is more likely, however, that the homonymy of the two words is accidental, though it was willingly adopted by the Akhīs; occasionally also it is borrowed in the Persian translation *birādar* (cf. Taeschner-Schumacher, *Nāṣirī*, 38). In reality it is a Turkish word (cf. J. Deny in *JA*, 1920, 182 f.; H. H. Schaeder, in *OLZ*, 1928, 1049, n. 1), which is already found in Uyghur in the form *aḳï* "generous" (A. von Gabain, *Alttürkische Grammatik*, glossary, s.v.; *Turfantexte*, vi, 1.4). The word occurs in the same form and with the same meaning (cf. also *aḳïlïḳ*, "generosity") in Middle Turkish (Kāshgharian): in al-Kāshgharī, *Dīwān Lughāt al-Turk* (*aḳï*, "*al-djawād*", i, 84 —

facs. ed. 57; *aḳilik*, iii, 129 — facs. ed. 520; C. Brockelmann, *Mitteltürkischer Wortschatz*, s.v.), and in the didactic poem *ʿAtebet al-Ḥaḳāʾiḳ* by Edīb Aḥmed b. Maḥmūd Yüknekī, ch. ix (ed. R. Rahmeti Arat, Istanbul 1951, 58-61, index, s.v.; under the title *Hibet al-Ḥaḳāʾiḳ*, ed. Nedjīb ʿĀṣim, Istanbul 1334, 52-5; cf. J. Deny in *RMM*, 1925, 219, n. 1); *aḳi er*, "the generous one", and *aḳi bol*, "be generous"; the opposite is *bakhīl* and *bakhīllik*, or *bukhul*, also *khasis and khasislik*). In the latter work the form *akhi* occurs also as a variant reading for *aḳi*, and this is the form which is exclusively used in Rūm-Turkish. It is found several times in the oldest Rūm-Turkish literature, as a vocative ("oh generous one, oh noble one, oh hero") constituting the rhyme-word at the end of a line; for instance in the *Kitāb-i Dede Ḳorḳut* (ed. E. Rossi, fol. 65r, three times; ed. Kilisli Rifʿat, 16; ed. Gökyay, 9), in two poems of Yūnus Emre (ed. Burhan Ümid, ii, 344, 361; ed. Abdülbaki Gölpinarli, 117), and also elsewhere (e.g. Enwerī (Mükrimin Khalil), 43). The word passed from the general to the particular meaning, i.e. possessor of *futuwwa* (P. *futuwwat*, T. *fütüwwet*), by acquiring the full implications of the Persian word *djawānmard*, which the latter in turn had received as a translation of Arabic *fata**, *al-fatā* (cf. H. H. Schaeder, loc. cit.).

Akhī, as a term qualifying its bearer as possessing *fütüwwet* (*ṣāḥib fütüwwet* or *fütüwwet-dār*), always precedes the name and occurs occasionally with reference to persons even earlier than the 7th/13th century. So for instance it is applied to the ṣūfī *shaykh* Akhī Faradj Zandjānī (d. 1 Radjab 457/8 June 1065), and the teacher of the poet Niẓāmī (b. 535/1141) is also said to have borne that designation. It is, however, only in the 7th/13th, and more especially the 8th/14th century, that the name occurs frequently, in the whole of the Middle East, but predominantly in Anatolia; it gradually disappears again in the course of the 9th/15th century.

In the more particular sense, Akhism is the specific form assumed by the *futuwwa* organization in late- and post-Saldjūḳ Anatolia. It is well attested here by a literature of its own (the Persian *Futuwwat-nāma* of Nāṣirī, written in 689/1290 in N. E. Anatolia, being a *mathnawi* of 886 couplets; the Turkish *Fütüwwet-nāme*, in prose, by Yaḥyā b. Khalīl al-Burghāzī, probably from the 8th/14th century; the important chapter on *fütüwwet* in Gülshehrī's old-Ottoman version of ʿAṭṭār's *Manṭiḳ al-Ṭayr*, studied by F. Taeschner in *SBPAW*, 1932, 744-60), as well as by allusions in various authors (the most impressive being Ibn Baṭṭūṭa's vivid account, ii, 254-354, especially 260 ff., the chapter on *al-akhiyya al-fityān*), and by inscriptions and documents. (A list of the references, to which many additions could now be made, in *Islamica*, 1929, 29-47.) ʿĀshiḳpasha-zāde (Giese), 201, 213 (= Istanbul ed. 205), names the *akhiyān*, together with the *ghāziyān*, *abdālān* and *bādjiyān*, as the four groups of "travellers" (*müsāfirler we-sayyāḥlar*) in Rūm (Anatolia) (for comments on this statement see P. Wittek, in *Byzantion*, 1936, 310). The wording of the sentence seems to imply that these groups came to Anatolia from abroad. They can perhaps be connected with the flood of *darwishes* and related figures from the east (Khurāsān and Turkistān), who are known from other sources as well to have come to Anatolia in the Mongol period (second half of the 13th century). Some early mentions of *akhis* in Iranian territory in pre-Mongol times would bear this out. The earliest mentions of *akhis* in Anatolia (especially in Aflākī, *Manāḳib al-ʿĀrifīn*, cf. Cl. Cahen, see below) also go back to relations with Iran. On the other hand, in considering the forms of organization of Akhism, the connection with the courtly *futuwwa* at the caliphs' court in Baghdād ought not to be passed over; this is made likely by the relations, repeatedly attested, between the caliph al-Nāṣir li-Dīn Allāh (575-622/1180-1225), the reformer of the *futuwwa* [*q.v.*], and the Saldjūḳ sultan of Rūm.

During the disintegration of the state of the Rūm Saldjūḳs and the division of Anatolia into a number of Turkish principalities (second half of the 13th century), the *akhis*, who according to the contemporary or slightly later authors (such as Ibn Bībī, Aḳsarāyī, the Paris Anonymous and Aflākī) were leaders of bands (*runūd*), showed a remarkable activity, reminiscent of the activity of the *ʿayyārūn* [*q.v.*] in Baghdād and the *aḥdāth* [*q.v.*] in Syria a century before. In the first half of the 14th century, the *akhis* appear in the account of Ibn Baṭṭūṭa, to whom the *akhis* extended hospitality in every town during his journey through Anatolia, ca. 1333, as an important element of cohesion in the motley conglomeration of states in Anatolia at that period. In towns where no prince resided, they exercised a sort of government and had the rank of *amir* (Aḳ Sarāy, Ibn Baṭṭūta, ii, 286; Ḳaysariyye, ii, 288 f.); sometimes they exercised judicial authority (Ḳonya, Ibn Baṭṭūṭa, ii, 281). Their position seems to have been especially strong in Anḳara, at the time when the authority of the Mongol governor residing in Sīwās did not reach so far. Sharaf al-Dīn, the richest and most powerful of these *akhis* of Anḳara, calls himself in his tomb inscription of 751/1350: *akhi muʿaẓẓam* (Mübārek Ghālib, *Anḳara*, ii, 15 f., no. 20; *Islamica*, 1929, 44, no. 3b). According to Neshrī (Taeschner), 52 (= ed. Ankara, 190-2), it was from their hands that Murād I accepted the town in 762/1360-1, We find *akhis* also in the entourage of the first Ottoman rulers; some of these *akhis* took part in the conquest of Brusa (for details see *Islamica*, 1929, 30). Basing himself on this fact, Fr. Giese (*ZS*, 1924, 255, 258) considered the *akhis* as the troops with whose help the Ottomans founded their power, and surmised that they themselves were members of *akhi* organizations. This is, however, little likely, in view of the urban character of Akhism and the fact that its associations were composed of craftsmen. P. Wittek has shown with much probability that the role attributed by Giese to the *akhis* belongs in reality to the *ghāzis*, fighters for the faith, who constituted a military counterpart to the *akhis* (first in *ZDMG*, 1925, 288 f., and then frequently). On the other hand it results from a *waḳfiyya* of Murād I, of 767/1366, and an inscription in Ḥādjdjī Bektāsh, of 769/1368, that Murād, probably for political reasons, joined the still powerful *akhi* organization (see Fr. Taeschner, *War Murād I Grossmeister oder Mitglied des Achibundes*, *Oriens*, 1953, 23-31). This was followed, however, by the decline, rather than the advancement, of Akhism, as it seems that the Ottoman sultans, when they had no further need of the *akhis*, dropped their relations with them.

The *akhis*' own literature does not allude to any activity in public life. Here the *akhi* organization appears as a half-religious, *darwish*-like society. It comprised three grades: *yigit* ("young man", translation of A. *fatā*, designated the ordinary unmarried member of the organization); *akhi* (president of a corporation of *fityān* and owner of a *zāwiya*, meeting-house, of which there were sometimes more than one

in a town); and *s̲h̲ayk̲h̲*. The latter grade seems to have played practically no active role; probably it refers to the leader of a *darwīs̲h̲* settlement, to which the members of the corporation felt themselves attached. Such attachments seem to have varied with the individual corporations; there are known to have been relations between *ak̲h̲īs* and the Mewlewīs, Bektas̲h̲īs, K̲h̲alwetīs, and probably yet other orders. The ordinary members were again divided into two classes: they were either *ḳawlīs*, "word-members", when they made a general profession only ("by way of speech"), or *sayfīs*, "sword-members", who probably were the active members. Their symbol was, according to Ibn Baṭṭūṭa, ii, 264, a knife (*sikkīn*); they covered their heads with a white woollen headgear (*ḳalansuwa*), from the end of which there hung down a piece of cloth one ell long and two fingers in breadth (the resemblance to the head-covering of the later Janissaries, the *keče*, is noteworthy). According to Ibn Baṭṭūṭa, the members of an *ak̲h̲ī* corporation met every evening in the house of their leader, the *ak̲h̲ī*, bringing him their daily earnings, which served to cover the expenses of the club premises and the communal meal, to which also guests, especially passing travellers, would be invited. The lodging and entertaining of travellers was considered by the *ak̲h̲īs* as their main function. According to Ibn Baṭṭūta, they also played a political role by fighting tyrants and murdering their adherents; this statement may be an echo of the frequently attested activities of the *ak̲h̲īs* in earler times, which found expression in revolts and similar demonstrations.

As regards other customs and their code of honour, the *ak̲h̲īs* accepted the general rules of *futuwwa* ([*q.v.*], T. *fütüwwet*). As in the *futuwwa*, so also among the *ak̲h̲īs*, the initiation of novices (*terbiye*) into the association by their girding, the cutting of their hair, the passing round of a cup of salted water and putting on the trousers, was of central importance. Their religious-political position, however, was not fixed: some elements in the custom and theory of the *ak̲h̲īs*, as for instance the intense cult of ʿAlī, shows a S̲h̲īʿite colouring; yet they no doubt considered themselves to be Sunnīs and like all Turks followed the Ḥanafī rite. (Ibn Baṭṭūṭa, as a Mālikī, fell in Sinob under suspicion of being a Rāfiḍī, i.e. S̲h̲īʿite, because of a minute difference in the ritual of prayer and had to clear himself by eating roasted hare (ii, 352 f.).)

In the 15th century information about Ak̲h̲ism becomes more and more rare and finally ceases. Sometimes the word *ak̲h̲ī* occurs, but merely as a proper name. A *molla* Ak̲h̲aweyn is named under Meḥmed II; a family called Ak̲h̲ī-zāde, whose members occupied high judicial posts, survived into the 17th century. Also place-names in which the word *ak̲h̲ī* occurs in various combinations are not uncommon in Anatolia and Rumelia. But it seems that Ak̲h̲ism disappeared in the course of the 15th century. Its tradition survived only in some elements of the Turkish guilds [cf. ṢINF], in whose organization (which according to Sayyid Meḥemmed b. Sayyid ʿAlāʾ al-Dīn's *Great Fütüwwet-nāme* (composed in 1524) had nine grades) the *ak̲h̲ī*, also called *k̲h̲alīfe*, occupied the seventh grade. The *ak̲h̲ī* tradition was especially cultivated in the guild of the tanners, who had as their patron Ak̲h̲ī Ewrān [*q.v.*], a semi-mythical figure, who, if he is historical at all, must have lived in the first half of the 14th century. The president of the tanners' guild bore the title of Ak̲h̲ī Baba [*q.v.*]. Moreover, among the tanners the *Fütüwwet-nāme* of Yaḥyā b. K̲h̲alīl al-Burg̲h̲āzī continued to be read, revised and copied.

The designation *ak̲h̲ī* occurs sporadically also outside Turkey, but the evidences are too scanty to allow of any definite conclusions as to its exact significance. The most striking case is appearance of a man called Ak̲h̲īd̲j̲ūḳ [*q.v.*], "little *ak̲h̲ī*" in Ād̲h̲arbayd̲j̲ān after the decline of the Īlk̲h̲āns of Persia. The word *ak̲h̲ī* occurs, in a weakened sense, several times in the *dīwān* of "K̲h̲aṭāʾī", i.e. S̲h̲āh Ismāʿīl, as one of the designations given to his followers (V. Minorsky, *The Poetry of Shāh Ismāʿīl I*, *BSOAS*, 1942, 1030a; M. Fuad Köprülü, *Türk Halkedebiyatl Ansiklopedisi*, no. 1, Istanbul 1935, 30a).

AK̲H̲Ī BABA, in popular parlance also AHU BABA or EHI BABA, title of the s̲h̲ayk̲h̲ of the tekye of Ak̲h̲ī Ewrān [*q.v.*] in Kīrs̲h̲ehir. Sometimes also his delegates to the Turkish guilds [cf. ṢINF] in Anatolia, Rumelia and Bosnia, especially those of the tanners and other leather workers (saddlers and shoemakers), as well as the heads of these guilds, were given the title of Ak̲h̲ī Baba (more correctly *Ak̲h̲ī Baba wekīli*). The main task of the Ak̲h̲ī Baba, or of his delegate or local representative, was to carry out the initiation of apprentices to these guilds by the ceremony of the girding (*ḳus̲h̲aḳ* or *pes̲h̲temāl ḳus̲h̲atmak*); this carried with it some fees. The Ak̲h̲ī Babas succeeded little by little in extending their ascendancy over other guilds and conducting the girding ceremony in them also. Thus they brought under their control almost the whole Turkish guild organization, both in Anatolia and the European provinces (but not, however, in the provinces with Arab population), acquiring for themselves a position of considerable power, and for the *tekye* of Kīrs̲h̲ehir great riches. Only a few guilds managed to escape their control; among these were the guilds of Ankara, which had formerly been the stronghold of *ak̲h̲ism*. His influence even reached as far as the Crimea, where also the tanners' guild had precedence in all celebrations of the guilds (E. Bulatov, in *Očerki Rossii*, ed. V. Passek, Moscow 1840, iii, 139-54; V. Gordlewskiy, *Organizatsiya*

tsekhov v krimskikh Tatar, Trudi etnografo-arkheologičeskovo Muzei, pri I. Moskovskom Gosudarsto. Universitete, iv, Moscow 1928, 56-65).

The Akhī Babas claimed to be descendants of Akhi Ewrān. The local representatives of the Akhī Baba were elected by the members of the respective guilds, but did not necessarily belong to them, and any persons who were in any way notable could be chosen. They had, however, to receive a licence (*idjāzet-nāme*) from the Akhī Baba of Kīrshehir and a diploma (*berāt*), confirming the appointment, from the government. The Akhī Baba of the tanners was at the same time the head of the whole guild organisation in his town. He could, however, be deposed.

With the decline of the Turkish guilds, following on the penetration of Western economic systems, the journeys of the Akhī Babas of Kīrshehir, as well as the sending of delegates by him, fell into disuse. A delegate of the Akhī Baba came to Bosnia for the last time in 1886-7 (Hamdija Kreševljaković, *Esnafi i Obrti u Bosni i Hercegovini, Sarajevo*, in *Zbornik Narodni život i običaje južnik Slavena*, Zagreb 1935, 101-47). In the provinces which remained part of the Ottoman Empire, this practice ceased only at the time of the abolition of the old guilds in 1908.

Bibliography: see AKHĪ and AKHĪ EWRĀN, also Fr. Taeschner, *Das Zunftwesen in der Türkei, Leipziger Vierteljahrschrift für Südosteuropa*, 1941, 172-88; idem, *Das bosnische Zunftwesen zur Türkenzeit* (1463-1878), *Byzantinische Zeitschrift*, 1951, 551-9. (FR. TAESCHNER)

AKHĪ EWRĀN, semilegendary Turkish saint, patron of the Turkish tanners' guilds. His tomb sanctuary in Kīrshehir (built in the 9th/15th century, with inscriptions of 854/1450 and 886/1481; the last in the name of ʿAlāʾ al-Dawla b. Süleymān Beg, probably of the family of the Dhu 'l-Ḳadr, and thus brother-in-law of Sulṭan Meḥmed II), connected with a *tekye*, was a frequented place of pilgrimage. Tashköprü-zāde (on margin of Ibn Khallikān, 15; Turkish transl. of Medjdī, 33; German transl. by O. Rescher, 6) mentions him amongst the *shaykhs* of the period of Orkhān. His name first occurs in a Turkish *mathnawī, Kerāmāt-i Akhī Ewrān ṭāba tharāh*, by Gülshehrī, which was composed probably after the author's *Manṭiḳ al-Ṭayr* (finished in 717/1317)—from which it has many borrowings—and not long after the saint's death. He is next mentioned in the *Wilāyet-nāme* of Ḥādjdjī Bektash, written in the time of Murād II (E. Gross, *Das Vilâjet-name des Ḥâǧǧî Bektasch*, Leipzig 1927, 82-93). While in Gülshehrī's *mathnawī* Akhī Ewrān's figure is given only a slight touch of the miraculous (it is noteworthy that there is as yet no mention there of his relation with the tanners' craft), in the *Wilāyet-nāme* it is already fully elaborated with legendary features (there is also mention of relations with the tanners); it is worth noting that here Akhī Ewran is presented not as a disciple, but as a friend of Ḥādjdjī Bektash. According to ʿAlī Emīrī (*OTEM*, 1335, 467 f., note) and M. Djewdet (*Dhayl ʿalā Faṣl "al-Akhiyya al-Fityān"*, Istanbul 1351/1932, 279-82) there exists a document of endowment (*waḳfiyye*) by Akhī Ewrān dating from 706/1306-7 (in a copy published by C. H. Tarīm, *Kīrşehir Tarihi*, Kīrşehir 1938, it even bears the date of 676/1277!), where the full name of the saint is given as al-Shaykh Naṣīr (Tarīm: Naṣr) al-Dīn Pīr-i Pīrān Akhī Ewrān. The document can, however, easily be recognized as a forgery, as Shaykh Ḥāmid Welī (d. 815/1412), teacher of Ḥādjdjī Bayrām Welī (d. 833/1428-9) is named in it; it was probably fabricated in the first half of the 15th century, in order to give legal sanction to the possessions of Akhī Ewrān's sanctuary in Kīrshehir.—The importance of the sanctuary as a place of pilgrimage is attested by Sīdī ʿAlī Reʾīs (*Mirʾāt ül-Memālik*, Istanbul 1313, 16; Engl. transl. by A. Vambery, *The Travels and Adventures of the Turkish Admiral Sidi Ali Reis*, London 1899, 105), who visited it in 964/1556 on his return from India. Also other Anatolian cities besides Kīrshehir boasted of the possession of the grave, or at least of a memorial, of the saint, for instance Trapezunt (a *maḳām* on the Boz Tepe), Ḳonya (in the quarter of Sīrčalī), Nigde and Brusa. All these were, however, more or less forgotten, and only the sanctuary of Kīrshehir retained its position.

In addition to the aforementioned writings, legends of Akhī Ewrān are occasionally found in authors such as ʿĀlī, *Künh ül-Akhbār*, v, 64; Ewliyā Čelebi, *Siyāḥat-nāme*, i, 594 f.; in the literature of the tanners' guilds, which continued the *akhī* tradition (often in the form of appendices bearing the title of *Menāḳib* to the *Fütüwwet-nāme* of Yaḥyā b. Khalīl al-Burghāzī, (cf. AKHĪ)); in oral traditions, recorded for instance by M. Räsänen, *Türkische Sprachproben aus Mittelanatolien*, iii, Helsinki 1936, 99 ff., nos. 22, 23 and 25, and by W. Ruben (see Bibl.). For the most part they deal with the saint's work as a tanner (or gardener) or with his name (Ewran or Ewren, "snake, dragon"; for this reason Gordlevskiy suspects a survival of a snake cult). In the tanners' guild literature the legend is found that his original name was Maḥmūd, that he was a son of al-ʿAbbās, the Prophet's uncle, and that he had been specially commended by the Prophet. (This anachronism was censured in the work of Münīrī Belghrādī, who criticized the Shīʿite tendences which were displayed in the literature of the guilds, in a work entitled *Nisāb ül-Intisāb wa-Ādāb ül-Iktisāb*, composed in 1620.) In the *ʿAnḳā-yi Mushriḳ* of the Djelwetī *shaykh* Sayyid Muṣṭafā Ḥāshim (d. 1197/1783), quoted by ʿAlī Emīrī (loc. cit., 464-6), the saint, under the name of Sayyid Niʿmat Allāh Akhī Ewrān Welī, is brought, along with Ḥādjdjī Bektash Welī and Sayyid Edebālī, into connection with Ghāzī ʿOthmān's girding with the sword. As patron of the Turkish tanners, a *silsile* was ascribed to him which went back to Zayd Hindī, patron of all the tanners; other *silsiles* go back to Manṣūr ʿĀbid, i.e. al-Ḥallādj.

The sanctuary of Akhī Ewrān in Kīrshehir played a great role into the first years of the 20th century, as the *shaykh* of the monastery, who bore the title of Akhī Baba [*q.v.*] controlled, partly personally, partly through his representatives who resided in the various towns, the guilds of the tanners and of kindred leather workers (saddlers, shoemakers) in Anatolia and the European provinces of the Ottoman Empire, and gradually succeeded in extending his influence over almost the whole of the Turkish guild-organisation.

AKHĪDJŪḲ, "little *akhī*", an *amīr* of unknown name in Tabrīz, in the 8th/14th century, follower of the Čobanid Malik Ashraf, who was defeated and executed by Djānī Beg, *khān* of the Golden Horde. When after Djānī Beg's death his son, Berdī Beg, who had been left by his father as governor in the conquered city, left Tabrīz in order to secure his father's throne for himself (758/1357), Akhīdjūḳ succeeded in obtaining possession not only of Tabrīz, but of the whole of Ādharbaydjān, and in defending them for some time from the Djalā'irid sultan of Baghdād, Uways, son of the "Great Ḥasan" (Ḥasan-i Buzurg). When, however, Uways captured Tabrīz in 760/1359, he ordered the execution of Akhīdjūḳ, who had taken part in a conspiracy against him. During his short rule Akhīdjūḳ corresponded with the Mamlūk Empire of Egypt (he was adressed by the Mamlūk chancery simply by the title of "*akhī*"; al-Ḳalḳashandī, *Ṣubḥ al-Aʿshā*, viii, 261, cf. W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Agypten*, 128). His fame spread as far as Anatolia, where a chapter was devoted to him by the old Ottoman poet Aḥmedī in his famous *Iskender-nāme*.

ĀKHIR-I ČĀRSHAMBA [see ṢAFAR].

ĀKHIRA, fem. of *ākhir*, "the last", is a term used already in the Ḳur'ān for the life to come, according to the commentators properly *al-dār al-ākhira*, "the last abode", as opposed to (*al-dār* or *al-ḥayāt*) *al-dunyā*, "the nearer or nearest abode or life", i.e. the present world. A synonym is *maʿād*. The same antithesis is expressed by the terms *dār al-baḳā'*, "the abode of everlasting existence", and *dār al-fanā'*, "the abode of transitoriness", and by the roots ' *dj l* and ʿ *dj l*. *Ākhira* also denotes the condition of bliss or misery in the hereafter, again as opposed to *dunyā*, the lot of man in the present world, and in particular its pleasures. From these meanings derive more technically theological and philosophical definitions, such as the state of resurrection whether corporeal or incorporeal or, if resurrection of the body is denied, a spiritual state. See also DUNYĀ.

Bibliography: Lane, *Lexicon*, s.v.; A. Sprenger (ed.), *Dictionary of the Technical Terms*, s.v.; Ghazzālī, *Iḥyā' ʿUlūm al-Dīn*, *kitāb* 40 and passim; Fakhr al-Dīn al-Rāzī, *Muḥaṣṣal*, *rukn* 3, *ḳism*, 2. (A. S. Tritton)

AKHISKHA, the Persian and Turkish name of a town, in Georgian AKHAL TSIKHE, "New Fortress", situated on the Poskhov river (left tributary of the upper Kur), centre of the Georgian province Samtskhe (later Sa-atabago) which is mentioned among the conquests of Ḥabīb b. Maslama (under Muʿāwiya), al-Balādhurī, 203.

Under the Mongols the local rulers (of the Djakilʿe family) became autonomous and received the title of *atabegs*. The name Ḳurḳūra found in Persian and Turkish sources refers to these rulers of whom several bore the name of Ḳuarḳuare (see Brosset, *Histoire de la Géorgie*, ii). In 1579 Akhal Tsikhe was occupied by the Ottomans who succeeded in implanting in this region Islam and Ottoman customs. In 1625 the Turkish pashas took over the administration. Akhal Tsikhe became a considerable strategic point and one of the chief Caucasian slave-markets, cf. Ḥādjdjī Khalīfa, *Djihān-numā*, 408 f. In 1829 the town was incorporated by the Russians. After the revolution it forms part of the Georgian S. S. Republic. (V. Minorsky)

AKHLĀḲ (plural of *khuluḳ*, "innate disposition"), ethics.

(i) Survey of ethics in Islam; (ii) Philosophical ethics.

(i) SURVEY OF ETHICS IN ISLAM.

1. Islamic ethics took shape only gradually and the tradition of the different elements of which it is composed was not finally established before the 5th/11th century. Unlike the Greek world, in which popular ethics were refined and reshaped by philosophical reasoning without any breach between them, and with no perceptible influence of any foreign doctrine, so that eventually philosophy came to express the moral values by which the lives of the educated classes were governed, in Islam ethics appear in their matured state as an interesting and, on the whole, successful amalgamation of a pre-Islamic Arabian tradition and Ḳur'ānic teaching with non-Arabic elements, mainly of Persian and Greek origins, embedded in or integrated with a general-Islamic structure. The praise of, and value attached to, good character (*ḥusn al-khuluḳ*) is common enough among traditionalists, mystics, philosophers, and those writers who aim at giving practical advice to rulers and "civil servants". But their ideas of moral perfection are drawn from widely different sources, although all of them, in various ways, try to conform to the basic standards of Islam (which are in themselves not static); hence the process of assimilation and eventual integration of these different and sometimes conflicting trends extended over a considerable time.

2. It would be erroneous to assume that the different kinds of morality which found literary expression in successive periods from the age of the pre-Islamic poets to the 5th/11th century present a cumulative process, in the sense that each new type as it emerged replaced or suppressed the earlier types. On the contrary, they co-existed for a long time, in varying strength. The tribal *sunna* of the pre-Islamic Arabs, based on usage and custom, described by I. Goldziher (*Muhammedanische Studien*, i) and others (e.g. B. Farès, *L'honneur chez les Arabes avant l'Islam*, Paris 1932), by no means died out with the advent of Islam; and since pre-Islamic literature eventually became part of the accepted Arabic humanities, the values expressed in it were never entirely forgotten: a high sense of personal honour [see ʿIRḌ], courage [see ḤAMĀSA], loyalty to one's fellowtribesmen [see ḲABĪLA], hospitality [see ḌAYF], endurance [see ṢABR], self-control [see ḤILM], and a secular spirit which could never be completely quelled by the prevailing religious morality [cf. also MURUWWA]. The preaching of Muḥammad obviously produced a radical change in moral values as well, based on the sanctions of the new religion, and fear

of God and of the Last Judgment: kindness and equity, compassion and mercy, generosity, self-restraint, sincerity, moral fellowship of the Believers are among the new virtues to replace tribal morality, and to become the pillars of an ethical society or, at least, the programme for such a society.

The religious ethic of the Ḳur'ān was subsequently expanded and pointed in immense detail by the traditionists in the form of *ḥadīth̲s* [*q.v.*], professedly based upon and expounding the *sunna*, or model behaviour, of the Prophet, but frequently supplementing this source by traditions of the Companions and by adaptation of materials from the cultural traditions of the older religions. The importance of the *Ḥadīth̲* in forming and maintaining the common ethical ideas of the Muslim Community in all ages and all regions has been incalculable; but in addition it was largely responsible for the ethical framework of the developing Islamic Law [see SH̲ARĪʿA], and for laying the foundations which made possible the process of integration described above. It may be said broadly that the whole corpus of *Ḥadīth̲* constitutes a handbook of Islamic ethics, inasmuch as in the general Muslim view the correct performance of religious duties and the right understanding of religious doctrine are inseparable elements of the moral life. Within this comprehensive structure, however, certain forms of conduct were more particularly designated by the term *adab* [*q.v.*], which in this early religious context had a definitely ethical connotation (see, e.g. Wensinck's *Handbook*, s.v. Adab). It is tempting to surmise (though it might be difficult to prove) that it was the capture of this term for the very differently motivated ethic of Persian origin expounded by the 2nd/8th century writers (see § 4 below) which led to the substitution of the term *ak̲h̲lāḳ*, which appears in various traditions extolling "good *ak̲h̲lāḳ*" (see Wensinck, *Handbook*, 11a and B. Farès, *Makārim al-Aḫlāq*, *Rend. Linc.*, 1937, 417 = *Mabāḥith̲ ʿArabiyya*, Cairo 1939, 21 ff.). The tradition of the Prophet used as a proof-text by later writers on Islamic ethics: "I have been sent to fulfil the virtues which go with nobility of character (*makārim al-ak̲h̲lāḳ*)", does not occur in the canonical books of tradition (cf. B. Farès, loc. cit.). Under this title several collections of ethical *ḥadīth̲s* were made from the 3rd/9th century onwards, e.g. by Ibn Abi 'l-Dunyā (Brock., I, 160), al-K̲h̲arā'iṭī (Brock., S I, 250), and al-Ṭabarsī (Brock. I, 513; S I, 709), the last-named being the classical S̲h̲īʿite book on the subject (cf. also B. Farès, 411-2).

3. The refinement and development of moral thought on the basis of the *Ḥadīth̲* was carried further by both of the religious movements which began to develop within Sunnī Islam in the 3rd/9th century. In theological circles, on the one hand, the conflict with the antideterminist trend of the Muʿtazila [*q.v.*], and the consequent emphasis laid by the Muʿtazilite theologians on moral decision and individual responsibility, produced an elaborate discussion and analysis of these topics [see ḲADAR]; and it was through both the Muʿtazilite movement, which in its turn was connected with Greek thought and Christian-Hellenistic apologetic works, and the orthodox reaction to it [see KALĀM] that the reception of Greek philosophical ethics was prepared and made possible. On the other hand, the anti-intellectual and ascetic mystical movement of Ṣūfism [see TAṢAWWUF] produced a somewhat divergent type of Islamic ethics, which was gradually to become more and more influential and eventually almost dominated in the Islamic world. For the ṣūfī preachers, poverty, self-humiliation, and complete surrender of personality became the highest values in life. It may be sufficient here to mention one eminent early ṣūfī writer, al-Muḥāsibī (d. 213/857), who had a decisive influence on al-G̲h̲azālī when he made ṣūfism a definite part of Islamic ethics in his fundamental *Revivification of the Religious Sciences* (see M. Smith, *An early Mystic of Baghdad*, London 1935, and *JRAS*, 1936, 65).

4. The introduction of Persian moral thought into the Islamic tradition preceded the acquaintance with Greek ethics. Its main representative is Ibn al-Muḳaffaʿ [*q.v.*], and—apart from *Kalīla wa-Dimna*, a work which deserves to be mentioned in this context—its main content is to be found in the two *adab* works ascribed to him, the *Adab al-Kabīr* (Fr. translation by C. F. Destrée, Brussels 1902, from the Dutch of G. van Vloten; German trans. by O. Rescher, *MSOS*, 1917) and the *Adab al-Ṣag̲h̲īr* (German trans. by O. Rescher, 1915), whose authenticity has been doubted but not disproved by G. Richter (*Isl.*, 1930, 278) and F. Gabrieli (*RSO*, 1932, 219 ff.). These works [cf. also ARDAS̲H̲ĪR, BUZURD̲J̲MIHR] are not based on any philosophical principle, but rather remind the reader of Greek rhetorics, giving the rulers, "civil servants" and persons who wish to advance in life advice on how to be successful. The Islamic allusions contained in this literature are at first scanty and formal, but the connection of this tradition with religion is steadily emphasized; Islam is regarded accordingly in the character of a state religion, linked to the sovereign power as religion had been linked with political power in the old Persian state (cf. A. Christensen, *L'Iran sous les Sassanides*[2], Copenhagen 1944, ch. iii): "religion and government are sisters". The advice, conveyed in a pleasing and effective style, is based on opportunist considerations and the recognition of force, which the intelligent man (*al-ʿāḳil*) will know how to deal with properly. In the course of a century or so, however, this originally foreign *adab* tradition was more or less adapted to Islamic standards, and was finally received into the accepted body of Islamic *adab* in the *ʿUyūn al-Ak̲h̲bār* of Ibn Ḳutayba (d. 276/889-90). This work, which may be called the first comprehensive manual of Islamic ethics, brought together and to a remarkable degree integrated the Ḳur'ānic, *ḥadīth̲*, pre-Islamic and Persian contributions, and by excluding the irreconcilable elements of the two latter, practically defined and standardized the component elements of the orthodox morality in its pre-philosophical and pre-ṣūfistic stage. Related types of literature are the "Mirrors of Princes" [see MALIK] and popular wisdom in apophthegmatic form [see ḤIKMA].

5. Philosophical ethics, derived from the Greeks, was introduced at first by the limited circles who devoted themselves to the study of philosophy. The details of its development amongst the Muslim *falāsifa* are studied in the next section. As is pointed out in §§ 8-10 of that section, philosophical ethics exercised an influence on *adab* literature and what is of even greater importance, philosophical ethics in the form given to it by Miskawayh was fully excepted by such an influential theologian as al-G̲h̲azālī and in this way was integrated with religious tradition. Miskawayh's doctrine became known also through another channel, viz. the Persian works of authors such as al-Ṭūsī and al-Dawwānī. On the other hand, the purely ṣūfistic morality gained through the great Persian poets an

immense influence in the eastern Islamic world, including Turkey—an influence which was paralleled and reinforced in all countries by the powerful social position occupied by the ṣūfī orders and the extension of their lay membership to all classes.

6. During the last century, the strong revulsion from ṣūfism in orthodox Muslim circles has had a parallel effect on Muslim ethical thought, which in reaction from the extreme passivity of the ṣūfī ethic has tended to swing towards an activist ethic, rather guardedly expressed by such leaders as Djamāl al-Dīn al-Afghānī and Muḥammad ʿAbduh, and in more outspokenly "Muʿtazilite" terms by others. Outside theological circles, the same trend, reinforced by the influence of western philosophies, together with internal social and political developments, has stimulated more evolutionary types of ethical theory, notably those of the Turkish sociologist Ziyā Gökalp and of the Indian poet Muḥammad Iḳbāl, all of which, however, are most properly to be regarded as representing transitional phases in modern Muslim thought. (R. WALZER and H. A. R. GIBB)

(ii) PHILOSOPHICAL ETHICS.

1. In the classification of the various branches of philosophy, *akhlāḳ* is considered, together with politics (*al-ʿilm al-madanī*, see MADĪNA) and economics (*tadbīr al-manzil* [*q.v.*]), as a part of practical philosophy. Galen's work *Fi 'l-Akhlāḳ* is described in Ḥunayn's treatise on the Syriac and Arabic Galen-translations in the following terms: "Galen dealt in it with different ἤθη, their causes, signs and treatment" (ed. Bergsträsser, no. 119; cf. Seneca, Epist. xcv, 65). Al-Ghazālī uses almost the same words when he says (*al-Munkidh*, 99) that *akhlāḳ* as a branch of philosophy consists in "defining the characteristics and moral constitutions of the soul and the method of moderating and controlling them". The same definition still occurs in Ibn Ṣadr al-Dīn al-Shirwānī (d. 1036/1626-7), quoted by Ḥādjdjī Khalīfa, s.v. *akhlāḳ*: "It is the science of virtues and the way how to acquire them, of vices, and the way how to guard against them. Its subject is: the innate dispositions (*akhlāḳ*), the acquired virtues, and the rational soul as far as it is affected by them". *Akhlāḳ* as a philosophical doctrine of ethics appealed at first only to the limited circles of persons interested in Greek philosophy. But since its representatives insist that philosophical ethics are not meant to contradict Islam but either to supplement or confirm it, these ideas could eventually be integrated with the religious tradition and retain some influence even in later centuries.

2. Greek moral philosophy was conveyed to the Arabs in several different ways which eventually converged. Standard works of the classical days of Greece read in the late philosophical schools, like Plato's *Republic*, *Timaeus*, *Laws*, were known in the original and in commentaries and summaries (cf. AFLĀṬŪN). Aristotle's *Nicomachean Ethics*, divided into eleven books, were known in Isḥāḳ b. Ḥunayn's translation. Books viii-xi of the Arabic text, corresponding to vii-x of the usual division, have been traced in a Moroccan manuscript (cf. A. J. Arberry, in *BSOAS*, 1955, 1 ff.). The same manuscript contains a summary of the *Nicomachean Ethics* by Nicolaus of Damascus (1st century B. C.). Porphyry's commentary (cf. *Fihrist*, and J. Bidez, *Vie de Porphyre*, Gand-Leipzig 1913, 56*-58*) was translated into Arabic and most probably extensively used by Miskawayh in chapters 3-5 of his *Tahdhīb al-Akhlāḳ* (see § 7 below). The Arabs knew also a late Greek summary of the *Nicomachean Ethics* ("Summary of the Alexandrines"): extracts in MS Taymūr Pasha, *akhlāḳ* 290, no. 16; this work was translated into Latin by Herman the German in 1243 or 1244 (cf. *Aristoteles Latinus*, ii, Cambridge 1955, 1308). Al-Fārābī wrote a commentary on the introduction of the *Nicomachean Ethics* which is referred to by Spanish authors of the 12th century (cf. M. Steinschneider, *Al-Farabi*, St. Petersburg 1869, 60). Ibn Rushd's Middle Commentary (written in A. D. 1177) is preserved in a Latin translation by the same Herman in 1240 (cf. *Aristoteles Latinus*, ii, 1308) and in a Hebrew translation of 1321 by Samuel b. Judah of Marseilles (M. Steinschneider, *Die hebr. Übersetzungen*, 217).

Among Greek works less known in the Western tradition but widely read in the Arab world are three treatises by Galen. (1) Περὶ ἠθῶν, *Fi 'l-Akhlāḳ*, lost in the Greek original and preserved only in Arabic guise. (Arabic Epitome published by P. Kraus in *Bull. of the Fac. of Arts of the Univ. of Egypt*, v/1, 1939; cf. R. Walzer, in *Classical Quarterly*, 1949, 82 ff.; idem, in *Harvard Theological Review*, 1954, 243 ff.; S. M. Stern, in *Classical Quarterly*, 1956.) (2) *How a man may discover his own vices* (cf. *Corpus Med. Graec.*, v, 4, 11; Ḥunayn, *Risāla*, no. 118). (3) *Good men profit by their enemies* (lost in the Greek original; Ḥunayn, no. 121). Both of these two latter treatises were used by al-Rāzī (see § 5 below), all three by Miskawayh (§ 7 below). A treatise by Themistius is quoted under a wrong name by Miskawayh (see below); another one attributed to him survives in Arabic (ed. L. Cheikho, *Mash.*, 1920, 887-9, tr. M. Bouyges, *Arch. de Philosophie*, 1924, 15 ff.). There were, no doubt, some other late Greek books from which middle-platonic Greek thought, only slightly touched by neoplatonic ideas, was handed down to the Arabs. Among other pre-neoplatonic treatises studied by Arabic writers on moral philosophy are the *Pinax* of Cebes ("Kābis the Platonist"), reproduced in Miskawayh's *Djāwidhān Khirad* (ed. Badawi, 229 ff.; separate editions by Elichman, Leiden 1640 and R. Basset, Algiers 1898); the neopythagorean Bryson's Οἰκονομικός, preserved only in Arabic translation and extensively quoted by Miskawayh (ed. M. Plessner, Heidelberg 1928); the *Golden Verses* ascribed to Pythagoras [see FUTHĀGHŪRAS] and a pseudo-platonic *Exhortation concerning the education of young men*, two "pythagorean" documents by which Miskawayh was impressed (cf. F. Rosenthal, in *Orientalia*, 1941, 104 ff., 383 ff.).

3. Al-Kindī's ethical treatises (*Fihrist*, nos. 190-1, 193-6, cf. also F. Rosenthal, *al-Sarakhsī*, ii A, 10-2, 16-7) were apparently appreciated by subsequent Islamic writers. His treatise *On freedom from Grief* (ed. H. Ritter-R. Walzer, *Studi su Al Kindi II*, Rome 1938; M. Pohlenz, in *GGA*, 1938, 404 ff.) was used by Miskawayh (*Tahdhīb*, 70 ff.), Ibn Sīnā and others. Another quotation in Miskawayh (61) may derive from al-Kindī's lost work *Fi 'l-Akhlāḳ* and is also known to al-Ghazālī (F. Rosenthal, in *Orientalia*, 1940, 186 ff.). Al-Kindī (cf. *al-Ḥudūd*, in *Rasāʾil* (Abū Rīda), 177-8 and elsewhere in his *Rasāʾil*) bases his moral philosophy, not unlike the Stoics, Galen and other late Greek philosophers, on the threefold platonic partition of the soul into a rational, spirited and appetitive part or soul or faculty, and on a platonic definition of the four cardinal virtues, wisdom, valour, temperance and justice [cf. FAḌĪLA]; these in their turn are each associated with a number of subordinate virtues. This scheme may, though

different in detail, be compared to the Stoic arrangement of the virtues and vices, or, e.g., to the pseudo-Aristotelian *De virtutibus et vitiis* (transl. in the 11th century by Ibn al-Ṭayyib (Brock., S I, 884). The Aristotelian definition of virtue as the mean between two extremes is combined with the platonising view (cf. Porphyry, Ἀφορμαί, ch. xxxii, 2 and I. Goldziher, *Maʿānī al-Nafs*, 20). Although the evidence available in the few extant works of al-Kindī is obviously slight, it seems probable that Miskawayh based himself in the first chapter of *Tahdhīb al-Akhlāḳ* on al-Kindī's treatment of the virtues and vices. There is on the whole nothing ultra-neoplatonic in al-Kindī's platonising popular philosophy, in which platonic, peripatetic and stoic elements are blended in a way not uncommon in hellenistic and later popular Greek moral treatises.

4. The Christian Ḳusṭā b. Lūḳā's treatise *About the causes of the differences which exist between men with regard to their characters, ways of life, desires and considered moral choice* (ed. P. Sbath, in *BIE*, 1941) is based on the Platonic tripartition of the soul and on the whole on ideas to be found in Galen.

5. Al-Kindī's treatise *On Spiritual Medicine* appears to be lost but al-Rāzī's brilliant treatment of the same subject is available in a critical edition of the Arabic text (*Opera Philosophica*, ed. Kraus, 15-96, Eng. tr. by A. J. Arberry, *The spiritual Physick of Rhazes*, London 1950). As was to be expected in this Muslim "Platonist", it is written in an uncompromisingly platonic vein, and the Aristotelian elements found in al-Kindī and Miskawayh are missing. It should be studied together with his autobiographical defence of the philosophical way of life (*Opera*, 98-111; French transl. by P. Kraus in *Orientalia*, 1935, 300 ff.; English tr. by Arberry in *Asiatic Review*, 1949). Al-Rāzī's version of Greek moral philosophy did not, however, influence the main trend of philosophical ethics in Islam.

6. The treatise *Fī Tahdhīb al-Akhlāḳ* of the Jacobite philosopher Yaḥyā b. ʿAdī represents another variant of late Greek thought. There are no specifically Christian ideas in it; Aristotelian influence is, as in al-Rāzī, non-existent. It is based on the platonic tripartition of the soul, but the 21 virtues and corresponding vices are neither specifically referred to the three souls nor subordinated to the four cardinal virtues and their contraries (which are listed among them). This scheme probably depends ultimately on some lost pre-neoplatonic Greek original. His concluding chapter on the perfect man who bases his life on the requirements of his intellectual soul and has trained himself to love every human being combines stoic and neoplatonic language, and is not very different from the thought of al-Fārābī [*q.v.*].

7. The most influential work on philosophical ethics is *Tahdhīb al-Akhlāḳ* of Miskawayh (d. 421/1030) (analysis of its contents in de Boer, 507, and Donaldson, 127-133; Eng. tr. by A. J. M. Craig in course of publication). Miskawayh firmly rejects the pre-Islamic Arabic poets as educators, but is not unsympathetic to the Persian tradition of ethics. In many striking passages he insists on the agreement of Greek moral philosophy with the basic tenets of Islam. He tries, however, to reconcile revealed and philosophical truth on the basis of rational thought, and for this reason his views are not acceptable to a primarily religious thinker, except with a certain shift of emphasis. The few Greek writers mentioned by name and quoted, sometimes at considerable length, are all of the later centuries of the Roman Empire: Galen (see § 2 above), Bryson (on the right upbringing of children; ibid.), Porphyry as a commentator on Aristotle's *Ethics*, and Themistius, wrongly quoted under the name of Socrates (cf. F. Rosenthal, in *IC*, 1940, 403). References to Plato and Aristotle occur within the context of these late works. Although al-Kindī is only twice mentioned by name, Miskawayh is probably in al-Kindī's debt to a much greater extent (see § 3 above). In chapters 3-5 he follows rather closely a neoplatonic commentator on certain sections of the *Nicomachean Ethics*, which recalls the known teaching of ethics in the later Peripatos and the extant commentaries on the *Ethics* without being identical with any of them. But at the same time he stresses the platonic elements to be found in the *Ethics* to make out Aristotle to be a more decided platonist than he was. Miskawayh's own contribution to this inherited interpretation, if any, was (apart from demonstrating the compatibility of Greek philosophy with Islam) to emphasise the neoplatonic aspects of this moral philosophy still further (cf. R. Walzer, *Some aspects of Miskawaih's Tahdhib al-Akhlāq, Mélanges Levi della Vida*, Rome 1956).

8. The influence of philosophical ethics on *adab* literature has been noted by de Boer, who singles out as an instructive example *Adab al-Dunyā wa 'l-Dīn* by al-Māwardī (d. 450/1058). In this work the presentation of the traditional ethical materials is refreshed and "modernized" by the inclusion of materials from the later centuries, including both philosophical and ascetic ideas; these are combined with the older materials somewhat unsystematically, but in a direction not dissimilar from that taken later by al-Ghazālī. (German transl. by O. Rescher, 1932-3.)

9. A much more far-reaching and fundamental synthesis was carried through by al-Ghazālī (d. 505/1111), who on the one hand discarded the merely formal and superficial elements of the *adab* tradition, and on the other firmly based his exposition on the penetrating spiritual analysis developed by the ṣūfī teachers (see sect. i, § 3 above). At the same time, he evidently regarded Miskawayh's treatise as "reasonable in itself and supported by proof", and agreed that its contents "did not contradict the Book and the *Sunna*". Hence the philosophical ideas of Greek origin which Miskawayh discusses and explains became part of the generally-accepted educational theory to be found in the *Iḥyā' ʿUlūm al-Dīn*, in which the section on self-discipline (2nd book of the 3rd quarter) is based on Miskawayh's *Tahdhīb al-Akhlāḳ*. Miskawayh's influence is also unmistakably traceable in other works of al-Ghazālī, and his ethical theory was in this way eventually integrated with the religious tradition. (Cf. A. J. Wensinck, *La Pensée de Ghazzali*, Paris 1946, esp. chap. ii; M. Plessner, op. cit.; H. Ritter, *Al Ghazzali, Das Elixier der Glückseligkeit*, Jena 1925; and see AL-GHAZĀLĪ.)

9. How successful the Ghazālian synthesis was in influencing later ethical literature and thought is a question which still awaits investigation. The literary evidence suggests *prima facie* that its influence, if anything, was indirect, and that the diverse trends of ethical thought continued to exist side by side. The influence of Miskawayh's work was perpetuated chiefly in Persian literature; the Shīʿite Avicennian, Naṣīr al-Dīn al-Ṭūsī, follows Miskawayh closely, as he himself avows, in the section on ethics of his *Akhlāḳ-i Nāṣirī* (completed 633/1233) (cf. Plessner, loc. cit.). Two centuries

later, al-Dawwānī (d. 907/1501), the author of the *Akhlāḳ-i Djalālī* (Eng. trans., with valuable notes, by W. F. Thompson, *Practical Philosophy of the Muhammadan People*, London 1839; short analysis by Donaldson, 184), selected his basic material from Ṭūsī's work, but he also refers to al-Ghazālī as an additional Islamic authority. (For Persian *akhlāḳ* literature cf. H. Ethé, in *Gr. I. Ph.*, ii, 346 ff.)

Bibliography to (i) and (ii): No comprehensive history of Islamic ethics has yet been written. D. M. Donaldson, *Studies in Muslim Ethics*, London 1953, is of unequal value. There is a brief but suggestive survey by T. J. de Boer in Hasting's *Encyclopaedia of Religion and Ethics*, vol. v, 1912, s.v. Ethics and Morality (Moslem). Scattered materials are to be found in a number of works; in addition to those mentioned in the article, different aspects are dealt with in the following: G. Richter, *Studien zur Geschichte der älteren arabischen Fürstenspiegel*, Leipzig 1932; D. B. Macdonald, *The Religious Attitude and Life in Islam*, Chicago 1909; C. E. von Grünebaum, *Mediaeval Islam*, Chicago 1946, etc.; L. Gardet, *La Cité Musulmane*, Paris 1954. (R. WALZER)

AKHLĀṬ or KHILĀṬ, town and fortress at the N.W. corner of Lake Wān.

(i) Pre-Mongol; (ii) Mongol and Ottoman periods.

(i) In Armenian the town is called Khlatʿ, the name being possibly connected with the ancient inhabitants of the country, the Urartian Khalds. It lies half-way between Sipan Dagh and Nimrūd Dagh on the route taken by invasions from Mesopotamia into eastern Armenia. Al-Balādhurī, 200, reckons it to Armenia III, which in the Arab view included Ḳālīḳalā (Erzerum), Ardjīsh and Baḥunays (i.e. either Apahunikʿ, where Manāzgird lies, or Bznunikʿ, the district of Akhlāṭ).

Under ʿUmar, ʿIyāḍ b. Ghanm made a treaty with the Akhlāṭians (al-Balādhurī, 176, 199). For four centuries Akhlāṭ was ruled in turn by Arab governors, Armenian autonomous princes, and the Arab local *amīrs* of the Ḳays tribe (Constantine Porphyrogenitus, ch. 44, ed. and tr. Moravcsik-Jenkins, Budapest 1949, 198-205; cf. J. Markwart, *Südarmenien*, 501-8, and M. Canard, *H'amdanides*, i, 471-8). Among the episodes of this period may be cited: in 316/918 the attack on Akhlāṭ by the domesticus John Curcuas (see Ibn al-Athīr, viii, 146); in 328/939 the arrival of Sayf al-Dawla (*Taʾrīkh Mayyāfāriḳīn*, see M. Canard, *Sayf al-Daula*, Algiers-Paris 1934, 76-8; idem, *H'amdanides*, i, 478-87); in 353/964 the occupation of Akhlāṭ by Nadjā (Miskawayh, ii, 201 etc.).

Towards 373/983 Akhlāṭ became part of the dominions of the Kurd Bādh (Asolik of Taron, iii, ch. 14) and was associated with the Marwānid [*q.v.*] princes untill the battle of Manāzgird (463/1071), after which Alp Arslān himself is said to have taken it over (*Taʾrīkh Mayyāfāriḳīn*, fol. 145v). In 493/1100 it was occupied by the Turkish *amīr* Sukmān al-Ḳuṭbī and for over a century remained the capital of the dynasty known as Shāh Arman [*q.v.*]. In 604/1207i t was captured by the Ayyūbid al-Awḥad, son of al-ʿĀdil, and on his death in 609/1212 passed to his brother al-Ashraf. In the interval, the Georgians twice reached Akhlāṭ (605/1208 and 607/1210). In 627/1230 it was stormed after a six months' siege by the Khwārizmshāh Djalāl al-Dīn Manguburnī, who was, however, shortly afterwards defeated by al-Ashraf in alliance with the Rūm Saldjūḳid ʿAlāʾ al-Dīn Kayḳubād I at Arzindjān. In 633/1233 Kayḳubād in turn seized Akhlāṭ, and held it in spite of a coalition of the Ayyūbid princes against him.

Bibliography: A full bibl. of Akhlāṭ is given in A. Gabriel, *Voyages archéologiques dans la Turquie Orientale*, Paris 1940, i, 241-51 (with plates, ii, 85-90); for the inscriptions, Abdurrahim Şerif, *Ahlat Kitabeleri*, Istanbul 1932 (corrections and additions by J. Sauvaget, in Gabriel, *op. cit.*, 346-50, and *RCEA*, nos. 3880-2, 4440, 4682, 4696, 4782-3, 4801-2, 4996, 5038, 5116-9. E. Honigmann, *Ostgrenze d. Byzant. Reichs*, Brussels 1935, passim; V. Minorsky, *Studies in Caucasian History*, London 1953, index; Le Strange, 183; H. F. B. Lynch, *Armenia*, London 1901, ii, 280-97; Bachmann, *Kirchen und Moscheen in Armenien u. Kurdistan*, Leipzig 1913, 58. (V. MINORSKY)

(ii) After the battle of Köse Dagh (641/1243) Akhlāṭ was captured by the Mongols (642/1244; see Tomaschek, in *SBAW*, 133, no. iv, 31 ff.; Abu 'l-Fidāʾ (Reiske-Adler), iv, 472), who, however, confirmed the native princes in their possessions (confirmation of a Georgian princess in her possessions in Akhlāṭ: Cyriac of Gandja, 440, cf. B. Spuler, *Die Mongolen in Iran*, 330, n. 1). The definitive occupation by the Mongols of Akhlāṭ and the neighbouring lands of Upper Mesopotamia and the Armenian highlands followed only after their capture of Baghdād (656/1258), in conjunction with Hulāgū's advance into Syria in 658/1259-60 (Spuler, op. cit., 55). Thereafter Akhlāṭ belonged to the kingdom of the Ilkhāns and their successor states (Djalāʾirids, Aḳ Ḳoyunlu), and was also a mint-city of the Ilkhāns. In 644/1246 the city was largely destroyed by a severe earthquake.

In one version of the legend of the foundation of the Ottoman empire Akhlāṭ is mentioned as the starting-point of the Oghuz tribe to which Ertoghrul, the alleged father of ʿOthmān, belonged; he is said to have moved westwards from Akhlāṭ under pressure from the Mongols. Neshrī, however, denies the identity of this Ertoghrul with ʿOthmān's father (*Taʾrīkh*, ed. Taeschner, 21-2; the statement is missing in the Ankara ed.). According to Ewliyā Čelebi (iv, 140) tombs of the ancestors of the Ottomans were shown in Akhlāṭ. The city appears to have come into Ottoman possession only under Selīm I; in 955/1548, however, it was captured by Shāh Tahmasp and levelled to the ground. Sulaymān I, under whom it was finally incorporated in the Ottoman empire, built on the lake shore a citadel (completed in 963/1554-5 according to Ewliyā Čelebi), in the vicinity of which a smaller new town arose. During the Ottoman period, Akhlāṭ remained under the rule of local Kurdish chieftains, and was brought under direct Ottoman administration only under Maḥmūd II in 1847. At the end of the 19th century, according to Cuinet, the *ḳaḍā* of Akhlāṭ had 23,659 inhabitants (16,635 Muslims, 6609 Gregorian Armenians, 210 Orthodox Greeks, 250 Yazīdīs). It is now the capital of a *ḳaḍā* (*ilče*) in the *wilāyet* (*il*) of Bitlis in the Turkish Republic; population of the town (1945), 3,124, of the *ḳaḍā*, 13,702.

The mediaeval town (Eski Akhlāṭ), on the slope of the mountain, is in ruins and uninhabited; the new town, with a large Ottoman *ḳalʿe* (on the main gate an inscription of Selīm II, 1568) lies to the E. of it on the lake shore. The latter contains two mosques of the 16th century (Iskender Pasha Djāmiʿi, with inscriptions from 972/1564 and minaret from 978/1570, and Ḳāḍī Maḥmud Djāmiʿi, dating from 1006/

1597). Between the medieval and the modern towns there is a famous cemetery with richly ornamented tombstones from the 13th-16th centuries (among them a "ram" stone from 1401) and many funeral buildings (*türbes* or *künbeds*) from the Saldjūḳid, Mongol and Turkmen periods. The most noteworthy among them are: Ulu Künbed (undated); Shādī Agha Künbedi (1273; now disappeared); Iki Türbe (of Būghātay Agha, d. 1281, and his son Ḥasan Timūr, d. 1279); Bayīndīr Mesdjid (882/1483) and Türbe (890/1491-2; of specially interest, one built by Baba Djān); Shaykh Nadjm al-Dīn Türbesi (1222); Ḥasan Pādishāh Türbesi (1275); and Erzen Khātūn Türbesi (1396-7).

Bibliography: in addition to the works mentioned under (i), Ḥādjdjī Khalīfa, *Djihān-nümā*, 413 f.; Ewliyā Čelebi, iv, 134-42; Sāmī, *Ḳāmūs al-Aʿlām*, i, 46a; Réclus, *Nouv. géogr. univ.*, ix, 376; V. Cuinet, *La Turquie d'Asie*, ii, 564-6. (F. Taeschner)

AKHMĪM, town in Upper Egypt on the east bank of the Nile about 312 m. from Cairo. Its name reflects the Coptic name, Shmin, the Greek Khemmis, and the place is called Panopolis in Byzantine texts. It was the chief town of a pagarchy (*kūra*), and later, from the time of the reforms of the Fāṭimid caliph al-Mustanṣir, of a province. In the 12th/18th century the town lost its position of chief city and was incorporated in the province of Girgā. In the middle ages, Akhmīm was surrounded by rich areas of cultivation, with plantations of date palms and fields of sugar cane. Al-Yaʿḳūbī mentions it as a centre for the manufacture of leather mats. There was a toll-house there, and the strictness of the officials aroused the indignation of Ibn Djubayr. The population to-day still includes a considerable number of Christians. The town was the birthplace, at the end of the 2nd/8th century, of the mystic Dhu 'l-Nūn.

All the Arab writers have enthused over the ancient temple of Akhmīm, (of which no trace now remains), which was particularly famed owing to its traditional association with Hermes Trismegistus. Most of the accounts record the usual legends which have grown up around relics of Egypt under the Pharaohs. The delightful description given by Ibn Djubayr, however, merits special attention. He displays a keen power of observation, intelligently used. The temple was destroyed in the course of the 8th/14th century, and the materials used to build a *madrasa*. But it appears that some of the materials had previously been purloined; historians of Mecca mention the erection in the *ḥaram* of columns originating from Akhmīm.

The town has no history. It was sacked at the beginning of the 12th/18th century during the struggle between the Mamlūk chiefs, and the governor, Ḥasan Akhmīnī, was put to death; the latter had restored, in 1114-16/1702-4, the principal mosque, an act which is commemorated by inscriptions.

Bibliography: Yaʿḳūbī, 332 (trans. Wiet, 187); Maḳdisī, 201; Idrīsī (Dozy and de Goeje), 46-7; Ibn Djubayr 60 ff. (trans. Gaudefroy-Demombynes, 68-70; trans. G. Broadhurst, 53-55); Ibn Baṭṭūṭa, i, 103 ff.; Yāḳūt, i, 165; Maḳrīzī, *Khiṭaṭ* (Wiet), iv, 134-8; Maspero and Wiet, *Matériaux*, MIFAO, xxxvi, 6-7; Djabartī, 1, 47, 98; Wiet, *L'Égypte de Murtadi*, 103-10. (G. Wiet)

AKHNŪKH [see idrīs].

AL-AKHRAS, ʿAbd al-Ghaffār b. ʿAbd al-Wāḥid b. Wahb, Arab poet of ʿIrāḳ, born at al-Mawṣil about 1220/1805, died at al-Baṣra 1290/1874. After settling in Baghdād, he established a connection with the *wālī* Dāwūd Pāshā. The latter, at his request, sent him to India for treatment to correct the defective power of speech which had gained him his sobriquet of al-Akhras ("the mute"), but he refused to undergo the operation. The panegyrics which he addressed to Dāwūd Pāshā and ʿAbd al-Bāḳī, and also to various men of note at Baghdād and al-Baṣra, appear to have secured him his livelihood, but the fame which he enjoys in ʿIrāḳ rests on the remainder of his work, which embraces every category of classical poetry: *ghazal*, elegy, threnody, satire, descriptive verse, personal glorification. He even composed some *muwashshaḥāt* and wrote some notable bacchic songs which led to his being dubbed the "Abū Nuwās of the 19th century". His *dīwān*, although incomplete, was compiled through the efforts of the nephew of ʿAbd al-Bāḳī, Aḥmad ʿIzzat Pāshā al-Fārūḳī, and published in Constantinople in 1304/1886, under the title: *al-Ṭirāz al-Anfas fi Shiʿr al-Akhras*.

Bibliography: Dj. Zaydān, *Tarādjim Mashāhir al-Sharḳ*, 3rd ed., 1922, ii, 257-60; L. Cheikho, *La littérature arabe au XIXe siècle*, 2nd ed., 1924-6, ii, 9-11; M. M. al-Baṣīr, *Nahḍat al-ʿIrāḳ al-Adabiyya fi 'l-Ḳarn al-Tāsiʿ ʿAshar*, Baghdād 1365/1946, 114-29; H. Pérès, *La litt. arabe et l'Islam par les textes*, 28; Brockelmann, S II, 792 and references quoted. (Ch. Pellat)

AKHSHĀM [see ṣalāt].

AKHSĪKATH or Akhshīkath (Sogdian, "city of the prince"), in the 4th/10th century capital of Farghāna and residence of the *amīr* and his lieutenants (*ʿummāl*), on the north bank of the Sīr Daryā (Jaxartes), near the mouth of the Kasān-say, at the foot of a mountain. Ibn Khurradādhbih, 208, calls the place Madīnat Farghāna, "the city of Farghāna"; according to Ibn Ḥawḳal (Kramers), 512, it was a large town (1 sq. mile) with many canals and a citadel where stood the Friday Mosque, the governor's palace, and the prison. The city was then enclosed by a wall with five gates, outside of which stretched extensive suburbs and gardens. There was a market-place both in the city and the suburb, and there were rich pasturages in the vicinity (al-Iṣṭakhrī, 333; al-Maḳdisī, 271; al-Ḳazwīnī, ii, 156; *Ḥudūd al-ʿĀlam*, 72, 116).

The town was apparently destroyed during the wars of the Khwārizmshāh Muḥammad II, at the beginning of the 13th century, and the succeeding Mongol invasions (Sharaf al-Dīn ʿAlī Yazdī, *Ẓafar-nāma*, Calcutta 1885-8, i, 441, ii, 633; here also the form Akhsīkant). The capital was transferred to Andīdjān, but for some time Akhsī, as the town was called at the time of Bābur (see transl. of Beveridge, index), still remained the second town of Farghāna. As late as the 11th/17th century Namangān, the present capital, was considered only one of Akhsī's less important sisters (*tawābiʿ*); cf. *Baḥr al-Asrār*, in H. Ethé, *India Office Cat.*, no. 575, fol. 108v. The ruins, near the villages of Akhsī and Shahand (1000 steps from west to east, 600 steps from north to south, abou 150 feet above the level of the Sīr Daryā), with the old citadel, Iski Akhsī, were explored in 1885 by N. I. Veselovskiy (cf. *Sredneaziatskiy Vyestnik*, Tashkent, July 1896).

Bibliography: Schwarz, *Iran*, iii, 269 (incidental reference, Farghāna is not dealt with in the book); Le Strange, 477 f.; 489; K. Miller, *Mappae arabicae*, Stuttgart 1926-31, iv, 78-82, 86*-91*. (B. Spuler)

AL-**AKHṬAL,** "the loquacious", the sobriquet of the Arab poet GHIYĀTH B. GHAWTH B. AL-ṢALT, who died probably before 92/710. He belonged to the great tribe of the Taghlib [*q.v.*] of northern Syria, which remained entirely Christian, of the Monophysite persuasion. By his mother Layla he was connected to another Christian tribe, that of Iyād. He was born either at Ḥīra (see *Aghānī*[1], vii, 170), or near Ruṣāfa (Sergiopolis); his date of birth is uncertain, but may have been about 20/640. He remained a Christian all his life, and was unmoved by the efforts of prominent members of the Umayyad dynasty to convert him to Islam. Although a Monophysite, he maintained good relations with the Melkite family of the Sardjūn. In his poetry, certain features prove his zeal for his faith and even indicate a certain ostentation in asserting it (see *Dīwān*, passim). His moral standards, however, do not seem to have differed markedly from those of the society in which he lived. He repudiated his wife and married a divorced woman. He seems to have been a heavy drinker, passing his time in taverns in the company of singing-girls of easy virtue.

All his life al-Akhṭal followed the fortunes of the reigning dynasty. During the reign of Muʿāwiya, he became embroiled in political affairs. He was the close companion of Yazīd I, whom he lauded in his panegyrics, and of other men of rank such Ziyād and al-Ḥadjdjāj. Under ʿAbd al-Malik, he actually became official poet to the Caliph (see *Aghānī*[1], xii, 172-6). He remained in the service of the successors of ʿAbd al-Malik, and in his poetry attacked all opponents of the dynasty (see *Dīwān*, 58, 73, 93, 204, 277 etc.). Lammens has clearly shown the historical interest of such compositions.

The poet's whole career was dominated by verbal warfare with his contemporary, the poet Djarīr. In his diatribes he was supported by the poet al-Farazdaḳ who, although a Tamīmite like Djarīr, was in antagonism with his fellow-tribesman. It is almost impossible to dissociate here the accounts of these three men. It is clear that in this sphere al-Akhṭal and Djarīr perpetuated the pre-Islamic tradition and simply expressed the sentiments of their particular group. In this respect, the poems of al-Akhṭal show how the old bedouin themes break through the religious veneer.

Under Walīd I, it appears that al-Akhṭal was not held in such high favour (see *Aghānī*, vii, 179 ff.). He died, probably shortly before the end of Walīd's reign, and left no offspring.

The poems of al-Akhṭal have reached us in a recension of al-Sukkarī, compiled with the aid of material collected by Ibn al-Aʿrābī (see Brockelmann, S I, 94; and *Fihrist*, 78, 158). This recension is availabe in provisional editions; Ṣalḥānī, *Dīwān al-Akhṭal*, Beirut 1891-2, is in part completed by the same, *Dīwān al-Akhṭal*, Beirut 1905, (photographic reproduction of a Baghdād MS.) and by Griffini, *al-Akhṭal, Dīwān*, Beirut 1906 (reproduction of a Yemen MS). In order to produce a counterpart to a compilation containing the epigrammatic polemics between Djarīr and al-Farazdaḳ, the poet Abū Tammām composed, in the 3rd/9th century, a *Naḳāʾiḍ Djarīr wa 'l-Akhṭal*, which presents the verbal contests between the two rivals. A MS of this work exists at Istanbul.

The works of Al-Akhṭal, like those of Djarīr and al-Farazdaḳ, have their origin in contemporary events, and reflect the feuds and political controversies of the time. The bedouin tradition is always apparent in them. The *Dīwān* comprises panegyrics in *ḳaṣīda* form and also a large number of epigrammatic poems. The poetical forms, the stereotyped terminology and the language resemble, with but slight variations, those of the other contemporary poets. It is highly probable (as Bashshār thought) that the vogue which al-Akhṭal enjoyed during his lifetime was the result of an infatuation on the part of the Rabīʿite Arabs, who rejoiced at finding in him a champion worthy to stand against those of the Bakrite and Tamīmite Arabs (see al-Marzubānī, *al-Muwashshah*, 138). Later, however, when the literary centres of ʿIrāḳ evolved their poetic ideal, it became the fashion to draw comparisons between the works of al-Akhṭal, al-Farazdaḳ and Djarīr. People succumbed to this taste for "assessments of comparative merit" so engrained in mediaeval oriental scholars, and this type of critical comparison became a regular subject for debate, which al-Hamadhānī parodied in his *Maḳāmāt* at the end of the 4th/10th century. It is possible that as early as the end of the 2nd/8th century or the beginning of the 3rd/9th the grammarians and philologists of Baṣra and Kūfa had indicated their preference for al-Akhṭal (see the judgments of Abū ʿUbayda, al-Aṣmaʿī, and Ḥammād "the Reciter" collated in *Aghānī*[3], viii, 284 ff., 291, 305). Al-Akhṭal does not seem to have kept his place in Arabic literature in the eyes of later generations (cf. for example the rather cautious judgement of Ṭāhā Ḥusayn in *Ḥadīth al-Arbaʿā*, ii, 77 ff.) Up to the present time al-Akhṭal has, in the West, been the subject only of biographical studies.

(R. BLACHÈRE)

AKHTARĪ is the *takhalluṣ* of Muṣliḥ al-Dīn Muṣṭafā b. Shams al-Dīn al-Ḳaraḥiṣārī (d. 968/1561). He wrote an Arabic-Turkish Dictionary (952-1545), known by the name of *Akhtarī Kabīr* (there are also concise recensions), and printed at Constantinople (1242, 1256, 1292). Cf. Flügel, *Die arab. pers. u türk. Hss. zu Wien*, i, 119-120.

ĀKHŪND (ĀKHŪN, ĀKHWĀND), title given to scholars. In Eastern Turkistān it is used after the name as "Mister", in Western Turkistān it is given to *ʿulamāʾ* of high rank, in the district of Ḳāzān to the chief *imām* of a place. In Persian it is current since Tīmūrid times in the sense of "schoolmaster, tutor". The word probably comes from Persian *khwānd* (*khwand, khund*), from *khudāwand* [*q.v.*].

ĀKHUND-ZĀDA, MĪRZĀ FATḤ ʿALĪ (1812-78) was the first writer of original plays in a Turkish idiom. The son of a trader who hailed from Persian Ādharbaydjān, he was born in 1811 (according to Caferoğlu) or 1812 (according to the *Soviet Encyclopaedia*, 1950) in Shēkī, the present-day Nūkhā. Thanks to the assistance of a relative he was able to avail himself of a good literary and philosophical education, which brought him into closer touch with liberal ideas than the actual calling which he intended to follow, that of an

Islamic theologian. After instruction from a divine in Gandja (Ḳarabagh) Āḳhund-zāda finished his training at the newly-opened Russian intermediate school for Muslims at Shēkī. It is possible that Āḳhund-zāda was in his early days brought into touch with modern trends in Islam owing to contacts with the reformers Djamāl al-Dīn Afghānī and Malkum Khān. Influence of this nature, however, as reported by Köčerli on the basis of communications from Āḳhund-zāda's family, can scarcely be proved. In his youth Āḳhund-zāda wrote in the style of Persian poetry, one of his works being an elegy on Pushkin's death.

He received a stimulus to activity as a dramatist from the advancement of the theatre in Tiflīs by the military governor, Prince Worontsow (1844-48), in whose government chancellery he was employed as oriental interpreter. Between 1850 and 1857 Āḳhund-zāda wrote six comedies and a historical narrative in Ādharī Turkish, the titles being as under: (1) *Ḥikāyet-i Mollā Ibrāhīm Khalīl-i Kīmīyāger* ("Story of M. I. Kh. the alchemist"), 1850; (2) *Ḥikāyet-i Monsieur Jourdan Ḥekīm-i Nebātāt we-Mostaʿlī Shāh Djādūger-i Meshhūr* ("Story of M. Jourdan and Mostaʿlī Shāh, the well-known magician"), 1850; (3) *Sergüzesht-i Wezīr-i Khān-i Serāb* ("Adventures of the Vezir of the Khān of S."), 1850; (4) *Ḥikāyet-i Khirs-i Guldur-basan* ("Story of the bear that caught the robber"), 1952; (5) *Sergüzesht-i Merd-i Khasīs* ("Adventures of the miser"), 1852-3; (6) *Ḥikāyet-i Wukalā'-ye Murāfaʿa* (Story of the attorneys in the lawsuit"), 1855; and the historical-satirical narrative, *Aldanmish Kewākeb* ("The betrayed stars"), 1857. In the plays and in the narrative the author gave play to his progressive ideas in opposition to feudalism, the practice of highway robbery, the prevalent corruption of justice and the superstition then rife in the Caucasus. Now and again he preaches loyalty to the Russian authorities in order to facilitate the transition of the Transcaucasian Muslims (the term "Ādharī Turks" was not yet in use in the 19th century) to modern civilization.

Several of the plays were published in Russian translation in the official Government journal *Kavkas*, and performed in Russian at Tiflīs and St. Petersburg. The first performances in the original language were given by pupils of Ādharbaydjān state schools at the end of the 1870 s. A complete Ādharī Turkish edition of the plays and the narrative appeared in Tiflīs in 1859: a second was brought out in 1938 by the Ministry of Culture of the Az.S.S.R. to mark the 125th anniversary of the writer. (In the 1920 s, frequent separate editions for school use had already appeared.) The plays were translated into Persian by Muḥammad Djaʿfar Munshī; no. 1 was transl. into French by Barbier de Meynard, *JA*, 1886; no. 2 into German (after the Persian) by A. Wahrmund, Vienna 1889, and into French (after the Turkish original) by L. Bouvat, Paris 1906); no. 3 into English (after the Persian) by W. H. O. Haggard and G. le Strange, *The Vazir of Lankurán*; no. 4 into French by Barbier de Meynard, in *Recueil de textes et de traductions*, Paris 1889; no. 5 into French by L. Bouvat, *JA*, 1904; no. 6 into French (after the Persian) by Aillière, in *Deux comédies turques*, Paris 1888; the narrative was edited and transl. by L. Bouvat, *JA*, 1903.

Besides his activity as a dramatist, which earned him the name of the "Caucasian Gogol" or the "oriental Molière", Āḳhund-zāda wrote treatises on political science against absolutism and theocracy, and also two memoranda on an alphabetical system of his own invention, designed to render the Islamic tongues, especially the Turkish idioms, more tractable and thus more capable of progress.

AKHŪR [see AMĪR ĀKHŪR].

ʿAḲĪDA (A.), creed; but sometimes also doctrine, dogma or article of faith; and hence *ʿaḳā'id* (pl.), articles of faith, is also used for "creed".

1. The Development and Use of the Form. The documents to which the terms *ʿaḳīda* or *ʿaḳā'id* are applied vary in length, and the longer ones cannot be sharply divided from the comprehensive theological treatises (e.g. *al-ʿAḳīda al-Niẓāmiyya* by al-Djuwaynī). The terms, however, may usefully be taken to signify compositions where the chief interest is in the formulation of doctrine or dogma, and not in intellectual discussion or argument about it. The earliest and simplest creed is the *shahāda* or confession of faith [*q.v.*], and this alone appears to be used liturgically. Though the term *ʿaḳīda* is usually not applied to the *shahāda*, there is a sense in which most of the later creeds are expansions of it. Sectarian discussions, however, also led to the development of doctrine, and an important source of the later creeds is the succinct formula defining the position of an individual, school or sect on some disputed point. The *Fiḳh Akbar I* attributed to Abū Ḥanīfa is a collection of such formulae, since it does not mention belief in God and in Muḥammad's apostleship, but only the attitude of the Ḥanafī school on matters on which they rejected views of the Khawāridj, Shīʿa and Djahmiyya. The later creeds are usually statements of the doctrinal position of the various theological schools, orthodox and heretical, and are often the subject of many commentaries and glosses. Sometimes an *ʿaḳīda* is intended as a catechism to be learnt by children. Creeds are often built round either the *shahāda* (as al-Ghazālī's) or the tradition, which elaborates a Ḳur'ānic formula, that faith is faith in God, His angels, His books, His prophets, etc. (as Birgewī's). Sometimes they are included in legal treatises, as introductory statements of what it is obligatory for a Muslim to believe. The development of the literary form and of its contents has been studied by Wensinck (see *Bibl.*).

2. The Development of Dogma. While the statement of the faith, it seems likely, was constantly being more accurately formulated during Muḥammad's lifetime, the development of dogma is generally regarded as beginning with the caliphate of ʿAlī and the appearance of the Khawāridj and Shīʿa as distinct religio-political parties, the one making justice according to the Scripture the supreme principle, while the other looked for a leader from the household of Muḥammad. For at least the first two centuries of Islam religion and politics were

inextricably mingled, but the topic has not been fully investigated. The exclusiveness of the K͟hawāri d͟j was opposed by the inclusiveness of the Murd͟jiʾa, who refused to treat Muslims who had committed grave sins as unbelievers (and could therefore remain loyal to caliphs of whom they disapproved). As these sects had many subdivisions with differing views, there was a great variety of doctrine by the middle of the 2nd/8th century. In the second half of that century elaborate intellectual arguments about doctrine appeared, inspired partly by Greek and Christian thought. This may be regarded as the beginning of *kalām* or theology [*q.v.*]. It influenced the formulation of dogma to the extent that some philosophical terms were introduced into the theologians' creeds, e.g. when they said that God is neither substance nor accident (*d͟jawhar*, *ʿaraḍ*), or when al-Sanūsī prefaces his creed by distinguishing between the necessary, the impossible and the possible. The opposition to this intellectualizing tendency, which probably always existed, found its chief exponent in Ibn Taymiyya. The statements of their position by Ṣūfīs often contain, besides their specifically mystical teaching, a section dealing with their attitude on matters of dogma.

3. The main Dogmas of Islam. No credal statement has been accepted even by all Sunnī Muslims as the standard account of Islamic dogma. The following brief account has been compiled from various creeds (chiefly those of al-Bag͟hdādī, al-G͟hazālī and Nad͟jm al-Dīn al-Nasafī), though not in their precise words. Short comments have been added. For fuller details see the articles referred to below.

(a) God [see ALLĀH] is one; there is no god except Him; He has no partner nor wife; He neither begets nor is begotten.—This article of faith belongs to Muḥammad's Meccan period, though it was given no emphasis in the earliest passages of the Ḳurʾān. It soon became necessary, however, to insist that Muḥammad's doctrine was incompatible with the vague monotheism apparently current in Mecca, which, while acknowledging God as supreme, tolerated lesser deities. Hence in the later Meccan sūrahs strict monotheism was vigorously proclaimed, and *s͟hirk* [*q.v.*], the giving of partners to God, i.e. polytheism, became a serious sin. When the Muslims came into closer contact with Christians, they regarded the current interpretations of the doctrine of the Trinity as an infringement of this article of faith. This is the point chosen for emphasis in the first clause of the *s͟hahāda*.

(b) God exists; His existence is rationally proved from the originated character of the world.—When the Muslims had to defend their religion against materialists and other unbelievers, some of them offered rational proofs of the existence of God. These were given at length in the theological treatises, and came to influence the credal statements (cf. al-Bag͟hdādī, Nad͟jm al-Dīn al-Nasafī). Some schools (cf. al-Sanūsī) treated existence (*wud͟jūd*) as one of God's attributes. This implied a distinction between essence and existence which was opposed by the early As͟hʿariyya and Ibn Taymiyya.

(c) God is eternal; His existence has neither beginning nor end.—This calls for no comment except on the difficulty of translation. Arabic has no single word for "eternal". *Ḳadīm* (properly "old" or "ancient" and *azalī* mean "being from eternity" or "having no beginning", while *bāḳiⁿ* and *abadī* mean "being to eternity" or "having no end" [cf. ABAD, ḲIDAM]. Consequently the renderings in European languages sometimes puzzle the uninitiated, e.g. "priority" and "continuance" for the hypostatized attributes *ḳidam* and *baḳāʾ*. Perhaps "pre-eternity" and "post-eternity" might be suggested.

(d) God is different from created things. He does not resemble any of them, and none of them resembles Him. He is not a body nor a substance nor the accident of a substance. He is not bounded nor limited in any way; He does not have a position in space; He may not be said to be in any direction. He sits on the throne (*ʿars͟h*), but only in the sense in which He Himself intended. He is above the throne and the heavens, but at the same time is "nearer to man than his jugular vein" (Ḳurʾān, L, 16/15). He is not subject to movement or change or suffering.—The otherness (*muk͟hālafa*) of God is presupposed in Islamic thinking from the Ḳurʾān onward, but only gradually became an explicit article of faith; al-Sanūsī makes *muk͟hālafa* one of the negative attributes of God. At an earlier period the main body of Muslims came to regard the Mus͟habbiha (those who made God resemble man) as unorthodox [cf. TAS͟HBĪH]. This was chiefly with regard to the interpretation of the anthropomorphic expressions in the Ḳurʾān, such as God's sitting on the throne and having hands and a face. At the other extreme from the Mus͟habbiha were those, like the Muʿtazila, who interpreted the terms metaphorically. The central position was that of those who said the terms were to be taken neither literally nor metaphorically but *bi-lā kayf* ("without how"), i.e. without specifying their manner or modality, or, as it was sometimes expressed, "in the sense in which God intended them" when He used them in the Ḳurʾān. It was emphasized that God was not corporeal and not material, and those who held that view were sometimes called Mud͟jassima. From the 5th/11th century onwards the followers of al-As͟hʿarī and other orthodox theologians, but not the Ḥanābila, largely abandoned *bi-lā kayf* and accepted metaphorical interpretations of anthropomorphic terms.

(e) God will be seen by the faithful in the world to come.—This article occasioned great difficulty because of God's incorporeality. The Muʿtazila and others denied the possibility of any vision of God. Ḍirār suggested that a sixth sense would be created. Eventually, however, it was generally agreed to accept the doctrine *bi-lā kayf*, and to avoid any inferences from it which involved corporeality.

(f) God is eternally powerful (or omnipotent), knowing (or omniscient), living, willing, hearing, seeing, speaking. He is so by the attributes of power, knowledge, life, will, hearing, sight and speech. These attributes are eternal; they are not God, yet not other than God. His power extends to everything, and no inadequacy or weakness characterizes Him. He knows everything, even what is concealed and secret, even the creeping of a black ant on a rugged rock on a pitch-black night.—These seven attributes (*ṣifāt* [*q.v.*]) received special attention from the theologians from the 3rd/9th century on. The discussion probably arose out of the question whether the Ḳurʾān was created or uncreated (see below). If the Ḳurʾān was uncreated, it was an eternal entity existing in relative independence of God's essence, even though it was His speech. For the D͟jahmiyya and Muʿtazila this view was unsatisfactory, and they asserted that God does not possess attributes of power, knowledge, speech, etc. which are distinct from His essence. In their view it is by His essence that He knows. Opponents called this

taʿṭīl, "stripping" (sc. God of His attributes), and the upholders of it Muʿaṭṭila. Those who held that God knows by an attribute of knowledge, neither identical with His essence nor distinct from it, are sometimes known as Ṣifātiyya, and include the As͟hʿariyya and other orthodox theologians. The points at issue were discussed with much subtlety, and in al-Sanūsī and al-Faḍḍālī a further distinction is drawn between God's power and His "being powerful" (*kawn ḳādiran*), etc.; the first groupa re known as *ṣifāt al-maʿānī* and the second as *al-ṣifāt al-maʿnawiyya* (perhaps to be rendered "attributes which are hypostatized concepts or aspects" and "attributes connected with hypostatized concepts"). It was doubtless because of their importance in popular religion that hearing and seeing were retained among the seven.

(g) The Ḳurʾān [*q.v.*] is the eternal and uncreated speech of God. This eternal speech is repeated by men's tongues, written in their copies of the Ḳurʾān and remembered in their hearts, yet it is distinct from its material embodiments.—The doctrine of the uncreated character of the Ḳurʾān was doubtless advanced in order to justify its position as the chief foundation of law and doctrine. The opponents, who included the D̲j̲ahmiyya, the Muʿtazila, and the central government of the caliphate from about 217/832 to 234/849 [cf. MIḤNA], were sympathetic politically to certain groups of the S͟hīʿa; and the S͟hīʿa tended to set the imamate above the written scripture. (It is still the view of the S͟hīʿa that the Ḳurʾān is created.) The Māturīdiyya and other followers of Abū Ḥanīfa rejected the As͟hʿariyya's view that the eternal speech of God can be heard.

(h) God's will is supreme and always effective; "what He wills exists, and what He does not will does not exist". Thus He wills all things, good and evil, though He does not command or approve of all. There is no obligation of any sort upon Him, e.g. to do what is best for men, or to reward them for good works, or to command them to do only what they are able to perform. Actions are good or bad because He commands or forbids them, and not in themselves; He could, if He so willed, change what is good and bad.—The sovereignty of God's will in the world was thought to be impaired by the Muʿtazila's assertion of man's free will, and was vigorously re-asserted by the orthodox. The Muʿtazila also held that God was bound by our (sc. human and rational) conceptions of good and bad. Al-As͟hʿarī and some of his followers opposed this, maintaining that good and bad are known only by revelation. They further asserted that God may punish one who obeys Him, that He may change a faithful man into an infidel (and that therefore when one says "I am a believer" one ought to add "if God will" [cf. ISTIT͟HNĀʾ]), and that God may impose on men duties that are beyond their powers. The Māturīdiyya took a contrary view on these and similar problems, though affirming the sovereignty of God's will against the Muʿtazila. The later and more intellectualistic theologians emphasize the supremacy of God's will at the time of events, but in the earlier and more popular creeds, the stress is on God's determination of events *beforehand* [cf. ḲADAR]; and thus al-As͟hʿarī himself includes in his creed the doctrine that whether a man dies or is killed his death takes place at his appointed term (*ad̲j̲al* [*q.v.*]).

(i) Man's acts are created by God, but are nevertheless properly attributed to man. They proceed from a power (*ḳudra, istiṭāʿa*) in the man, but this power is created by God; God does so at the moment of the act, not before it.—The leading orthodox theologians all try to find a middle way between absolute determinism (*d̲j̲abr*) and absolute free will (*ḳadar*). The argument of the Muʿtazila, that God's justice (*ʿadl*) presupposed that men could properly be punished or rewarded for their acts, forced orthodoxy to deny that men were mere automata. The As͟hʿariyya (and others before them—cf. *JRAS*, 1943, 234-47) used the vague word *kasb* [*q.v.*] or *iktisāb*, "acquiring", to describe the relation of man to his act. They held that, though the act proceeded from a power in the man, this power was created by God at the moment of the act for this specific purpose and no other. The Muʿtazila on the other hand held that the power was created before the act and was power to do either the act or its opposite.

(j) God is also characterized by active attributes (*ṣifāt fiʿliyya*), such as creating and giving sustenance. —Some, especially the As͟hʿariyya, held that God cannot be called creator, sustainer, etc. until He has created or given sustenance; as this implies the existence of originated beings, these attributes cannot be eternal. On the other hand, some, like the Māturīdiyya, held that God is eternally creator, etc.

(k) Only those names (or attributes) are applicable to God which are to be found in the Ḳurʾān and sound traditions, or are sanctioned by *id̲j̲māʿ*.— The Muʿtazila argued that names might be applied to God by inference. It is commonly held that there are 99 names [cf. AL-ASMĀʾ AL-ḤUSNĀ], but in fact more are found.

(l) The questioning by Munkar and Nakīr, and the punishment of the tomb, are realities; so also are the signs of the end, such as the slaying of the Dad̲j̲d̲j̲āl by ʿĪsā.—Between death and the resurrection on the Last Day men will be questioned in the graves by two angels, Munkar and Nakīr, and rewarded or punished. Various signs of the coming of the Last Day are also mentioned. These are popular beliefs, based on Tradition and not on the Ḳurʾān, but they have been incorporated into the creeds [cf. ʿAD̲H̲ĀB AL-ḲABR]. Among the S͟hīʿa special emphasis is laid on the Return (*rad̲j̲ʿa* [*q.v.*]), i.e. of the Mahdī and of a limited number of very good and very bad people; this is for the punishment of the latter and the glorification of the household of Muḥammad (cf. D. M. Donaldson, *The Shiʾite Religion*, London 1933, 236 f.). This return to earth *before* the Last Day, though "a preliminary judgement", is to be distinguished from God's final judgement.

(m) God will judge all men on the Last Day [cf. ḲIYĀMA]. The balance (*mīzān*), the bridge (*ṣirāṭ*) and the pool (*ḥawḍ*) are realities.—The central fact of judgement is prominent in the Ḳurʾān, and the balance on which men's deeds are weighed is hinted at (cf. Wensinck, *Muslim Creed*, 167 ff.). The pool or basin of Muḥammad, from which he quenches for ever the thirst of his followers, and the knife-edge bridge over the pit of Hell, from which the wicked fall down, come from popular conceptions. The various ideas were reconciled with one another only by the later systematizers.

(n) Certain persons, and notably Muḥammad, will be permitted by God to intercede for others on the Last Day [cf. S͟HAFĀʿA]. Muḥammad will intercede for sinners of his community.—This was denied by the Muʿtazila on Ḳurʿānic grounds, but ultimately gained general acceptance.

(o) Paradise and Hell already exist, and will continue to exist eternally [cf. D̲J̲ANNA, D̲J̲AHANNAM]. Grave sinners of the Muslim community will be

punished in Hell, but not eternally. No monotheist will remain eternally in Hell.—The Djahmiyya and other sects held that Paradise and Hell would not be created until the Last Day and would cease to exist after a time, but the majority rejected this view. There are some divergences about the precise late of Muslims who are sinners, but it is generally agreed that by intercession of otherwise they will eventually be released from Hell, if they enter it at all.

(p) Prayers for the dead and alms offered on behalf of them are advantageous to them.

(q) God has sent to mankind messengers (*rusul*) and prophets (*anbiyāʾ*). The prophets are above saints and angels. Muḥammad is the seal of the prophets and the most excellent of them.—The *Fiḳh Akbar* ascribed to al-Shāfiʿī says there are 120,000 prophets and 313 messengers.

(r) Prophets are preserved (*maʿṣūm*) from all sin by God.—This was the view of the Māturīdiyya and other followers of Abū Ḥanīfa, but the Ashʿariyya admitted that they might commit light sins.

(s) The best of men after the prophets are Abū Bakr, then ʿUmar, then ʿUthmān, then ʿAlī.—This assertion of the acceptance of the first four caliphs in order is made in opposition to the Shīʿa who held that ʿAlī was best.

(t) No Companion of Muḥammad is mentioned except for good.—This was to bury the quarrels about rights and wrongs of ʿUthmān, of Ṭalḥa and al-Zubayr, etc. It was directed mainly against the Shīʿa.

(u) Unbelief (*kufr*), or the status of being an unbeliever, does not necessarily follow the commission of sin by a believer.—This was directed against the Khawāridj, who excommunicated anyone guilty of sin.

(v) Faith is knowing in the heart, confessing with the tongue and performing works. It increases and decreases [cf. ĪMĀN].—Many others, however, notably the Ashʿariyya, said that works were not a part of faith, and that faith did not increase and decrease.

(w) Faith and unbelief are due to God's guidance and abandonment (*khidhlān*) respectively.

(x) (Some later creeds also contain articles about the nature of knowledge and true report, and other philosophical matters.)

ʿĀKIF PASHA [see muḥammad ʿākif pasha].

ʿAḲĪḲ (a.; *nomen unitatis*: ʿAḳīḳa) is the name of the cornelian, which is found in Arabia in various colours and qualities, of which the red shade is especially in demand. The cornelian has of old been exported from Yaman (al-Shiḥr) via Ṣanʿāʾ to the ports of the Mediterranean; and also from India. It was used for seal-rings, for ladies' ornaments and even costly mosaics, for example in the *miḥrāb* of the great mosque at Damascus (according to al-Maḳdisī, 157). It was used as a medicine for the preservation of the teeth; superstitious belief ascribed to the cornelian in the seal-ring the power of soothing the heart—especially in battle—and of stopping hemorrhage. Even Muḥammed is said, according to some traditions, to have shared this belief and to have confirmed the power of the seal to give happiness and to protect from poverty. (Similar beliefs are attached to the cornelian also in Europe, cf. *Handwörterbuch d. Deutschen Aberglaubens*, s.v. Karneol.) Down to the present day the cornelian has remained a favourite neck-ornament for women, and the name *ʿaḳīḳ* has been transferred to any kind of necklace which is of a red colour, whether made of glass or shells or other materials.

J. Clément Mullet, in *JA*, 1868, i, 157. (J. Hell*)

AL-ʿAḲĪḲ, the name of a number of valleys, mines, and other places in Arabia and elsewhere. When applied to valleys, ʿAḳīḳ is used in the sense of a bed cut out by a stream; when applied to mines, it may refer either to stones such as the cornelian (*ʿaḳīḳ*) or more generally to any mineral cut away from its source. The name is much used by the Arab poets, who do not always make clear which of the many ʿAḳīḳs they have in mind.

The best known of the ʿAḳīḳs is the valley passing just west of Medina, from which it is separated by Ḥarrat al-Wabra. It continues northwards to join Wādī al-Ḥamḍ [*q.v.*], the classical Iḍam, which empties into the Red Sea south of al-Wadjh. The mountain ʿAyr south of Medina rises above the right bank of al-ʿAḳīḳ, which draws much of its water from the neighbouring lava beds. After heavy rains the valley is filled with a broad river which has been compared with the Euphrates; when the rains fail, only the wells remain to slake the thirst of men, beasts, and plants.

In the Prophet's time the first stage of the route from Medina to Mecca ran through al-ʿAḳīḳ to Dhu 'l-Ḥulayfa, as does the present road. Numerous traditions speak of the fondness Muḥammad had for al-ʿAḳīḳ, the "blessed valley" in which he was once told to pray by a messenger from God. As the valley lay within the territory of Muzayna, Muḥammad gave it as a *ḳaṭīʿa* to Bilāl b. al-Ḥārith of this tribe. Muḥammad also established a reserve (*ḥimā*) for the Muslims' horses at al-Naḳīʿ a good distance up the valley from Medina. Bilāl having done nothing to improve his land, the Caliph ʿUmar took most of it from him and distributed it among deserving Muslims. For several generations thereafter the valley flourished: wells were dug, gardens and fields abounded, and the country houses (*ḳuṣūr*) of ʿAlids and other Medinan notables witnessed parties where the entertainment was hardly in keeping with the sober spirit of the first days of Islam. (Cf. H. Lammens, *Berceau de l'Islam*, 98; idem, *Le règne de Moʿâwia*, index—with further references.) Saʿd b. Abī Waḳḳāṣ retired to his estate in al-ʿAḳīḳ on the election of ʿAlī as Caliph. The poets lavished praise on the lovely scene and the famous wells, particularly Biʾr Rūma (now known as Biʾr ʿUthmān after ʿUthmān b. ʿAffān, who bought it from its Jewish owner and gave its water to the Muslims) and Biʾr ʿUrwa b. al-Zubayr. The water of al-ʿAḳīḳ was so sweet that it was sent all the way to Hārūn al-Rashīd in ʿIrāḳ. With the decline of ʿAbbāsid power and the increase of insecurity in al-Ḥidjāz, the valley lapsed into its old somnolence, to remain there for centuries.

Another ʿAḳīḳ, sometimes called ʿAḳīḳ Dhāt ʿIrḳ by the older authors, extends northwards from the vicinity of al-Ṭāʾif along the inner side of the main mountain range of al-Ḥidjāz. Some writers state that this valley is connected with ʿAḳīḳ al-Madīna, but recent hydrographic studies have shown that it empties instead into a large swampy basin called al-ʿĀḳūl between Mecca and Medina.

A great valley in Central Arabia was known in classical times as ʿAḳīḳ al-Yamāma or ʿAḳīḳ Tamra. Although the descriptions given by the

older authors are meager, there is little doubt about the identification of this valley with the present Wādi'l-Dawāsir [*q.v.*], a small settlement in which still bears the name Tamra, while a nearby salt flat in the valley bed is still called al-ʿAḳīḳ. According to al-Hamdānī (i, 152), Tamra was a town with 200 Jews. The same authority may well be mistaken in connecting the name of this valley with Maʿdin al-ʿAḳīḳ, a mine he places in the vicinity, no trace of which has been found. Other mines with the same name are mentioned, but in such general terms that identifying them may be a hopeless task.

In addition to various other valleys named al-ʿAḳīḳ in Arabia, there has been at least one in ʿIrāḳ south of the Euphrates (cf. W. Wright, *Opuscula arab.*, 110; *Ḥamāsa*, i, 468; *Aghānī*, vii, 123; al-Dīnawarī, 260). On the Sudanese shore of the Red Sea a village named ʿAḳīḳ (without the definite article) stands on a gulf of the same name southwest of Sawākin.

Ḥusayn Haykal, *Fī Manzil al-Waḥy*, Cairo 1356, index; H. St. J. B. Philby, *A pilgrim in Arabia*, London 1946, 50 ff.

(G. Rentz)

ʿAḲĪḲA (A.) is the name of the sacrifice on the seventh day after the birth of a child. According to religious law it is recommendable (*mustaḥabb* or *sunna*) on that day to give a name to the new-born child, to shave off its hair and to kill a victim, for a boy two rams or two he-goats, for a girl one of these according to the Shāfiʿites, but in both cases only one according to the Mālikites. If the offering of the *ʿaḳīḳa* has been neglected on the seventh day, it can be done afterwards, even by the child itself when it has come of age. The greater part of the flesh of the sacrifice is distributed amongst the poor and indigent, but a meal (*walīma*) for the family is recommendable.

Some of the older scholars (amongst other Dā'ūd al-Ẓāhirī) have looked upon the offering of the *ʿaḳīḳa* as a duty. Abū Ḥanīfa on the contrary regarded it as optional.

The shorn hair of the child is also called *ʿaḳīḳa*, and the law recommends to the faithful to spend a sum not less than the weight of this hair in silver (or gold) in almsgiving.

The *ʿaḳīḳa* sacrifice was doubtless derived from old Arabian heathenism. The Prophet is said to have observed: "When some one wishes to offer a sacrifice for his new-born child, he may do so". In heathenish times it was the custom to wet the child's head with the blood of the animal. According to some traditions Muḥammed had allowed the Muslims to do the same. The jurisconsults maintain that this custom is not desirable (*sunna*) but it is done, e.g. in Palestine.

According to Doughty (*Travels in Arabia Deserta*, i, 452) the *ʿaḳīḳa* is one of the most frequent sacrificial ceremonies in the Arabian desert, but there it is only performed at the birth of a boy, never when a girl is born.

ʿĀḲIL [see bālig̲h̲].

ʿAḲĪL b. ABĪ ṬĀLIB, elder brother of ʿAlī, who was 20 years his junior. After fighting against the Muslims at Badr, where he was taken prisoner and ransomed by al-ʿAbbās, he became a convert to Islām. The sources give contradictory information as to the date of this event (after the capture of Mecca, according to al-Balādhurī; shortly before or after the pact of al-Ḥudaybiya, according to Ibn Ḥadjar, etc.), as well as on his participation in the Khaybar and Mūta expeditions, the capture of Mecca, and the battle of Ḥunayn. During the struggle between ʿAlī and Muʿāwiya, he ranged himself on the side of the Umayyad because his brother, it is said, refused to draw on the state coffers in order to pay a debt to him, but the estrangement between the two brothers probably had political causes. Yet ʿAḳīl would never allow anyone to insult ʿAlī in his presence.

He had "an extremely prosperous household" and a considerable entourage. He died, probably in 50/670, and was buried at Medina. He left several sons who joined al-Ḥusayn at the time of his rebellion against Yazīd; one of them, Muslim, was killed by Ibn Ziyād, and others, either six or nine in number, fell at Karbalā'. ʿAḳīl left a reputation not only as a great authority on genealogies and the history of Ḳuraysh, on the strength of which he became one of the four arbiters (*ḥakam*) of Ḳuraysh, and was summoned by ʿUmar to assist in compiling the *dīwān*, but also as a man endowed with great natural eloquence; his swift and pungent retorts are often quoted by the historians.

Lammens, *Études sur le règne du calife Omayade Moʿawia Ier*, Beirut 1906-7, 91, 112-3, 175 ff. A series of anecdotes, translated from Balādhurī, are to be found in Caetani, *Annali*, 37 A.H. and 176, and several other quotations exist in his *Chronographia*, 50 A.H., no. 39, 551.

(L. Veccia Vaglieri)

ʿĀḲILA, one of the most significant institutions of Muslim penal law as regards both the origins and the sociological evolution of that law.

The term *ʿāḳila*, pl. *ʿawāḳil*, denotes, as its ety-

mology would suggest, the group of persons upon whom devolves, as the result of a natural joint liability with the person who has committed homicide or inflicted bodily harm, the payment of compensation in cash or in kind. This compensation is called *diya* [*q.v.*], *ʿaḳl*, pl. *ʿuḳūl*, and also *maʿḳula*, pl. *maʿāḳil*, from a root meaning "to bind, shackle": the Arab lexicographers readily explain that it referred originally to the camels of the *diya*, which were given "shackled" to the victim or his inheritors (cf. Ibn Ḳutayba, *Adab al-Kātib*, 1346 A. H., 52; *LA*, xiii, 487-8, which has a detailed account); but the classical jurists prefer to relate it to the idea of a "restraint" operating against the exercise of private revenge (cf. Germanic *wergeld*). The original meaning is perhaps to be found in the classical expression *ʿaḳalᵃ l-ḳatīlᵃ*, "to pay the compensation for the victim of a murder", which possibly meant at first "to prevent the victim [from avenging] himself".

This institution has its roots in the ancient Arab tribal principle of joint responsibility (Procksch, *Über die Blutrache etc.*, Leipzig 1899, 56-61; Morand, *Études de droit mus. algérien*, Paris 1910, 65-7; idem, *Introd. à l'étude du droit mus. algérien*, Paris 1921, 210-12; Lammens, *Arabie occidentale*, 189). In Islam, it seems to be a survival not easy to reconcile with the individualist tendencies of religious doctrine which find expression, in the field of moral responsibility, in the Ḳurʾān (vi, 164): "no soul bears another's load." *Fiḳh*, however, approved of it (protests were raised by the Muʿtazilite Abū Bakr al-Aṣamm, and in Khāridjite circles), and several "*ḥadīths*" of the Prophet" (conveniently grouped, with a commentary, in al-Shawkānī, *Nayl al-Awṭār*, 1357 A. H., vii, 80-6) gave it the tardy support of Tradition: the *Muwaṭṭaʾ* of Mālik only takes cognizance of such versions as are irrelevant to the question of the *ʿāḳila*, which it discusses at considerable length without invoking any decision of the Prophet. Its incorporation into *fiḳh* was accompanied, however, by the imposition of highly restrictive regulations and even, in one of the principal schools of law, by an appreciable change in the principle of joint responsibility.

Firstly, as was to be expected, *taʿāḳul*, or joint liability by *ʿāḳila*, is not permissible between Muslims and non-Muslims (it is allowed between *dhimmīs*, the conditions varying according to the school). Secondly, a factor of much greater importance, four other basic restrictions are laid down in the formula, valid in principle for all the orthodox schools: *lā taʿḳilᵘ 'l-ʿāḳilatᵘ ʿamdᵃⁿ wa-lā ʿabdᵃⁿ wa-lā ṣulḥᵃⁿ wa-lā iʿtirāfᵃⁿ*: "*ʿāḳila* does not intervene in the case of an intentional act, or a slave, or a compromise or a confession". The first of these restrictions, which limits the legal function of the institution to the case of non-intentional homicide or injury (*khaṭaʾ* [*q.v.*]) — and most of those who allow this supplementary category include the quasi-intentional — is extremely important; there is a clear connection between it and the distinction drawn in the Ḳurʾān (ii, 178; iv, 92) between intentional and non-intentional homicide. The intentional act of a minor or an insane person is counted by the majority of authors as tantamount to a non-intentional act. The second restriction apparently denotes (the grammatical vindication of this was given by the grammarian al-Aṣmaʿī to the Ḥanafī ḳāḍī Abū Yūsuf) that if the victim — and not the guilty party — is a slave, the *ʿāḳila* of the guilty party does not intervene; but the Ḥanafīs, followed with some hesitation by the Shāfiʿīs, see the matter in a different light. The two remaining restrictions mentioned in the formula are represented by the jurists as seeking to prevent any collusion prejudicial to the members of the *ʿāḳila*.

Even more drastic is the Ḥanafī innovation which affects the members of the *ʿāḳila* themselves. Among the pre-Islamic Arabs, only the relatives by parentage, real or fictitious, were concerned. The Muslim jurists have not departed from this customary view, with the exception of the Ḥanafīs of ʿIrāḳ, who have accepted and confirmed an Umayyad administrative practice (Schacht, *Origins*, 207) which gave precedence to the joint liability between companions-in-arms entered on the same pay-roll or *dīwān*. This tallied with the tendency towards state control, because the authorities could in this way directly guarantee compensation for the victim, by means of official deductions from pay. The experiment made by some early Mālikīs, obviously following the example of the ʿIrāḳīs, of taking the *dīwān* into account to a certain extent, was unsuccessful (compare ʿAbd al-Wahhāb, *Ishrāf*, ii, 194, with al-Bādjī, *Muntaḳā*, vii, 113-4).

The schools of law are thus virtually unanimous on the point that the *ʿāḳila* comprise, as in the pre-Islamic period, the *ʿaṣaba* (cf. MĪRĀTH] of the guilty party, that is to say, the male relatives or agnates, after whom come, in the case of a freedman, the patron and his *ʿaṣaba* (an old Shāfiʿī ruling in favour of the reciprocal obligation of the freedman towards the patron has not been generally accepted). As regards the agnates, the old system of kinship is seen here in all its force and clarity, more plainly even than in the rules governing inheritance; moreover, the agnatic relationship, in such a conservative question of penal law, continues to be interpreted with the greatest strictness: Mālik, for example, stipulates that neither the husband nor the son of a woman who is a guilty party, although they are her heirs, can be a member of her *ʿāḳila*. The Shāfiʿīs are alone in excluding from the *ʿāḳila* the sncestors and descendants of a man who is the guilty party, though the Ḥanbalīs are undecided on this point (Ibn Ḳudāma, *al-Mughnī*, 1367 A. H., vii, 784). Minors and insane persons are excluded from the *ʿāḳila*, as are women. As regards the guilty person himself, it is certain that originally he was not party to the *ʿāḳila* which intervened on his behalf; although certain Mālikīs have incorporated him in it, it can be confidently asserted that this is in imitation of the Ḥanafīs — an additional modification to be attributed to the latter (Brunschvig, in *Studia Islamica*, iii, 69).

Ḥanafism has not completely excluded from the *ʿāḳila* either the agnates or the patron by right of manumission; it even includes the contractual patron, to whom it alone of the orthodox schools accords legal status; and it places no limitations of time or degree on the agnatic relationship. But agnates and patrons, under this system, only play a suppletory role. Further, Ḥanafism justifies its theory of the superiority of the military *dīwān* to the *ʿaṣaba* by declaring itself faithful to the traditional idea of an overriding duty of "mutual assistance" (*nuṣra, tanāṣur*) as the basis of penal solidarity, and by adducing the changes which had occurred during the first century of Islam in the very composition of the natural group of mutual aid; thus there was initiated among the members of this school a development of doctrine which led to the acceptance of the principle that, in default of the *dīwān*, members of the same *sūḳ* or of the same

profession, in a given locality or district, should between them perform the function of *ʿāḳila*. Further developments occurred among the mediaeval Ḥanafīs, but the various jurists trod divergent and confused paths (the classical works on *ikhtilāf*, through being over-condensed, give the illusion of a unified doctrine); some left the judge considerable scope for the exercise of his own discretion, others were inclined to provide a definitely geographical basis for the institution, at least in the absence of agnates.

As a result of the dislocation of the tribes under Islam and their dispersal over vast areas of territory, the problem of a limitation either, again, of a geographical nature, or connected with the degree of kinship, arose in the other schools, in which the role of the agnates retained its original importance. The Mālikīs had early signified their decision (*Mudawwana*, xvi, 198) that there should be no *taʿāḳul* between the people of Egypt and Syria, for example, because they constituted different *djunds* (a faint echo of the *dīwān* theory); and the Shāfiʿīs, who to begin with saw no impediment in any distance, however remote, wondered in their turn whether relations who were near at hand might not be called upon in preference to more closely connected relatives who lived at a distance (compare al-Shīrāzī, *Muhadhdhab*, ii, 214, with *K. al-Umm*, vi, 103). The Ḥanbalīs were not inclined to take geography into account at all; but, while the Shāfiʿīs rejected joint liability between tribes considered to be related, they, on the other hand, limited the institution to that fraction of the tribe in which kinship was clearly established (*Mughnī*, vii, 786, 788). Again, within the framework of the social changes occasioned by Islam, and as a mark of its distrust of Bedouin life, there is recorded the attempt of several doctors to prevent *taʿāḳul* between townsmen and nomads: the Ḥanafī al-Sarakhsī emphasizes this point (*Mabsūṭ*, xxvii, 132-3); the Mālikīs, notwithstanding the *Mudawwana*, loc. cit., on the whole refused to follow this path (al-Bādjī, *al-Muntaḳā*, vii, 98).

Attention must be drawn here to a theoretical discussion, which occurs in detailed works of *fiḳh*, on the nature of the obligation devolving on the *ʿāḳila*, and which is notable as an interesting example of Muslim legal thought, rather than for its problematical influence on practical solutions. Does this obligation rest on the *ʿāḳila "per se"* (*ibtidāʾan*: this is the technical significance of this term, which is sometimes not fully understood), that is, are they considered as debtors *"per se"*, or does it result from a legal "transfer" (*intiḳāl*) from the guilty party, the "acceptance of responsibility" (*taḥammul*) being made by the group? The second hypothesis allows emphasis to be placed on the idea of the "alleviation" (*takhfīf*) and the "generous help" (*muwāsāt*) which, although obligatory, are afforded by the *ʿāḳila* to the guilty party. Ḥanafism seems to adhere to this theory. The other schools are undecided; the *ibtidāʾ* of the responsibility, which they hesitate to affirm or maintain, would doubtless tally better than the rival theory with the primitive conception by which the clan, jointly responsible, feels itself bound to offer reparation collectively, as much or even more on its own behalf as on behalf of the guilty party.

Again, as regards the amount of *ʿaḳl* and the modalities of the payment incumbent upon the *ʿāḳila*, Muslim law has shown a tendency to restrict and regulate the institution. The Shāfiʿīs alone have remained faithful, or have returned to their allegiance, to the settlement of the compensation by the *ʿāḳila*, whatever the amount may be (theoretical discussion by al-Shāfiʿī, *Risāla*, ed. Shākir, Cairo 1940, nos. 1039 ff., and *K. al-Umm*, vii, 297). The Mālikīs, on the other hand, followed by the Ḥanbalīs, have fixed, perhaps in conformity with an old government decision (*K. al-Umm*, loc. cit.; Schacht, loc. cit.), a minimum, representing a third of the whole *diya*, below which the *ʿāḳila* are not liable. The Ḥanafīs, in the same way, but acting with greater moderation, have absolved the *ʿāḳila* from responsibility for sums less than 500 *dirhams* or —what amounts to the same thing according to them—1/20th of the whole *diya*, the legal rate for head injuries which "lay bare" (*mūḍiḥa*) the skull. Below these minima, therefore, the responsibility rests on the guilty party personally.

All the schools have given their assent (exceptions apart) to the general rule, deriving almost certainly from Umayyad practice, which allows the *ʿāḳila* to discharge its liability by three consecutive annual payments (according to some to commence from the date of the injury, according to others from that of the agreement between the parties, or from the date of the conviction), instead of by the immediate payment of the whole. But they again reveal an appreciable difference of opinion on the method of assessment among the members. The Ḥanafīs, who like accountantcy, and who are anxious to embarrass each member as little as possible, have opted for an extremely low *maximum*, to be the same for all—three or four *dirhams* per head. The Shāfiʿīs, who aim at relieving the poor, have fixed two rates of contributions according to means, very similar to the preceding ones, but in this case revolving round a *minimum*—½ *dīnār* for the rich, ¼ for persons of more moderate means, proceeding from the nearest agnates to the most distant. The Mālikīs and Ḥanbalīs refuse to lay down any fixed amount; each of the agnates, in order of kinship, must pay according to his means; this was undoubtedly the ancient method. In an organized State, if an equal assessment is refused, the case must be referred to a judge; the schools concerned agree on this.

The *ʿāḳila* reappears in a closely-connected penal institution, the *ḳasāma* [*q.v.*], but in slightly different forms from the ones just described.

The Imāmī Shīʿites have made virtually no innovations on the subject of the *ʿāḳila*. Their fundamental solutions are those of the orthodox doctors, with a preference now for one school, now for another. In their eyes, the persons jointly responsible are first and foremost the agnates; the guilty person himself, minors and the insane, and the emancipator too, are excluded; the priority accorded to, or rather imposed upon, relations german as against consanguineous relations of the same degree is debated by the orthodox, who in general disallow it. The minimum sum involving the *ʿāḳila* is that laid down by the Ḥanafīs; the minimum devolving on each member is fixed either in accordance with Shāfiʿī doctrine, or by the magistrate; payment is made, as in the case of the Sunnīs, in three annual instalments.

Finally, can *fiḳh* be said to have succeeded in its effort to preserve, and at the same time to delimit, the function of the *ʿāḳila*? The reply can only be in the negative. In general, large sections of the old Muslim penal law, even though based on the Ḳurʾān, fell rapidly into disuse, when faced with competition from the secular, and highly arbitrary, justice of rulers; there was even greater reason why this

should occur in the case of an institution such as the *ʿāḳila*, which was extra-Ḳurʾānic and no longer corresponded to social reality as far as an increasing number of Muslims were concerned. The evolutionary process initiated during the first centuries of Islam by Ḥanafism, in the sense of joint liability on a territorial basis, was indecisive, and unsatisfactory in many respects; taken a stage further by the Ḥanafīs in the course of time, it even went as far as the doctrine, put forward by some, that the public treasury, i.e. the state, was responsible in the absence of family or of a military *dīwān*. Instead of this solution, which was hard to admit, some authors advocated that the *diya* should be placed to the sole charge of the guilty person—this being the germ of a theory of civil liability which was not further developed (Tyan, *Le système de la responsabilité délictuelle en droit musulman*, Beirut 1926, 123-8; Abou Haïf, *Le Dièh en droit musulman*, Cairo 1932). It seems that collective responsibility to-day exists only in societies where the joint responsibility of the tribe is still an active force, for example among the Arabic-speaking nomads (the literature on the subject is summarized in Grāf, *Das Rechtswesen der heutigen Beduinen*, Bonn 1952), or among the settled Berber populations; customary law then predominates, only influenced in varying measure by Muslim law.

Bibliography: In addition to the references quoted in the text, all the general works on *fiḳh*. For the three principal orthodox schools see Bercher, *Les Délits et les Peines de droit commun prévus par le Coran*, Tunis 1926. For reference on the Mālikī school Arévalo, *Derecho penal islámico*, Tangier 1939, 40-44. Bourham, *De la vengeance du sang chez les Arabes d'avant l'Islam*, 1933-44, is of no value. (R. Brunschvig)

AḲÎNDJÎ, irregular cavalry during the first centuries of the Ottoman Empire, based on and primarily for service in Europe. Their name derives from the verbal noun *aḳîn* (from *aḳ-maḳ*, "to flow, be poured out"), which means a "raid, incursion into enemy territory". Akîndjî is "the name given to those who carry out *aḳîn*-s on foreign territory to reconnoitre, plunder, or spread destruction". (M. Zeki Pakalîn, *Osmanlî tarih deyimleri ve terimleri sözlüğü*, Istanbul 1946, i, 36). The treasurer of Meḥmed II, G. M. Angiolello, in his eye-witness account of the campaign against Uzun Ḥasan (1473), gives the best description (trans. Charles Grey): "Besides the five columns we have mentioned, there was also another of the Aganzi, who are not paid, except by the booty which they may gain in guerilla warfare. These men do not encamp with the rest of the army, but go traversing, pillaging, and wasting the country of the enemy on every side, and yet keep up a great and excellent discipline among themselves, both in the division of the plunder and in the execution of all their enterprises. In this division were thirty thousand men, remarkably well mounted . . .".

Tradition ascribes the formation of these auxiliary troops, comprising contingents from the Turcoman tribes of Anatolia, to the Saldjūḳids; and in fact, although accurate information is lacking concerning the battle in the plain of Brusa at the end of the 13th century between Ertoghrul, supported by the *aḳîndjî*, and the Byzantine-Tatars, it seems probable that this tradition contains the truth. The term *aḳîn* is also used in connection with naval expeditions. Enwerī (ed. M. H. Yinanç, Istanbul 1928, 24) records an *aḳîn* made along the Bosporus with 35 ships. Neshrī mentions the *aḳîndjî ḳāḍîlarî*, or "*aḳîndjî* judges". These irregular units of the Ottoman army established themselves, as the Turks gradually advanced into the northern Balkans, in strategic and wellprotected localities. Fīrūz Bey of Vidin was ordered by Bāyazīd I to make an *aḳîn* on Wallachia, and in 1391 the Turks (*aḳîndjî*) for the first time advanced north of the Danube. Later they numbered not less than 40-50,000 horsemen. They were commanded by what were virtual dynasties of local chiefs (*bey*); Ewrenos-oghullarî (the descendants of Ewrenos Bey [*q.v.*], at Gümüldjina, Serez, Ishkodra) in the north-west; Mīkhāl-oghullarî, descendants of Köse Mīkhāl [*q.v.*], a Greek renegade of the family of the Palaeologi (Serbia, Hungary); Turkhān-oghullarî (Smederevo-Semendire, Greece, Wallachia and in the direction of Venetian territory); Malkoč-oghullarî, originally from Bosnia where they were known as Malkovitch (Hungary, Wallachia, Moldavia and Poland); Ḳāsim-oghullarî (at Vienna, 1529).

Towards the end of the 16th century, the *aḳîndjî* lost some of their thrust and importance. In the course of the ill-fated expedition of the Grand Vizier Kodja Sinān Pasha against Mihai Viteazul of Wallachia (1595), they were almost annihilated: at Giurgiu (Yerköyü) on the Danube they remained on Rumanian territory, where "the root of the *aḳîndjî* was severed and they withered away". Again in 1604, Sultan Aḥmad I issued orders to ʿAlī Bey Mīkhāl-oghlu to join the expedition against Hungary. But the *aḳîndjî* rapidly adapted themselves to new forms of warfare. They became artillerymen, armourers, and drivers, and demanded to be entered in the army muster-rolls and to be paid regularly. The statistician of the decline of the Ottoman empire, Koči Bey, in his *Risāle* (ed. A. Wefīḳ Pasha, London, 1279/1862, 17) written in 1630, stated that "the *aḳîndjî* contingents (*aḳîndjî ṭāʾifesi*) had become either paid troops or regular soldiers, or had relinquished their positions (*aḳîndjîlîghî inkār idüb*); scarcely 2000 *aḳîndjî* remained". Their individuality became lost in the main body of the regular Ottoman forces.

ʿAKK, old Arabian tribe, probably identical with the ʼΑγγῖται (ʼΑχχῖται) of Ptolemy, vi, 7, § 23. H. Reckendorf considered the name ʿAkk as a place-name; but it occurs as a personal name in Thamūdic inscriptions. At the beginning of the 7th century the territory of the ʿAkk in the Tihāma of Yaman stretched from Wādī Mawr, over Surdud, to Wādī Sahām (i.e. between modern Luḥayya and Ḥudayda), where it met that of the Ashʿar. At that time they

participated in the Meccan cult. Earlier a colony of the ʿAkk was to be found in ʿAḳīḳ (Tamra) = Wādī al-Dawāsir. No information is available concerning their adherence to Islam. In the revolt of al-Aswad, which broke out during the last year of the Prophet's life, they took sides against him, so that the representative of Medina, Ṭāhir b. Abī Hāla, was able to remain in their territory. On the other hand, after the death of Muḥammad a group of ʿAkk and As̲h̲ʿar assembled at Aʿlāb near Ṣuḥār (in the territory of a sub-tribe of ʿAkk of the same name), but they were annihilated by Ṭāhir and a chieftain of the ʿAkk themselves. During the wars of the conquests some groups from the tribe came to Syria (they settled in the valley of the Jordan), and from there to Egypt and the Mag̲h̲rib, also to Kūfa and Persia. Members of the tribe were prominent in the conquest of Egypt and in the battle of Ṣiffīn (on the Syrian side). In Arabia, the tribe preserved its old territory, and even extended it to the north and south.

Wüstenfeld, Table A2, shows the divisions of the emigrant ʿAkk, the *Ṭurfa* those of the tribe in its primitive seat in the 13th century. In the tradition of Medina (Ibn Isḥāḳ) the ʿAkk are counted among the ʿAdnān, in that of K̲h̲urāsān among the Azd S̲h̲anūʾa (through ʿUdt̲h̲ān, which is often corrupted into ʿAdnān). Both versions are easy to understand: when Kūfa was founded, the ʿAkk were assigned to the "seventh" of the Iyād (b. Nizār b. Maʿadd b. ʿAdnān), while in K̲h̲urāsān they were assigned to the Azd.

(W. Caskel)

ʿAKKĀ, the Acco (ʿAkkō) of the Old Testament, the Ptolemais of the Greeks, the Acre of the French, town on the Palestinian seaboard. ʿAkkā was captured by the Arabs under the command of S̲h̲uraḥbīl b. Ḥasana. As the town had suffered in the wars with the Byzantines, Muʿāwiya rebuilt it, and constructed there naval yards which the Caliph His̲h̲ām later transferred to Tyre. Ibn Ṭūlūn constructed great stone embankments round the port; al-Maḳdisī, whose grandfather executed the work, gives an interesting description of their construction. The port became subsequently one of the naval bases of the Fāṭimids in Syria. The Crusades marked a new epoch in the history of the town. After an unsuccessful attempt, Baldwin I succeeded, in 497/1104, in gaining possession of this important port, which then became the central point in the Christian possessions in the Holy Land. Al-Idrīsī's description of ʿAkkā belongs to this period: a large straggling town, with many farms, a fine, safe harbour and a mixed population. After Saladin had won the great battle of Ḳarn Ḥaṭṭīn, ʿAkkā surrendered to him in 583/1187. But since possession of ʿAkkā was vital to the Christians, they again laid siege to the town. The siege lasted for two years, and finally (1191) the arrival of Philippe Auguste and Richard Coeur de Lion led to the capture of ʿAkkā by the Christians. From 626/1229 onwards, ʿAkkā was the principal centre of Christian power in Palestine, and received the name of Saint-Jean d'Acre, after a splendid church built there by the Knights of St. John of Jerusalem. In 690/1291 the Sultan al-Malik al-As̲h̲raf gained possession of ʿAkkā and put an end to Christian domination in Palestine. The town was completely destroyed, and for long remained a heap of ruins, with few inhabitants. Towards the middle of the 18th century, a revival took place, when S̲h̲ayk̲h̲ Ẓāhir, who had founded a kingdom in Galilee, made ʿAkkā his capital. The town was rebuilt, and flourished still more during the reign of terror of Aḥmad al-D̲j̲azzār (1775-1804). It was during his rule that Napoleon conducted a fruitless siege of the town, which was protected by the British fleet. ʿAkkā continued to prosper under the peaceful rule of al-D̲j̲azzār's successors, but in 1832 it was taken by Ibrāhīm Pas̲h̲a and razed. It rose yet again, only to be bombarded in 1840 by the Turkish fleet supported by the British and the Austrians. Since then the town has witnessed a certain revival.

(F. Buhl*)

AKKERMAN [see aḳ kirmān].

ʿAḲL, intellect or intelligence, the Arabic equivalent to Greek νοῦς.

(1) In neoplatonic speculation, which in many respects resembles the late Greek doctrine of the Logos and also in many respects corresponds to the Logos christology, *ʿaḳl* is the first, sometimes the second, entity which emanates from the divinity as the first cause, or proceeds from it by means of intellectual creation, *nafs* and *ṭabīʿa* etc. coming after *ʿaḳl* in succession. As first created entity the *ʿaḳl* is also called "the representative" or "the messenger" of God in this world. The neoplatonic idea of *ʿaḳl* as first creation also appears in the *ḥadīt̲h̲*: "The first thing created by God was the *ʿaḳl* etc." (cf. I. Goldziher, *Neuplatonische und gnostische elemente im Hadīt*, *ZA*, 1908, 317 ff.). [Cf. also falsafa, ik̲h̲wān al-ṣafāʾ; for the role of *ʿaḳl* in Ismāʿīlism, ismāʿīliyya and durūz; for *ʿaḳl* in ṣūfī theosophy, e.g. ibn ʿarabī and ʿabd al-razzāḳ al-ḳās̲h̲ānī]. (Tj. de Boer*)

(2) According to the theologians (*mutakallimūn*), *ʿaḳl* is a source of knowledge and, as such, is the antithesis of *naḳl* or tradition (see e.g. I. Goldziher, *Vorlesungen über den Islam*, ch. iii); the words *fiṭra* and *ṭabīʿa* (φύσις) are also used for it. *ʿAḳl* is thus a natural way of knowing, independently of the authority of the revelation, what is right and wrong. (Thus it corresponds to the λόγος of the Stoics, who understood by this term a "natural light" (*lumen naturale*), which was their criterion for distinguishing between good and bad.) This *ʿaḳl*, possessed by all human beings, is also called *al-raʾy al-mus̲h̲tarak* (al-Fārābī, *R. fi 'l-ʿAḳl* (Bouyges); cf. the κοιναὶ ἔννοιαι of the Stoics and the κοινὸς νοῦς of Alexander of Aphrodisias, *De anima* (Bruns)). Allied to this meaning of *ʿaḳl* is the view qualified by al-

Fārābī (op. cit.) and Ibn Sīnā (*al-Ḥudūd*) as that of the masses (*al-d̲j̲umhūr*), according to which *ʿaḳl* must lead to praiseworthy conduct, so that a man of bad character, however ingenious he might be, is not an *ʿāḳil* (cf. the ὀρθὸς λόγος of the Stoics and the distinction made by Aristotle between φρόνησις and πανουργία, *Nic. Ethics*); *ʿaḳl* here means "wisdom".

(3) The philosophers of Islam followed in their accounts of *ʿaḳl* Aristotle and his Greek commentators, more especially Alexander of Aphrodisias. According to them *ʿaḳl* is that part of the soul (for their psychology in general see NAFS) by which it "thinks" or "knows" and as such is the antithesis of perception. Mostly, however, *ʿaḳl* is not regarded as a part of the soul at all, which is then restricted to the lower mental functions, but as an incorporeal and incorruptible substance differing in kind from the soul—an ambiguity which also pervades Aristotle's psychology. *ʿAḳl* is broadly divided into the theoretical (*al-naẓarī*) and the practical intellect (*al-ʿamalī*); the former apprehends the quiddities or universals, while the latter deliberates about the future actions and through the appetitive faculty moves the body to the attainment of the good.

The development of the theoretical intellect in man is the most widely and richly discussed subject of the doctrine. In a brief and rather obscure passage (*De anima*, iii, 5) Aristotle had said that the potential intellect in man is actualized by an eternally actual intellect (an application of the general Aristotelian principle that for the realization of a potentiality the agency of something already actual is necessary); the latter acts upon it as light acts upon our faculty of sight or art on its material. The disparity between the two analogies obscures Aristotle's view of the relationship between the passive and active intellects, but it was Alexander's interpretation which provided the basis for the Arabs' discussions. According to Alexander (op. cit.) our intellect is initially a pure potentiality which is actualized by the active intellect which is God; when our actualized intellect is not operating, it is *intellectus in habitu*, which in actual operation becomes *intellectus in actu*. Most of the succeeding commentators, especially Themistius and (pseudo-)Philoponus (Stephanus), reject Alexander's equation of the active intellect with God and declare it to be a part of the human soul. According to Muslim philosophers, the active intellect (*ʿaḳl faʿʿāl*) is the lowest of the separate intelligences, which gives individual forms to material objects and universal forms to the human intellect—hence its name: *wāhib al-ṣuwar* (*dator formarum* of the later scholastics). According to al-Fārābī (op. cit.) the first stage of actualization consists of the abstraction of forms from matter by the "light" of the active intelligence: the second stage is reached when the thus actualized intellect (*ʿaḳl bi 'l-fiʿl* = *intellectus in effectu*) reflects upon itself and attains to a knowledge of the categories and becomes *ʿaḳl mustafād* (*intellectus acquisitus* or *adeptus*). According to Ibn Sīnā (*al-S̲h̲ifāʾ*, *De anima*) the potential intellect (*ʿaḳl bi 'l-ḳuwwa*, or *ʿaḳl hayūlānī* = *intellectus potentialis* or *materialis*) reaches the first stage of its actualization when it acquires the axiomatic truths (this is called *ʿaḳl bi 'l-malaka* = *intellectus in habitu*), the second stage (called *ʿaḳl bi 'l-fiʿl* = *intellectus in actu*) when it acquires the secondary intelligibles from the primary intelligibles or axioms, the final stage (*ʿaḳl mustafād* = *intellectus acquisitus*) when it actually contemplates these intelligibles and becomes similar to the active intellect. Ibn Sīnā, inspired by Neo-platonism, affirms that the universal cannot be acquired by abstraction from the particulars, but by direct intuition from the active intelligence. The final stage of human bliss comes when the human intellect becomes one with the active intellect, which happens, according to al-Fārābī and Ibn Sīnā, only after death, although Ibn Rus̲h̲d allows such a union during earthly life.

One of the chief difficulties of this whole Greco-Arabic doctrine is the individuality of intellect which they affirm to be incorporeal and therefore, according to their general principle of individuation by matter, universal. Although its individuality is recognized, seeing that the subject of thought is the individual "I", the basic principle of their theory of knowledge, viz. that of the identity of subject and object (a principle laid down by Aristotle in order to ensure the objectivity of knowledge, but rejected by Ibn Sīnā), prevented the formulation of the individual ego. This difficulty culminated in Ibn Rus̲h̲d (*De anima*), who declared the intellect to be one for all humanity, while recognizing that his theory did not do justice to the individuality of the act of thought.

(4) The Muslim philosophers recognized a hierarchy of separate intelligences (*ʿuḳūl mufāriḳa*), each lower one emanating from the higher. These incorporeal beings, usually ten in number and endowed with life, intuitive thought and bliss in varying degrees, create and govern their respective spheres which themselves are regarded as being possessed of souls. Like the Greco-Christian thinkers (e.g. (pseudo-)Philoponus, *De anima* (Hayduck), 527), the Muslims identified the separate intelligences with certain angels, the lowest of these, the active intellect, called Gabriel, being the ruling *ʿaḳl* of the sublunar sphere.

ʿAḲLIYYĀT, (A.), technical term in *ʿilm al-kalām* (scholastic theology). Its use is common (see the commentators on al-Taftazānī, al-Bad̲j̲ūrī etc.), as expressing a certain concept, and to denote a genus of theological dissertations, which go back at least to the 6th/12th century with Fak̲h̲r al-Dīn al-Rāzī, and are clearly stated in the 8th/14th century by al-Īd̲j̲ī, al-Taftazānī and al-D̲j̲urd̲j̲ānī. The term refers to the earlier expression *al-ʿulūm al-ʿaḳliyya*, derived from *falsafa*, signifying the rational (and natural) knowledge which the reason (*ʿaḳl*) can acquire by itself. Al-G̲h̲azzālī uses this phrase freely (cf. *Iḥyāʾ*, iii) and opposes it to *al-ʿulūm*

al-sharʿiyya wa ʾl-dīniyya (revealed and religious knowledge). According to Muʿtazilite tradition, and Saʿadya al-Fayyūmī, *ʿakliyyāt* denotes that which is accessible to the reason and especially, on the ethical level, the natural values of law and morals. Cf. the Muʿtazilite MS *al-Madjmūʿ fi'l-Muḥīṭ* (abridged from the Muḥīṭ of the *Ḳāḍī* ʿAbd al-Djabbār, end of the 10th century) by Ibn Mattawayh (Berlin, MS Glaser 526; information supplied by G. Vajda).

In classical *kalām*, this distinction operates also within the "religious sciences". Traces of it are found from the time of the first Muʿtazilite disputation, when *ʿilm dīnī* is sometimes subdivided into *ʿilm ʿaḳlī* and *ʿilm sharʿī*. In later works (Ashʿarī and Ḥanafī-Māturīdī schools), *ʿaḳliyyāt* denotes the aggregate of subjects in *kalām* (i.e. "religious science") which are amenable to reason; that is to say subjects the fundamentals of which, even where they are provided by the *sharʿ*, can be "proved" by "apodictic arguments" (*ḳaṭīʿ*). These are contrasted with the subjects called *samʿiyyāt, ex auditu*, the fundamentals of which derive only from Ḳurʾānic or traditional texts (*ḥadīth, idjmāʿ*). In this latter category, reason only intervenes to resolve arguments of expediency. Two kinds of problems are considered as *ʿaḳliyyāt*: (1) the preliminary subjects of *kalām*, which deal with "essentials and accidents", subjects which are in the strict sense "rational", and which assemble the products of logic, natural philosophy, and ontology; (2) *ilāhiyyāt*, which deal with (a) the existence of God (*wudjūd Allāh*), and his attributes (*ṣifāt*), with the exception of the three attributes of Sight, Hearing, and Speech, and of the "vision of God" (*ruʾyat Allāh*), which are considered as *samʿiyyāt*; and (b) the "acts of God" (*afʿāluhū taʿālā*). The *ilāhiyyāt* must always have a scriptural basis, but a basis which reason, for its part, can prove by apodictic arguments. The other subjects, such as prophecy, eschatology, the "statutes and the names", the "command and prohibition" (*imāma*), are *samʿiyyāt*. The great classic of al-Djurdjānī, the *Sharḥ al-Mawāḳif* (8th/14th century) for example, has six principal sections; five of these treat of *ʿaḳliyyāt*, and one only, the final section, comprises all the subjects called *samʿiyyāt*. (L. Gardet)

AL-AḲRAʿ B. **ḤĀBIS** B. ʿIḲĀL B. MUḤAMMAD B. SUFYĀN B. MUDJĀSHIʿ B. DĀRIM, Tamīmite warrior. *Al-Aḳraʿ* is an epithet ("bald"); his proper name (Firās ? Ḍull ?) is disputed. He is said to have been the last judge in the *djāhiliyya* at ʿUkāẓ, having inherited this office (which was a privilege of Tamīm) from his ancestors; he performed this duty until the rise of Islam, giving his judgments in *sadjʿ* (al-Djāḥiẓ, *Bayān*, i, 236). He is said also to have been the first to prohibit games of chance (*ḳimār*), but was accused of partiality in the controversy between Badjīla and Kalb. He took part, and was captured, in the battle of Zubāla (or Salmān, according to al-Balādhurī and Yāḳūt) and was freed by Bisṭām b. Ḳays. Another exploit of al-Aḳraʿ was the raid on Nadjrān after the battle of al-Kulāb al-thānī (see *al-Naḳāʾiḍ*, 46, 448; Ibn Ḥabīb's statement (*Muḥabbar* 247) that he took part in al-Kulāb al-awwal is due to a confusion with his ancestor Sufyān: see *Aghānī*, xi, 61). Ibn Ḥabīb also states that he was one of the *djarrārūn*, who succeeded in uniting a whole branch of his tribe, the Banū Ḥanẓala, under his banner. According to Ibn Ḳutayba (*al-Maʿārif*, 194) and Ibn al-Kalbī (quoted in the *Iṣāba*) he was a Zoroastrian (*madjūsī*); this is of importance for the estimation of Persian influence on some sections of Tamīm.

Nothing is known of his attitude towards Muḥammad up to the time when he joined the Prophet in al-Suḳya during the expedition to Mecca in 8/630. He took part in the conquest of Mecca and was one of *al-muʾallafa ḳulūbuhum* who were presented with gifts, which gave occasion to a famous verse of ʿAbbās b. Mirdās. He took part also in the battle of Ḥunayn and refused to return his booty, in spite of the Prophet's request. (For Muḥammad's somewhat negative opinion of him see also Ibn Hishām, iv, 139.) He participated later in the deputation of Tamīm to the Prophet, the traditional account stressing his arrogant conduct; nevertheless, he was appointed to collect the *ṣadaḳāt* of part of the Banū Ḥanẓala (*al-Ansāb*, x, 970ʳ). Together with other chiefs of Tamīm, he interceded for the captives of the Banu ʾl-ʿAnbar, and was a witness to a letter despatched by the Prophet to Nadjrān.

During the *ridda*, according to Sayf (al-Ṭabarī, i, 1920), al-Aḳraʿ and al-Zibriḳān proposed to Abū Bakr to guarantee the allegiance of Tamīm against the grant of the *kharādj* of Baḥrayn, and it was only ʿUmar who prevented Abū Bakr from accepting the proposal. In view of the situation of Tamīm at this period, this tradition does not seem trustworthy, but it may reflect ʿUmar's attitude towards al-Aḳraʿ (cf. *Bayān*, i, 253, and *ʿUyūn al-Akhbār* (Cairo), i, 85). Sayf relates also that he took part in the battle of the *ridda* alongside Khālid b. al-Walīd, and was in the vanguard at the battles of Dūmat al-Djandal and al-Anbār. His name is last mentioned in 32/652-3, when he was sent by al-Aḥnaf b. Ḳays to subdue Djūzdjān; he must have been a very old man at that time. Al-Balādhurī mentions that his descendants lived in Khurāsān.

ʿAḲRAB (A.), scorpion. This branch of the *arachnida*, which is met with as far north as lat. 45°, includes, in Asia and Africa, some species whose sting produces effects of a more or less serious nature, and sometimes even death. For this reason the scorpion has always haunted the imagination of oriental peoples; it has found a place among the stars (a constellation and the 8th sign of the Zodiac are named after it), and has played some part in the magic and the interpretation of dreams. As a protection against its sting, magic formulas and, later, verses of the Ḳurʾān, were used, engraved on rings and other talismans; according to the Traditions, Muḥammad saw no objection to this practice. The observations of Arab naturalists, who claimed that the scorpion escaped from pain and intense heat by committing suicide, and that the female carried its young on her back and ultimately perished in this way, have been confirmed in modern times.

The behaviour of the scorpion when confronted by human beings, and the effect of its sting on different victims, were noted at an early period; different species were identified; but above all, efforts were made to discover a remedy against its sting. The best method, apart from sucking the venom from the wound, was to cut the animal open and place it on the affected part. The scorpion played an important part also in Arab medicine; its ashes were an effective remedy against calculus; its roasted flesh would cure the eye complaint known as *rīḥ al-sabal*. Scorpion oil (*duhn al-ʿaḳārib*), prepared in various ways, was considered to possess particularly curative powers; it was used in the treatment of malignant sores, sciatica and pains in the back, orchitis, and falling hair. In addition, cases are quoted in which hemiplegia and fever were cured by a scorpion sting.

On the use of scorpions in war see al-Djāḥiẓ, *Ḥayawān*², v, 358; Elliot and Dowson, *History of India*, v, 550-1. In Arabic literature, the name "scorpion" occurs quite frequently, and always typifies treacherous hostility (*Ḥamāsa*, ed. Freytag, 105, verse 1; 156, verse 2; *Hudsailian poems*, no. 21, verse 24; *Mufaḍḍaliyyāt*, ed. Thorbecke, no. 19, verse 12; Nābigha, ed. Ahlwardt, no. 1, verse 4), or mockery (ʿUrwa, no. 15, verse 2), or calumny (ʿUrwa, no. 5, verse 6; Farazdaḳ, *Dīwān*, no. 61, verse 3), and similarly in proverbs (Freytag, *Proverbia*, no. 902). The three coldest days of winter (the new moons of November, December and January) were, on account of their "biting" cold, called "the three scorpions" (*Calendrier de Cordoue*, 10).

ʿAḲRABĀʾ is the name of two localities:

1. A place on the frontier of Yamāma, famous for the bloody battle in which Musaylima and the Banū Ḥanīfa were defeated by Khālid. In its neighbourhood was a grove (*ḥadīḳa*), surrounded by a wall and, before this battle, known by the name of "Raḥmān's garden"; later on it was called "garden of death".

Bibliography: Ṭabarī, i, 1937-1940; Balādhurī (de Goeje), 88; Yāḳūt, *Muʿdjam* ii, 226; iii, 694.

2. A place of residence of the Ghassānid princes in Djawlān; it is probably identical with the present ʿAḳrabā in the province of Djēdūr.

Bibliography: Yāḳūt, iii, 695; Nöldeke, in *ZDMG*, xxix, 430; cf. in *ZDPV*, xii, the map of the Djabal Ḥawrān A B 3. (F. Buhl)

AḲRĀBĀDHĪN, or Ḳarābādhīn from Syriac *grāfādhīn*, reproducing Greek γραφίδιον, "small treatise", was used by the Arabs as a title of treatises on the composition of drugs, or pharmacopoeias, while the simples which went into the composition were designed by the term *al-adwiya al-mufrada* [*q.v.*].

The practice of pharmacology. In the hospitals pharmacological instruction very early made an important part of the medical training. That the big hospitals had a pharmacist on the staff we can infer e.g. from the *al-Ṣaydala fi ʾl-Ṭibb* of al-Bīrūnī. The rapid increase in the *materia medica*, not only of Greek but also of Iranian and Indian origin certainly called for a special body of men and for the separation of the pha[rmaceut]ica from the medical profession. In ordinary outside practice the doctor may have prescribed and compounded his own mixtures (cf. C. Elgood, *A medical history of Persia and the Eastern caliphate*, Cambridge 1951, 272 f.). As a rule drugs were bought separately from the druggist [cf. al-ʿaṭṭār] and then compounded. The *muḥtasib* had to give heed to the various ways in which drugs were adulterated (cf. Ibn al-Ukhuwwa, *Maʿālim al-Ḳurba* (Levy), ch. 25). The practice of preparing substitutes for certain simple drugs is attested by the philosopher al-Kindī who wrote a treatise containing recipes for the preparation of substitutes for rare drugs (*Kīmiyāʾ al-ʿIṭr wa ʾl-Taṣʿīdāt*, (K. Garbers), Leipzig 1948).

Pharmacological literature. Galen's *De medicamentorum compositione secundum locos et genera* had been translated into Arabic, under the title *Kitāb Tarkīb al-Adwiya*, by Ḥubaysh from the Syriac of Ḥunayn b. Isḥāḳ (cf. G. Bergsträsser, *Ḥunain ibn Isḥāq über die syrischen und arabischen Galenübersetzungen*, Leipzig 1925, 23 f.). We are told that surgeons, before they could practise, were obliged to make themselves masters of this work (cf. Ibn al-Ukhuwwa, ch. 45).

The first pharmacopoeia to receive universal acceptance throughout the caliphate was written by the Christian physician Sābūr b. Sahl (d. 255/869), of the staff of the hospital of Djunday Sābūr. According to Ibn al-Nadīm (*Fihrist*, 297) it contained 22 chapters, according to Ibn Abī Uṣaybiʿa (*ʿUyūn al-Anbāʾ*, i, 161) 17 chapters. It was in common use until the publication of the *Aḳrābādhīn* of Amīn al-Dawla Hibat Allāh b. Saʿīd b. al-Tilmīdh (d. 560/1165). Ibn al-Tilmīdh was a court physician to al-Muḳtafī and to his successor al-Mustandjid and attached to the ʿAḍudī hospital in Baghdād. Besides the *Aḳrābādhīn* in 20 chapters he wrote a compendium (*al-Mūdjaz al-Bīmāristānī*) for use in ordinary hospitals (Ibn Abī Uṣaybiʿa, i, 276). Manuscripts of these works or of parts of them have come down to us (Brockelmann, I, 642 and S I, 888), as have also manuscripts of the *Aḳrābādhīn* of the famous physician and philosopher Abū Bakr Muḥ. b. Zakariyyāʾ al-Rāzī (Brockelmann, I, 269). Of the pharmacopoeias written in the East, the *Aḳrābādhīn* of Badr al-Dīn Muḥammad b. Bahrām al-Ḳalānisī, who wrote in the year 590/1194, is also worth mentioning. In this work, of which several manuscripts have come down to us, the author quoted the *Ḥāwī* and the *Ṭibb al-Manṣūrī* of al-Rāzī, the *Ḳānūn* of Avicenna and other works (Ibn Abī Uṣaybiʿa, ii, 31). Of the great medical compilation written by Nadjm al-Dīn Maḥmūd b. Iyās al-Shīrāzī (d. 730/1330), the 5th part, containing a treatise on compound drugs, was edited by F. F. Guigues (thesis, Paris 1902).

In Egypt the Jewish physician Mūsā b. al-ʿĀzār (Moses b. Eleazar) wrote an *Aḳrābādhīn* for the Fatimid caliph al-Muʿizz (Ibn Abī Uṣaybiʿa, ii, 86). In the hospitals of Egypt, Syria and ʿIrāḳ the *al-Dustūr al-Bīmāristānī* of Abu ʾl-Faḍl b. Abi ʾl-Bayān al-Isrāʾīlī (publ. by P. Sbath in *BIE*, 1933, 13-78) was in common use until it was replaced by the *Minhādj al-Dukkān* of Ibn al-ʿAṭṭār al-Isrāʾīlī which was published in Kairo in 658/1260 (Brockelmann, I, 648).

In Muslim Spain the study of the text of Dioscurides seems to have inspired an exclusive confidence in the simple drugs. We are informed by Ibn Abī Uṣaybiʿa (ii, 49) that the famous physician Ibn

Wāfid (d. after 460/1068) very seldom prescribed a compound drug. Like his contemporary ʿAbd Allāh b. ʿAbd al-ʿAzīz al-Bakrī, who wrote an inventory of the plants and trees of al-Andalus (Ibn Abī Uṣaybiʿa, ii, 52), Ibn Wāfid seems to have been an enthusiastic adherent of the Dioscoridean tradition in medicine. This is true also of al-Ghāfiḳī, the most important pharmacologist of Muslim Spain. In the Latin tradition the *Grabadin* of Mesue Junior (according to Leo Africanus this work was written by a certain Māsawayh al-Mārindī, who died in Baghdād in 1015, and translated into Latin by a Sicilian Jew) was for centuries the recognized authority on pharmacy throughout Europe and became the basis of later official pharmacopoeias.

For the medical principles underlying the composition and administration of drugs see ṬIBB.

(B. LEWIN)

ʿAḲRABĪ (plural: ʿAḳārib), a Soutb Arabian tribe in the neighbourhood of Aden. Their territory, stretching on the coast line from Biʾr Aḥmad to Raʾs ʿImrān, is very small (a few square miles only). It is crossed by the lower part of the river of Laḥidj, which here is nearly always dry; as rain is also lacking, the soil is barren and yields but little fruit. The chief town is Biʾr Aḥmad, with a few hundred inhabitants and the castle of the sultan. The ʿAḳārib, according to the Rasūlid al-Ashraf, *Turfat al-Aṣḥāb* (Zetterstéen), 56, 57, belonged to the Kuḍāʿa (text obscure; according to 56 to the branch of Banū Mādjid, according to 57 to that of Khawlān). The identification by A. Sprenger, *Die alte Geogr. Arabiens*, 80, with the Agraei of Pliny, is very doubtful. Their chief, Mahdī, threw off the allegiance of Laḥidj and became independent about 1770. Ḥaydara b. Mahdī, a descendant of the former, signed a treaty of friendship with the British in 1839, ʿAbd Allāh b. Ḥaydara various treaties in 1857, 1863, 1869, and the treaty of protectorate in 1888. (The animosity always latent between them and the ʿAbdalī led to open war as late as 1887, when the latter besieged Biʾr Ahmad; peace was restored by British intervention.)

AKRĀD [see KURD].

ʿAKS [see BALĀGHA].

AḲSARĀ [see AḲ SARĀY].

AKTHAM B. **ṢAYFĪ** B. RIYĀḤ B. AL-ḤĀRITH B. MUKHĀSHIN, ABŪ ḤAYDA (or Abu 'l-Ḥaffād, *Ansāb*; the verse quoted there is, however, attributed in *K. al-Muʿammarīn*, 92, to Rabīʿa b. ʿUzayy, also of Usayyid) of the clan of Usayyid, a branch of the tribe of Tamīm, was one of the judges of the *djāhiliyya*. The biography of Aktham consists mostly of legendary stories. Numerous traditions tell of missions by kings and chiefs to ask advice from him. The utterances of Aktham contain wise sayings about life, friendship, behaviour, virtue, women, etc. His personality as reflected in these sayings may be compared with that of Luḳmān, to whom some of the wise sayings attributed to Aktham are actually attributed in other traditions.

Aktham is famous as one of the *muʿammarīn*. Muslim tradition tries to bring him into relation with the person of the Prophet and stresses that Aktham approved of Islam; he is even said to have, spurred on his people to embrace Islam, and to have died as a martyr on his way to the Prophet, but these traditions are certainly spurious.

Aktham is said to have had descendants in al-Kūfa, particularly the *ḳāḍī* Yaḥyā b. Aktham.

(M. J. KISTER)

AL (ar.), the definite article, see TAʿRĪF.

ĀL, the clan, a genealogical group between the family (*ahl*, *ʿāʾila*, [*q.v.*]) and the tribe (*ḥayy*, *ḳabīla*, [*q.v.*]), synonym of *ʿashīra* [*q.v.*]. In this sense, the word occurs in the title of sūra iii, *sūrat āl ʿImrān*. The *āl* of the Prophet are the descendants of Hāshim and al-Muṭṭalib; when the Shīʿa restricted this concept to his nearest relatives and descendants [see AHL AL-BAYT], the Sunnīs enlarged it so as to include all his followers (cf. Lane, *Lexicon*, s.v.). Later, the term came to mean the dynasty of a ruler, e.g. *āl ʿUthmān*, the Ottoman dynasty, *āl Bū Saʿīd*, the dynasty of the rulers of ʿUmān and Zanzibār, *āl Fayṣal āl Suʿūd*, the official title of the Saudi Arabian dynasty. [ED.]

ĀL, demon who attacks women in childbed, a personification of puerperal fever; cf. *ZDMG*, 1882, 85; Goldziher, *Abh. zur arab. Philologie*, i, 116; H. A. Winkler, *Salomo und die Karina*, 104-7.

(A. HAFFNER *)

ĀL [see SARĀB].

ĀLA "instrument", "utensil" (synonym of *adāt* plural *adawāt*).

i. In grammatical terminology, *āla* and *adāt* are found in expressions like *ālat al-taʿrīf* "instrument of determination" (= the article *al*), *ālat al-tashbīh* "instrument of comparison" (= the particle *ka*) etc. The term *āla* (like *adāt*) does not seem to have been used by the Arab grammarians of the 3rd/9th century; in works such as that of Ibn Fāris, the word *adāt* is only met with once. Towards the end of the 4th/10th century the term *ḥarf* ("particle") may be regarded as signifying also the grammatical "instruments" later called *āla* and *adāt*. This usage seems to imply a distinction between the idea of "casual action" (connected with *ḥarf*) and the idea of "syntactic function" (represented by *āla* and *adāt*), leading to the expression of "determination", "finality", "comparison".

Bibliography: Ibn Fāris, *Ṣāḥibī*, 102; al-Tahānawī, *Kashshāf Iṣṭilāḥāt al-Funūn*, ed. Sprenger, Calcutta 1862, art. *adāt* and *āla*. (R. BLACHÈRE)

ii. In the classification of sciences *ālāt* is the name of such attainments as are acquired not for their own sake (as an end in itself), but "as a means to something else", as e.g. philological sciences and logic, as ancilliary studies of the religious ones: *al-ʿulūm al-āliyya* in contrast to *al-ʿulūm al-sharʿiyya*. Cf. the expression *ālāt al-munādama*, i.e. knowledge and accomplishments which are useful in social intercourse. Consequently that what is called *āla* differs from what is called *adab* [*q.v.*] only in so far as the former takes into account the attainments in their relation to *ʿilm*; cf. also *ʿUyūn al-Akhbār* (Brockelmann), i, 4. The appellation *ālāt* corresponds exactly to the expression ὄργανα in the classification of the philological sciences by Tyrannion of Amisus;

see H. Usener, *Philologie und Geschichtswissenschaft* Bonn 1882, 23.

Bibliography: Ghazālī, *Iḥyā, Kitāb al-ʿIlm*, ch. ii (*Itḥāf al-Sāda*, i, 149); Snouck Hurgronje, *Mekka*, ii, 206; Goldziher, in *Steinschneider-Festschrift*, 114 (with further references). (I. GOLDZIHER)

iii. Logic is called *āla*, following the peripatetic view according to which it is an instrument (ὄργανον), not a part, of philosophy (cf. Goldziher, in the bibliography of ii, above; S. van den Bergh, *Averroes' Epitome d. Metaphysik*, 148; al-Bīrūnī, introd. to *al-Ṣaydana* (ed. M. Meyerhof, in *Quellen u. Stud. z. Gesch. d. Naturw. u. Med.*, 1932); and MANṬIK).

For other meanings of *āla* see ḤIYAL, NAWBA.

ALA DAGH (T.), "mountain of various colours", name of various mountains. (1) In N.W. Anatolia, near Bolu. (2) In the Taurus range. (3) In E. Anatolia, near the springs of the Murād Ṣu, N. E. from Lake Wān; it served as summer headquarters for the Ilkhānids. (4) In N. E. Persia, S. of the Atrek. (5) In Central Asia, between Dzungaria and the basin of Lake Balkash. (6) Between the Issik Köl and Alma Ata. (7) In Siberia (in Russian Kuznets Mountains), N. of the Altai Mountains. The local pronunciation for the last three is Ala Taw.

ALA SHEHIR, "the motley-coloured town", town in Anatolia at the foot of the Boz Dagh (ancient Tmolus), near the Kuzu Čay. In antiquity and in Byzantine times the town, called Philadelphia after its founder, Attalus II Philadelphus, played an important role (see Pauly-Wissowa, s.v.). It was taken, together with the other towns of Phrygia, by Sulaymān b. Ḳutlumush in 1075 or 1076, but was recaptured by the Byzantines in 1098 and served as an important base in their operations against the Saldjūḳids. According to Ibn Bībī (Houtsma), 37, the battle between the emperor Theodore Lascaris and the Saldjūḳid Kay Khusraw I, in which the latter lost his life (607/1210), was fought near the town (here called for the first time Ala Shehir), but this is not borne out by the Byzantine historians. The town was besieged by the Germiyan-oghlu Yaʿḳūb I in 1303, but was relieved by the Catalan mercenaries; as a result of repeated sieges by the Germiyan-oghlus (1307 and 1324), the town was reduced to the payment of tribute. Subsequently, the tribute was paid to the Aydin-oghlus (though the statement of the *Düstūr-nāme-yi Enweri*, that it was actually captured by the Aydin-oghlu Umur Beg in 1335, does not seem to correspond to reality). Ala Shehir was captured, the last of the free Greek cities in Asia Minor, by Bāyezīd I in 794/1391, but passed in 1402 into the possession of Tīmūr, and subsequently into that of Djunayd Beg, until it came finally under Ottoman dominion in the reign of Murād II. In Ottoman times the town did not preserve its former importance and was only the capital of a *ḳaḍā* (of the *wilāyet* of Aydin, later of Manisa). Between 1919-23 it was occupied by the Greeks. In 1890 the town had 17,000 Muslim, 4000 Greek inhabitants (Cuinet); in 1945 the town counted 8,883 inhabitants (all Muslims), the *ḳaḍā* (1,115 sq. km.) 45,792.

ʿALĀʾ AL-DAWLA [see KĀKAWAYHIDS].

ʿALĀʾ AL-DAWLA AL-SIMNĀNĪ, RUKN AL-DĪN ABU 'L-MAKĀRIM AḤMAD B. SHARAF AL-DĪN MUḤ. B. AḤMAD AL-BIYĀBĀNAKĪ, important mystic, born in Dhu 'l-Ḥidjdja 659/Nov. 1261 in Simnān (Khurāsān) of an illustrious and rich family [see SIMNĀNĪ]. When he was fifteen, he left Simnān and entered government service. Under the Īlkhān Arghūn his father became governor of Baghdād and the whole of ʿIrāḳ, his paternal uncle vizier, and his maternal uncle *ḳāḍi 'l-mamālik*. In the course of a campaign in 683/1284 against Arghūn's uncle, Simnānī experienced near Ḳazwīn a vision of the other world, and though he remained until mid-Shaʿbān 685/beg. Oct. 1286 in the service of the Īlkhān, he was then allowed to go on leave to Simnān, where he found his way, after examining his conscience, to Sunnī Orthodoxy and Ṣūfism. He performed spiritual exercises with the aid of Abū Ṭālib al-Makkī's *Ḳūt al-Ḳulūb*, until he made the acquaintance of *Akhī* Sharaf al-Dīn Saʿd Allāh, by whom he was taught a particular form of «remembering God» (*dhikr*), viz. throwing the head swiftly hither and thither; this resulted after only one night in powerful manifestations of light. Simnānī decided to join as a novice Nūr al-Dīn ʿAbd al-Raḥmān al-Kasirḳī al-Isfarāʾinī, by whose command Saʿd Allāh had visited him; so in Muḥarram 686/Febr.-March 1287, instead of returning to Tabrīz, he travelled in ṣūfī dress to Baghdād, where Kasirḳī lived. He was, however, stopped in Hamadān by Arghūn's men and was carried to Sharūyāz, where Arghūn was founding the city of Sulṭāniyya (later completed by Uldjaytu). He succeeded, as a result of successful disputations with Buddhist monks (*bakhshī* < *bhikshu*), who played a great role at the court, in appeasing the Īlkhān's anger, so that he was asked to remain at court at least as a Ṣūfī. After staying, rather unwillingly, for eighty days, Simnānī escaped to Simnān, which he reached in Ramaḍān 686/Oct. 1287. Arghūn, having ascertained that he had not gone to Baghdād, left him alone. Saʿd Allāh, who had in the meantime visited Baghdād, brought for Simnānī the *khirḳa* of Kasirḳī, in whose name he entered the *khalwa* in Simnān, in Shawwāl 687/Nov.-Dec. 1288. After the dismissal of his father and the execution of his uncle (for the date see SIMNĀNĪ; ʿAlāʾ al-Dawla's own statements vacillate), he succeeded in reaching Baghdād, where for the first time he met his *shaykh* Kasirḳī personally (Ramaḍān 688/Sept. 1289). Simnānī entered the *khalwa* in the Masdjid al-Khalīfa and undertook, in obedience to an order by Kasirḳī, the pilgrimage to Mecca and Medina. He returned to Baghdād in Muḥarram 689/Jan. 1290, entered the *khalwa* for the second time (in the Shūnīziyya), and finally returned to Simnān, where he began to instruct Ṣūfīs in the Khānḳāh-i Sakkākī. After a life of extensive educational and

literary activity he died in his monastery, Ṣūfiyābād-i Khudādād, in Simnān, on 22 Radjab 736/6 March 1336.

Simnānī was a Sunnite; he condemned the Shīʿite tendencies of Üldjaytu and praised the amīr Čūbān, who did not share them. In spite, however, of his zealous advocacy of war against unbelievers, he rejected the idea of a revolt against Shīʿite oppression and advised, with Ḥasan al-Baṣrī, to show patience under oppression, though not to withhold exhortation or prayer for improvement. In the Shīʿa he appreciated the love of the Prophet's family, but deprecated their hatred of ʿĀʾisha. He adapted the Shīʿite belief in the dissappearance of the twelfth Imām to his doctrine of the *abdāl*, who according to him, was raised after his disappearance to the grade of *ḳuṭb* and then, after 19 years, died. By his ṣūfī affiliation he was a Kubrawī (Simnāni—Kasirḳī, d. 717/1317 —Aḥmad al-Djūrafānī, (Gūrpānī), d. 669/1270—Raḍī al-Dīn ʿAlī al-Lālā, d. 642/1244—Nadjm al-Dīn al-Kubrā, d. 618/1221), but he also venerated, in addition to this line, other shaykhs, and more especially Abū Ḥafṣ ʿUmar al-Suhrawardī (d. 632/1234). He also took as a model the Kubrawī Madjd al-Dīn al-Baghdādī (d. 616/1219,) whose name he sometimes inserts between Lālā and Kubrā. He was impressed by Djalāl al-Dīn al-Rūmī, but advised caution. He admired also Ghazālī, but blamed in him the excess of theory over experience and the abundance, in some of his writings, of philosophical (Avicennian) ideas. Simnānī's main opponent was Ibn ʿArabī, against whose pantheistic system he kept up continuous polemics, not only in his books, but also in his correspondence with ʿAbd al-Razzāḳ al-Kāshānī (d. 730/1330). He accused Ibn ʿArabī of idolizing a verb (*fiʿl*), by his identification of Being (*wudjūd*) and God; he himself considers Being as an attribute (*ṣifa*) or accident, which, though it is eternally inherent in God, is distinct from His essence (*dhāt*). For this reason the last degree of the mystic is not *tawḥīd*, but *ʿubūdiyya*. The only possible share of man in God is the grace of inner purity (*ṣafāʾ*), by which he is enabled to reflect the higher things. To become a mirror in this sense is the aim of manhood and mysticism. Simnānī's doctrine was later elaborated by the Čishtī Aḥmad-i Sirhindī ([*q.v.*]; d. 1035/1626) who opposed this renovated doctrine, *shuhūdiyya*, to the *wudjūdiyya* of Ibn ʿArabī.

Simnānī shared with Kubrā a strongly mediumistic nature and a preference and capability for visionary experience. He had a particularly refined feeling for spiritual vibrations in his environment; out of a deep sense of the living presence of Khaḍir, he insisted on saying "the Lord" Khaḍir; and at places where he attempted to contact the spirits of the great dead (*tawadjdjuh*), he registered the slightest oscillations of experience. Like most of the Kubrawīs, in mystical training he accepted the so-called "eight conditions of Djunayd" (see Meier, *Fawāʾiḥ*, index), about which we have different statements by him. In addition to the particular *dhikr* of Kasirḳī (cf. above) he had another, viz. the recital of the formula *lā ilāha illa'llāh*, in four beats; the *lā* being drawn as it were from the navel, the *ilāha* sunk into the right side of the breast, the *illā* raised from there, and the *Allāh* thrust into the left side of the breast, the heart (cf. for the recital of this *dhikr* in two beats Nadjm al-Dīn al-Dāya, *Mirṣād al-ʿIbād*, Teheran 1312/52, 151, and for another practice, ʿAzīz-i Nasafī, in *WZKM*, 1953, 165). Simnānī also practised listening to music (*samāʿ*) and fed in his monastery passing travellers. The greater part of his possessions he left as *waḳf* for the Ṣūfīs of his persuasion; he disagreed with the view that the Ṣūfī must have no material possessions, though he demanded that each individual should give away all he had. He denounced begging and in general insisted, in the interest of humanity, upon the most intensive cultivation of the soil, another feature which connects him with Kubrā and his disciple, Sayf al-Dīn al-Bākharzī.

Simnānī aspired to a great number of disciples, hoping that there would be amongst them at least one chosen one. His most important, and for a time most beloved, disciple seems to have been ʿAlī-i Dūstī, who became teacher of ʿAlī-i Hamadānī. Names of other disciples are to be found in Iḳbāl-i Sīstānī's collections of Simnānī's apophthegmata, and thence in Djāmī, *Nafaḥāt al-Uns*, 510-24 and Ibn Ḥadjar al-ʿAsḳalānī, *al-Durar al-Kāmina*, i, 251. Some of them bore the title of *akhī*.

There exists as yet no critical bibliography of Simnānī and none of his works has been published. For the works in Persian, cf. the catalogues of MSS and for those in Arabic, Brockelmann, II, 263, S II, 281 (delete *al-Wārid al-Shārid etc.* and *Tuḥfat al-Sālikīn*). *Mashāriʿ Abwāb al-Ḳuds*, *al-ʿUrwa li-Ahl al-Khalwa* and *Ṣafwat al-ʿUrwa* belong together as different versions of the same work and can be exactly dated: the first 711/1311 (MS Shehīd ʿAlī 1378, not 1328), the second Ramaḍān 720/Oct. 1320-23 Muḥarram 721/22 Febr. 1321, and the last Djumādā II 728/April 1328-18 Dhu 'l-Ḥidjdja 728/24 Oct. 1328. Some of the surviving MSS are excellent; MS ʿAshīr I 482 of the *ʿUrwa* reproduces the autograph, Lāleli 1432 of the *Ṣafwa* is dated Ṣūfiyābād 733/1333 and was thus written in the lifetime and perhaps under the eyes of the author). The book *Faḍl al-Sharīʿa* (MS Fayḍ Allāh 2135, not 2133) should probably be called more correctly *Faḍl al-Ṭarīḳa*; it is once quoted by Simnānī himself, in accordance with the sub-title of part i, as *Tabyīn al-Maḳāmāt wa-Taʿyīn al-Daradjāt* and dates from 712/1312-3. The treatise *Mā lā budd fī 'l-Dīn* is in Persian and the treatise on Simnani's ṣūfī affiliation, also in Persian (MS Paris 159, 10) is called not *Tadhakkur*, but *Tadhkirat al-Mashāyikh*. Of great importance for Simnānī's biography and mystical teaching is the collection of his sayings, made by his disciple Iḳbāl b. Sābiḳ-i Sīstānī and preserved in several MSS under the titles of *Čihil Madjlis*, or *Malfūẓāt-i Shaykh ʿAlāʾ al-Dawla-yi Simnānī*, etc. On this is based the greater part of Djāmī, *Nafaḥāt*, 504-15.

(F. MEIER)

ʿALĀʾ AL-DĪN [see GHŪRIDS, KHWĀRIZMSHĀH, SALDJŪḲS].

ʿALĀʾ AL-DĪN BEG (commonly **ʿALĀʾ AL-DĪN PAS̲H̲A**), son of ʿOt̲h̲mān, the founder of the Ottoman state. His figure remains enigmatic, owing to the absence of reliable documents and the tendentious, and rather legendary, character of the early Ottoman chronicles—the same circumstances which are the cause of so many uncertainties in early Ottoman history. In some sources he is called Erden ʿAlī (Ibn Tag̲h̲rībirdī and Ibn Ḥad̲j̲ar), or ʿAlī, According to the historians he and Ork̲h̲an were born of the same mother, Māl K̲h̲ātūn, daughter of the *ak̲h̲ī* Edebali; according to a document of 724/1324, however, Māl K̲h̲ātūn was the daughter of a certain ʿOmar Bey—thus there seems to be some error. There are conflicting statements as to whether he was a younger, or an older, brother of Ork̲h̲an.

The historians relate that after the death of ʿOt̲h̲mān, ʿAlāʾ al-Dīn (who is said to have stayed during his father's lifetime with Edebali in Biled̲j̲ik) refused the offer made by Ork̲h̲an to assume the direction of the affairs of the state and retired to his property situated in Kotra (or Kudra) in the district of Kete, between Brusa and Mik̲h̲alič. Ḥ. Ḥüsām al-Dīn has put forward the suggestion that in reality the two brothers were rivals for the throne and that this fact was purposely distorted in the historical tradition. (Ibn Tag̲h̲rībirdī and Ibn Ḥad̲j̲ar say: "Erden ʿAlī succeeded his father".)

According to tradition ʿAlāʾ al-Dīn for some time occupied the post of vizier and commander-in-chief; in effect, in a *waḳfiyya* by him, dated 733/1333, he bears titles which befit a military position. Ḥ. Ḥüsām al-Dīn holds that ʿAlāʾ al-Dīn, while he was commander-in-chief, was never a vizier, but that his figure was conflated with that of a certain ʿAlāʾ al-Dīn Pas̲h̲a, who was in fact ʿOt̲h̲mān's and Ork̲h̲an's vizier. (He is mentioned in a *waḳfiyya* of Asporḍ̲j̲e K̲h̲ātūn, Ork̲h̲an's wife, dated 723/1323.)

The establishment of various Ottoman institutions are ascribed to ʿAlāʾ al-Dīn: the choice of the coniform cap of white felt as official costume and the organization, together with D̲j̲enderli-zāde Ḳara K̲h̲alīl, of Ottoman infantry (*yaya*). The responsibility for the introduction of an Ottoman coinage is also credited to him by late historians. [Cf. ORK̲H̲AN.]

ʿAlāʾ al-Dīn died about 1333; the various accounts concerning the circumstances of his death in late authors (such as Nis̲h̲ānd̲j̲i and Belīg̲h̲) are not worthy of credit. His tomb is in ʿOt̲h̲mān's mausoleum in Brusa.

Descendants of ʿAlāʾ al-Dīn are mentioned in the latter half of the 15th century by Nes̲h̲rī and ʿĀs̲h̲ıḳpas̲h̲a-zāde, in the 16th century in land-cadasters, in connection with *waḳfs* established by their ancestor.—ʿAlāʾ al-Dīn founded a *tekke* in the Kükürtli quarter of Brusa and two mosques in the fortress of Kaplid̲j̲a.

ʿALĀʾ AL-DĪN MUḤAMMAD B. HASAN [see ALAMŪT].

ʿALĀʾ AL-DĪN MUḤAMMAD K̲H̲ALD̲J̲Ī [see DIHLĪ, SULTANATE OF].

ĀLABA WA 'L-ḲILĀʿ, "Alava and the forts", a geographical expression used in the 2nd 3rd/8th-9th centuries by Arab chroniclers to denote that part of Christian Spain which was most exposed to the attacks of summer expeditions (*ṣāʾifa*) sent from Cordova by the Umayyad *amīrs*. The term Ālaba was used more especially to denote the northern part of the Iberian peninsula beyond the left bank of the upper valley of the Ebro. This region was bounded on the west by the territories of Bureba and Castilla la Vieja ("Old Castile" = al Ḳilāʿ), which stretched from the left bank of the Ebro, opposite the Pancorbo pass as far as the outskirts of the present town of Santander. Alava is to-day the name of a Spanish province, the capital of which is the modern town of Vitoria.

ALADDIN [see ALF LAYLA WA-LAYLA].

ALAD̲J̲A (T.; originally a diminutive of *ala* = spotted, variegated) = chintz with coloured stripes (cp. Yule and Burnell, *Hobson-Jobson*, s.v. Alleja, 8 and 756); it is also found in geographical names (see for example the next article).

ALAD̲J̲A DAG̲H̲, "mountain of various colours" a name often employed for mountains in Turkish speaking countries; it is the name e.g. (1) of a mountain S. W. of Ḳonya; (2) a mountain, constituting a spur of the Ḳara Dag̲h̲ in the S. E. part of Ḳarṣ, near which the Russians defeated the Turks on 16 Oct. 1877.

ALAD̲J̲A ḤIṢĀR, "the motley-coloured fortress", the Turkish name of the town of Krushevats, on the south side of the Western Morava. The town was the capital of Serbia under Lazar (who assembled there his army to march against the Turks, and lose his empire, at Kosovo, in 1389) and his son Stephan. It was occupied by the Turks in 1428, after the accession of George Brankovits, who made Semendria his capital. The town played a role in the Serbian wars and Muḥammad II established there a gunfoundry. Alad̲j̲a Ḥiṣār was the capital of a *sand̲j̲aḳ* in the *eyālet* of Rūm-eli [*q.v.*]. The Austrians occupied the town for a short while in 1737; a second occupation lasted from 1789 to 1791, when the town was restored to Turkey by the treaty of Sistovo. It was occupied from 1806 to 1813 by the Serbian insurgents of Ḳara George; in 1833 it was ceded to the autonomous principality of Serbia as one of the "six districts" (cf. G. Gravier, *Les frontières historiques de la Serbie*, Paris 1919, 67 ff.); the small garrison of the citadel, however, had to be starved into surrender.

ʿALĀʾIYYA [see ALANYA].

ʿALĀḲA [see NISBA].

ʿALAM, plural *aʿlām* (A), i. "signpost, flag", used in the latter sense concurrently with the Arabic *liwāʾ*, *rāya*; the Persian *band*, *dirafsh*; and the Turkish *bayraḳ* = *liwāʾ*, *sandjaḳ*: see SANDJAḲ, and compare the Latin *signa*.

It is known that when, before the advent of Islām, the Ḳuraysh waged war on another tribe, they received from the hands of Ḳuṣayy the *liwāʾ*, a piece of white cloth which Ḳuṣayy himself had attached to a lance (Caussin de Perceval, *Essai*, i, 237-8). During Muḥammad's lifetime, flags were called indifferently *liwāʾ* or *rāya*, less commonly *ʿalam*. Tradition, however, says that the flag (*ʿalam*) of the Prophet was called *ʿuḳāb*. Other traditions contrast the *rāya*, the Prophet's black flag, with his *liwāʾ*, which was white (*Kanz al-ʿUmmāl*, iv, 18, no. 346; 45, no. 995). In another tradition the proposal is made to Muḥammad that the faithful should be called to prayer by the raising of a *rāya*, but he will not consent to this method of summoning them (ibid., iv, 264, no. 5461). In yet other traditions, however, *liwāʾ* and *rāya* appear to be synonymous (ibid., v, 268, no. 5357; 269, no. 15358). The use of the *rāya* does not seem to have been confined exclusively to Muslims, since, at Badr, Ṭalḥa carried the *rāya* of the idolaters (ibid., 269, no. 5365).

Later, flags played an important part in Islām. The Umayyads adopted white, the ʿAbbāsids black, and the Shīʿites green. Representations of flags occur frequently on various objects, especially in miniatures. One of the oldest representations is that shown on a Persian lustre-ware plate, which unquestionably dates from the 10th century (*Survey*, pl. 577). For other later drawings of flags, see Kratchkowskaya in *Ars Islamica*, iv, 468-9. Compare also the Moorish flag of the 14th century preserved in Toledo cathedral (Kühnel, *Maurische Kunst*, pl. 149). Banners and standards were also used in Egypt and Syria during the Mamlūk period (see Leo A. Mayer, *Mamluk Costume*, s.v. *Banners*; Maḳrīzī, *Khiṭaṭ*, i, 23 ff.: *khizānat al-bunūd*). There may at this period have been some differentiation in the use of the various words meaning "flag".

In epigraphy, an inscription of Ḳāytbāy balances the words *sayf* and *ḳalam* with *band* and *ʿalam*, which seems to suggest that the first term denotes a military standard, the second a religious flag (see J. David-Weill, *Catalogue général du Musée arabe du Caire, Bois à épigraphes depuis l'époque mamlouke*, 57-8; Gaudefroy-Demombynes, *Ibn Faḍl Allāh, Masālik al-abṣār fī mamālik al-amṣār*, XLVD-LVI and 26). Numerous flags with religious inscriptions are preserved in museums; they usually date from the 17th or 18th century and the majority derive from the countries of the Middle East and North Africa. (Cf., among others, a Turkish flag: C. J. Lamm, *Malmö Musei Vanners*, Arsbok 1940; *En Turkish Fana*, Malmö 1940.) Some flags are still used in processions conducted by the religious orders.

For Turkish standards see ṬUGH, SANDJAḲ. For the emblem of the crescent see HILĀL, for that of the lion and the sun, SHĪR U-KHŪRSHĪD. For heraldic symbols, see SHIʿĀR, TAMGHA.

(J. DAVID-WEILL)

ii. Proper noun, see ISM.

ʿĀLAM (A., pl. *ʿālamūn*, *ʿawālim*), world.

1. The word is found as early as the Ḳurʾān, where in borrowed formulae we have references to the *rabb al-ʿālamīn* and the seven *samawāt*.

Allāh is its lord and creator who has created it for man as a sign of his omnipotence. This transitory world (*dunyā*) is of little value—"not worth the wing of a midge" is the traditional expression—in comparison with the next (*ākhira*). We are told very little about the structure of the world [cf. the article KHALḲ]; the subjects of interest, in the Ḳurʾān as well as in Tradition, are God, the spiritual world and man.

This became altered as Islam took over the inheritance of Hellenistic eclecticism and especially through the translation of Indian and Greek works on science and philosophy. The huge figures with which the Hindus operated were, it is true, ridiculed, nor were the fables of the ancient Greeks about an endless plurality of worlds beside or in succession to one another, believed nor, from the theological point of view at least, was the belief in the eternity of the world accepted; on the whole however, the picture of the world as given by Greek science was accepted. The teaching of Plato and Aristotle that there is only one universe was naturally easy to reconcile with the monotheism of Islam; cf. *Ḳurʾān*, xxi, 22: "If there were in these two worlds gods in addition to Allāh, both (heaven and earth) would perish".

On the scientific development of the cosmogonic teaching of Aristotle and Ptolemy in Islām, see the articles NUDJŪM (Astronomy and Astrology) and the article Sun, Moon and Stars in Hastings, *Encycl., of Rel. and Ethics* (by C. A. Nallino). Here we must confine ourselves to the speculations of the theologians and philosophers regarding the origin and nature of the world in relation to the existence of God and man. They are mainly based on Plato's *Timaeus* or Aristotle's Περὶ οὐρανοῦ and Book Λ of his *Metaphysics* and also on the commentaries of Simplicius and Johannes Philoponus. Of the greatest importance for the Islamic elaboration of the Greek philosophy we have the neo-Platonic "Theology of Aristotle" and to some extent the tradition of Christian dogmatics. In reference to Aristotle's work Περὶ οὐρανοῦ ("On the Universe"), it should be noted that according to Hellenistic tradition the title of the Arabic tradition is *fi 'l-Samāʾ wa 'l-ʿĀlam* ("On Heaven and the World"). August Müller (*Die griechischen Philosophen in der arabischen Überlieferung*, Halle 1873, 51) therefore suggested that the Arab translators of the Aristotelian work had added to it the Περὶ κόσμου which is three hundred years later and influenced by the Stoics. But so far no translation of this work ascribed to Aristotle has been found.

All Muslim thinkers asserted that God is the author of the world although they used different expressions for the coming into existence of the world in distinction to the existence of God: creation out of nothing, emanation (*fayḍ*) or manifestation (*tadjallī*). The image most used, whether emanation or manifestation was talked of, was that of light (*nūr*) which disseminates itself timelessly.

In general the theologian who adhered to tradition said that the reason for the world was the all-powerful will of God. Mutʿazilī thinkers

laid more emphasis on the benevolent wisdom of the Creator, who orders everything well for the good of his servants. Mystics talked a great deal about the overflow of divine love; finally the philosophers in the narrower sense, as well as a few speculative theologians, regarded the world as the product of pure thought, in itself accidental, but necessary on God's part.

The world forms a whole, a unity in plurality. Even the atomist theologians, who denied any interconnection in nature, were of the opinion that no part of the world but only the whole could be destroyed at once by an act or an omission of God.

The world is a plurality. The traditional distinctions between heaven and earth or between this world and the next continued. But Hellenistic mediatorial theories complicated this originally simple universe. From Plato came the distinction between the visible world of beings (κόσμος ὁρατός) and the spiritual intelligible world (κόσμος νοητός). Aristotle rather emphasised the distinction between our earthly world of origin and decline (*ʿālam al-kawn wa 'l-fasād*) and the world of the heavenly spheres. The world of heaven controlled by exalted spirits or souls, consisting of one element entirely, the ether, and provided from eternity with the most beautiful motion revolving in a circle, is far more perfect than the earthly world with its four elementary circles and motions of various kinds Then came the Stoics who brought God and the world together and worked out a theodicy. Finally came the Neo-Pythagoreans and Neo-Platonists, who took over a great deal from Aristotle and the Stoics, but with Plato, and much more decidedly than he, transferred the central point into the world of God and of pure spiritual existence.

This is the starting point of the cosmological speculations of the Muslim thinkers just as it was for the Gnosis and the doctrine of the Eastern Christian church. Since God is the highest being and everything in the most exalted sense, so also is He the first world. The mystics in Islam (cf. al-Djīlī, *al-Insān al-Kāmil*, ch. 1 ff. and Horten, *Das philosophische System von Schirázi*, Strassburg 1913, 36, 276 f.) in so far as they were influenced by Christian dogmatics, ultimately talked of five worlds: 1. the world of the divine being; 2. of His names; 3. of His qualities; 4. of His actions; 5. of His works. Others established mediation between God and the world by triads and tetrads. Emphasis on three qualities of God was very common: power, knowledge, and life (in speculation these were no doubt interpreted as the power of the Creator, the knowledge of the *ʿaḳl* and the life of the soul). God's spheres of activity in the world were determined according to his qualities. When for example al-Ghazālī speaks of three worlds (*ʿālam al-mulk, al-malakūt, al-djabarūt*), this looks like a triad for the spheres of the Creator's power (for Ghazālī's immediate sources see Wensinck (*Bibl.*)).

To distinguish three or four worlds the philosophers as a rule used the neo-Platonic terminology from the "Theology of Aristotle": the world of the mind (*ʿaḳl*), of the soul (*nafs*) and of nature (*ṭabīʿa*). The soul of man is there the centre of interest which, although associated with a mortal body, remains, in so far as it is intelligent, always associated with the highest world, its origin and the goal of its longing, through the mediation of the world soul and the world intelligence. From the point of view of this soul, only two worlds are as a rule mentioned: the physical and the spiritual, the lower and the upper world. If it is desired to define more closely the sphere ruled by the soul it is called the world of the heavenly spheres and its site (*ufḳ*) is transferred to the sphere of the fixed stars. The world of pure intellectual being has a superheavenly site (*al-ufḳ al-aʿlā*) and nature has its special sphere of operation in the sub-lunary world.

It is not possible here to go into the modifications of this cosmogony in the different philosophers. The main object in all cases is to indicate the different stages of being and parallel with them the stages of cognition. The world is a man on a large scale and man a little world. Now man is made up of a natural body, a conceiving soul and a pure intelligence. The sub-lunary world is therefore also called the world of sensual perception (*shahāda, ḥiss*); the world of the heavenly spheres that of allegorical conception (*wahm, takhayyul*), if we assume, e.g. with Ibn Sīna that the souls of the spheres possess a power of imagining (Ibn Rushd denies this); and the super-heavenly world that of pure thought or of intellectual observation (*ʿaḳl, naẓar* etc.).

Of the great deal that could still be said let us only emphasise one thing in conclusion, that is the optimism of the philosophers, who with the Stoics regard this beautiful world as the best possible and with Plato and Aristotle they make it last for ever. Al-Fārābī, for example ("Model-State", Arab. text, ed. Dieterici, 17), sees in the general order of the universe God's goodness and justice. According to the general philosophical view, evil and wickedness are only imperfections without real existence. Even the Ikhwān al-Ṣafāʾ, although they call the physical world a hell for fools and a purgatory for the wise, are quite aware of the amenities of this world and appreciate the splendid life of its kings. The mystics also can be optimistic: everything comes from God and returns to Him. All thus endeavour to regard the relatively better as allied to the absolutely good.

2. ʿĀlam al-Djabarūt, ʿĀlam al-Malakūt, ʿĀlam al-Mithāl. *ʿĀlam*, "world", is used here in the gnostic sense of "sphere of existence". The idea is a common one, and is derived from a dual stream of influences—Plotinian and Iranian: Ismaʿīlī traditions, the Hellenistic philosophers (*falāsifa*), notably al-Fārābī, and the ṣūfī schools. Introduced by the Ṣūfīs of the early centuries of Islam, it became one of the themes of al-Ghazzālī, and was adapted and developped by the "master of the *ishrāḳ*" and his school. Later, it was widely adopted by the ṣūfīs of the *waḥdat al-wudjūd*.

Platonist and Neoplatonist stream of influence: the world of sensual perception: *ʿālam al-mulk*, *ʿālam al-khalḳ*, is distinguished from the world of the mind or the world of ideas (*maʿānī, muthul*). The latter is the *ʿālam al-mithāl* (or *muthul*), translated by Henry Corbin as "world of archetypal images".

Oriental gnostic stream of influence: opposed to the *ʿālam al-mulk* are the worlds of the *malakūt* and

the *dj̲abarūt* (Aramaic terms); and, transcending them both, the world of the *lāhūt*.

Lāhūt (antonym of *nāsūt*, "humanity"): the incommunicable world of the divine essence—a word occurring frequently in Ḥallād̲j̲ian terminology. In general: the world of absolute divine transcendence, and therefore absolutely superior to all other "spheres of existence". For some supporters of Monist tendencies, *malākūt* and *dj̲abarūt* are, as it were, assumed by *lāhūt*; this is then the *ʿālam al-g̲h̲ayb*, the world of Mystery (uncreated).

ʿĀlam al-mulk, a term of Ḳurʾānic origin, "the world of kingship" (synonyms: *ʿālam al-k̲h̲alḳ*, *ʿālam al-s̲h̲ahāda*, the latter expression being frequently used by al-G̲h̲azzālī): it is the world of becoming, the world here below.

ʿĀlam al-malakūt, similarly of Ḳurʾānic origin, (cf. *Ḳurʾān*, vi, 75; vii, 185; xxiii, 88; xxvi, 83): "the world of Kingdom, of Sovereignty", of which the *ʿālam al-mulk* is the contingent reflection. It is the world of immutable spiritual truths (*ḥaḳāʾiḳ*), and hence of the angelic beings, to which are added the *entia* of Islamic tradition, the Preserved Table, the Pen, and the Scales (see AL-WAʿD WAʾL-WAʿĪD), and often also the Ḳurʾān. The spiritual reality (*rūḥ*) which is in man belongs to it. So too do the separated intellects, and hence the human *ʿaḳl* which partakes of them. Al-Dj̲urdj̲ānī (*Taʿrīfāt*, 246) includes the *nufūs* (souls) which are sometimes assigned to the *ʿālam al-dj̲abarūt*. Common synonyms: *ʿālam al-g̲h̲ayb*, *ʿālam al-amr*. This "world of Sovereignty" recalls the "City of the Angels" of Gregory of Nyssa.

ʿĀlam al-dj̲abarūt, a term originating in Tradition, occurring in various *ḥadīt̲h̲* (see A. J. Wensinck, *La pensée de G̲h̲azzālī*, 83 n. 3): "the world of (divine) Omnipotence". In general, the place of *barzak̲h̲*, an "intermediate" world (some texts, however, are inclined to put this last near to the *malakūt*). To it belong, according to al-G̲h̲azzālī, the impressionable and imaginative faculties of the human soul. Sometimes, however, as is pointed out by al-Dj̲urdj̲ānī, following Abū Ṭālib al-Makkī (*Taʿrīfāt*, 77), *dj̲abarūt* is the world of the divine Names and Attributes. Al-Kās̲h̲ānī assigns to it *ḳaḍāʾ* (decree of divine predestination); the Preserved Table has also been assigned to it.

The mutual inter-relation of these various "worlds". (1) The *ʿālam al-mit̲h̲āl* can coincide either with the *malakūt*, or with the *dj̲abarūt*, or with both together. It is in fact stated (al-G̲h̲azzālī) that the world of sensual perception is the reflection, the image, the copy of the *ʿālam al-malakūt*: cf. the "shadows" of the cave of Plato. In so far as the *ʿālam al-mit̲h̲āl* denotes the idea of archetypal images, it also recalls the *dj̲abarūt* and the *barzak̲h̲*. To sum up: *malakūt* is the world of pure self-existent *intelligibilia*; *dj̲abarūt*, the world of the archetypal images and symbols of the contingent world, evoking the idea of "transcendental imagination", in Heidegger's acceptance. According to the Avicennan cosmogony, the active intellects belong to *malakūt*, the celestial souls to *dj̲abarūt*.

(2) Whether this hierarchy of "worlds" is considered as real or as a privileged myth, the *falāsifa*, al-G̲h̲azzālī, and the *is̲h̲rāḳiyyūn* teach, from the standpoint peculiar to each school, how man can elevate himself from the *ʿālam al-mulk* to the two superior worlds. This is the *kas̲h̲f* ("unveiling") or *mukās̲h̲afa*. Al-G̲h̲azzālī (*Iḥyāʾ*, iii, 17-19) tells us that the heart (*ḳalb*) has "two doors", the one open towards the world of the *malakūt*, the other towards the world of the *mulk* or *s̲h̲ahāda*. Further, referring to the relationship of the macrocosm-microcosm, the same author sees in man—body, psychic faculties, and spirit—a reflection of the three worlds—*mulk*, *dj̲abarūt* and *malakūt*. It can happen, however, that the relationship between the two worlds is reversed. The following summary classification can be made: the world of *amr* is opposed to the (perceptible) world of *k̲h̲alḳ*, and the *amr* combines *dj̲abarūt*, *malakūt*, and *mit̲h̲āl*.

(3) Some ambiguity exists regarding the mutual relation between *malakūt* and *dj̲abarūt*: (a) the thesis of al-G̲h̲azzālī (cf. above): *malakūt*, the world of intelligible realities to which belong the Angels, "light-substances" (cf. the G̲h̲azzālian text of the *Mis̲h̲kāt al-Anwār*) is practically synonymous with *ʿālam al-amr*, the world of Command, of the divine Logos uncreated. The *dj̲abarūt* becomes therefore a refraction of the light emanating from this higher world into an intermediate world of archetypal images, and is thence accessible to the insight of a prophet or a gnostic (*ʿārif*), who borrows from it symbols for the instruction of the people. In the *Iḥyāʾ*, al-G̲h̲azzālī compares the journey through the *ʿālam al-mulk* to the progress of man on earth; that through the *ʿālam al-dj̲abarūt* to a voyage on a ship; that through the *ʿālam al-malakūt* to the progress of a man with the power to walk directly on the waters. Clearly, therefore, the *dj̲abarūt* is the "intermediate" world, "in contact with both the others". It "can be manifested in the visible world, although the eternal Power has linked it to the world of the *malakūt*", says al-G̲h̲azzālī in the *Imlāʾ*. The superiority of the *malakūt* is also affirmed by Ibn ʿAṭāʾ Allāh of Alexandria, etc. (b) In other texts, particularly, it seems, those representing the Ṣūfī line of thought of the *waḥdat al-wudj̲ūd* [see ALLĀH], which itself had its origin in a Plotino-gnostic tradition, superiority is accorded to the *dj̲abarūt*. Thus in the Turkish dictionary *Maʿrifet-nāme* (cf. Carra de Vaux, in *Bibl.*) the following hierarchy in descending order is given: (1) *ʿars̲h̲* (divine Throne or Tabernacle), (2) *dj̲abarūt*, (3) *kursī* (divine Seat), (4) *malakūt*, (5) human worlds, including Paradise. The (according to W. Montgomery-Watt, apocryphal) G̲h̲azzālian text *al-Durra al-Fāk̲h̲ira* states: the race of Adam, and the animals, belong to the world of the *mulk*; the angels and the *dj̲inn* to the world of the *malakūt*; the "elect among the angels" to the world of the *dj̲abarūt* (cf. Wensinck, op. cit., 99). Or again: the Ḳurʾān (uncreated), the substantial Word of God, "exists personally" in the *dj̲abarūt*, while *islām* (*ṣalāt*, *ṣawm*, *ṣabr*) belongs to the *malakūt*.

Al-Suhrawardī, "master of the *is̲h̲rāḳ*", brings together in the same passage (*Ḥikmat al-Is̲h̲rāḳ*, ed. Corbin, 156-7) the "light which permeates the world of the *dj̲abarūt* and the entities of the *malakūt*". Other passages from the same work sometimes treat of the *dj̲abarūt*, sometimes of the "victorial lights of the *malakūt*", both worlds being the hierarchized places of archangelic or intelligible irradiations (*is̲h̲rāḳāt*).

The mutual inter-relation between the suprasensory worlds can thus vary. Each case where the words are mentioned must be considered in its context, while the indications derived from the etymology can serve as a orientation.

AL-AʿLAM AL-**SHANTAMARĪ** [see AL-SHANTAMARĪ].

ʿALĀMA, mark of ratification or initialling used in the Muslim west, from the time of the Muʾminid dynasty, on all official chancery documents. This *ʿalāma*, in principle inscribed by the sovereign's own hand in the space provided for the purpose at the head of the document, beneath the *basmala*, consisted of a doxology, which varied under the different dynasties: *al-ḥamdu li'llāh*, under the Muʾminids and Saʿdids; *al-ḥamdu li'llāh wa 'l-shukru li'llāh*, under the Ḥafṣids; *lā ghāliba illa'llāh* under the Naṣrids of Granada. The *ʿalāma* was gradually replaced by illegible arabesque initials, and supplanted, in modern times, by the seal in indelible ink. At the beginning of the 9th/15th century, the chronicler Abu 'l-Walīd b. al-Aḥmar devoted a short treatise, *Mustawḍaʿ al-ʿAlāma*, to the formula of ratification (cf. *Hespéris*, 1934, 200).

ALAMAK [see NUDJŪM].

ALAMBIC [see AL-ANBĪḲ].

ʿĀLAMGĪR [see AWRANGZĪB].

AL-**ʿALAMĪ**, the name of an old Jerusalem family, the *nisba* being to one ʿAlam al-Dīn Sulaymān (d. 790/1388). The family traces its descent to Ibn Mashīsh and may have been one of the many Maghribī families which immigrated to Jerusalem in the 14th century, though Mudjīr al-Dīn hints (ii, 616) that it was of Turcoman origin. Two sons of ʿAlam al-Dīn: Mūsa (d. 802/1399) and ʿUmar (d. 806/1403), succeeded one another as governors of the city (*nāʾib al-salṭana*), and keepers of the sacred places of Jerusalem and Hebron (*nāẓir al-ḥaramayn*), and at least three other members of the family became chiefs of police (*amīr ḥādjib*) before this post was merged into the governorship by al-Ashraf Īnāl about 857/1453. Muḥammad al-ʿAlamī (d. Jerusalem 1038/1628), for whose works see Brockelmann, S II, 470, was one of the more famous ṣūfī saints of his day in Syria. He conceived the plan of building a mosque near the site of the Place of Ascension on the Mt. of Olives, which the Christians of Jerusalem at first thwarted by appealing to Constantinople. But Shaykh Muḥammad enlisted the support of Shaykh Asʿad b. Ḥasan, the *mufti* of Constantinople (al-Muḥibbī, i, 396), after whom the building, when completed, in 1025/1616 was called al-Asʿadiyya, and where Muḥammad was later buried. Muḥammad's teaching was carried on by his nephew Ṣalāḥ (d. 1055/1645), who also became Shādhilī *khalifa* in Jerusalem. Arab travellers to the city in the 18th century mention several ʿAlamīs, chiefly as lecturers at the Aḳṣā Mosque and Ḥanafī *muftīs*. Early in the present century the Alamīs re-entered administrative life with Fayḍ Allāh (who was also the author of the Concordance of the Ḳurʾān, *Fatḥ al-Raḥmān*, Cairo 1927, 1955) and his son, Mūsā (still alive).

Bibliography: Mudjīr al-Dīn, *Uns*, ii, 506, 609; Muḥibbī, index; Murādī, i, 49, 71, 116, ii, 330, iii, 88, iv 218; Ḥusaynī, *Tarādjim Ahl al-Ḳuds*; Nābulusī, *al-Ḥaḍra al-Unsiyya* (both MSS in writer's possession); Kirk, *The Middle East 1945-1950*, London 1954, 314-5. (W. A. S. Khalidi)

AL-**ʿALAMĪ**, Muḥammad b. al-Ṭayyib, Moroccan poet and man of letters belonging to the branch of the Shurafāʾ ʿAlamiyyūn (or descendants of the Moroccan saint ʿAbd al-Salam b. Mashīsh [*q.v.*], who is buried among the Djebāla, in Djabal al-ʿAlam, north Morocco). Born and educated at Fās, he lived for a while at Miknās, at the court of Mawlāy Ismaʿīl, and died at Cairo, on his way to Arabia to perform the pilgrimage, in 1134 or 1135/1721-23. He has left a work, which is at once an anthology of poetry and a compilation on certain technical subjects, in which there is much information on Moroccan literary life at the beginning of the 12th/18th century; this work, entitled *al-Anīs al-Muṭrib fī-man laḳītuhū min Udabāʾ al-Maghrib*, was lithographed at Fās in 1315 A. H.

Bibliography: E. Lévi-Provençal, *Chorfa*, 295-97 (and references quoted); Brockelmann, S II, 684; J. Berque, *La littérature marocaine et l'Orient au XVIIIe siècle*, *Arabica*, 1955, 311-2. (L. Lévi-Provençal)

ALAMŪT. (i) The fortress; (ii) the dynasty and state.

(I) THE FORTRESS.

The ruins of the fortress of Alamūt are situated on the summit of a lofty and almost inaccessible rock in the heart of the Alburz mountains two days's march north-north-east of Ḳazwīn. According to Ibn al-Athīr (x, 131), an eagle indicated the site to a Daylamite king, who built a castle there, hence the derivation of Alamūt from *āluh*, "eagle" and *āmū(kh)t*, "teaching". In 246/860 the ʿAlid al-Ḥasan al-Dāʿi ila'l-Ḥaḳḳ rebuilt the castle. Ḥasan-i Ṣabbāḥ, the founder of the Assassins, seized Alamūt in 483/1090 and made it the headquarters of the Order. The Mongols took Alamūt in 654/1257 but the Assassins regained it in 673/1275, only to lose it finally soon afterwards. In Ṣafawid times, Alamūt was used as a state prison or "castle of oblivion". Remains of the walls and buildings are still to be seen.

regarding the identification of Alamūt), *Some Ismaili Strongholds in Persia*, *IC*, xii, 382-92; F. Stark, *The Valleys of the Assassins*, London 1934. (L. Lockhart)

(ii) THE DYNASTY.

Alamūt was the center of a Shīʿite state between 483/1090 and 654/1256 with territories scattered unevenly from Syria to eastern Iran, ruled by the head of the Nizārī Ismāʿīlī [*q.v.*] sect, sometimes called the Assassins.

The state grew out of an attempt by the Ismāʿīlīs of Iran to break the power of the Sunnite Saldjūḳs on behalf of the Fāṭimid rulers of Egypt. Their revolt began in the last years of Malikshāh's reign, spreading especially during the troubled time of Barkiyāruḳ; Ismāʿīlīs seized strongholds in Ḳuhistān, Ḳūmis, Fārs, al-Djazīra, Syria, and elsewhere, and Ismāʿīlī troops intervened in the civil wars. Among the leaders the most important were the learned ʿAbd al-Malik b. ʿAṭṭāsh, *dāʿī* (chief propagandist) of Iṣfahān, his son Aḥmad b. ʿAṭṭāsh, who seized Shāhdiz near Iṣfahān in 494/1100, and Ḥasan-i Ṣabbāḥ [*q.v.*], who seized Alamūt in Daylamān in 483/1090. On the death of the *imām* al-Mustanṣir of Egypt in 487/1094 the Ismāʿīlīs of Iran supported the claims of his son Nizār; when Nizār was defeated they refused to recognize al-Mustaʿlī, and carried on their revolt independently of Egypt, under the name of Nizārīs [*q.v.*].

With the concentration of Saldjūḳ power in the hands of Muḥammad Tapar the tide turned against the Ismāʿīlīs; Shāhdiz fell in 500/1107 and Alamūt was in grave danger when Muḥammad's death, in 511/1118, allowed the Ismāʿīlīs a time of recuperation. By this time the leadership was clearly in the hands of Ḥasan-i Ṣabbāḥ at Alamūt. He controlled an essentially independent state consisting of the strongholds in the Rūdbār district around Alamūt, of the fortress of Girdkūh near Dāmghān in Kūmis, and of numerous towns in Ḳuhistān south of Khurāsān. In addition, he was the leader of most of the Ismāʿīlīs under Saldjūḳ rule in Iran and the Fertile Crescent and even a few partisans of Nizār in Egypt. With a later small addition in Syria, the territory of the state remained substantially the same till its end, while the importance of Ismāʿīlī adherents in the surrounding lands seems to have declined rapidly.

The history of the state was dominated by a sustained hostility between the Ismāʿīlīs and the surrounding Sunnite and even Shīʿite populations; a hostility expressed on the one side in repeated massacres of all suspected Ismāʿīlīs in a town and on the other side in assassinations of their most active enemies, such as Niẓām al-Mulk [*q.v.*]. Assassination was not in itself unusual at that time, but its systematic use by the Ismāʿīlīs produced a special terror. Especially in the earlier years, Ismāʿīlīs owing allegiance to the sect leadership at Alamūt lived interspersed among the people, keeping their unpopular faith secret with Shīʿite *taḳiyya*. Those detailed to get rid of some persecuting *ḳāḍī* or *amīr* sometimes stalked their victim with signal devotion, finally killing him spectacularly in public. Any public murder therefore was likely to be ascribed to the Ismāʿīlīs; hence a nickname of theirs, al-Ḥashīshiyya, has become the word *assassin* in Western languages. (There is no evidence that the use of the drug *ḥashīsh* entered in any way into the assassinations.) Eventually, at least, assassination as a weapon became institutionalized, assassins being kept in readiness at hostile courts and their services perhaps even hired out to friendly rulers. Suspicion and war almost never ceased between the Ismāʿīlī state and the surrounding peoples; raiding Ismāʿīlī villages and slaughtering their inhabitants was considered a pious act among the Sunnites, while the Ismāʿīlīs in their isolated districts maintained a united front against outsiders until the end.

Ḥasan-i Ṣabbāḥ died in 518/1124, leaving the leadership to one of his generals, Buzurg-ummīd, as *dāʿī* of Daylamān. Buzurg-ummīd's son Muḥammad succeeded him in 532/1138. During these two reigns defense against Saldjūḳ rulers, especially Sandjar and Maḥmūd, alternated with local raids against mountain rivals or nearby towns like Ḳazwīn. Of symbolic importance were the assassinations of two ʿAbbāsid caliphs, al-Mustarshid and al-Rāshid. Meanwhile, after playing a calamitous role in the politics of Aleppo and Damascus, the Syrian Ismāʿīlīs finally acquired for the state the fortresses of a part of Djabal Bahrā, north of the Lebanon.

Muḥammad's son, Ḥasan II, who succeeded in 557/1162, declared himself in 559/1164 no longer simply *dāʿī* but *khalīfa*, plenipotentiary of the long-hidden *imām*; and probably hinted that he was himself that *imām*. Proclaiming the Day of Resurrection, the spiritual consummation of the world, he abolished the Shīʿite *sharīʿa* law as inconsistent with the mystical life in Paradise to which Ismāʿīlīs were henceforth called; thus consecrating irrevocably the breach with the Muslim community at large. Some objected to the new order, and in 561/1166 Ḥasan was murdered; but his young son Muḥammad II took firm control and carried through his father's policy. Henceforward the ruler of Alamūt was regarded as an ʿAlid *imām*, lineal descendant of Nizār. But external relations remained much as before; Muḥammad had a long and relatively peaceful reign, troubled toward its end by the enmity of the Khʷārazmshāh. During his reign Syrian Ismāʿīlism was dominated by the able Rāshid al-Dīn Sinān [*q.v.*], who acted with apparent independence of Alamūt in his quarrels and rapprochements with Aleppo and Saladin, with the Crusaders, and with the Nuṣayrī mountaineers about him. But after his death in 589/1193 the authority of Alamūt was unquestioned.

The son of Muḥammad II, Ḥasan III, succeeded in 607/1210 and declared himself a Sunnite Muslim, ordering all his followers to accept the Sunnite *sharīʿa*, and allying himself with, among others, the caliph al-Nāṣir. The Ismāʿīlīs accepted his decrees outwardly; he made minor conquests in alliance with Uzbag of Ādharbāydjān. But when he died in 618/1221 (perhaps by poison) his young son who succeeded, Muḥammad III, was not brought up a Sunnite; and though officially Ḥasan's decrees probably stood, in fact the *sharīʿa* was dropped and the state resumed its political isolation.

Nevertheless, a broad Islamic outlook was maintained. Naṣīr al-Dīn Ṭūsī [*q.v.*] and other scholars were attracted to its fortresses; and ambitious quarrels were carried on with Djalāl al-Dīn Mangūbirtī [*q.v.*] and then with the Mongols; allies were sought even in western Europe. But the Sunnites' ingrained hatred finally prevailed. The Mongol Hūlāgū's first objective in Iran was to destroy the Ismāʿīlī state. Muḥammad had developed a degenerate character and his refusal to negotiate frightened his generals, who were evidently hoping to circumvent him when a courtier murdered him, in 653/1255.

After ambivalent negotiations and the fall of many fortresses, his son Khᵘrshāh surrendered unconditionally in 654/1256. He was soon killed, and the Ismāʿīlīs of Daylamān, Ḳūmis, and Ḳuhistān were massacred; the survivors never succeeded in reestablishing the state. The Syrian fortresses survived the Mongols only to be taken by Baybars of Egypt, who however left them as an autonomous community, furnishing assassins to their new overlords.

ALĀN (in Arabic usually taken as al-Lān), an Iranian people (Alān < Aryan) of Northern Caucasus, formerly attested also east of the Caspian sea (see al-Bīrūnī, *Taḥdīd al-Amākin*, ed. A. Z. Validi, in *Bīrūnī's Picture of the world*, 57), as supported by local toponymy. The Alān are mentioned in history from the 1st century A.D. In 371 they were defeated by the Huns. Together with the Vandals, a part of the Alāns migrated to the West across France and Spain, and finally took part in the creation of the Vandal kingdom in North Africa (418-534). On conquering this kingdom Justinian assumed the title of king of "Vandals and Alans". The Alāns remaining north of the Caucasus became neighbours consecutively of the Bulghārs, the Turks and the Khazars, who pushed them out of the plains towards the mountains. In 119/737 Marwān b. Muḥammad "entered the Khazar country from the direction of Bab al-Lān (Darial)", see al-Balādhurī, 207 (Ibn al-Athīr, v, 160).

The Alāns were the ancestors of the present-day Ossets whose name (in Georgian: Ows-etʿi) is derived from Ās (very probably the ancient Aorsi; al-Masʿūdī, ii, 10, 12: *al-Arsiyya guards in Khazaria) who were apparently a sister tribe of the Alāns. The Armenian Geography calls the westernmost Alans "Ashtigor" (As-Digor), and the Digor are the western division of the present-day Ossetes, while "Asi" in Osset refers to the still more westernly region near Mt. Elbruz, which the Ossets must have occupied too in earlier days.

The Alans were converted *en masse* under the Byzantine Patriarch Nicholas the Mystic (between A.D. 901 and 925), though al-Masʿūdī, *Murūdj*, ii, 43, states that in 320/932 they apostasised (probably temporarily) and expelled their bishops and priests. According to Ibn Rusta, 148, only the chief of the al-Lān was a Christian. Muslim authors do not know any other peoples between the dominions of the Alāns and those of the Ṣāḥib al-Sarīr, the ruler of the Daghistān Avar, who also professed the Christian faith. The tribe D.khsās (*Rukhs-ās) which Ibn Rusta, 148, mentions as the noblest tribe of the Alāns, may correspond to the Roxalani of the western authors, and the name Ṭwlās (see *Ḥudūd*, 445) should probably be read Tuwal-ās and refer to the Tualtae living now across the Caucasian range. The Alan capital M.gh.s mentioned in the *Murūdj*, ii, 42, should be read *Magas and explained in Arabic as *dhibbāna*, "a fly" (not *diyāna* as in the Paris edition).

The Alāns (or Ās) are frequently mentioned at the time of the Mongol invasion when they were Greek Christians. Their settlements in the 13th century extended towards Darband and the estuary of the Volga. The Alans had close relations with the Byzantines, the Georgians and the Russians (the latter called them Yasī).

The Mongol conquest led to a further dispersion of the Alāns, whose military contingents and settlers are known even in China. The Persian sources know the Ās as Christians at the court of the Mongol sovereigns, but according to Ibn Baṭṭūṭa (Defrémery), ii, 448, the Ās in Sarāy on the Volga were Muslims.

(W. Barthold-V. Minorsky)

ALANYA (ʿAlāʾiyya, ʿAlāyā), port in South Anatolia, 36° 32′ N, 32° E, at the foot of a mountain 250 m. high and towering above the sea; capital of the *ḳaḍā* of the same name, which belongs to the *wilāyet* (formerly *sandjaḳ*) of Antalya. In 1945 the town had 5884, the *ḳaḍā* 37, 971, inhabitants. The name is derived from the Rūm Saldjūḳ sultan ʿAlāʾ al-Dīn Kayḳubād I, who, in 1220, conquered, and adopted as his winter residence, the castle on the mountain. This had been in the possession of a Greek, or Armenian, baron, called by Ibn Bībī (Houtsma), iii, 234-44, iv, 97-103, Kīr Fārd, and was known, on account of its beautiful situation, as Galonoros (i.e. καλὸν ὄρος; hence the name of Candeloro or Skandeloro in medieval European sources). From 692/1293 ʿAlāʾiyya belonged to the principality of Ḳaraman; Ibn Baṭṭūta (ii, 257 f.) found there in ca. 1333 Yūsuf Beg as prince of the Ḳaraman. According to al-Maḳrīzī (*al-Sulūk*, s.a.) the town was sold by the Ḳaraman to the Mamlūk sultan Barsbey in 830/1427; but according to the Ottoman chronicles the town was, later in the 15th century, in the possession of a descendant of the Saldjūḳ dynasty. In 876/1471-2 ʿAlāʾiyya was captured by Gedik Aḥmed Pasha, Meḥmed II's general (Neshrī (Taeschner), i, 205 f.). From then ʿAlāʾiyya remained in Ottoman hands and was the capital of a *liwā* (*sandjaḳ*) in the *eyālet* of Ičel (Kātib Čelebi, *Djihān-nümā*, 611).

The old town of ʿAlāʾiyya was situated on the mountain, which slopes steeply to the W. and S., but descends more gradually to the E and N. To the north it is connected with the mainland only by a narrow neck of land, and thus forms together with the latter two bays, of which, however, only the eastern one served, and serves still, as a harbour. The old town on the mountain is surrounded by a wall which starts from a strong octagonal tower in

the NE side of the peninsula on the eastern shore, made of red sand-stone (hence the name Ḳïzïl Kule) and dated 623/1226, and ascends up to the summit of the mountain at the southern end of the peninsula. The area so enclosed is further divided by two transverse walls, of which the upper, southern one encloses, together with the outer wall, the citadel (Ič Kalʿe) lying at the summit, the other the outer fortress (Dïsh Ḳalʿe). In Turkish times, the citadel served as barracks for the garrison; it is uninhabited today, but contains the ruins of a Byzantine church. The outer fortress was the residential area of the old town; it contains a *khān* (caravanserai; not, it seems, a *bedestān*, as is often stated) of the early Ottoman period, an old, though in its present state only Ottoman, mosque (Kalʿe Djāmiʿ) and the *türbe* (from 628/1230) of a certain Aḳshebe Sulṭān. The mosque called after ʿÂlāʾ al-Dīn, situated outside the outer fortress, does not seem to be very old. On the shore there is an arsenal (*tersāne*) built, according to its inscription, by ʿAlāʾ al-Dīn Kayḳubād I; it consists of five large barrel-vaults with five arched openings in each partition-wall, the only building of its kind as yet known from the Saldiūḳ period.

The old town is at present but sparsely populated; a new town arose at the foot of the mountain on the isthmus and on the mainland. It contains no monuments worthy of mention.

Not far to the east of ʿAlāʾiyya in the coastal plain on a rivulet, is to be found the ruin of a small, *köshk*-like building of the Saldjūḳ period, mainly consisting of a barrel-vault in the middle of an area surrounded by a wall. It was probably the country-house of a Saldjūḳ nobleman with a garden. On the line of the wall lies the ruin of a small Christian church.

ALARCOS [see al-arak].

ALAYA [see ālaba wa ʾl-ḳilāʿ].

ʿALAWĪ (ʿAlluwī < Ahl ʿAlī, according to v. Maltzan, *Reise*, 356), tribe and district on the caravan route ʿAdan-Ḳaʿṭaba-Ṣanʿāʾ, the smallest among the "nine cantons" of the Western Aden Protectorate. It lies between ʿĀmirī (N) and Ḥawshabī (S) territory and formerly belonged to the ʿĀmir (v. Maltzan, loc. cit.), but later it became semi-independent and signed a treaty with the British in 1895. Population: 1000-1500. The *shaykh* lives at al-Sawda, which is the only place of some importance, with a landing ground for aircraft.

Bibliography: *Handbook of Arabia* (Admiralty), i, 212; Hunter, *Account of the British settlement of Aden*, 87 f., 155, 169 f.; von Maltzan, *Reise nach Südarabien*, 204, 356; D. Ingrams, *Survey of social and economic conditions in the Aden protectorate*, 24, 27, 34. (O. Löfgren)

ʿALAWĪS (ʿAlawiyya), the reigning dynasty in Morocco.

Morocco at the advent of the ʿAlawid dynasty. When the ʿAlawid *Shurafāʾ* [see sharīf] succeeded in asserting their sovereignty over Morocco, the country was rent by a serious political, social and religious crisis. The great movement of maraboutism and xenophobia for which the growth of Ṣūfism and Sharīfism and the development of the religious brotherhoods had for long paved the way, and which had manifested itself as early as the 15th century, the period of incursions by Portuguese and Spanish Christians on the coasts of Morocco, assumed a new form. While the two Saʿdid *makhzens* established at Fez and Marrākush crumbled into ruin, strong provincial factions, based on a religious allegiance, divided up the country and warred amongst themselves. The marabouts of al-Dilāʾ [*q.v.*], supported by the Berber population of the Middle and Central Atlas, some of whom began to move down into the Atlantic plains, seemed to be on the point of establishing a Ṣinhādjī domination in Morocco. Morocco needed rehabilitation, organisation, and also pacification, because anarchy and brigandage continued to spread. The ʿAlawids, if they were not faced with the task of overcoming the preceding dynasty, had to meet difficult problems on every side.

The establishment of the dynasty. The ʿAlawids, of Ḥasanid descent, had come from Arabia to Tāfīlālt at the end of the 13th century. For a long time they played no part in politics. But, in the anarchy which marked the decline of the Saʿdid dynasty, the inhabitants of Tāfīlālt, threatened simultaneously by Abu ʾl-Ḥasan al-Samlālī and by the marabouts of al-Dilāʾ, adopted as their leader Mawlāy al-Sharīf. His son Mawlāy Maḥammad (*sic*), who succeeded him during his lifetime in 1045/1635-6, strove for a period of twenty years to organise a small principality in eastern Morocco, but left no permanent structure. Maḥammad's brother, Mawlāy al-Rashīd [*q.v.*], took up his task with greater foresight and determination. The moment was favourable; the country was tired of anarchy and the great marabout organisations were beginning to decline. It was in order to escape from his brother Mawlāy Maḥammad that Mawlāy al-Rashīd, after the death of their father, al-Sharīf, in 1069/1659, sought his fortune in Morocco. He had managed to collect a small force and, after obtaining funds by killing a rich Jew, Ibn Mashʿal, he succeeded in establishing himself in eastern Morocco with the aid of the Maʿḳil Arabs and the Ayt Inassen Berbers. Gradually he extended his kingdom, and made Tāzā his provisional capital. In 1076/1666 he seized Fez; from then on he assumed the role of sultan and applied himself to the subjugation of the marabout powers which shared the Atlantic seaboard of Morocco. First he conquered northern Morocco, and then he defeated the Dilāʾites and took possession of their *zāwiya*. In 1079/1669 he entered Marrākush, and occupied Sūs and the Anti-Atlas. But he died at Marrākush in 1082/1672 without having consolidated his achievements.

Thus the Filālī Sharīfs had achieved power as a result of a personal venture which for long was situated half-way between banditry and war, and which reached its climax with the conquest of the Morocco of the plains and oases. With a few Arab tribes forming his only genuine support, Mawlāy al-Rashīd, thanks to the weak state of the country and the decline of the great marabout organizations, had successfully carried out the task of regrouping and of imposing law and order. But, in this country, practically everything had still to be put in order. Although the marabout crisis had suddenly ended, the Arab problem, always serious, was about to find a parallel in a formidable Berber problem, the essential phase of which was to be the push of the Ṣinhādja of the Atlas towards the north and west. The tasks of organizing an army, re-forming a government, and of establishing the place which

Morocco intended to hold in the Mediterranean theatre, still remained.

Mawlāy Ismāʿīl (1082-1139/1672-1727) and the consolidation of the dynasty. The work of pacification accomplished by al-Ras͟hīd proved impermanent. His brother and successor Ismāʿīl [*q.v.*] (1672-1727) had to face two rival claimants to the throne and to suppress numerous revolts both in the towns and among the tribes. He deprived Fez and Marrākus͟h, to which he had been obliged to lay siege, of their status as capital cities, and installed himself with his government at Miknāsa. Mawlāy Ismāʿīl had first of all to solve the problem of the army. He had recourse first to the old expedient of the Arab *gīs͟h*, to which he added the Maʿḳil Arabs of the oases and to which he gave the name of *gīs͟h* of the Udāya. But more especially he pressed into service the descendants of the black slaves who had been imported in large numbers by the Saʿdids; these were the *ʿabīd al-Buk͟hārī*; but this black militia never had any great military value.

Mawlāy Ismāʿīl, who from the beginning of his reign had been unsuccessful in his Algerian ventures and had had to conclude peace with the Turks on the usual terms, succeeded in recovering from the Spanish Maʿmūra, Mahdiyya and al-Arāʾis͟h (Larache). The British evacuated Tangier. Mazagan, Ceuta and Melilla remained in Christian hands.

Nearly the whole of his long reign was devoted to the suppression of internal revolts, risings by pretenders, and rebellions on the part of the tribes. The task was a heavy one; the country had a long tradition of anarchy, and the crushing financial burdens which the sovereign imposed on conquered territory were a clear incentive to revolt. The hardest campaigns were those against the Ṣinhād͟ja Berbers. With the aid of some of these, Mawlāy Ismāʿīl pacified for a time the Middle Atlas. But he never succeeded in occupying the whole of Morocco.

Mawlāy Ismāʿīl's diplomatic relations with Europe have often given rise to misconceptions. The sovereign hated the Christian world. His European policy, based on a desire for holy war and on cupidity, and implemented with reluctance, was fundamentally negative. In spite of the efforts of the European nations, the crying problem of the captives was not settled. Foreign trade continued to be negligible. Morocco isolated itself to an increasing extent from Europe and also from Turkish Algeria; the seeds of revival could not be planted from without.

At home, Ismāʿīl had strengthened the dynasty's position and pacified part of the country, but he had failed to resolve either the Arab or the Berber problem. After his death the black militia proved to be the principal fomentors of trouble. Ismāʿīl had not remedied Morocco's deep-rooted disorders, nor had he set the country on a new path. At his death, the ensuing anarchy was worse than ever.

The period of anarchy (1139-70/1727-57). For a period of thirty years, various sons of Mawlāy Ismāʿīl were elected and deposed by the *ʿabīd*, the *gīs͟h* and even by the Berber tribes, who had come down into the plains. Seven rulers came and went. One of them, Aḥmad al-D͟hahabī, reigned twice, and ʿAbd Allāh [*q.v.*], on four different occasions. This was one of the darkest periods in Moroccan history. Anarchy and brigandage laid waste the subject territory and the large towns.

The rehabilitation under Muḥammad b. ʿAbd Allāh (1170-1204/1757-90). Muḥammad, when he was elected sulṭān in 1170/1757, had already, as *k͟halīfa* of his father at Marrākus͟h, accomplished work of importance. Muḥammad had no more ability than his predecessors or his succ ssors to devise new solutions or to undertake a real reorga nization of the country. He failed to settle any of the major problems which confronted him. Conscious of the limitations of his resources, he gave his kingdom, as far as he was able and as far as the country itself allowed him, peace and prosperity. He organized the collection of taxes, minted a sound currency, and built up a small army from the remnants of the *gīs͟h* and the *ʿabīd*, and a few con tingents from subject tribes. Despite his alliances with the Berbers, he was unable to check the encroachment of the Ṣinhād͟jī tribes on the plains; the road from Fez to Marrākus͟h via the Tādlā was cut.

He had the good fortune to reoccupy Mazagan, which the Portuguese evacuated in 1182/1769. After two defeats at Ceuta and Melilla, he made peace with Spain. He realised that a certain minimum of foreign trade was indispensable to Morocco; accordingly he signed treaties of trade and friendship with the principal European powers. He tried in vain to concentrate the majority of the European merchants and consular officials in the new town of Mogador, planned by European architects, which was commenced in 1179/1765.

The end of the reign of Muhammad b. ʿAbd Allāh was marred by the rebellions of his son and heir-apparent, al-Yazīd.

The conservative policy of the ʿAlawids: prelude to the Moroccan crisis (1204-1311/1790-1894). The short reign of al-Yazīd (1204-6/1790-2) was marked by conflict with Spain and a serious revolt in southern Morocco. On the death of this fanatical and bloodthirsty sultan, his brother Sulaymān rid himself of two rivals and gave Morocco a brief respite from warfare.

Up to the end of the 19th century, Morocco was spared crises concerning the succession; in each case the heir designate succeeded to the throne without difficulty.

The Sulṭāns Sulaymān 1206-38/1792-1822) [*q.v.*], ʿAbd al-Raḥmān b. His͟hām (1238-76/1822-59) [*q.v.*], Muḥammad b. ʿAbd al-Raḥmān (1276-90/1859/73), and Mawlāy al-Ḥasan (1290-1311/1873-94) [*q.v.*], were practical rulers endowed with common sense. But their policies, though persevering and flexible in detail, were not progressive. Throughout this period the internal problems of Morocco remained the same. The army was weak: the *ʿabīd* had been suppressed but the *gīs͟h*, restored to a position of supremacy, remained undisciplined and largely ineffective. The best troops were the contingents of the adherent tribes, which were mustered on the eve of an expedition. The energies of the sultans were entirely directed, not always with success, to levying the taxes in the subject territories. They had given up all pretensions to the pacification of the *bilād al-sība* [*q.v.*], which gradually increased in size.

In order to put down local revolts and to secure payment of the taxes, the ʿAlawid sultans of the 19th century spent part of their time conducting *ḥarkas* over their territories; the effect of these was often limited and temporary. Diplomacy was employed rather than force; and attempts were made to secure the aloof homage of the tribes which lived in actual independence. By all these means, the *mak͟hzen* endeavoured to save face, if not at home, at least in the eyes of Europe. It avoided headlong collision with the powerful unsubdued

groups; the latter were, for their part, incapable of uniting against the central power. At the end of the 19th century, however, Mawlāy al-Ḥasan had the good fortune to bring within his orbit the powerful *ḳāʾids* who had established themselves in southern Morocco.

Both the military and political activities of the sultans were limited in scope and exhausting. Their financial resources, though administered with care, remained exiguous; the smallness of the sums at the disposal of the *makhzen* precluded any works of a lasting character.

In a Morocco which clung obstinately to a sort of paradoxical mediaevalism, European interventions steadily became more pressing, and questions of foreign policy eventually, at the beginning of the 20th century, took pride of place over domestic matters. The fate of Morocco, the last Mediterranean country to stand aloof from the modern world, was not settled earlier because rivalries between the powers, and above all the desire of France, the country principally interested, for peace, long preserved it in its existing condition. Morocco, however, imprudently provoked two wars with European powers. ʿAbd al-Raḥmān gave his support to ʿAbd al-Ḳādir b. Muḥyi'l-Dīn [*q.v.*] in his conflict with France. The Moroccan troops were defeated on the Isly (28 Djumādā II 1260/15 July 1844) and the ports of Tangier and Mogador were bombarded by the French fleet. The sultan hastened to conclude peace. His son and successor, Muḥammad, as a result of frontier incidents, declared war on Spain. The Spanish army, marching from Ceuta, occupied Tetuan and was advancing on Tangier when Great Britain negotiated peace. The ʿAlawid dynasty emerged unscathed from these two adventures into which it had been led by its xenophobia and its attachment to the holy war. Nevertheless European penetration increased during the reign of Mawlāy al-Ḥasan [*q.v.*]. In 1297/1880 the Convention of Madrid gave rulings on questions of trade and protection; European trade in the ports expanded. Every endeavour of Mawlāy al-Ḥasan was directed towards the maintenance of his authority in the subject territory, and the prolongation of an independence which was in increasing jeopardy. This unstable and paradoxical position could only last so long as the diplomatic façade constituted by the Sharīfian empire remained intact.

The Moroccan crisis and the establishment of the French Protectorate (1311-30/1894-1912). The internal disintegration of Morocco grew more rapid during the first years of the 20th century. ʿAbd al-ʿAzīz [*q.v.*] was only fourteen when he succeeded his father Mawlāy al-Ḥasan. Until 1900, the vizier Bā Aḥmad exercised the real authority and in all respects continued the practices of the preceding reign. Despite the blundering good intentions of the sultan and his attempts at reform, the *bilād al-makhzan* itself was breaking up; a pretender unrelated to the dynasty, the *rūgī* Bū Ḥmāra (Abū Ḥamāra), installed himself at Tāzā and defied the Sharīfian armies. The dynasty was tottering. Thus Morocco advanced involuntarily to the forefront of the diplomatic stage. Mounting confusion in the country set at nought the agreements concluded by the chancelleries of Europe with a view to the preservation of peace. The main episodes in this crisis had their origin in military or other moves on the part of Germany, which was trying to prevent the expansion of French influence in Morocco. The final act of the Conference of Algeciras, convened to resolve the first of these clashes, proclaimed the independence of the sultan, the inviolability of his empire, and economic equality among the Powers, while, however, recognizing a certain privileged position for France.

The murder of French dependents and agitation on the Algerian border induced France to pacify the Oujda region and to occupy the Chaouia. A new diplomatic crisis ended with the Franco-German agreement of 1909. France and Spain increased their activities in Morocco.

During all these events the ʿAlawid dynasty, engrossed in domestic disorders and preoccupied with its own defence, was singularly inactive. ʿAbd al-ʿAzīz was replaced by his brother Mawlāy ʿAbd al-Ḥāfiẓ, who had rebelled against him at Marrākush. Finally the incident at Agadir, which for a moment threatened the peace of Europe, led to a new Franco-German agreement which gave the Reich compensations in Equatorial Africa and made possible the signature of the Protectorate agreement (11 Rabīʿ II 1330/30 March 1912). The ʿAlawid dynasty, which had seemed on the point of collapse, could thus, under French protection, maintain its position and enter a new phase. Mawlāy ʿAbd al-Ḥāfiẓ, who showed extreme ill will in promulgating the reforms anticipated in the Protectorate agreements, abdicated in 1913 and was replaced by his brother, Mawlāy Yūsuf, who was succeeded in 1926 by his son Sīdī Muḥammad; the latter was replaced in Dhu 'l-Ḥidjdja 1372/August 1953 by Sīdī Muḥammad b. Mawlāy ʿArafa.

Bibliography: Arabic sources. The Arabic sources have been listed and appraised by E. Lévi-Provençal, *Les Historiens des Chorfa*, Paris 1922. Three recent works which give detailed information may be added to this list: Ibn Zīdān, *Itḥāf Aʿlām al-Nās bi-Djamāl Akhbār Ḥādirat Miknās*, Rabat 1929-33; ʿAbbās b. Ibrāhīm al-Marrākushī, *al-Iʿlām bi-man Ḥalla Marrākush wa-Aghmāt min al-Aʿlām*, Fez 1936 ff.; Muḥammad al-Muwaḳḳit, *al-Saʿāda al-Abadiyya fi 'l-Taʿrīf bi-Mashāhīr al-Ḥadra al-Marrākushiyya*, lith., Fez 1335-6. Essential texts in translation are: Zayyānī, *al-Turdjumān al-Muʿrib ʿan Duwal al-Mashriḳ wa 'l-Maghrib*, extract edited and translated by O. Houdas, *Le Maroc de 1631 à 1812*, Paris 1886; Nāṣirī, *al-Istiḳṣāʾ*, trans. Fumey in *AM* ix, 1906 and 1907; *al-Ḥulal al-Bahiyya*, partial trans. by L. Coufourier, *Chronique de la vie de Moulay el-Ḥasan*, *AM* viii, 1906. In October 1955, Sīdī Muḥammad b. Mawlāy ʿAfara went to reside in Tangiers, and a Council of the Throne was instituted in the Sharifian Empire; Sīdī Muḥammad b. Yūsuf was installed on the throne again on 16th November 1955. (ED.)

ALAWITES [see NUṢAYRĪ].

ALAY, a Turkish word probably derived from the Greek *allagion*, which was applied to certain divisions of the Byzantine army (cf. Köprülüzade Mehmet Fuat, *Bizans Müesseselerin Osmanlı Müesseselerine Te'siri*, *Türk Hukuk ve Iktisat Tarihi Mecmuası*, i, 277), signifying in Ottoman usage "a troop", "a parade", and hence "a crowd", "a large quantity", and used from the time of the 19th century military reforms to denote "a regiment". The most important parades to which the name was given were the *ḳılıč alayı*, held on the occasion of the sultan's visit to Eyyūb for his girding with the sword of ʿOthmān; the *alay-ı hümāyūn*, held on his departure from or return to the capital whether in connection with a campaign or for some other reason; the *ṣürre alayı*, held at the *sarāy* on the despatch of his annual gift to the Holy Cities; the *Mewlūd* and *Bayram alayları*, held for his visitation of mosques on the Prophet's Birthday and the two *ʿīds*; and the *wālide alayı*, held on the translation of a new Wālide Sulṭān from the Old to the New Sarāy. The word also figures in designations such as *alay beyi*, applied to officers commanding the feudal cavalry of a *sandjaḳ* or *eyālet* and themselves fief-holders, and *alay čawushu*, applied either to *čawushes* whose duty it was to clear the route for processions or to those who conveyed commands in battle by shouting. The Alay Köshkü was a pavilion in the Ṭopḳapı Sarayı built in the reign of Murād III from which sultans might view parades.

ALBARRACIN [see RAZĪN, BANŪ].

ALBISTĀN [see ELBISTAN].

ALBUFERA [see BALANSIYA].

ALBURZ (now usually pronounced ELBURZ), in Old Persian Hara Berezaiti or "High Mountain", is a mountain chain which, besides separating the Persian central plateau from the Caspian depression, links the Caucasus range with the Paropamisus. The average height of the western portion is just under 10,000 feet, culminating in Damāwand [*q.v.*], which is 18,600 feet high. The northern slopes of the range are densely wooded, but vegetation is scanty on the southern side because of the much lower rainfall

Firdawsī gives the name Alburz to a mythical mountain in India. The first Persian geographer to apply the name to the range was Ḥamd Allāh Mustawfī.

Alburz or Elburz is not to be confused with Elbruz, the Caucasian peak. Cf. Le Strange, 368 note. (L. LOCKHART)

ALF LAYLA WA-LAYLA, "Thousand nights and one night" is the title of the most famous Arabian collection of fairy-tales and other stories. One often reads or hears nowadays "like a fairy-tale from the thousand-and-one nights", and, indeed, the fairy-tales are the most striking part of the collection. Like all Orientals the Arabs from the earliest times enjoyed imaginative stories; but since the intellectual horizon of the true Arabs in ancient times before the rise of Islam was rather narrow the material for these entertainments was borrowed mainly from elsewhere, from Persia and from India, as we gather from the accounts of the Prophet's competitor, the merchant al-Naḍr. In later times when Arab civilization had grown richer and more comprehensive the literary influence from other countries was, of course, much stronger. An attentive reader of the "Nights" will soon be astonished by the manifold variety of their contents: they resemble in a way an Oriental meadow with many different beautiful flowers intermingled with a few weeds. On the other hand, the reader will notice that these stories comprise a very wide field: there are stories of King Solomon, of the kings of

ancient Persia, of Alexander the Great, of the caliphs and the sultans on one side, and stories in which guns, coffee and tobacco are mentioned on the other side.

Its appearance in Europe. The entire work is enclosed in a "frame-story", and this was known in Italy in the Middle Ages. Traces of it are to be found in a novel by Giovanni Sercambi (1347-1424) and in the story of Astolfo and Giocondo which is told in the 28th canto of *Orlando Furioso* by Ariosto (beginning of the 16th century); travellers who had been in the East may have brought this knowledge to Italy. But the whole *Alf Layla wa-Layla* came to Europe in the 17th and 18th centuries. The French scholar and traveller Jean Antoine Galland (1646-1715) published it for the first time. Travelling in the Near East at first as a secretary of the French ambassador, then as a collector of objects for museums commissioned by amateurs, he had known the world of the Orient, and his attention was directed to the great number of stories and fables told there. After his return to France he began in 1704 to publish his volumes *Les mille et une Nuits contes arabes traduits en Français.* By 1706 seven vols. had appeared: vol. viii appeared in 1709, vols. ix and x in 1712, vols. xi and xii in 1717, two years after Galland's death. This delay in the appearance of the later vols. is significant for Galland's difficulties as to material and also for his indifference to this side of his work as a scholar. He was a born story-teller; he had a flair for a good story and a knack of re-telling it well. Thus he adapted his translation to the taste of his European readers, changing sometimes the wording of the Arabic text and paraphrasing things that were foreign to Europeans. Hence the great success of his "Nights". But he was also fortunate in the material which fell into his hands. He began by translating Sindbād the Sailor from an unidentified MS; then he learned that this was part of a great collection of stories called "The Thousand and One Nights"; then he had the luck to have sent to him from Syria four vols. of a MS of that work which is, except for a small fragment found by Nabia Abbott, the oldest known and contains the best surviving text. The first three of his vols. are still in the Bibliothèque Nationale, but the fourth is lost. In the first seven vols. of his translation he exhausted his three vols. of Arabic text which we still have and added Sindbād and Camalzaman (Ḳamar al-Zamān) from unidentified MSS. Then for lack of material he stopped for three years until his publisher forced his hand by issuing, without authority, vol. viii containing Ganem (G͟hānim), translated by Galland from an unidentified MS, and two stories, Zeyn Alasnam (Zayn al-Aṣnām) and Codadad (K͟hudādād), translated by Pétis de la Croix and intended for his *Mille et un jours.* Again Galland was completely out of material and stopped; he was also tired and disgusted with the whole matter. But in 1709 he met a certain Maronite from Aleppo, Ḥannā, brought to Paris by the traveller Paul Lucas, and at once recognized that he had got an oral source of the story material. Ḥannā told him stories in Arabic, and Galland inserted in his *Journal* abstracts of some of these. But Ḥannā also gave him transcripts of some. In this way the last four vols. of Galland's translation were filled out; his *Journal* gives full details. Ḥannā's transcripts have vanished, but two Arabic MSS of Aladdin have since come to light and one of Ali Baba. This, then, is the origin of the book which made the "Nights" known to Europe and which in the French text and in very many translations from the French became the "Arabian Nights" for the great multitude of readers. For details see H. Zotenberg, *Histoire d'ʿAlāʾaldin . . . avec Notice sur quelques manuscrits des Mille et une nuits et la traduction de Galland*, Paris 1888. This contains the Arabic text of Aladdin (ʿAlā al-Dīn) and a study of certain MSS of the Nights and of the entries in Galland's *Journal.* See also V. Chauvin, *Bibliographie arabe*, iv, Liège 1900, and D. B. Macdonald, *A bibliographical and literary study of the first appearance of the Arabian Nights in Europe, The Library Quarterly*, vol. ii, no. 4, Oct. 1932, 387-420.

For more than a century Galland's French version meant the Nights for Europe, and two of his stories whose original Arabic texts were not known were even translated into Oriental languages. But meanwhile other MSS, more or less connected with the Nights, were brought to light and, from these, various supplements to Galland were translated and published. Just as the MSS of the Nights themselves varied enormously as to the stories which they contained, so these translators were prepared to attach to the Nights any story that existed in Arabic. The following supplements, partly separate and partly attached to editions of Galland, are of importance in themselves and as signs of the interests of their times. For further details on all of them see Chauvin's *Bibliographie*, iv, 82-120.

In 1788 there appeared as a supplement to the *Cabinet des Fées*, vols 38-41, a series of tales translated from the Arabic by Denis Chavis. It is significant for the interest at the time in the whole subject of the Nights that there appeared, 1792-1794, three separate English translations of this supplement. In 1795 William Beloe published in the third vol. of his *Miscellanies* some Arabic stories which had been translated for him orally by Patrick Russell, the author of *The Natural History of Aleppo* (1794). In 1800 Jonathan Scott translated in his *Tales, Anecdotes and Letters* certain stories from the MS of the Nights brought from India by James Anderson, and in 1811 to his edition of an English version of Galland he added a vol. of new stories from another MS, the Wortley Montague MS now in Oxford. In 1806 Caussin de Perceval had already added two vols. of supplement to his edition of Galland. But Edouard Gauttier in his professed edition of Galland (1822-1825) went much farther: besides two vols. of new tales drawn from all manner of sources he freely inserted others in the course of Galland's Nights. Von Hammer in his *Die noch nicht übersetzten Erzählungen der Tausend und einen Nacht*, Stuttgart 1823, had a much firmer foundation and used a real recension of the Nights. He had acquired in Egypt a MS of the recension now known as Zotenberg's Egyptian Recension, which through numerous editions has become the Vulgate text of the Nights; see the editions, below. Von Hammer's French translation of a number of stories not in Galland is lost, but Zinserling (1823) translated it into German, and this version was rendered in English by Lamb (1826) and in French by Trébutien (1828). In 1825 M. Habicht began to publish 15 volumes professing to be a new translation but consisting really of Galland with some supplements from Caussin, Gauttier and Scott and an ending from a so-called Tunisian MS. He began also to publish an Arabic text. From this text, later on also from Galland, from Gotha MSS and from a text printed in Egypt, Weil published his translation within the years 1837-1867.

Editions and translations. The main editions of the Arabic *Alf Layla wa-Layla* are the following.

1. The first Calcutta Edition: *The Arabian Nights Entertainments; In the Original Arabic, published under the Patronage of the College of Fort William*; By Shuekh Uhmud bin Moohummud Shirwanee ul Yumunee, Calcutta, vol. i 1814; vol. ii 1818. It contains only the first two hundred Nights and the story of Sindbād the Sailor.

2. The first Būlāḳ Edition, a complete Arabic edition, printed in 1251/1835 (from MSS found in Egypt) in the State Printing Office at Būlāḳ near Cairo founded by Muḥammad ʿAlī.

3. The Second Calcutta Edition: *The Alif Laila or the Book of the Thousand Nights and one Night, Commonly known as "The Arabian Nights Entertainments", now, for the first time, published complete in the original Arabic, from an Egyptian manuscript brought to India by the late Major Turner, editor of the Shah-Nameh.* Edited by W. H. Macnaghten, Esq. In four volumes, Calcutta 1839-42.

4. The Breslau Edition: *Tausend und Eine Nacht Arabisch. Nach einer Handschrift aus Tunis herausgegeben* von Dr. Maximilian Habicht, Professor an der Königlichen Universität zu Breslau (etc.), nach seinem Tode fortgesetzt von M. Heinrich Leberecht Fleischer, ordentlichem Prof. der morgenländischen Sprachen an der Universität Leipzig, Breslau 1825-43. D. B. Macdonald, in his article on Habicht's Recension in *JRAS*, 1909, 685-704, and in his article *A Preliminary Classification of some MSS of the Arabian Nights*, in the *E. G. Browne Volume*, Cambridge 1922, 304, discussed the value of this edition. His expert opinion is that Habicht wilfully created a literary myth and enormously confused the history of the Nights because a Tunisian recension of the Nights never existed, and out of many stories which had come to him from many sources he constructed a new recension of the Nights much in the same way that he had constructed his translation described above. However, Macdonald acknowledged that Habicht's texts are given verbatim without any attempt at correction, and are, therefore, "vulgar" in the exact sense whereas all other texts have been grammatically and lexicographically "improved" by learned shaykhs.

5. Later Būlāḳ and Cairo Editions. In the latter half of the 19th century and in the beginning of the 20th century the complete text of the first Būlāḳ edition, in the main the same as the second Calcutta edition, was several times reprinted. They are representatives of Zotenberg's "Egyptian Recension", which is the result of a compilation made by a certain shaykh in the 18th century, according to a notice in U. J. Seetzen, *Reisen durch Syrien, Palästina, Phönicien, die Transjordan-Länder, Arabia Petraea und Unter-Aegypten*, Berlin 1854-5, iii, 188; the name of the shaykh is not known, but this notice confirms Zotenberg's hypothesis. The Jesuit Press at Bayrūt has published an independent but expurgated edition from another MS of the same recension (1888-90).

From the Egyptian Recension have been made all the modern western translations. Lane's translation, incomplete but with a very valuable and full commentary, began to appear in parts in 1839 and was finished in 1841. It was made from the first Būlāḳ edition. Payne's translation from the Macnaghten edition, complete and privately printed, appeared in 9 vols. 1882-84. Three additional vols. contained tales in the Breslau and 1st Calcutta editions (1884), and a 13th vol. (1889) contained Aladdin and Zayn al-Aṣnām. Since Payne's death in 1916 there have been a number of complete reprints. The translation by Sir Richard Burton, also from the Macnaghten edition, is very largely dependent upon that of Payne and often reproduces Payne verbatim (10 vols., 1885; 6 supplementary vols., 1886-8). Besides the Smithers edition (12 vols., 1894) and Lady Burton's edition (6 vols., 1886-8) it has been completely reprinted several times. On the strange relation between the versions of Payne and of Burton see Thomas Wright, *Life of Sir Richard Burton* (2 vols., London 1906) and *Life of John Payne* (London 1919), and for an attempt at a comparative estimate of the above English translations see Macdonald's *On translating the Arabian Nights*, *The Nation*, New York, Aug. 30 and Sept. 6, 1900, In *Reclam's Universal-Bibliothek* (1895-97) Max Henning published a German translation, 24 small vols.; it is somewhat expurgated and rather prosaic and gives only half the verses. The first 17 vols. give the Nights from the Būlāḳ edition and vols. 18-24 various supplements, largely translated from Burton. In 1899 J. C. Mardrus began a French translation of the Nights professedly from the Būlāḳ edition of 1835. His translation is not very trustworthy, and it incorporates tales from all manner of other collections than the Nights. Moreover there are translations of the Nights in Spanish, English, Polish, German, Danish, Russian, Italian. The Spanish translation is by Vicente Blasco Ibañez; the English by E. Powys Mathers; the Polish translation is incomplete. The German translation by E. Littmann appeared in Leipzig, 6 vols., 1921-8; first re-edition Wiesbaden 1953, second re-edition ibid. 1954. It contains the complete translation of the second Calcutta edition and the following stories: *ʿAlāʾ al-Dīn and the Magic Lamp*, from the Paris MS edited by Zotenberg (cf. above); *ʿAlī Baba and the Forty Robbers*, from the Oxford MS edited by Macdonald (*JRAS*, 1910, 221 ff., 1913, 41 ff.); *Prince Aḥmad and Parī Bānū*, from Burton, i.e. an English rendering of a Hindustani version derived from Galland; *Abu'l-Ḥasan or the Sleeper Awakened*, from the Breslau edition; *The Craft of Women*, from the first Calcutta edition; the end of Sindbād's sixth journey and his seventh journey, from the first Calcutta edition; supplement in the *Story of the Brass City*; the end of the *Story of Sindbād and the Seven Viziers*; *The Story of al-Malik al-Ẓāhir Rukn al-Dīn Baybars al-Bundukdārī and the Sixteen Guardians*, from the Breslau edition; *The Jealous Sisters*, from Burton-Galland; *Zayn al-Aṣnām*, from a Paris MS edited by F. Groff; *The Nocturnal Adventure of the Caliph*, *Khudādād and his Brothers*, *ʿAlī Khawādja and the Merchant of Baghdād*, from Burton-Galland.—The Danish translation by J. Oestrup was published at Copenhagen in 1927. The Russian translation by I. Kračkovsky appeared in 1934, the Italian translation by F. Gabrieli in 1949.

Problems of origin and evolution. When the Arabian Nights first became known in Europe they served only for the entertainment of European readers; but at the beginning of the 19th century western scholars began to take an interest in the question of their origin. Silvestre de Sacy, the founder of modern Arabian philology, discussed this question in several dissertations: *Journal des savants*, 1817, 678; *Recherches sur l'origine du recueil des contes intitulés les Mille et une nuits*, Paris 1829; in the *Mémoires de l'Académie des Inscriptions & Belles-Lettres*, x, 1833, 30. He denied, correctly, the possible authorship of one single writer and believed

that the book was written at a very late period without Persian and Indian elements; therefore, he regarded as spurious a passage in *Murūdj al-Dhahab* of al-Masʿūdī (written in 336/947 and re-edited in 346/957) referring to these elements. This passage, published by Barbier de Meynard in Arabic and French (*Les prairies d'or*, iv, 89), reads in English: "The case with them (viz. some legendary stories) is similar to that of the books that have come to us from the Persian, Indian (one MS has here: Pahlawī) and the Greek and have been translated for us, and that originated in the way that we have described, such as for example the book *Hazār Afsāna*, which in Arabic means "thousand tales", for "tale" is in Persian *afsāna*. The people call this book "Thousand Nights" (two MSS have here: Thousand Nights and One Night). This is the story of the king and the vizier and his daughter and her servant-girl; these two are called Shīrazād and Dīnāzād (in other MSS: and her nurse; in again other MSS: and his two daughters)".

In *al-Fihrist* by Muḥammad b. Isḥāḳ b. Abī Yaʿḳūb al-Nadīm (written in 377/987), ed. Flügel, i, 304, the *Hazār Afsān* are mentioned and a résumé of the frame-work story is given. The *Fihrist* adds that Abū ʿAbd Allāh b. ʿAbdūs al-Djahshiyārī (d. 331/942), the author of the *Book of the Viziers*, began to write a book in which he selected a thousand stories from the stories of the Arabs, the Persians, the Greek and other peoples. He collected four hundred and eighty stories, but he died before he had attained his purpose, i.e. to complete a thousand stories.

Contrary to de Sacy, Joseph von Hammer (*Wiener Jahrbücher*, 1819, 236; *JA*, 1e série, x; 3e série, viii; Preface to his *Die noch nicht übersetzten Erzählungen* (see above) maintained the genuineness of the passage in al-Masʿūdī with all its consequences. William Lane tried to prove that the whole book was the work of one single author and had been written in the period 1475-1525 (Preface to *The Arabian Nights Entertainments*, London 1839-41).

The discussion was resumed by de Goeje (*De Arabische Nachtvertellingen, De Gids*, 1886, iii, 385, and *The Thousand and One Nights* in the *Encycl. Britann.*, xxiii, 316). He collated the passage in the *Fihrist* (see above), in which the *Hazār Afsān* are said to have been written for Humāy (var.: Humānī), the daughter of King Bahman, with a passage in al-Ṭabarī (9th century), i, 688, where Esther is called the mother of Bahman and the name Shahrazād is assigned to Humāy; and consequently tried to show that the frame-work story of the Nights was connected with the Book of Esther. August Müller seems to have been the pioneer towards a freer attitude in his *Sendschreiben* on the subject to de Goeje (*Bezzenbergers Beiträge*, xiii, 222) and in his article in *Die deutsche Rundschau*, xiii, July 10, 1887, 77-96. He distinguished various layers in the work, one of which he supposed to have been written in Baghdād, whereas to another and larger one he assigned an Egyptian origin. The idea of various layers was worked out with greater accuracy by Th. Nöldeke (*Zu den ägyptischen Märchen, ZDMG*, 1888, 68) who gave an approximate definition of the texts, by which each could be recognized.

The contents of the Nights were described and considered by Nöldeke several times. In this respect Oestrup's *Studier over* 1001 *Nat*, Copenhagen 1891, are of special importance; they were translated into Russian by Krymski (*Izsliedowanie o* 1001 *noči*, Moscow 1905, with a long introduction) and into German by Rescher, "*Oestrups Studien über* 1001 *Nacht*" *aus dem Dänischen* (*nebst einigen Zusätzen*), Stuttgart 1925, and a French résumé with notes was published by Galtier, Cairo 1912. Other ingenious discussions of the subject were given by Horovitz, mainly in his article *Die Entstehung von Tausendundeine Nacht, The Review of Nations*, no. 4, April 1927; idem, in *IC*, 1927. See also Littmann, *Tausendundeine Nacht in der arabischen Literatur*, Tübingen 1923, and *Die Entstehung und Geschichte von Tausendundeiner Nacht* in the *Anhang* to Littmann's translation (mentioned above).

The earliest testimony to the existence of the book of the Thousand Nights was discovered by Nabia Abbott, *A Ninth-Century Fragment of the "Thousand Nights". New Light on the Early History of the Arabian Nights, Journal of Near Eastern Studies*, 1949. After that the work is mentioned by al-Masʿūdī and in the *Fihrist* (see above). In the 12th century a collection of tales called "The Thousand Nights and one Night" was known in Egypt as we learn from a certain al-Ḳurṭī who wrote a history of Egypt under the last Fāṭimid caliph (1160-71), and al-Ghuzūlī, who died in 815/1412, transmitted in his anthology a tale of the Nights, as Torrey recognized (*JAOS*, 1894, 42 f.). A MS discovered by H. Ritter in Istanbul which is of the 13th or 14th century contains four stories that are in the Egyptian recension. These stories are not stated to be a part of the Nights; they will be published and translated by H. Wehr on the basis of preliminary studies by A. von Bulmerincq. Then follow Galland's MS and a number of other MSS of the Nights which cover the period from the 15th to the 18th centuries.

We know then that in the common form of the Nights there are a Baghdād and an Egyptian part. Oestrup grouped the separate tales into three layers of which the first one was to comprehend the fairy-tales from the Persian *Hazār Afsāna* with the frame-work of the book, the second those which had come from Baghdād, and the third the stories which had been added to the body of the work; certain tales, as for example the extensive chivalric romance of ʿUmar b. al-Nuʿmān, were inserted when the number 1001 was taken in its literal sense. But the *Story of Sūl and Shumūl* in a Tübingen MS, which is professedly a part of the Nights and which was edited as such by Seybold, certainly never was an integral part of them, because in it a Muslim is converted to Christianity; in the true Nights Christians, Zoroastrians and pagans often adopt Islam, but a Muslim never adopts another religion.

The following forms of the Nights were established by Macdonald (*The earlier history of the Arabian Nights, JRAS*, 1924, 353 ff.)—meaning by that any collection of stories fitted into the frame-work which we know: i. The original Persian *Hazār Afsāna*, "Thousand Stories". ii. An Arabic version of the *Hazār Afsāna*. iii. The frame-work story of *Hazār Afsāna*, followed by stories of Arabic origin. iv. The Nights of the late Fāṭimid period; to its popularity al-Ḳurṭī testifies. v. The recension of the Galland MS. From notes in it that MS was in Syrian Tripoli in 943/1536 and at Aleppo in 1001/1592; it may, of course, be older. But it was written in Egypt. There remains the at present still unsolved problem of the relations between it and the other old and independent MSS; there are according to Macdonald at least six such MSS which must be considered.

Nabia Abbott (see above) stated the following six

forms. i. An eighth-century translation of the *Hazār Afsāna*. According to her belief this was most probably a complete and literal translation, perhaps entitled *Alf Khurāfa*. ii. An eighth-century Islamized version of the *Hazār Afsāna* entitled *Alf Layla*. This could have been either partial or complete. iii. A ninth-century composite *Alf Layla* containing both Persian and Arabic materials. While most of the former came undoubtedly from the *Hazār Afsāna*, other current story-books, especially the *Book of Sindbād* and the *Book of Shimās*, are not improbable sources. The Arabic materials, as Littmann had already pointed out, were not so slight or insignificant as Macdonald believed them to be. iv. The tenth-century *Alf Samar* of Ibn ʿAbdūs. Whether this was meant to include, among other materials, all the current *Alf Layla* and to supersede it, is not clear. v. A twelfth-century collection augmented by materials from iv and by Asiatic and Egyptian tales of local Egyptian composition. The change of title to *Alf Layla wa-Layla* belongs, in all probability, to this period. vi. The final stages of the growing collection extending to the early sixteenth century. Heroic tales of the Islamic countercrusades are among the most prominent additions. Persia and ʿIrāḳ may have contributed some of the later predominantly Far Eastern tales in the wake of the thirteenth-century Mongol conquest of those lands. The final conquest of Mamlūk Syria and Egypt by the Ottoman Salīm I (1512-20) closed the first chapter of the history of the Arabian Nights in its oriental homeland.

The title "Thousand Stories" may have been changed to "Thousand Nights" when, with the Arabs, the frame-work story and other stories were combined; that cannot have been done later than the 9th century. Originally "1000 stories" meant only a very large number of stories; in the same way it is said of Shahrazād that she had collected "a thousand books". For the simple mind even 100 is a high number, and "before 100 years" means—even for Oriental historians—the same as "a long time ago"; therefore the number 100 must not be taken in its exact sense. But 1000 is almost the same as "innumerable". And the Book of the Thousand Nights which was known at Baghdād scarcely contained a thousand separate nights. But why was 1000 changed to 1001? This change may partly owe its origin to the superstitious aversion to round numbers common among the Arabs as among other peoples. But it is very likely that it was also influenced by the Turkish idiomatic use of *bin bir* "thousand and one" for a large number: in Anatolia there is a ruin called *Bin-bir-kilise* "1001 Churches", but there are, of course, not nearly so many there. In Istanbul there is a place called *Bin-bir-direk* "1001 columns"; but there are only a few dozens of them there. The Turkish alliteration *bin bir* points to the origin of the Persian idiom *hazār yak* "1001" and of the title *alf layla wa-layla*. Since the 11th century Persia, Mesopotamia and Syria and the other countries of Eastern Islam were under the influence of the Turks. Thus the title "1001 Nights" at the beginning meant only a large number of nights, but later on the number was taken in its literal meaning, and it became necessary to add a great many stories in order to complete the number 1001.

The various component elements. If then India, Persia, Mesopotamia, Egypt and in some way the Turks were partners in the origin of the Nights we must assume that materials derived from all these countries and peoples are to be found in them. The first outer tests might be the proper names. There are Indian names like Sindbād, Turkish names like ʿAlī Baba and Khātūn; the names Shahrazād, Dīnāzād, Shāhzamān are Persian and occur, as de Goeje has shown, in Persian legends; so also Bahrām, Rustam, Ardashīr, Shāpūr and many others are Persian. However, by far the majority of names are Arabic, i.e. old Arabic names used among the Arabian bedouin and later Islamic names. Greek and European names occur in a few cases in stories treating of the relations between Muslims and Byzantines and Franks. Egyptian names refer to places and to months in their Coptic forms. Of Hebrew names chiefly Solomon and David occur; both play an important rôle in Islamic tradition. Besides them Āṣaf, Barakhiyā, Bulūḳiyā and others are named. But since in very many cases stories are transferred to other persons and frequently persons without names act in them the question of the names must not be stressed.

However, the frame-work system, which is very common in India but very rare in other countries, is a test of the Indian origin of certain parts of the Arabian Nights. In the Indian popular books it usually runs like this: "You may not do such and such a thing or else you will go the same way as so and so".—"How was that?" asks the other, and then the admonisher begins his story.

The foreign elements in the Nights have been carefully studied by Oestrup. One of the interesting statements he made was that in the Iranian fairy-tales the demons or supernatural powers act on their own account and independently, whereas in the more recent tales, especially in those from Egypt, they are always subject to some talisman or magic object; hence its owner decides the development of the action, not the Djinns and ʿIfrīts themselves. Only a short summary of the foreign elements in the Nights can be given here.

The frame-story is of Indian origin. That it consists of three different parts which originally were independent stories was shown by Emmanuel Cosquin in *Études folkloriques*, Paris 1922, 265. These parts are: 1. The story of a man who was grieved by a disloyal wife but whose grief was allayed when he saw that a high personality had the same misfortune. 2. The story of a demon or a giant whom his wife or his captive betrayed with many other men in the most audacious manner. This is the same as the tale told by the seventh vizier in the *Story of Sindbād the Wise*. 3. The story of a clever girl who by her skilful telling of stories averts an evil threatening her or her father or both of them. Of these three parts only the third one seems to have belonged to the original frame-work story, as indicated by al-Masʿūdī and by the *Fihrist*; in it, then, only the cruel king, the clever daughter of the vizier and her true old nurse were known. It is probable that the story of the clever daughter of the vizier came at an early date from India to Persia, where it was "nationalized" and combined with the other two parts of the frame-story. A number of tales in the Nights are of Indian origin: such are the stories of pious men that remind us of Buddhist and Jainist saints, the fables of animals, the story-cycles of *Sindbād* [*q.v.*] *the Wise*, and of *Djaliʿād and Shimās*. Indian motifs are to be found in different passages of the Nights: such are, e.g., the *Story of the Magic Horse*; the poisoning by means of the leaves of a book (by the physician Dūbān), a practice which points to Indian customs (cf. Gildemeister, *Scriptorum Arabum De Rebus Indicis loci et opuscula*, Bonn

1838, 89). All this passed through Persian before it reached the Arabs.

Quite a number of tales are of Persian origin, especially those fairy-tales in which the ghosts and the fairies act independently; see above. The tales which Oestrup enumerates as being of Indian-Persian origin are the following: 1) *The Story of the Magic Horse*; 2) *The Story of Ḥasan of Baṣra*; 3) *The Story of Sayf al-Mulūk*; 4) *The Story of Ḳamar al-Zamān and of Princess Budūr*; 5) *The Story of Prince Badr and of Princess Djawhar of Samandal*; 6) *The Story of Ardashīr and Ḥayāt al-Nufūs*. And according to him the relation between the *Story of ʿAlī Shār* and the Persian original, the former containing many details which recur in the probably later narrative of *Nūr al-Dīn ʿAlī and the Girdle-girl*, also to be found in the Nights, is uncertain. The *Story of the Jealous Sisters* and the *Story of Aḥmad and Parī Bānū* that are found only in Galland give a strong impression of being originally Persian, but Persian prototypes of them have not become known as yet.

Baghdād is situated in the region of ancient Babylonia: it is, therefore, probable that ancient Babylonian ideas should have survived there until Islamic times and might be reflected in the Nights. Even a whole story, the *Story of Ḥayḳār the Wise*, which in some MSS appears as a part of the Nights, is of Old Mesopotamian origin; it probably dates back to the 7th century B.C., and it found its way through the Jewish and Christian literatures into Arabic literature. Khiḍr the Ever-Youthful, has a Babylonian prototype; the journeys of Bulūḳiyā and the water of life fetched by Prince Aḥmad may seflect motifs of the Babylonian epic of Gilgamesh. But Khiḍr and the water of life were probably iransmitted to the Arabs by the Romance of Alexander, and the journeys of Bulūḳiyā became known to them through Jewish literature. Above all, the frequent anecdotes about the ʿAbbāsid caliphs and their court and also some anecdotes about their subjects belong to the Baghdād recension of the Nights. The *Story of Sindbād* [*q.v.*] *the Sailor* found its definite shape probably in Baghdād, the romance of *ʿUmar b. al-Nuʿmān* [*q.v.*] contains Persian, Mesopotamian and Syrian materials; the romance of *ʿAdjīb and Gharīb* points to Mesopotamia and to Persia; the story of the clever slave-girl *Tawaddud* [*q.v.*] originated in Baghdād and was in some respects reshaped in Egypt. The Stories of *Bulūḳiyā*, of *Sindbād* [*q.v.*] *the Wise*, and of *Djaliʿād and Wird Khān* were certainly known in Baghdād. But there is no certain proof that all these tales were parts of the Baghdād recension. The same is to be said of the four stories of the Istanbul MS found by H. Ritter (see above); it contains four of our Nights stories but does not refer to *Alf Layla wa-Layla*. These stories are: 1) *The Story of the Six Men*, i.e. of the six brothers of the barber of Baghdād; 2) *The Story of Djullanār the Sea-girl*; 3) *The Story of Budūr and ʿUmayr b. Djubayr*; 4) *The Story of Abū Muḥammad the Slothful*.

Egyptian origin is to be postulated of the stories in which the tricks of clever thieves and rogues are related, of the tales in which the ghosts and demons appear as servants of talismans and of magic objects, and of stories that might be called "bourgeois novels", some of which resemble modern romances of adultery. All these stories date, of course, in their present form from the time of the Mamlūk sultans and of Turkish rule in Egypt. But some of the motifs go back to Ancient Egypt. The clever rogue ʿAlī al-Zaybaḳ and his companion Aḥmad al-Danaf have their prototype in the bold *condottiere* Amasis, and the treasure of Rhampsinit is found in the story of ʿAlī al-Zaybaḳ, as Nöldeke pointed out. The monkey-scribe in the story of the three dames of Baghdād may have his prototype in Thot, the scribe of the Egyptian gods who is often represented as a monkey, or in Hanuman the monkey-leader of the Indian *Ramayana*. It has also been suggested that the ancient story of the Egyptian shipwrecked person is to be connected with Sindbād's journeys, and that the story of the capture of Jaffa by Egyptian warriors hidden in sacks recurs in the story of ʿAlī Baba; but these connections are not very likely; see Littmann, *Tausendundeine Nacht in der arabischen Literatur*, 22.

For possible Greek influences in the Nights see von Grunebaum, *Medieval Islam*, Chicago 1946, Chapter Nine, *Greece in the Arabian Nights*.

The various literary genres. It remains to give a summary account of the different classes of literature represented in the Nights; it is here, of course, impossible to mention every one of all the stories, as has been done in the *Anhang* to Littmann's translation. There six main groups were distinguished: 1) Fairy-tales; 2) Romances and novels; 3) Legends; 4) Didactic stories; 5) Humorous tales; 6) Anecdotes. A few examples of each group must suffice here.

1. The frame-story consists of three Indian fairy-tales. The tales which come first in all manuscripts (*The Merchant and the Djinnī*; *The Fisherman and the Djinnī*; *The Porter*; *The Three Calenders and the Three Dames in Baghdād*; *The Hunchback*) belong to this class; they are themselves examples of the frame-work system and contain some traits which remind us of Indian prototypes and even of some motifs which have parallels in stories from farther east. The best known fairy-tales are those of *ʿAlāʾ al-Dīn and the Magic Lamp* and *ʿAlī Baba*. Other examples are *Ḳamar al-Zamān and Budūr*, *The Jealous Sisters*, *Prince Aḥmad and Parī Bānū*, *Sayf al-Mulūk*, *Ḥasan al-Baṣrī*, *Zayn al-Aṣnām*.

2. The longest romance is that of *ʿUmar b. al-Nuʿmān* [*q.v.*] *and his Sons*; it has been discussed by Paret (*Der Ritterroman von ʿUmar an-Nuʿmān*, Tübingen 1927), and by H. Grégoire and R. Goossens (*ZDMG* 1934, 213: *Byzantinisches Epos und arabischer Ritterroman*). *The Story of ʿAdjīb and Gharīb* is the model of an Islamic popular romance. The stories of *the Porter and the Three Dames*, of *ʿAlāʾ al-Dīn Abu ʾl-Shāmāt*, of *Nūr al-Dīn and Shams al-Dīn*, of *Nūr al-Dīn and Maryam the Girdle-girl* might be called "bourgeois" romances or novels, as also the story of *Abū Ḳīr and Abū Ṣīr*.

Here the love-stories may be added. There are a great many of them in the Nights, and they comprise three groups: a) ancient Arabian life before Islam; b) urban life in Baghdād and Baṣra, love-affairs with girls or slave-girls in the cities or in the palace of the caliphs; c) love-novels from Cairo which are sometimes frivolous and lascivious. See Paret, *Früharabische Liebesgeschichten*, Bern 1927.

Also the stories of rogues and of seafarers are to be mentioned here. For *ʿAlī al-Zaybaḳ* see above; many short stories of the guardians are told before the rulers of Egypt. The famous story of *Sindbād* [*q.v.*] *the Sailor* is based on a book *The Wonders of India*, which contained adventures and sailors' yarns collected by a Persian sea captain at Baṣra in the 10th century. The first part of the story of *Abū Muḥammad the Slothful* is composed of sailors' stories and motifs of fairy-tales.

3. There are a few ancient Arabian legends inserted in the Nights: *Ḥātim al-Ṭāʾī*, *Iram the City of Columns*; *The Brass City*; *The City of Lebta*, which refers to the conquest of North-western Africa by the Arabs. Other legends refer to pious men and women, among them to pious Israelites (these need not necessarily be due to Jewish authors); the legend of *The Pious Prince*, who was a son of Hārūn al-Rashīd and became a dervish, is reminiscent of the famous legend of Alexius.

4. Didactic stories, fables and parables, especially of animals, are known to many peoples and have found their way into the Nights also, where most of them seem to have originated in India, as e.g. the two long cycles of *Sindbād* [*q.v.*] *the Wise* (*Syntipas*) and of *Djaliʿād and Wird Khān*, and many of the fables of animals, but they were sometimes remodelled in their Arabic forms. The long story of the clever slave-girl *Tawaddud* [*q.v.*] (in Spain *la doncella Teodor*, in Abyssinia *Tauded*) with its probable Greek prototype correctly discussed by Horovitz belongs in this category.

5. Humorous tales are the stories of *Abu 'l-Ḥasan or the Sleeper Awakened*, of *Khalīfa the Fisherman*, of *Djaʿfar the Barmakid and the Old Bedouin*, and of *ʿAlī the Persian*; the latter is a typical story of lies. In the stories of *Maʿrūf the Cobbler* and of *the Hunchback* there ary many humorous traits.

6. The group of anecdotes comprises here all the stories that are not classified in the preceding groups. Collections of anecdotes are the stories of the *Hunchback* and of *the Barber and his Brothers*, and they are combined to a comedy of great style. The other anecdotes are to be divided into three groups: those of rulers and their circles, those of munificent men, those taken from general human life. Those of rulers begin with Alexander the Great and end with the Mamlūk sultans: a few of them refer to the Persian kings, a very large number of them refer to the ʿAbbāsid caliphs, above all to Hārūn al-Rashīd who became the ideal ruler in the opinion of later Muslims. Some of these anecdotes may not originate from Baghdād but from Egypt where they were ascribed to him. The munificent men about whom the Nights tell are mainly Ḥātim al-Ṭāʾī, Maʿn b. Zāʾida and the Barmakids. The anecdotes from general human life are of several kinds: they tell of rich and poor, of young and old, of sexual abnormities (*Wardān and the Woman with the Bear*; *The Princess and the Monkey*), of bad eunuchs, of unjust and of clever judges, of stupid schoolmasters (a type known in Greek and Roman literature as well as in modern Egyptian Arabic tales). The *Nocturnal Adventure of the Caliph* transmitted only by Galland contains three long anecdotes told at large and intermingled with motifs from fairy-tales.

There are about 1420 poems or fragments of poetry in the 2nd Calcutta edition, according to Horovitz (in *Festschrift Sachau*, Berlin 1915, 375-9) Of these a number of 170 repetitions must be deducted, so 1250 insertions of poetry remain. Horovitz has been able to prove that those insertions whose authors he could discover are to be dated from the 12th to the 14th centuries, i.e. from the Egyptian period of the history of the Nights. These poems and verses are mostly of the kind that they might be omitted without disturbing the course of the prose texts, and, therefore, have been later added to them.

Bibliography: Has been given in the course of the article. Here special attention should be called to Oestrup's *Studier* and their annotated translation by Rescher (see above), to N. Elisséeff, *Thèmes et Motifs des Mille et Une Nuits*, Beirut 1949, and to the full bibliography given by Brockelmann, II, 72-4, S II, 59-63. ALGERIA (Ar.: BARR AL-DJAZĀʾIR), modern term indicating the central part of northern Africa between Morocco in the West, and Tunisia in the East.

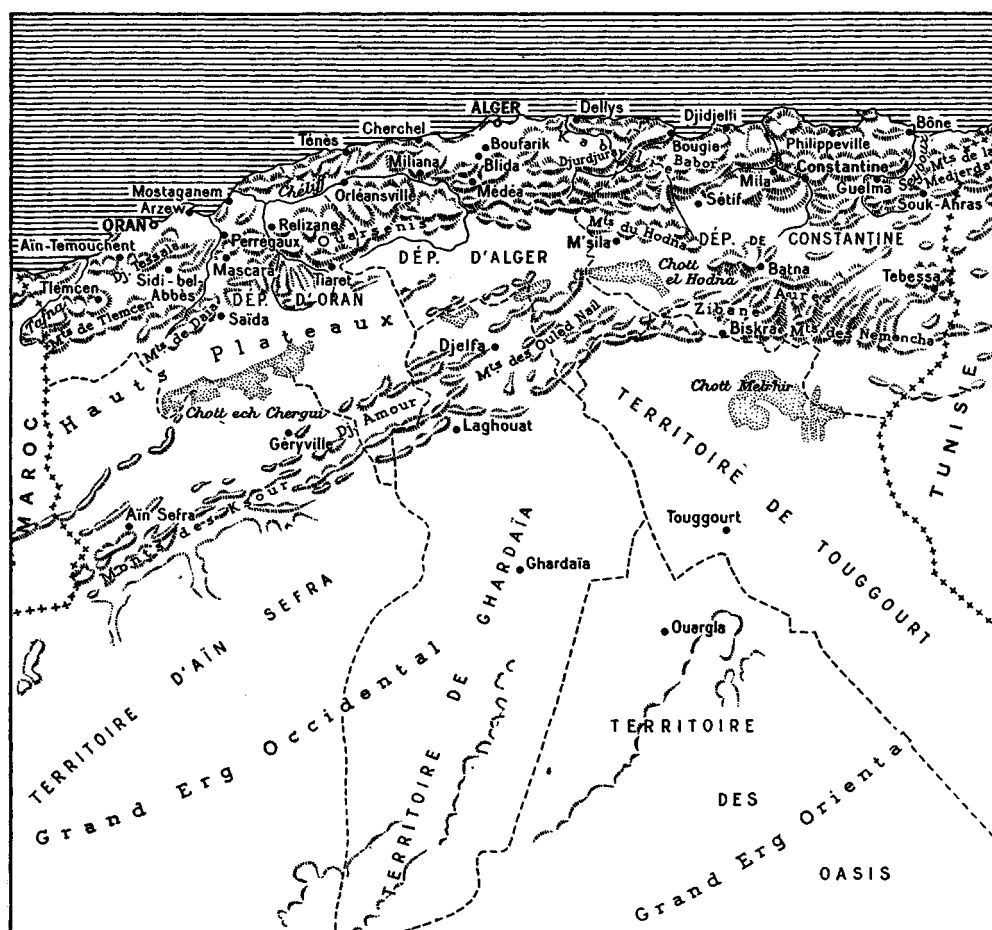
(i) — Geography.
(ii) — History:
 (1) To the 16th century.
 (2) The Turkish period.
 (3) After 1830.
(iii) — The population.
(iv) — The institutions.
(v) — Languages.

(i) GEOGRAPHY.

Algeria comprises the central section of North Africa (also called Maghrib, Barbary, Africa Minor, the Atlas region [cf. MAGHRIB] and a large part of the Sahara, and has an area of 2,191,464 sq. km. Situated between latitudes 37° and 19° N., it is bounded by Morocco and Spanish Rio de Oro in the West, by French West Africa and French Equatorial Africa in the South, and by Libya and and Tunisia in the East. Algeria proper, which extends roughly to the southern slopes of the Saharan Atlas, covers only 14.6% of this area, or 320,000 sq. km. It is 1000 km. long, with 1,300 km. of coastline; it is 350 km. in breadth at the Moroccan frontier and 240 km. at the Tunisian, and extends from lat. 32° 1° to 35° 1' in the West, and from lat. 34° 9' to 37° 1' in the East. Tlemcen is at the same latitude as the oasis of Biskra. Algeria proper is a plateau with a mean altitude of 900 m. Is is traversed by the Atlas Mts., a southern branch of the Alpine chain, which were thrown up in a series of folds during the tertiary and at the beginning of the quaternary period, on the edge of the hard Saharo-African platform. They are divided into two main groups, the Tell Atlas in the North and the Saharan Atlas in the South, which come together in the east and enclose upland plains.

The Tell. The Tell Atlas in relief presents a complex picture, by reason of its excessively folded structure and of the extensive erosion caused by the Mediterranean rains and by the fact that its coastline is near sea level. The successive ridges rise parallel to or at an angle to the coast, cut by deep transverse valleys and separated, in the West, by longitudinal depressions. South of the hills of the Sāḥil (Sahel) of Oran, Dahra, and Benī Menāṣer, and the mountains of Zaccar (1,579 m.) stretches a depression 350 km. in length, following the line of the Sebkha of Oran, the low marshy plains of the Macta and the Mina, and the valley of the lower Chélif (Shalaf). It is


bounded in the South by lines of hills which rarely exceed 1000 m.: the Tessala, Ouled Ali, and Beni Chougran mountains, and the great massif of the Ouarsenis (Wan<u>sh</u>arīs) and the Maṭmāṭa which rises between the Chélif valley and the high plains. To the West of the valley of the Mina, the inner plains are dominated to the South by table-like limestone and sandstone formations, which rise to between 1000-1500 m.: these are the plateaus of Oran.

To the East of Algiers and the hills of the Sahel the mountain formations are higher and more massive. Between the plains of the Mitī<u>dj</u>a and Bône (Būna) there is no important depression, except that of the Wādī Sāḥil-Soummam with its western extension. The mountains of Kabylia, between the Mitī<u>dj</u>a and the Edough, are of great size and are dominated by a "limestone spine" formed by the <u>Dj</u>ur<u>dj</u>ura (highest peak Lālla <u>Kh</u>adī<u>dj</u>a, 2,308 m.) [see KABYLIA], the Babor (Bābūr) (2,004 m.), and the highest peaks of the Numidian chain. To the South, the Mitī<u>dj</u>a and the Medea mountains, the Bībān ranges, and the Constantine and Me<u>dj</u>erda mountains, composed of non-durable marl and schistose material, have comparatively soft or deeply-furrowed contours. The littoral, precipitous and rocky nearly everywhere, affords scant natural shelter against the N-W gales; the bays of Mers el Kebir-Oran (Mars al-Kabīr), Arzeu, Algiers, Bougie (Bi<u>dj</u>āya) and Bône face East.

The High Plains. The high plains, wrongly termed high plateaus, are monotonous expanses broken by isolated rocky humps whose moderately-folded structure makes them similar to the Saharan Atlas. Situated below the Tell Atlas, and subject to a climate which is already arid, they form a succession of enclosed basins: the *wādīs* discharge their alluvia and their waters into *sebk<u>h</u>a* (or *zahrez*), whose surface in summer sparkles with salt, while their margins (*<u>sh</u>oṭṭ*) have a covering of salt-loving plants. The high plains of the West, with the Gharbi (*<u>gh</u>arbī*) and Chergui (*<u>sh</u>arḳī*) *shoṭṭs* (1000 m.), the Zahrez (800 m.) and the shallow basin of the Ḥoḍna ([*q.v.*] 400 m.), drain partially into the sea. East of the mountains of the Ḥoḍna (1,890 m.) and the Belezma (2,094 m.), the high plains of Constantine (900-1100 m.) abound in mountain massifs which are extensions of the mountain chains of the Ḥoḍna, the Belezma and the Awrās.

The Saharan Atlas is formed, from Morocco to Biskra, by a group of asymmetrical minor ranges running SW-NE, the debris of moderately-folded ranges; they are separated by large depressions and

are half-buried under their own detritus. The Ksour (Ḳṣūr; 2,236 m.), the Amour (ʿAmūr [*q.v.*]; 2,008 m.) the Ouled Nail and the Zībān (or Zāb) mountains drop towards the NE.; they are easily negotiated. East of Biskra, the Aurès [see AWRĀS] is the largest and highest Algerian massif (D̲j̲abal Chélia, 2,329 m.), and is a succession of peaks and depressions running SW-NE.

The Desert. The varied terrain of the Atlas region contrasts with the extremely monotonous expanse of the desert; for instance its severe plateaus or *ḥamāda*, its immense plains which constitute enclosed basins and which are partly covered with sandy or pebbly *reg*, and finally its *erg*, vast agglomerations of sand-dunes which cover only 1/5 of its surface [see AL-ṢAḤRĀʾ].

The climate is Mediterranean in the Tell Atlas, but it deteriorates in the high plains and the Saharan Atlas where it becomes an arid without actually becoming a desert climate. On the littoral the variation in the mean monthly temperatures is small, because of the humidity. The climate is becoming continental; considerable heat has been known in depressions sheltered from the sea winds, with cold winters in the mountains and on the high plains. Everywhere, except on the littoral, where it rarely occurs, the sirocco (*s̲h̲ehīlī*) brings temperatures of 104° F and higher several times a year; in winter, on the other hand, snow covers the principal massifs for 2-3 weeks.

The summer is dry, apart from a few storms, and rain falls principally from October to May. The massifs of the Tell Atlas to the East of Algiers receive more than 31 ins. of rain, and sometimes more than 39 ins. The plains of the West, and the Ḥodna, receive only some 7-11 ins., except on their northern boundary, and the Saharan Atlas 11-15 ins. on its northern slopes. The desert receives less than 7 ins.

Only the main rivers of the Tell Atlas have water all the year round, and even then their summer flow is very small: these are Mediterranean torrents whose spate is sudden and violent. Such are the Tafna, the Macta (formed by the confluence of the Sig and the Habra), the S̲h̲alaf (Chélif), the Sebāw (Sebaou), the Wādī Ṣāhil, the al-Wādī al-Kabīr, the Seybūs (Seybouse), the Med̲j̲erda and its tributary, and the Wādī Melleg (the lower courses of the last two belong to Tunisia). Not one of them is navigable; some are used for irrigation. On the high plains and in the Saharan Atlas the *wādīs* contain water for only part of the year, and then only in their upper courses; many only contain water after heavy rains.

The vegetation has been much impaired by man. Thin forests of non-deciduous and resinous trees still cover the Tell mountains and certain more arid massifs; there are cork-trees on the siliceous and well-watered mountains of the Kabylias and the Bône region; evergreen oaks, or holm-oaks, indifferent to the soil, even in the Awrās; Aleppo pines on the limestone of the humid regions and on mountains already dry; Barbary thuyas and Kermes oaks in the Oran Tell, and thinly-sown junipers on the drier slopes. A few well-watered peaks still support plantations of cedars. Agricultural expansion and the demand for timber and charcoal have caused the forests to recede; the area under cultivation has chiefly increased at the expanse of dense thickets of wild olives and mastic trees, a characteristic of heavy, well-watered soils, and of a thin undergrowth of jujube trees on the drier plains of the Tell Atlas and the high plains of Constantine.

The areas which receive less than 13 ins. of rain annually are the regions of the steppe, a formation characterized by the scarcity of bushes and trees, especially of the latter, and by the presence of perennial herbaceous plants such as alfa (10 million usable acres) and esparto, of small ligneous plants such as the artemisia, salt-loving plants growing on the saline soil of the *s̲h̲oṭṭs*, and of an annual herbaceous vegetation which burgeons every spring. The desert is only an open steppe without alfa.

Algeria, therefore, comprises two great natural regions in addition to the desert: a Mediterranean region, where the cultivation of cereals, wheat and and barley, and of trees like the olive, the fig and the almond is practicable without irrigation, and consequently where a sedentary mode of existence possible: it is known to the indigenous peoples as the Tell; and, secondly, the steppes, where cultivation is not practicable without irrigation or flood waters, and which is devoted to the breeding of livestock on a migratory basis, and to nomadism: natives know this area and that of the desert under the common name of Sahara. This distinction between Tell and Sahara is a fundamental one in the history of the country no less than in its geography.

(ii) HISTORY.

(1) *To the 16th century.*

The region which later became known as Algeria presents a framework not readily acceptable to the historian of Muslim North Africa. The frontiers which are shown on the map cannot set bounds to his field of study; they only assume any significance with the establishment of the Turkish regency of Algiers in the course of the 16th century. During the nine hundred years prior to this event, the future Algeria, which comprises what the Arab writers call central Mag̲h̲rib (al-Mag̲h̲rib al-Awsaṭ) together with part of Ifrīḳiya (or near Mag̲h̲rib), was closely linked with the two neighbouring countries, being almost invariably either subject to rulers coming from these countries or in fear of their domination. Although, in comparison with the two other subdivisions of Barbary or Mag̲h̲rib, this central region appears to be a large rural area with few towns, populated by nomadic shepherds and hill farmers, it has nevertheless through the centuries played a not inconsiderable part in the history of the Muslim West. Only the more important episodes in its history will be mentioned here.

In the middle of the 1st/7th century, North Africa was invaded by the Arabs, the propagators of Islam. The military power of Byzantium rapidly

disintegrated; but the reduction of the Berbers was a more difficult task. Resistance was primarily organized in central Maghrib; inspired, it is said, by Kusayla [*q.v.*], chief of the Awrāba, native bands arose which, near Biskra, engaged Uḳba b. Nāfiʿ [*q.v.*]—a battle in which the latter lost his life (63/682). The Awrās in particular seems to have been used as a strongpoint in the struggle against the Arabs; it was in the foothills of this mountain massif that the Kāhina [*q.v.*], legendary queen of the country, witnessed, after a brilliant success, the destruction of Berber independence (74/693).

The central Maghrib again became the centre of autochthonous resistance in the 2nd/8th century, when the Berbers had become converted en masse to Khāridjism. Tlemcen, where Abū Ḳurrā, chief of the Banū Ifran [*q.v.*] (148/765), was in command, was at first their chief centre. In the 3rd/9th century Tīhert (near the modern Tiaret), capital of the Rustamid [*q.v.*] *imāms*, became the centre of Berber Khāridjism.

The position of this central region, on the borders of the territory which the Aghlabids of al-Ḳayrawān held in the name of the ʿAbbāsids, explains how the Fāṭimid [*q.v.*] power was engendered there among the Kutāma [*q.v.*] Berbers of Lesser Kabylia at the end of the 3rd/9th century. These new masters, however, were not accepted without a struggle; the Awrās and its environs witnessed the terrible revolt of the Man with the Donkey, in which the Fâṭimid cause was nearly lost [see Abū Yazīd al-Nukkārī].

Taking over the role of the Kutāma, the Ṣinhādja [*q.v.*; see also Zīrids] of central Maghrib became, in the 4th/10th century, the most useful allies of the Fāṭimids and supported their policy of opposition to the Zanāta [*q.v.*], who were vassals of the Umayyads of Spain. The Zanâta were for the most part nomads, and frequented the central and western plains. The Ṣinhādja were settled tribes, and inhabited the central and eastern mountain regions; they founded or developed towns, such as Ashīr and the Ḳalʿa, capital of the Ṣinhādja Banū Ḥammād [see Ḥammādids]. This latter kingdom experienced the repercussion of the serious events which occurred in Ifrīḳiya. The invasion of the Banū Hilāl [*q.v.*] Arabs in the middle of the 5th/11th century, which destroyed the kingdom of al-Ḳayrawān, caused an influx into the Ḳalʿa of merchants and artisans, and palaces were built there which betrayed the influence of Fāṭimid Egypt and of Persia. But it was not long before the Arab scourge menaced, in their turn, the Banū Ḥammâd, who emigrated to Bidjāya (Bougie).

While, in what was later the province of Constantine, the power and prosperity of the former rulers increased, the future provinces of Oran and Algiers acquired new masters. Emerging from Morocco, the Almoravids (5th/11th century) [see al-Murābiṭūn] overran the country as far as Algiers; the Almohads (6th/12th century) [see al-Muwaḥḥidūn and Muʾminids] extended their sway over the whole of North Africa. Both dynasties, which had in addition annexed Muslim Spain, enriched the cities of their Berber dominions, particularly Tlemcen, with the products of the magnificent civilization of al-Andalus.

At the beginning of the 7th/13th century, the great Almohad empire collapsed, and Tlemcen, which had escaped ravage et the hands of the Arabs and the Almoravid Banū Ghāniya [*q.v.*], became the capital of the Banū ʿAbd al-Wād [see ʿAbd al-Wādids], formerly Zanâta nomads. This new kingdom achieved real economic prosperity; but it was constantly threatened by the Marīnids, its Moroccan neighbours, and, at the beginning of the 10th/16th century, it was annexed by the Turks of Algiers.

It was the appearance of the Spanish off the small Berber port of Algiers which led to Turkish intervention in the central region of North Africa and made Algiers the centre of a vassal State. For nearly three centuries piracy, a substitute for holy war, provided the Regency of Algiers with important resources. The country itself, which later became Algeria, and which was divided into three provinces, to some extent evaded the control of its Levantine masters, and its nomadic and settled populations pursued in relative independence an archaic mode of existence, the history of which is, and will doubtless long remain, obscure to us.

(G. Marçais)

(2) *The Turkish period.*

The establishment of the Turks in Algiers was not the result of a deliberate policy of expansion planned and carried out by the Ottomans. It was, on the contrary, at least at its inception, a private venture by two intrepid corsairs, known in Western sources as the Barbarossa brothers, ʿArūdj [*q.v.*] and Khayr al-Dīn [*q.v.*]. These two, with a great reputation for valour gained in hunting down Christian vessels in the Mediterranean, came to the rescue of Islam in

Africa, which they saved from the hands of the Spaniards. In 922/1516, the inhabitants of Algiers appealed to ʿArū̲d̲j̲, who proclaimed himself sultan, and occupied Miliana, Medea, Tenes and Tlemcen. He was killed at Tlemcen after resisting siege by the Spanish for six months (924/1518). K̲h̲ayr al-Dīn restored the situation, which had been rendered momentarily critical by the death of his brother, by presenting the Ottoman Sultan Selīm with the newly-acquired territories, thus gaining both increased prestige and the military and financial aid which he needed. He extended his authority over Collo, Bône, Constantine and Cherchell, and 1529 forced the surrender of the Peñon of Algiers, a fort which the Spanish had erected on an islet some 300 yards from the shore. In 940/1533 K̲h̲ayr al-Dīn was appointed commander-in-chief of the Ottoman fleet, and was replaced at Algiers by *beylerbeys* who administered the country either directly or through lieutenants until 995/1587. Aspirations to independence on the part of some of these officials led the Ottoman Government, in 1587, to replace them by *pas̲h̲as* appointed for a term of three years. The *pas̲h̲as* were eclipsed, after 1070/1659, by the *ag̲h̲as* of the army corps, who were in turn succeeded by a new power, that of the *deys*, who ruled until the capture of Algiers by France. The triennial *pas̲h̲as*, *ag̲h̲as* and *deys* were more often than not tools in the hands either of the army corps (*od̲j̲aḳ*), recruited primarily from the townsmen of Anatolia, or of the *ṭāʾifat al-ruʾasā*, a guild of corsair captains which, for three centuries, furnished the Algerian treasury with the greater part of its resources. The four *ag̲h̲as* who reigned successively from 1659-71 were all assassinated, and fourteen of the twenty-eight *deys* met the same fate.

The internal organization of the Algerian State is obscure; the scant information of a reliable nature which is available to-day deals for the most part with the era of the *deys*. The *deys*, when they managed to stay in power, governed as absolute sovereigns assisted by a council (*dīwān*) composed of the *k̲h̲azinedār* or *k̲h̲aznad̲j̲ī* (treasurer), the *ag̲h̲a* of the camp (commander of the troops), the *wakīl al-k̲h̲ard̲j̲* (head of naval administration), the *bayt al-māld̲j̲ī* (trustee of vacant estates), and the *k̲h̲od̲j̲at al-k̲h̲awl* or *atk̲h̲od̲j̲an* (receiver of tribute).

With the exception of the district of Algiers itself which constituted the *dār al-sulṭān* and was divided into seven regions (*waṭan*) administered by Turkish *ḳāʾids* under the direct control of the *dey*, the whole country was divided into three provinces (*beylik*), each under a *bey*, which anticipated the later French provinces. These were the province of Tīṭarī, with Medea as its chief town; the eastern province with Constantine as its centre; and the western province, the capital of which was successively Māzūna, Mascara and, after 1792, Oran. The *beys*, appointed and dismissed by the *dey*, ruled their provinces with absolute authority, assisted by *ḳāʾids*. In the eyes of the central government, they were no more than revenue collectors, tax-farmers who contracted, usually having bought their offices, to pay into the state coffers large sums, the size of which was determined in Algiers. The sum contracted was payable during the financial year, the commencement of which coincided with the appointment of the *bey*, in several instalments, effected by the *bey*, his lieutenant and a courier. The *bey* appeared in person at Algiers during the spring following his appointment and thereafter every three years. His lieutenant travelled to Algiers twice a year, spring and autumn, and the courier, whose office was occasionally discharged by an official described in the archives at Algiers as *wakīl-i sipāhiyān*, went to the capital regularly every month, or every two or three months. The sums remitted to the Treasury by each official remained constant, but each official remitted a different amount. This organization seems to have been designed solely to enable the *dey* to exercise the closest supervision of the provincial governors, and to dismiss them at the slightest sign of any shortcoming.

This preoccupation with financial matters was apparent throughout the internal organization of Algeria under the Turks. All commissions and offices involving the collection of taxes, dues, imposts or fines were farmed out by the State for sums payable, according to circumstances, in one or more annual instalments. Such a system gave rise to a host of abuses and led to exploitation of the people on such a scale as to render any attempt at winning their sympathies impossible. Moreover, Turkish ascendancy existed more in theory than in fact, and in their garrison-towns in the interior of the country (Bid̲j̲āya, Bord̲j̲ Lehaou, Constantine, Medea, Miliana, Māzūna, Mascara, Tlemcen) the Anatolian *yoldas̲h̲* had often the appearance of troops under siege. In order to maintain their own position, the Turks were obliged to inflame tribal rivalries; the *mak̲h̲zen* tribes, when they espoused the Turkish cause, secured not only various financial immunities but also the right to oppress subject tribes (*raʿāyā*) and to exterminate rebel tribes. At the same time, the Turks established military colonies (*zumūl*) on all the main communication routes. Thus the Kabylian massif was ringed with posts responsible for ensuring the free passage of troops. Finally the Turks endeavoured to conciliate the religious orders. But they were not entirely successful, and the revolts which broke out at the beginning of the 19th century in in the province of Oran and in the Bābūr Kabylia were the work of the powerful Darḳāwa order encouraged and supported by the S̲h̲arīfs of Fez.

The Turks had no thought of improving the territories they conquered. The future of Algeria, they considered, did not lie in its hinterland. They had come by sea, and they continued to look seawards, and Mediterranean piracy provided the major part of their revenue. The 17th century was the golden age of privateering. In Algiers, about 1650, there were nearly 35,000 captives in the city prisons. Spain made several unavailing attempts to capture Algiers (1541, 1567, 1775). But thereafter French and British naval demonstrations checked the Algerian mariners' piratical career, and their power declined. Their crews became less audacious. Only one *raʾīs*, Ḥamīdū, deserves mention in the 18th century for the temerity of his exploits. After the middle of the century Algiers, impoverished and shorn of its former importance, suffered a decline in population, a decline hastened by famine and plague. In 1816, after the Congress of Vienna, when Lord Exmouth and the Dutch admiral Van der Capellen, the representatives of Europe, arrived to bombard the town, there were only 1,200 slaves in the prisons. On the eve of the French invasion, Algiers, which had at one time had 100,000 inhabitants, had been reduced to barely 40,000.

To sum up, little is known even now of the history of Algeria under the Turks; it is a period which has not aroused much interest. At that time, however, the frontiers of the region situated between present day Morocco and Tunisia, corresponded for the

first time with the frontiers drawn on the map of Barbary as we know it to-day. Moreover, the fusion between the Arab and Berber elements of the population had become more complete. Algeria entered on its career as an entity, and Algiers attained the status of a capital.

(3) *After 1830.*

Following a dispute concerning the supply of wheat, the *dey* of Algiers Ḥusayn insulted Deval, the French Consul. The Government of Charles X instructed the fleet to blockade the old pirate stronghold. In 1830, influenced by considerations of internal policy, Polignac, the chief minister, decided, despite British objections, to send an expeditionary force to Algiers. The *dey* surrendered on 5th July and embarked with the majority of his janissaries. France, which did not aim at permanent occupation, entered into negotiation with the other powers. At first the July Monarchy was perplexed by the "embarrassing legacy" of the previous régime. It decided to begin with to confine itself to a limited and temporary occupation. It was not until 1834 that a Governor-General was appointed following the report of an "African Commission". Until 1841 the French occupation, frowned on by the Chambers, was limited to possession of the principal ports and their environs.

Meanwhile, the situation had changed in the interior. The Turks, the *ḳul-oghlus*, and the former *makhzen* were harassed by the Arabs, and various native states came into being. The *bey* of Constantine, Aḥmad, consolidated his power within his province. In the west, after a period of anarchy, the people accepted or were subjected to the rule of the marabout ʿAbd al-Ḳādir [*q.v.*], who was conspicuous for his bravery, his diplomacy and his organizing ability. French policy vacillated between collaboration with the former *makhzen* and dealings with the new Arab chiefs. But although ʿAbd al-Ḳādir twice agreed to sign treaties which strengthened his position, Aḥmad refused, and repulsed a French army before Constantine in 1836. The following year a new expedition captured the town, and France decided to effect a definitive occupation of the eastern province. In 1839 ʿAbd al-Ḳādir declared war on France. The conduct of operations during Marshal Valée's governorship was apathetic. General Bugeaud was despatched to Algeria with a large force and, by employing new tactics, he succeeded, between 1841 and 1847, in crippling the power of ʿAbd al-Ḳādir, in suppressing the risings organized in the mountains by religious agitators, in defeating in 1844 the army of the Sultan of Morocco, who supported the rebels, and in beginning the subjection of the nomads of the south. He put in hand the organization of indirect rule through "Arab bureaus", and encouraged European colonization in the coastal plains by populating villages, virtually military colonies, which were designed to consolidate his work.

These colonies were reinforced in 1848 by an influx of Parisian workers who formed forty-two new villages, followed by colonists of all kinds, who were given small grants of land by the State or who set themselves up on their own account.

The occupation of the country proceeded under the Second Republic, and at the beginning of the Second Empire, by the annexation of the oases and of Kabylia. In order to protect Algeria from the nomads of the south, and to control the desert trade routes, fortified posts were established on the plateaus, and columns scoured the Saharan borders. Kabylia, which was independent during the Turkish era, had already been penetrated by two expeditions under Bugeaud, and by the campaigns of Saint-Arnaud and Randon. France was thus enabled to extend her control over the Kabylia of the Babors, the Oued Sahel region and the Sebaou valley. The Kabylian confederations of Djurdjura held out longer, and were subjugated by Marshal Randon in 1857. France allowed the people to retain their municipal organization and their customs. Since that time peace in Algeria has not been disturbed by any general uprising. The insurrection of 1871 was the result of Germany's defeat of France, of the reduction in the strength of the garrisons, and the discontent of the great Moḳrānī family. The Medjana, both the Kabylias, parts of the department of Algiers, and the southern half of the department of Constantine, rebelled. The rebels massacred colonists, and threatened the Mitidja. Admiral de Gueydon, appointed Governor-General of Algeria, restored order. The rebels were heavily fined, and over a million acres of land were confiscated and set aside for colonization. Again in 1881 a comparatively serious revolt broke out in the south of the department of Oran, led by Bū ʿAmāma. This led to the establishment of a line of permanent posts on the southern edge of the plateaus. A revolt in the Sétif (Saṭīf) and Guelma (Ḳālama) areas in 1945 caused the death of about 100 Europeans, but was of short duration and was severely repressed.

The organization and colonization of Algeria since the time of Bugeaud have passed through several phases characterized by the application of quite distinct methods. The Second Republic favoured a policy of assimilation and of French colonization. The civil territory of the three departments was placed under prefects responsible for the administration of the colonists. The remainder was in the hands of the military authority under the control of the Governor-General, the supreme head of the "Arab bureaus". The native population was governed by Muslim chiefs, appointed and supervised by the military administration. This organization continued to exist under the Second Empire. Under Randon's governorship, European colonization was increased and the economic framework of the country was built up. Algeria was visualised as a source of

tropical foodstuffs; but the crop which succeeded best was corn, the colonists' crop until about 1881. An economic crisis and the increasing claims of the colonists, who were handicapped by the limited scope of their concessions and who wished to acquire land made available through the establishment of cantonments, led the Government to renew the policy of assimilation. From 1858-60, the country was governed from Paris by a Ministry for Algeria and the Colonies, entrusted at first to Prince Napoléon, and them to the Comte de Chasseloup-Laubat. The disorder of the administration forced Napoléon III to restore military government under Marshal Pélissier and, after the latter's death in 1864, under Marshal Mac-Mahon. During this period, despite opposition from the colonists, the Emperor tried to make Algeria an "Arab Kingdom". He protected the tribal collective lands by the *senatus consultum* of 1863; by that of 1865, Muslims were allowed to adopt French nationality.

In 1870 the colonists expelled the imperial agents and set up the revolutionary government of the "commune" of Algiers. The Government headed by Thiers decided on the establishment of a civil administration. From that time, although the first two governors, Admiral de Gueydon and General Chanzy, came from the armed forces, the civil territory increased steadily in extent and the "Arab bureaus" gave way to "mixed communes".

Complete administrative and financial autonomy was achieved in 1900. The powers of the Governor General were increased, and the budget was henceforth voted by the "Délégations financières", a body representing the various economic interests in the country. Algeria was empowered to raise loans in order to improve its industrial plant, ports, roads, railways, dams etc. An era of prosperity was inaugurated. More varied types of crops were grown, and over an ever-increasing area. European colonization was stimulated; the outlay necessitated by increasingly scientific agricultural methods gave it a capitalist character unknown before the large-scale cultivation of the grape and of citrus fruits. New mines of iron, zinc and phosphates were developed. The native population increased as the result of a high birth-rate coupled with a decreased mortality rate, the product of more hygienic methods. The economic achievement was very considerable, but social policy continued to be paternal in spirit.

Algeria played a prominent part in the 1939-45 war. After the Anglo-American landings in 1942, a French liberation force was organized there which took part in driving the Germans and Italians out of Tunisia, and participated in the Italian compaign and in the fighting in France. In recognition of the services rendered by Muslims during this common effort, the political régime was improved by the creation of an Algerian Assembly, elected by universal suffrage and consisting of two houses, European and Muslim, with equal rights. The work of economic development was resumed on a more generous scale; a comprehensive scheme for the education of Muslims was drawn up, and an era of social reform was ushered in.

(M. Emerit)

(iii) Population.

Demography. The total population of Algeria, according to the census of 31 Oct. 1948, is 8,681,785, which represents a large increase as compared with previous censuses. It comprises 7,721,678 Muslims and 960,107 non-Muslims; the latter include 876,686 French and 45,586 other Europeans, of whom $^3/_4$ are Spanish. More than 75% of the Europeans live in the cities. In the country they are found chiefly in the Tell, especially in the wine-growing and market-gardening districts. In the department of Oran most of the French are of Spanish origin.

The majority of the Muslims live in the rural areas, and the movement to the towns is a recent phenomenon: 1/5 of them now live in them. They form the majority everywhere except in Algiers and Oran. The population of the largest towns (1948) is as follows:

	Muslims	*Non-Muslims*	*Total*
Algiers (incl. suburbs)	225,539	247,722	473,261
Oran (incl. suburbs)	90,678	174,036	264,714
Constantine	77,089	37,249	114,338
Bône	56,614	44,541	105,155

There are five other cities of from 50-100,000 inhabitants: Tlemcen, Philippeville, Sidi-bel-Abbès, Mostaganem, and Sétif, all situated in the Tell. The distribution of the population in the administrative districts and its density per sq. km. are as follows:

Department of Oran	1,990,729	density 30
Department of Algiers	2,765,896	density 50
Department of Constantine	3,108,165	density 35
Southern Territories	816,993	density 0.4

The most populous regions are those of the Tell Atlas where the density per sq. km. generally exceeds 30 and sometimes 60 (Trārā, the Algiers district, the Kabylias); it reaches 114 in the purely rural and mountainous arrondissement of Tizi Ouzou, but drops to between 10 and 30 on the high plains of Constantine (except in the NW) and in the Awrās and the Ḥodna, to less than 10 on the steppes, and less than 1 in the desert.

Ethnography. The Muslim peoples of Algeria, the Berbers [*q.v.*], have an obscure origin. Of white race, they are, and apparently have been since remote antiquity, of various physical types. The influx of foreigners has not been on a large scale in the course of the centuries, except for that of the Arabs (i.e., Muslims from the East) in certain

regions, and of Mediterranean elements in the cities, where the most recent arrivals are the Andalus (Muslims returning from Spain), Turks and Europeans. But although most of the population calls itself Arab because it speaks Arabic, although the descendants of Turks who married Algerian women call themselves *ḳul-oghlu* (*kouloughli*), although the older citizens, of considerably mixed origin, pride themselves in the term *ḥaḍar* while others boast of being "Andalus", the bulk of the population has changed little, anthropologically, and has remained Berber. In the Saharan oases the coloured Ḥarāṭīn [see ḤARṬĀNI] cultivate the soil, and the coloured races of the Sudan were for long sold as slaves (*ʿabīd*) in the towns. In practice, the terms "Arabs" and "Berbers" are used for Arabic-speakers and Berber- speakers.

29% of Algerian Muslims still speak Berber; they are chiefly the Shāwiyya (Chaouia), who spill over extensively from the Awrās, and the Kabyles (*ḳabāʾil*) west of Djidjelli; there are also the Benī Menāṣer of the mountains between Tenes and Cherchell, and small groups in the Mitīdjian Atlas, the Wansharīs (Ouarsenis), the Tlemcen Mountains and, in the South, the mountains of the Ksour. In the Sahara Berber is spoken by the Tuareg [*q.v.*], by the Mzābites [*q.v.*] and some Ksourians (villagers) of the Saoura, Gourara, Wargla and the Wādī Rīgh (Oued Righ). The Berber dialects, which vary from district to district, do not constitute a literary language; Berber is not written, and its literature is transmitted orally. From the 11th century onwards, Arabic was propagated far more by the nomads than by the towns. The sedentary Arab dialects are localised in the cities, in eastern Kabylia and the Trāra; everywhere else Berber was pushed back by the bedouin dialects.

The Arabs, who have thus furnished 71% of Algerians with dialects derived from their language, have gradually converted them all to Islam (except for 130,000 Jews, at the present day). Virtually the only rite practised in Algeria is the Mālikite; there are a few followers of the Ḥanafī rite among people of Turkish descent in Algiers and Tlemcen. The Mzābites, Ibāḍī (Khāridjite) heretics, form a separate community.

Of the fundamental practices of Islam, which are the same everywhere, the five daily prayers are regularly performed in Algeria only by a minority of the population; the pilgrimage to Mecca, to which people now travel by sea or air, is performed by about a thousand believers a year; and the Ramaḍān fast is the most universally respected religious obligation.

Islam in North Africa is characterised by the development there of religious brotherhoods and of the cult of saints or marabouts. The religious brotherhoods once played a considerable part in political affairs, as a result of their moral authority in an Algeria in which law and order had not yet been fully established. Their importance has since greatly diminished; they maintain, on the whole, good relations with the French authorities, but they are strongly criticised by the townspeople. It is impossible to state the number of their adherents with any accuracy (250 to 450,000?). The most important is the Raḥmāniyya which comprises more than half the *ikhwān*, notably in eastern Algeria; next come the Ṭayyibiyya, still active in the province of Oran; the Shādhiliyya, whose adherents are primarily recruited in the department of Algiers; the Tidjāniyya in department of Constantine; and the Ḳādiriyya; there are also a few Darḳāwa in Oran, and ʿIsāwa and ʿAmmāriyya in Constantine. [Cf. the articles on these orders.]

The saints, or marabouts [cf. WALĪ], are not necessarily members of the brotherhoods. In former days some of them played a considerable moral and political role, especially in western Algeria where numerous marabout families or tribes still survive, such as the Awlād Sīdī Shaykh (Ouled Sidi Sheikh) of Southern Oran. Some of them trace their origin to the Prophet's family (though ʿAlī and Fāṭima): these are the *shurafāʾ* (*chorfa*) [cf. SHARĪF]. At the end of the Middle Ages, and later, many are said to have come from Morocco and Sāḳiyat al-Ḥamrāʾ (Saguiet el Hamra, Rio de Oro), but the majority pass as natives of the country. They all transmit the *baraka* to their descendants, if any. But many marabouts have never existed, and their cult is proof of the persistance of pre-Islamic nature cults involving trees, springs, rocks, and mountains (for instance Lālla Khadīdja at the highest point of the Djurdjura). The marabout cult has sometimes gained non-Muslim adherents. Pre-Islamic practices survive in various rites involving magic and sorcery; in the belief in the evil eye, and in sundry agricultural rites. All the non-orthodox popular practices are still widespread in certain country districts, especially among the women.

Islam, in Algeria as elsewhere, has permeated social life. Although the life of the Kabyles in the West, and of the inhabitants of the Awrās and of the Tuareg of the Sahara, remains faithful to customs which owe nothing to Muslim law, the private life of the majority of native Algerians is regulated by this law, especially as regards the law of succession, which, in detail, is extremely complex, and personal status. Polygamy, although of course authorized, is in fact not prevalent, particularly in the towns. Mālikite law does not forbid child marriage, and the young girls' consent to their own marriage, which is arranged by their father, is not required (the right of *djabr*); women can be repudiated by their husbands without any formality or indemnity, a practice which encourages "successive polygamy". Agrarian law in Algeria has undergone a radical transformation through the influence of French law.

Ways of life. Social life and economic activity are bound up with the way of life of the various elements of the population.

The tribes of the steppes and the desert, consisting of shepherds who breed sheep, goats, camels and horses, are still more or less nomadic. Omitting the Tuareg and the Shaʿānba who are pure Saharans [see AL-ṢAḤRĀʾ], only those tribes will be mentioned which roam between the desert and Algeria proper. Some still spend the summer in the Tell. The Arbāʿ (Laârba) of the Laghwāṭ region, and the Said Atba of the Wargla neighbourhood are almost solely pastoral in their way of life, and spend the summer in the Serson and on the southern slopes of the Wansharīs. The nomads of the Touggourt Territory, owners of palm-trees and with fewer flocks, spend the summer in the high plains of Constantine; they include the Ouled Djedi and Bouazid of the Oued Djedi, the Arab Sherāḳa (Cheraga), the ʿAmūr and Ouled Sidi Salah of the dependency of Biskra and the Arab Gheraba and the Ouled Moulet of the dependency of Touggourt. Other tribes, which live in the valleys of the Saharan foot-hills, cultivating a certain amount of grain and grazing the pasturages, spend the summer with their flocks in the Saharan Atlas; for instance the Awlād Sīdī Shaykh, the Awlād Naīl of the south and the Nememcha in the east.

The steppes are the province of the semi-nomads who, for 6-8 months of the year, remain close to their barley and wheat fields and their winter pasture grounds. The ʿAmūr and the Awlād Naʾil of the north use the pasture grounds of the southern valleys of the Saharan Atlas and the folds of the high steppes, and spend the summer in the Atlas. The semi-nomads of the high steppes, cultivators of grain crops and collectors of alfa, spend the summer with their flocks on the southern slopes of the Tell Atlas. The Hamian, to the west, are former camel nomads. The tribes of the Ḥodna have no alfa and in the summer migrate with their flocks and as labourers to the high plains of Constantine.

The breeding of the horse, formerly used in battle, is on the decline; so also is that of the camel, the beast of burden and trade, owing to the competition of rail and road. Sheep breeding, which flourished between 1880 and 1920, is giving way to the cultivation of cereals. The collective ownership of agricultural land is developing into family ownership and even into private ownership; the tents, made of camel hair, goat's hair and wool, formerly grouped in great *douars*, are dwindling; they are only used as temporary dwellings by the semi-nomads, who spend the winter in huts or houses. The economic and social unit, which among the nomads is the tribe or a subdivision of the tribe, is a smaller subdivision or the patriarchal family among the semi-nomads.

In the principal mountain massifs the inhabitants often still retain their Berber dialects and customs; but their way of life depends on local conditions. The Awrās is the stronghold of the Shāwiyya, who are both agriculturalists and breeders of sheep and goats. Their terraced fields, usually irrigated, support cereals and, depending on the altitude, date-palms, figs, apricots and nuts. Although principally village dwellers, they undertake a winter migration, and to some extent follow a semi-nomadic existence, in the direction of the plains of the north and south; they spend the summer on the upland pasture grounds with the exclusively pastoral people. Their lofty villages, surmounted by fortified granaries (see AGADIR), are still under the effective authority of *djemāʿas*. Among the Kabyles, only those of the west (Djurdjura, Soumman, Bābūr, Guergour) have retained their traditional dialects and customs. Their terraced fields chiefly support olive and fig trees; they lack cereals and livestock. For want of space they are emigrating in increasing numbers, principally to the towns of Algeria and to France. The village (*taddart*), whether its quarters (*kharrūba*) are combined, separate or scattered, forms the economic, social and political unit: the *djemāʿa* officially maintains its traditional authority in Kabylia of the Djurdjura. The Kabyles of the east are arabicised. Like their non-Kabyle neighbours of the Bône region, they live in large clearings where they cultivate barley, sorghum and a few fruit trees; they breed cattle and sheep etc., and work in the forests, mainly stripping cork. Their neighbours have huts made with branches; they live in houses grouped in hamlets and are emigrating in large numbers. In western Algeria the way of life of the Beni Menāṣer (Berber-speaking) and of the Trāra (Arabicised) recalls that of the Kabyles of the west. The inhabitants of the high valleys of the Wansharīs and the Oran plateaus, once almost all semi-nomads, now have no more than a few tents.

The fertile plains and hills of the Tell, formerly coveted and menaced by both nomads and mountain dwellers, and only insufficiently exploited by people living in huts and tents and gaining a livelihood from the cultivation of cereals and extensive stock-breeding, have greatly changed in appearance. In the areas of dense colonization, some of the former *fellāḥs* have become agricultural labourers while others have profited by the examples before their eyes. The local populations everywhere, whose numbers have greatly increased, have considerably extended the area devoted to the cultivation of cereals, at the expense of rearing of livestock. The old semi-nomad tribes of the high plains of Constantine are now bound to the soil. Tribal connections are forgotten; society is crumbling, but private ownership of property often still remains vested in the family. French schooling, military service, and emigration—usually temporary—to the towns or to France accentuates individualism and family autonomy.

Individualism is getting the upper hand in the cities, without causing loss of solidarity between men of the same origin. The partly-Turkish bourgeoisie of the ancient cities of Algeria (Algiers, Constantine and Tlemcen) has been to a large extent regenerated by people of rural origin; artisans have gradually disappeared. Both old and new towns now have a prosperous or rich bourgeoisie of landed proprietors and a few business men, a middle class of civil servants, members of the liberal professions and various employees, and a large proletariat, burdened with an excessive number of rural immigrants with no manual skill and potentially only mediocre labourers.

Economy. The native elements remain the dominant factor in the Algerian economy. They cultivate nearly 3/4 of the grain lands, sowing almost entirely barley and wheat, and nearly 2/3 of the bearing olive trees and of land devoted to pulses and tobacco. They own more than 96% of the date palms and nearly all the fig trees. They own 95% of the sheep and goats. The colonists, on the other hand, cultivate the vine almost exclusively, and are almost alone in growing early vegetables and citrus fruits. A fundamental problem is how to increase the volume, still very low, of the native output as a whole, and to improve the quality of livestock. Some Algerians have been trained in fishing by Frenchmen of Spanish or Italian origin. The native peoples provide only the labour force and fill a few lower grades in the mines (iron and phosphates, especially lead and zinc), but they are employed in large numbers in the transport services. Industry, still underdeveloped despite recent efforts, finds in them an ample source of labour, but few skilled craftsmen or specialists. Short-term emigration to the industrial cities and to dockyards in France assures an abundant flow of money into the country.

(iv) INSTITUTIONS.

Algeria is part of the French Union as defined by the constitution of 27 October 1946. In it Algeria holds a peculiar position, which was defined by the law of 20 September 1947 entitled "the Algerian Statute". At the head of Algeria, there is a Governor with wide powers. The inhabitants are represented by an elective Algerian assembly which not only has financial powers, as had the "*Délégations financières*" which it replaces, but also a part in the initiation and adaptation to the country of the laws, the principal legislative body being the French Parliament.

Personal status had previously been defined by the law of 7 May 1946, an entirely new law which bears the name of its author, Lamine-Gueye, and which proclaimed the equality of the inhabitants of the country: "all subjects of French nationality of the departments of Algeria enjoy, without distinction of birth, race, language or religion, the rights attaching to the status of French citizens and are subject to the same obligations". But since alongside the Europeans, who are mainly French, lives a large Muslim majority, whose private life is largely regulated by Muslim law, it is laid down that "citizens who do not possess French civil status keep their personal status as long as they have not renounced it". The citizens of French status are French citizens by birth, Algerian-born Jews, who have been citizens since the Crémieux decree of 24 October 1870, a few Muslims who have applied for French citizenship as a result of the facilities given by the *senatus-consultum* of 14 July 1865 and by the law of 4 February 1919, and finally naturalised foreigners, especially pursuant to the law of 26 June 1889. Citizens of local status are all the other Muslims. For these, the following matters remain subject to Muslim law (and, for certain Berber-speaking areas, to customary law): "marriage, marital authority, married women's rights, divorce, repudiation, affiliation, paternal authority, majority, minority, deprivation of control over property, emancipation, and guardianship" (J. Lambert). For foreigners the regulations are in general similar to those in force in France. Foreign Muslims, mainly Tunisians and Moroccans, have in certain cases, e.g. before the courts, the same status as Algerian Muslims.

Political Organisation. The Governor General "represents the Government of the French Republic throughout Algeria .... he resides at Algiers". The Algerian Assembly is composed of 120 members: 60 representatives of each of the two Colleges, elected for 6 years by universal suffrage, with two ballots on a single member basis, half the members being replaced every 3 years. The first College comprises citizens of French civil status. All other citizens of local status belong to the second College. The electoral laws are similar to those obtaining in France, but Muslim women do not vote. All citizens are eligible without distinction for election to one or other college.

The peoples of Algeria are represented in the Parliament of the Metropolis by 30 deputies in the National Assembly (15 per College), by 14 Councillors of the Republic (7 per College), and by 12 elected persons in the Assembly of the French Union, 6 of these being elected by the Algerian Assembly and 6 by the general councils.

Administrative organisation. The three departments (Algiers, Constantine and Oran), whose prefects have wider jurisdiction than in the metropolis, are divided into *arrondissements* (7, 7 and 6). Their general councils are made up of 3/5 of citizens of French status and 2/5 of elected Muslims. The communes are large and varied in character. Where the non-Muslim French are found in sufficient numbers, they are *Communes de plein exercise* (with full powers) in which both Colleges are represented (3/5 and 2/5); dependent on the mayor, where needed, are the *ḳāʾids* (*caïds*) of the *douars* (sections of communes), subdivisions which have their own elected representatives, the *d̲j̲amāʿa* (*djemâa*). The "mixed Communes", destined eventually to disappear, are headed by officials of the Algerian civil service. These preside over the municipal committee which consists of elected members, the *ḳāʾids*, and the presidents of the *d̲j̲amāʿa* of the various *douars*. In those areas with native populations which have reached a sufficient stage of development there have recently been set up "municipal centres" which, under the control of a civil servant, are undergoing their apprenticeship to public life.

The increase in the size of the departments has gradually pushed back towards the Sahara the former military districts, which have become the Southern Territories. Covering an enormous area, two of them encroaching on the Saharan Atlas and the high steppes of the west, the four Territories have as their centres Colomb-Béchar, Laghaout (Lag̲h̲wāṭ), Touggourt and Ouargla (Wargla). They are under the direct authority of the Governor General, acting in the capacity of a prefect; the military commanders who are subordinate to him have the administrative powers of a sub-prefect. The Territories used to be divided into dependencies (*annexes*) which have become the basis of the present communes: 10 mixed communes under civil administrators, and 9 "native communes" under officers for Saharan affairs or administrators. The *ḳāʾids* of the *douars* are subordinate to them, and members of the *d̲j̲emāʿa* are elected or nominated. The Algerian Statute provides for the gradual conversion of the Southern Territories into civil districts.

The Judicial System. The judicial system is closely modelled on that of the Metropolis. Algiers is the seat of a Court of Appeal; there are 17 assize courts (with French and Muslim jurors) and 17 courts of first instance. Questions concerning the personal status and the inheritance of French Muslims are dealt with by the *ḳāḍīs* of the 84 principal *maḥkamas* (*mahakma*) and by the *bas̲h̲ ʿādil* (*bachadel*) of the 23 dependencies. But their jurisdiction is always optional, and the interested parties can refer to the

justices of the peace, judges of common law in Muslim matters who apply the provisions of Muslim law, or to the French judicial authorities and to French law. The Kabyles of the west, the majority of whom have preserved their own customs, do not have *ḳāḍīs*. [Cf. also ʿĀDA.]

(v) LANGUAGES.

(1) *The Arab dialects of Algeria.*

The territory forming the present Algeria was arabicised during two distinct periods, in common with North Africa in general. The first period commenced with the Muslim invasions at the end of the 1st/7th century. Although not important from the point of view of their ethnic contribution, these invasions had a considerable military, political, religious, and therefore linguistic, effect. They affected primarily the urban centres. The conquering Arabs established garrisons there, distributing units of the eastern *djund* throughout the countries which they wished to control and administer. Just as Idrīsid Fez and Aghlabid al-Ḳayrawān arabicised the rural and mountain regions around them, so Tlemcen and Constantine, in Algeria, caused the regions which lay between them and the sea, namely Trāra and eastern Kabylia, to foresake the native idiom and adopt the language of the conquerors. Later, the Shīʿite propaganda, by directly linking the Berber tribes to the Shīʿa movement, very probably played a part in imposing Arabic on certain peoples in the north of the department of Constantine. The arabicisation of this first period is responsible for the Arabic spoken in the old centres and in the adjacent mountainous regions; thus its various forms can be called "pre-Hilālī dialects".

The invasion of the Banū Hilāl, the Sulaym and the Maʿḳil inaugurated the second period of arabicisation. It began halfway through the 4th/11th century, unleashing the turbulent throng of Bedouin tribes against "perfidious Maghrib". This time the ethnic contribution was important. The movement of populations which was brought about by the invasion of these new-comers threw Barbary into a ferment, and resulted in the widespread diffusion of the language which they brought with them. Not merely small districts but vast areas abandoned Berber for Arabic; at first, no doubt, it was the steppes and high plains devoted to the pastoral life, where the nomads felt at home; then, as a result of alliances which were offered to them or which they imposed, vast settled regions of the Tell and even of the Sahel. Important transfers of populations continued to take place up to the end of the 8th/14th century; for example the establishment of the Hilāl Dawādida in northern Constantine province, and of the Maʿḳil ʿUbayd Allāh and the Hilāl Zughba b. ʿĀmir between Tlemcen and the sea. Through contact with the Bedouin Arabs or under their tutelage, entire Berber tribes, sharing a common mode of existence with the Bedouin, turned to Arabic; for example the Sadwikīsh of western Constantine province and sections of the Zanāta of northern Oran. Arabicisation has continued until our own times, penetrating the mountain massifs and ancient Saharan centres which remained the strongholds of Berberism. An unpublished work of al-Ṣabbāgh on the life of the great saint of the Chélif, Sīdī Aḥmad b. Yūsuf, gives us an idea of the linguistic state of this region in the 10th/16th century, and quotes phrases in *lugha zanātiyya*. Berber was still spoken in the Chélif at that period, but now Arabic alone is spoken, except in the mountain massifs of the Banī Menāser and Wansharīs which skirt the region. One is tempted to consider that the propagation of the conquerors' language was particularly encouraged by the Turks between the 9th/15th and the 13th/19th centuries. In the northern regions which they endeavoured to control, they executed large transfers of rural and Bedouin groups, on a scale surpassing that of the dynasties which preceded them in central Maghrib.

The upheaval of populations in the course of centuries has been so great that linguistics cannot provide any ethnic criteria. It is doubtless permissible to conjecture that the groups which have remained Berber-speaking include a large proportion of elements of Berber origin, but nothing enables us to assess the proportion of the elements of Arab origin among the Arab-speaking populations. It is most likely that the latter are largely composed of arabicised Berbers. No shibboleth, or linguistic criterion, enables us to establish the ethnical origin of the various groups; no dialectal indication, as far as we know, makes it possible to identify the Berber groups converted to Arabic such as the Ulḥāṣa, the Huwwāra, the Sindjās, the ʿAdjīsa, the Luwwāta or the Kutāma, etc.

As regards the Arabic dialects introduced by the invasions of the 5th-6th/11th-12th centuries, it is generally considered that the territory of the Sulaym was definitely to the east, and that of the Maʿḳil more to the west. The territory of the Hilāl cannot be defined exactly; it was certainly centrally situated, but probably encroached on the territories to the east and west. The dialectal variations of the language which they spoke or which they disseminated are known as "Bedouin dialects".

(A) Pre-Hilālī dialects. Included in this category are village (or mountain) dialects, and urban dialects (Jewish and Muslim).

(a) Village dialects. These are represented by two groups which have been clearly identified but have not been the subject of equal study; namely, Oran dialects, and Constantine dialects. The former embrace the mountain massif of the Trāra, which extends from the *wādī* of Moghniyya (Marnia) as far as the sea, and is bounded approximately by the course of the Tafna to the east. Nadrūma (Nédroma) is the urban centre. This region belongs to the Ulḥāṣa and the Kūmiyya, and is crossed by the routes connecting Tlemcen with the ports of Ḥunayn and Arashḳūn (Rachgoun). Its arabicisation dates probably from the Idrīsid era. The second group corresponds to eastern Kabylia, and is completely mountainous, having the form of a triangle whose apexes are Djidjelli, Mila and Collo. Historically, the region represents the seaward expansion of Constantine and Mila, which were Arab garrison towns in the Aghlabid period. This is the former Kutāma country, the centre of the Fāṭimid movement.

These dialects are characterised phonetically as follows: uvular *ḳ* is changed into velar *k*, e.g. *kalb* for *ḳalb* "heart"; *k* is pronounced as a palatal,

and often, with a marked degree of palatalisation, *ky*, or as an affricate, *ksh*, *tsh*, or as a fricative *sh*, with a voiceless *y* (Trāra), e.g. *tshelb*, *shelb* for *kelb*, "dog"; the interdentals *th*, *dh*, *ḏh* disappear, confounded with *t*, *d*, *ḍ*; *t* becomes the affricate *ts*; *ḍ* often becomes *ṭ*; the voiced sibilant is pronounced *ž* when it is single, *dj* when it is doubled; diphthongs with a short element are resolved, *ay* becoming *ī*, *aw* becoming *ū*; there is a very marked decay of the short vowels especially in eastern Kabylia, where the neutral vowel *e* predominates; changes occur in the syllabic structure which derive, in words containing short vowels, from the phonetic influence of radical consonants, rather than from etymology; the labials *m* and *b*, and the uvular *ḳ*, have the ability to assimilate the *l* or the article, e.g. *eb-bāb*, "the door", *eḳ-ḳemḥ*" the corn".

Morphologically these dialects are characterised as follows: by the constant reconstruction of defective verbs, *nsā-nsāt-nsāw*, *yensā-yensāw* "to forget", *bkā-bkāt-bkāw*, *yebkī-yebkīw* "to weep", and of verbs hamzated on the first radical, *klā-klīt-klāw*, *yākel*, *kūl* "to eat"; by the use of *-āyen* as a sign of the dual in nouns of measure, *yūm-yūmāyen* "two days", *shber-shebrāyen* "two spans"; by the adoption of plural forms, *ṣnādeḳ* "coffers" and of diminutives, *mfīteḥ* "small key" (with a short vowel in the final syllable), for all quadriliterals; by the substitution in the case of diminutives for the form *ṭfeyl* (cl. *ṭufayl*) of *ṭfeyyel* "small child", from *ṭfel*. as in *žneyyen* (cl. *žunayyin*) "small garden", from *žnān*; by the confusion of gender in the expression of the second person, both in the verbal endings and in the inflexions of the independent personal pronouns, *ḍrabt* "thou (m. or f.) hast struck", *taḍrab* "thou (m. or f.) wilt strike", *enta* "thou" (m. or f.); by the frequent usage of the form *yāna* for *āna* "I"; by the pronunciation *u* of the 3rd person masc. sing. pronominal affix, after a consonant, *ḍarbu* "he has struck him", *weldu* "his son"; by the constant use of *-ayya/-iyya*, *āk/-īk*, *āh/-īh*, etc., pronominal endings suffixed to the duals of nouns denoting parts of the body. On all these points of morphology, the dialects of Trāra and those of eastern Kabylia are analogous, but they differ in certain other respects; in the plural persons of the imperfect of sound verbs with radical stems, the Trāra dialects have a doubled form *yeḍḍarbu*, while the rural Djidjellians have the non-doubled form *iḍarbu*, from *ḍrab* "to strike"; similarly in the case of nouns with a short vowel and final *-at*, the former have *reḳḳebtek*, the latter *rḳebtek* "thy neck", from *reḳbat*; in the perfect of hollow verbs, the Trāra dialects follow the sequence, as regards the radical vowel, of short with changed quality, or long with pure quality, according as it occurs in a closed syllable or not, *bāʿ - ibīʿ - beʿt* "to sell", while the rural peoples of Djidjelli maintain the same vowel quality and follow the sequence semi-long/long, *bāʿ - ibīʿ - bīʿt*; to express the continuous or customary present, the Trāra use the imperfect of the verb, without any special verbal prefix, while the rural Djidjellians make free use of the prefix *ka/ku* (probably derived from the verb *kān - ikūn*), *ka-yekteb*, *ku-nekteb* "he is writing, I am writing".

As regards syntax and vocabulary these dialects are characterised as follows: by the extensive use of an indefinite article *wāḥed* or *ḥa*; the latter is especially prevalent in eastern Kabylia; by the disappearance of the direct construct relationship (except in groups in which the idea of a possessive relationship impresses itself strongly on the speaker), and by the expression of this relationship by means of the particles *di*, *eddi*, *dyāl* and, especially in Collo, *elli*; by the impossibility, in the Djidjelli region, of expressing the noun of kinship unless it has a pronominal suffix denoting the person with whom the relationship is established: *ʿammu ddi-Keddūr* "his uncle (to him) of Keddūr". In both groups specifically Berber features have survived and been integrated into the grammatical system, such as the use of the genitive link *n* among the Trāra, e.g. *bbwāy en fāṭma* "the father of Fāṭma", or the use of the demonstrative *d*, which in the Djidjelli region plays the role of a logical copula, as in *khūh d - eḳ - ḳāyd* "his brother (the one who) is the *ḳāʾid*"; or again, the transference of the number and gender of the Berber word to the Arabic word which has superseded it, e.g., in eastern Kabylia, *ržel*, a feminine treated as a masculine (Berber *aḍar* is masculine) "foot", *ṣōf*, masculine changed to feminine (Berber feminine *taḍuf*) "wool", *ma*, a singular considered as a plural (Berber plural *aman*) "water"; and finally, certain elements of vocabulary have survived, such as words of Berber forms with the prefix *a-* (not taking the Arabic definite article), or of the form *t . . . t*, most of them associated with rural life (dwellings, domestic life, domestic utensils, country life, agricultural implements, animals, plants, etc.).

These two types of village dialects unquestionably possess considerable points of difference; but they have certain features in common with the dialect of the Moroccan Djbāla to the west. The Oran group is nearer to the Moroccan group than to the Constantine. To the ears of townsmen, and with even more reason to those of the Bedouin, the speech of the Djbāla, the Trāra, and the rural Djidjellians sounds like a foreign tongue, whose sounds, syntax and vocabulary seem to them alien to Arabic. It is, however, Arabic, and even Arabic of an ancient stock, as is witnessed by certain archaisms, such as the preservation of the old monoliteral *fa* "mouth" in the Nedroma district, and of the final *iyyesh* among the rural Djidjellians; but at the same time it is an Arabic in which appears the Berber method of presenting ideas, and through which the substratum of Berber vocabulary often emerges; an Arabic, finally, which, retaining the marks of the bilingualism which preceded the supersession of Berber by Arabic, is still handled by those, whose ancestors had adopted it, with a beginner's clumsiness.

(b) Urban dialects. These do not form a homogeneous group, and the listing and description of these dialects is far from complete. They are divided into two classes—Jewish and Muslim.

Jewish dialects. The North African Jews are almost entirely city-dwellers in Algeria. Apart from the semi-nomadic group of the Baḥūṣiyya in the Souk-Ahras region, now dispersed, they all live in towns. Only those Jewish communities which, because of their populousness and strong social cohesion, constitute societies distinct from and virtually alien to the Muslim majority around them, possess any special form of Arabic; for instance the communities of Oran, Tlemcen, Miliana, Médéa, Algiers and Constantine. Although the Jewish dialects differ from one city to another, they share certain common characteristics.

The phonetic system is rather changed in these dialects, especially as spoken by women: loss of the interdentals *th*, *dh*, *ḏh*, which revert to *t*, *d*, *ḍ*; the unvoiced dental *t* becomes the affricate *ts*, in Oran and Tlemcen, a change which leads to confusion with the fricatives *sh* and *s* and the sibilants *ž* (*dj*) and *z*;

the excessive rolling of *r*, very noticeable in Algiers; a general inability correctly to pronounce back consonants; thus ʾ, glottal check, for *ḳ*, in Algiers, and, in Tlemcen and Oran (as in Jewish Fez), *k* for *ḳ*, and *ts͟h* for *k*; the muting of the aspirate, especially in Algiers; the decay of the short vowels, in which the neutral sound *e* predominates; an excessive syllabic curtailment which gives the impression that the language consists wholly of consonants, where the only vowels are those which are absolutely indispensable to the pronunciation of the consonants and to the definition of morphological groups; e.g. *yiktbu* "they write", *ḍrabtu* "she has struck him", *rḳebti* "my neck", etc. Schematically, the morphology has forms analogous to, if not identical with, those described in respect of the village dialects, especially as regards the normalisation of paradigms and the strengthening of grammatical forms; it is characteristically Arabic.

The dialects used by the Jewish communities differ from those of the urban Muslims primarily in vocabulary. The vocabulary, largely Arabic, nevertheless contains a considerable foreign element: important borrowings from Spanish — some dating from the first period (imported in the 14th and 15th centuries by Spanish-speaking Jewish émigrés from Spain), and some from the second period (the Jews of Algeria, particularly of Algiers and Constantine, had continuous intercourse with the Jews of Leghorn), these last coinciding chronologically with the Spanish contribution of the second period; borrowings from Turkish, common to both the Jewish and the Muslim dialects; a few Berber loan words; and finally considerable borrowings from Hebrew, especially of words appertaining to the intellectual or religious life. It should be emphasised that the Jews of Algeria write their Judaeo-Arabic in a special cursive Hebrew, and not in Arabic characters. But their more rapid Europeanization, stimulated by the progressive dislocation of communities and the break-down of the division into quarters, is leading to the substitution of French for the traditional dialect among the younger generation, and also of the latin script for the Hebrew cursive.

Muslim dialects. The Muslim urban populations present great human, and therefore, linguistic, variety. Some of them preserved the use of the Arabic of the first stratum, such as is found in Tlemcen, Nédroma, Cherchell, Dellys, D͟jid͟jelli, and Collo. On the other hand, at Ténès, Miliana, Médéa, Blida, Bougie, Mila, Philippeville, and Constantine, it is only discovered among the older generation, and seems doomed to early extinction, if, indeed, it has not already disappeared. The old cities everywhere bear the marks of the external influences to which they have been subjected in the course of centuries, and to which they are still subject; that of the rural populations and that of the Bedouin. The populations of certain towns are replenished by the contributions of their surrounding rural areas, as for instance in the cases of Nédroma, D͟jid͟jelli and Collo, where the dialect tends to conform to that of the surrounding villagers. In other cases, the townsmen have borrowed the language of the neighbouring Bedouin collective, or sedentary Bedouin, groups; for instance, in Tlemcen, Ténès, Blida, Miliana, Médéa, Mila, Philippeville, and Constantine. Although, on the whole, the language of these old centres has remained urban, there are others where the Bedouin dialect is almost completely dominant: for instance, in Oran, Mostaganam, Mascara, Mazouna, and Bône (and similarly, in the extreme east of the Mag͟hrib, at Tripoli and Beng͟hāzī). The case of Algiers and its environs, and that of Bougie, are more complex still. Algiers and the Faḥṣ form a melting-pot for urban elements, for old-established rural sedentary population, for newly-arrived rural elements, and for Bedouin who, after a period of acclimatization in the Chélif and the Mitīd͟ja, flock to a city life which, although of a proletarian nature, attracts them; Kabylia, moreover, disgorges its emigrants there in an unending stream. The Kabylian element, indeed, has so far taken possession of Bougie as to render this ancient capital and mediaeval centre of Arab culture, a Berber-speaking city.

Phonetically, the urban Muslim dialects have on the whole the same characteristics as those of the village dialects and the Jewish dialects. Only the ancients in Ténès, Cherchell, Dellys and Constantine have preserved the interdentals. In Médéa, Blida and Algiers both the fricative and the occlusive pronunciation are heard together. *T* is everywhere converted to the affricate *ts*. The voiced sibilant is variously pronounced: *d͟j*, with an initial dental, in Tlemcen, Ténès, Cherchell, Médéa, Blida, Algiers, Dellys, Mila, and Constantine: elsewhere as *ž*. The exaggerated rolling of *r* could be said to be a typically urban "articulatory disease": its presence in the Jewish dialects has already been noted: it is common in Constantine, D͟jid͟jelli, Cherchell, Tlemcen and Nédroma (and similarly at Tunis and Fez.) The change of *ḳ* to ʾ, a simple glottal check, exists at Tlemcen; at D͟jid͟jelli, a back *k* is substituted for it; but in all the other towns, it remains *ḳ*. Ibn K͟haldūn based the essential difference between the dialects of the sedentary peoples and the dialects of the Bedouin of the Mag͟hrib on the contrast between the unvoiced *ḳ* voiced *g*, in the back velar. This distinction still exists; but the flow of nomadic elements into the cities has introduced *g* there; this has occurred at Tenes, Miliana, Médéa, Algiers itself, Mila and Constantine (where the two sounds, in the same words, are sometimes heard from the same mouth). Elsewhere, the presence of a *g* in a word stamps it as a loan word from Bedouin dialects. Everywhere the aspirate *h* is a weak consonant, liable to become mute; thus in Tlemcen *ṛām* is heard from *ṛāhum* "here they are!", and at Nédroma, *ma-ʿandā-s͟h* for *ma-ʿandhā-s͟h* "she has not".

The morphological forms contain both similar and dissimilar elements. Among the former should be noted reconstruction of defective verbs, for instance of *k͟hdā* "to take" and of *klā* "to eat"; the general use of the plural quadriliteral form *ṣnādeḳ* "coffers" and the diminutive *mfīteḥ* "small key", and of the triliteral diminutive *ṭfeyyel* "small child"; the frequent use (except at Constantine, Mila, Philippeville) of a sort of curious adjectival diminutive *kbīber* "somewhat large" from *kbīr*, *kḥīḥel* "blackish" from *kḥel*, already vouched for in al-Andalus; the pronunciation *u* or *o* of the pronominal affix of the 3rd person sing. masc., after a consonant. The feminine *ah* is peculiar to Cherchell; elsewhere it is invariably *ha*, for the 3rd person pronominal affix: *ah* is doubtless an importation from al-Andalus, and there is evidence of other such importations in the Cherchell dialect. In the 2nd and 3rd persons plural of the independent pronoun, the Cherchell dialect is also distinctive, using the forms *entūmān*, *hūmān*, while elsewhere the forms always used are *entum*, *hum*, or *entūma*, *hūma*. Although Nédroma, Mostaganem, Ténès, Bougie and D͟jid͟jelli make no distinction between the genders of the 2nd person sing. of pronouns or verbs, *enta* "thou"

(m. and f.), *ḍrabt* "thou hast struck" (m. and f.), Miliana, Cherchell, Médéa, Blida, Algiers and Dellys differentiate between them, *enta* "thou" (m), *enti* "thou" (f.), *ḍrabt* "thou (m.) hast struck", *ḍrabti* "thou (f.) hast struck"; differentiation of gender again disappears in the eastern dialects, in Collo, Mila, Philippeville and Constantine, but the feminine form *enti*, *ḍrabti*, is extended to both genders; in Tunis the form is confined to the independent pronoun. The syllabic treatment of the persons of the plural, in the first form of sound verbs, produces a remarkable variety of forms: for "they strike" *yeḍḍarbu* is the form used at Tlemcen, Nédroma, Mostaganem, Ténès, Miliana, Cherchell, Médéa, Blida, Algiers, Dellys and Collo; but *iḍarbu* is used at Bougie, Djidjelli, Philippeville, and occasionally in the suburds of Algiers, and *yeḍarbu* (with the stress on the first syllable) at Mila and Constantine. The attachment of personal affixes with an initial vowel to feminine nouns of the form *faʿla(t)* poses the same problem of syllabic economy, to which according to dialect, the same solution is reached; for "my neck" *rakkebti*, *rkebti* and *rakebti*. *Ḍarbet* + *u* "she has struck him", is pronounced throughout western and central urban Algeria *ḍarbātu*; in the Faḥṣ of Algiers it is sometimes *ḍrabtu*; throughout the east, *ḍarbettu* (as in the cities of Tunisia). In all the cities, the plural of nouns of colour admits of a prolongation of the vowel *u*, which is known in the village dialects: e.g. *ḥūmor* "red" (even expanded to *ḥūmrin* in Nédroma and Djidjelli,) except in Dellys, where *ḥmūra* is used, and in Collo, Mila, Constantine, and Philippeville, where the only form current is *ḥmor*, the form used in the urban and rural dialects of Tunisia. To indicate the possessive relationship, the urban dialects only use the method of direct connexion (*iḍāfa*) to a limited extent; more often they have recourse to an analytical method, the governing word being linked to the governed by prepositions of dialectal origin, namely *di* (*eddi*), (*dyāl*, in use from Tlemcen to Djidjelli, or the rival *mrāʿ* (*ntāʿ* from Tlemcen to Dellys), which prevails in Constantine. Collo often uses the relative *elli* as a particle of connexion: *en-nās elli-d-dowwār* "the people of the *douar*".

Every urban dialect possesses characteristics peculiar to itself, but the points of difference are becoming progressively less, only what is common to all being retained, and these dialects are gradually merging into a sort of *koine* of the towns. The constant growth of relations between urban centre and urban centre inspires the desire, conscious or unconscious, to eliminate dialectal peculiarities, and to produce a language which will be understood everywhere, which will avoid ambiguities, and which will not occasion surprise or be the target for mirth. This tendency towards uniformity is perhaps strengthened by a certain concern for purism awakened by listening to wireless broadcasts, which are heard in many homes and in a still greater number of shops, and in every café and meeting-place. Feminine society, which has always constituted an important factor in linguistic conservatism, is being profoundly influenced by the radio, which brings into the home a "universal Arabic" and effects its general adoption, and also by urban life, which affords ever greater freedom, and provides women with more and more opportunities for contact with the outside world. It seems that the time is not far off when the urban Muslim dialects of Algeria will have the featureless appearance of uniformity, and will no longer preserve traces of their original characteristics except those fossilized in songs, proverbs, and a few ready-made expressions.

(B) Bedouin dialects. In so far as they are known (and knowledge of them is only approximate and incomplete), the Bedouin dialects of Algeria present the appearance of a composite and heterogeneous mass. The isoglosses which some have attempted to trace form a complex picture; the interpretation of this picture, if it seeks to take an overall view, ignores the diversity of the material and glosses over numerous contradictions.

The following are the identifying marks of a Bedouin dialect. (a) Phonetic. A fairly general retention of the interdentals *th*, *dh*, *ḏh*; an occlusive pronunciation of the unvoiced dental *t*, except in certain oasis dialects in which it is affricated (as at Beni Abbès in southern Oran, or Touggourt in southern Constantine); the voicing of the back velar, *g*, *ḳ*, only appearing in loan words and especially in the vocabulary of law and religion; an occasional preservation of short vowels, often complicated by a change in quality attributable to the influence of adjacent consonants or, sometimes, to that of stress. (b) Morphological. A certain conservatism which preserves in the verbal and nominal forms traces of the ancient tongue; differentiation of gender in the second person singular of verbs and of the independent pronoun: *ḏhrabt* "thou (m) hast struck", *ḏhrabti* "thou (f.) hast struck", *enta* "thou (m), *enti* "thou (f.); a fairly widespread use of the dual, going beyond the limited use for nouns of measure and nouns denoting parts of the body which occur in pairs. (c) In syntax and vocabulary. A restricted use of the indefinite article *wāḥd-el*, the use of the undefined noun often being sufficient to indicate a state of indefiniteness; the frequent expression of the possessive relationship by the old method of direct connexion; the use of a vocabulary more exclusively Arabic than that of the sedentary populations.

This group of characteristic forms constitutes a common basis of the Bedouin dialects. They possess other peculiarities, but either they do not all possess them or they are not alone in possessing them: for instance the preservation of the diphthongs *ey*, *ow* or their contraction to *ē*, *ō*, the sedentary dialects usually resolving them fully, to *ī*, *ū*: the use of the form *īd*, not *yedd* "hand", and of the preposition *mtāʿ* (*ntāʿ*) "of", to the exclusion of *eddi*, *di*, *dyāl*; the use of the plural form *ṣnādig* (not *ṣnādeg*) "coffers" and of the diminutive *mfītiḥ* (not *mfiteḥ*) "small key", for quadriliterals, and of the dimutives *ṭufeyl*, *ṭfēl*, *ṭfīl* (not *ṭfeyyel*) "small child" for triliterals with a short vowel; the existence of a plural form for triliterals with a doubled medial consonant and short vowel, *sherref* from *shāref* "old, tough", and of a plural *mfaʿʿla* from *mafʿūl*, e.g. *mghabbna* from *maghbūn* "deceived, afflicted"; the preservation, in the numerals from 11-19, of the ʿ of *ʿashar*, e.g. *khumsṭāʿāsh* "fifteen" (especially in southern Oran), the sedentary dialects habitually having *khumsṭash* etc.

In order to attempt a provisional draft classification of the Bedouin group, only a limited number of those dialectal features which may properly be called distinctive will be selected, some phonetic, other morphological (but not distinctions of vocabulary, an enumeration of which would lead us too far afield):

(1) The pronunciation of the voiced sibilant: *ž* is the pronunciation of the Bedouin dialects of eastern Algeria. The line of demarcation *dj/ž* passes

to the east of Philippeville, Constantine and Ouled Rahmoun, curves south of Barika, keeps to the south of Hodna and veering north, reaches the neighbourhood of Mansoura des Bibans. It is also identical with that of the high plains and the Saharan regions of the centre and west of Algeria: the line of demarcation *dj*/*ž* passes to north of Aïn Bessem in the direction of Champlain, leaves Médéa, the Djerbel and the Ouarsenis to the south and, at the altitude of Teniet el-Hadd, crosses the Sersou, proceeds to the south of Trézel and north of Frenda and Saïda, and swings north towards Mercier-Lacombe, Saint Denis du Sig and the approaches of Tlemcen. *Dj* therefore represents the pronunciation of the regions of Constantine, Saint Arnaud, Sétif, Bord Bou Arreridj, Barika, Msila and the Hodna; of the Algerian Sahel, Mitīdja, the valley of the Chélif, Dahra, the plateau of Mostaganem, the mountains of Mascara and the plain of Macta; constituting a more northerly Bedouin group.

(2) The change of the velar fricative *gh* to the occlusive back velar *ḳ*. This characterises the Saharan Bedouin dialects (with the exception of certain oasis dialects), but also extends over a considerable area to the north towards the high Algerian plains: the line of demarcation *gh*/*ḳ* commences south of Aïn Sefra, passes to the east of Mecheria, turns back towards the Khreider, follows the Chergui *chott*, leaves Trézel to the west, crosses the Sersou, passes to the south of Teniet el-Hadd, Berrouaghia and Aïn Bessem, passes over the Hodna at the altitude of Msila, skirts Barika, El Kantara and Biskra, and plunges southwards, leaving Mraïer, Djemaa and Touggourt to the East.

(3) The pronunciation *ah* after a consonant of the 3rd person sing. masc. personal affix. This is characteristic of the Bedouin dialects of (i) Oran. The line of demarcation *ah*/*u* commences at Mostaganem, goes down towards Uzès-le-Duc, leaves Tiaret and Trézel to the east, follows the eastern prong of the Chergui *chott*, and passes approximately half-way between Géryville and Aflou: the Ouled Sidi Cheikh use *ah*, but the Douï Menia and the sedentary peoples of the Saoura use *u*; the Bedouin outskirts of Tlemcen and the region which lies towards Aïn Temouchent and Oran also uses *ah*. (ii) Eastern Constantine, comprising: to the north, the inhabitants of mountains of the Collo region, which are a continuation of the Kroumirs and Mogods of Tunisia; to the south, the nomads of western Souf and of the Saharan zone which skirts southern Tunisia (the *ah* frequently being curtailed to *a*); this form is found among a considerable proportion of the Bedouin of Tunisia, and throughout Libya; all the rest of Algeria, both north and south, uses the forms *u*, *o*.

(4) The structure of the 3rd person feminine of the perfect of sound verbs, when followed by a personal affix with an initial vowel, e.g. *ḏhaṛbet* + *k* "she has struck thee": (i) *ḏhaṛbātek* is the pronunciation of north-eastern Constantine, as far as a line which starts to the east of Philippeville, reaches Jammapes and the Khroub, turns westwards, touches Chateau-dun-du-Rumel, and proceeds in the direction of Périgotville; of the region situated to the south of this line, namely the high plains of Sétif as far as Bordj Bou Arreridj, and also of the eastern Sahara as far as the outskirts of Biskra and Touggourt; of the Algerian Tell where the voicid sibilant is pronounced as *dj*; and finally of north and west Oran, following a line which passes south of Ammi-Moussa, swings southwards between Tiaret and Frenda, follows the Chergui *chott* and again swerves south, leaving Mechéria and Aïn Sefra to the east: (ii) *ḏhaṛbettek* is the pronunciation of the Constantine region, of Ferdjioua, and of the environs of Fedj-Mzala as far as Guergour; (iii) *ḏhaṛebtek* (with the stress on the first syllable) extends south of a line joining Bordj-Bou-Arreridj and Colbert throughout the Hodna, south-west Constantine and the central Sahara; it is the pronunciation of all the Algerian nomads (including Teniet al-Hadd) who pronounce the voiced sibilant as *ž*; and it is also the pronunciation which prevails in eastern and southern Oran.

(5) The syllabic structure of the imperfect of sound verbs, first form, in the plural: *yeḏhṛab* + *u* "they have struck"; and that of the triliteral noun *faʿla(t)* with a suffix commencing with a vowel: *raḳba(t)* + *i* "my neck"; (i) *yeḏhaṛbu*, *raḳebti* (with the stress on the first syllable) is found throughout the Constantine region except in El-Kantara, on the high Algerian plains and in the whole of the east, central and west Sahara; the dialects of the south-east have a clearly-defined tendency to prolongate the vowel receiving the stress; (ii) *yeḏhḏhaṛbu*, *raḳḳebti*, with doubling of the medial and stress of the second syllable, is prevalent in El-Kantara and the region of Philippeville; these are the forms in use in the north of Algeria, wherever the voiced sibilant is *dj*, including Teniet el-Hadd; they are also used throughout north and west Oran; the dividing-line *yeḏhḏhaṛbu*/*yeḏhaṛbu* passes between Tiaret and El-Ousseukh, follows the northern edge of the Chegui *chott*, and swings south, leaving Mechéria to the west and Aïn Sefra to the east.

(6) The conjugation of defective verbs (imperfect and imperfect *a*): *mshā* - *yemshī* "to go" and *nsā* - *yensā* "to forget": (i) northern Constantine, from the Tunisian frontier as far as a line which drops rapidly from Bône towards Ain Beïda, and the eastern Sahara as far as Sidi Okba and El-Oued, use the forms *mshā* (*mshē*) - *mshet* - *mshū* - *yemshī* - *yemshū*; *nsā* (*nsē*) - *nset* - *nsū* - *yensā* - *tensī* - *yensū*; (ii) central Constantine, from the northern boundary delineated above as far as the outskirts of Biskra and Mdoukal, along a line which follows the Hodna depression and rises again towards Mansoura des Bibans as far as Kabylia, has forms which are completely resolved: *msha* - *mshāt* - *mshāw* - *yemshī* - *yemshīw* -; *nsa* - *nsāt* - *nsāw* - *yensā* - *tensā* - *yensāw*, analogous to those of the sedentary dialects; (iii) throughout Bedouin Algeria, from the Sahara to the sea, and in a large part of Oran, bounded on the east by a line which, starting from the outskirts of Oran itself, passes to the south of Saint Denis-du-Sig and to the north of Cacherou, leaves Frenda to the east and proceeds southwards, passing between Aflou and Géryville, the conjugation of verbs with imperfect *i* and imperfect *a* is characterised by a peculiar usage: *yemshi* - *yemshū* on the one hand, *yensa* - *tensay* - *yensāw* on the other; this usage is found again in western Oran, from a line running east of Tlemcen, passing east of the Homeyan, and curving westwards north of Aïn Sefra; (iv) central Oran, comprising the regions of Aïn Temouchent, Sidi bel-Abbès, Mascara, Saïda, Méchéna, Géryville, Aïn Sefra and Ouled Sidi Sheikh, has the forms *yemshu*, *tensī*, *yensū*.

By drawing up a table of all the different characteristics, there emerge, despite the overlapping and contradictions which blur the boundaries and split up geographical areas, four, or perhaps five distinct basic groups:

(i) The Bedouin dialects of eastern Constantine, the region of La Calle and Souf (Cantineau's group

B): the pronunciations are *ž*, *gh*, *ah*, *dharbâtek*, *yedharbu*, *rakebti*, *mshet* - *mshū* - *yemshu*, *nset* - *nsū* - *tensī* - *yensū*. The final *y* vowel tends to become *i* (*imāla*); diphthongs are generally reduced to *ē*, *ō*.

(ii) The Bedouin dialects of central and western Oran (Cantineau's group D): the pronunciations are *ž*, *gh*, *ah*, *dharebtek*, *yedhdharbu*, *rakkebti*, *yemshu*, *tensī* - *yensū*; diphthongs are either correctly preserved *ey*, *ow*, or reduced to *ē*, *ō*.

(iii) The Bedouin dialects of central and Saharan Algeria (Cantineau's group A): the pronunciations are *ž*, *ḳ* for *gh*, *u*, *dharebtek*, *yedharbu*, *rakebti*; diphthongs are either correctly preserved or reduced to *ē*, *ō*.

(iv) The Bedouin dialects of the Tell and of the Algerian-Oran Sahel (Cantineau's group B): the pronunciations are *dj*, *gh*, *u* (*o*), *dharbâtek*, *yedhdharbu*, *rakkebti*; diphthongs are sometimes preserved sometimes reduced to *ī*, *ū*, and final *u* is pronounced *o*.

These two last groups have the same conjugation of the defective verb: *mshā* - *mshāt* - *mshāw* - *yemshū*; *nsā* - *nsāt* - *nsāw* - *tensāy* - *yensāw*.

(v) The dialects of the high plains of Constantine, covering the north of Hodna and the belt which extends roughly from Bordj Bou Arreridj to the valley of the Seybouse, occupies an intermediary position between groups i, iii and iv, and the sedentary dialects (Cantineau's group C): the pronunciations are *dj*, *gh*, *u*, *dharbettek*, *yedharbu*, *rakebti*; the diphthongs are reduced to *ī* and *ū*, and the conjugation of the defective verb is completely restored, as in the urban and village dialects; these dialects can be regarded as a complementary group, if not as an independent one: they are the dialects of the old Zīrid state of the Ḳalʿa, a centre of sedentary peoples buried beneath the mass of the Bedouin.

It cannot be pretended that any interpretation of this classification can be other than a hazardous and debatable undertaking. Having due regard to the delicacy of the task, it may be hazarded that group i is connected with the Tunisian group which W. Marçais considers Sulaymite; following him let us call it group S. Group ii is probably an extension of the eastern Moroccan group, which G. S. Colin considers Maʿḳilian; let us call it group M. Group iii comprises the most truly Sahara Bedouin elements, at once the most imposing and the most united, including the Chaamba, the Larbaa, the Ouled Naïl, the Arab Cheraga; the dialectal area of these nomads extends over a wide area of the north—more to the east than to the west—covering the nomad's pasture grounds and the grazing lands of the high plains. The northern part of their domain forms a large zone of transition shared with group iv. They are grouped in the valley of the Chélif, and stretch as far as the environs of Relizane and Mostaganem in the west, and into Mittidja and as far as Kabylia in the east. Let us call group iii H^1 and group iv H^2, conjecturing a vast implantation there of Hilālī Arabic, the Arab element (perhaps that of the Athbedj and the Zoghba) intermixed with a Zenāta element. The proportion of Arabicised Berbers is doubtless more considerable in the north of the high plains and along the Tell Atlas. Group v, an extremely complex group, is inserted like a wedge between the still Berber-speaking groups of Kabylia and the Chaouia region; it to is perhaps consonant with an implantation of Hilālī Arabic (Riyāḥ?) in the formerly ʿAdjīsa and Kutāma territories; let us call it H^3.

We do not profess to define the precise disposition of the zones of transition between the various groups, or to determine the possible preponderance in them of one type of dialect as opposed to another. It is, however, suggested that group H^1 succeeded, in the course of centuries, in spreading further afield, to the detriment of groups H^2 and H^3, as a result of the political superiority enjoyed by those forming that group: it was a case of warlike pastoral nomads, imbued with the spirit of conquest, confronting people who were at the same time small agriculturalists and semi-nomadic, semi-settled. In the same way group H^3 must have impinged strongly on the territories of the settled regions of western Constantine: hence the presence of sedentary dialectal forms emerging from the superimposed Bedouin dialect as surviving witnesses to a group of dialects which have been superseded. On the other hands, more recently we see that not only is Bedouin linguistic expansion being checked, owing to the decline of the pastoral life, to its geographical limitation and even, at many points, to its disappearance, but that the sedentary dialectal elements are gaining ground, especially in the northern areas.

Although any forecast must be risky, one is inclined to believe that the social changes whose effects are daily experienced by the Arabic-speaking peoples of Algeria can divert the spoken idiom into new channels. In the land in which they live, the towns, few in number, enclosed with walls whose gates were closed at nightfall, have remained, for thousands of years, alien intruders in a rural and pastoral, composite and inorganic world. The towns of modern Algeria, whether legacies of the past or recent creations, some of them populous centres, all of them centres of economic activity, exercise a magnetic influence on many a district of the former Regency, even the most distant, to which they represent labour markets and a source of livelihood; and, one might add, melting-pots in which is being produced a *koine* of Algerian Arabic which is capable of causing the extinction of the old regional dialects.

ALGORITHMUS is the old name for the process of reckoning with Arabic numerals. In mediaeval treatises the word is spelt in various ways: e.g. *Algorismus*, *Alchoarismus*, *Alkauresmus*, etc., corruptions of the *nisba* of the oldest known writer on Arabic arithmetic: Muḥammed b. Mūsa al-Khwārizmī [*q.v.*]. His book was translated into Latin in the 12th century by an unknown author, and the only known copy at Cambridge has been edited by B. Boncompagni (*Trattati d'aritmetica* i, Rome 1857). It opens with the words: "dixit Algorithmi", the word is here correctly given in the form of an Arabic *nisba*, i.e. as a proper name; it is strange that it should afterwards have come to mean the new process of reckoning with Arabic figures, as contrasted

with the system of counting by the Greco-Roman abacus. Of the numerous attempts to explain the word it is enough to mention a derivation from a philosopher Algus, and a supposed origin from the Arabic article *al* combined with the Greek ἀριθμός, hence the form "Algarithmus". The right explanation was given by M. Reinaud in his *Mémoire sur l'Inde*, 303-4, in the year 1849, before the Cambridge manuscript had been edited, but the false acceptation prevailed, and Algorithm (or Algorism) is still used in the sense of "system of numeration, arithmetic".

ʿĀLĪ, MUṢṬAFĀ B. AḤMAD B. ʿABD AL-MAWLĀ ČELEBI, one of the most outstanding representatives of Turkish literature of the 16th century. Born at Gallipoli in 948/1541, from the age of 10 he studied under Surūrī, great expert in Persian language and literature, and then under the Arab poet Muḥyi 'l-Dīn. In 965/1557 he presented to the heir-apparent Selīm his work entitled *Mihr u-Māh*, a step which determined his future career (see Dozy, *Cat. cod. or. bibl. Acad. Lugd. Batavae*, ii, 128). He became a member of the circle of his fellow-citizen Muṣṭafā, tutor to the prince, and was for a long time attached to this important figure as a private secretary. Selīm II, on his accession, confirmed him in this post, and about the same time he made the acquaintance of Nishāndjī, through whom he acquired knowledge of numerous events. In 976/1568 he accompanied Muṣṭafā to Egypt, but this visit was abruptly terminated by the latter's dismissal. In 1570, Muṣṭafā was placed in command of the army charged with the conquest of Cyprus, and ʿĀlī, as his secretary, witnessed the achievements of the Ottoman fleet and army. During the following years he lived in Rumelia, and in 980/1572 he compiled the *Heft Madjlis* or *Heft Dastān* (MS Lāleli, Istanbul, no. 2114; printed edition in the collections of the *Iḳdām*) in which he described, in a pompous style, the end of the reign of Suleymān I and the accession of Selīm II. About the same time he compiled a collection of poetry in Turkish, consisting mainly of *ḳaṣīdas* and *ghazals*. He also produced a Persian *dīwān* (see Flügel, *Die arab., pers., und türk. Hss. der K.K. Hofbibl. zu Wien*, i, 651). ʿĀlī is, however, only ranked as a second-rate poet, as his poetry shows little feeling or sensibility. In 1577, he was again Muṣṭafā's secretary when the latter was placed in command of an expedition to Persia; he was the author of numerous victory proclamations sent from the Caucasus. He took advantage of his stay in those areas to collect a mass of information on the customs and legends of the populations of the Caucasus, and especially those of Gīlān, Shīrwān and Georgia. After the dismissal of Muṣṭafā, ʿĀlī returned to Istanbul; the sudden death of his protector placed him in a difficult position, but did not interfere with his literary activity. He dedicated to the Sultan his *Mirʾāt al-ʿAwālim* which gives an account of the miracles of the Creation and the Prophets (MSS: İstanbul Üniversitesi Kütüphanesi, nos. 17397-96; Esad Efendi Kütüphanesi, no. 2407; cf. Flügel, loc. cit., ii, 94; Pertsch, *Verz. d. türk. Hss.... zu Berlin*, nos. 36, 558). Soon afterwards he completed the *Nuṣrat-nāme*, which deals with the expedition to Iran (Esad Ef. Kütüp., no. 2433; Rieu, *Cat. of the Turk. MSS. in the Brit. Mus.*, p. 61). The ceremony of the circumcision of the heir-apparent Meḥmed, one of the most magnificent ceremonies which took place in the Ottoman Empire, was the occasion of a descriptive work which gained him an introduction to the prince: *Djāmiʿ al-Ḥubūr der Madjālis al-Sūr* (Istanbul, Nuruosmaniye Kütüp., no. 4318).

In 995/1586 he compiled the *Manāḳib-i Hunerwerān*, in which he collected important material on some hundreds of calligraphists, miniaturists, illuminators and bookbinders (see Flügel, loc. cit., ii, 386; edited by İbnülemīn Maḥmūd Kemāl, Istanbul 1926). The *Zubdat al-Tawārīkh*, the Turkish translation of an Arabic work, dates from the same period (Flügel, ibid., ii, 90; İst. Üniv. Kütüp., nos. 2378-2386). Interested in mysticism and pantheism, he gave in the *Ḥilyat al-Ridjāl* (Rieu, loc. cit., p. 19; Pertsch, *Die türk. Hss. ... zu Gotha*, 75; Ist. Üniv. Kütüp., nos. 1329, 404) detailed information on the saints, their hierarchy and their influence; he also composed a *dīwān* entitled *Lāʾiḥāt al-Ḥaḳīḳāt* (Rieu, loc. cit., 261; İst. Univ. Kütüp., nos. 651, 1963). Appointed *kātib* of the Janissaries, then *defter emini*, he applied himself to tracing the course of history down to his own times; he wished, however, to produce his work at Cairo, then the greatest book centre of the Muslim world. Meḥmed III who, on his accession, accorded him privileged treatment, appointed him *defterdār* of Egypt, but the hostility of certain *wazīrs* caused him to lose this post. From 1000-1007/1592-9 he wrote his great work, *Kunh al-Akhbār*, in four parts (printed at Istanbul between 1277/1861 and 1285/1869 in 5 vols., covering the period up to the reign of Meḥmed II; no printed edition of the remaining 150 years exists). In the first part, he recounts the ancient legends concerning the prophets; in the second, he treats of Muḥammad and Islam. He was so convinced of the important role played by his nation in the development of Islam that he entitled the third part "The Turko-Tatar chapter". The fourth part is devoted to the formation of the states and to Ottoman history. A geographical dictionary is appended to the work. The *Kunh al-Akhbār* is among the most important Ottoman historical works. Although the information given by ʿĀlī on the pre-Islamic period is of no great value, on the subject of Ottoman history, especially that of the 16th century, he is extremely valuable. His passion for truth even leads him to criticise the actions of certain sultans, and in general he speaks favourably of non-Muslims. His style, poetical to begin with, becomes more simple as he proceeds.

Later he wrote a historical summary of the Muslim World, entitled *Fuṣūl al-Ḥall wa 'l-ʿAḳd Uṣūl al-Khardj wa 'l-Naḳd*, which is one of the most popular works in Turkish (see, e.g., the MS in Nuruosmaniye Kütüp., no. 3399). As a reward for his literary activities he was appointed *pasha* of Djidda; in 1008/1600 he wrote his last work, *Ḥālāt al-Ḳāhira min al-ʿĀdāt al-Ṭāhira* (MSS: Esad Ef. Kütüp., no. 2407; Cairo, *Bibl. Khédiv., Cat. des ouvr. turcs*, 197), a short but significant work. He died the same year.

ʿĀlī is a particularly attractive character: although, in the circles in which he moved, violence and intrigue seem to have the rule, he showed himself always to be loyal, kindly and upright. His integrity and seriousness explain why he failed to win the goodwill of the rough and unpolished men of that period; even the Grand Vizier Siyāwush Pasha, a remarkable man, viewed him with contempt. On the other hand, every writer of the period was his friend.

Bibliography: His life and works have been described by J. von Hammer-Purgstall, *Gesch. d. osman. Reiches*, iv, 308, 651 ff.; idem, *Gesch. d. osman. Dichtkunst*, iii, 115 ff.; by Meḥmed Ṭāhir b. Rifʿat, *Müwerrikhīn-i ʿOthmāniyyeden ʿĀlī we-Kātib Čelebi'nin Terdjüme-i Ḥālleri*, Salonica 1322/1906; and by Ibnülemīn Maḥmūd Kemāl, op. cit. Cf. also *Cat. cod. or. bibl. Acad Lugd. Bat.*, 1873, v. 57; Flügel, loc. cit., ii, 94; *JA*, 1869, 76, 90 ff. (K. SÜSSHIEM-R. MANTRAN)

ʿALĪ B. AL-**ʿABBĀS** AL-MADJŪSĪ, medieval medical writer, commonly known to the West as Haly Abbas. He was born in al-Ahwāz from old Persian stock, as his title al-Madjūsī shows. He probably moved to Shīrāz at an early date, for he made his medical studies under a physician of that city, Abū Māhir Mūsā b. Sayyār, and dedicated his magnum opus to its ruler, ʿAḍud al-Dawla the Buwayhid. This book he named the *Kāmil al-Ṣināʿa* or *K. al-Malikī*; the medieval Latin translators named it the *Liber Regius*. It derives its title from the dedication to ʿAḍud al-Dawla. The exact date of ʿAlī's death is not known. It occurred between 982 and 995 A.D.

The *Kāmil al-Ṣināʿa*, upon which the importance of ʿAli b. ʿAbbās depends, was deliberately written to fall mid-way between the lengthy *al-Ḥāwī* and the brief *al-Manṣūrī*, both works of al-Rāzī. It was immediately recognised as a master-piece and was adopted as the chief textbook of medicine for students. Some hundred years later it was overshadowed by the *Ḳānūn* of Ibn Sīnā. But it remained sufficiently popular to be translated into Latin in full by Stephan of Antioch in 1127 and this translation to be printed in Venice on 1492 and in Lyons in 1523. The surgical section of the book had already been translated by Constantine the African in the 11th century and was used by the School of Salerno. (Printed in *Constantini Africani Operum Reliquia*, 1539.) The Arabic text was reproduced in Cairo, Būlāḳ 1294/1877, and in 1903 the anatomical section was translated into French (P. de Koning, *Trois traités d'anatomie arabe*, Leiden 1903, 90-427).

ʿALĪ B. **ʿABD ALLĀH** B. AL-**ʿABBĀS** was the ancestor of the ʿAbbāsids. According to Muslim tradition, ʿAlī was born in the year 40/661, the very same night in which the caliph ʿAlī was assassinated; but there are also other statements concerning the year of his birth. His mother was called Zurʿa bint Mishraḥ. His grandfather al-ʿAbbās was the uncle of the Prophet, and on account of his high birth and his personal gifts ʿAlī attained to great distinction. He was looked upon as the handsomest and most pious Ḳurayshite of his time, and received the surname of "al-Sadjdjād" (he who prostrates himself often) because of his constant praying. His piety did not prevent him from plotting secretly against the Umayyads, and was therefore banished from the capital by the caliph al-Walīd I. He went to live in the province of al-Sharāt on the border between Arabia and Palestine. Here he died in 117/735-6 or 118 in the village of Ḥumayma. This place remained the headquarters of the ʿAbbāsid propaganda, after ʿAlī's son Muḥammed, the father of the future caliphs al-Saffāḥ and al-Manṣūr, had been recognised as the head of the ʿAbbāsids.

ʿALĪ B. **ABĪ ṬĀLIB**, cousin and son-in-law of Muḥammad, and fourth caliph, was one of the first to believe in Muḥammad's mission. Whether he was the second after Khadīdja, or the third after Khadīdja and Abū Bakr, was much disputed between Shīʿites and Sunnīs. He was at that time aged 10 or 11 at most, and Muḥammad had taken him into his own household to relieve the boy's father Abū Ṭālib, who had fallen into poverty. One narrative, which is open to criticism on several counts, represents ʿAlī as having occupied the Prophet's bed on the night when the latter left Mecca for Medina, so that the conspirators, on entering the house in order to kill Muḥammad, were surprised to discover his young cousin sleeping there. After restoring to their owners the objects which Muḥammad was holding on trust, ʿAlī rejoined the Prophet at Ḳubā. Some months later, he married Muḥammad's daughter Fāṭima [*q.v.*], and of their marriage were born al-Ḥasan and al-Ḥusayn [*qq.v.*]. During the lifetime of Fāṭima ʿAlī took no other wife.

Military exploits. In Muḥammad's lifetime ʿAlī took part in almost all the expeditions, often as standard-bearer, twice only as commander (at Fadak in 6/628, and in al-Yaman in 10/632). He always displayed a courage, which later on became legendary; at Badr he killed a large number of Ḳurayshites; at Khaybar he used a heavy door as a shield, and the victory of the Muslims over the Jews was due to his ardour; at Ḥunayn (8/630) he was one of those who stoutly defended the Prophet. After the Prophet's death, he took no part in any military expedition, for reasons unknown. ʿUmar is said to have prevented the Ḳurayshites from going out to the provinces, but ʿUthmān removed all obstacles to their movements. It is possible that ʿAlī himself had no wish to absent himself from Medina; perhaps it was simply his state of health which kept him from fighting, although several feats are attributed to him at the battles of the "Camel" and Ṣiffīn, in 36/656 and 37/657, when he was already sixty years old.

In addition, ʿAlī performed several other functions for the Prophet. He was one of his secretaries, and on occasion was charged with missions which might be called diplomatic; on two occasions he was deputed to destroy idols. He executed with his own hand enemies condemned to death by the Prophet, and with al-Zubayr supervised the massacre of the Banū Ḳurayẓa (5/627). In 9/631 he read to the assembled pilgrims at Minā the first seven verses of the sūra *Barāʾa* (ix).

Dispute with Abū Bakr. During the election of Abū Bakr [*q.v.*] as Muḥammad's successor, ʿAlī, with Ṭalḥa, al-Zubayr, and several other Companions, remained apart in the Prophet's house to watch over his body and prepared for its burial. Although solicited to do so by al-ʿAbbās and also, it is said, by Abū Sufyān, he made no effort to keep the control of the Community in the hands of the Hāshimites. When those persons who had at first abstained from recognizing Abū Bakr gradually accepted his election, ʿAlī maintained his refusal for six months. His position was complicated by a

question of inheritance; Fāṭima had asserted a claim to the lands held by her father, which Abū Bakr firmly rejected on the ground of Muḥammad's saying that "Prophets have no heirs". Whether ʿAlī really hoped to succeed Muḥammad is doubtful. The Arabs as a rule chose as their chiefs men of mature age (in 11/633 ʿAlī was a little over thirty) and showed no inclination to legitimism. The S̲h̲īʿites, by inventing or interpreting in the light of their beliefs certain words said to have used by Muḥammad concerning ʿAlī (see Wensinck, *Handbook*, s.v. ʿAlī), have always maintained that the Prophet intended to transmit the succession to his son-in-law and cousin, but it is certain, in any case, that in his last illness he did not express this desire.

Relations with ʿUmar. According to the Muslim authors, ʿAlī was a valued counsellor of the caliphs who preceded him; but although it is probable that he was asked for advice on legal matters in view of his excellent knowledge of the Ḳurʾān and the *sunna*, it is doubtful whether his advice was accepted by ʿUmar on political questions. In regard to the famous *dīwān*, at least, ʿAlī held a view entirely opposed to that of the caliph, for on being questioned on this subject by ʿUmar he recommended the distribution of the entire revenue without holding anything in reserve (al-Balād̲h̲urī, ap. Caetani, *Annali*, A.H. 40, § 275). During the lifetime of ʿUmar (and of ʿUt̲h̲mān), ʿAlī held no office, either military or political, except the lieutenancy of Medina during ʿUmar's journey to Palestine and Syria (al-Ṭabarī, i, 2404, 2522); for this reason he alone was absent from the meeting at D̲j̲ābiya [*q.v.*] at which the military commanders and leading personages convoked by ʿUmar gave approval to measures of the greatest importance on the regulation of the conquests and the *dīwān*. Further evidence of ʿAlī's lack of complete agreement with the policies of Abū Bakr and ʿUmar is contained in the received tradition relating to the *s̲h̲ūrā* [see ʿUT̲H̲MĀN B. ʿAFFĀN], according to which ʿAlī, on being asked by ʿAbd al-Raḥmān b. ʿAwf whether he engaged himself to follow, together with the Ḳurʾān and the *sunna*, the work (*fiʿl*, *sīra*) of the preceding caliphs, gave an evasive answer.

The Opposition to ʿUt̲h̲mān. During the caliphate of ʿUt̲h̲mān, ʿAlī, with other Companions (notably Ṭalḥa and al-Zubayr), frequently accused him of deviating from the Ḳurʾān and the *sunna* of Muḥammad, particularly in the application of the *ḥudūd* [see AL-HURMUZĀN]. ʿAlī insisted upon the duty of applying the divine Law; he was among those who demanded that the legal punishment for drinking should be inflicted on al-Walīd b. ʿUḳba, viceroy of Kūfa, and in some accounts is said to have carried out the whipping with his own hand. With ʿAbd al-Raḥmān b. ʿAwf he reproached ʿUt̲h̲mān with introducing *bidaʿ*, such as making four *rakʿas* at ʿArafāt and Minā in place of two (cf. Wensinck, *Handbook*, s.v. ʿAlī). But on political questions also he ranged himself with ʿUt̲h̲mān's opponents and was recognized by them as their chief, or one of their chiefs, at least morally. E.g. (1) when Abū D̲h̲arr al-G̲h̲ifārī [*q.v.*], who preached against the misdeeds of the powerful, was exiled from Medina, ʿAlī with his sons went to salute him on his departure in spite of ʿUt̲h̲mān's prohibition, and provoked thereby a violent dispute with ʿUt̲h̲mān. (2) When the rebels who came from Egypt to Medina opened negotiations with ʿUt̲h̲mān, ʿAlī was their intermediary, or one of their intermediaries (see e.g. al-Ṭabarī, i, 2969). (3) When they returned later on to Medina and besieged "the House," they asked ʿAlī to put himself at their head (idem, i, 2965); although he refused, nevertheless by his attitude he encouraged the rebels during the siege, and there are reasons for suspecting him to have been in agreement with them in demanding the caliph's abdication, at the same time that any participation by him in the bloody conclusion of the conflict is to be excluded. (4) After his election as caliph, his partisans included those persons who are known to have been hostile to the government on economic questions, such as al-As̲h̲tar [*q.v.*], Ibn al-Kawwāʾ, Ṣaʿṣaʿa and others (al-Masʿūdī, iv, 261; al-Ṭabarī, i, 2916, 2908, etc.). His own programme in face of the various financial demands put forward by the *muḳātila* (division of the surplus of the revenues, distribution of the domanial lands, etc.) is not known. It is recorded only that on becoming caliph he distributed the entire sums which he found in the *bayt al-māl* of Medina, Baṣra and Kūfa, and the whole of the provisions collected in the *bayt al ṭaʿām* (cf. also *Annali*, 40 A.H., §§ 276-80), an action which is to be regarded not simply as a demagogic gesture but as the consequence of the view that he had previously expressed to ʿUmar. He is said also to have wished to distribute the Sawād (i.e. the domanial lands in al-ʿIrāḳ), but to have refrained through fear of legal disputes (al-Balād̲h̲urī, *Futūḥ*, 265 f.).

Apart from this, there is no statement which authorizes us to regard him as an extremist; on the contrary, he was hostile to the Sabaʾiyya, the followers of ʿAbd Allāh b. Sabaʾ [*q.v.*], and when they exalted him beyond measure he rid himself of them; he tried to cut himself loose from the *nuffār*, the besiegers of "the House" (of ʿUt̲h̲mān) and their adherents, as soon as circumstances allowed him to do so (al-Ṭabarī, i, 3163-5, 3182). By his extreme attachment to Islam ʿAlī was driven to attach an absolute superiority in merit to priority of conversion and to services rendered to Islam in its early days, over other claims such as nobility of birth and political or administrative ability. In his conflict with the government he continually appealed to the duty of applying the Ḳurʾān and following the *sunna* of the Prophet, which in his view were being neglected. Whether by this policy, or because, aiming to defend the right of the Hās̲h̲imid house to the caliphate, he was bound to oppose the principle which extended this right to the whole of Muḥammad's tribe, he set the Ḳuray̲s̲h̲ against him, although himself of Ḳuray̲s̲h̲; in return he had the support of most of the Anṣār, of the other non-Ḳuray̲s̲h̲ite Arabs who had been amongst the Old Believers, of the *muḳātila* in the provinces, and the depressed classes in general (*Ag̲h̲ānī*, xi, 31).

Election of ʿAlī and early measures. When ʿUt̲h̲mān was killed the Umayyads fled from Medina and the opposition remained masters of the situation. Since ʿAlī was the person for whom they had most respect, he was invited to succeed to the caliphate. The traditions on the manner and circumstances of his election (the most commonly accepted date is 18 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 35/17 June 656) are contradictory in regard to his willingness to accept it. His partisans on the other hand were ready to employ violence against those who refused to recognize him (including Ṭalḥa and al-Zubayr); nevertheless there were some who would not yield and who left Medina, e.g. ʿAbd Allāh b. ʿUmar, Saʿd b. Abī Waḳḳāṣ, al-Mug̲h̲īra b. S̲h̲uʿba, Muḥammad b. Maslama al-Anṣārī, Usāma b. Zayd.

Muʿāwiya was therefore able to maintain that the election was invalid because made by a minority; to this ʿAlī replied that the election of the caliph was a right of those persons (Anṣār, Muhād̲j̲irūn, or Badr-combatants) who were present in Medina at the relevant time. What is certain is that ʿAlī allowed himself to be nominated also by the rebels who had ʿUt̲h̲mān's blood on their hands. This was an error, in that it exposed him to accusations of complicity in their crime, although some traditions represent him as vainly endeavouring to rid himself of the most factious of his partisans. In spite of counsels by Ibn ʿAbbās to go slowly, ʿAlī at once took some of the measures demanded by the opposition from ʿUt̲h̲mān: he removed the governors appointed by the latter and wherever possible replaced them by governors of his own party, and satisfied the populace by distributions of money, made with a laudable equity. The report of ʿUt̲h̲mān's murder and of ʿAlī's protection of those guilty of it had in the meantime provoked strong reactions in Mecca, Syria and Egypt. Muʿāwiya, governor of Syria and cousin of ʿUt̲h̲mān, accused ʿAlī of complicity with the murderers and refused to pay homage to him. ʿAlī hastily collected troops to force him to obedience, but another serious rebellion compelled him to delay action in Syria, while Muʿāwiya for his part maintained a prudent waiting policy.

Rebellion of ʿĀʾis̲h̲a, Ṭalḥa and al-Zubayr. Although ʿĀʾis̲h̲a had supported the opposition against ʿUt̲h̲mān, she had gone on pilgrimage to Mecca during the siege of "the House". On her way back she learned of the events in Medina, and in consternation, especially at the news of ʿAlī's election, returned to Mecca and engaged in active propaganda against the new caliph. Four months later she was joined by Ṭalḥa and al-Zubayr, and shortly afterwards ʿAlī learned that all three, with several hundred troops, were marching to al-ʿIrāḳ by sidetracks. He immediately set out in pursuit, but could not overtake them. The rebels expected to find in al-ʿIrāḳ the forces and the resources which they needed. ʿAlī was absolutely compelled to prevent them from seizing this province, since Syria obeyed only Muʿāwiya, Egypt was in anarchy, and the loss of al-ʿIrāḳ would have involved also the loss of the eastern provinces dependent on it.

The three insurgents proclaimed that the *ḥudūd* must be re-established for all alike, and that a "reform" (*iṣlāḥ*) must be put into effect (al-Ṭabarī, i, 3093, 3131, 3132). Since these influential leaders were in part responsible for the fate of ʿUt̲h̲mān, the reasons for their rising to demand vengeance for his murder, and the meaning which they attached to *iṣlāḥ*, are obscure. Social and economic motives, inspired by fear of the possible influence of the extremists on ʿAlī, seem to provide a more convincing explanation than personal feelings for their action, and especially ~~for the effect~~ which it produced. The moderates amongst those opposed to ʿUt̲h̲mān had no doubt desired a change of policy, but not one so radical as that now foreshadowed.

While the insurgents occupied Baṣra, and there massacred many of the *nuffār*, ʿAlī sent his supporters to Kūfa to invite its population to take his part, and when he had collected an adequate force he marched towards Baṣra. Since both parties aimed at a peaceful settlement of the dispute, an agreement was negotiated, according to which ʿAlī should disengage himself from the *nuffār* (while guaranteeing their lives), but this was not the conclusion of the affair which the extremists of his party meant to reach. A brawl provoked by them developed into a battle, which became famous in Muslim annals as the "Battle of the Camel" (15 D̲j̲umādā II 36/9 Dec. 656) [see AL-D̲J̲AMAL], and in which Ṭalḥa and al-Zubayr lost their lives, while ʿĀʾis̲h̲a was peremptorily ordered by ʿAlī to return to Medina under escort.

Conflict with Muʿāwiya. Following on this success, ʿAlī had hopes of regaining the allegiance of the governor of Syria by opening negotiations with him, but in vain. Muʿāwiya demanded the surrender of the murderers of ʿUt̲h̲mān in virtue of a verse of the Ḳurʾān (xvii, 32/35) which forbids the slaying of any person save for just cause (*illā bi 'l-ḥaḳḳ*), at the same time according the right of vengeance in the case of anyone slain unjustly (*maẓlūm^an^*) to his *walī*, i.e. his near relative. Muʿāwiya maintained that ʿUt̲h̲mān had been killed unjustly; consequently, he proposed to exercise the right accorded by God. In the meantime, he would hold to his refusal to pay homage to ʿAlī. The sources pass vaguely over the thesis maintained by ʿAlī in rejecting Muʿāwiya's demand, except for the explicit statement in the *Waḳʿat Ṣiffīn* of Naṣr b. Muzāḥim al-Minkarī (570): since ʿUt̲h̲mān was killed by the people, who were outraged by his arbitrary actions, the murderers should not be liable to the *lex talionis*. In reality the struggle had much deeper causes; what was at issue was the pre-eminence of Syria or of al-ʿIrāḳ, and probably also two different conceptions of the policy to be followed in the government of the Muslim State.

ʿAlī, finding that Muʿāwiya was not to be won over, passed to the offensive; the two armies, each some tens of thousands strong, faced one another on the plain of Ṣiffīn [*q.v.*]. After some skirmishing, interrupted by a truce in Muḥarram 37/June-July 657 and some parleys, battle was joined; there was a week of combats between horsemen and foot-soldiers, followed by a violent conflict (the "night of clamour", *laylat al-harir*, 10 Ṣafar 37/28 July 657). Muʿāwiya's star seemed to be sinking, when ʿAmr b. al-ʿĀṣ advised him to have his soldiers hoist copies of the Ḳurʾān on their lances. This gesture, famous in Muslim history, did not imply surrender; by this means Muʿāwiya invited the combatants to resolve the question by consultation of the Ḳurʾān. Weary of fighting—the number of the killed is swollen in the sources to 70,000 or even more—the two armies laid down their arms. ʿAlī was forced by his partisans to submit the difference to arbitration, as proposed by Muʿāwiya, and further to choose the arbitrator for his side from among the "neutrals" So sure were his followers that they were in the right! In these decisions the *ḳurrāʾ* [*q.v.*], of whom many were in his army (though they were represented in Muʿāwiya's army also), played a large part.

Appointment and task of the arbitrators (*taḥkīm*). A convention was drawn up at Ṣiffīn itself (Ṣafar 37/657), by the terms of which the two arbitrators, Abū Mūsā al-As̲h̲ʿarī [*q.v.*] for ʿAlī and ʿAmr b. al-ʿĀṣ [*q.v.*] for Muʿāwiya, would announce their decision at a place halfway between Syria and al-ʿIrāḳ in the presence of witnesses chosen by themselves; the date fixed for the meeting was Ramaḍān, but the arbitrators might advance it or postpone it until the end of the year 37. In the two versions of the convention which have come down to us the points to be examined by the arbitrators are not defined; all that is said is that they were to consult the Ḳurʾān "from the first to the last sūra" and, in default of clear indications in the sacred Book, the *sunna* of the Prophet, excluding what

might give rise to divergences. L. Veccia Vaglieri (see the art. cited in the Bibliography) has shown that their task was to determine whether the acts of which ʿUt̲h̲mān was accused were or were not *aḥdāt̲h̲*, arbitrary actions at odds with the divine Law. If the caliph were guilty, his murder could be regarded as an act of justice; but if he had committed no errors, the conclusion must be that he had been killed unjustly (*maẓlūm^an^*), and in consequence Muʿāwiya was justified in claiming the right of vengeance. But this was not all, for a decision in favour of Muʿāwiya would inevitably involve, for ʿAlī, the loss of the caliphate.

Protests against the arbitration. While awaiting the verdict, the armies returned to their bases. But already at Ṣiffīn certain individuals had protested against recourse to arbitration with the cry *lā ḥukm^a^ illā li'llāh*, literally "No decision save God's". The phrase implied that it was absolutely improper to apply to men for a decision since, for the case in dispute, there existed a divine ordinance in the Ḳurʾānic verse xlix, 8/9: "*If two parties of the Believers fight with one another, make peace between them, but if one rebels* (bag̲h̲at) *against the other, then fight against that one which rebels* (allatī tabg̲h̲ī), *until it returns to obedience to God . . .*". In fighting against his opponents ʿAlī had appealed to this verse, since in his view the "rebellious party" had been, firstly, that of ʿĀʾis̲h̲a, Ṭalḥa and al-Zubayr, and now that of Muʿāwiya. The dissidents maintained, very logically, that it was his duty to continue to fight against Muʿāwiya, as no new fact had intervened to alter the situation.

During the return to Kūfa, those had first raised the cry *lā ḥukm^a^ illā li'llāh* (hence called *al-muḥakkima al-ūlā*) persuaded many other partisans of ʿAlī that the arbitration was a sin against God, by substituting the judgment of men for His prescription. A group of some thousands proclaimed their repentance and stopped at Ḥarūrāʾ, near Kūfa (whence their name of Ḥarūrites [*q.v.*]). The caliph, on a personal visit to their camp, succeeded in reconciling the dissidents, all or in part, evidently by making concessions to them. After his return to Kūfa, however, he denied from the *minbar* the reports which asserted his intention of infringing the convention of Ṣiffīn. When it was learned that he had sent Abū Mūsā to the meeting with ʿAmr, a group of dissidents, 3,000 or 4,000, secretly left Kūfa, and some hundreds more left Baṣra. The rallying-point chosen by these dissidents, called K̲h̲awārid̲j̲ (K̲h̲ārid̲j̲ites [*q.v.*]), was al-Nahrawān, on the canal of the same deriving from the Tigris.

The arbitration (*ḥukūma*). Muʿāwiya, with his escort, was the first to arrive at the meeting-place of the arbitrators (Ramaḍān 37/Feb. 658). ʿAlī, excusing himself on the ground of the troubles caused by the dissidents, did no more than send Abū Mūsā with the escort and his cousin Ibn ʿAbbās as his representative. The sources give vague or contradictory statements on the place and date of the meeting, some placing it at Dūmat al-D̲j̲andal (now al-D̲j̲ōf), approximately halfway between Syria and al-ʿIrāḳ, as stipulated in the convention, others at Ad̲h̲ruḥ, between Maʿān and Petra. There are many grounds (see the art. cited above) for believing that a first meeting in the presence of six persons only was held at Dūmat al-D̲j̲andal, and a second meeting (see below) at Ad̲h̲ruḥ in S̲h̲aʿbān 38. At the former, the arbitrators must have reached an agreement on the result of their investigations, and this result was that ʿUt̲h̲mān had committed no breach of his trust, since only on this ground can the later events be explained. A passage in *Waḳʿat Ṣiffīn* (618 f.) explains why their verdict is known to us only indirectly: as a measure of precaution, "the two men agreed at Dūmat al-D̲j̲andal to say nothing". But though the verdict was not promulgated, it is certain that it became known to both parties; the Syrians, perhaps in the enthusiasm of the moment, took the *bayʿa* to Muʿāwiya (D̲h̲u 'l-Ḳaʿda 37/April 658: al-Ṭabarī, ii, 199), while ʿAlī publicly protested against both arbitrators, proclaimed that their sentence was contrary to the Ḳurʾān and the *sunna*, and that he was therefore under no obligation to submit to it. Thereupon he assembled his forces and set out to engage Muʿāwiya in battle again. On reaching al-Anbār, he turned aside towards al-Nahrawān, in the conviction that it was necessary first of all to destroy this centre of insurgence. Muʿāwiya, in the same month in which ʿAlī was engaged with the K̲h̲ārid̲j̲ites, took possession of Egypt (Ṣafar 38).

Battle of al-Nahrawān. ʿAlī first tried to re-enlist the K̲h̲ārid̲j̲ites in his forces by a declaration that he would take the field again against Muʿāwiya, but without effect. The dissidents demanded that he should confess himself guilty of an act of impiety (*kufr*), which he indignantly refused to do. After promising the *amān* to those who should submit—and there were some—he attacked the rebels (9 Ṣafar 38/17 July 658). It was a massacre rather than a battle, and it seems that ʿAlī was the first to regret it. This action, condemned by contemporary opinion,—for many sincere believers, of well-known piety, had fallen on the field—had very grievous consequences for him; the defections, which had already begun, increased, and he was forced to return to Kūfa and to give up the campaign against Muʿāwiya.

Conference of Ad̲h̲ruḥ. The situation was completely changed after these events. Henceforward the opposing parties were no longer a caliph and a rebel governor, but two rivals for the supreme office in the State. While Muʿāwiya had gained ground, ʿAlī was struggling in a morass of difficulties: he had been disqualified in the eyes of the Muslim community by the verdict of the arbitrators, and he had lost many of his supporters by his refusal to submit to their decision after consenting to the *taḥkīm*, by the massacre of the K̲h̲ārid̲j̲ites, and in general by his vacillating policy. This was the position when the arbitrators and many eminent persons (with the exclusion of ʿAlī and also, it would seem, of his representatives) met at Ad̲h̲ruḥ in S̲h̲aʿbān 38/January 659. In this conference the meetings attended only by the arbitrators and certain personages must be distinguished from the final plenary session. In the former the verdict of the arbitrators was promulgated (several sources assert that Abū Mūsā recognized that ʿUt̲h̲mān had been killed unjustly), and the selection of a new caliph was discussed. The information given in the sources is rather discordant, except as regards the final scene. It can be gathered that ʿAmr maintained the cause of Muʿāwiya against Abū Mūsā's preference for ʿAbd Allāh b. ʿUmar, who for his part refused to stand for election in default of unanimity; Abū Mūsā then proposed, and ʿAmr agreed, to declare both ʿAlī and Muʿāwiya deposed and to remit the choice to a committee. In the public discourses that followed, Abū Mūsā observed this agreement, possibly adding some counsels in which he alluded to his preference for the son of ʿUmar; ʿAmr in his

turn declared ʿAlī deposed and confirmed Muʿāwiya. Several modern historians have adjudged this scene entirely improbable, but this negative attitude towards traditions which are nevertheless explicit and fairly concordant on this point is due to an inadequate appreciation of the preceding events explained above. In the light of these the final scene at Adhruḥ can readily be accepted. The unexpected declaration of ʿAmr seems to have been a strictly personal proposal on his part, which, as a man charged with a grave responsibility, he believed himself entitled, if not in duty bound, to advance. But this declaration, which obviously contravened the agreement previously reached (since Abū Mūsā reacted to it with indignation), was generally judged in later times as a treacherous trick, and was certainly a disloyal act. It is worthy of notice that even in the plenary assembly no voice was raised on behalf of ʿAlī; the clash which followed ʿAmr's declaration was a reaction against the Umayyads, not in favour of ʿAlī. In any case the conference had entirely negative results, for the participants separated without taking any decision on the caliphate.

Last years, death and burial of ʿAlī. ʿAlī continued to be regarded as caliph by his partisans, though their numbers were daily diminishing, and Muʿāwiya by his. In 39/659 the situation was still uncertain. ʿAlī, confined to Kūfa, remained passive even when Muʿāwiya made small expeditions into the heart of al-ʿIrāḳ and of Arabia. In Khurāsān and the East Arab rule was thrown off [see ʿABD AL-RAḤMĀN B. SAMURA], but a rising in Fārs was skilfully put down by Ziyād b. Abīhi [*q.v.*], as governor for ʿAlī. In 40/660 ʿAlī enjoyed no authority in the two Holy Cities, and could not stop an attack by Muʿāwiya on al-Yaman. Finally, a Khāridjite, ʿAbd al-Raḥmān b. Muldjam al-Murādī [see IBN MULDJAM], in revenge for the men slain at al-Nahrawān, struck ʿAlī with a poisoned sword before the door of the mosque of Kūfa. He died about two days later, being then 62 or 63 years of age. A questionable tradition asserts that Ibn Muldjam was only one of a group of fanatics who plotted to rid Islam of the three persons regarded as responsible for the civil war, and that Muʿāwiya and ʿAmr were to have been assassinated at the same time.

ʿAlī's burial place was kept secret, evidently for fear lest his body should be exhumed and profaned. It was not until the time of Hārūn al-Rashīd that it was announced that his tomb had been identified at a spot some miles from Kūfa, where a sanctuary subsequently arose; a town, al-Nadjaf [*q.v.*], grew up there, surrounded by an immense cemetery, due to the aspiration of pious Shīʿites to be buried in the vicinity of their Imāms.

Personal details. In person, ʿAlī is represented as bald, affected by ophthalmia, stout, short-legged and broad-shouldered, with a hairy body and a long white beard covering his chest. In manner he was rough and brusque, apt to give offence and unsociable. He had two nicknames: *Ḥaydara*, "lion", and *Abū Turāb*, "dustman", a name probably given to him contemptuously by his enemies, but which was afterwards interpreted as an honorific by invented episodes (see Nöldeke in *ZDMG*, 1898, 30). He had fourteen sons and nineteen daughters by nine wives and several concubines; of his sons, only three, al-Ḥasan, al-Ḥusayn, and Muḥammad b. al-Ḥanafiyya, played a historical role, and five in all left descendants. He was reputed to have a profound knowledge of the Ḳurʾān, of which he was one of the best "readers" (Suyūṭī, *Itḳān* (Sprenger), 169, 171; the statement that he compiled a recension is to be rejected: *Gesch. des Qor.*, ii, 8-11). Many political discourses, sermons, letters and wise sayings (*ḥikam*) have been ascribed to him; these can be read in *Nahdj al-Balāgha*, a collection of the 5th/11th century, which includes here and there old historical texts and passages of *adab* [see AL-SHARĪF AL-RAḌĪ]. On the *dīwān* (in which some poems are perhaps authentic) and the prose works attributed to him, see Brockelmann, i, 43 f., S I, 73 f. His gifts as an orator were doubtless remarkable, but the same cannot be said of his poetic art (H. Lammens, *A propos de ʿAlī ibn Abī Ṭālib*, *Études sur le siècle des Omayyades*, 1930, 1-11).

Personality. The personality of ʿAlī is difficult to define, since the historian finds no sure guide either in his actions or his discourses, or in the data supplied by the sources. His own will was paralysed or modified by events and the constraint of his partisans. His discourses are obscure in form, and it is not easy to distinguish the genuine from the forged. Since the conflicts in which he was involved were perpetuated for centuries, the sources are sometimes tendentious, and, though less idealizing or hostile than has been asserted, more often reticent. The hostile judgment of Lammens (especially in *Fāṭima* and *Moʿâwia Ier*), sometimes obtained by forcing the texts, is to be rejected. The milder presentation of Caetani which, while exposing the weaknesses of ʿAlī, gives due weight to the pressure of circumstances upon him, remains vague in its general lines. Neither Lammens nor Caetani has brought out the religiosity of ʿAlī and its reflections in his policy. There is an abundance of notices on his austerity, his rigorous observance of religious rites, his detachment from worldly goods, his scruples in regard to booty and retaliation; and there is no reason to suppose all these details invented or exaggerated, since all his actions were dominated by this religious spirit. Without attempting to decide whether his devotion to Islam was always wholly unmixed with other motives, this aspect of his personality cannot be disregarded for the understanding that it affords of his psychology. He engaged in warfare against "erring" Muslims as a matter of duty, in order "to sustain the Faith and to make the right way (*al-hudā*) triumphant" (al-Balādhurī in Caet., 40 A.H., § 235, *d*, etc.). After his victory at "the Camel", he tried to relieve the distresses of the vanquished by preventing the enslavement of their women and children, in face of the protests of a group of his partisans; when battles ended, he showed his grief, wept for the dead, and even prayed over his enemies. Even the apparent ambiguity of his attitude towards the Ḥarūrites can be explained by his fear of disobeying God; though persuaded by them that the arbitration was a sin, he recognized also that to infringe the convention of Ṣiffīn was equally a sin, and in this painful dilemma chose to allow the arbitration to proceed. Obedience to the divine Law was the keynote of his conduct, but his ideas were governed by an excessive rigorism, and it was perhaps for this reason that his enemies described him as *maḥdūd*, "narrow-minded". Imprisoned in his strict conformism, he could not adapt himself to the necessities of a situation which was very different from that of Muḥammad's time; thus he lacked that political flexibility which was, on the other hand, one of the pre-eminent qualities of Muʿāwiya. His programme, rather than uncertain, was utopian;

probably he himself discovered the impossibility of realizing it when the power came into his hands, and this may have contributed, along with the external events, to his discouragement in his last years. Caetani observed that the half-divine aureole which soon encircled the figure of ʿAlī was derived not only from his relationship with the Prophet, but also from the personal impression which he left on his contemporaries; but he did not indicate the qualities which gave rise to the legend. If it is recognized that his was a profoundly religious spirit, and that he supported by his authority a programme of social and economic reforms, at the same time placing them on a religious basis, this question also may find its solution. [For S͟hīʿite doctrines and legends concerning ʿAlī see s͟hīʿa.]

Bibliography: The basic historical sources, with many additional texts *adab*, *ḥadīt͟h* and other works, are translated or summarized in Caetani, *Annali* (of which vols. ix and x (1926) are devoted to the caliphate of ʿAlī). Further materials in Naṣr b. Muzāḥim al-Minḳārī, *Waḳʿat Ṣiffīn*, ed. ʿAbd al-Salām Muḥammad Hārūn, Cairo 1365 (the lith. ed. Ṭehran 1301 and abridged ed. Bayrūt 1340 are much inferior), and Muḥibb al-Dīn al-Ṭabarī, *al-Riyāḍ an-Nāḍira fi Manāḳib al-ʿAs͟hara*, Cairo 1327, ii, 153-249. Studies: A. Müller, *Der Islam in Morgen- und Abendland*, Berlin 1885, i, 308-34; J. Wellhausen, *Die religiös-politischen Oppositionsparteien*, Berlin 1901 (*A. K. G. W. ʿALĪ b. al-D̲J̲AHM b. Badr b. al-D̲j̲ahm al-Sāmī, Arab poet, of Banū Sāma b. Luʾayy, a tribe from Baḥrayn, whose claim to descent from Ḳurays͟h was disputed. His father al-D̲j̲ahm moved from K͟hurāsān to Bag͟hdād and was appointed to various offices under al-Maʾmūn and al-Wāt͟hiḳ; the poet's brothers also were prominent in official and literary circles. ʿAlī was born probably c. 188/804, and received his education in Bag͟hdād. Under al-Muʿtaṣim (218-27/833-42) he held *maẓālim* jurisdiction in Ḥulwān, but, perhaps because of his support of Aḥmad b. Ḥanbal in opposition to the Muʿtazila, did not become prominent as a court poet until the reign of al-Mutawakkil (232-47/847-61). For some time he enjoyed, as a *nadim*, the intimacy of that caliph, but fell from favour owing to his freedom of speech and the jealousy of his rivals. After a year's imprisonment he was sent to K͟hurāsān, and suffered further punishment there before being released, when he returned to lead a disorganized life in Bag͟hdād. After the murder of al-Mutawakkil (which he lamented with fiery denunciation of all those involved) he set out to join the volunteer *g͟hāzī* troops on the Syrian borders, and was killed on the way by a raiding party of Kalb, in 249/863.

Only a selection from his *diwān* has been preserved (ed. K͟halīl Mardam Beg, Damascus 1949). It shows him to have been a gifted poet, whose verse is above all the simple expression of his own emotions, whether in praise or satire, in patient acceptance of adversity or reckless adventure. It is noteworthy also as displaying the attitudes of the K͟hurāsānian Arab supporters of the ʿAbbāsid caliphate in opposition to S͟hīʿite and other unorthodox views. He was in friendly relations with Abū Tammām [*q v.*], who made him the subject of two poems, but was on the contrary coarsely satirized by al-Buḥturī (Istanbul 1300, ii, 99, 107) for his hostility to ʿAlī b. Abī Ṭālib.

Bibliography: *Ag͟hānī* ix, 104-120 and index; al-K͟haṭīb al-Bag͟hdādī, *Taʾrīk͟h Bag͟hdād*, vii, 170; xi, 367-9; Ibn Ḥazm, *D̲j̲amharat Ansāb al-ʿArab*, 163; Ṣūlī, *Ak͟hbār Abī Tammām* 61-63; idem, *Awrāḳ*, 81; Ibn K͟hallikān, no. 435; Preface to the *Diwān*. (H. A. R. Gibb)

ʿALĪ b. **ḤUSAYN ZAYN al-ʿĀBIDĪN** [see zayn al-ʿābidīn].

ʿALĪ b. **ʿĪSĀ** b. Dāʾūd b. al-D̲j̲arrāḥ, ʿAbbāsid vizier, b. 245/859 into a family of Persian origin settled at Dayr Ḳunnā on the Tigris below Bag͟hdād, who had probably turned Christian before their adoption of Islam. Many of his relatives, including his father and grandfather, were officials in the ʿAbbāsid administration, and he himself seems to have received his first secretarial employment at the age of nineteen or twenty. In 278/892, on the formation of the *diwān al-dār* by Aḥmad b. al-Furāt, both ʿAlī and his uncle Muḥammad b. Dāʾūd were employed in that department as secretaries under Aḥmad's brother ʿAlī, and some seven years later, when independent departments for the Western and Eastern provinces were created, ʿAlī b. ʿĪsā and his uncle were appointed to manage them respectively. During the later years of al-Muʿtaḍid's caliphate, a feud developed between members of the family of al-D̲j̲arrāḥ and the brothers Aḥmad and ʿAlī b. al-Furāt, and this came to a head on the death of al-Muktafī in 295/908, when, after the latter's brother al-Muḳtadir had succeeded as caliph largely owing to the exertions of Ibn al-Furāt, the Banu 'l-D̲j̲arrāḥ engineered a conspiracy to depose him in favour of ʿAbd Allāh b. al-Muʿtazz [*q.v.*]. ʿAlī b. ʿĪsā was given control of the *diwāns* in the short-lived government of Ibn al-Muʿtazz and was consequently fined and banished to Mecca on the restoration of al-Muḳtadir.

In Mecca, during the first vizierate of Ibn al-Furāt, ʿAlī was kept under surveillance until Ibn al-Furāt's fall in 299/912. In 300/913 he was recalled at the suggestion of the general Muʾnis [*q.v.*], to succeed al-K͟hāḳānī as vizier. His first term in office lasted exactly four years, and was marked by strenuous efforts on his part to rehabilitate the state finances. Although he succeeded in augmenting the revenues, his reduction of expenditure earned him the dislike of the court, including the irresponsible and extravagant caliph. During his first year as

vizier he despatched an embassy to the Ḳarāmiṭa, which secured the release of the ʿAbbāsid prisoners of war; and since for some ten years, whether or not partly as a result of this approach (which was repeated in 303/915-6), the Ḳarāmiṭa remained quiescent, this action later gave ʿAlī's enemies a pretext for alleging that he was in league with the sectaries. The economy in military expenditure on this front was, however, offset by the cost of expeditions against the Fāṭimids in Egypt (301/914) and other rebels in ʿIrāḳ (303/916); ʿAlī found himself unable to pay certain troops at the capital, who mutinied; and in the next year Ibn al-Furāt, by promising plentiful supplies of money to the caliph and his mother, and engaging the influence of the powerful *ḳahramāna* Umm Mūsā, whom ʿAlī had offended, was reappointed vizier. Although ʿAlī was fined, imprisoned, and impeached (though unsuccessfully) for complicity in the rebellion of Yūsuf b. Abi 'l-Sādj, which broke out shortly before his dismissal, the caliph began, little more than a year later, to consult him on whom to appoint in his rival's place; and early in 306/July 918 Ibn al-Furāt was dismissed and Ḥāmid b. al-ʿAbbās made vizier. Shortly afterwards, on Ḥāmid's proving quite incompetent, ʿAlī was induced to accept office as his deputy, and it was not long before he exercised all real power. An attempt by Ḥāmid to regain his influence by undertaking to raise extra revenue from the Sawād, al-Ahwāz, and Iṣfahān, produced a sharp rise in the price of grain at Baghdād, followed in 308/920-1 by prolonged popular riots. ʿAlī thenceforward managed affairs on his own, but refused the office of vizier in the following year. He again incurred unpopularity by his measures of economy, which was rendered more than ever necessary by heavy expenditure on expeditions for the second expulsion of the Fāṭimids from Egypt and the defeat of Ibn Abi 'l-Sādj, and in 311/923 Ibn al-Furāt was reappointed vizier for the third time.

ʿAlī, once more arrested and questioned on his management of the finances and his relations with the Ḳarāmiṭa (who raided Baṣra four days after his dismissal), was cleared on the second charge but forced into signing a bond for 300,000 *dīnārs*, and subsequently tortured, by Ibn al-Furāt's son al-Muḥassin. He was nevertheless helped to pay off his fine and again allowed to retire under surveillance to Mecca, whence, after more than one attempt on his life by his guardian, he was exiled to Ṣanʿāʾ, remaining there until the summer of the following year, when, on the execution of Ibn al-Furāt, he was appointed Overseer of Egypt and Syria. Three years later, at the end of 314/beginning of 927, he was recalled and reappointed to the vizierate.

His second term of office lasted little more than a year. The ʿAbbāsid government was by now hopelessly insolvent; the Byzantines were tempted by its evident weakness to advance into Muslim territory and took Sumaysāṭ (Samosata); and the Ḳarāmiṭa, after taking Kūfa and defeating Ibn Abi 'l-Sādj, advanced on Baghdād and came near to taking it too. ʿAlī was forced to apply to the caliph and his mother for funds for the defence of the city and to raise the pay of the mutinous soldiery; and though, when he sought to resign in consequent despair over the finances, al-Muḳtadir refused to allow him to do so, he was dismissed shortly afterwards and imprisoned.

On al-Muḳtadir's second deposition nine nonths later, ʿAlī was released; and on the caliph's restoration (ʿAlī's partisan Muʾnis then becoming all-powerful) he was appointed to deal with *maẓālim* and subsequently, in 318/930, made head of the *dīwāns* and general adviser first to his cousin Sulaymān b. al-Ḥasan b. Makhlad and then to the latter's successor in the vizierate, al-Kalwādhī. Towards the end of 319/931, however, on the appointment of his second cousin and enemy al-Ḥusayn b. al-Ḳāsim, he was again exiled, this time to his native Dayr Ḳunnā, though he was soon allowed to return to the capital. During the reign of al-Ḳāhir he held a minor fiscal office for some months; and after the accession of al-Rāḍī he was once more arrested, fined, and momentarily exiled to al-Ṣāfiya (near Dayr Ḳunnā), at the instance of Ibn Muḳla, who, however, at the end of 323/935, was obliged to enlist his help in negotiating peace with al-Ḥasan b. Abi 'l-Haydjāʾ the Ḥamdānid (afterwards Nāṣir al-Dawla), with whom ʿAlī had been accused of intriguing.

In the summer of 325/936, ʿAlī, having as usual declined the vizierate for himself, acted as general assistant to his brother ʿAbd al-Raḥmān for three months. In 328/940, on the accession of al-Muttaḳī, he was against appointed to deal with *maẓālim*, and a few months later he again acted as assistant to ʿAbd al-Raḥmān, though for little more than a week. These were his last employments; and apart from expressing the view, which was acted on, that the Christian relic known as the "Image of Edessa" should be handed over to the Byzantines in exchange for an undertaking to refrain from attacking that city in 332/944, he played no further part in public affairs. Six months after the arrival of the Buwayhid Muʿizz al-Dawla in Baghdād, he died at the age of eighty-nine (29 Dhu 'l-Ḥidjdja 334/1 Aug. 946).

Comparatively little is known of ʿAlī's private life. He had two sons, probably by different wives: Ibrāhīm, who became secretary to the caliph al-Muṭīʿ in 347/958-9 and died in 350/961; and ʿĪsā, b. 302/914-5, who likewise became secretary to al-Ṭāʾiʿ, earned some repute as a traditionist and student of the "Greek" sciences, and died in 391/1001. ʿAlī's ascetic tendencies in religion seem to have been intensified by an attraction to ṣūfism. He is known to have been a friend of the ṣūfī al-Shiblī; and his dealings with al-Ḥallādj, whom, when the latter was accused of heresy in 301/913, he examined, but declined to try when he was further accused in 306/918, suggest that there existed a secret sympathy between them. Some of ʿAlī's letters to al-Muḳtadir's Ṣābian physician, Sinān b. Thābit, are quoted by Ibn al-Ḳifṭī and Ibn Abī Usaybiʿa; according to the latter also the philosopher al-Rāzī addressed a medical treatise to ʿAlī, who displayed much interest in the improvement of public health, himself founding a hospital in the Ḥarbiyya quarter of the capital. Other foundations of his were at least one mosque on his private estates, a well (called after him al-Djarrāḥiyya) at Mecca, and another well and an aqueduct at Ṣanʿāʾ. He was also the author of three, possibly four, books, none of which appear to be extant.

(H. Bowen)

ʿALĪ B. ʿĪSĀ was the best known oculist (*kaḥḥāl*) of the Arabs. His work, the *Tadhkirat al-Kaḥḥālīn*, deserves the greater claim to our attention from the point of view of the history of civilization in that it is the oldest Arabic work on ophthalmology, that is complete and survives in the original. The name of the author is also recorded in the inverted form: ʿĪsā b. ʿAlī. Preference is to be given to the first form as follows from a reference in Ibn Abī Uṣaibiʿa (*ʿUyūn al-Anbāʾ*, i, 240) and from quotations in later authors as al-Ghāfiḳī, Khalīfa b. Abi ʾl-Maḥāsin and Ṣalāḥ al-Dīn. The uncertainty as to the form of the name is due to confusion with the court physician of the Caliph al-Mutawakkil, ʿĪsā b. ʿAlī, who lived some 150 years earlier (*Fihrist*, i, 297, 19; Ibn Abī Uṣaibiʿa, i, 203), and also wrote medical treatises.

ʿAlī b. ʿĪsā's life falls in the first half of the 5th/11th century; for (according to Ibn Abī Uṣaibiʿa, *l.c.*) he was a pupil of Abu ʾl-Faradj b. al-Ṭayyib, the commentator on Galen, at Baghdad, who died in the third decade of the 5th/11th century (according to Ibn al-Ḳifṭī, ed. Lippert, 223). ʿAlī, who, like his above mentioned teacher, professed the Christian religion, seems likewise to have practised at Baghdād. We know nothing of the external details of his life. As a physician he was full of foresight and prudence and of kindly feeling. This is evidenced by many a counsel given to the ophthalmic surgeon in the interests of the patient.

His *Tadhkirat al-Kaḥḥālīn* (promptuary for oculists),—sometimes also designated *Risāla* (epistle), on account of the introductory words—is a very detailed treatise. According to the Preface the first Book treats of the anatomy of the eye, the second of diseases externally visible and their treatment (diseases of the lid, of the corners of the eyes, of the conjunctiva, cornea, uvea, cataract and its operation), the third of hidden diseases and their treatment (visual illusions, diseases of the albumen, crystalline lense, spirit of vision, long-sightedness, short-sightedness, blindness during the day, and during the night, diseases of the vitreous humour, of the retina, of the visual nerve, of the choroid, of the sclerotic, squinting and weak sight). After a chapter on the preservation of health, the work closes with an alphabetical treatment of 141 simple remedies and their particular action on the eye.—We cannot judge to what extent the work can lay claim to originality, since the older Arabic works on the subject are not preserved. ʿAlī himself observes in his Preface: "I have searched the works of the Ancients throughout, and merely added the little of my own thereto, which I have learned publicly from the teachers of our own time and which I have acquired in the practice of this science". He mentions the work of Ḥunayn together with Galen as his principal sources. In addition he cites in the *Tadhkira* the Alexandrians, Dioscorides, Hippocrates, Oreibasius and Paulus.

The comprehensiveness of his work laid the foundation of his fame [cf. ʿAMMĀR]; it has been considerably used by later Arab oculists—until the present day—both for the practical and theoretical portions (Ibn al-Ḳifṭī, *l.c.*: "the physicians of this branch work at all times in accordance with this") and has frequently been quoted whole chapters at a time. A commentary on it, written by Dāniyāl b. Shaʿya, is mentioned by Khalīfa b. Abi ʾl-Maḥāsin [*q.v.*] in the introduction to his ophthalmological work. This commentary is not preserved; on the other hand a large number of manuscripts of the *Tadhkira* itself have come down to us. Even in the Middle Ages it was translated into Hebrew and twice into Latin (*Tractatus de oculis Jesu b. Hali*, Venice 1497, 1499, 1500; edited once more by Pansier with a second translation, made from the Hebrew version, under the title *Epistola Ihesu filii Haly de cognitione infirmitatum oculorum sive Memoriale oculariorum quod compilavit Ali b. Issa*, Paris 1903). That the great importance of the *Tadhkira* in the history of medicine has been entirely unrecognized is due to the barbarous character of the Latin translation and the fact that whole sentences are frequently omitted therein. So the continuity is destroyed and the sense made unrecognizable.

A German translation of the *Manual for oculists* based on the Arabic manuscripts is contained in vol. i of *Die arabischen Augenärzte nach den Quellen bearbeitet* by J. Hirschberg, J. Lippert and E. Mittwoch, Leipzig 1904.

Bibliography: cf. the introduction of the last-named work; Brockelmann, I, 635, S I, 884.

(E. Mittwoch)

ʿALĪ B. MAHDĪ [see MAHDIDS].

ʿALĪ B. MAʿṢŪM [see ʿALĪ KHĀN].

ʿALĪ B. MAYMŪN B. ABĪ BAKR AL-IDRĪSĪ AL-MAGHRIBĪ Moroccan mystic of Berber (though pretended ʿAlid) origin, born about 854/1450. In his youth he is said to have been the *amīr* of a *ḳabīla* of the Banū Rāshid in the Djabal Ghumāra, but to have relinquished that position because he was unable to enforce among his people the prohibition on wine-drinking. In 901/1495-6 he left Fez, visited Damascus, Mecca, Aleppo, and Brusa, and finally settled at Damascus where he died in 917/1511.

His mysticism was of a moderate character; in his *Bayān Ghurbat al-Islām bi-Wāsiṭat Ṣinfay al-Mutafaḳḳiha wa ʾl-Mutafaḳḳira min Ahl Miṣr wa ʾl-Shām wa-mā yalīhā min Bilād al-Aʿdjām*, he inveighed against the religious and social abuses which he had noticed in the East (cf. Goldziher, in *ZDMG*, 1874, 293 ff.). He wrote this work at an advanced age (he commenced it on 19 Muḥarram 916). On his mystical writings, among which an apology for Ibn ʿArabī calls for special comment, see Brockelmann, II, 124; S II, 152. See also Tāshköprü-zāde, *al-Shaḳāʾiḳ al-Nuʿmāniyya* (in the margin of Ibn Khallikān, Būlāḳ 1299), i, 540.

(C. Brockelmann)

ʿALĪ B. MUḤAMMAD [see ṢULAYḤIDS].

ʿALĪ B. MUḤAMMAD AL-ZANDJĪ, known as ṢĀḤIB AL-ZANDJ, was the leader of the Zandj [*q.v.*], the rebel negro slaves who for fifteen years (255-270/868-83) terrorised southern ʿIrāḳ and the adjoining territories. He was born in Warzanīn, a village near Rayy, and is said by some authorities to have been of Arab origin, being descended from ʿAbd al-Ḳays on his father's side and from Asad on his mother's. His name is generally given as ʿAlī b. Muḥammad b. ʿAbd al-Raḥīm. According to Ibn al-Djawzī (*al-Muntaẓam*, Hyderabad 1357, v, 2, 69) his real name was

Bihbūdh. Al-Bīrūnī (*Chronology*, 332; translation, 330) states that he was known as Al-Burḳuʿī (the veiled one). He himself claimed to be an ʿAlid, and gave his pedigree as ʿAlī b. Muḥammad b. Aḥmad b. ʿĪsā b. Zayd b. ʿAlī b. Ḥusayn b. ʿAlī b. Abī Ṭālib (al-Bīrūnī, loc. cit.; al-Masʿūdī, *Murūdj*, viii, 31; al-Ṭabarī, iii, 1742- who gives a slightly different pedigree. On an ʿAlid of this name, whose father died in prison under Al-Mustaʿīn, see al-Masʿūdī, *Murūdj*, vii, 404 and Abu 'l-Faradj al-Iṣfahānī, *Maḳātil al-Ṭālibiyyīn*², Cairo 1949, 672 and 689). After a first attempt to win support in Baḥrayn, where he is said to have had family connexions, he sought to exploit the disturbed state of Baṣra in order to establish himself there. He failed, however, and only escaped imprisonment by fleeing to Baghdād. Not long afterwards new disturbances in Baṣra favoured his return. This time he sought for support among the negro slaves working in gangs on the salt-flats east of Baṣra. After a period of preparation he openly declared himself on 26 Ramaḍān 255/5 September 869. Though claiming to be an ʿAlid, and using the title of Mahdī, he did not adopt the Shīʿite doctrine, but instead professed the equalitarian creed of the Khāridjites. After a long period of military successes, including the temporary captures of Ubulla, Ahwāz, Baṣra and Wāsiṭ, the Zandj armies were at last overcome by a major expeditionary force mounted by the regent Muwaffaḳ, and besieged in their capital al-Mukhtāra. The Zandj leader refused the offer of a free pardon and a state pension, and after the final assault on 2 Ṣafar 270/11 August 883, his head was taken on a pole to Baghdād.

Bibliography: The fullest account is that of Ṭabarī, iii, 1742-1787; 1835-2103). Further details will also be found in Masʿūdī, *Murūdj*, viii, as well as in Yaʿḳūbī, Ḥamza Iṣfahānī etc. For studies on the Zandj revolt see T. Noeldeke, *Sketches from Eastern History*, London-Edinburgh 1892, 146-175; Fayṣal al-Sāmir, *Thawrat al-Zandj*, Baghdād 1954; and ʿAbd al-ʿAziz al-Dūrī, *Darāsāt fi 'l-ʿUsūr al-ʿAbbāsiyya al-Muta'akhkhira*, Baghdād 1945, 75-106. On the coins of the Zandj see P. Casanova in *Revue Numismatique*, 1893, 510-6, and J. Walker, in *JRAS*, 1933, 651-6.

(B. LEWIS)

ʿALĪ B. RABBAN AL-ṬABARĪ [see AL-ṬABARĪ].

ʿALĪ B. SHAMS AL-DĪN was the author of a history of Gīlān entitled *Ta'rīkh-i khānī*, and covering the years 880-920 (1475-1514). According to the introduction, the book would appear to have been written by Sultan Aḥmad Khān, but ʿAlī seems to be the real author. The work has been edited by B. Dorn, *Muhammedanische Quellen zur Geschichte der südl. Küstenländer des kaspischen Meeres*, vol. ii. Cf. the preface of this volume, 15 f.

ʿALĪ B. YŪSUF B. TĀSHUFĪN, Almoravid amīr and second sovereign of the Tāshufīnid dynasty, who ruled over a large part of the Maghrib and of southern Spain from 500/1106 to 537/1143.

The reign of ʿAlī, who succeeded his father Yūsuf b. Tāshufīn at the moment when Almoravid power was at its greatest on both sides of the Straits of Gibraltar, was marked by a series of events of which hitherto the main facts were known, but the exact course of which was not always clear, owing to a lack of detailed sources old enough to be reliable. To-day, there is available on the one hand the volume of the *Naẓm al-Djumān* of Ibn al-Ḳaṭṭān, and the "Memoirs" of the companion of the Mahdī Ibn Tūmart, al-Baydhaḳ, on the disintegration of Almoravid power before the onslaught of the Almohad rising, and on the other the unpublished fragments of the *al-Bayān al-Mughrib* of Ibn ʿIdhārī on the reign of ʿAlī b. Yūsuf, fragments which were to a large extent borrowed from the work of the historian Ibn al-Ṣayrafī [*q.v.*], the contemporary of the Almoravids. This information derived from the chronicles of the 8th/14th century has only a supplementary value; sometimes it must even be regarded with caution or even rejected, on account of its lack of objectivity and of its pro-Almohadism. This is particularly the case with the *al-Muʿdjib* of ʿAbd al-Wāḥid al-Marrākushī, hitherto considered an essential source for the Almoravid period, which despite some picturesque and probably accurate accounts of the court at Marrakush, must be used with great care.

The reign of ʿAlī b. Yūsuf lasted for 37 years, despite the difficulties which faced him from the beginning—difficulties which soon appeared to be of little consequence compared with the danger occasioned by the rising in the Atlantic mountain region and the preaching of *tawḥid* by Ibn Tūmart [*q.v.*]. The first danger which ʿAlī had to face, from the time of his accession and in the years following, arose from disputes between members of his own family and the chiefs of the *murābiṭ* movement, who belonged to two related, but not solidary clans, namely the Lamtūna, the clan of the ruling branch, and the Massūfa. Under the Almoravid régime, in which fraternal relationship on the father's side was of less importance than uterine kinship, and in which legitimate Tāshufīnid amirs were only designated by the name of their mother (Ibn ʿĀ'isha, Ibn Gannūma etc.), disputes over precedence and conspiracies against the reigning prince were, as was the case a few decades earlier at the Ṣinhādjī courts of the Zīrids of Ifrīḳiya and al-Andalus, mainly the work of the royal princesses (*ummahāt*), with the aid of their immediate kin and *mawālī*, in favour of their own sons.

Yūsuf b. Tāshufīn had seen this danger so clearly that he was careful not to designate as his successor one of his sons by a Ṣinhādjian wife, not even his eldest son, Abu' l-Ṭāhir Tamīm, offspring of his marriage at Aghmāt to the influential Ifrīḳiyan Zaynab, who predeceased him by ten years. His choice fell on ʿAlī, born at Ceuta of his union with a Christian captive from Spain, in 477/1084, two years before the battle of al-Zallāḳa. This young man of 23 years was enthroned without opposition at Marrakush on the death of his father, 1 Muḥarram 500/2 September 1106, with the apparently disinterested support of his elder brother Tamīm. But he was obliged inmediately to bring to his senses a son of his brother Abū Bakr b. Yūsuf, Yaḥyā, who was in command at Fez and who submitted without delay. Relying on the judgement of his Andalusian advisers, who had belonged to his father's entourage, ʿAlī embarked on a policy of the pendulum which he was obliged to follow throughout his reign, namely, constantly to move, like pawns on a chessboard, the majority of the Almoravid *amirs*, including his brother, who held provincial governorships in the chief towns of Maghrib and Andalusia. The Almoravid governors received threatening letters of recall to the ruler's side, were dismissed or restored to favour, and were in addition assisted in their duties by administrative inspectors (*mushrif*) and secretaries of chancery, who were almost all Andalusians; such is the record of the greater part of the annals of his reign. It will not be recalled here in detail, but this

lack of continuity in the tenure of the important military and regional commands already shows that the structure inherited by ʿAlī b. Yūsuf from his father was not resting securely on its foundations.

On the other hand, the fortunes of war for long smiled on the Almoravid sovereign in his *d̲j̲ihād* expeditions against the Christians of Spain, led by himself or by one of his generals. The aged Alfonso VI had never abandoned the hope of revenging his defeat at al-Zallāḳa; but he suffered a further humiliation in S̲h̲awwāl 501/end of May 1108, when Tamīm, the elder brother of ʿAlī, defeated under the walls of the fortress of Uclés (*Ukli̲d̲j̲*) the Castilian troops of Count Garcia Ordoñez, accompanied by the infant Sancho, the son of Alfonso VI and Mora Zaida, the step-daughter of al-Muʿtamid b. ʿAbbād. The Christian general and the infant were overtaken and killed a few days later at Belinchón, not far from Uclés. Alfonso VI, aged and broken by this blow, had nothing to wait for but death, which overtook him barely a year later, on 30 June 1109. The throne of Castille was occupied until 1126 by his daughter Urraca. Meanwhile, the young kingdom of Portugal was becoming organised, and, in Aragon, Alfonso the Warrior aimed at the capture of Saragossa, which the Almoravids had finally taken from the Hūdids in 503/1110; Alfonso added it to his own dominions nine years later, in 512/1118.

All the chroniclers mention the four successive crossings of ʿAlī b. Yūsuf to al-Andalus; the first voyage, in the year of his accession, took him no further than Algeciras; the second was a *d̲j̲ihād* expedition in the summer of 503/1109, which led to the temporary occupation of Talavera, on the Tagus; the third, also inspired by the motive of holy war, was marked by a resounding success—the capture of Coïmbra in Ṣafar 511/June 1117, after a siege of twenty days. On his fourth crossing, in 515/1121, ʿAlī b. Yūsuf did not go beyond Cordova. But the operations of the Almoravid generals against Spanish Christendom continued without respite, both in Aragon and in New Castille. One of the last notable victories of the reign was that of Fraga, in the region of Lérida: this town, besieged by Alfonso the Warrior, was relieved by the Almoravid general Yaḥyā b. ʿAlī b. G̲h̲āniya, who inflicted a crushing defeat on the King of Aragon, 23 Ramaḍān 528/17 July 1134.

ʿAlī b. Yūsuf, despite some undeniably good qualities, was far from possessing the stature of his father Yūsuf b. Tās̲h̲ufīn. Although he spent the greater part of his reign in Morocco itself, he seems to have devoted his special attention to Spain and to have reserved the majority of his military forces for the *d̲j̲ihād* against Christendom, only retaining, for the security of his capital and to guard the Moroccan mountain region, light forces, mainly composed of Christian mercenaries, under the command of the celebrated Catalan Reverter (al-Rubertayr). This policy brought about the downfall of his kingdom. From the moment when the history of the reign of ʿAlī b. Yūsuf became identical with that of the return of Ibn Tūmart [*q.v.*] to Morocco, the preaching of *tawḥīd* and the first military ventures of the Almohad chiefs, the game was lost, in default of strong and immediate measures against the rebel movement. ʿAlī b. Yūsuf was gradually forced to face the facts: he had been unable adequately to strengthen the structure bequeathed to him by his father, and had allowed ever larger cracks to appear in it. Soon it collapsed, but the son of Yūsuf b. Tās̲h̲ufīn was not himself present at this dramatic climax; he died on 8 Rad̲j̲ab 537/38 January 1143, exactly five years before the capture of Marrakus̲h̲ by ʿAbd al-Muʾmin, leaving his son Tās̲h̲ufīn to succeed him on his tottering throne.

Despite these ultimate misfortunes, the reign of ʿAlī b. Yūsuf must be considered one of the most brilliant periods in the history of the Muslim West. The pro-Almohad historians (followed by Dozy) have tried in vain to disparage the Almoravids; to-day it must be admitted that the first third of the 6th/12th century coincided with a positive renaissance of Spanish civilisation, both in al-Andalūs and the Mag̲h̲rib. The sovereign's literary circle was of the same quality as during the era of the *ṭawāʾif*. Cordova once more became the intellectual and social capital of the kingdom. Ibn Ḳuzmān gives us an attractive picture of it in his *zad̲j̲als*, and at Sevilla, the *muḥtasib* Ibn ʿAbdūn gives us information on the urban economy and the part played in it by the representatives of Almoravid authority.

At the same time, however, the hand of Mālikism in its most intransigeant form continued to retard the wheels of society. The *faḳīhs*, almost all of whom were natives of al-Andalus, were in a dominating position both at Marrākus̲h̲ and at Cordova. They promulgated *autos-da-fé*, and burned the *Iḥyāʾ* of al-G̲h̲azzālī in the parvis of the great mosque of Cordova as early as 503/1109. They fulminated against the laxity of morals and against innovations, in the knowledge that the sovereign would lend them an attentive ear. But the other Almoravid nobles and their wives paid no heed to their sermons. A steadily widening rift developed between the Lamtūnian aristocracy and the population of the towns. ʿAlī b. Yūsuf did not possess the necessary energy to seal it up in time.

Bibliographie: Of the Arabic sources, the most important (*Naẓm al-D̲j̲umān* of Ibn al-Ḳaṭṭān and *Bayān* of Ibn ʿId̲h̲ārī) still unpublished are to be published by E. Lévi-Provençal, *Documents inédits d'histoire almoravide*; see also the same, *Documents inédits d'histoire almohade*, Paris 1928, index. For details of the other sources, belonging to later historiography, and assessed at the beginning of the article (ʿAbd al-Wāḥid al-Marrākus̲h̲ī, *al-Ḥulal al-Maws̲h̲iyya*, Ibn K̲h̲aldūn, Ibn K̲h̲allikān, Ibn al-K̲h̲aṭīb, Ibn al-At̲h̲īr, al-Nuwayrī, al-Nāṣirī, etc.), see the bibliography of the article AL-MURĀBIṬŪN. Cf. also the short work, now out-of-date, of F. Codera, *Decadencia y desaparición de los Almoravides en España*, Saragossa 1899; E. Lévi-Provençal, *Reflexions sur l'empire almoravide au début du XIIe siècle*, *Islam d'Occident*, i, Paris 1948, 239-56. (E. LÉVI-PROVENÇAL)

ʿALĪ b. ṢĀLIḤ [see WĀSIʿ ʿALĪSI].

ʿALĪ AKBAR K̲H̲IṬĀʾĪ, author of a description of China in Persian (*K̲h̲iṭāy-nāma*), which was finished in 922/1516, and originally intended for the sultan Selīm, but later dedicated to Sulaymān. The book is not a travel-book, but a systematic description in twenty chapters, based partly on observations by the author himself, partly on information collected by him in China. The work was translated into Turkish in the reign of Murād III, probably in 990/1582 (lith. Istanbul 1270/1854); the translation served as the basis for the studies of Fleischer and Zenker.

ʿALĪ AMĪRĪ, Turkish historian, b. in 1274/1857 at Diyâr Bakr, d. at Istanbul 23 December 1923 (1342). An official of the financial administration, he was primarily interested in the history of the Ottoman Empire, and he took advantage of his appointment to different towns to transcribe Arabic and Turkish inscriptions, to study local history and above all to seek out old documents and historical and poetical manuscripts. In this way he built up a library of unpublished and rare manuscripts, which later enriched the National Library of Istanbul. He published the review *Taʾrīkh we-Edebiyyāt*, edited the *Dīwān Lughāt al-Turk* of Maḥmūd Kāshgharī, and was a member of various learned societies. He wrote historical and literary works, but is principally known as an editor of texts. He also helped to classify the archives of the Sublime Porte at Istanbul, and gave his name to one of the catalogues: *Ali Emiri tasnifi*.

Bibliography: Ahmed Refik, *ʿAlī Emīrī, Ḥayātī we-Athari* in *TOEM*, 14th year, No. 1 (78), January 1340/1924, 45-51; Reşad Ekrem Koçu, in *Istanbul Ansiklopedisi*, s.v. Ali Emiri. The description of numerous MSS. in *Istanbul Kütüphaneleri Tarih-Coğrafya yazmalari*, fasc. 1 to 10, Istanbul 1943-51, and *Istanbul Kitapliklari Türkçe yazma divanlar kataloğu*, 2nd series, fasc. 1 (12th-16th centuries), Istanbul 1947.

(R. Mantran)

ʿALĪ ʿAZĪZ Efendi, **GIRIDLI**, Turkish diplomat and writer, d. 19 Djumādā I 1213/29 Oct. 1798. He was born in Crete, where his father Taḥmisdji Meḥmed Efendi was *defterdār*. Son of a wealthy father, he lived a carefree life until circumstances constrained him to enter the service of the state (*muḥaṣṣil* of Chios, ca. 1792-93 in Belgrad). In 1211/1796-97, he was appointed ambassador to Prussia, arrived in Berlin early in June, 1797, and died there in the following year. Of his achievements as a diplomat little is known; he owes his fame to his writings. ʿAlī Efendi, who knew Persian, French, and even some German, is an interesting forerunner of the 19th century Turkish movement of Westernization and self-interpretation. In his treatise *Wāridāt* (unpublished, MSS in Istanbul Üniversite Kütüphanesi, nos. T 3383, T 3470, T 1698, and Millet Kütüphanesi, Ali Emiri, Şer'iyye 1154/23) ʿAlī Efendi defends the irrationalism of mystic religiousness (he himself was the disciple of a certain Sheykh Kerīm Ibrāhīm of Abana near Sinob) with arguments tinged with 18th century rationalism. He accepts the vacillation of the God-searching soul between faith and scepticism, and offers the story of his own salvation, modestly admitting its inapplicability to others. An exposé of the ideas of mysticism, and, especially, of the superhuman powers of the sheykh, is also found in ʿAlī Efendi's famous book of fairy tales, the *Mukhayyelāt-i Ledün-i Ilāhī* (written in 1211/1797-98, printed in Istanbul, 1268, 1284, 1290), based mainly on Petis de la Croix's *Les Mille et un jours* (first printed in 1710-12), but handling its material freely and adding many new stories of various character. This book, which was very popular in the 19th century, may be regarded as the first modern educational novel in Turkish; beside fantastic tales, it contains also stories depicting life in 18th century Istanbul with charming realism. ʿAlī Efendi has also left poems, mostly in the ṣūfī tradition. Finally, he is supposed to have written a (now lost) opus containing his discussions with European philosophers.

Bibliography: Saadeddin Nüzhet Ergun, *Türk şairleri*, ii, 620-2 (containing five poems); *IA*, s.v. (by M. Cavid Baysun and Ahmed Hamdi Tanpinar); A. Tietze, *ʿAzīz efendis Muhayyelât*, *Oriens*, 1948, 248-329 (containing the translation of one of the tales); E. J. Gibb, *The Story of Jewâd, a romance by ʿAlī ʿAzīz Efendi the Cretan*, Glasgow 1884 (translation of the second of the three parts of *Mukhayyelāt*).

(A. Tietze)

ALĪ BABA [see alf layla wa-layla].

ʿALĪ BEY, a Caucasian by birth, was for nearly 20 years the chief personage in Egypt. He had been brought there at an early age, and had been offered as a gift to Ibrāhīm Katkhudā, who was the real master of the country from 1156 to 68/1743-54. Before his death, the latter conferred on ʿAlī the rank of *bey*, and made him a member of that curious council of "Powers", whose turbulent authority grew in proportion as the Pasha nominated by the Porte became a shadowy and passive spectator. This Ottoman governor, in order to survive, concerned himself with preserving an apparent neutrality in face of the sanguinary conflicts between the *beys*, a neutrality which he abandoned in order to hasten to the aid of the victor.

ʿAlī distinguished himself at the beginning of his career by the successful defence of a pilgrim caravan against Arab tribes. Appointed *bey*, he was plunged into an atmosphere of intrigue; each character in the drama was obliged to have recourse to murder, and was himself shadowed by assassins. At first, ʿAlī Bey maintained an attitude of prudent watchfulness, confining his activities to enriching himself by every means, and was thus able to collect a substantial number of *mamlūks*. This policy bore fruit when, from the year 1177/1763, his peers recognised him as their leader. In the course of the following year he conferred the rank of *bey* on his *mamlūk* Muḥammad Abu 'l-Dhahab [*q.v.*], the man who was destined to overthrow him. This rise to power, not achieved without setbacks and disputes, was abruptly checked: ʿAlī Bey, forced to take refuge in Syria, established relations with ʿUmar al-Ẓāhir, the ruler of Acre. Through the good offices of the latter, ʿAlī Bey returned to Egypt, with the support of the Porte, and again assumed his prerogatives as *shaykh al-balad*.

Two years later, ʿAlī Bey had to flee again, but he returned to the capital at the head of an armed force in 1181/1767. A new Ottoman governor was obliged to confirm ʿAlī Bey as *shaykh al-balad*; however, alarmed by the latter's independent attitude, he tried to provoke a rising against him. It was a failure, and the Pasha was forced to resign (1182/1768). From then on, ʿAlī Bey did not trouble to conceal his ambitious designs, and he refused to tolerate the presence of an officer who had any influence. He showed his hostility to the Porte and reduced the number of his Janissaries. Nevertheless he did not throw off the mask completely, and did not refuse the Sultan's request to send a contingent for the war against Russia. He was then denounced at the Porte as a traitor, and accused of having mobilised these troops to aid the Russians: a firman was issued at Constantinople condemning him to death.

Informed of this, ʿAlī Bey replied with an arrogant declaration of independence. From then on, ʿAlī Bey became entangled in a diabolical web and was

forced to keep his forces in the field without respite. First, he subdued the Arab tribes of Upper Egypt, and intervened at Mecca to instal there a pretender to the sharīfate who had sought his protection. The expedition was under the command of his right hand man, Muḥammad Bey Abu 'l-Dhabab.

Conscious of his power, ʿAlī Bey struck coinage in his own name: the coins still bore the sultan's name, but the initials of the master of Egypt were inserted under a date which no longer represented the date of the sultan's accession.

He then proceeded to invade Syria with a huge army, again under the command of Muḥammad Bey Abu 'l-Dhahab. Negotiations with the Russians were set on foot but there was no time for them to yield results. The whole of Syria was speedily conquered, but events took an unexpected turn when Muḥammad Bey Abu 'l-Dhahab, after his victorious entry into Damascus, led his army back to Egypt to seize possession of it from his master. ʿAlī Bey decided to flee from Cairo in Muḥarram 1186/April 1772, and took refuge once more with the Pasha of Acre. He set about raising another army, with the help of some Russian equipment, and, after a series of successful skirmishes, confronted his rival at Ṣāliḥiyya, in the eastern part of the Delta. His army was defeated, and ʿAlī Bey, mortally wounded on the field of battle, died a few days later, 15 Ṣafar 1187/8 May 1773.

It is difficult accurately to assess the autonomy of ʿAlī Bey. As already noticed, the form of his coins was unusual, although ʿAlī Bey had declared that the Ottomans had seized control of the country by force, aided by the treachery of the population. A document dated at the beginning of 1186 A.H., shortly before his final departure from Cairo, supplies evidence that he had not dared to proclaim himself officially sovereign of Egypt. It consists of a long inscription carved on the drum of the cupola of the tomb of al-Shāfiʿī; it makes no reference to the Ottoman Power, but does not mention ʿAlī Bey either, merely stating that the order to restore this tomb was given by the "powerful master of Egypt, who has increased the prestige of this country by his authority".

From a perusal of al-Djabartī, one gets the impression that ʿAlī Bey was in many respects a repulsive character, but the morals of the time and the environment must be taken into consideration, and one could express agreement with a contemporary judgment: "He was an extraordinary man, who only lacked a different education and a larger stage to have astonished the world".

ʿALĪ ČELEBI [see wāsiʿ ʿalīsi].

ʿALĪ EFENDI [see ʿalī].

ʿALĪ b. Shihāb al-Dīn b. Muḥammad al-**HAMADĀNĪ**, ṣūfī saint and the apostle of Kashmīr, born in Hamadān of a notable family of *sayyids* (claiming descent from ʿAlī b. Ḥusayn, grandson of the *imām* Zayn al-ʿĀbidīn), on 12 Radjab 714/22 Oct. 1314. His chain of initiation went back through two links to ʿAlāʾ al-Dawla al-Simnānī, and through him to Nadjm al-Dīn al-Kubrā. He led the itinerant life of a *darwīsh* and is said to have visited all parts of the Muslim world. He arrived for the first time in the valley of Kashmīr in 774/1372, during the reign of Shihāb al-Dīn, accompanied by 700 *sayyids*; he remained for four months and then left for the Ḥidjāz. He came to Kashmīr for the second time in 781/1379, during the reign of Ḳutb al-Dīn, and remained for two years and a half. For the third time he visited Kashmīr in 785/1383, but left it after less than a year for Turkistān. He died however, after having passed through Pakhlī, near Kūnār, on 6 Dhu 'l-Ḥidjdja 786/18 Jan. 1385; his body was carried to Khuttalān, where his mausoleum is still extant in modern Kulāb (cf. Sufi, *Kashir*, i, 116 ff.). The *khānḳā-yi Shāh-i Hamadān* in Srinagar, reputedly built on the site where the saint performed his prayer, is a well-frequented place of pilgrimage (cf. R. Ch. Kak, *Ancient Monuments of Kashmir*, London 1933, 77 ff.). This *khānḳā* and the mosque in Tral, built by ʿAlī's son, Muḥammad (774/1372-854/1450), during the reign of Sikandar, were centres of Islamic propaganda in Kashmīr. A favourite pupil of ʿAlī was Isḥāḳ Khuttalānī, who was in his turn the spiritual master of Muḥammad Nūrbakhsh, founder of the Nūrbakhshiyya.

The best known of his works are the *Awrād-i Fatḥiyya*, a collection of prayers in Arabic, and the *Dhakhīrat al-Mulūk*, on political ethics (Lahore 1323; lith. Amritsar) cf. also H. Ethé in *Gr. I Ph.*, ii, 349). His teachings have received as yet little attention; for a preliminary study (more especially of his theory of dreams) and a translation of his *Risāla-yi Manāmiyya*, see F. Meier, *Die Welt der Urbilder bei Ali Hamadani*, *Eranos Jahrbuch*, xviii, 1950, 115 ff.

Bibliographie: Nūr al-Dīn Djaʿfar Badakhshī (a pupil of the saint), *Khulāṣat al-Manāḳib* (for MSS see Storey, i, 946-7); Djāmī, *Nafaḥāt al-Uns*, 515; Khwandamīr, *Ḥabīb al-Siyar*, Teheran, iii, 87; Nūr Allāh Shushtarī, *Madjālis al-Muʾminīn*, Teheran, 311; Rieu, *Cat. Pers. MSS Brit. Mus.*, ii, 447; Brockelmann, II, 287, S II, 311; A. A. Hekmat, in *JA*, 1952, 53 ff.; G. M. D. Sufi, *Kashmir*, Lahore 1949, i, 85-94, 116 ff.; Storey, i, 946, note 4 (in the last named three works further references). For ʿAlī's Persian transl. of Nadjm al-Dīn Kubrā's *Uṣūl*, see *Isl.*, 1937, 17. (S. M. Stern)

ʿALĪ ILĀHĪ ("deifiers of ʿAlī"), a vague and popular designation of sects connected with, and issued from, Shīʿa extremism (*ghulāt*, [*q.v.*]). In Persia and Kurdistān it covers chiefly the Ahl-i Ḥaḳḳ [*q.v.*] and Ḳizil-bash [*q.v.*], but may occasionally refer to such smaller communities as Ṣarli, Shabbak [*qq.v.*] etc. (Ed.)

ʿALĪ KHĀN b. Aḥmad b. Muḥammad Maʿṣūm b. Ibrāhīm Ṣadr al-Dīn al-Ḥusaynī al-Madanī, author of biographical works and a book of travels, b. 15 Djumādā I 1052/12 August 1642 in Medina; he was a descendant of Ghiyāth al-Dīn al-Shīrāzī. His father was since 1055/1644 in the service of the prince Shāhinshāh ʿAbd Allāh b. Muḥammad Ḳuṭb Shāh. ʿAli joined him in Ḥaydarābād in 1068/1657. His father died in 1083/1672, a year after the death

of his patron, Shāhinshāh ʿAbd Allāh, and ʿAli himself incurred the displeasure of the ruler, Abu 'l-Ḥasan. He succeeded, however, in escaping to the court of Awrangzīb, who made him *khān* and *dīwān* at Burhānpūr. He went on the pilgrimage, and visited Baghdād, Nadjaf and Karbalāʾ. In Shirāz he taught at the Manṣūriyya *madrasa* and died in that town in 1117/1705 or 1120/1708.

In 1074/1663 he wrote a description of his journey from Mecca to Ḥaydarābād, entitled *Sulwat al-Gharīb wa-Uswat al-Arīb*. He is best known for his work on the poets of the 11th century A. H., which he wrote in 1082/1671 as a supplement to al-Khafādjī's *Rayḥāna* : *Sulāfat al-ʿAṣr fī Maḥāsin Aʿyān al-ʿAṣr*, Cairo 1324, 1334. As a supplement to the commentary on his own *Badīʿiyya* he gives biographies of writers on rhetoric, and also wrote, in addition to various treatises and poems, a biographical collection of Imāmī Shīʿīs.

ʿALĪ KHĀN [see MAHDĪ ʿALĪ KHĀN].

ʿALĪ KÜČÜK [see BEGTEGINIDS].

ʿALĪ B. MUḤAMMAD AL-**ḲŪSHDJĪ**, ʿALĀʾ AL-DĪN, astronomer and mathematician, b. in Samarḳand, d. in Istanbul, on 5 Shaʿbān 879/19 Dec. 1474. He received his surname from his father, who served as the falconer (*ḳushdji*) of Ulugh Beg. He studied mathematics and astronomy in his native city under the *amīr* Ulugh Beg [*q.v.*], who was at the same time an able astronomer, and Ḳaḍī-zāde-i Rūmī, one of the rectors of the celebrated *madrasa* in Samarḳand which was especially favoured by the *amīr*. ʿAlī al-Ḳūshdjī succeeded Ḳāḍī-zāde as director of the renowned observatory of Samarḳand, and took part in the compilation of the *Zīdj Gurkānī*, the principal author of which was the *amīr* himself (cf. its preface). ʿAlī al-Ḳūshdjī is said to have left secretly for Kirmān, in order to perfect himself in his studies, and on his return to have presented his patron with his *Ḥall Ashkāl al-Ḳamar*.

After the murder of Ulugh Beg, ʿAlī al-Ḳūshdjī, left Samarḳand and stayed in Tabrīz with the Aḳ Ḳoyunlu ruler Uzun Ḥasan. He was sent by this ruler on an embassy to the Ottoman sultan Muḥammad II; he went back to Tabrīz to accomplish his political mission, but subsequently returned to Istanbul to establish himself there definitely. He was appointed as professor of sciences in the *madrasa* of the Aya Sofiya and greatly influenced the development of the sciences in Turkey.

He composed in Kirmān a commentary, dedicated to Abū Saʿīd Khān, on Naṣīr al-Dīn Ṭūsī's *Tadjrid al-Kalām*; he also wrote on grammar and rhetoric. His main works are the *Risāla fi 'l-Hayʾa*, *Risāla fi 'l-Ḥisāb*, and a commentary on Ulugh Beg's *Zīdj*. (The *Risāla al-Fatḥiyya* and the *Risāla Muḥammadiyya* are Arabic translations of the *Risāla fi 'l-Hayʾa* and the *Risāla fi 'l-Ḥisāb*).

(A. ADNAN ADIVAR)

ʿALĪ MARDĀN, honorific title given to ʿAlī b. Abī Ṭālib by the Shīʿites, being an abbreviation of ʿAlī *shāh-i mardān*, "ʿAlī, King of mankind".

ʿALĪ MARDĀN, a Khaldjī adventurer who acquired power in Bengal, centring upon the capital Lakhanawaṭī, in the first decade of the 7th/13th century. Appointed to the *iqṭāʿ* of Narān-go-e by Malik Ikhtiyār al-Dīn Muḥammad Bakhtiyār Khaldjī, he took advantage of the latter's defeat by the Hindu Rai of Kāmrup, says Minhādj al-Sirādj, to murder his master at Dīwkot on a sick bed. This occurred in 602/1205-6. ʿAlī Mardān, however, was later imprisoned by Muḥammad Shirān, putting him in the charge of the *koṭwāl* of Narān-go-e. ʿAlī Mardān, in collusion with the *koṭwāl*, managed to escape to the court of Ḳutb al-Dīn Aybak and accompanied him to Ghaznīn where he became a captive of Tādj al-Dīn Yilduz when the latter recaptured Ghaznīn from Ḳuṭb al-Dīn Aybak (605/1208-9). After about a year ʿAlī Mardān escaped and presented himself again before Aybak at Lahore. He was treated with favour and was assigned the territory of Lakhanawaṭī. According to the *Ṭabaḳāt-i Nāṣiri*, ʿAlī Mardān proceeded to Dīwkot, assumed power there and brought the whole of Lakhanawaṭī under his sway. On the death of Ḳuṭb al-Dīn Aybak in 607/1210, ʿAlī Mardān had the *khuṭba* read in his own name and was styled Sulṭān ʿAlāʾ al-Dīn. He brought the Khaldjī nobles of Lakhanawaṭī under control and overawed neighbouring Hindu chiefs. His overbearing behaviour caused discontent among the Khaldjī nobles and under the leadership of Malik Husayn al-Dīn ʿIwāz, they conspired against him and slew him. ʿAlī Mardān ruled for something over two years, the probable date of his death being 610/1213.

Bibliography: Minhādj al-Sirādj, *Ṭabaḳāt-i Nāṣiri*, trans. Raverty, i, 572-80; Sir Jadunath Sarkar (ed.), *History of Bengal*, ii, Dacca 1948; *Cambridge History of India*, iii, 50 ff.

(P. HARDY)

ʿALĪ MARDĀN KHĀN, a Bakhtiyārī chief who rose to prominence in the troubled period following the assassination of Nādir Shāh in 1747. In 1163/1750 he captured Iṣfahān, and, in conjunction with Karīm Khān Zand [*q.v.*], placed Ismaʿīl, a grandson of Shāh Sulṭān Ḥusayn, on the throne. ʿAlī Mardān's oppressive measures led to an open breach with Karīm Khān, who, fearing for his life, attacked and defeated him. ʿAlī Mardān Khān fled, and was subsequently assassinated by Muḥammad Khān who, according to Mirzā Ṣādiḳ, the author of the *Tārīkh-i Gītī-gushā*, was a relative of Karīm Khān.

This ʿAlī Mardān Khān is not to be confused with his contemporaries and namesakes (a) the *wālī* of Luristān, a Faylī Lur who was wounded at Gulnābād in 1722 and later vainly endeavoured to relieve Iṣfahān, and (b) ʿAlī Mardān Khān Shāmlū, whom Nādir Shāh sent as ambassador to Delhi and Constantinople.

Bibliography: Mīrzā Ṣādik, *Tāʾrīkh-i Gītī-gushā* (quoted by Malcolm, *History of Persia*, London 1815, ii, 116-8); Riḍā Ḳulī Khān Hidāyat, *Rawḍat al-Ṣafāʾ-yi Nāṣirī*, Teheran 1853/6, ix, 7-9; Hammer-Purgstall, iv, 477, 478 (this authority's reference to ʿAlī Mardān's earlier career, iv, 278 is inaccurate); O. Mann (ed.), *Muǧmil et-Târîkh-i baʿdnâdirîje*, 7, 8. (L. LOCKHART)

ʿALĪ MUḤAMMAD SHĪRĀZĪ [see BĀBĪ].

ʿALI PASHA ʿARABADJI, Ottoman Grand Vizier. Born at Okhri between 1620 and 1622, died at Rhodes 16 Shaʿbān 1104/21 April 1693. Af first *imām* to various eminent people, then *ketkhudā*, he became *agha* of the Janissaries in 1101/1689, and later *wazīr* and *ḳāʾim-maḳām* of the imperial stirrup. Through the support of the *ḳāḍi 'l-ʿasker* Yaḥyā Efendi and the Shaykh al-Islām Abū Saʿīd-zāde Feyḍ Allāh Efendi, he succeeded Köprülü-zāde Muṣṭafā Pasha, killed at Szalankamen as Grand Vizier, on 6 Dhu 'l-Ḥidjdja 1102/30 August 1691. Showing no desire to place himself at the head of the army against the Austrians, ʿAlī Pasha succeeded in disarming his opponents either by bribery or by dismissal. As a result of this policy he incurred the hostility of the sultan, who eventually dismissed him (28 March 1692), and replaced him by Ḥādjdjī ʿAlī Pasha. ʿAlī Pasha ʿArabadjī was exiled to Rhodes, but as he represented a possible source of trouble and conspiracy, his enemies obtained his death warrant, and shortly afterwards he was executed at Rhodes. His cognomen is derived from the fact that he sent off one of the officials whom he had dismissed in an ox-cart.

Bibliography: Rāshid, *Taʾrīkh*, II, 166 ff.; ʿOthmān-zāde Tāʾib, *Ḥadīḳat al-Wuzarā*, 118 ff.; Fīndīḳlīlī Meḥmed Agha, *Silāḥdār Taʾrīkhi*, ii, 596-634; *IA*, s.v. (by Reşad Ekrem Koçu).

(R. MANTRAN)

ʿALĪ PASHA ČANDĀRLI-ZĀDE (d. 1407), son of Čandārlī Khalīl Khayr al-Dīn Pasha, was, like his father, *ḳāḍī*, then *ḳāḍī 'l-ʿasker*, and finally Grand Vizier, and also combined the functions of *wazīr*, that is to say head of the administration and finance, and of army commander, perhaps after the death of his father in 1387. After having directed a campaign in Anatolia against the Ḳaramānid ʿAlī Bey, he conducted the skilful operations in Bulgaria which led to the capture of several fortresses (Pravad, Tīrnova, Shehirköyü etc.) before the battle of Kossova (20 June 1389), in which he played a decisive part. Murād I was killed in the battle, and was succeeded by Yīldīrīm Bāyazīd I, who appointed ʿAlī Pasha Grand Vizier. ʿAlī Pasha accompanied the Sultan in the campaigns in Greece and Bosnia, and played an important part at the siege of Constantinople, commenced in 1391, but abandoned as the result of the invasion of eastern Anatolia by Tīmūr. After the battle of Anḳara (1402) in which Bāyazīd I was taken prisoner, ʿAlī Pasha saved the heir apparent Sulaymān and took him first to Brusa and then to Adrianople. Up to the time of his death in Radjab 809/January 1407, ʿAlī Pasha remained Grand Vizier to Sulaymān Čelebi, and his skilful diplomacy secured for the latter mastery over the Ottoman territory from Anḳara to the Aegean Sea; deprived of his *wazīr*, Sulaymān Čelebī succumbed to the attacks of Meḥmed Čelebi, later Meḥmed I (1410).

ʿAlī Pasha Čandārlī-zāde, like his father, made a contribution to the organisation of the Ottoman administration, notably by codifying the functions of the *ḳāḍīs*, by creating the corps of the *ič-oghlān*—pages from whom numerous imperial officials were recruited, and by making the *wazīrs* persons of influence and respect. The chroniclers have criticised his predilection for the pleasures of life—a taste which he communicated to Bāyazīd I, and have stated that he was not loved either by the people or by government personnel. ʿAlī Pasha was buried at Iznik (Nicaea) in his father's tomb. At Brusa, a quarter, a mosque and a convent bear his name.

Bibliography: Āshīḳ Pasha-zāde; *Taʾrīkh*, Istanbul 1332, 70, 71, 76, 77; Meḥmed Neshrī, *Djihān-nümā*, Ankara 1949, i, 220 ff.; Saʿd al-Dīn, *Tādj al-Tawārīkh*, i, 138 ff.; Gibbons, *The Foundation of the Ottoman Empire*, 171-2, 199-200, 234; J. von Hammer, *Histoire de l'Empire Ottoman*, i, l. 5, 262-77; l. 6, 316-20, 341; l. 8, 105, 125, 135-40; F. Taeschner and P. Wittek, *Die Vezirfamilie von Čandarlīzade*, *Isl.*, 1929, 60-115, *IA*, s.v. (by I. H. Uzunçarsīlī).

(R. MANTRAN)

ʿALĪ PASHA ČORLULU, Ottoman Grand Vizier. Born about 1670, the son of a peasant or barber of Čorlu, he was adopted for his good looks and intelligence by a courtier of Aḥmed II and placed as a probationer in the Ghalaṭa Sarāyī, whence he entered the Palace service, rising by way of the *seferli oda* to be *silāḥdār* under Muṣṭafā II. As *silāḥdār* he greatly enhanced the importance of his office, whose occupant thenceforward replaced the Dār al-Saʿāde Aghasī as intermediary between the sultan and the Grand Vizier and the Bāb al-Saʿāde Aghasī as controller of the *ič-oghlans*, and composed a *niẓām-nāme* re-defining the whole hierarchy of the *enderūn*. At the onset of the revolution of 1703 he was ousted from this position by the influence of the Shaykh al-Islām Feyḍ Allāh and the Grand Vizier Rāmī Meḥmed and given the rank of *wazīr*. But on the accession of Aḥmed III he was made a *ḳubbe wazīri* and continued as such, except for a short interval during 1704, when he was appointed *wālī* of Tripoli in Syria, until his elevation to the Grand Vizierate in May 1710.

Čorlulu was the first competent Grand Vizier of the reign, and for four years he enjoyed great favour with the sultan, becoming a *damad* in 1708 by marrying Emīne Sulṭān, a daughter of Muṣṭafā II. He devoted himself in particular to the redress of abuses in the standing and feudal armies, the reduction of state expenditure, and the improvement of the Arsenal and the fleet. But he was so far determined that the Porte should not be involved in war that he neglected not only the opportunity provided by the outbreak of the War of the Spanish Succession for a possible recovery of the Morea from Venice, but also that provided by the invasion of the Ukraine by Charles XII of Sweden, which might, if assisted by Ottoman forces, have obviated the threat offered to the Ottoman Empire by the designs of Peter the Great. He was criticized by his enemies on both counts; and after Charles's defeat at Poltava and his flight into Ottoman territory, the king himself refused to accept presents sent to him by Čorlulu or to deal with him, on the ground that he had been led to expect assistance from the Crimean Tatars that had not been forthcoming. This was perhaps due to a misunderstanding; but it was fatal to Čorlulu. Aḥmed lost confidence in him, and he was accordingly dismissed in June 1710 and banished, whilst on his way to assume the governorship of Keffe in the Crimea, to Mitylene, where he was executed in December of the following year at the age of about forty.

Čorlulu ʿAlī Pasha was the founder of a number of fine monuments, notably two *djāmiʿ* mosques at Istanbul, at the Čarshī Ḳapī (where he is buried) and the Tersāne, and a school and fountain at his native Čorlu.

Bibliography: ʿOthmān-zāde Tāʾib, *Ḥadīḳat al-Wüzerā*, ii, 10 f.; Ṭayyār-zāde ʿAṭā, *Enderūn Taʾrīkhi*, i, 160 f., 285, ii, 76-83; Rāshid, *Taʾrīkh*, passim; A. N. Kurat, *Isveç Kīralī Karl* (etc.), index; idem, *Prut Seferi ve Barīşī*, index; Hammer-Purgstall, vii, 116 ff.; *IA*, s.v. (by R. E. Koçu).

(H. BOWEN)

ʿALĪ PASHA DĀMĀD (1667-1716), Ottoman Grand Vizier. Born at Sölöz near Nicaea in 1079/1667, he entered the Seraglio of Ahmed II, and filled successively the posts of *kātib*, *rikābdār*, *čuḳadār* and *silāḥdār*; he exercised great influence over Sultan Aḥmed III, who came to the throne in 1703, and who made him *wazīr* and gave him his daughter Fāṭima in marriage (Rabīʿ I 1121/May 1709); he had a hand in the appointment and dismissal of *wazīrs*, including Köprülü-zāde Nuʿmān Pasha and Baltadji Meḥmed Pasha. The Grand Vizier Khodja Ibrāhīm Pasha was condemned to death for attempting to assassinate Dāmād ʿAlī Pasha, and the latter then became Grand Vizier (Rabīʿ II 1125/April 1713). One of his first acts was to sign with Russia the peace of Adrianople, which fixed the frontier between the two countries between the Samara and the Orel (5 June 1713). Wishing to erase the treaty of Karlovitz, he undertook the Morean campaign, for which the motive was the attacks by Venetians and Montenegrins against Turkish vessels; in 1715, Dāmād ʿAlī Pasha occupied Napoli de Romania, Argos, Coron, Modon, Malvasia, and, in Crete, La Suda and Spina Longa. At the same time he had to suppress the revolts of ʿOthmān-oghlū Naṣūḥ Pasha in Syria, of the bandit ʿAbbās in Anatolia, and of Ḳaytas Bey in Egypt.

In 1716, he initiated an expedition against Corfu, but Venice and Austria concluded an offensive and defensive alliance which forced him to send his troops to Belgrade. The Austrian army, led by Prince Eugène, met the Ottomans at Peterwardein on 16 Shaʿbān 1128/5 August 1716; Dāmād ʿAlī Pasha was mortally wounded by a bullet in the forehead during the battle, when the Turkish troops had already begun to retreat. He was buried in the garden of the mosque of Sulaymān I at Belgrade; 70 years later, when he captured this town, the Austrian general Landon transferred the tomb to the forest of Hadersdorf at Vienna. While the campaign against Austria was in progress, Turkish forces were disembarked at Corfu, but the news of the death of the Grand Vizier resulted in the evacuation of the Turkish troops from the island (July-August 1716).

Dāmād ʿAlī Pasha was at once a fine military leader and a great statesman; he displayed a shrewd political sense, suppressed a number of abuses, restricted and controlled the expenses of the Seraglio, prohibited the system of giving presents, regulated the movements of government personnel and restored to their former state estates which had been converted into *malikāne*. He patronised men of letters, especially the historian Rāshid, and displayed great interest in science and poetry. He reopened the school for *ičoghlans* at Galatasarāy, which had become a *madrasa*. He built a mosque at Sölöz and repaired the Čīnarlī mosque at Ayvansarāy.

Bibliography: Rāshid, *Taʾrīkh*, iii and iv, passim; Farāidī-zāde Meḥmed Saʿīd, *Gulshen -i Maʿārif*, ii; Muṣṭafā Pasha, *Natāʾidj al-Wuḳūʿāt*, iii, 22-6; Ṭayyār-zāde ʿAṭā', *Taʾrīkh*, ii, 85-100. iii, 208, v, 25-38; J. von Hammer, *Histoire de l'Empire Ottoman*, xiii, ch. 63; *IA*, s.v. (by M. Cavid Baysun). (R. Mantran)

ʿALĪ PASHA GÜZELDJE ("the handsome"), (d. 1620) Ottoman Grand Admiral and Grand Vizier. Born at Istanköy (Cos), he was successively *bey* of Damiette, and *beylerbeyi* of the Yaman (1602), Tunis, Morea and Cyprus. In November 1617, he succeeded Khalīl Pasha as *ḳapudan-ĭ deryā*; in August 1618, a storm off the Dalmatian Coast caused the loss of eleven vessels of his fleet; dismissed at the accession of Muṣṭafā I, he again became *ḳapudan-ĭ deryā* shortly afterwards. On 16 Muḥarram 1029/23 December 1619, he succeeded Öküz Meḥmed Pasha as Grand Vizier following intrigues among the intimates of Sultan ʿOthmān II, who loaded him with gifts. He became notorious for his confiscation of property and extortion of money, in which he spared neither Muslim nor Christian; the Venetian dragoman Borissi, being unable to pay the 100,000 thalers demanded, was strangled; the Greek Skarlati, provider of the *odjaḳ* to the Janissaries, was forced to pay an enormous sum; the Greek patriarch obtained his release by paying 30,000 ducats on top of the 100,000 demanded. ʿAlī Pasha was trying to incite the Sultan to a campaign against Poland, when he died of calculus (15 Rabīʿ I, 1030/8 March 1621). He was buried at Beshiktash, near the tomb of Yaḥyā Efendi. He also received the cognomen of Čelebi ("the elegant").

Bibliography: Ibrāhīm Pečewī, *Taʾrīkh*, ii, 371-5; Naʿīmā, *Taʾrīkh*, ii, 153-86; ʿOthmān-zāde Tāʾib, *Ḥadīḳat al-Wuzarāʾ*; Kātib Čelebi, *Tuḥfat al-Kibār fī Asfār al-Biḥār*, 105 ff.; J. von Hammer, *Histoire de l'Empire Ottoman*, viii, l. 44, 251-3 and 263-72; *IA*, s.v. (by Reşad Ekrem Koçu).

(R. Mantran)

ʿALĪ PASHA ḤAKĪM-OGHLU, Grand Vizier under the Ottoman sultans Maḥmūd I and ʿOthmān III. His father, Nūḥ Efendi, the physician of Muṣṭafā II, was a Venetian renegade. ʿAlī Pasha was born on 15 Shaʿbān 1100/4 June 1689; brought up in the seraglio, he held various administrative posts at Istanbul, and then in the provinces; in 1722 he was appointed as governor of Adana and subdued the tribes of Cilicia; in 1724 he became governor of Aleppo, and in the same year distinguished himself at the siege and capture of Tabrīz. Appointed *wazīr* in 1725, he was successively *beylerbeyi* of Anatolia, *ser-ʿasker* of the East, governor of Sīwās, and governor of Diyārbakir. In 1730, again *ser-ʿasker* of the East, he defeated Shāh Ṭahmāsp III at Ḳuridjān (13 Rabīʿ I 1144/15 September 1731), and captured Hamadān, Urmiya and Tabrīz. He became Grand Vizier soon after the peace called after Aḥmed Pasha, 15 Ramaḍān 1144/12 March 1732. His first term of office as *wazīr* was marked by wise administration and currency reform. In the field of foreign affairs, the Marquis de Villeneuve, the French ambassador, urged the Grand Vizier to conclude an alliance with France against Austria, but the conditions put forward by ʿAlī Pasha (and suggested by Aḥmed Pasha Bonneval) prevented the conclusion of the treaty. Dismissed on the resumption of hostilities with Persia (22 Ṣafar 1148/14 July 1735) ʿAlī Pasha was exiled to Mytilene, then appointed governor of Bosnia, where he held the Austrians in check for three years, successfully defended Trawnik, and, on 4 August 1737, defeated Marshal Hildburghausen near Banjaluka. In 1740 he was sent to Egypt, where he suppressed a *mamlūk* revolt; in 1741 he was made *beylerbeyi* of Anatolia, and on 15 Ṣafar 1155/21 April 1742 he became Grand Vizier for the second time. The following year he was dismissed for wishing to lead in person the eastern expedition against Nādir Shāh of Persia. Governor of Bosnia in 1744, then of Aleppo (1745), he was nominated commander-in-chief of the eastern army, but in the meantime peace was signed with Nādir Shāh (1746). Governor of Bosnia, then of Trebizond, he was made Grand Vizier by ʿOthmān III on his accession 4 Djumādā I 1168/16 February

1755; this third term of office as Grand Vizier only lasted 53 days; the *silihdār* Bïyïklï ʿAlī Āghā succeeded in securing his dismissal and his exile to Cyprus; but in the course of the year he was appointed Governor of Egypt, and in 1756 *beylerbeyi* of Anatolia. Recalled in 1757, he retired to Kütahya, where he died 9 Dhu 'l Ḥidjdja 1171/14 August 1758. He was buried in the tomb adjoining the mosque which he was responsible for building at Istanbul (1732-4). He was reputed to be a learned, shrewd and liberal man, but quick-tempered and extremely severe in his dealings with officials guilty of extortion.

Bibliography: Wāṣif, *Taʾrīkh*, i, 50 ff.; Küčük Čelebī-zāde ʿĀṣim, *Taʾrīkh*, 301, 403. 566, 598; Dilāwer-zāde ʿÖmer, *Ḥadīḳat al-Wuzarāʾ*, suppl. i, 42-51; J. von Hammer, *Histoire de l'Empire Ottoman*, xiv, xv, xvi, passim; Comte de Bonneval, *Mémoires*, ii, passim; *IA*, s.v. (by Reşad Ekrem Koçu). (R. MANTRAN)

ʿALĪ PASHA KHĀDIM, Ottoman Grand Vizier. At first *aḳ aghasï*, then *beylerbeyi* of Ḳaramān and subsequently of Rumelia, he distinguished himself in the course of a campaign in Wallachia (1485); *wazīr* in 1486, he defeated the Mamlūks of Egypt at the battle of Āghāčayïr in Cilicia (1942), took the fortresses of Coron and Modon (1500), and was appointed Grand Vizier the following year in succession to Mesīḥ Pasha. Dismissed in 1503, he again became Grand Vizier in 1506 and remained in office until his death. He strove to secure the succession of the *shāh-zāde* Aḥmed, second son of Sultan Bāyazīd II, against the *shāh-zāde* Ḳorḳud, whom he defeated in 914/1508; he also defeated prince Selīm, who had rebelled against his father, at Čorlu (1511). He died while engaged in suppressing the revolt of Ḳara Bïyïk-oghlū, at Gökčay, between Sīwās and Kayseri (1511): he was the first Grand Vizier to die on the field of battle; his death shattered the hopes of the *shāh-zāde* Aḥmed. A skilful and upright statesman, esteemed by Sulṭān Bāyazīd II and by the people, ʿAlī Pasha was in addition the patron of men of letters and of science, notably of the poet Mesīḥī and the historian Idrīs Bitlīsī. He built at Istanbul the mosque known as ʿAtīḳ ʿAlī Pasha (1496), together with the adjoining *medrese*, school and *ʿimāret*; he was also responsible for a *ḥammām* at Ḳaragümrük and a mosque at Yassïören, and it was he who converted the monastery church of Saint Savior in Chora into a mosque, known as *Ḳaʿriyye Djāmiʿ*.

Bibliography: ʿĀshiḳ-pasha-zāde, *Taʾrīkh*, 223-9; ʿOthmān-zāde Tāʾib, *Ḥadīḳat al-Wuzarāʾ*, i, 20; Meḥmed Ḥemdemi Ṣolaḳ-zāde, *Taʾrīkh*, 299 ff.; J. von Hammer, *Histoire de L'Empire* Ottoman, iv, l. 20, 14, 19, 24-6, 69, 95-114; *IA*, s.v. (by Reşad Ekrem Koçu). (R. MANTRAN)

ʿALĪ PASHA MUBĀRAK, Egyptian statesman and man of letters. Born in 1239/1823 in Birinbāl (Daḳahliyya province) he gained admission to the recently founded government schools of Ḳaṣr al-ʿAynī and of Abū Zaʿbal, and studied at the polytechnic (*muhandis-khāne*) of Būlāḳ. In 1260/1844 he was sent to France as a member of the "Mission égyptienne" and was trained as an officer and military engineer. On his return to Egypt in 1266/1849-50, he won the favour of ʿAbbās I and began a distinguished career first in the topographical department of the Ministry of War, then as Director of the military training college al-Mafrūza. During the Crimean War he held appointments in Istanbul, in the Crimea and in Gümüshkhāne. Under Saʿīd he resigned, but under Ismāʿīl he occupied one after another almost all the ministerial posts and other offices of state. Everywhere he introduced reforms, though often acting with well-meant zeal rather than with thorough understanding. To him is due the establishment of printing-offices and the printing of textbooks, especially technical ones, the construction of a barrage in the Nile, near Cairo (*al-ḳanāṭir al-khayriyya*) which was, however, not very successful, of railways and irrigation-works, the foundation of the Dār al-ʿUlūm, a teachers' training college on the model of the "École normale supérieure" and of the Khedivial Library (1870). In matters of education he obtained the advice and cooperation of the Swiss educationalist Ed. Dor Bey (d. 1880). During his last tenure of office as Minister of Education in the government of Riyāḍ Pasha (from 1888 onwards), the defects of his administration became more and more apparent, and he had to resign, following, the intervention of Sir Alfred (later Lord) Milner, in 1891. He died in Cairo on Djumādā I 1311/14 Nov. 1893.

His publications are concerned with education, engineering, etc.; during his last period of office he published a reader for schools. His principal work, *al-Khiṭaṭ al-Djadīda al-Tawfīḳiyya*, Būlāḳ 1306/1888-9, in 20 parts, compiled with the help of numerous assistants, is intended to be a modern counterpart of al-Maḳrīzī's *Khiṭaṭ*. It contains descriptions of Cairo (i-vi) and Alexandria (vii) with biographies of the famous men buried in these cities; descriptions of the other principal places of Egypt, with biographies (viii-xvii); descriptions of the Nilometer (xviii), of canals and dams (xix) and of the coinage (xx). Part xi, s.v. Birinbāl, contains his autobiography. His sources for the biographies are al-Sakhāwī, al-Shaʿrānī, al-Suyūṭī, al-Muḥibbī and al-Djabartī; for the historical and archaeological part he also uses European works, including the writings of de Sacy and Quatremère. It is a useful compilation but must be used with caution.

ʿALĪ PASHA MUḤAMMAD AMĪN, Ottoman Grand Vizier, born in Istanbul in February 1815, his father being a shopkeeper of the Egyptian Market. At the age of fourteen he obtained his first government post in the secretariat of the Imperial *dīwān* and, whether because of his short stature, or of his ability, acquired the nickname ʿĀlī. In 1833, having already learnt some French, he was appointed to the translation department of the *dīwān*, and three years later was sent with a mission, first to Vienna, where he remained some eighteen months, and then, in 1837, to St Petersburg. On his return he was appointed Interpreter to the *dīwān*; in the following year he accompanied Muṣṭafā Reshīd Pasha [*q.v.*] to London as Counsellor, on the latter's appointment as Ambassador; and in 1839, on the accession of ʿAbd al-Medjīd, they returned together to Istanbul.

In 1840, ʿĀlī first deputized for the Counsellor to the Ministry of Foreign affairs and then replaced him. In 1841 he was appointed Ambassador in London. Returning in 1844, he was made a member of the *medjlis-i wālā*; and in 1845 he deputized for Shekīb Efendi, the Minister of Foreign Affairs, until his replacement by Reshīd Pasha.

During Re<u>sh</u>īd Pā<u>sh</u>ā's tenure of the Ministry of Foreign Affairs ʿĀlī, who then again became Counsellor of that department, was also appointed *beylikči* of the *dīwān*; and when in 1846 Re<u>sh</u>īd was made Grand Vizier for the first time ʿAlī replaced him as Foreign Minister. In April 1848, after ʿĀlī had been raised to the rank of vizier, both Re<u>sh</u>īd and he were simultaneously dismissed, but were restored four months later and remained in office until 1852, when, on Re<u>sh</u>īd's again being dismissed, ʿĀlī succeeded him as Grand Vizier, with Fuʾād Pa<u>sh</u>a as Minister of Foreign Affairs.

His first Grand Vizierate, however, lasted only two months; and it was not until November 1854, after the outbreak of the Crimean War, when Re<u>sh</u>īd again became Grand Vizier, that ʿĀlī returned to high office, as Foreign Minister. In the interval he had been appointed first *wālī* of Izmīr (January-July 1853) and then *wālī* of <u>Kh</u>üdāwendigār (April-November 1854), also assuming whilst in the latter post, the presidency of the newly formed High Council of the *tanẓīmāt* [*q.v.*]. He continued to hold this position while Foreign Minister, as which, in March 1855, at the conclusion of the war, he was appointed a delegate to the preliminary peace conference in Vienna. Then, in the same year, on Re<u>sh</u>īd's resigning the Grand Vizierate, ʿĀlī again replaced him in that office, so that it fell to him in February 1856 to draw up and promulgate the famous *<u>kh</u>aṭṭ-i hümāyūn* of that year and in the following month to sign the Treaty of Paris as first Ottoman delegate. Within the next two years, however, the disputes of the western Powers over the affairs of the Principalities led first to ʿĀlī's resignation and replacement by Re<u>sh</u>īd Pā<u>sh</u>ā in November 1856 and then, in August 1857, to Re<u>sh</u>īd's dismissal and replacement by Muṣṭafā Nāʾilī Pa<u>sh</u>a, with ʿĀlī as Foreign Minister. ʿĀlī retained this post under Re<u>sh</u>īd during the latter's last tenure of the Grand Vizierate, and on Re<u>sh</u>īd's death in January 1858, replaced him in that office for the third time.

In 1859 ʿĀlī was again dismissed for having suggested a cut in palace expenditure as one remedy for the financial crisis that then faced the Ottoman government. But after deputizing first for the Grand Vizier Ḳïbrïslï Meḥmed Emīn Pa<u>sh</u>a during the latter's tour of Rumelia in the summer of 1860 and then for Fuʾād Pā<u>sh</u>ā as Foreign Minister during his absence in Syria, in July 1861 ʿĀlī was once more first appointed Foreign Minister himself and then, after the accession of ʿAbd al-ʿAzīz, Grand Vizier for the fourth time. Two months later, in November 1861, although the new sultan, finding him too deliberate in action, dismissed him in favour of Fuʾād, ʿĀlī returned to the Ministry of Foreign Affairs. Moreover he continued in that office under successive Grand Viziers until February 1867, when, on the resignation of Müter<u>dj</u>im Rü<u>sh</u>dü Pa<u>sh</u>a, he took his place. On this occasion he remained Grand Vizier (it was his fifth term) for as long as four years, until his death.

ʿĀlī was more or less self-educated, poverty having obliged him, in order that he might earn his living, to forgo the receipt of an *i<u>dj</u>āzet* from the Bāyazīd *medrese*, where he began the study of Arabic, later continued with Aḥmed <u>Dj</u>ewdet Pa<u>sh</u>a [*q.v.*]. But he was of a high natural intelligence; though shy and reserved, he was notably witty; he acquired a mastery of French; and from the date of the Paris peace conference he enjoyed a European reputation as an outstanding diplomatist of perfect manners and rare integrity. Among his countrymen he became unpopular. He was in fact secretive, solemn, and overbearing, and was regarded as vindictive. During his final Grand Vizirate ʿAbd al-ʿAzīz would have been glad to get rid of him, but recognized ʿĀlī's standing in Europe to be such that he could not afford to; and ʿĀlī profited by this security to insist on his correct treatment by the sultan, on his right to have all governmental matters of importance to be referred to him, and on the immunity of ministers and officials from banishment (in the bad old way) except after due trial.

Both ʿĀlī and Fūʾād owed all their official training and advancement to Re<u>sh</u>īd Paʾ<u>sh</u>a. But when in 1852 ʿĀlī took Re<u>sh</u>īd's place as Grand Vizier, the latter was hurt; and from that time on a coolness, which was exacerbated by calumniators, and even a certain rivalry, developed between ʿĀlī and Fuʾād on the one hand and Re<u>sh</u>īd on the other, although ʿĀlī was not thereby prevented from serving under Re<u>sh</u>īd on two further occasions. All three were regarded as pillars of the *tanẓīmāt* movement. But whereas it was in part Re<u>sh</u>īd's object to educate the Ottoman public in self-government, ʿĀlī was of an authoritarian temperament and after Re<u>sh</u>īd's death was bent rather on the firm establishment of the rule of law and the consequent limitation of the sultans' autocracy. The maintenance of the Empire now depending on the goodwill of the Powers, it was above all his constant concern to forestall their complaints and intervention. But by devoting too little attention to the internal reforms by the promise of which their favour had been gained, he contributed to its decline. However, in 1868, during his last Grand Vizierate, the *me<u>dj</u>lis-i wālā* was replaced by a Council of State (*<u>sh</u>ūrā-yï devlet*) on the one hand and a High Court of Justice (*dīwān-ï aḥkām-ï ʿadliyye*) on the other, with the aim of separating the judicial from the executive powers of the government; soon after an Imperial School (*mekteb-i sulṭānī*) was opened in the <u>Gh</u>alaṭa Sarāyi, where the instruction, on European lines, was in French and the pupils were non-Muslim as well as Muslim; and in 1869 a Ministry of the Interior was created. During the same period education was also promoted by an increase in the number of the Rü<u>sh</u>diyye schools; the army and navy were overhauled; the fleet was enlarged; and an agreement was concluded for the construction of railways in Rūmeli.

ʿĀlī's most notable actions at this time were his agreement to the evacuation of the Serbian fortresses by Ottoman troops (1876); his visit to Crete curing the insurrection, as a result of which he formulated the *niẓām-nāme* under which it was governed for the next thirty years (1868); his success in causing the Powers to oblige the Greek government to desist from aiding the Cretan rebels; his restraint of the <u>Kh</u>idīw Ismāʿīl from exercising powers beyond those already conceded to him; and his opposition to the formation of the Bulgarian Exarchate, which was consequently delayed till 1870, and to the absorption by Rome of the Armenian Catholic Church.

Owing to his lack of interest in the movement for an Ottoman constitution, ʿĀlī was savagely attacked during the last years of his life by its most ardent advocates, the refugee Yeni O<u>th</u>manlïlar (Jeunes Turcs), most of whom, however, recognized after his death, that they had done him an injustice; and he was further successively distressed by the death in 1869 of Fuʾād Pasha, after which he made himself responsible for the Ministry of Foreign Affairs as

well as the Grand Vizierate; by the defeat in 1870 of France, on whom he had long particularly lent; and by the consequent denunciation by Russia of the Black-Sea clauses of the Treaty of Paris. Exhausted by overwork and these calamities, he fell sick in the summer of 1871, and died after a three months' illness on 7th September, aged fifty-six, at his seaside villa at Bebek on the Bosphorus.

ʿALĪ PASHA RIẒWĀN BEGOWIČ [see RIẒWĀN BEGOWIČ].

ʿALĪ PASHA SEMIZ, Ottoman Grand Vizier. Born at Brazza in Herzegovina, he was carried off at an early age during a *dewshirme* operation to be brought up at Istanbul; in 953/1546 he became *agha* of the Janissaries, and later *beylerbeyi* of Rumelia. Appointed governor of Egypt in 1549, he took part in Sulaymān I's Persian campaign, and succeeded Rustam Pasha as Grand Vizier in Shawwāl 968/July 1561, a post which he held until his death in Dhu 'l-Ḳaʿda 972/June 1565. Immediately after his appointment, he negotiated with the Austrian ambassador Busbecq a peace treaty which was signed at Prague 1 June 1562. But the peace policy of ʿAlī Pasha was wrecked by the new Emperor Maximilian II; on the death of the Grand Vizier, Sultan Sulaymān I had to undertake a fresh campaign against Austria. An intelligent and shrewd man, ʿAlī Pasha was famous for his corpulence (hence his cognomen Semiz, "the fat") and his wit.

Bibliography: Muṣṭafā Selānikī, *Taʾrīkh*, 7-11, Ibrāhīm Pečewī, *Taʾrīkh*, i, 24; ʿOthmān-zāde Tāʾib, *Ḥadīḳat al-Wuzarāʾ*, 31 ff.; J. von Hammer, *Histoire de l'Empire Ottoman*, vi, 86 ff., 146 ff., 199, 208; *IA*, s.v. (by Tayyib Gökbilgin). (R. Mantran)

ʿALĪ PASHA SÜRMELI, Ottoman Grand Vizier. Born in Dimetoka, he entered the financial administration and was eventually appointed *defterdār* in 1688; he was dismissed the following year, but in 1103/1691 was again *defterdār* and *wazīr*. Successively governor of Cyprus and Tripoli in Syria, he became Grand Vizier on 16 Radjab 1105/ 13 March 1694 in the place of Bozoḳlu Muṣṭafā Pasha, and conducted the Hungarian campaign, during which he unsuccessfully besieged Peterwardein. Sulṭān Muṣṭafā II, on his accession, retained ʿAlī Pasha in his post, but forced him to undertake a new campaign against Hungary; a revolt of the Janissaries led to his dismissal on 18 Ramaḍān 1106/22 April 1695; condemned at first to exile, ʿAlī Pasha was later executed on 4 Shawwāl 1106/18 May 1695. He instituted the practice whereby the Council of Ministers met four days a week, and changed the Egyptian crown lands, let at fixed perpetual rents, into fiefs on a life tenure. He was extraordinarily extravagant, and loved luxury; he owed his cognomen to his habit of using cosmetics.

ʿALĪ PASHA TEPEDELENLI, governor of Yanya (Jannina). Born probably in 1744 of a family descended from a Mewlewī *derwish* of Kütahya who migrated to Rumelia. His grandfather and father had in turn held the *mutesellimlik* of Tepedelen in the Epirus; but being left fatherless as a child ʿAlī was brought up by his bold and ambitious mother, a native of Konitza, in an atmosphere of constant warfare between rival chieftains of the region.

After attaching himself in turn to the Warden of the Passes (*derbend bashbughu*) and the *mutaṣarrif* of Delwine (Delvino), of whom he facilitated the murder after marrying his daughter, in 1874 he was himself made *mutaṣarrif* of Delwine with the rank of *mīr-i mīrān*, and shortly afterwards, though only temporarily, that of Yanya as well. In the following year he was transferred to Tirḥala (Trikala); in 1786 he was appointed Warden of the Passes in addition; and after the outbreak of war in 1787, having meanwhile exchanged Tirḥala for Yanya, he fought with distinction on the Austrian front and afterwards took part in the suppression of a rising in Serbia. Although in 1790 he incurred the displeasure of the Porte so far as to be dismissed from the Wardenship, in view of his further prowess in the war, his conduct in continually adding without warrant to the territory under his control was overlooked; and in 1792, after the restoration of peace, he and his son Welī al-Dīn were appointed joint Wardens for the specific purpose of preventing the passage of Albanians into Rumelia, where their employment for the suppression of outlaw bands had only added to the prevailing disorder. Shortly afterwards ʿAlī Pasha's influence was increased by the appointment, as a reward for his efforts to overcome the rebel Paswan-oghlu, of another son, Mukhtār, to the *sandjaḳ* of Eghriboz (Negropont) and Ḳarlī-ili.

One of ʿAlī Pasha's main concerns during and after the war of 1787-92, which had encouraged the Orthodox inhabitants of Suli to rebel against Ottoman rule, was to reduce them to obedience, though he was unable to do so finally before 1802. In the meantime, after the transference of the Ionian Islands and the "four districts" of Preveze (Prevesa), Parga, Voniče (Vonitza) and Butrinto from Venetian to French sovereignty by the Treaty of Campo Formio in 1797, ʿAlī Pasha not only sent a contingent to assist the conquest by Russo-Ottoman forces of Corfu, but also occupied Butrinto and, after several successes against the French, took possession of Preveze and Voniče as well. By the settlement of 1802 the "four districts" were to be incorporated in the *sandjaḳ* of Yanya. But it was not until 1819 that the incorporation of Parga, after various vicissitudes, was in fact effected.

In April 1802 ʿAlī Pasha was appointed *wālī* of Rumelia. The Albanian irregulars employed to suppress the brigandage and revolts that were again rife in the province at this time had themselves mutinied at Edirne; and it was thought that ʿAlī Pasha was alone capable of pacifying them and overcoming the general disorder. However, his success in inducing many of the outlaws to return to their homes so far provoked the hostility of the many Rumelian *aʿyān* whose interest it was to resist any thorough pacification, that in 1803 his appointment was revoked. He was then given the *sandjaḳ* of Tirḥala in addition to Yanya; but it was sought to counterbalance his influence in Albania

by replacing him in Rumelia by Ibrāhīm Pas̲h̲a, the *mutaṣarrif* of Is̲h̲ḳodra (Scutari), whose authority among the Ghegs of the north was little less than ʿAlī's own among the Tosks of the south.

After the resumption of the European war in 1803 close relations were established between ʿAlī and the French, who supplied him with weapons, munitions, and even gunners. But after Tilsit in 1807, when the Ionian Islands were relinquished by Russia to the French, the latter then proposed regaining the "four districts", occupied Parga, and instigated a revolt of the Greeks of Tirḥala against ʿAlī's authority, which, however, was suppressed by his son Muk̲h̲tār.

In 1810, after first marrying two of his sons and a nephew to daughters of the *mutaṣarrif* of Awlonya, and then contriving that the latter should be attacked in his capital, ʿAlī Pas̲h̲a was able to appropriate this *sand̲j̲aḳ* as well, under the pretext of flying to the relief of a relatieve. Maḥmūd II was enraged by this episode, but powerless to refuse the appointment of Muk̲h̲tār Pas̲h̲a to Awlonya in place of the dispossessed governor. No less unwelcome to the Porte were ʿAlī's acquisition of Ergiri (Argyrocastron) in the following year, and still more his invasion of the Gheg country, where, after overcoming some local resistance, he was able to add the fortresses of Tirana and Peklin (Pekinje) and the *sand̲j̲aḳs* of Ok̲h̲rī and Elbaṣan to his dominions.

In the face of repeated protests from Istanbul ʿAlī Pas̲h̲a sought to excuse this high-handed conduct, and in the war with Russia resumed in 1809 sent a considerable force to the sultan's aid under the command of Muk̲h̲tār and Welī Pas̲h̲as. He also assisted the British forces in their occupation of the Ionian Islands; and in view of these services and his advanced age no attempt was made by the Porte to unseat him before 1820. Then, however, owing in the first place to his falling out with the all-powerful *nis̲h̲ānd̲j̲ī* Ḥālet Efendi, and the latter's wish to divert Maḥmūd from his intention of abolishing the Janissaries; in the second place to the intrigues of certain Phanariot Greeks, who saw that he constituted an obstacle to the already projected insurrection in the Morea; and finally to the attempted assassination, contrived by ʿAlī Pas̲h̲a, of Pas̲h̲o Ismāʿīl Bey, a former *kāk̲h̲ya* of Welī Pas̲h̲a in Istanbul, in April 1820 he was dismissed from his Wardenship of the Passes and ordered to withdraw his troops from all regions outside the *sand̲j̲aḳ* of Yanya, while Welī Pas̲h̲a was deprived of his governorship of Tirḥala. Since there was little doubt that force would be needed to secure his obedience, all the governors of adjacent provinces had previously been warned to hold themselves in readiness to apply it; K̲h̲urs̲h̲īd Aḥmed Pas̲h̲a, recently made governor of the Morea, was appointed to command all the troops engaged in operations against him; and a flotilla was ordered to the Albanian coast. ʿAlī Pas̲h̲a responded by concluding an agreement for mutual aid with the Greek rebel leaders and seeking to provoke revolts also in the Aegean islands, Serbia, and the Principalities; on which the Porte in turn deprived him of his vizirate, dismissed him from Yanya, and ordered him and his whole family to reside at Tepedelen.

ʿAlī Pas̲h̲a was in fact deprived of all his acquisitions except Yanya itself, in the well stocked citadel of which he was then besieged, while three of his sons and a grandson, the governors of districts formerly in his control, surrendered. Owing to his provocation of a mutiny by the Albanians of the besieging force, a rising of the Suliotes, and the outbreak of the Greek revolt, it was not until the siege had continued for two years that ʿAlī Pas̲h̲a could be induced to give in. He then did so on condition that his life should be spared, retiring with a few supporters to a neighbouring monastery. But K̲h̲urs̲h̲īd Pas̲h̲a's guarantee was repudiated by Ḥālet Efendi, whose purposes it suited that the trouble at Yanya should continue. ʿAlī Pas̲h̲a, on learning that his execution had been ordered, decided to fight. He was accordingly attacked and died from a shot wound on 24 January 1822.

Tepedelenli ʿAlī Pas̲h̲a attained some celebrity in Europe owing to his being visited by various writers, notably Lord Byron, and to his efforts to enlist help from both the French and the British in the prosecution of his ambitions. He was brave, bold, and clever, but treacherous and wholly self-seeking. Having acquired great riches, he maintained a semi-royal state. surrounded by a strange entourage of European officers, Greek doctors, poets, *derwīs̲h̲es*, astrologers, and the leaders of brigand bands. Of all the contemporary Muslim rebels against the Ottoman power he contrived to do it most harm, by facilitating the beginning of the Greek revolt.

ʿALĪ AL-RIḌĀ, Abu 'l-Ḥasan b. Mūsā b. D̲j̲aʿfar eighth Imām of the Twelver S̲h̲īʿa, was born in Medina in 148/765 (al-Ṣafadī) or, according to other and probably better informed authorities, in 151/768 or 153/770 (al-Nawbak̲h̲tī, Ibn K̲h̲allikān, Mīrk̲h̲ʷānd). He died in Ṭūs in 203/818; the sources agree on the year, but differ as to the day and month (end of Ṣafar—al-Ṭabarī, al-Ṣafadī; 21 Ramaḍān—al-Ṣafadī; 13 D̲h̲ū 'l-Ḳaʿda or 5 D̲h̲ū 'l-Ḥid̲j̲d̲j̲a—Ibn K̲h̲allikān). His father was the Imām Mūsā al-Kāẓim, his mother a Nubian *umm walad* whose name is variously given (S̲h̲ahd or Nad̲j̲iyya—al-Nawbak̲h̲tī; Sukayna—Ibn K̲h̲allikān; K̲h̲ayzurān—Ibn al-D̲j̲awzī). For the greater part of his life he played no political role, but was known only for his piety and learning. He related traditions from his father and from ʿUbayd Allāh b. Arṭāh, and gave *fatwās* in the mosque of the Prophet in Medina. His first appearance on the political stage was in 201/816, when the Caliph al-Maʾmūn summoned him to Marw and appointed him as heir to the Caliphate, giving him the title of al-Riḍā. The sources agree that ʿAlī al-Riḍā was reluctant to accept this nomination, ceding only to the insistance of the Caliph. The ʿAbbāsid and ʿAlid princes and dignitaries, led by Al-Maʾmūn's son al-ʿAbbās, took the *bayʿa* to the new heir, who was dressed in green.

By the Caliph's order, green flags and green uniforms replaced the ʿAbbāsid black all over the empire. It is unlikely that the green colour was at this early date specifically associated with the house of ʿAlī, and the precise significance of the change of colour is uncertain (cf. Weil, ii, 216, n. 3; Gabrieli, 37 n. 4). The full text of the document of appointment is preserved (al-Ḳalḳashandī, *Ṣubḥ*, ix, 362-6; Ibn al-Djawzī, *Mirʾāt*, Paris Ms. Ar. 5903, f. 149 r-151 r; translation in Gabrieli 38-45). It shows that al-Maʾmūn carefully avoided the larger question of principle as between the claims of the houses of ʿAbbās and of ʿAlī, and simply appointed ʿAlī al-Riḍā as the person best fitted by his personal qualities—that is to say, on Sunnī rather than Shīʿī grounds. Nor does the document make any allusion to the delicate question of the succession after ʿAlī al-Riḍā.

The appointment aroused vigorous and conflicting reactions. The various ʿAbbāsid governors, with the exception of Ismāʿīl b. Djaʿfar in Baṣra, loyally carried out their orders, and exacted the oath of allegiance to the new heir. The Shīʿites were of course jubilant, though by no means won over by this partial recognition of their claims. In ʿIrāḳ however this step, added to the effective transfer of the imperial capital from Baghdād to Marw, aroused the fury of the inhabitants, who rose in revolt against the Caliph. They were joined by the garrison and the ʿAbbāsid princes in Baghdād, one of whom they elected as Caliph. The hatred of the ʿIrāḳīs was especially directed against the brothers Ibn Sahl, to whose activities they attributed all their troubles. It seems to have been the disinterested ʿAlī al-Riḍā himself who revealed to the Caliph the real meaning of the revolt in ʿIrāḳ. Al-Maʾmūn, realising the position at last, made a gradual change of policy. In 203/818 he set out for Baghdād, arriving there in the following year. On the way both Faḍl b. Sahl and ʿAlī al-Riḍā died—the former murdered in Sarakhs, the latter after a brief illness in Ṭūs. The Shīʿite historians attribute his death to poison, administered in a pomegranate given to him by ʿAlī b. Hishām (al-Yaʿḳūbī, ii, 551), or in a drink of pomegranate juice prepared by a courtier and handed to him by the Caliph himself (*Maḳātil*, 566-7). Al-Ṭabarī makes no allusion to the possibility of murder. The Caliph mourned him publicly, and recited the last prayers. He was buried by the tomb of Hārūn al-Rashīd, and his sanctuary (*mashhad*) has given its name to the town, supplanting the older name of Ṭūs. In Shīʿite works he is credited with many miracles.

(B. LEWIS)

ʿALĪ RIḌĀ-I ʿABBĀSĪ, calligraphist in the reign of Shāh ʿAbbās, who wrote out inscriptions for some of the great mosques of Iṣfahān (Masdjid-i Shāh, Masdjid-i Luṭf Allāh) as well as for the dome over the tomb of the shrine of ʿAlī al-Riḍā and the shrine of Khwādja Rabīʿ in Mashhad. He was also appreciated as a copyist of manuscripts, several of which in his handwriting are still preserved. Some miniatures are also attributed to him, but he is not to be confounded with Riḍā-i ʿAbbāsī [*q.v.*].

ʿALĪ WERDĪ KHĀN, bearing the title of Mahābat Djang, was the governor of Bengal (1740-56) under the later Mughal emperors of India. Being the son of a Turkoman of the name of Mīrzā Muḥammad ʿAlī, he started his career as the governor of Bihar, and after defeating the previous governor of Bengal, Sarfarāz Khān, entered Murshidābād [*q.v.*] on 12 May 1740, as viceroy of Bengal, Bihar and Orissa. For most of the time, he was engaged in ceaseless and fruitless warfare against the Marāṭhās, who finally succeeded in taking Orissa from him. He died on 9 April 1756 and was succeeded by his grandson, Sirādj al-Dawla Mīrzā Maḥmūd, who proved to be the last Mughal governor of Bengal; for Clive's victory at Plassey on 23 June, 1757, established the supremacy of the British in that part of India.

ALICANTE [see LAḲANT].

ALIDADA [see ASṬURLĀB].

ʿALIDS, descendants of ʿAlī b. Abī Ṭālib, who had eighteen sons (according to most works on ʿAlid genealogy, but fourteen according to another version given by al-Ṭabarī and eleven according to al-Masʿūdī), and seventeen daughters. His sons were as follows:

By Fāṭima; al-Ḥasan, al-Ḥusayn, and al-Muḥsin (or Muḥassin). The third does not appear in all sources.

By Khawla; Muḥammad, known as Ibn al-Ḥanafiyya.

By Umm al-Banīn; ʿAbbās the elder, ʿAbd Allāh, ʿUthmān the elder, Djaʿfar the elder.

By al-Ṣahbāʾ, called Umm Ḥabīb; ʿUmar.

By Laylā bint Masʿūd; Abū Bakr ʿAbd al-Raḥmān, ʿUbayd Allāh.

By Asmāʾ bint ʿUmays; Yaḥyā, ʿAwn, Muḥammad the younger (according to al-Ṭabarī).

By Umāma bint Abi'l-ʿĀṣ; Muḥammad the younger (the second, according to al-Ṭabarī).

By other mothers; Djaʿfar the younger, ʿAbbās the younger, ʿUmar the younger, ʿUthmān the younger, Muḥammad the younger (according to Akhū Muḥsin, or the second, according to the *Maḳātil*).

Five of these sons left issue, viz. al-Ḥasan, al-Ḥusayn, Muḥammad b. al-Ḥanafiyya, ʿUmar and ʿAbbās. (*Ittiʿāẓ*, 7).

It was to al-Ḥasan [*q.v.*], al-Ḥusayn [*q.v.*], and, for a time, Muḥammad b. al-Ḥanafiyya [*q.v.*] and

their descendants that the loyalties of the different groups of the S̲h̲īʿa [*q.v.*] were given. The claims made by the S̲h̲īʿa on behalf of the ʿAlids were broadly of two kinds. For the extremist S̲h̲īʿa the ʿAlid Imāms were the spiritual as well as the religious and political heirs of the Prophet, whose spiritual inspiration they retained or resumed. For the moderate S̲h̲īʿa they were the legitimate heirs of the Prophet as heads of the *Umma* of Islam, with a better claim to the succession than that of the reigning Caliphs, whom the S̲h̲īʿa regarded as usurpers. The early ʿAlids, with the possible exception of Muḥammad b. al-Ḥanafiyya and the more probable exception of his son Abū Hās̲h̲im, seem consistently to have refused to have any dealings with the extremists, or countenance their ideas (e.g. *Ag̲h̲ānī*², vii, 24 and viii, 33). On the other hand they seem to have acquiesced—if somewhat passively—in the political claims made on their behalf by the moderate S̲h̲īʿa. The numerous traditions in which ʿAlids reject and denounce the claims of their own supporters (e.g. Ibn Saʿd, v, 77, 158, 235, 238) are almost certainly due to Sunnī propaganda, and a more accurate reflection of the political views and claims of the house of ʿAlī will be found in the letter written by the Ḥasanid pretender Muḥammad b. ʿAbd Allāh [*q.v.*] to the Caliph Manṣūr in 145/762 (al-Ṭabarī, iii, 209 ff.), and in the verses of such pro-ʿAlid poets as Kumayt and Kut̲h̲ayyir. Muḥammad's letter is also interesting in that the writer claims pure Arab descent on both sides, without admixture of foreign or slave blood—thus accepting the aristocratic Umayyad principle of succession, (which had excluded sons of slave mothers like Maslama) and rejecting the Islamic rule followed by the Ḥusaynids (several of whose Imāms had slave mothers), and, later, by the ʿAbbāsids. In the early period the claims of the ʿAlids were based on descent from ʿAlī the Prophet's kinsman rather than from Fāṭima his daughter, since according to the ideas of the time kinship with the Prophet in the male line was more important than descent from him in the female line. (Thus in the revealing speech attributed to ʿAlī at Ṣiffīn, he speaks of himself only as "cousin of the Prophet", *Murūd̲j̲*, iv, 355). Claims based on kinship could thus be advanced on behalf of descendants of ʿAlī by wives other than Fāṭima, and even of collateral descendants of Abū Ṭālib (see AHL AL-BAYT). Only after the usurpation of ʿAlid claims by their ʿAbbāsid cousins was stress laid on direct descent from the Prophet via Fāṭima. In the development of this new claim, the sixth Imām D̲j̲aʿfar al-Ṣādiḳ seems to have played a role of some importance.

After the abortive rising of al-Ḥusayn and the massacre of Karbalāʾ in 61/680, when most of the ʿAlids were killed, the ʿAlid pretenders remained politically inactive, giving recognition and sometimes even help to the ruling house (examples in al-Ṭabarī, ii, 3, 409, 420, 1338; al-Yaʿḳūbī, ii, 298 ff.; Ibn Saʿd, v, 83, 159; Buhl, 369). They preferred to reside in Mecca or Medina, far from the main political centres, and while maintaining their claims did little to advance them. Such action as they took may be qualified as litigious rather than rebellious, concerned with their estates rather than their political rights (cf. I. Hrbek, *Muḥammads Nachlass und die ʿAliden*, *Arch. Or.*, 1950, 43-9). In the tradition this passivity is naturally given a religious colouring, and appears as the prototype of the characteristic S̲h̲īʿa practice of *taḳiyya* [*q.v.*].

Towards the middle of the 8th century growing discontent brought new opportunities to the ʿAlids. In ca. 122/740 Zayd b. ʿAlī b. Ḥusayn [*q.v.*] led the first ʿAlid bid for power since Karbalāʾ. After his death, closely followed by that of his son Yaḥyā [*q.v.*] in ca. 125-6/743-4, the ʿAlid bolt was shot, and both the cause and the opportunity were taken over by the ʿAbbāsids. The first major expression of ʿAlid anger and disappointment at the ʿAbbāsid victory was the revolt of the Ḥasanid brothers Muḥammad and Ibrāhīm b. ʿAbd Allāh [*qq.v.*], in Medina and Baṣra respectively. Both movements were choked in blood, and the Caliph Manṣūr adopted a policy of violent repression towards the ʿAlids, great numbers of whom were arrested and put to death (cf. al-Ṭabarī, iii, 445-6; *Murūd̲j̲*, vii, 404; *Maḳātil*, 178 ff.). Al-Mahdī dealt more kindly with the ʿAlids, as part of a general policy of appeasement, but when this failed to gain ʿAlid good will, it was abandoned by al-Hādī, whose harsh actions drove the ʿAlids to open revolt. The rising of Ḥusayn b. ʿAlī [*q.v.*], known as Ṣāḥib Fak̲h̲k̲h̲ (after the place of his death), in 169/786 was soon suppressed, (Ṭabarī, iii, 551-9; *Maḳātil* 431 ff.), but Idrīs [*q.v.*], a brother of the ill-fated Muḥammad b. ʿAbd Allāh, escaped to Morocco where he founded the first ʿAlid dynasty. Hārūn al-Ras̲h̲īd eased the severities of al-Hādī, but after the revolt of Yaḥyā b. ʿAbd Allāh [*q.v.*] in 176/792-3 he resumed the strict surveillance of the ʿAlids, and the Ḥusaynid Mūsā al-Kāẓim [*q.v.*] died in prison. Meanwhile, in 175/791, some Zaydids (of the line of Zayd b. Ḥasan) took refuge in Daylam, where in 250/864 they were able to establish the first of a series of local dynasties. Al-Maʾmūn on his accession faced the pro-ʿAlid revolts of Abu 'l-Sarāya [*q.v.*] in association with the Ḥasanid Muḥammad b. Ibrāhīm, called Ibn Ṭabāṭabā [*q.v.*] in Mesopotamia in 199/814, and of Muhammad b. D̲j̲aʿfar, [*q.v.*] known as Muḥammad al-Dībād̲j̲, in Mecca in 200/815-6. His subsequent nomination of the Ḥusaynid ʿAlī al-Riḍā [*q.v.*] as his heir and his adoption of a pro-ʿAlid policy brought some alleviation, but did not save him from a further ʿAlid rising, that of ʿAbd al-Raḥīm b. Aḥmad in the Yemen in 207/822-3. Under al-Maʾmūn's successors relations between ʿAbbāsids and ʿAlids again deteriorated, reaching their lowest point with the insults and persecutions of al-Mutawakkil. Al-Muntaṣir is reported to have treated the ʿAlids with consideration, but the revolts continued. Most of them were suppressed, some few resulted in the appearance of local dynasties of ʿAlid stock, in such remote places as Morocco, Yemen, and the Caspian provinces of Persia.

Most of the rebels and pretenders of the early ʿAbbāsid period came from the line of al-Ḥasan, that of al-Ḥusayn preferring a life of tranquil piety. It was however the latter that came to have the greatest influence. After the death in 148/765 of D̲j̲aʿfar al-Ṣādiḳ [*q.v.*], the sixth Imām in the line of Ḥusayn, the succession was disputed between his sons Ismāʿīl and Mūsā al-Kāẓim [*q.v.*]. Ismāʿīl, whose claims were accepted by the sect known as Ismāʿīliyya [*q.v.*], sired a line of Imāms from whom came the Fāṭimid Caliphs (some authorities however doubt the authenticity of their pedigree). Mūsā's line ended with the disappearance of the 12th Imām, known as Muḥammad al-Mahdī ca. 260/873-4. After this the aspirations of their followers [see ITHNĀ ʿAS̲H̲ARIYYA] became eschatological rather than political, since they could offer no real alternative to the ʿAbbāsid Caliphate, which was therefore accepted even by S̲h̲īʿite dynasties such as the Būyids.

Many dynasties claimed to be of ʿAlid descent. They may be grouped as follows:

1) Ḥasanids:
   a) N.W. Africa—Idrīsids [*q.v.*], Sulaymānids [*q.v.*], Sharīfs (Saʿdids [*q. v.*], Filālīs, [see ʿALAWIDS]).
   b) Yemen—Sulaymānids, Banū Ukhayḍir, Rassids [*qq.v.*].
   c) Mecca—Sulaymānids, Banū Ukhayḍir, Banū Fulayta, Banū Ḳatāda [see MAKKA].
   d) N. Persia—Zaydids, ʿAlids.
   e) Ghāna—Banū Ṣāliḥ [*q.v.*].
   f) Āmul—Ḥasanids.
   g) Cordova and Malaga—Ḥammūdids [*q.v.*].

2) Ḥusaynids:
   a) Ifrīḳiya and Egypt—Fāṭimids [*q.v.*].
   b) Medina—Banū Muhannā [*q.v.*].

3) Unknown: Mecca and Medina—Banū Mūsā.

Bibliography: Genealogies of the descendants of ʿAlī were compiled from an early date. One of them was that of the 10th century ʿAlid genealogist Akhū Muḥsin, who wrote a "complete account" of all the progeny of ʿAlī, in an attempt to disprove the legitimacy of the Fāṭimids. This work is lost, but is preserved in excerpts in Maḳrīzī's *Ittiʿāẓ al-Ḥunafāʾ*, (Shayyāl), Cairo, 1948, 4 ff. and in Ibn Aybak al-Dawādārī, *Kanz al-Durar*, Vol. vi, MS Sarāy, Aḥmed III, no. 2932, 5 ff. where the source is named. A parallel account of the descendants of ʿAlī will be found in the *Siḥāḥ al-Akhbār* of Abu 'l-Maʿālī Muḥammad al-Makhzūmī (9th/15th century), Cairo 1306. Slightly different versions are given by Ṭabarī (i, 3471 ff., followed by Ibn al-Athīr iii, 333-4), and by Masʿūdī (*Tanbīh*, 298 and *Murūdj*, v, 148). Among later works on ʿAlid genealogy mention may be made of the *ʿUmdat al-Ṭālib fī Ansāb Āl Abī Ṭālib* of Aḥmad b. ʿAlī ... b. Muhannā, Bombay, 1318. Biographies of ʿAlids will be found in Abu 'l-Faradj al-Iṣfahānī's martyrology, *Maḳātil al-Ṭālibiyyīn*², Cairo 1949, (cf. *Murūdj*, vii, 404, where martyred ʿAlids are listed), as well as in general works such as the *Ṭabaḳāt* of Ibn Saʿd and the *Ansāb al-Ashrāf* of Balādhurī (the ʿAlids appear in vol. 10). On the role of the ʿAlids in the Umayyad and early ʿAbbāsid periods see Fr. Buhl, *Alidernes Stilling til de Shiʿitiske Bevaegelser under Umajjaderne, Oversigt over det Kgl. Danske Videnskabernes Selskabs Forhandlinger*, 1910, no. 5, 355 ff.; F. Gabrieli, *Al-Maʾmūn e gli ʿAlidi*, Leipzig 1929; Ḥ. I. Ḥasan, *Taʾrīkh al-Islām*², Cairo 1948, ii, 113 ff.; ʿA. ʿA. al-Dūrī, *Al-ʿAṣr al-ʿAbbāsī al-Awwal*, Baghdad 1945. Genealogical tables of the descendants of ʿAlī, showing the interrelation of ʿAlid dynasties, will be found in Zambaur, ii, A-E. On the status and organisation of persons descended from the Prophet in later times see SAYYID and SHARĪF.

(B. LEWIS)

ALIF [see HIDJĀʾ].

ALIGARH, town (27° 53′ N., 78° 4′ E.) and district in the Meerut (Mīrat) division of Uttar Pradesh (formerly the United Provinces). In 1941 the district (1946 sq. miles = 5024.5 sq. km.) had 1, 372, 641 inhabitants (186, 381 Muslims) and the town 112, 655 (51, 712 Muslims). The town was at first called Koil (Kol) and the citadel, built in 1542, was named Aligaṛh (high fort) when Nadjaf Khān restored it in 1776; previously it had been called Ramgaṛh, occasionally Sābitgaṛh after one Sābit Khān or Muḥammadgaṛh.

Koil, which was certainly an old town, was captured towards the end of the 12th century by Ḳuṭb al-Dīn Aybeg and was usually subject to Delhi, being a fief of Balban's eldest son c. 1270. It was ruled from Djawnpur in 1393 and was independent for a time from 1447. In 1785 Mahrattas of the Scindhia family captured it but were driven out by Lord Lake in 1803. It was often described by Muslim writers, e.g. Ibn Baṭṭūṭa (iv, 6).

Modern Aligarh owes its place to its university. In 1871 (Sir) Sayyid Aḥmad Khān [*q.v.*] began to collect funds, some Hindus contributing, for a boys' school to be run more or less on English lines. In 1875 the high school was started and three years later it was raised to a second grade college. The institution then became a school and the Muhammadan Anglo-Oriental College. Sir Sayyid kept the management in his own hands during his lifetime and had excellent helpers in the first principals, Th. Beck and (Sir) Theodore Morison. Finance was a trouble and there was opposition to this breach with traditional Muslim education. Entrance to the college was never restricted to Muslims and the language of instruction was English except in religious subjects. After the founder's death the management was put in the hands of Muslim trustees. In 1904 353 boys were in the school, 269 students in the college and 36 students of law; of the total 76 were Hindus. In 1909 there were eight teachers of European origin and for some years the professor of Arabic was a European. Later the number of teachers who were not Indians was much reduced. In 1920 the college was created a university and an intermediate college was established for the first two years of the university course, following the recommendations of the Calcutta Commission. At the same time the non-cooperation movement caused trouble, resulting in the foundation of the National University; this was active for two years or so and existed in name for some time longer. Aligarh University continued to develop; in 1929 teachers of Yūnānī (Unani) medicine appeared on the staff; in 1932 the intermediate college was absorbed in the university and new laboratories opened; in 1934 a college of Yūnānī medicine was started and in 1938 an institute of technology and electrical engineering and a Yūnānī hospital were opened. Women were admitted to some degrees in the same year and later further concessions were made to them. In 1945 an agricultural college was opened and in 1947 the staff is found grouped in four faculties, arts, science, engineering and technology, and theology. The separation of Pakistan from India caused a great upheaval and many of the staff left but their places were filled, the university survived and still flourishes. Aligarh has always upheld the Muslim ideal of opening the road to education to the needy; it is to be feared that the pursuit of this ideal may clash with the purpose of a university. In the year 1946-7 there were 5896 students of whom 775 were graduates and 501 first degrees were given in the faculties of arts, science, commerce and engineering; in the following year the numbers were 4285, 1186 and 365.

(A. S. TRITTON)

ʿĀLIM [see ʿULAMĀʾ].

ʿĀLIMA, in the Egyptian dialect of Arabic *ʿālme*, *ʿālime*, plural *ʿawālim*, literally "a learned,

expert woman", the name of a class of Egyptian female singers forming a sort of guild, according to the sources of the 18th and 19th centuries. They were engaged to perform in harems at celebrations of marriages or births, during Ramaḍān and on other occasions. Their art included the improvisation of poems of the *mawāl* [*q.v.*] type, singing and dancing. They withdrew from Cairo during the French expedition. Well-informed travellers were careful to distinguish them from the *ghawāzī* (sing. *ghāziyye*) who sang and danced primarily in the streets, making a speciality of lascivious dances and often becoming prostitutes (the most accurate descriptions are those of Savary, *Lettres sur l'Égypte*[2], Paris 1786, i, 149 ff., and Villoteau, *Description de l'Égypte*[2], Paris 1826, xiv, 169-82; useful information is contained in Sonnini, *Voyage dans la haute et basse Égypte*, Paris, year vii, ii 372 ff.; Chabrol in *Descr. de l'Égypte*[2], Paris 1826, xviii, 1, 173 ff., 212 ff., 330; Lane, *Modern Egyptians*, London 1836-7, i, 226, 261; ii, 65 ff., 270 ff., Laerty-Hadji (Baron Taylor), *L'Égypte*[2], Paris 1856, 263-5. The Arabic word as recorded by the travellers appears in French, from the time of Savary (*loc. cit.*; cf. *Journal encyclopédique*, 1787, ii, 519 ff.), in the form *almé*, later *almée*, and in English (first recorded in 1814 by Byron, *Corsair*, ii, 8) as *alma* or *almah*. But Baedeker, *Aegypten*, Leipzig 1877, i, 25-6 states that *ʿawālim* of the better class only survived in the harems of the most eminent houses; a debased type was frequently to be seen in the streets accompanied by one or two, usually blind, musicians. Travellers regularly confused the *ʿālmas* with the *ghawāzī*, who were however expelled from Cairo to Upper Egypt in 1834 by Muḥammad ʿAlī. The latter were found in large numbers at Ḳene, Esne, Luḳṣor (Baedeker, *Aegypten*, Leipzig 1891, ii, 81 ff., 258). Flaubert in 1850 associated with them there, and refers to them as *almées* (*Voy. en Orient*, Paris 1949, 63 ff.). Most of the *ʿawālim* and *ghawāzī* held an annual reunion at Ṭanṭā on the occasion of the *mawlid* of Sīdī Aḥmad al-Badawī (Baedeker, *loc. cit.*, i, 25, 245; cf., referring to the year 1865, A. Rhone, *L'Égypte à petites journées*, Paris 1877, 172-8, and, as late as 1933, the parade of prostitutes, in J. W. Mc Pherson, *The Moulids of Egypt*, Cairo 1941, 286.

Bibliography: apart from the works mentioned in the text, Aḥmad Amīn, *Ḳāmūs al-ʿĀdāt wa 'l-Taḳālīd wa 'l-Taʿābīr al-Miṣriyya*, Cairo 1953, 210 ff., s.v. *raḳṣ*; P. N. Hamond, *L'Égypte sous Mehemet Ali*, Paris 1843, i, 314-20; Prisse d'Avennes, *Petits mémoires secrets sur la cour d'Égypte suivis d'une étude sur les almées*, Paris 1930; Auriant, *Koutchouk Hanem l'almée de Flaubert*, Paris, 1943. (M. RODINSON)

ALINDJAḲ or ALINDJA (in Armenian Erndjak, a district of the province Siunikʿ), now ruins within the Nakhičewān territory of the Azerbaydjan Soviet Socialist Republic. The river Alindja flows into the Araxes near Old Djulfa. The ancient fortress Alindjaḳ stood some 20 km. above its estuary on the right bank of the river, on the top of an extremely steep mountain (near the village Khānaḳā). The fortress played a considerable role at the Tīmūrid and Turkman period.

Bibliography: V. Minorsky, *Caucasica*, *JA*, 1930, 93-4, 112. (V. MINORSKY)

ALĪSAʿ (or ALYASAʿ) B. UKHṬŪB (or YAKHTŪB), the biblical prophet Elisha. The Ḳurʾān mentions him twice (vi, 86 and xxxviii, 46, second Meccan period) together with other apostles of Allāh, without special comment. The Arabs have considered the first syllable as the article (discussion of variant readings in al-Ṭabarī, *Tafsīr*, vii, 156 ff.). Muslim tradition identifies Alīsaʿ with the son of the widow who sustained Elijah during the famine (I Kings xvii, 9 ff.). This son, a paralytic, was cured by Ilyās (Elijah) and became his disciple, his companion and, eventually, his successor. Because of his parentage, some authors call him Ibn al-ʿAdjūz (son of the old woman), but others, including al-Ṭabarī (loc. cit. and *Annals*, i, 535) give this sobriquet to Ḥazḳīl (Ezekiel). In traditional Muslim chronology, Alīsaʿ is placed much earlier in date than Ṭālūt (Saul), and it is he who is said to have been evoked by the witch of Endor. His identification with one of the guardians of the Ark of the Covenant is a further detail derived from the history of Samuel. Some identify him with al-Khiḍr [*q.v.*], or even with Dhu 'l-Kifl [*q.v.*], who is generally regarded as his successor.

(M. SELIGSOHN-G. VAJDA)

ALJAMÍA, Spanish transcription of the Arabic *al-ʿadjamiyya* ("non-Arabic"), a term used by the Muslims of al-Andalus to denote the Romance dialects of their neighbours in the north of the Iberian peninsula—dialects soon coloured with Arabisms which, for the most part, were introduced from the 9th century by Mozarab emigrants who had settled in the Christian countries neighbouring the kingdom of Cordova. The Romance language, the use of which in al-Andalus by all classes of society, especially by the rural classes, alongside Spanish Arabic, has been established, was also called *al-ʿadjamiyya*. It was only in the latter Middle Ages that the Spanish equivalent of this term, *aljamía*, acquired the particular meaning which is attributed to it to-day, namely: a Hispanic Romance language (Portuguese, Galician, Castilian, Aragonese or Catalan, depending on the district) written, not in Latin, but in Arabic characters. The literature in *aljamía* which has been preserved is therefore termed *aljamiada*.

This *aljamiada* literature, of which there exists a number of manuscripts, has been the subject of numerous studies in Spain itself, especially towards the end of the 19th century. It comprises in general works of a religious or legal nature in addition to poetical compositions, usually didactic in tone, and a few works of fiction in prose. In considering this literature, a distinction must be made between the works written in Spain itself, before the expulsion of the Moors by Philip III in 1609, and those, more numerous, written after that date, in particular by the Moorish communities established in Tunisia [see MORISCOS]. In the first group, the most important work, which apparently dates back to the 14th century, is the anonymous "Poem of Yūsuf"; R. Menéndez Pidal, who has edited and commented on this poem (*Poema de Yuçuf: materiales para su estudio*, in *Revista de Archivos, Bibliotecas y Museos*, VIII, Madrid 1902; new edition, Granada 1952), thinks it is the work of an Aragonese Morisco. It consists of a version in Spanish verse of Ḳurʾān, xii (*Sūrat Yūsuf*), embellished with elements borrowed from the Muslim "legends of the prophets". In the second group, the poetical compositions of another Aragonese Morisco, Muḥammad Rabaḍān, a native of Rueda de Jalón, deserve special mention; composed about 1603, they consist of strophic poems which narrate,

following in general Abu 'l-Ḥasan al-Baṣrī, the various episodes of the *sīra* of the Prophet. About the same period (beginning of the 17th century), an account of a pilgrimage to Arabia was composed, also in rhymed strophes, by a Morisco known as Alhichante (*al-ḥādjdj*) of Puey Monzón. An anti-Christian polemical poem composed in 1627 by Juan Pérez, a Morisco from Alcalá de Henares, who had emigrated to Tunisia, and whose original name was Ibrāhīm Taybilī, must also be mentioned.

Dating from the same period are the Muslim apologetics written in *aljamiado*, for instance that composed in 1615 by ʿAbd al-Karīm b. ʿAlī Pérez. To this literature also belong some novelistic prose narratives concerning the Prophet or one of his Companions (for instance Tamīm al-Dārī). Others recount biblical episodes or are biographies of more or less legendary characters (especially Alexander *Dhu 'l-Ḳarnayn*).

Finally attention must be drawn to the discovery of private letters written in *aljamía*; the most characteristic—writte hardly later than the capture of Granada in 1492 by the Catholic Kings—has recently been published in facsimile by I. de Las Cagigas *Una Carta aljamiada granadina*, in *Arabica*, 1954, 271-5. (E. LÉVI-PROVENÇAL)

Bibliography: Manuscripts: There are scattered MSS at Paris, Algiers, Aix-en-Provence, Uppsala, the British Museum, Cambridge, the Escorial. For the few MSS at Toledo see A. González Palencia, *Noticia y Extractos de MSS árabes y aljamiados*, in *Miscelanea de Estudios y Textos Árabes*, Madrid 1915. The three main collections are: (1) that of the Biblioteca Nacional, Madrid (see F. Guillén Robles, *Catálogo de MSS arabes*, etc., Madrid 1889); (2) the "manuscritos de la Junta" now at the Escuela de Estudios Arabes, Madrid. This is particularly interesting as preserving almost intact a large hoard of MSS found at Almonacid in 1884 (see J. Ribera and M. Asin, *Manuscritos árabes y aljamiados de la Biblioteca de la Junta*, Madrid 1912, which also includes a description of MSS at Saragossa). (3) For the Gayangos collection at the Real Academia de la Historia, Madrid, the only description is in E. Saavedra, *Índice de la Literatura Aljamiada*, appendix to his *Discurso*, in *Memorias de la Real Academia Española*, vi, Madrid 1878, still a fundamental work, but made before the discovery at Almonacid. On the spelling of the texts, see J. D. M. Ford, *Old Spanish Sibilants*, Boston 1900. Published works in *aljamía*: P. Gil, J. Ribera and M. M. Sánchez, *Colección de textos aljamiados*, Saragossa 1888; H. Morf, *Poema de José*, in *Gratulationsschrift der Universität Bern an die Universität Zürich*, Leipzig 1883; K. V. Zetterstéen, in *MO*, 1921, 1-174; R. Menéndez Pidal, and I. de Las Cagigas, see above. In accurate transliteration: J. Cantineau, in *JA*, 1927, 9-17; J. N. Lincoln, in *American Geographical Riview*, 1939, 483 ff.; idem, in *Publ. Mod. Lang. Assoc.*, 1937, 631 ff.; A. R. Nykl, *A Compendium of Aljamiado Literature*, in *Revue Hispanique*, lxxvii; M.J. Müller, in *SBBayr. Ak.*, 1860, 201 ff.; M. Schmitz, in *Romanische Forschungen*, 1901, 315 ff.; D. Lopes, *Textos em aljamia portuguesa*, Lisbon 1897. In free transliteration: F. Guillén Robles, *Leyendas Moriscas*, 3 vols., Madrid 1885-6; idem, *Leyendas de José y de Alejandro Magno*, Saragossa 1888; *Historia de los amores de Paris y Viana*, in *Revista Histórica*, no. xxii, Barcelona 1876; M. de Pano y Ruate, *Las Coplas del Peregrino de Puey Monçón*, Saragossa 1897; P. Longás, *Vida Religiosa de los Moriscos*, Madrid 1915; J. Sánchez Pérez, *Partición de Herencias entre los Musulmanes del Rito Malequí*, Madrid 1914. Works written in Latin characters: ʿĪsā b. Djābir, *Suma de los principales mandamientos*, ed. P. de Gayangos, in *Memorial Histórico Español*, v, Madrid 1853; H. E. J. Stanley, *The Poetry of Mohamed Rabadan*, in *JRAS*, 1867-72. Studies: J. Ribera, *Disertaciones y Opúsculos* I, Madrid 1928, 493 ff.; P. Gil, in *Homenaje Codera*, Saragossa 1904, 537-49; R. Basset, in *GSAI*, 1893, 3-81; J. González Palencia, *Hist. de la literatura arábigo-española*[2], Barcelona 1945, 303-9.

(L. P. HARVEY)

ʿALḲAMA B. ʿABADA AL-TAMĪMĪ, surnamed al-Faḥl, early Arab poet, was active in the first half of the 6th century. His poetry relates to the combats which took place between the Lakhmids and the Ghassānids; as the spokesman of his tribe he is reported to have obtained, by reciting a *ḳaṣīda* (no. 2, ed. W. Ahlwardt, *The Diwan of the six ancient Arabic poets*, London 1870), the release of his brother Shaʾs and the other Tamīmites whom the Ghassānid king, al-Ḥārith b. Djabala (*ca.* 529-569), had taken prisoner. Arab tradition connects ʿAlḳama with Imruʾ al-Ḳays (d. *ca.* 540), with whom he is supposed to have fought and won a literary contest as a result of which Imruʾ al-Ḳays divorced and ʿAlḳama married the umpire Djundab. The style of their work would bear out the suggestion of some sort of artistic association such as the anecdote implies. The oft-remarked similarities between ʿAlḳama, 1 (Ahlwardt), and Imruʾ al-Ḳays, 4 (Ahlwardt), indicate a certain confusion of the two literary personalities on the part of the *ruwāt*. Already Ahlwardt, *Bemerkungen*, 68 ff., noted that in all likelihood ʿAlḳama's is the older ode. ʿAlḳama shares with Imruʾ al-Ḳays a predilection for the longer and more tranquil meters. Stylistic and thematic kinship justifies the grouping of the two poets together as representatives of a distinct "school". A certain enrichment of the techniques of description may possibly be traced to ʿAlḳama. The poems Ahlwardt, 8 and 12, are spurious, so the chronological conclusions which Nöldeke (*Die Ghassânischen Fürsten aus dem Hause Gafna's Abh. Akad. d. Wissensch.* Berlin 1887, 36) and, following him, Brockelmann (I, 48) have based on them must be dismissed. The Arab critics include ʿAlḳama among the *fuḥūl* or powerful poets (literally "stallions").

Bibliography: The *Dīwān* of ʿAlḳama was first published, together with a German translation, by A. Socin, Leipzig 1867, then the text alone, by Ahlwardt in the edition mentioned above; text with commentary by al-Aʿlam al-Shantamarī, by Mohammed Ben Cheneb (Algiers 1925); further references: *Aghānī*, vii, 127-8; xxi, 171-5; de Slane, *Le Diwan d'Amro 'l-kais*, Paris 1837, 80; Caussin de Perceval, *Essai sur l'histoire des Arabes*, ii, 314; G. E. von Grunebaum, in *Orientalia*, 1939, 328-45. (G. E. VON GRUNEBAUM)

AL-**ʿALḲAMĪ** is, on the authority of the geographers Ḳudāma and al-Masʿūdī, the name used in the 3rd-4th/3th-10th centuries for the western branch of the Euphrates, between its bifurcation at or near the modern Hindiyya Barrage (44° 16' E, 36° 40' N) and its loss in the medieval Great Swamp. The proportion of Euphrates water using this or the eastern (al-Sūrāʾ, or modern Ḥilla) channel, has

varied from period to period thoroughout medieval and modern times: the western branch has finally been dominant, and the eastern merely a controlled canal, since the early 20th century; but al-ʿAlḳamī, using a bed not necessarily identical with the modern "Hindiyya river", probably represented the main stream. It passed by the important towns of al-Ḳanṭara (on both banks) and Kūfa (right bank). The name of the vizier Ibn al-ʿAlḳamī [*q.v.*] was taken from the river.

ALKANNA [see AL-ḤINNĀʾ].

ALḲĀṢ MĪRZĀ (or ALḲĀS, ALḲĀSP), second son of Shāh Ismaʿīl I of the Ṣafawī dynasty, and younger brother of Shāh Ṭahmāsp I. Born Tabrīz 921/1515-6, he fought a successful action at Astarābād against the Uzbegs in 939/1532-3. In 945/1538-9 he subdued Shirwān, and was made governor of that province by Ṭahmāsp. He rebelled soon afterwards, but was granted a conditional pardon through the intercession of his mother Khān Begī Khānum. At the instance of Ṭahmāsp, he fought an inconclusive campaign against the Circassians, but again rebelled, minting his own coinage and including his name in the *khuṭba*. In 953/1546-7 Ṭahmāsp launched his second Georgian expedition, and from Gandja dispatched 5000 men against Alḳāṣ. Alḳāṣ, worsted in several engagements, fled to Constantinople via the Ḳipčāḳ plain and the Crimea (954/1547-8).

He incited Sulaymān I to send another expedition against Persia, and in 955/1548-9 he was sent ahead of the main Ottoman army which advanced on Tabrīz via Sīwās and Erzerum. The success of Ṭahmāsp's policy of laying waste the countryside obliged Sulaymān to retire from Tabrīz after only five days. Alkāṣ accompanied Sulaymān at the capture of the fortress of Wān, and interceded for the garrison. But he had fallen in Sulaymān's estimation because his presence in Persia had not evoked the support promised, and Sulaymān willingly agreed that Alḳāṣ should leave Baghdād and raid Persia with a force of irregulars (he refused to allow him any Janissaries). Alḳāṣ marched to Hamadān, where he destroyed the palace of his brother Bahrām and captured his son Badīʿ-al-Zamān Mīrzā, and thence to Ḳum, Kāshān and Iṣfahān. Then, instead of complying with Sulaymān's order to rejoin him, he went on to Shūshtar, and sent a conciliatory letter to Ṭahmāsp. (Dhū'l-Ḥidjdja 955/January 1549). Proceeding towards Baghdād, he was opposed by Muḥammad Pasha, Governor of Baghdād, and fled to Ardalān, where he was handed over to Ṭahmāsp by Surkhāb Beg, the ruler of Ardalān, on condition that his life was spared. According to Ṭahmāsp's own account, Alḳāṣ was imprisoned at Alamūt, where he was killed a few days later, ostensibly as the result of a private feud, but probably with Ṭahmāsp's connivance.

Horn, *Denkwürdigkeiten Schâh Tahmâsp des I.*, 38, 64 ff., 134); Ḥasan Rūmlū, *Aḥsan al-Tawārīkh*, Calcutta 1931; Sharaf Khān Bidlīsī, *Sharaf-nāma*, St. Petersburg 1873; Pečewī, 267 ff.; Hammer, *Histoire de l'Empire ottoman*, vi, 7 ff.; Sir John Malcolm. *History of Persia*, London 1815, i, 509-10, 505 note. (R. M. SAVORY)

ALLĀH, God the Unique one, the Creator and Lord of the Judgment, polarizes the thought of Islam; He is the sole reason for its existence.

Allāh was known to the pre-Islamic Arabs; he was one of the Meccan deities, possibly the supreme deity and certainly a creator-god (cf. Ḳurʾān, xiii, 16; xxix, 61, 63; xxxi, 25; xxxix, 38; xliii, 87). He was already known, by antonomasia, as *the* God, *al-Ilāh* (the most likely etymology; another suggestion is the Aramaic *Alāhā*).—For *Allāh* before Islam, as shown by archaeological sources and the Ḳurʾān, see ILĀH.

But the vague notion of supreme (not sole) divinity, which *Allāh* seems to have connoted in Meccan religion, was to become both universal and transcendental; it was to be turned, by the Ḳurʾānic preaching, into the affirmation of the Living God, the Exalted One.

I. ALLĀH IN THE ḲURʾĀN.

A Muslim tradition tells us that sūra xcvi was the first to "come down" to the Prophet Muḥammad; so the mission entrusted to him was from the first the preaching of the Word of *Allāh* ("Preach!", xcvi, 1 and 3). *Allāh*, as is said to Muḥammad in this first sūra, is *thy Lord* (*rabbuka*, xcvi, 1), Creator of man, the Very Generous, "Who teaches man that which he knew not" (xcvi, 3). The great Ḳurʿānic leit-motiv, *bismillāh al-Raḥmān al-Raḥīm*, "in the name of God, the merciful Benefactor" cf. R. Blachère's translation), opens the announcement of the imparted message and is repeated at the head of each sūra. It may be that it contains a reference to the *Raḥmān* of pre-Islamic south Arabia, and that *Raḥmān* should be taken as a divine proper name. The fact remains that the root RḤM came to connote, in the course of the Islamic centuries, precisely the concept of benefaction, of clemency, of mercy, and that the expression *raḥmat Allāh*, "God's mercy", was to become, in the spiritual writers, as it were an evocation of the mysterious profundities of divinity in its relations with man.—Hence, from the beginning of Muḥammad's preaching, the affirmation of God, *Allāh*, as benefactor, creator, bountiful, imparting instruction to men through a messenger, of whom He was, in a special way, the Lord.

(A) *The great themes.*

From a historical point of view, we shall accept the distinctions generally admitted to exist (with some differences as to detail, see Nöldeke, Grimme, Blachère) between the three Meccan periods and the Medinan period, distinctions which roughly agree with some Muslim traditions (cf. ḲURʾĀN). But although these various periods give us a multiplicity of perspectives and new flashes of illumination, there is strictly speaking no progressive revelation of *Allāh*. The Ḳurʾān is not a theological exposition of the existence, nature and attributes of God. Muslim faith has always regarded the text of the Ḳurʾān as God's Word made manifest to man, in which God says what He wishes about Himself. God is "the benefactor Who teaches the Preaching" (lv, 1-2), which is addressed to "the pious who believe in the Mystery (*ghayb*)" (ii, 2-3). God remains mysterious, unapproachable (xlii, 50-51). He is declared in His transcendent perfections and in His dealings with the world; and every action of the Almighty (*afʿāluhū taʿālā*) is the restatement of the inscrutable mystery, for "the sight cannot perceive Him, while He can perceive the sight" (vi, 103).

Without a risk of breaking the very rhythm of sūras and verses, it is not easy to pick out, still less easy to classify, the themes concerning God. Three seem to us to predominate, but they must be taken as a whole.

1. *God of creation, judgment and retribution.* He is "creator (*khālik*) of all things" (xiii, 16). He is the absolute originator (*badīʿ*). He creates what He wishes (xlii, 49; v, 17) by His command (*amr*), by the *kun* ("Be!") which causes existence (e.g. xxxvi, 82; ii, 117). He is the bestower of all good, the supreme judge (*ḥākim*) and "the justest judge" (xcv, 8).

The oldest sūras proclaim God's unlimited sovereignty (*rubūbiyya*) over His creation, particularly His human creation, and His attributes of sovereign judge and king (*mālik*). The final shock is given to minds and hearts by the news of the Judgment (*yawm al-dīn*; see all sūra lxvi) and the imminence of the Hour (liii, 56-57; liv, 1, etc.), which is known to God alone (e.g. lxxix, 42-44; xliii, 85). The manner of this preaching may vary, but never its essential contents. For variations of theme relate less to God in Himself than to relations between God and the community of believers, depending on obstacles encountered or successive organisations. Thus, for example, the dichotomy of the Elect and the Damned (lxxxiv) at the end of the first Meccan period, and the Medinan leit-motiv of the "hypocrites" (*munāfiḳūn*) "whom God will mock" (ii, 15).—The Meccan sūras of the first two periods stress the eschatological advent of the Hour; in them, God appears essentially as the sovereign judge, having jurisdiction because He is the omnipotent creator of man (cf. lxxxii, 17-19, which follows logically on lxxxii, 6-8; lxxx, 18-22; xcv, 4-8, etc.). The theme of retribution is resumed however in the Medinan sūras (xxxiii, 63; xxiv, 25-26, etc.). Here and there perspective doubtless changes. At Mecca there is blunt teaching, intended to bring about an admission of faith in the mystery of God, the Judge and Creator, by means of the rhythmic rapping-out of asseverations. At Medina the same mystery is as it were recalled; presented to the heart's recollection (*dhikr*), as a witness to the eschatological value of daily life itself, urging the Muslim, whether he be "believer" or "hypocrite", to be constantly mindful of the Hour, in his every action; therefore urging the "hypocrite" to the "return", to conversion.

The same variations and resumptions of a single theme recur in the presentation of the divine management of human history. The Medinese sūras relate in minute detail the story of Adam, proceed to the history of the prophets, from Noah to Jesus, and state what God's will is of the community of believers. But there it appears as a sequence of discontinuous interventions of the immutable decree (*ḳadar*) of God, which, as the Meccan preaching had already said, encompasses all things, both in and out of time. For God is "the King of life and death" (xcii, 13; a theme constantly reverted to later, e.g. xv, 23; ii, 258, etc.). From the very first sūras Noah is evoked (liii, 52), and Abraham and Moses (lxxx, 19; liii, 36-37), and the tribes of Thamūd (xci, 11 and 14; liii, 51, etc.). In the second Meccan period, God's plans for the Nations, for Thamūd and ʿĀd, are mingled with intimations of the Judgment (cf. lxix and lxxix); to the second and third Meccan periods belong the most fully developed accounts of the history of the prophets. Mixed with the theme of the judgment of peoples, that of the judgment of every individual human being is constantly stated.

2. *God, Unique and One in Himself.* In all of the earliest sūras, God is ***thy*** Lord. Subsequently He is called Creator, Benefactor, Help, Judge. He is the Most High (lxxx, 1). He is given these names by virtue of those attributes of His godhead which have some connection with man. The particular attribute of His godhead in which the faith of Islam was to have its focus is first stated as an answer to man's errors and impieties: God the One.

Sūra lii, 39 and 43, contains a condemnation of the Meccans who have been accustomed to ascribe partners and daughters to Allāh. For Allāh is ***wāḥid***, sole divinity. "Your God is One" (xxxvii, 4), the believers are told. The assertion is constantly repeated throughout the Book, constantly restated in the Medinan period (e.g. ii, 163). It is the very core of the preaching concerning God: "It has been revealed to me only that your God is One God", Muḥammad says again and again (e.g. xli, 6, etc.).

But in a verse of the first Meccan period is found what is perhaps a stronger affirmation that Allāh is One in Himself. In relation to man, sole divinity, *wāḥid*; in Himself, One in His nature of deity, ***aḥad*** (cxii, 1).—Sole and One, the two Names come together in the Unity, the ***tawḥīd***, and its absolute transcendence. Such is the meaning of the "witness" of Islam, the *shahāda*. As early as that 73rd sūra, which, according to the traditions, gave rise to the conversion of ʿUmar, the assertion appears: "There is no divinity—save Him (*huwa*)" (lxxiii, 9). The second Meccan period declares: ***innanī Anā Allāh— lā ilāh illā Anā***, "I, I am God—there is no divinity save Me" (xx, 14), and that the mystery of this divine "I" is the Real (*ḥaḳḳ*, xx, 114; xviii, 44).—Lastly, the short sūra cxii, of uncertain date (referred by some to the Medinan period), is known as the sūra of Unity (*tawḥīd*) *par excellence*: God Alone, the Master, not begetting and not begotten; without equal: an assertion of the unity of the divine nature as such, its intrinsic mystery unfathomed (cf. xxiii, 91).

3. *God omnipotent and merciful.* The twofold aspect of the mystery of God in relation to His creation: Lord of the worlds (lxxxiv, 29; a very frequent expression) in His unquestioned omnipotence and His forgiving benevolence, is found in all periods of the Ḳurʾān alike, with varying shades of expression and emphasis.

The quality of omnipotence is the first enunciated. He is "the Lord of Easts and Wests" (lxx, 49; cf. lxxiii, 9); but it is precisely this which encourages the believer to see in Him a protector, a surety (***wakīl***, lxxiii, 9) and to exalt that power of mercy and forgiveness on which the text is so insistent. The names ***raḥmān***, ***raḥīm***, ***ghafūr***, ***ghaffār***, benefactor, merciful, forgiving, everforgiving, are among those which occur most frequently. What is first brought into notice is, on the one hand, the inscrutable omnipotence of God and, on the other hand, the total and trusting committal of oneself which is demanded by night, by way of response to this omnipotence, of all who devote themselves to the Lord. A text of the Medinan period (v, 3) makes the "committal to God" (*islām*) into the religion itself, but already in the eschatological sūras of the first period, the believer is exhorted to entrust himself to the gracious bounty (*niʿma*, xciii, 11) of the Lord. God is the refuge and the guide (xciii, 6-7); the whole of sūra lv (of the second Meccan period, according to Grimme; with later additions, according to Bell) proclaims the wrath of the Merciful, Lord of majesty (*djalāl*) and generosity (*ikrām*), against those who reject His benefactions.

(B) *The Signs and Names of Allāh.*

Thus God, through His prophets, is continually revealing to man the unexpressed mystery of His

ineffability, in which man is asked to believe, and His explicit sovereignty over all creation, and the transcendental perfections by which it is made known. For He is at the same time "the First and the Last, the Manifest (*ẓāhir*) and the Hidden (*bāṭin*)" (lvii 3).

In the first place, man, since he has received a revelation about them, must be able to recognize the "signs of the universe", which are "signs of God" (*āyāt Allāh*). So wonderful indeed are the "unfailing" (lxvii, 3-4) order and harmony of the world, that man is in danger of worshipping them. But he must recognize that there is nothing imperishable in this order and harmony. As happened to the prophet Ibrāhīm (Abraham); man's reason, guided by God, must grasp, in the perishable and the mutable, the incontrovertible evidence for the necessary and transcendent existence of the Creator. "To reflect", "to reason about the signs of the universe", is therefore a religious duty for man's reason, imposed on it by the Ḳur'ān (ii, 118, 164; iii, 190; vi, 99; xiii, 2-3; xxiv, 43-54, etc.). The Ḳur'ān also teaches it that God alone abides. "All perishes, save His Face" (xxviii, 88; cf. xxxix, 68; lv, 26-27, etc.). At the declared eschatological Hour, God, creator and therefore master of life and death, will annihilate all things, subsequently re-creating everything at the great Gathering (*ḥas͟hr*, 1, 44; lix, 2). The wonderful order and harmony of the present cosmos are presented as an invitation to prostrate oneself before the Power Which creates and annihilates (xxxii, 15; xli, 37).

God's perfections, which cause His transcendence to blaze forth in relation to this order of the world, are the same as those which God reveals. They are essentially the Names (*asmā'*) which He gives to Himself. "He has the most beautiful Names" (vii, 180; xvii, 110; xx, 8). Muslim piety has carefully picked out from the text of the Ḳur'ān, supplemented by tradition, the 99 "most beautiful Names" and has never ceased to memorize them and meditate on them. Without wishing to give here an exhaustive analysis of them (see complete list under AL-ASMĀ' AL-ḤUSNĀ), we may say that the following are the main themes which emerge (we shall confine ourselves to a single reference for each, generally the oldest):

God is One and Unique (cf. above), the Living, the Self-subsisting (*al-ḥayy al-ḳayyūm*, xx, 111), the Real, the Truth (*al-ḥaḳḳ*, xx, 114, frequent), the Sublime (*al-ʿaẓīm*, lxix, 33, frequent), the High and Great (*al-ʿalī al-kabīr*, xxxi, 30), Light and "Light on Light" (*nur, nūr ʿalā nūr*, xxiv, 35), the Sage (*al-ḥakīm*, lxxvi, 30, frequent), the Omnipotent (*al-ʿazīz*, lxxxv, 8, frequent; *ḳadīr*, lxvii, 1, frequent), absolute Creator (*badīʿ*, vi, 101), creating the world (*k͟hāliḳ*, xl, 62), Who does not cease to create (*k͟hallāḳ*, xxxvi, 81), Who is unlike all creation ("Naught is like unto Him" *laysa ka-mit͟hlihī s͟hay'*, xlii, 11), the Hearing, the Clearsighted, the Omniscient (*al-samīʿ, al-baṣīr, al-ʿalīm*, e.g. xlii, 11-12, frequent), the Witness (*s͟hāhid*, lxxxv, 9, frequent), the Bountiful (*al-wahhāb*, li, 58), the Benefactor (*al-raḥmān*, lxxviii, 37, very frequent), the Surety (*al-walī*, xlv, 19), the Protector (*al-wakīl*, lxxiii, 9, frequent), the Generous (*al-karīm*, xliv, 49), the Merciful (*al-raḥīm*, lii, 28, very frequent), the Forgiver (*g͟hafūr*, lxxvi, 20, frequent) Who is ever forgiving (*g͟haffār*, xx, 84), the Compassionate (*al-ra'ūf*, iii, 30), the Benevolent (*al-wadūd*, lxxxv, 14), the "Best of Judges" (*k͟hayr al-ḥākimīn*, x, 109), Who punishes in all strictness and rewards in all fairness and forbearance.

A good many of these terms occur again and again. Stress may be laid on one or other of them, now in the Meccan period, now in the Medinan, but nearly all are at least recalled in sūras of both periods. Often the text proceeds by fulgurating affirmations, "with no hollow", "facing" the believer, like God Himself (*ṣamad*, cxii, 2); often too by allusive parables, which insist and "prove" by the literal veracity with which their parabolic mode of expression is then invested.

A single example: the divine omniscience extends to the smallest action of the smallest created thing. These are the words employed: "No leaf falls but He knows it; there is no seed in the darknesses of the earth, no green shoot or dry but it is inscribed in the perspicuous Book" (vi, 59). Or again: "No female conceives or brings forth without His knowledge" (xxxv, 11). The mind is thus powerfully disposed to recognize the full presence of God in every human deed, in every act of the human heart. He is the creator of every act, whatever it be (xxxvii, 96); He is, in a special way, close to the man He has created (cf. xxxiv, 50); He knows "that which his soul suggests to him"; He is "closer to him than his jugular vein" (1, 16).

(C) *Two groups of verses.*

Some remarks on two groups of verses which, in the course of the centuries, were to give rise to numerous controversies:

1. *Retribution and the divine decree.* God's sovereign omnipotence becomes explicit in His wishes for the world. It is affirmed in his efficacious decree (*ḳadar*), and man, like all creatures, belongs to Him. But at the same time it is affirmed as the omnipotence of the just Judge, the equitable Rewarder, and man must know that every one of his acts will carry its own weight,—of recompense for the good, of punishment for the bad (e.g. ii, 286).

It has been too often and too readily stated that the Ḳur'ān contains a mass of "contradictory" verses. The truth is that there is no contradiction at all, but contrasted and complementary affirmations, with the aim of producing the required attitude towards God in the heart of man.

The divine omnipotence is indeed monolithic. "God has no account to render", as Muslim tradition repeatedly says. But here we must be careful of the Ḳur'ānic manner of preaching. The Ḳur'ān poses neither the theological problem of predestination (it does not *pose* any *problem*), nor the philosophical problem of the nature of human freedom: it evokes the mystery of the relations between creature and Creator. Nor does it pose the problem of the nature of evil. "It is God Who has created you and all that you have done" (xxxvii, 96), an affirmation frequently applied later to every human act. Nevertheless, "every good which comes to you comes from God, every ill which comes to you comes from you" (iv, 79). There is nothing here to demand an acceptance of the positive nature of evil.

The verses of the Ḳur'ān tirelessly proclaim that nothing escapes God, His will and His power, and equally that God is the Bringer of retribution. In a way, the idea of retribution is even dominant. Reward is promised to the just, and punishment to "him who turns away" (xcii, 16). The damned are those "who refuse the help" of God (cvii, 7). —In his Index, R. Blachère (iii, 1223) notices between two and three hundred passages which promise retribution in the measure of one's works. On the Day of Judgment, every soul will be judged

by what it has acquired (xl, 17): "whoever has done an atom's weight of good shall see it; whoever has done an atom's weight of evil shall see it' (xcix, 7-8). The necessity of "doing good", of "ordering what is right" (*al-amr bi 'l-maʿrūf*) and "forbidding what is wrong" (*al-nahy ʿan al-munkar*) is one of the first commands; the very first, one might say, since the pre-eminently good act is the declaration of faith in the One, the sincere *islām*. This command is not addressed only to each man, but, in precise terms, to the community of believers as such (iii, 104, 110, etc.). On the temporal plane of the fulfilment of the divine decrees in the contingent world, man is recompensed according to his works and his deserts.

But on the intemporal plane of the immutable decrees, a shift of perspective occurs. Nothing can have any effect on God's Will (*irāda*) or on His Command (*amr*). The elect are the chosen of God. "He bestows His favour on whomsoever He wishes" (iii, 73-74; v, 54; lvii, 21; lxii, 4); it is He "Who brings low and raises up" (iii, 25). And the great affirmation: "He turns astray whom He wishes, and guides whom He wishes" (xiv, 4; xvi, 93; xxxv, 8; vi, 39, 125),—and he whom God sends astray can have neither surety nor guide (xvii, 97; xviii, 17; xxxix, 29, 37; vii, 186; xiii, 33). Twice there occurs this image of specifically Semitic construction, so close to Isaiah vi, 9-10: "We have placed veils over their hearts, that they may not understand, and a dullness into their ears" (Ḳurʾān, xviii, 57); and "he whom God, knowingly, has sent astray, whose hearing and whose heart He has sealed, and on whose eyes He has set a blindfold..." (xlv, 23).

The first of these two texts (xviii, 57) in fact throws into sharp relief the divine action which seals hearing and heart, and the wrongness of the one who has turned away from the signs of the Lord. The second (xlv, 23), closes with a summons to reform. Verse xlv, 19, states that the wrongdoers are left to themselves ("they have no patrons but themselves"), while God is the patron of the righteous: thus according with iv, 79, quoted above.

The responsibility of man, the omnipotence and the peremptory decree of God: these two lines of thought combine in the ultimate affirmation of the Judgment. This way of access to the mystery was one which presented itself most forcefully to Muslim speculation in later ages.

2. *Anthropomorphic verses.* The other group of verses is one whose picturesque style, if taken absolutely literally, would seem to ascribe human attributes or acts to God. These are the *mutas̲h̲ābih*, "ambiguous", verses, as distinct from the *muḥkam* verses, whose sense is clearly established.—Thus: God dwells on His throne (xx, 5; lvii, 4, etc.); He "comes" (movement in place, lxxxix, 22); the hand of God (xlviii, 10; li, 47); His face (e.g. lv, 27); His eyes (xi, 37; lii, 48; liv, 14) etc. Our reason for noting these texts is that they were later the object of exegetic and theological dispute.

(D) *Conclusion.*

The Ḳurʾānic preaching about God is entirely centred on its affirmations of Oneness and Unity, of transcendence and subsistence, of absolute perfections. The forbidding inaccessibility of the divine nature is resolutely maintained; God, omniscient and "near", can be known only by His Word, by the Names, the attributes and acts of His paramount Sovereignty, which He Himself reveals.

It is indeed in His Sovereignty over every creature that Allāh is manifested. The attributes of omniscience and omnipotence relate to God's outward-directed knowledge and power. The declaration of Oneness pertains to the oneness of the divine nature, the godhead as such. God in Himself remains the unexpressed mystery, *g̲h̲ayb*.

For Islam, the name *Allāh* is indeed, as Macdonald said (EI[1]), the proper name of God; in that it expresses the sole and incommunicable godhead.

Ought one to describe the God of this preaching as a personal God? This question has no place emong the problems of Muslim theologians. It is weightily posed by the speculations of western students of Islam (cf. Macdonald's article, quoted above, in which he speaks of the "overwhelming personality" of Allāh): God, personal because living, creating, acting on the world, speaking to men. But never will Islam say that Allāh is *s̲h̲akh̲ṣ* or *s̲h̲akh̲ṣī*. They shrink from the assertion made by western scholars; indeed, they take positive exception to it. There is a twofold misunderstanding here. (a) *Vocabulary. S̲h̲akh̲ṣ* has not undergone, in philosophical Arabic, the same shift as the Greek ὑπόστασις or the Latin *persona*. *S̲h̲akh̲ṣ* always connotes the individual silhouette. There is no better term for the concept of "person"; moreover, it is well suited to the created person, but suggests a limiting individualization. (b) The very *concept* as applied to God: generally, the Muslim will feel loth to trammel with it the inaccessibility of the divine nature.

But the misunderstanding disappears if we make it plain that "personal God" implies, in the Indo-European languages, an absolute perfection: God, subsisting in Himself, incommunicable in His purpose of godhead. God, personal because perfect and the source of perfection, infinitely distinct from every creature, and the object of faith and worship. Now this is precisely what the Ḳurʾān teaches. If it leaves God's inmost Life in its own mystery, it is so as to insist on the Word communicated to man through the prophets, and on the inner attitude demanded of the believer.—God, sovereign Judge, just and terrible (*d̲j̲abbār*, lix, 23), is also, by the same token, protecting, beneficent, merciful. Faced with the incommunicable mystery, the Ḳurʾān demands of the believer, in respect of Allāh, reverent fear (*taḳwā*, ix, 109) and, at the same time, piety (*birr*), the act of which is the same as the act of reverent fear (ii, 189), gratitude (*s̲h̲ukr*; in the verbal form: "you may perchance be grateful", as the Book aften says, especially in the Medinan period), confidence (*tawakkul*; frequently in the verbal form: "have confidence in God", e.g. iv, 81).

The "God-fearing" of the Ḳurʾān bow down before the inscrutable omnipotence. For the damned alone, i.e., "those who have rebelled" (lxxix, 37), this fear becomes dread of punishment (cf. lxxv 25). The chosen "those who believe in the Mystery, perform the prayer, and give [in alms] of their goods" (ii, 3), those "who seek after His Face", to use the beautiful expression so often employed (e.g. xcii, 20), find in Him their protector (*wakīl*) and guide (*hādī*); they find with Him the supreme Refuge (*maʾāb*, e.g. iii, 14; lxxviii, 39).

II. THE DEVELOPMENT IN TRADITION AND KALĀM.

*In section iii we shall sketch the most notable attitudes of the Muslim schools concerning God. For the moment, we seek to devote ourselves to the body of problems and the axiology of Sunnite theology.

The traditional science which deals with divine matters is the *ʿilm al-kalām* or *ʿilm al-tawḥīd*, roughly "theology" or "defensive apology" (see below

for certain criticisms raised in Islam against its legitimacy). We shall take it in its established form, assuming a knowledge of its historical origins, the influences it underwent, the formation of the various schools (see KALĀM). A reminder: 1) under the Umayyads: the Murdji'ites, Ḳadarites, Djabbārites; 2) the Muʿtazilites, originally political (1st/7th century), then doctrinal (2nd-3rd/8th-9th centuries), who triumphed under Maʾmūn but were subsequently regarded as "heterodox" for centuries; 3) from the 4th/10th century onward, the official Ashʿarite and Ḥanafite-Māturīdite lines.—The conclusions vary with the diverse attitudes towards the relation of reason (*ʿaḳl*) and the Law (*sharʿ*), or of reason (*ʿaḳl*) and tradition (*naḳl*, *taḳlīd*), or of rational (*ʿaḳlī*) and authoritarian (*samʿī*) proofs.

The *ʿilm al-kalām* came to sustain itself by means of two other "religious sciences": 1) the science of *ḥadīth* provided texts regarded as authoritative proofs, which took up one theme or another of the Ḳurʾānic teaching, in a picturesque, even mythical, manner (cf. the six "authentic" collections, *ṣaḥīḥ*, particularly the *kitāb al-tawḥīd* of Bukhārī's *corpus*). Numerous traditions relate, on the one hand, to God's mercy and forgiveness (e.g. "My mercy outweighs My wrath or takes precedence of it", Bukhārī, *Tawḥīd*, 169, 175); on the other hand, to His absolute kingship ("I am the King; where are the kings of the earth?", id., 167, 181); on the one hand, to human responsibility (texts in Bukhārī or Muslim, chap. *Ḳadar*), on the other hand, to the preordaining decree (e.g. these oft-quoted ḥadīths: "All the hearts of mankind are like one single heart between two of the fingers of the Merciful", and: "These for heaven, and I care not; those for hell, and I care not"). Many *ḥadīths* had great influence on the formation of current notions and the popular attitude concerning God.

2) The science of *tafsīr*, or exegetic interpretation, played a leading part in the use and understanding of those Ḳurʾānic verses which speak of God, particularly the anthropomorphic passages.

Ḥadīth and *tafsīr* were employed in various ways by the schools of *kalām*.

If we refer to the problems of the *kalām* (which is, in its essentials, of Muʿtazilite origin), we find two great principles directly concerning God: 1) the principle of *tawḥīd* or divine unity; 2) the principle of *ʿadl*, of the justice of God in connection with the requital of human actions. As against the "free-thinkers" of their day, the Muʿtazilites had presented themselves as "the people of unity and justice", *ahl al-tawḥīd wa 'l-ʿadl*. These problems continued to inspire later schools. Only their titles changed. The great classic manuals of the Ashʿarites and Māturīdites (e.g. *Sharḥ al-Mawāḳif* of Djurdjānī, *Maḳāṣid* of Taftāzānī, etc.) called the first principle *wudjūd Allāh wa ṣifātuhu* ("the existence and attributes of God"), and the second *afʿāluhu taʿālā* ("the actions of the Exalted One"). Here are the main questions raised in connection with both.

(A) *Tawḥīd*.

1. *The Existence of God* (*wudjūd Allāh*).

All schools agree in quoting those Ḳurʾānic verses (cf. above) which bid the reason to "reflect on the signs of the universe", and to rise thereby to the affirmation of the Creator. But: (a) according to the Muʿtazilites, there is involved in this an obligation inherent in the nature of reason, prior to the promulgation of the Law; (b) according to the Māturīdites, reason should, by rights, have been able to attain to the knowledge of its Creator, but was actually brought to it by the promulgation of the Law; (c) for the Ashʿarites, the employment of the reason and of reasoning in order to rise to God is a purely legal (revealed) obligation. Cf. al-Djurdjānī, *Sharḥ al-Mawāḳif*, Cairo 1325/1907, i, 251 ff. In other words: if the Law had not laid down the obligation, human reason could never have attained to the existence of God (cf. al-Ghazzālī, *al-Iḳtiṣād*, Cairo, n.d., 77-8). The affirmation of the existence of God, for the Ashʿarite school as a whole, is therefore the result of a rational (*ʿaḳlī*) argument, prescribed by an argument of authority (here, *sharʿī*).

Whatever the nature of this obligation, the schools are as one with regard to the rational argument itself. What is involved is a proof of the existence of God *a novitate mundi*, linked with the entirely contingent and perishable character of the world, as the Ḳurʾān teaches and reason can convince itself. For the *kalām*, the temporal beginning and end of the world are demonstrable truths. There is then an inference (*istidlāl*) which proceeds, with no universal middle term, from this utter inadequacy of the created to the necessary (*wādjib*) existence of the Creator, Who alone exists from all eternity and alone is self-subsisting (truths taught by the Ḳurʾān and also accessible to the reason, *ʿaḳliyyāt*). This inference, in the early days of the *kalām* (Muʿtazilites as well as Ashʿarites) was set out as a piece of reasoning in two terms. Among the later *mutakallimūn*, more directly imbued with the Aristotelian logic, it frequently took the shape of a syllogistic deduction (both forms are found in al-Djuwaynī). The argument is given in all the manuals as a "decisive" (*ḳaṭʿī*) proof. Only rarely, under influences proceeding from the *falsafa*, does it take the form of the proof *a contingentia mundi* in the strict sense. The world is *muḥdath*, and in the treatises of *kalām* this term stays very close to its etymological sense of "begun" in time (see the works of Wensinck and S. de Beaurecueil, cited in the bibliography, on the proofs of the existence of God).

2. *The Attributes of God* (*ṣifāt Allāh*).

(a) *Relations between essence and attributes*. This was one of the most controversial topics. Some old traditionists held fast to the letter of the texts and set themselves against all research that might be called rational. Their opponents, exaggerating the rigidity of the position they were attacking, called them *mudjassima* ("corporealists", who give bodily attributes to God), or again, contemptuously, *ḥashwiyya*. They accused them of *tashbīh*: comparing God to the created.

In their anxiety to purify the concept of *tawḥīd*, the Muʿtazilites extolled, on the contrary, *tanzīh*, "withdrawal", the *via remotionis* which they applied with extreme rigour: one must deny God every created thing, as the Ḳurʾān commands. The Djahmites, disciples of the Djabbārite Djahm b. Ṣafwān, had practically denied the existence of the attributes, God being known only as an inscrutable omnipotence. The Muʿtazilite *tanzīh*, on the other hand, took the theistic standpoint of a ruling God. They recognized the divine attributes of knowledge, power, speech, etc., but asserted that they were "identical with the essence", a distinction which was, for them, hardly more than nominal.

The "orthodox" schools likewise practised *tanzīh*, i.e., they denied God any resemblance to anything:

He is neither body nor substance (*djawhar*, in the sense of bounded substance) nor accidents, nor is He localized, etc. (It must be noted that the Karrāmites had recognized God as substance, by which they understood self-existent).—The Ashʿarite reform, in the name of the "golden mean", held itself equally aloof from the Muʿtazilite tendency to prove everything rationally, and from the literalism of the *mudjassima*. This was the famous principle *bilā kayf wa lā tashbīh*, "without 'how' or comparison". It accused the Muʿtazilite *tanzīh* of amounting to the same as *taʿṭīl*, divesting the attributes of all reality and making of God no more than an empty concept. The Ashʿarites, for their part, while recognizing the entire reality of the attributes, since the Ḳurʾān informs us of them, yet affirmed that this reality can in no way compromise the perfect divine Unity. Simultaneously opposing Muʿtazilites and *falāsifa*, and following al-Ghazzālī, they later arrived at this approximation: "the attributes subsist in the divine essence; they are not God and are nothing other than He".

A kindred solution was advanced by certain Ashʿarites who remained faithful to the conceptualist theory of "modes" (*aḥwāl*) of the Muʿtazilite Abū Hāshim: e.g. al-Djuwaynī (5th/11th century); on this point the so-called "modern" school (6th-7th/12th-13th century) of Fakhr al-Dīn al-Rāzī, Djurdjānī, etc. was at variance with him. The "mode" (*ḥāl*) is an attribute which is attached to an existing thing but is itself qualified neither by existence nor by non-existence: that is how the relation between the divine essence and the attributes is to be understood.

This difficult theological problem was served by a philosophical instrument which went on striving to improve itself, and making progress, though not without occasionally stumbling. Thus, at the beginning of the Ḥanafite-Māturīdite line, we find in the *Fiḳh Akbar II* (text of the time of Ashʿarī), that God is a "thing" (*shayʾ*). Much though this statement might later be ridiculed by some of the *mutakallimūn*, influenced by Greek thought, as used by the ancients it is clearly to be taken in the sense of "existing reality": "Allāh is thing, not as other things but in the sense of positive existence" (*Fiḳh Akbar II*, Art. 4; cf. Wensinck, *Muslim Creed*, Cambridge 1932, 190). It was in this same sense that the term "body" or "bodily substance" (*djism*) was used in speaking of God; this practice of certain Karrāmites and Ḥanbalites was noted by Macdonald (EI[1]).

The Māturīdites on the whole preferred not to distinguish God's attributes from Himself but to say: "God is knowing and has a knowledge which is attributed to Him in the sense of eternity", etc., thus laying stress on the divine Names (the Knowing, Willing, Powerful, Speaking, etc.).

(*b*) *List of attributes*. The guiding principle was to affirm no attribute not expressly indicated in the Ḳurʾān: the principle of *tafwīḍ*, "leaving it to God" to elucidate through scripture. The majority of the doctors of *kalām*, however, considered that it was not being false to the text to pass from the present participle, for example, to the noun, in accordance with the laws of language. Thus there evolved, in the course of the centuries, a list of attributes, enumerated in no particular order, to begin with (so in the *Ibāna* of al-Ashʿarī), and then, especially from al-Djuwaynī onward, sorted out and classified.

The order adopted, indeed the appellations themselves, vary with the different schools (cf. ṢIFA). To adhere to one commonly-held view, we offer the following list: 1) attribute of essence (*ṣifat al-dhāt*): *wudjūd*, existence; in the case of God, not distinguished from essence; 2) "essential" (*dhātī* or *nafsī*) attributes, sometimes divided into (a) "negative" attributes which emphasize the divine transcendance: eternity (*ḳidam*), permanence (*baḳāʾ*), dissimilarity to the created (*al-mukhālafa li ʾl-ḥawādith*), self-subsistence (*ḳiyām bi ʾl-nafsi*),—and (b) *maʿānī* attributes, "adding a concept to the essence": power (*ḳudra*), will (*irāda*), knowledge (*ʿilm*), life (*ḥayāt*), speech (*kalām*), hearing (*samʿ*), sight (*baṣar*), perception (*idrāk*: some denied that this was an attribute); 3) attributes of "qualification" (*maʿnawiyya*), the *maʿānī* attributes taken verbally: having power, willing, knowing ...; 4) attributes of action (*ṣifāt al-afʿāl*), designating not an intrinsic quality but a "possibility" of God, which God may or may not do: visibility (*ruʾyat Allāh*), creation (*khalḳ*), actual creation of the contingent world (the Māturīdite *takwīn*), command (*amr*), decree and predetermination (*ḳadar* and *ḳaḍāʾ*), whose relations with the divine knowledge and will vary according to the school, consent (*riḍā*: especially in Māturīdism), etc.

The Ashʿarites and Māturīdites agree in taking the *maʿānī* attributes as eternal, even if their object is contingent; against the Muʿtazilites who maintained, for example (school of Baṣra), that God has a "contingent" knowledge, with a beginning, of free human acts. On the other hand, Ashʿarites and Māturīdites diverge over the "eternal" or "begun" character of the attributes of action: the Māturīdites generally regard them as eternal.

All but four of the attributes depend on the *ʿaḳliyyāt*: they are taught by the Ḳurʾān but human reason can "prove" them. The other four, visibility, speech, hearing and sight ("perception" is sometimes included), depend on the *samʿiyyāt* and are knowable only because they have been revealed.

(c) *Two controversial attributes*. The "vision of God" (attribute of visibility") and Speech were hotly debated.

The vision of God (*ruʾyat Allāh*) is understood as being through the eyesight, *bi ʾl-abṣār*. The pious traditionists accepted it absolutely, interpreting in this sense Ḳurʾān, lxxv, 22-23, and numerous *ḥadīths*. The Muʿtazilites denied it no less absolutely, interpreting the Ḳurʾānic text by a philological *taʾwīl* (cf. below). Ashʿarites and Ḥanafite-Māturīdites upheld the vision of God, but emphasizing the *bilā kayf*: every man will see God with his eyesight on the Day of Judgment, the elect will see Him (transiently) in Paradise,—but they will not see Him as one sees an object spatially situated and limited, and it is impossible to specify the manner of this vision (*Ibāna*, Cairo 1348 h., 14, *Fiḳh Akbar II*, 17).

The "traditional" (*samʿī*) attribute of Speech is of major importance, since by means of it God manifests Himself to men. The Muʿtazilites, precisely because of this manifestation in time, made of it a contingent "created" Speech (whence the thesis of the created, *makhlūḳ*, Ḳurʾān). The Ḳurʾān *is* the Speech of God, but the latter is contingent. The Ashʿarites, taking up that great affirmation which had earned Ibn Ḥanbal imprisonment and flogging, saw in it essential (*nafsī*) Speech, subsisting by the very existence of God. Hence the thesis of the "uncreated Ḳurʾān" (*ghayr makhlūḳ*, *Ibāna*, 20-22). But the school distinguished between it and its "created" expression: the Book and its recitation by human lips. In the 8/14th century, Ibn Taymiyya, meditating on and reviving the faith of the "pious ancients" (*salaf*), found Muʿtazilites and Ashʿarites equally

wanting: he reaffirmed the essential Speech of God, which expresses Him and subsists in Him, and declared that this Speech, in its mystery, *is* Torah, Gospel, Ḳur'ān (*Fatāwā*, Cairo 1329 h., v, 265-7).

3. *Mutas͟hābih Verses.*

The veneration of the Ḳur'ānic text, coupled with the inscrutable mystery of the One God, soon confronted Muslim thought with the case of the "ambiguous" anthropomorphic (*mutas͟hābih*) verses, which apparently liken God to the created. Are they to be accepted in pure faith, or should they be interpreted (*ta'wīl*) by exegesis (*tafsīr*)?

(a) The ancient traditionists took these verses at their face value. But it would be idle to bring against them an unqualified accusation of "corporealism", as their opponents did. The As͟hʿarites themselves declared valid the attitude of the "ancients" who, eschewing all *ta'wīl* or interpretation, took refuge in the *tafwīḍ* or committal to God. God sits on His Throne (*istiwā'*), descends towards the earth, has eyes, has a hand, because the text says so. But no one knows the acceptation given by God to these terms: this attitude was attributed to Mālik b. Anas in particular. It is hardly necessary to add that an attitude like this became "corporealist" only insofar as it tried to conceptualize itself and to justify itself discursively, but not insofar as it interiorizes itself in adherence to faith.

(b) But the Muʿtazilite schools, for their part, wished to justify dialectically the Muslim notion of God, in face of the Greek-inspired "God of the philosophers". On the one hand the emphasis placed on the Oneness of God, on the other their confidence in the rational criterion (*mīzān ʿaḳlī*), led the Muʿtazilites to an extensive use of *ta'wīl*. Their representative in *ta'wīl* was al-Zamak͟hs͟harī, who adopted for his own purposes the philological method of al-Ṭabarī. In this way "shining countenances, looking at their Lord" became, as al-D͟jubbā'ī suggested, "beautiful countenances, aspiring to the bounty of their Lord": the vision of God could be denied without contradicting the Ḳur'ān.—Recourse was had to figures of speech, as well as to philology. The *mīt͟hāḳ*, the covenant granted by God to the race of Adam in pre-eternity (vii, 172) was regarded as a metaphor (*mad͟jāz*), as were all the anthropomorphic passages.

(c) The first As͟hʿarites reacted against this use of reason in *tafsīr*. For them, the anthropomorphic terms, including the sitting on the throne and the motion in space, are just the expression of actions and attributes which are consistent with the divine Majestry but of which we can know neither the nature nor the manner, and which have nothing in common with the corresponding human actions or attributes. This was the *bilā kayf* attitude, often confused with that of the "ancients" and advanced by the master, al-As͟hʿarī himself.

(d) Later, under an influence picked up from the Muʿtazilites and especially from the *falāsifa* opposition, another attitude, known as that of the "moderns", was admitted into the *kalām*. *Ta'wīl* was permitted. Thus al-D͟juwaynī, Fak͟hr al-Dīn al-Rāzī, etc. The "hand" of God was interpreted as "the protection extended over mankind", His "eyes" denote "the intensity of His providence and watchfulness", etc. (al-Rāzī, *Kitāb Asās al-Taḳdīs*), Cairo 1327 h., 149). A metaphorical interpretation, into which allegory may creep, if need be, and which comes very close to the Muʿtazilite legacy, with the following differences: 1) the attitude of the "ancients" is regarded as valid (cf. *Asās al-Taḳdīs*, last chapter); 2) only the specifically anthropomorphic passages are accepted as metaphors; where the "apparent" (*ẓāhir*) sense would lead to a real impossibility: this was the position which Ṭabarī had already taken up. But the vision of God, and the metahistorical fact of the covenant, were maintained in their strict sense, in conformity with the As͟hʿarite dogmatic.

(B) *The actions of God* (*afʿāluhu taʿālā*).

(The problem of justice and retribution).

The Ḳur'ān teaches the two great truths of divine omnipotence and human responsibility, good works rewarded, acts of "disobedience" punished. Muslim thinkers strove tirelessly to find the solution to this apparent conflict. This was the subject of the first controversies, as early as Damascus, between D͟jabarites, Ḳadarites and Murd͟ji'ites. The great schools of *kalām* inherited it from them.

1. The Muʿtazilites affirm human freedom: man acts by a power (*ḳudra*) which God has once and for all created in him. God knows these free actions; He does not create them. The school of Baṣra insisted that He knows them only from the moment of their production, by an attribute of knowledge which in this respect is contingent, "begun".—But these actions are rewarded or punished by God in all fairness. He is the just Judge, incapable of not acting for a purpose, with a fixed aim in view. There is a deliberate order in the universe (the wonderful order of which the Ḳur'ān speaks), an objective order: and therefore there are intermediate aims subordinated to a final aim. There are secondary causes (*asbāb*) which act efficaciously on their effects, and there is a good and an evil (literally beautiful, ugly, *ḥasan*, *ḳabīḥ*) in the nature of things, prior to the elucidation brought by the revealed Law (*s͟harʿ*). God is bound to do the best (*aṣlaḥ*). He does not want evil and does not order it; His will (*irāda*) and His command (*amr*) are identical. Evil is created by man, just as he creates the moral denominations of his acts, since he creates (*k͟halaḳa*) all his actions, good and bad.—The two Muʿtazilite groups, of Baṣra and Kūfa, parted company over the concept of the "best" which God always accomplishes, and over its extension.

2. The As͟hʿarite school revolted against this attempt at "justifying" God. God "does not come within the grasp of the intellect". He is the just Judge *because* He does what He wishes. "No obligation for God". What He does is the best, not because He is so obliged, but because He does it. Moral good and evil have no existence prior to the positive divine Law. "If God were to reverse the decision, and to declare good (*ḥasan*) what He has declared bad (*ḳabīḥ*), and bad what He has declared good, there would be no impediment" (al-D͟jurd͟jānī, *S͟harḥ al-Mawāḳif*, viii, 182).—Al-G͟hazzālī and al-Rāzī, it is true, recognize a "rational" (*ʿaḳlī*) meaning in the "beautiful good" and the "ugly-evil": only on the plane of being, for al-Rāzī (*Muḥaṣṣal*, Cairo n.d., 147; *Kitāb al-Arbaʿīn*, Cairo 1353 h,, 249); on the plane of the sensible qualities inherent in things, for al-G͟hazzālī (*Iḳtiṣād*, Cairo n.d., 67).

And God, as the Ḳur'ān says, "guides whom He wishes, turns astray whom He wishes". Everything is fixed by His predetermination (*ḳaḍā'*), according to His eternal Will (*irāda*), encompassing in its generality the totality of things,—while His decree (*ḳadar*), existentialized by His command (*amr*), is

an "attribute of contingent action", particularizing in time the things that are "begun", as they pass from non-being to being. As al-Djurdjānī says (*Taʿrīfāt*, ed. Flügel, 1845, 181), "*ḳadar* is the relation of the essential Will to things in their individual realization"; and again: "*Ḳadar*: the passing of possible from non-being into being, one by one, in conformity with *ḳaḍāʾ*. *Ḳaḍāʾ* is of the order of pre-eternity (*azal*), *ḳadar* depends on the present order of things" (ibid.). It follows that one must distinguish between *irāda* and *amr*; it is the latter which is directly linked with man's obedience. God wishes the impiety of the infidel and creates it in him, yet commands him to believe.

For man's "free" action, his *ikhtiyār*, is only a special case of more general principles. God is the creator of human acts, whatever they be. The text "God is creator of all that you do" is interpreted in the sense of a creation *ex nihilo*. True, man has a feeling of his own responsibility. This means that God sets down to his merit or demerit the actions he performs, as the Ḳurʾān expressly states, and that He rewards or punishes him, as promised. Man receives the "acquisition", the attribution of his acts (*kasb*, *iktisāb*: cf. Ḳurʾān, ii, 281; lii, 21, etc.). At the end of the last century, Bādjūrī found this formula necessary: "man is a bound being, in the shape of a free being" (*Ḥāshiya ʿala ʾl-Djawhara*, Cairo 1352/1934, 62). On the empirical level, man must therefore continue to act as though he were free. But he must know that everything comes to him from God. If he acts well, it is because God in His Mercy has so decreed; if he acts badly, it is because God has so willed in His justice.

This negation of ontological liberty accords with the negation of the efficacy of the second causes (*asbāb*): as against the "reprehensible innovation" (*bidʿa*) of the Muʿtazilite thesis (efficacy of the *asbāb*, according to a "power" created by God), and against the absolute determinism of the causes ("cause" here rendered by *ʿilla*) taught in the *falsafa*, a thesis tainted with *kufr* (impiety). (Cf. al-Sanūsī, *Muḳaddimāt*, Algiers 1908, 108-109; al-Bādjūrī, op. cit., 58).—For the Ashʿarites, there is nothing efficacious about the second causes, because there is no conservation in being, on the part of God. There are discontinuous series of instantaneous creations, temporal existentializations of the eternal *ḳaḍāʾ*. At every instant (*waḳf*), God creates and re-creates the world and the impermanent whole, extrinsically unified, which is man, and every act of man. The world of "free" acts, as well as the cosmos in its entirety, is a discontinuous sequence of inscrutable divine decrees. The "causes" are but the channels, the tokens, of this divine Will, and the "laws" are a "custom of God" (*sunnat Allāh*; the expression is still found in Muhammad ʿAbduh, *Risālat al-Tawḥīd*, Cairo 1353, 7). It is a custom which God can always modify: as He does, for example, when He decides to give proof, by miracles (*muʿdjizāt*), of the mission of His prophets.

For most of the Ashʿarites, though by no means all, there is an atomistic cosmology corresponding to the discontinuous view of things. Everything is but a concourse of atoms (*nuḳṭa*, *dharr*), connected, disconnected, reunited, by divine decree. If it is true that al-Bāḳillānī (4th/10th century) declared atomism to be "coessential" (Massignon) with the Ḳurʾānic dogmas, it would, in our opinion, be going too far to see in this the pre-eminently characteristic aspect of Ashʿarism, still more of all "orthodox" Muslim theology. This physico-theological atomism is actually of Muʿtazilite origin (Abu 'l-Hudhayl; cf. studies by Horten and S. Pines), and matched well then with the *ḳudra*, the "power" which man was recognized as having over his acts. An impressive line of Ashʿarites, al-Bāḳillānī al-Īdjī, al-Djurdjānī (with some modifications), the "frozen conservatism" of such men as al-Sanūsī, al-Laḳānī and al-Bādjūrī, remained faithful to the occasionalist atomism as being the most favoured explanation of the divine omnipotence over the world. But another line, influenced to some small extent by the disputed theses of the *falsafa*, passed over it in silence (al-Ghazzālī, Fakhr al-Dīn al-Rāzī) or greatly modified it (al-Shahrastānī), although still affirming the usual theses on God's *ḳaḍāʾ* and *ḳadar* and the simple human *iktisāb*.

3. Some Māturīdites (Abū Ḥafs al-Nasafī, al-Taftāzānī) were atomists. But we wish to lay particular emphasis on the more directly psychological aspect in which the Ḥanafite-Māturīdite school as a whole regarded the relations between the divine decree and human freedom. From the first, *ḳadar* and *ḳaḍāʾ* were no longer related to the divine Will, but to the divine Knowledge;—and, counter to the Ashʿarites, it was *ḳadar* that was to be eternal, while *ḳaḍāʾ* was connected with existentialization in time. *Ḳadar* was therefore an eternal foreknowledge whereby God knows, from all eternity, the beautiful (good), ugly (bad) or harmful qualities of His creatures, while *ḳaḍāʾ* was God's existentialization of these same things, created with wisdom and perfection (cf. ʿAbd al-Raḥīm b. ʿAlī, *Naẓm al-Farāʾiḍ*, 2nd ed., Cairo n.d., 28-30; and al-Bādjūrī, *Djawhara*, 66).

For the majority of the Māturīdites, there exists in things a "rational" good (beautiful) and evil (ugly), on the plane of being, not directly on the moral plane (a thesis already noted in connection with the Ashʿarite al-Rāzī). On the moral plane, it is God Who directly creates the basis (*aṣl*) of man's "free" actions, but it is man's power which makes their qualification (*ṣifa*) good or bad. (It should be noted that al-Rāzī, *Kitāb al-Arbaʿīn*, 227, and al-Djurdjānī, *Sharḥ al-Mawāḳif*, viii, 147 ascribe this thesis, whose tenor is Māturīdite, to al-Bāḳillānī). All that happens is willed by God; but only the good depends on His consent (*riḍā*). God is not bound to be just, as the Muʿtazilites say; His action is not just because He wishes it, as the Ashʿarites say: He is above all justice by reason of His knowledge and wisdom. He is unable not to be just.

4. We have no need to follow here the abundant efforts of the doctors of the *kalām* to strengthen their arguments and to resolve the objections that were constantly cropping up. Those who were not satisfied with the Ashʿarite theory of *kasb*, of acts imposed from outside, undertook more recondite analyses: thus we have the theory (common to Ashʿarites and Māturīdites) of *istiṭāʿa* [*q.v*] or "capacity" [for an act], created by God previously or simultaneously (cf. al-Djuwaynī, *Irshād*, ed. Luciani, 1938, 122/196, 125/201; al-Djurdjānī, *Taʿrīfāt*, 18, etc.); the theory of *tawlīd* or *tawallud* [*q.v.*], which explains the "generation" of the transitive act by the divine occasionalism; and the theory of *tawfīḳ* [*q.v.*] or "facilitation" of acts, especially of good acts, faith and obedience, which is created in man by the divine favour (*luṭf*), and its (positive) opposite, *khidhlān* or divine "abandonment" ("creation in man of the power to disobey", according to a definition by the Māturīdite al-Taftāzānī, *Maḳāṣid*, Istanbul ed., 118), etc.

We can see that these efforts of minute analysis, applied to problems of great complexity, may well have looked like disheartening intellectual games, to those who wished to remain true to the sense of mystery of the "pious ancestors", and who refused to "prove dogma" (cf. al-Djurdjānī, *Sharḥ al-Mawāḳif*, I, 34-35) as the later Ashʿarites aspired to doing. The *kalām* had its greatest opponents (apart from the *falāsifa* opposition) in the Ḥanbalite and Ẓāhirite systems of thought, which were wedded to tradition and mistrustful of the use of reason in matters of faith. Al-Ghazzālī too was very severe with the *kalām*, on occasion. Yet it is sometimes among these opponents that we find the most pertinent bases of analysis of the relations between the free act and the divine omnipotence.

Thus Ibn Ḥazm (4th-5th/10th-11th century) the Ẓāhirite, who denied any criteriological capacity to the reason (one can speak of Ibn Ḥazm's "nominalism", but it is a nominalism centred on the effective value of language and its internal laws), and who meant to hold fast to the precise declarations of the scriptures: he rejected the Ashʿarite *kasb*, since the texts, he said (*Fiṣal*, Cairo 1347 h., iii, 48) allow neither a "creation" by man of his acts (Muʿtazilite) nor an "acquisition" conferred by God (Ashʿarite); but his whole refutation, highly discursive, of the opposing theories (id., 51-52) is pertinently developed; while a valuable personal solution is outlined in connection with *istiṭāʿa* (id., 21-26 and 31).

Al-Ghazzālī, not indeed the Ghazzālī of the *Iḳtiṣād*, who confines himself to presenting or rather to improving the theses of the Ashʿarites, minimizing, moreover, the scope of the *kalām* (7-8), but the al-Ghazzālī of the *Tahāfut* and, above all, of the *Iḥyā'* (Cairo 1352/1933, iv, 219) carries out an extremely shrewd psychological analysis on the subject of "choice" and the relations of intellect and will in the free act. He defends an irrational concept of freedom and maintains that God alone, Who acts without motive (*ghayr gharaḍ*) is totally free, with a freedom conceived as a free human choice raised to the power of infinity. What the *mutakallimūn* called *kasb* is an "intermediate stage" (*Iḥyā'*, iv, 220) which is not at all a participation in the divine freedom. Man acts of necessity, in the sense that everything which happens in him comes not from him but from Another; he acts by free choice, in the sense that he is the place (*maḥall*) of the free act, which operates inevitably in him after the decision of the intellect, this last being only a matter of form. And al-Ghazzālī propounds this formula, which it would be well not to interpret loosely: "Man is forced into free choice" (*ibid.*).

This concern with analysis was to dwindle to vanishing point in the later manuals, which, from the 15th century onward, hardly did more than repeat the formulas of the past. At the end of the 19th century, Muḥammad ʿAbduh, wishing to free himself from the dialectic of the *kalām*, confined himself to saying: "As for seeking further, for wishing to reconcile God's omniscience and will, which are proved [by the Ḳur'ān and rational arguments], with the free activity of man, which is shown to us by the evidence [sensory, psychological]; that means seeking to penetrate the secrets of the divine decree. We are forbidden to plunge into this abyss and to concern ourselves with that which reason is scarcely capable of attaining" (*Risālat al-Tawḥīd*, 61).

III. VARIOUS MUSLIM ATTITUDES TO GOD.

Some pointers, chosen from the most characteristic:

1. *Ismāʿīlī Theology*. There is much that could be said about the "schismatic" theologies, of Khāridjite Islam on the one hand, of Shīʿite on the other. We shall confine ourselves to the Ismāʿīlī system, which had so many cultural contacts with the Sunnite majority. Integrated in it there is a twofold line of influence: Muʿtazilite (which continued to act on the Shīʿa after the condemnation of the Muʿtazilites in the time of Mutawakkil) and Neoplatonic (consequently, a certain influence from *falsafa*).

We know hardly anything of the very first phase of development or of its efforts to fix in an original direction such Muslim notions as *kun*, *ḳadar*, etc. Not until Abū ʿAbd Allāh al-Nasafī (4th/10th century) do we find these primitive conceptions given a new setting in a largely Neoplatonic, emanationist system. Speculation was pursued, and enriched by various trends, with Abū Ḥātim al-Rāzī, Abū Yaʿḳūb al-Sidjistānī, Nāṣir-i Khusraw, al-Kirmānī (in whom S.M. Stern has found a probable influence of Fārābī: theory of the ten Intellects). Through the Ikhwān al-Ṣafā', Ismāʿīlism was to influence many *falāsifa* and even Sunnite theologians, up to the time of the conflict waged by Naṣīr al-Dīn al-Ṭūsī in favour of Ibn Sīnā.

The emphasis is on the inscrutable mystery of God. A whole "negative theology" developed. No name or attribute can be attached to God in His essence. The perfect *tawḥīd* does not even attribute existence (Persian: *hasti*) to Him, and the Ḳur'ānic Names signify only that those who bear them come from Him (cf. Idrīs al-Ḳarsī, 8/14th century). The Command (*amr*), the Speech or Word (*kalima*), the Act of Creation (*ibdāʿ*), the Absolute Knowledge (*ʿilm maḥḍ*) are hypostatized. God is neither eternal nor existing at present. What is eternal is His Command and His Speech; what exists at present is the creation, which emanated from Him at His Command (cf. al-Maḳrīzī, *Khiṭaṭ*, i, 395, quoted by G. Vajda, *Juda b. Nissim ibn Malka*, Paris 1954, iii, chap. 1). God remains, absolutely, the Unknowable (Nāṣir-i Khusraw). The *tashbīh-taʿṭīl* dilemma is absorbed into a *via negationis*, which refers the affirmation of the attributes to the Word or the Command, or to the First or Universal Intellect.—Al-Kirmānī identifies the First Intellect with the Word, and makes the *ibdāʿ* (Act of Creation) one of its attributes.

The emanationist system of al-Nasafī and his successors set up, in fact, the intermediary of the Universal Intellect, from which the world is produced by way of successive emanations. The echoes are heard in the *Fuṣūṣ fi 'l-Ḥikma* (which, after the researches of S. Pines, REI, 1951, 121-124, is to be ascribed not to al-Farābī but to Ibn Sīnā), and as far as al-Ghazzālī: the *muṭā'* of the *Mishkāt al-Anwār*.

Ismāʿīlī religious feeling attached itself to a group of Gnostic hypostases. The Will (*irāda*), Volition (*mashī'a*) and Command (*amr*) are sometimes "spiritual grades" above the First Intellect; most often, Will, Command and Speech are identified with one another, and the Universal or First Intellect is itself, as the "manifestation" of God, unknowable and ineffable, operated by His Command. These speculations were rooted in an allegorical *ta'wīl* ("hidden", *bāṭin*, meaning of Ḳur'ānic verses) and throve readily on Iranian myths. They were later interiorized by certain Shīʿite, and even Sunnite, Ṣūfīs.

2. *Falsafa.* It was in *falsafa* that the term *ilāhiyyāt* (taken up by *kalām*) gained currency as denoting the whole mass of questions concerning God. The body of problems was no longer that of the *kalām.* It came from Greece, particularly from Aristotle, but was pervaded, at least in eastern *falsafa* (especially al-Fārābī, Ibn Sīnā) by a considerable Neoplatonic inspiration (the pseudo-*Theology of Aristotle*). Ḳur'ānic influence had some effect on this body of problems (e.g. the problem of the divine knowledge of individuals), but the Ḳur'ān had ceased to be the chief source. We do not therefore need to set out the questions in detail, as we did in the case of the *kalām.* We shall note merely that Ibn Sīnā demonstrates the existence of God by the proof *a contingentia mundi* in the strict sense (not overlooking the proof by the "idea of being", *Ishārāt*, ed. Forget, 146). The more flexible philosophic instrument of the *falāsifa* enabled them to affirm the attributes, distinct from the divine essence, by a simple, reasonable (*ma'ānī*) distinction but with a basis in reality.

The Greek contribution led to an emphasis on the necessary acts of the divine essence. God is the Thought which thinks itself (cf. Aristotle), He is the supreme Good (cf. Plato), which necessarily loves itself. He is the Intelligence, exercising intellection on itself; He is Love and the object of love for Himself: *'aḳl, 'āḳil, ma'ḳūl, 'ishḳ, 'āshiḳ, ma'shūḳ* (cf. *Nadjāt*, Cairo 1357/1938, 243, 245; corresponding passages of the *Shifā'*, etc.). We should mention here an esoteric trend, still imperfectly known, which seems to take up several themes of the Isma'īlī *via negationis* (intermediaries: *Ikhwān al-Ṣafā'*, al-Tawḥīdī; and, at an earlier date, the Isma'īlī tendency, pointed out by S. Pines, of certain recensions of the *Theology of Aristotle*; see *REI*, 1954, 7 ff.).

The *falāsifa* do not provide us with treatises on *'adl* or *af'āluhu ta'ālā.* Contrary to the *kalām*, they affirm (and set out to prove) the production of the world by way of necessary and deliberate emanation (cf. Ismā'īlism), and its temporal eternity: world without beginning or end, "possible" (*mumkin*) in itself, necessary by Another (*ab alio*); contingent in the order of essence, determined in the order of existence. Providence (*'ināya*) is the law of emanation itself, necessarily willed by the eternal thought of God.

The second causes cannot fail to act on their effects. There is no longer any problem of human freedom as against divine omnipotence (cf. *Nadjāt*, 302).

Whatever solution may be adopted as regards the personal survival of the soul, the Active Intellect (*'aḳl fa''āl*) appears as an intermediary between God and man, both in the order of knowledge and in the order of emanation. There is a hierarchy of discrete intellects, up to the First Caused; embracing these, there is the Universal Intellect. For Ibn Sīnā, there is a corresponding hierarchy of Souls, rejected by Ibn Rushd; the latter seems to have been the only one of the *falāsifa* to come back, by way of philosophy, to the divine knowledge of the individual in its very individuality, so forcefully taught by the Ḳur'ān.

What is at stake is the whole attitude of faith with regard to God. Certainly the *falāsifa* were Muslims and remained Muslims. But even though their theses might be amended, and reconciled with the affirmations of the Ḳur'ān, the God they proclaim is exactly the God attained through reason, and, at the highest, through the flash of intellectual intuition. They set out to prove (their notion of prophecy comes into it: a simple privileged moment of the universal determinism) that the God of reason and the God of the Ḳur'ān coincide in every respect. But it is not a question of a verity of faith corroborating reason on its own plane. They treat philosophy on the one hand, the Law on the other, as two sources of equal value; the point at issue is to show that they agree. They attain this end with the help of a rational *ta'wīl*, philosophical and at the same time allegorical. God is, first and foremost, the necessary Being, *al-wādjib al-wudjūd.*

The God of the great *falāsifa* is a lofty concept of Being, necessary and perfect, supreme Intelligence and supreme Love, producing the world by a mode of necessary and deliberate emanation: in short, an object not so much of faith as of philosophic experience and rich intellectual intuition. The seriousness with which they pursued their researches and reasonings (notwithstanding certain setbacks) led to the integration of real riches into Muslim culture; their analyses sometimes influenced religious thought itself. But here we find ourselves on a different plane from the inscrutable mystery of the Living God, which the Ḳur'ān presents for the adoration of the faithful.

3. *Kalām.* We return now to the schools of Sunnite *kalām.* The *falāsifa* no doubt despised the dialectic of the *mutakallimūn*, those people "who have broken the religious Law into pieces", as Ibn Rushd put it (*Faṣl al-Maḳāl*, ed. and tr. Gauthier, Algiers 1942, 29). Their subtleties and debates are often confused, their philosophic arguments questionable. But when they thus set out to defend the dogmas against "those who doubt", it is certainly the God of faith that is involved. The Mu'tazilites, just as much as the Ash'arites, are "men of religion first and philosophers second" (Aḥmad Amīn, *Ḍuḥā al-Islām*, Cairo 1362/1943, iii, 204).

The inner attitudes of the two *kalām*'s were nevertheless different. True, the Mu'tazilites took as their starting-point the Ḳur'ān and the sovereign Justice of Allāh. But their idea of *'aḳl* as a criterion of the Law, and later the impact of the "foreign sciences", led them to fix the sum total of faith on an idea of God as being "justified" in the eyes of human reason. They meant to serve and to purify the affirmation of the transcendent Existence, but their drastic *tanzīh* reached the pitch of attenuating the very notion of divine attributes; the Ash'arites were not wrong in accusing them of that. Thereafter the mystery of the divine Oneness, the *tawḥīd*, is as it were encircled by a human concept; expressed negatively, no doubt, but directly attainable on a discursive level. We find something corresponding to this in taṣawwuf, in the experience of Djunayd. In correlation, and, at the same time, as a counterpart, the *'adl*, the divine Justice, was in a way "humanized"; there was a touch of the idea of a just human judge, raised to the power of infinity.

In its origins, the Ash'arite reaction was by no means a pure renunciation on the part of the faithful of every elaboration of the data of faith. The "conversion" of al-Ash'arī was presented as a return to the inner attitude of the "ancients" and a profession of loyalty to Ibn Ḥanbal (*Ibāna*, 9). Yet the Ash'arites accepted the challenge to dialectical combat. This led them far afield; it led them to refine unceasingly, but also to complicate unceasingly, a body of problems which never came to an end, as a result of the multiplicity of objections and the rise of opposing schools. Amid the welter of arguments, it sometimes

becomes difficult to trace that complete resignation, in the nakedness of faith, to the One God, Creator and Judge, which we find in the sūras of the Ḳur'ān. The negation of human freedom in its ontological reality turned many lines of thought towards a divine voluntarism, conceptualized as such. This became still more marked after the 15th century, when the Ash'arite (or Māturīdite) *kalām*, instead of regenerating itself to keep pace with its contemporary opponents, as its primarily apologetic function would seem to demand, congealed in rather stereotyped manuals. This risk of sclerosis was no doubt one of the main considerations leading to the semi-agnosticism of Muḥammad 'Abduh.

There, we believe, lies the explanation of the half-contempt for the *kalām* (a half-contempt which sometimes grows to violent opposition), which is shown alike by the successors of the "pious ancients", notably represented by the ḥanbalite trend, and the mystics of the *taṣawwuf*.

4. *The taṣawwuf*. We cannot hope to analyse here the theological bases of the diverse Ṣūfī schools or attitudes, with all their fine distinctions (for the first centuries, see L. Massignon, *Passion d'al-Ḥallādj*, Paris 1922, and *Lexique technique*, 2nd ed. Paris 1954). The important thing to note is that we are no longer dealing with a rational endeavour towards the necessary Being, as in *falsafa*, nor, as in *kalām*, with a discursive endeavour to find "decisive" or formal arguments for the Ḳur'ānic doctrine about God. What is involved here is a spiritual experience, a life with God, soon to be understood as an experience of oneness, an inner realization of the *tawḥīd*.

There were some Ṣūfīs (al-Ḥallādj, al-Tirmidhī) who rethought for themselves the dogmatic bases of their era; some (Ḥasan al-Baṣrī) who could, by stretching a point, be called "semi-Mu'tazilite"; others (Ibn Karrām) who gave their name to a theological school; some were linked to the Ḥanbalite way of thought; there were many Shī'ite Ṣūfīs; and there were many Sunnite Ṣūfīs who in no way challenged the regular conclusions of the Ash'arite *kalām* (al-Makkī, the al-Ghazzālī of the *Iḥyā'*, many Shādhilīs, etc.). Finally, a great many, especially from the 7th/13th and 8th/14th centuries onward, permitted themselves to be influenced by an existential monism of Neoplatonic tendencies.—From the point of view which concerns us, we shall confine ourselves to picking out two main lines of Ṣūfism, according to a distinction insisted on by L. Massignon:

(a) *waḥdat al-shuhūd*, the oneness of Witness, of which al-Ḥallādj was the exponent. It seems also to have inspired every mystic of Ḥanbalite influence. The union with God is achieved in God's bearing witness to Himself and to His mystery of Unity, in the mystic's heart. The divine transcendence and its absolute Oneness in relation to all creation remain the central object of the act of faith. But the meeting with God is brought about by love ("in His Essence, love, *'ishḳ*, is the Essence of the essence", said Ḥallādj); by love, the dialogue is established between the faithful heart and God, until the supreme "I", which consummates the dialogue in unity, without destroying it. It is well known how much the official Islām of the 3rd/9th century opposed this union of love (which claimed the support of Ḳur'ān, iii, 29 and v, 59), this oneness of the Witness in the duality of natures.

Two intermediate stages. The al-Ghazzālī of the *Iḥyā'* (5th/11th century), who gave the *taṣawwuf* citizen-rights among the recognized religious sciences: uniting, not without some eclecticism, the dogmatic values of developed Ash'arism and the spiritual values of the love of God (*maḥabba*), of dependence and trust (*tawakkul*), and of the diverse ascetico-mystic virtues. Another and more important intermediate stage is that of the *ishrāḳ* movement and its emanationism, which is by no means purely monist. The great figure of the master of the *ishrāḳ*, al-Suhrawardī of Aleppo (6th/12th century), so well studied by H. Corbin, illustrates a quest for unity which leads to identity in the order of knowledge; but the outer garb of Iranian myth permits him, on a plane of lofty poetic intuition, to leave the Witness its transcendence.

(b) *waḥdat al-wudjūd*, the oneness of Existence.—This came to dominate later Ṣūfism, since Ibn 'Arabī (6th/12th-7th/13th century). Ibn Taymiyya saw (and condemned) in it the influence of Ibn Sīnā (discrimination to modify and to complete, not to reject). One may say that the Ghazzālī of the minor works of the last period, so deeply imbued with *falsafa*, even with Ismā'īlism, was the forerunner of it. In it, the Neoplatonic monism of the pseudo-*Theology of Aristotle* meets the Ash'arite tendency which, the better to affirm the One God, denied the creature all real ontological density. In contrast with God, "sole Being and sole Agent", the created world is but impermanence. The illusory empirical existence, says the mystic, must obliterate itself (*fanā'*) in the only Existence which subsists (*baḳā'*),—that of God. Interpreting Ḳur'ān, xvii, 85, the Ṣūfī partisans of the monism of the Being said that the human spirit, the *rūḥ*, is a direct emanation from the divine Command (*amr*), and is therefore an emanation from God Himself. Cf. already the Ghazzālian text (ascription discussed by W. Montgomery Watt, *Authenticity of works attributed to al-Ghazzālī*, *JRAS* 1952, 1 and 2) the *Risāla Laduniyya* (Cairo 1353/1934, 25). Following some quite different references, we have here something like an echo of the "trace of the One in us" of Plotinus, even indeed—all question of historical channels aside—of the Indian "Thou art That". The supreme mystical experience is then an experience of unity (*ittiḥād*), understood as identification. It readily justifies its chosen course by an allegorical and gnostic *ta'wīl* of the scriptural texts.

The *waḥdat al-wudjūd*, for reasons partly doctrinal, partly historical, never aroused among the *fuḳahā'* and the *mutakallimūn* the opposition encountered in the 3rd/9th century by the *waḥdat al-shuhūd*. One cannot however forget how powerfully the latter might lead the *tawakkul*—the total dependence of the believer upon God, sovereign Judge and sovereign Unity—to spiritual experience in the strict sense of the term.

5) *The "pious ancients"*. The adherence to faith of many Ṣūfīs of the first centuries was in complete accordance with that of the "pious ancients". In the first centuries, Ṣūfī and traditionist circles often overlapped.—There was no question of a school, in spite of the fact that these people frequently set themselves in the Ḥanbalite tradition; it was a question of an inner attitude. This reference to the "ancients" (*salaf*) must be understood as a choice, much more than a chronological distinction: we find it as much in the 14th century, with Ibn Taymiyya, as at the beginning of the hijrī era; we find it again, systematized and with a predominantly anti-Ṣūfī note, among the Wahhābites and neo-Wahhābites, among the modern Salafiyya and their contemporary disciples (including, in some measure, the *Ikhwān al-Muslimūn*).

This tendency raised itself many a time against the quibbles and subtleties of the *kalām*, against an excessive confidence in rational or dialectical proofs. In his *Dhamm al-Kalām*, al-Anṣārī claimed for the Muslim the right not to seek for explanation (*tafsīr*) of the divine attributes, not to proceed down the "blind alley" of the Ashʿarites, glossing texts and distinguishing between the attribute and its *kayf*, its "mode of being" (cf. quotation from al-Anṣārī in Ibn Taymiyya, *Fatāwā*, v, 275-78). The very personality of the mystic al-Anṣārī would suffice to show us that a tendency that is truly loyal to the "pious ancients" has no grounds for condemning *taṣawwuf* wholesale, as it often does nowadays; too easily confusing the *waḥdat al-shuhūd* with the *waḥdat al-wudjūd*, and the latter with the deviations of the "brotherhoods".

What remains affirmed is the faith in God Most High, Who speaks to men by His prophets and apostles, revealing no more of Himself than the "most beautiful Names" whereby He indicates and conceals Himself (*ḥidjāb al-ism*): a faith which does not require God to be explicit about Himself, while it holds fast (to His Word) and resigns itself (to Him),—in a unique act which bears witness both to the divine omnipotence and to the responsibility of the "slaves". The inner attitude of the believer is rightly then a total and confident surrender of the self, in the night, to God, to Whom one puts no questions, but Whom one knows, according to His Word, to be the just Judge and supreme Help.

It appears that this inner attitude which has been summed up is the most characteristic mark of the Muslim faith in God; that this, first and foremost, is what the Muslim has in his heart when he pronounces the name *Allāh*.—No enumeration is needed here. In every age there have been "free-thinkers", "doubters and deniers". In every age, intellectual researches on the *ilāhiyyāt*, and the discursive expression of them, have abounded in Islām. Contemporary thought seems harried on all sides by the diverse trends of the modern philosophies, as it was formerly by Greek or Iranian thought. It may be that a new *kalām* will be called into being, a new "defensive apology", that will carry out an extensive re-examination of the questions and problems of its treatises on *wudjūd Allāh* and *afʿāluhu taʿālā*, in the varying light of the idealism, pragmatism, dialectical atheism or existentialism of the moment. But maybe it will be able to avoid the mishaps that befell the ancient *kalām* only by going beyond the "contradictory" appearances of the problems posed,—by a vital recourse to God, One, Living, Master of the worlds and of the retribution of mankind, *Allāh al-wāḥid, al-ḥayy, mālik al-ʿālamīn, mālik yawm al-dīn*, whereby many sincere believers and "bearers of the Ḳurʾān" have always endeavoured to live.

Bibliography: I. *Characteristic Muslim works*: a) works, cited in the course of the article, by: Bukhārī, Muslim, Ashʿarī, Ibn Sīnā, Ibn Ḥazm, Djuwaynī, Abū Ḥāmid al-Ghazzālī, Ibn Rushd, Fakhr al-Dīn al-Rāzī, Ibn Taymiyya, Saʿd al-Taftāzānī, Djurdjānī, Sanūsī, Bādjūrī, ʿAbd al-Raḥīm b. ʿAlī, Muḥammad ʿAbduh, Aḥmad Amīn; b) other works: Khayyāṭ, *Intiṣār* (ed. Nyberg, Cairo 1344/1925); Ashʿarī, *Lumaʿ* (ed. and English tr. by R. J. McCarthy, *The Theology of al-Ashʿarī*, Beirut 1953), 6-74/6-103; Bāḳillānī, *Tamhīd* (ed. Khudayrī and Abū Rīda, Cairo 1366/1947), 152-159; ʿAbd al-Ḳāhir al-Baghdādī, *Uṣūl al-dīn* (Istanbul, 1346/1928) chap. 3-6; Djuwaynī, *Shāmil* (MS. 1290, Nat. Library, Cairo), 150-189; Abū Ḥafs al-Nasafī, *ʿAḳāʾid* (ed. Cureton, 1843); Shahrastānī, *Kitāb al-Milal wa 'l-Niḥal* (ed. Badrān, Cairo 1370/1951), esp. 8-11; *Nihāyat al-Iḳdām* (ed. ALLĀH AKBAR [see TAKBĪR].

ALLĀHĀBĀD (ILĀHĀBĀD), an important town in the State of Uttar Pradesh and the seat of the State High Court, is situated on the confluence of the rivers Gangā and Yamunā. Population in 1951: town: 366, 127, including 90, 829 Muslims; district: 2,048,250, including 12.8 % Muslims.

History: One of the most ancient towns in India, it was known as Prayāg and regarded as sacred by the Hindus. When the Ghūrid Turks occupied Banāras in 1194, the town came under the Sultanate of Delhi, but presumably continued under the administration of autonomous Hindu *rādjās*, the nearest important military centre of the Sultanate being located at Kaṛā [*q.v.*] about 45 miles to the west. With the overthrow of the independent Sharḳī Kingdom of Djawnpūr in the 16th century and the subsequent rise of the Afghāns, the usefulness of the ferry across Prayāg to Djhūsī began to be appreciated. In June 1567, Akbar crossed the Gangā at Prayāg after defeating Khān-i Zamān, the rebel Governor of Djawnpūr. In 1574, he again passed through the town on his way to Bengal. Realising its strategic importance he decided to make it a military centre. From a small township, it became a big city and was given by Akbar the name of Ilāhbās (being changed to Ilāhābād through popular usage). In 1579-80, when Akbar reorganised the administrative divisions of the empire, it became the capital of the *ṣūba* (province) of the name, thus

superseding both Kaṛā and Djawnpūr in importance. Most of the Indian writers and European travellers visiting India during the 17th and 18th centuries testify to its importance. In 1736 the Mahrattās conquered it. After 1750 it changed hands several times, till the British garrisoned the citadel in 1798 and the town in 1801.

Monuments: The citadel built by Akbar (with Asōka's pillar and its famous inscription). and the Khusraw Bāgh, with the tombs of Prince Khusraw, his mother and his sister, are the chief monuments of the Mughal period.

Bibliography: *Akbar-nāma* (Bib. Ind.), ii, 296; iii, 88, 414, etc.; *Āʾīn-i Akbarī* (tr. Sarkar), ii, 94, 169; *Ṭabaḳāt-i Akbarī* (Bib. Ind.), ii, 211, 286, 379, etc.; De Laet 62; Bernier (1891), 457; Tavernier (1925), i, 15, 95; Thevenot, 92; Nevill, *Allahabad, a Gazetteer*. (Nurul Hasan)

ALLĀHUMMA is an old Arabic formula of invocation: "Allāh!", for which also Lahumma is found (cf. Nöldeke, *Zur Grammatik d. class. Arab.*, 6). Whether, as Wellhausen supposes in his *Reste arabischen Heidentums*², 224, it was originally meant for the god Allāh, higher than and different from the old Arabian gods, is rather doubtful, because every god might be invoked as "the God" (just as "the Lord". It was used in praying, offering, concluding a treaty and blessing or cursing (see Goldziher, *Abhandlungen z. arab. Philol.*, i, 35 ff.; cf. also the expression *Allāhuma ḥayyi* = much good may it do you, al-Akhṭal iii, 7). The phrase *bi'smika 'llāhumma*, said to have been introduced by Umayya b. Abi 'l-Ṣalt (according to a statement in *Aghānī*, iii, 187) and used as an introduction in written treaties, has been replaced by others by Muḥammed as being a heathen expression (Ibn Hishām, i, 747; Wellhausen, *Skizzen u. Vorarb.*, iv, 104, 128). The simple Allāhumma (Lāhumma), on the other hand, was retained as inoffensive (e.g. Ḳurʾān, iii, 26; xxxix, 46; *subḥānaka 'llāhumma*, x, 10), and in the same way *allāhumma naʿam* = "certainly!", being in fact the answer on being conjured to tell the truth (al-Ṭabarī, i, 1723). For the peculiar formula *allāhumma minka wa-ilayka* (or *laka*) used at the family-offering, cf. Goldziher, in *ZDMG*, 1894, 95 f.

(Fr. Buhl)

al-ʿ**ALLĀḲĪ**, name of a wādī in Lower Nubia between the Nile and the shore of the Red Sea, 62 miles south of Aswān.

In the Middle Ages, this small valley resembled a large populous and flourishing town, because it was a gold mining area, using black slave labour. "The nuggets of gold", wrote al-Yaʿḳūbī, "appear in the form of sulphide of arsenic, and are made into bars". Al-Idrīsī gives more curious information. The prospectors, he tells us, took up their positions at night in order to see the gold dust glistening in the darkness and to mark the sites so that they could be recognised the next day. The prospectors then proceeded to collect and transport the auriferous sand and to wash it in tubs of water to extract the metal, which was then blended with mercury and smelted.

These gold mines, exploited in early times, were abandoned at the end of the Middle Ages. The old workings can still be seen. Gold mining has recently been resumed in the area (Umm Gharayāt).

ALLĀN [see alān].

ALMA ATA (formerly Vernyi), town, capital of the Soviet Socialist Republic of Ḳazakhistān since 1929 and administrative centre of the *oblast* (province) of the same name. Established in 1854 on the site of a Ḳazakh settlement called Almaty, in 1867 it became the administrative centre of the Russian military governorate of Semirechia. By 1871 it had been largely rebuilt on Russian lines and had become a thriving trade centre with a mixed population of 12,000 composed of Ḳazakhs, Dungans, Uyghurs, Tatars, Russians and Chinese. The population rose to 45,000 in 1926 and to 230,000 in 1939. Among the many educational and cultural establishments in the city are the Academy of Sciences, 50 schools, 4 theatres and 13 cinemas.

ALMA-DAGH [see elma-dagh].

ALMADA [see al-maʿdin].

ALMADEN [see al-maʿdin].

ALMAGEST [see baṭlamiyūs].

ALMALÎGH, capital of a Muslim kingdom in the upper Ili [*q.v.*] valley, founded in the 7th/13th century by Ūzār (Djuwaynī, i, 57) or Būzār (Djamāl Ḳarshī, in W. Barthold, *Turkestan*, Russ. ed., i, 135 f.), who is said to have previously been a brigand and horse-thief. According to Djamāl, he assumed the title of Toghrîl Khān as ruler. Almalîgh is first mentioned as the capital of this kingdom, and later as a great and wealthy commercial city. We owe our information about its site mainly to the Chinese (Bretschneider, *Med. Researches*, i, 69 f., ii, 33 ff. and index); it lay south of Lake Sayram and the Talki pass, north of the Ili, probably northwest of the modern Kuldja.

Like other rulers of these regions, the king of Almalîgh had dealings with Čingiz Khān, (whose hunting-ground was near Almalîgh: Djuwaynī, i, 21). He was surprised and killed while hunting by Küčlük, the governor of the kingdom of the Ḳara Khitāy [*q.v.*]; but Küčlük failed to capture the town of Almalîgh. Ūzār's son and successor Suḳnāḳ (or Sughnāk) Tigin married a granddaughter of Čingiz Khān (a daughter of Djuči). On his death (851/1253-4 cf. Djuwaynī, i, 58; 648/1250-1 in Djamāl Ḳarshī, he was succeeded by his son whose name (Dānish) mand Tigin) like the names of the other rulers of this line are given only by Djamāl Ḳarshī (Barthold, *Turkestan*, i, 140 f.). Almalîgh in his time (beginning of the 8th/14th century) was still ruled by this dynasty. How long this line continued to reign is not known. The silver and copper coins struck at Almalîgh in the 7th/13th century apparently belong to them. After Čingiz Khān's death the territory of Almalîgh was under the suzerainty of Čaghatay, cf. B. Spuler, *Mongolen in Iran*, 277, note 2. The whole province (to which belonged also the old Ḳuz Ordu = Balāsāghūn) was called in the 13th-14th centuries Îl Arghū (cf. also the *nisba* Ilarghawi in Barthold, *Turkestan*, i, 138-40). Near Almalîgh was situated the "hord" of Čaghatay and his successors, such as Ergene Khātūn and Tarmashîrîn (Djuwaynī, ii, 241, 243, 272 f.; iii, 97; Waṣṣāf, lith. Bombay, 50; Ibn Baṭṭūṭa, iii, 41, 49 f.

As a great commercial city on the main route through Central Asia to China, Almalîgh is frequently mentioned by European travellers and missionaries (see I. Hallberg, *L'Extrême Orient etc.*, Göteborg 1906,

17 f.: Almalech). In 1339 some Franciscan friars were murdered in the town (cf. A. van den Wyngaert, *Sinica Franciscana*, i, 510-1; G. Golubovich, *Biblioteca Bio-Bibliografica*, ii, 72, iv, 244-8, 310-1). Here was the seat of a Roman Catholic missionary bishop and, probably, of the Nestorian metropolitan (cf. Bretschneider, *Med. Res.*, 38; Barthold, *Očerk istorii Semiryečya*, Vyerniy 1898, 64-7; V. Rondalez, in *Neue Zeitschrift für Missionswissenschaft*, 1951, 1-17; S. Dauvillier, in *Mélanges F. Cavallera*, Toulouse 1948, 305-7).

Like the towns on the Čū [*q.v.*], the Talas and elsewhere, Almaligh was completely ruined by the constant civil wars and other fighting in the 8th/14th century (cf. Bābur, ed. Beveridge, 1; Mīrzā Muḥammad Ḥaydar, *Taʾrīkh-i Rashīdī*, tr. E. D. Ross, 364). Muḥammad Ḥaydar mentions the ruins of the tomb with the tomb of Tughluḳ Tīmūr Khān (d. 764/1362-3; cf. DUGHLAT); these ruins (at present called Alimtu) lie between the Khorgos, the boundary river between the Soviet Union and China and the village of Mazār and have been fully described by N. Pantusov, *Kaufmanskiy Sbornik*, Moscow 1910, 161 ff. Inscriptions from graves of Nestorian Christians have also been found there (see especially P. Kokovtsov, in *Zap.*, xvi, 190 ff.).

A. N. Bernstamm (*Pamyatniki stariny almaatinskoy oblasti po materialam ekspeditsii 1939g.*, *Izvestiya Akad. Nauk Kazakh. SSR*, Archeol. series, i, Alma Ata 1948, 79-91) identifies Almalīgh with a town (also called Alimtu = Chinese A-li-tʿu) near the modern Alma Ata; but in reality this is another, different, town having the same name (as an appellative, "apple town"); it is mentioned in 1390 in connection with Tīmūr's campaign against Mughulistān (Yazdī, *Zafar-nāma*, i, 466 ff.; cf. F. Pétis de la Croix, *Histoire de Timur-bec*, ii, 66 ff.).

ALMANAC [see ANWĀʾ; TAʾRĪKH].

ALMANZOR [see AL-MANṢŪR].

ALMĀS—frequently regarded as a noun defined by the article (*al-mās*; correctly *al-Almās* according to Ibn al-Athīr, in *LA*, viii, 97: the *'l* belongs to the root as in *Ilyās*), a corrupt form from the Greek ἀδάμας (l.c.: "*wa-laysat bi-ʿarabiyya*"),—the diamond. According to the pseudo-Aristotelian *Kitāb al-Aḥdjār* which, on the basis of cognate Greek sources, agrees in the main with the statements of Pliny, the diamond cuts every solid except lead, by which it is itself destroyed. On the frontier of Khurāsān is a deep valley in which the diamonds lie guarded by poisonous snakes whose looks alone are enough to kill. Alexander the Great procured some of them by a trick: he had mirrors made in which the snakes saw themselves and died; then he had the flesh of sheep thrown down into the ravine so that the diamonds stuck to it and were brought up by vultures who seized the pieces of flesh. This story, already found in Epiphanius *De XII gemmis*, is generally known in the East (*Arabian Nights*). Al-Bīrūnī ridicules this story and asks why the snakes did not die when looking at one another, but only when seeing themselves in the mirrors. He takes the opportunity to make fun of other stories about the diamond, and also of stories recounting the death of people who looked at certain animals and stones. On the other hand, he has many valuable notices on the qualities, mining and use of the diamond. He also tells of a piece which Muʿizz al Dawla Aḥmad b. Būya presented to his brother Rukn al-Dawla al-Ḥasan weighing 3 *mithḳāl* (12, 75 or even 14, 16 g). But al-Dimashḳī knows of no diamonds heavier than 1 *mithḳāl*. The sources differ widely about the places where diamonds are found. —Al-Tīfāshī and al-Ḳazwīnī relate that the pieces obtained through smashing the stone are all triagonal (observation of the octagonal scissure?), and the former also says that the diamond attracts little feathers.—It is generally mentioned as being used for cutting and piercing other stones. Aristotle is said to have used it for destroying stones in the bladder. The powder of it must not touch the teeth; applied externally it is a good cure for colic and stomach-ache.

ALMEE [see ʿĀLIMA].

ALMERIA [see AL-MARIYYA].

ALMICANTARAT [see MUḲANṬARĀT].

ALMODOVAR [see AL-MUDAWWAR].

ALMOGÁVARES, or Almugávares, a name, apparently derived from the Arabic *al-mughāwir* "one who makes hostile incursions", which was given at the end of the Middle Ages to certain contingents of mercenaries levied from among the mountaineers of Aragon, a tough, sober but undisciplined race. Zurita (*Anales*, iv, 24) gives a picturesque description of them. These were the troops, fighting on foot, in the service of the Kings of Aragon and Castille, who cut to pieces the French army of Philip III the Bold during his campaign of 1285, at Roussillon, and who later, under the name of the Grande Compagnie Catalane, made daring raids in the Eastern Mediterranean.

ALMOHADS [see AL-MUWAḤḤIDŪN].

ALMORAVIDS [see AL-MURĀBIṬŪN].

ALMUÑECAR [see AL-MUNAKKAB].

ALP (T.), «hero», a figure which played a great role in the warlike ancient Turkish society; synonyms: *batur* (*bahādur* [*q.v.*], *sökmen*, *čapar* [*qq.v.*]). (Turkish heroic tradition survived in an Islamicized form and appears in Anatolia in the stories of Dede Ḳorkud [*q.v.*] as well as in the poetry of ʿAshiḳ Pasha and the history of Yazīdjīoghlu; cf. Fuad Köprülü, *Bibl.*). The word *alp*, used since ancient times among the various Turkish peoples either as an element in compound proper names or as a title, occurs frequently in proper names also of the Islamic period (cf. the various persons called Alp Tigin, the Saldjūḳ *amirs* Alp Ḳush, Alp Aghadjl, Alp Argu, the Saldjūḳid Alp Arslan, etc.). Another form is Alpī (cf. the Artuḳids Nadjm al-Dīn ʿAlī Alpī, ʿImād al-Dīn Alpī); the word *alpaghu* (*yilpaghu*,

alpaghut, alpawut), found in various dialects and as the name of a tribe under the Aḳ Ḳoyunlu and the Ṣafawids, seems also to be related.

As a title, *alp* was used by Saldjūk *amīrs*, and together with other old Turkish titles such as *inandj, kutlugh, bilge*, was adopted by the rulers of the states which succeeded the Saldjūḳ empire. *Alp* alone is found in an inscription of Aḳ Sunḳur of Aleppo; in the inscriptions of the Syrian and Mesopotamian *atabegs* and of the Artuḳids occur the titles *alp ḳutlugh, alp inandj ḳutlugh, alp ghāzī* (cf. *RCEA*, nos. 2764, 3021, 3072, 3085, 3111-2, 3122, 3146; Van Berchem, *Amida*, 76, 92, 104, 120, 122; idem, *Arabische Inschriften aus Armenien und Diarbekr*, Berlin 1910, 148 ff.; Ibn al-Ḳalānisī, ed. Amedroz, 284: *alp ghāzī* as title of Zengi; and the dedication of a translation of Dioscorides, in MS Mashhad, Cat. no. 27, to a prince with the title of *alp inandj ḳutlugh*).

Under the Ghūrids we find Nāṣir al-Dīn Alp Ghāzī as governor of Harāt (cf. also Ṭabaḳāt-i Nāṣirī, Calcutta 1846, 121; ʿAwfī, *Lubāb*, 159, 321; *Taʾrikh-i Sistan*, ed. Bahār, 388; Muḥammad b. Ḳays, *al-Muʿdjam fi Maʿayīr Ashʿār al-ʿAdjam*, 346). In Rūmiyya we find in 564/1168 a *ṣāḥib-i kabīr* Alp Djamāl al-Dīn (see Sachau-Ethé, *Cat. Pers.* MS *MSS of the Bodl. Libr.*, i, 1424). A Turkish chieftain near Djand in the 12th century bore the title of *alp direk* (Djuwaynī, ii, 40 f.); for an Anatolian Saldjūḳ prince with that of *alp ilek* see *Bell.*, 1937, 288. In India we find *alp khān* (Barnī, *Taʾrīkh-i Fīrūzshāhī*, 240, 527; Firishta, *Taʾrikh*, i, 176, 238; Badāʾūnī, *Muntakhab al-Tawārikh*, 219).

Bibliography: M. van Berchem, *Amida*, Heidelberg 1910, 92; Z. Gombocz, *Árpádkori etc.*, 43 ff.; M. Fuad Köprülü, *Türk Edebiyyātında Ilk Mutaṣawwiflar*, Istanbul 1918, 272 ff.; idem, *Les origines de l'Empire Ottoman*, Paris 1935, index; idem, in *IA*, s.v. (O. PRITSAK)

ALP ARSLAN ʿADUD AL-DAWLA ABŪ SHUDJĀʿ MUḤAMMAD B. DĀʾŪD ČAGHRIBEG, celebrated Saldjūḳ sultan, the second of the dynasty (455/1063-465/1073). Born probably in 421/1030, at an early age he led the armies of his father Čaghribeg with great success, especially against the Ghaznawids, and in 450/1058 he saved his uncle, the sultan Ṭughrilbeg, from the revolt of Ibrāhīm Inal in Persia. Two or three years later he succeeded Čaghribeg, who had been ill for a long time, and at the end of 453/1063 he succeeded Ṭughrilbeg, who died childless; he thus brought under his authority all the Saldjūḳid territories. He rid himself without difficulty of his half-brother Sulaymān, who had probably been adopted by Ṭughrilbeg; the vizier al-Kundurī payed with his life for the indiscretion of having at first supported him. Alp Arslan was recognized by the Caliph al-Ḳāʾim and invested with all his predecessor's prerogatives; he enforced the submission of his uncle Yabghū at Harāt, and defeated Ḳutlumush, a cousin of Čaghribeg and Ṭughrilbeg, who had been in revolt for some years in the mountains south of the Caspian, and who met an accidental death in this battle. He created difficulties for his elder brother Kawurt of Kirmān, who aspired at least to a share in the succession, by supporting against him the Kurdish chief Faḍlūya; later (in 457/1065, 459/1067 and 461/1069) he took direct action against him, and brought Fārs firmly under his control by suppressing Faḍlūya, who had come to terms with Kawurt. The latter was allowed to retain Kirmān, but as a subordinate. A demonstration of force in Ḳarakhānid territory and up to the Aral Sea (457/1065) reinforced the authority which his father had previously exercised there. As regards the Ghaznawids, he kept the peace concluded during the last years of Čaghribeg's rule.

His fame in the eyes of posterity rests on his activities on the western front. Like his predecessor Ṭughrilbeg and his successor Malikshāh, he had the ambition to march on Egypt to destroy the stronghold of Fāṭimid heresy. But he realised the necessity of maintaining his ascendancy over the Turkomans, who constituted the military strength of the dynasty, and who were primarily interested in the richly-rewarding campaigns of a holy war (*ghazwa*) on the Christian territories beyond Ādharbāydjān, where they where concentrated. Shortly after his accession, therefore, Alp Arslan conducted a series of campaigns against the Byzantines and their Armenian and Georgian neighbours, while independent bands of Turkomans raided more deeply into their territories; these campaigns also had the effect of increasing his prestige in certain autochthonous Muslim circles. In 456/1064 he captured Ānī and Ḳars, and extracted a pledge of submission from the tiny Georgian kingdom. A further expedition against Georgia, in which the Shaddādid prince of Arrān took part, became necessary in 460/1068. The main advantages accruing from these campaigns were that the security of the Ādharbāydjān frontiers was ensured, and that the Turkomans had free access to the pasture lands on the Aras. It is difficult to assess to what extent the peregrinations of the Turkomans, who simultaneously penetrated to the heart of Byzantine Asia Minor and permeated Muslim Diyār Bakr and Diyār Muḍar, were directed by Alp Aslan; the Turkomans opened the way for him, but withdrew after having gained their booty. Moreover, their activities provoked a Byzantine counterattack against the Syrian and Armenian borders of the Muslim world (1068-9), following which terms were negotiated between the two empires.

Alp Arslan then considered himself sufficiently secure against the Byzantines to listen to an appeal from rebels in Egypt and to undertake the anti-Fāṭimid expedition to support orthodoxy and the caliph. He occupied en route Ardjīsh and Mantzikert held by the Byzantines, attacked Edessa, and pushed on without delay to secure the submission of the Mirdāsid Maḥmūd at Aleppo, who attempted to save himself by a last-minute recognition of the ʿAbbāsid Caliphate. The sultan's intention was to advance into Southern Syria, where various Turkoman groups had preceded him, when he heard that the Byzantine Emperor Romanus Diogenes, at the head of a formidable force, was threatening his rear in Armenia, and he had to return with all possible speed. He nevertheless succeeded in regrouping sufficient forces to give battle to the Byzantine army at Mantzikert in Dhu 'l-Ḳaʿda 463/August 1071. The diversity of the Byzantine forces in both their composition and morale, combined with their lack of manoeuvrability, made them no match for the agile Turks who, though far fewer in number, were inspired by the fervour of holy war. By evening, the Byzantine army had been annihilated and, for the first time in history, a Byzantine Emperor was taken prisoner by a Muslim ruler. Alp Arslan's object was not to destroy the Byzantine empire; he contented himself with frontier adjustments, promises of tribute, and an alliance—a settlement which the downfall of Romanus Diogenes rendered impermanent. In fact, however, the battle

of Mantzikert laid open Asia Minor to Turkish conquest. In later years there was no princely family in Asia Minor but wished to boast an ancestor present on that glorious day.

Alp Arslan himself met an unworthy end not long after his triumph. At the other extremity of his empire, relations with the Ḳarakhānids, despite marriage alliances, were again strained. At the beginning of 465/end of 1072 he invaded their territory. In the course of a quarrel with a prisoner, the latter mortally wounded him. He died in the prime of life, at the end of Rabīʿ I/beginning of January 1073. He had nominated his son Malikshāh his heir.

In the eyes of orthodox Muslims, Alp Arslan was a leader of men and a commander capable of enforcing strict discipline, generous, just, devout, with an aversion for informers. Christians, remembering massacres such as that at Ānī, ascribed to him a reputation for brutality, in contrast to his son Malikshāh, who was regarded by them in a more favourable light. Space does not permit here an account of his administration, which was essentially the achievement of his vizier Niẓām al-Mulk and which is discussed in the article on the latter and in the general article on the Saldjūḳids. To Alp Arslan belongs the credit for singling out the Khurasānī who rose rapidly to fame and who became, under Malikshāh, the real head of the State. The influence of his new vizier may have led to the execution of al-Kundurī. Even at the height of his power, Alp Arslan appears to have deliberately refrained from setting foot in Baghdād, in order to avoid being involved in embarrassing and futile disputes with the Caliph and the Arabs of ʿIrāḳ such as had complicated the last years of Ṭughrilbeg. On the other hand, he energetically enforced in ʿIrāḳ the rights of the Sultanate. He saw no objection to the continued existence on his frontiers of dependent principalities, such as those of the ʿUḳaylids of Mawṣil and the Shaddādids of Arrān. The close watch which he kept, for example, on Hazārasp of Baṣra shows that he would tolerate no defection from that source, too. It is in this light, and in the light of respect for family traditions inherited from a tribal organization, that one must consider the distribution by Alp Arslan among the more important princes of his family of various apanages in the original domains of the dynasty in Khurāsān.

Culturally, the reign of Alp Arslan does not seem to have been of great importance, either from the traditional Islamic, or from the Turkish, point of view. It may be of some interest to mention that the *Malik-nāma*, an anonymous attempt to reconstruct the historical origins of the dynasty, was composed for Alp Arslan (cf. Cahen, in *Oriens*, 1949).

Bibliography: A more comprehensive list of sources will be found under SALDJŪḲIDS. The principal chronicles are those of ʿImād al-Dīn al-Iṣfahānī (in al-Bundārī's version, ed. Houtsma, *Recueil*, ii), the anonymous *Akhbār al-Dawla al-Saldjūḳiyya* (ed. M. Iqbal, Lahore 1933), the *Rāḥat al-Ṣudūr* of Rawandī, ed. M. Iqbal, 1921, the *Kāmil* of Ibn al-Athīr and, a much-neglected work, the *Mirʾāt al-Zamān* of Sibṭ b. al-Djawzī (of which the relevant section will shortly be published). In other categories, the chief works are the *Fārs-nāma* of Ibn al-Balkhī and the *Siyāsat-nāma* of Niẓām al-Mulk. The Byzantine, Syriac, Armenian and Georgian sources should not be forgotten. Later Persian historical works should be distrusted. There is no good comprehensive modern work either on Alp Arslan or on the Saldjūḳids. For their activities in the east, see the masterly account of V. Barthold, *Turkestan*; for their activities in the west see general guidance in E. Honigmann, *Die Ostgrenze des byzantinischen Reiches*, Brussels 1935; Cl. Cahen, *La première pénétration turque en Asie-Mineure*, in *Byzantion*, 1948; and V. Minorsky, *Studies in Caucasian History*, Cambridge 1953. A provisional survey of Saldjūḳid history has been contributed by Cl. Cahen to *History of the Crusades* Philadelphia 1955, 135-176.
(CL. CAHEN)

ALP TAKÎN (ALP TIGIN), the founder of the Ghaznawid power. Like the majority of the praetorians of his time, he was a Turkish slave, purchased and enrolled in the Sāmānid body guard, who progressively rose to the rank of *ḥādjib al-ḥudjdjāb* (commander-in-chief of the guard). In this capacity he wielded the real power during the reign of the young Sāmānid ʿAbd al-Malik I; the vizier Abū ʿAlī al-Balʿamī owed his appointment to him, and did not dare to take any action "without the knowledge and advice" of Alp Takīn. In order to remove him from the capital, the sovereign invested him (Dhu 'l-Ḥidjdja 349/Jan.-Feb. 961) with the post of Governor of Khurāsān, the highest military office in the empire. Dismissed from this post by Manṣūr b. Nūḥ, of whose elevation to the throne he had disapproved, Alp Takīn withdrew to Balkh; in Rabīʿ I, 351/April-May 962 he defeated an army sent against him by the Sāmānid ruler, and retired to Ghazna where, after overthrowing the local dynasty, he set up an independent empire. The records disagree as to the date of his death; according to some, he died before 352/963. His learned son Abū Isḥāḳ Ibrāhīm (on whom see Ibn Ḥawḳal, 13, 14) could only maintain his position, in face of a revolt by the former ruler of Ghazna, with Sāmānid aid. Thus the Ghaznawid kingdom only existed at first as a Sāmānid vassal state. Abū Isḥāḳ died childless, and the leaders of the army, on which the new state was based, selected as his successor first the commander of guard Bilgā Takīn (Tigin) (355-64/966/974), who left a reputation for integrity, and then Pirī Takīn (Tigin). During the latter's reign a final revolt by the supporters of the former dynasty was crushed. But the victor, Subuk Takīn, the son-in-law and former chief officer of Alp Takīn, was raised to power by the troops (Shaʿbān 366/April 977), and became the founder of the Ghaznawid [*q.v.*] dynasty.

Bibliography: A concise but comprehensive history of Alp Takīn and his immediate successors, with references to all the sources, is contained in Muḥammad Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, ch. i. The chief sources are Gardīzī, *Zayn al-Akhbār*, ed. Muḥammad Nāẓim, Berlin 1928, and Djuzdjānī, *Tabaḳāt-i Nāṣirī*. Niẓām al-Mulk's account in the *Siyāsat-nāma* (Schefer), 95-101, is an idealized version designed to place Alp Takīn and Subuk Takīn in a more favourable light. On the effect on the frontiers of Sīstān of the foundation of the new kingdom of Ghazna, see now, in addition to Muḥammad Nāẓim's sources, the anonymous *Tarīkh-i Sīstān* published by Bahār, Teheran 1314, 326 ff.
(W. BARTHOLD-[CL. CAHEN])

ALPAMÎSH, One of the most famous Turkish epics (*dāstān*) of Central Asia, inspired by two classical themes, (1) the quest for the betrothed and the rivalry of the suitors; (2) the return of the husband on the day of his wife's remarriage (theme of the

return of Ulysses). The Özbek hero Alpamīsh of the Kungrat tribe repairs to Ḳalmīḳ territory in search of his fiancée and cousin Barčin. Alpamīsh triumphs over his Ḳalmīḳ rivals, marries Barčin and brings her back to his tribe. The second part is the account of a further expedition on the part of Alpamīsh to Ḳalmīḳ territory to rescue his wife's father. Alpamīsh is captured and held prisoner for seven years by the Ḳalmīḳ Khān, and is finally aided to escape by the Khān's daughter; he returns to his native land the very day on which his wife is about to marry—against her will—the son of a slave who has usurped his authority. Alpamīsh kills the usurper and regains his position as head of the tribe.

It is difficult to determine accurately the date of the composition of Alpamīsh, although it cannot be before the beginning of the 16th century, or later than the end of the 17th. In the *dāstān*, the Kungrat tribe lives a nomadic existence around Lake Baysun north of Tirmidh (now the Surkhān Daryā district of southern Özbekistān). The Kungrat only moved into this area with the armies of Shaybānī Khān, about 1500. Moreover, in the three versions, Özbek, Ḳazaḳ and Ḳaraḳalpaḳ, Alpamīsh and the Kungrat are called Özbek, which postulates an origin later than the Shaybānid conquests. On the other hand, the main theme of the epic, the struggle of the Muslim Turkish nomads against the "infidel" Ḳalmīḳs, places it between the 16th and the 17th centuries, the period when the Ḳalmīḳs of the Oyrat Empire were making a series of bloody raids in Central Asia.

Žirmunskiy and Zarifov believe that they can detect, beneath the existing versions of Alpamīsh, an older version, now lost, dating back to the 11th-12th century, a period when the ancestors of the Kungrat were nomads near the Aral Sea (analogy with the Oghuz poem Bamsi-Bayrek) or to still earlier times when they dwelt in the fringes of the Altai (analogy with the Mongol poem *Khān Kharangui*).

All the Central Asian versions of *Alpamīsh* are in verse, the prose passages serving only to mark the divisions between the various episodes of the poem. The versification is simplified. The repetition of the same rhyme divides the verses into stanzas of different length (2, 4, and up to 10 and 15 verses). This simple poetic form is perfectly suited to the way in which the poem is transmitted, whether recited by a *bakhshī* ("bard"), or chanted by a *shāʿir* ("minstrel") with accompaniment on the *ḳobuz* (two-string violin).

Several versions of *Alpamīsh* exist: Özbek, Ḳazaḳ, and Ḳaraḳalpaḳ, which correspond fairly closely to one another, but have occasional but obvious differences of detail. The best and the most popular is the Özbek version of the *bakhshī* Fāḍil (Fazyl) Yuldash (born in 1873 at Ḳīshlāḳ Layk in the district of Bulungur near Samarḳand), the text of which was published for the first time by Ḥāmid ʿAlīmdjan at Tāshkent in 1939, in a slightly abridged form, under the title "Yuldash oghly Fazyl: *Alpamysh*". The first part of this work in an abridged form has been translated into Russian verse by V. V. Deržavin and A. S. Kočetov, and the second, *in extenso*, by L. M. Pen'kovskiy. These two translations, based on ʿAlīmdjan's text and with a preface by V. M. Žirmunskiy, were published at Tāshkent in 1944 under the title: "Fazyl Yuldash: *Alpamysh*". Finally, in 1949, L. N. Pen'kovskiy published at Tāshkent the first complete translation of the Yuldash version, with the title *Alpamysh, uzbekskiy epos*. There are other Özbek versions, by other *bakhshīs*, which are still unpublished, and which differ in certain details.

The Ḳazaḳ version (2nd part only) was published by Shaykh ul-Islāmov at Ḳazān in 1896, and the complete text was edited by Divaev at Tāshkent in 1922, and re-edited some years later at Alma-Ata in 1933. It appears under the title *Alpamys Batyr* in the anthology *Batyrlar Žyry*, Alma-Ata 1939, 249-96.

The Ḳaraḳalpaḳ version (1st part only, with Russian translation) is based on the text of Djiya Murād Bek Muḥammedov, *bakhshī* of Törkül (A. Divaev, *Alpamys-Batyr, Etnografičeskie materyaly*, fasc. vii in *Sbornik materyalov dlya statistiki Syr-Daryinskoy oblasti*, ix, Tashkent 1901). The complete Ḳaraḳalpaḳ version was published in Moscow in 1937 and again in 1941 at Törtkül and Tāshkent, under the title "Aimbet uly Ḳally: *Alpamys*."

In addition there exist two prose versions, Bashkir and Altai, which are radically different from the central Asian versions. The Bashkir version, *Alpamysh hem Barsyn Kh'yluu*, was published by N. Dimitriev, with Russian translation by A. G. Bessonov, in *Bashkirskie Narodnye Skazski*, fasc. 19, Ufa 1941.

The text of the apparently earlier Altai version *Alyp-Manash*, established by N. U. Ulagashev, appears in *Altay Bučay* (the Oyrat national epic), published by A. Koptelev, Novosihirsk 1941, 79-126.

The longest version, that of Fazyl Yuldash, comprises 14,000 stanzas; the Ḳazaḳ and Ḳaraḳalpaḳ versions are shorter and comprise 2,500 and 3,000 stanzas respectively.

Bibliography: V. M. Žirmunskiy and Kh. T. Zarifov: *Uzbekskiy Narodniy Geroičeskiy Epos*, Moscow 1947; *Antologiya Uzbekskoy Poezii*. edited by M. Aibek, etc., Moscow 1950.

(E. LÉVI-PROVENÇAL)

ALTAI, mighty, ca. 1000 miles long mountain system in eastern Central Asia, stretching from the Saisan Sea in the southwest to the upper Selenga and the upper Orkhon, with the sources of the Obʾ, the Irtīsh and the Yenissei. Here, and in the adjacent country to the north-east as far as the present-day Mongolia, was the oldest home of the Turks and the Mongols and their ancestors. The Turks had here for a long time after their "refuge" in the Ötükän [*q.v.*] mountains. The oldest Turkish designation for the southern Altai, as it appears in the inscriptions of the Orkhon, is Altin-yīsh ("gold mountains"), in Chinese Kin-shan (same meaning). The name of Ektag, however, mentioned by the Greeks (probably Aḳ Tagh, "white mountain"), seems to refer to the Tʿien-shan (E. Chavannes, *Documents sur les Tou-kieu occidentaux*, 236 f.). It is uncertain whether the modern name, which appears for the first time in the Kalmuck period, is connected with the Mongol *altan*, "gold"; the local population explains it by a false etymology as *alti ay*, "six month".

Fickeler, *Der Altai*, 1925; *Bol'šaya Sovetskaya Entsiklopediya*², ii, 136-51. For its role in Turkish civilization, cf. A. von Gabain, *Steppe und Stadt im Leben der ältesten Türken*, *Isl.*, 1949, 30-62 and TURK.

(B. SPULER)

ALTAIANS is the name of a Turkish tribe in the Altai mountains, partly professing, more or less nominally, Orthodox Christianity, partly Shamanistic; though Islam is not to be found amongst them, they had some contact, though possibly not an immediate one, with Islamic civilization (as attested by loan words such as *kuday*, "God"; *shaytan*, "the devil"). (Cf. for them G. Teich and H. Rübel, *Völker ... der UdSSR*, Leipzig 1943, 28-43, 137 f., 142; W. Radloff, *Proben aus der Volksliteratur der türkischen Stämme Süd-Sibiriens*, i; idem, *Aus Sibirien*, i, 250 ff.; *Bol'shaya Sovetskaya Entsiklopediya*², 141 f.).

The name Altais has been substituted since about 1874, and more especially in the 20th century, following a proposal of M. A. Castrén, for the term Turanian [*q.v.*], coined by F. Max Müller, as the designation of the assumed community of the Turkish-Mongolian peoples; the even wider concept of Ural-Altaians comprises also the Samoyeds, Finno-Ugrians and Tunguses. (Cf. e.g. *Ural-Altaische Jahrbücher*, Wiesbaden, since 1952; J. Benzing, *Einführung in das Studium der altaischen Philologie und der Turkologie*, Wiesbaden 1953, with bibliography; W. K. Matthews, Languages of the *URRS*, Cambridge 1951). These peoples, however, with the exception of the Turks [*q.v.*], are not touched by Islam.

ALTAIR [see NUDJŪM].

ALTAMISH [see ILTUTMISH].

ʿALTH, or AL-ʿALTH, town, to the north of Baghdād, between ʿUkbarā and Sāmarra, on the eastern bank of the old course of the Tigris. As the course of the Tigris has changed (cf. DIDJLA), ʿAlth is today on the western bank, on al-Shuṭayṭa. The extensive ruins of the town are known as ʿAlth up to the present day; they lie about $4^1/_2$ m. N.W. of the modern town of Balad. The town is already mentioned by Ptolemy (v. 20) under the name of Altha. According to the medieval geographers the northern limit of the Sawād or al-ʿIrāḳ was formed by ʿAlth on the eastern, Ḥarba on the western side of the Tigris. The town was a *waḳf* for the benefit of the descendants of ʿAlī b. Abī Ṭālib (Yāḳūt) and some di tinguished traditionists of the 6th and 7th centuries A. H. came from it. A stone dam was built over the Tigris near ʿAlth, but no trace of it remains. Near ʿAlth lay the convent called Dayr al-ʿAlth or Dayr al-ʿAdhārā, described, among others, by the poet Djaḥdha al-Barmakī.

ALTÎ PARMAK ("the man with six toes"), MUḤAMMAD B. MUḤAMMAD, Turkish scholar and translator. He was born in Üsküp, where he studied and joined the ṣūfī *ṭarīqa* of the Bayramiyya [*q.v.*], became a preacher (*wāʿiẓ*) and teacher in Istanbul and later in Cairo, where he died in 1033/1623-24. (1) His main work is the *Dalāʾil-i Nubuwwat-i Muḥammadī wa-Shamāʾil-i Futuwwat-i Aḥmadī*, a translation of the Persian *Maʿāridj al-Nubuwwa* by Muʿīn al-Dīn b. Sharaf al-Dīn Farāhī, known as Mullā Miskīn (d. 907/1501-02); there are numerous manuscripts in Istanbul, Cairo and elsewhere, and printed editions of Istanbul 1257 and Būlāḳ 1271 (see Storey, i, 188; Brockelmann, S II, 661). For a detailed account of the contents of this work, see Flügel, *Handschr. Wien*, ii, no. 1231. (2) He also translated from the Persian the *Nigāristān*, not the work of Djāmī (as in Brockelmann, ii, 590), but that of Aḥmad b. Muḥammad Ghaffārī (d. 975/1567-68; cf. Storey, i, 114); the translation bears the title *Nuzhat-i Djahān wa- Nādirat-i Dawarān*, and exists in several manuscripts in Istanbul. (3) A further work of his is the translation of the *Kitāb-i sittīn, Djāmiʿ Laṭāʾif al-Basātīn*, a mystical interpretation, in sixty "sessions", of sūra xii by Abū Bakr b. Aḥmad b. Muḥammad b. Zayd Ṭūsī, an author of uncertain date (cf. Storey, i, 29, no. 10); a manuscript exists in the Köprülü Library in Istanbul. (4) Finally, there is his translation of a "commentary on an extract on rhetoric" (*Sharḥ Talkhīs al-Maʿānī*), with the title *Kāshif al-ʿUlūm wa-Fātiḥ al-Funūn*, preserved in a manuscript of the ʿUmumī Library in Istanbul; this is presumably identical with his translation of the *Muṭawwal* (Ḥādjdjī Khalīfa, ed. Flügel, ii, no. 3541) by al-Taftāzānī (cf. Brockelmann, i, 354).

Bibliography: al-Muḥibbī, *Khulāṣat al-Athar*, iv, 174; Brusalî Meḥmed Ṭāhir, *ʿUthmānlî Müʾellifleri*, i, 212 f. (J. SCHACHT)

ALTI SHAHR, or ALTA SHAHR (the word "six" is always written *alta* in Chinese Turkistān), "six towns", a name for part of Chinese Turkistān (Sin-kiang) comprising the towns of Kuča, Aḳ Su, Uč Turfān (or Ush Turfān), Kāshghar, Yārkand and Khotan. It appears to have been first used in the 18th century (cf. M. Hartmann, *Der Islamische Orient*, i, 226, 278). Yangi Ḥiṣār, between Kāshghar and Yārkand, is sometimes added as the seventh town (though it also frequently counted as one of the six, in which case either Kuča or Uč Turfān is omitted). On account of this the country is often called in modern sources Djiti (or Yiti) Shahr, "seven towns"; cf. e.g. *Taʾrikh-i Amāniyye*, written in 1321/1903 and printed by N. Pantasow, Kazan 1905. [See the articles on each of the towns and TURKISTĀN.]

(W. BARTHOLD *)

ALTILIK [see SIKKA].

ALTÎN or ALTUN (T.), Gold, also used of gold coins. The word is often met with in Turkish proper names of persons and places, e.g. Altîn Köprü, Altîntash (Altuntash). See also SIKKA.

ALTÎN (Altūn) **KÖPRÜ**, a town of ʿIrāḳ, built picturesquely on a small rocky island in the Lesser Zāb river (44° 8' E., 35° 42' N.)—and in modern times overflowing on to both banks—serves as a *nāḥiya* headquarters in the *ḳaḍā* of Kirkūk in the *liwā* (province) of that name, formerly in the *wilāyet* of Mosul. The Zāb here forms the boundary between Kirkūk and the Irbīl *liwās*. Known locally in Arabic simply as al-Ḳanṭara, the Turkish name ("Golden Bridge") is variously explained; some believe it to commemorate a Turkish or Kurdish lady of that name, others that it refers to the rich caravan-tolls of earlier days, since the place lies on the agelong Baghdād-Mosul highway; while others understand it as an abbreviation of Altin-Sū-Köprü, or the "Bridge of the Altin-Sū". But it is at least equally probable that the river name (now rarely used) itself merely reflects the town name.

The place, no more than an obscure and unrecorded village in medieval times, gained importance in and since the 11th/16th century, after the erection of the two bridges by (it is said) Sulṭān Murād IV and a period of settled administration. It was visited and has been described by many European travellers; and, now reckoned as healthy as well as highly picturesque, has in late years been greatly improved in cleanliness, amenities, and communications. The famous stone-built bridges, of which the southern contained an almost impractically high central arch, were destroyed by the Turks in 1918 and later replaced by modern steel structures. The Kirkūk-Irbīl branch of ʿIrāḳ Railways crosses the Zāb immediately upstream.

The inhabitants of Altîn Köprü, some 3500, are mixed Kurdish, Turkoman and Arab; this applies also to the thirty villages within the *nāḥiya*. Many of the latter lie within the area of the rich and extensive Kirkūk oilfield (discovered in 1346/1927, and in full development since 1353/1934); oilfield operations give employment to many of the inhabitants. Their other main occupations are those of agriculture (partly rain-fed, partly aided by modern-type irrigation), of services and supplies connected with road transport, of the characteristic *kellek* (skin-supported raft) traffic on the Zāb, and of wholesale and retail trade.

ALTÎN ORDU, modern Turkish imitation of the Russian term "Zolotaya Orda", "Golden Horde" [see bātūids].

ALTÎNTASH (also Altuntash, local pronunciation Altindesh), village in Anatolia, 39° 5' N, 30° 10' E, and a *nāḥiye* in the *wilāyet* and the *ḳaḍā* of Kütahya (though the capital of the *nāḥiye* is not in the village, but in the village of Kürdköyü, a little to the west), on the small stream in the area of the sources of the Porsuk, somewhat to the west of the Afyōn Ḳara Ḥiṣār—Kütahya road. The village contains a *türbe* of the 19th century and a modern mosque incorporating older fragments. It stands on the site of an older and larger mosque, the building inscription of which (by the Rūm Saldjūḳ ʿAlāʾ al-Dīn Kayḳubād) is said to be in the museum of Aḳ Shehir. The inscription which is now above the porch refers to the building of a bridge and bears the date of 666/1267-8; the place has two small old bridges.

In the neighbouring Čakarsaz (called by the inhabitants Čakîrsaz) there is an early Ottoman *khān* (three naves with five girders) with a remarkable porch, into which there are also built antique fragments.

Altintash was a stage on the highway from Brusa (and Usküdar) via Kütahya to Afyōn Ḳara Ḥisar and Ḳonya, forming the stage probably together with Čakarsaz.

Bibliography: Cl. Huart, *Konia*, Paris 1897, 87, 254; ʿAli Djewād, *Memālik-i ʿOthmāniyyenin Taʾrīkh we-Djoghrāfyā Lughāti*, 26; Fr. Taeschner, *Das anatolische Wegenetz*, Leipzig 1924-6, ii, index. (Fr. Taeschner)

ALTŪNTĀSH al-Ḥādjib, Abū Saʿīd (his alleged second name Hārūn which occurs in a single passage of Ibn al-Athīr, ix, 294, is probably due to an error of the author or of a copyist), Turkish slave, later general of the Ghaznawid Sebuk Tegīn and his two successors and governor of Khwārizm. Already under Sebuk Tegīn he attained the highest rank in the bodyguard, that of a "great *ḥādjib*"; under Maḥmūd he commanded the right wing in the great battle against the Ḳarakhānids (22 Rabīʿ II 398/4 Jan. 1008, and in 401/1010-1 he is mentioned as governor of Harāt. After the conquest of khwārizm in 408/1017 he was appointed governor of the province with the title of Khwārizmshāh and maintained himself in this office until his death in 423/1032. Altūntāsh seems to have administered the advanced border-province with energy and foresight and to have effectively guarded it against the neighbouring Turkish tribes. As, however, by this means he established his own rule even more than that of the sultans, his measures were always regarded with suspicion both by Maḥmūd and Masʿūd, and it is said that both of them made attempts to remove the troublesome governor by treachery. In the spring of 423/1032 Altūntāsh undertook, by order of the sultan Masʿūd a campaign against ʿAlī Tegīn (cf. ḳarakhānids) and received a mortal wound in the battle of Dabūsiyya. He was succeeded as governor by his son Hārūn, but Masʿūd bestowed the title of Khwārizmshāh on his own son Saʿīd and Hārūn administered the country only as Saʿīd's representative. In Ramaḍān 425/August 1034 Hārūn proclaimed himself independent, but was killed the very next year at the instigation of the Ghaznawids. His brother and successor Ismāʿīl Khandān ruled the country till 432/1041, when he was ousted, by order of the Ghaznawids, by Shāh Malik, the prince of Djand. Thus the dynasty founded by Altūntāsh came to an end.

ALUDEL [see AL-ʿUTHĀL].

ʿALŪK [see AL-DJINN].

AL-**ĀLŪSĪ**, name of a family which included a large number of savants of Baghdād in the 19th and both centuries. The name is derived from Ālūs, a place situated on the west bank of the Euphrates, between Abū Kamāl and Ramādī; according to family tradition, the ancestors of the Ālūsī (whose descent is traced back to al-Ḥasan and al-Ḥusayn) fled there to escape from the Mongol conqueror Hūlāgū; their descendants only returned to Baghdād in the 11th/17th century. Among the numerous representatives of this family who have added lustre to the cultural and political history of ʿIrāk are:

(1) ʿABD ALLĀH ṢALĀḤ AL-DĪN, forefather of the family (d. 1246/1830).

(2) ABU'L THANĀʾ MAḤMŪD SHIHĀB AL-DĪN (1217-70/1802-54), son of the preceding; he was *muftī* of Baghdād for several years, but was also an outstanding professor, thinker and polemist. Among his numerous works are: *Rūḥ al-Maʿānī* (commentary on the Ḳurʾān, Būlāḳ 1301-10/1883-1892, 9 vols.); commentaries on grammar and prosody and attempts at *maḳāmāt*; his doctrinal arguments are contained in *al-Risāla al-Lāhūriyya* (ed. 1301/1883) and *al-Adjwiba al-ʿIrāḳiyya ʿan al-Asʾila al-Īrāniyya* (Istanbul 1317). The account of his voyage to Istanbul in 1267-9/1851-2, after his dismissal from his post as *muftī*, provided the material for there works: *Nashwat al-Shamūl fi 'l-Dhahāb ilā Islāmbūl*, *Nashwat al-Mudām fi 'l-ʿAwd ilā Dār al-Salām*, and *Gharāʾib al-Ightirāb wa-Nuzhat al-Albāb*, published at Baghdād, the first two in 1291-3/1874-6, the third in 1327/1909.

(3) ʿABD AL-RAḤMĀN, brother of the preceding, (d. 1284/1867); a *khaṭīb* at Baghdād, he was called "the Ibn al-Djawzī of his age and the Ibn Nubāta of his generation".

(4) ʿABD AL-ḤAMĪD, brother of the preceding, (1232-1324/1816-1906); professor and *wāʿiẓ*, author of some verse and a *Nathr al-Laʾālī ʿalā Naẓm al-Amālī*.

(5) ʿABD ALLĀH BAHĀʾ AL-DĪN, elder brother of (2) (1248-91/1832-74); *ḳāḍī* of Baṣra, author of a small treatise on grammar, two texts on logic and a commentary on a treatise on mysticism.

(6) ʿABD AL-BĀḲĪ SAʿD AL-DĪN, brother of the preceding (1250-93/1834-76); *ḳāḍī* of Kirkūk in 1292/1875; he wrote mainly commentaries on or adaptations of manuals on grammer or scansion, and a guide to the pilgrimage, *Awḍaḥ Manhadj ilā Maʿrifat Manāsik al-Ḥadjdj* (lith. Cairo 1277).

(7) NUʿMĀN KHAYR AL-DĪN ABU' L-BARAKĀT, brother of the preceding (1252-1317/1836-39), professor and *wāʿiẓ*; author of a defence of Ibn Taymiyya, *Djalāʾ al-ʿAynayn fi 'l-Muḥākama bayn al-Aḥmadayn*, which caused a great sensation. He wrote two other polemical works, *al-Djawāb al-Faṣīḥ* (against the Christians), and *Shaḳāʾiḳ al-Nuʿmān fi Radd Shaḳāshiḳ Ibn Sulaymān*; his sermons and exhortations were collected in his *Ghāliyat al-Mawāʿiẓ*, a work of great length which exists in several editions.

(8) MUḤAMMAD ḤAMĪD, brother of the preceding (1262/1846-1290/1873-4).

(9) AḤMAD SHĀKIR, brother of the preceding (1264/1848-1330/1911-2), *ḳāḍī* of Baṣra.

(10) MAḤMUD SHUKRĪ, known also as MAḤMŪD ĀLŪSĪ-ZĀDA, son of (5) (29 Ramaḍān 1273/14 May 1857/3 Shawwāl 1342/8 May 1924); the best known of his family, a fact which is partly due to the zeal of Muḥammad Bahdjat al-Atharī in publishing his works. He wrote some 50 works on history, *fiḳh*, biography, lexicography, rhetoric and dogmatic controversy; on history, the most noteworthy are the *Bulūgh al-Arab fi Maʿrifat Aḥwāl al-ʿArab* (printed in 1313/1896), a history on the Arabs of the *djāhiliyya* compiled in answer to a question raised at the 8th Oriental Congress (1889), and *Taʾrīkh Nadjd* (Cairo 1343); on biography, *al-Misk al-Adhfar* (Baghdād 1348/1930) on the savants of Baghdād in 12th-13th centuries; on dialectology, *Amthāl al-ʿAwāmm fī Madīnat al-Salām*; on controversy, a series of violent polemics against Shīʿism, against the Rifāʿiyya Order, in support of the neo-Ḥanbalite law reform, etc., notably the *Ghāyāt al-Amāni*, published under a pseudonym (Cairo 1327). He was one of the most vigorous representatives of modern Islam, striving by means of the written and spoken word and by his example to combat *bidʿa*, and he may be regarded as one of the leaders of the Salafiyya movement.

(11) ʿALĀʾ AL-DIN ʿALĪ, son of (7) (d. 1340/1921); a professor; his only work is a manual on grammar in verse; a collection of biographies was never completed.

(12) MUḤAMMAD DARWĪSH, son of (9) (d. after 1340/1922); professor and preacher; he wrote several unpublished works.

ʿALWA, name of a Nubian people and kingdom. The kingdom was adjacent to that of Maḳurra [*q.v.*] a little below the confluence of the White Nile and the Atbara and stretched southward well beyond the confluence of the White and Blue Nile; its capital was Sōba, near the modern Kharṭūm. The Christian kingdom preserved its independence even after the fall of the kingdom of the Maḳurra and only disappeared in the beginning of the 10th/16th century under the pressure of Arab tribes allied to the Fundj. [See also NŪBA, and AL-NĪL.]

ALWĀḤ [see LAWḤ].

ALWAND [see AK KOYUNLU].

ALWAND KŪH or KŪH-I ALWAND (ELWEND), is an isolated mountain-group lying to the south of Hamadhān, and rising to a height of 11,717 feet. To the north and north-east the Alwand Kūh drops steeply off to the plain; to the north-west it is united to the Kūh-i Dāʾim al-Barf, a mountain-mass of almost equal height, which is joined to the Kūh-i Almu Ḳulakh by lower mountain-chains. The latter forms the north-western extremity of the entire Alwand system. The core of the real Alwand consists of granite, judging from the geological formation; only at the base is there to be found isolated red clay of salt formation. Wild rocky precipices, bare cliffs and gorges alternate with fertile mountain pasturages; up to nearly 7,500 feet the southern slopes are clad with groves of walnuts, mulberries and fruit trees. The Alwand Kūh is noted for its abundant water-supply. Mustawfī observes (*Nuzhat al-Ḳulūb*, Bombay 1311, 152) that in addition to the spring which rises on the highest peak, no fewer than 42 streams flow from this central portion of the mountain chain, some of which are tributaries of the Tigris, others turning eastwards, flow to the interior of Iran. As the result of the plentiful irrigation by the Alwand streams the plain of Hamadhān has always been considered as the most highly favoured region of Irān. Hamadhān itself, the old Ekbatana, which is built in terraces along the foot of the mountain was a favourite summer residence for the Achaemenid kings on account of its cool, lofty position (1860 metres). Two cuneiform inscriptions dating from Darius I and Xerxes I still remain as vestiges of ancient Persian times at a place named Gandj Namah (= treasure-house) on the slope of the Alwand Kūh at a height of 7,000 feet.

Oriental writers relate many legends but few facts concerning the Alwand Kūh. (They mention a source on the summit of the mountain as one of the sources of paradise—probably following old beliefs concerning the locality; cf. Jackson, *Persia Past and Present*, 146, 170-3.) Al-Ḳazwīnī (682 = 1283) gives the best account; he names it Kūh Arwand. Yāḳūt also uses the form Arwand, whereas other Arabic writers employ the later term Alwand (Mustawfī: Alwand Kūh). The Old Persian name Aruanda (Avesta and Pāzend: Arwand) appears in Greek writers (Polybius, Ptolemy, Diodorus) in the form Ορόντης. In Old Armenian the word is found as the name of persons in the form Erwand (Arwand); cf. H. Hübschmann, *Armenische Grammatik*, Leipzig 1897, i, 40, and in *Indogermanische Forschungen*, 1904, 426. The "white mountains" mentioned in the cuneiform inscriptions are probably to be identified with the Alwand Kūh; cf. Streck in *ZA*, 1900, 371. Perhaps moreover, the "cedar-mountain" of the Old Babylonian Gilgamesh epic refers to the Alwand Kūh, as Jensen has conjectured in Schrader's *Keilinschriftl. Biblioth.*, vi/1, Berlin 1900, 573.

ALWĀR (ULWUR in English spelling) was a "native" state in the east of Radjputāna, India, lying between 27° 3' and 28° 13' north and 76° 7' and 77° 13' east with an area of 3, 141 square miles and a population of 861, 993 (1951 census). The languages spoken are mainly Hindi and Mewāti; about one fourth of the inhabitants is Muslim.

The founder of the modern state of Alwār was Pratap Singh, 1740-1791, who, between 1771 and 1776, succeeded in carving out a principality which was recognised by the Mughal Emperor Shāh ʿĀlam II, and later, in 1811, by the British.

After the lapse of British paramountcy Alwār joined the Matsya Union with Bharatpur, Dholpur and Karauli; the Maharaja of Alwār become Uparpramukh of the new state. On the 15th May, 1949, Alwār and the other component states of the Matsya Union merged with the Union of Radjasthān.

The town of Alwār has some Islamic monuments, such as the mausolea of Bakhtāwar Singh (the adopted son and successor of Pratap Singh) and of Fatiḥ Djang (see Fergusson, *Indian Architecture*).

Bibliography: *The Imperial Gazetteer*; *The Rajputana Gazetteer*; Government of India Ministry of States, *White Paper on Indian States*, Delhi 1950. (P. HARDY)

AMA [see ʿABD].

AL-AʿMĀ AL-TUṬĪLĪ, "the blind man of Tudela", ABU 'L-ʿABBĀS (or ABŪ DJAʿFAR) AḤMAD B. ʿABD ALLĀH B. HURAYRA AL-ʿUTBĪ (or AL-ḲAYSĪ), Hispano-Arabic poet, b. in Tudela, but brought up in Seville; d. 525/1130-1. MSS of his *dīwān*, containing classical poetry, are to be found in London and Cairo (see Brockelmann, I, 320, S I, 480), but he is mainly famous as one of the great masters of *muwashshaḥ* poetry. His *muwashshaḥs* are preserved, apart from occasional quotations in general works, in such special anthologies of the genre as Ibn Sanāʾ al-Mulk's *Dār al-Ṭirāz* (ed. Rikaby, nos. 1, 30, 34), Ibn Bushrā's *ʿUddat al-Djalīs*, Ibn al-Khaṭīb's *Djaysh al-Tawshīḥ* (ch. ii), and al-Ṣafadī's *Tawshīʿ al-Tawshīḥ* (nos. 14a, 16a; for the last two, cf. S. M. Stern, in *Arabica*, 1955, 150 ff.); cf. MUWASHSHAḤ.

ʿAMĀDIYA, a town in Kurdistān, at about 100 klm. north of Mosul in the basin of the Gāra river (a right tributary of the Great Zāb). The town stands on a hill and is dominated by the citadel built on a steep rock. The water supplying the citadel comes from cisterns hewn in the rock. The stronghold is situated at a point which, in the east, controls communications with valleys of the left affluents of the Zāb (Shamdīnān, Rū-Kučük, Rawānduz) and, in the west, those within the Khābūr basin. The climate of ʿAmādiya is hot and unhealthy.

According to Ibn al-Athīr the fortress received its name from ʿImād al-Dīn Zangī who built it in 537/1142 on the spot where a more ancient castle stood called Āshib (*al-Kāmil*, ix, 60) or al-Shaʿbāniyya (*Taʾrīkh al-Atābakiyya, Recueil des Hist. des croisades*,

ii/2, 114-5). Less probable is its attribution to the Būyid ʿImād al-Dawla (d. in 338/949, see *Nuzhat al-Ḳulūb*, 105.) The original form of the name is, therefore, ʿImādiyya, but the modern pronunciation is ʿAmādiya.

ʿAmādiya had Kurdish princes of the Bahdīnān family, originary of a place called Tārūn (cf. Hoffmann, *Auszüge*, 222) in the territory of the Shams al-Dīnān (Shamdīnān). Sharaf al-Dīn, i, 106-15, traces their arrival back to circa 600/1203. In its heyday the principality comprised a number of adjoining territories (ʿAḳr Shūsh, Dahūk and even Zakho). The later Bahdīnān shifted between the Ṣafawids and the Ottomans and were finally incoporated by the latter, under whom ʿAmādiya was reckoned now to the wilāyat of Wān and now to that of Mawṣil. Since the settlement of the Mosul question in 1926 ʿAmādiya has formed part of ʿIrāḳ.

(M. Streck-[V. Minorsky])

ʿAMAL (A.). 1. *ʿAmal*, performance, action, is usually discussed by the speculative theologians and philosophers only in connection with belief [see ʿILM, IMĀN] or with *ʿilm* and *naẓar*. From Hellenistic tradition was known the definition of philosophy as the "knowledge of the nature of things and the doing of good" (cf. *Mafātīḥ*, ed. van Vloten, 131 f.). Many Muslim thinkers have emphasised the necessity or at least the desirability of this combination (cf. Goldziher, *Kitāb Maʿānī al-Nafs*, 54*-60*). But it is the intellectualism of the Greek philosophy, in ethics also, that explains how nine tenths of the philosophers and mystics influenced by it represented action if not of less importance than at least as dependent on knowledge. Plato placed wisdom (σοφία) as first of his cardinal virtues, the Stoics and Neo-Platonists followed him. Aristotle also esteemed theoretical (dianoetic) virtue higher than ethical. This is the doctrine of the so-called "Theology of Aristotle", that the soul of man is elevated, not through actions but by cognition, to perceive and enjoy the intellectual world.

Different opinions on the relation between knowledge and action are given by al-Tawḥīdī in his *Muḳābasāt*, Cairo 1929, 262 sff. We shall here confine ourselves to the predominantly intellectual conception and take as an example the *Fuṣūṣ*, attributed to al-Fārābī, *Philosophische Abhandlungen*, 72 ff. [Arabic] ed. Dieterici; in reality by Ibn Sīnā, where we find the psychological and metaphysical basis of the author's teaching. He distinguishes three practical faculties of the soul, which are only briefly mentioned and two theoretical, which are discussed more fully. The activity of the vegetable and animal soul is practical as is that of the soul of man, i.e. the reasoning soul, in so far as the latter chooses not only the useful but also the beautiful and prepares itself for the goals placed before it in this life. The theoretical faculties are of a higher rank. Beginning with sensual perception (animal soul) theoretical reason advances beyond the material world and rises to the intellectual sphere. Practical reason is only servile, theoretical however is independent (cf. al-Fārābī's *Musterstaat*, [Arabic] ed. Dieterici, 47).

In conclusion it may be mentioned that the philosophers following Aristotle divided sciences into theoretical (*naẓariyya*) and practical (*ʿamaliyya*). The latter are ethics, economics and politics.

Bibliography: A. J. Wensinck, *The Muslim Creed*, Cambridge 1932, s. index, s.v. *Works*; and Tj. de Boer, *Ethics and Morality* (*Muslim*), in Hastings' *Enc. of Religion and Ethics*.

(Tj. de Boer)

2. *ʿAmal* (and the pl. *aʿmāl*), "that which is practised" and, following the usage of Ḳurʾān and *ḥadīth*, "the works". It is opposed complementarily to *naẓar* [*q.v.*], speculative knowledge, and must be distinguished from *fiʿl* [*q.v.*] (pl. *afʿāl*), acts. *ʿAmal* signifies the moral action in its practical context and, secondarily, the practical domain of "acting". In the terminology of *falsafa*, *al-ʿilm al-ʿamalī* is practical knowledge, which comprises, according to the list given by al-Khwārizmī (*Mafātīḥ al-ʿUlūm*), ethics, domestic economy and politics, thereby reproducing an Aristotelian distinction. This then is a notion which applies to the "foreign sciences". It was used and developed in *falsafa*, particularly in distinguishing the "practical" and the "theoretical intellect". Concurrently, the idea of *ʿamal ṣāliḥ*, a morally good action, synonymous with *maʿrūf*, became current in Islam. But the *Risāla al-Laduniyya* (a text usually attributed to al-Ghazzālī) introduced the distinction between speculative knowledge (here *ʿilmī*) and practical knowledge (*ʿamalī*) as regards revealed knowledge (*ʿilm sharʿī*) itself, and it is canon law (*fiḳh*) which is called an *ʿamalī* science. When works on *kalām* consider the nature of faith (*īmān*) and its relationships to Islām, the "external works" required by the Law are commonly termed *aʿmāl*. Ibn Ḥazm does the same. (*Afʿāl*, on the other hand, is commonly used in order to describe the human acts when discussing the question of free will.) Al-Ghazzālī, especially in the *Iḥyāʾ*, when speaking of the faith, follows the usage of *kalām* with regard to the meaning of the term *ʿamal* and its plural *aʿmāl*. He considers as permissible the following definition: *īmān* is equivalent to the sum of inward assent (*taṣdīḳ*), verbal confession (*ḳawl*) and works (*aʿmāl*).

Bibliography: *Mafātīḥ al-ʿUlūm*, Cairo 1342, 79) *al-Risāla al-Laduniyya*, Cairo 1353/1934, 31; *Iḥyāʾ ʿUlūm al-Dīn*, Cairo 1353, i, 103 ff.; see also the *Fiṣal* of Ibn Ḥazm and the treatises of *kalām*, chap, on *al-asmāʾ wa'l-aḥkām*.

(L. Gardet)

3. *ʿAmal*, "judicial practice". The problem of "jurisprudence" as a source of law has arisen at every period and in every province of Islām. But Morocco has provided the best facilities for studying it, since the discovery there by L. Milliot in 1917 of an *ʿamal* which has regulative force.

In Andalusia, despite controversy, there prevailed a tendency to require judges to follow "practice of Cordova". Jurisprudence entered into compendia of "formularies" (*wathāʾiḳ*), "responsa" (*fatāwā*) and even "regulations" (*ḳawānīn*). Part of this material was incorporated in a late manual, the *Tuḥfa* of Ibn ʿĀṣim (d. 829/1426), which was destined to have

a great success in Morocco, where the evolution was determined by local conditions.

At Fez, the jurisdiction of the *ḳāḍīs* was combined with the action of municipal authorities, and had to take into consideration special customs. The resultant of this complicated procedure, once set down in writing, was precisely the *ʿamal*, which found a recognised place in the system from the end of the 9th/15th century. A short guide to procedure, the *Lāmiyya* of ʿAlī al-Zaḳḳāḳ (d. Shawwāl 912/Feb.-March 1507), expressed already the technical aspect of the problem. *Fiḳh* is above all an "art" in the service of orthodoxy and of urban economy. At the same time, it reflects the difficulties met with in the existence of unusual practices, or even what we should call customary laws. Aḥmad b. al-Ḳāḍī (960 — Ṣafar 1025/1552 — Feb.-March 1611) expounds a Mālikī *ʿamal*. Al-ʿArabī al-Fāsī (6 Shawwāl 488 — 14 Rabīʿ II, 1052/14 Nov. 1588 — 12 July 1642) sanctions the evidence of the *lafīf*, "unsifted" witnesses, which emanates neither from "virtuous men" [cf. ʿADL] nor from professionals, but from the "man in the street", and relies therefore on the inherent integrity of the "group" (*djamāʿa*). This innovation, which was not unconnected with conditions in rural areas, provoked controversy. Similarly the *ṣafḳa* which, by sanctioning the validity of a sale concluded by a joint owner, demonstrated the solidarity of the rural family, was the subject of a work by Maḥammad b. Aḥmad Mayyāra (15 Ramaḍān 999 — 3 Djumādā II, 1072/7 July 1591 — 24 January 1662).

In the second half of the 11th/17th century, ʿAbd al-Raḥmān al-Fāsī (17 Djumādā II 1040-16 Djumādā I 1095/21 Jan. 1631-20 April 1695) collected together several hundred rules in a mnemonic poem called *al-ʿAmal al-Fāsī*. This work, which acquired at least three commentaries, has given its name to a whole class of literature. There is also a "general practice" (*ʿamal muṭlaḳ*), and especially a Southern practice which, being based on an irregular local system, has great documentary value. An important part in its formulation was played by the *ḳāḍī* ʿĪsā al-Suktānī (d. 1062/1652) and by the jurists originating from the old intellectual centres in the Sūs and influenced by the spiritual movement which developed round the *zāwiyas*, such as Dilāʾ and particularly Tamggrūt.

Under the title of "opinions" (*adjwiba*), "judgements" (*aḥkām*) or "precedents" (*nawāzil*), each doctor reproduced and, on occasion, revised the contributions of his predecessors. The lack of criticism of the sources, and the tendency to cover expedient solutions by the cloak of doctrinal pretexts, make it difficult to trace the evolution of ideas, as well as of this voluminous branch of legal literature as a whole. Nevertheless, European scholarship, justly impressed by the continuity and by the practical value of this literature, is inclined to regard it as tending to the creation of a positive law. This thesis has been propounded in a masterly fashion by L. Milliot. On its part, Moroccan exegesis reduces *ʿamal* to a purely technical plane; when local customs require it, the *ḳāḍī* has the right to prefer the "isolated" or "anomalous" opinion (*shādhdh*) to the "predominant" opinion (*mashhūr*). This right, limited by numerous conditions and differentiations, is therefore apt to produce only temporary and isolated solutions. In fact, *ʿamal* is virtually a pragmatic law. But it remains subject to doctrinal criticism which can at any moment revoke it. It is nevertheless of considerable interest to historians, to whom it offers factual information, too often neglected by the chroniclers, and a many-sided documentation on the development of Moroccan law.

Bibliography: Dogmatic theory of jurisprudence: Ḳarāfī, *al-Iḥkām fī Tamyīz al-Fatāwā ʿan al-Aḥkām*, 22nd question; Ibn Farḥūn, *Tabṣira*, Egypt. ed., 1302, i, 45-8. For the early function of "practice", and a comparison between the attitudes of the various schools: J. Schacht, *The origins of Muhammadan jurisprudence*, Oxford 1950, 190 ff.; idem, *Esquise d'une histoire du droit musulman*, Paris 1953, 70 ff. For the literature of jurisprudence in Muslim Spain: Gonzalez Palencia, *Historia de la literature arabigo-española*, Madrid 1945, 280 ff. For the controversy concerning the application of the *ʿamal* of Cordova: Maḳḳari, *Nafḥ al-Tīb*, Dār al-Maʾmūn ed., n.d., v, 33-40. For the history of *ʿamal* in Morocco: Ḥadjdjwī, *al-Fikr al-Sāmī*, iv, Fez, n.d., 226 ff., trans. J. Berque, *Essai sur la méthode juridique maghrébine*, 1944, 120 ff. For late attempts by the Sultan Muḥammad b. ʿAbd Allāh to systematize legal practice: ʿAbbās b. Ibrāhīm, *Iʿlām*, v, 1358, 123 ff. Main works on *ʿamal* in the strict sense: Zaḳḳāḳ, *Lāmiyya*, with a commentary by ʿUmar al-Fāsī, lith., Fez 1306; trans. by Merad ben Ali, with text, and preface by L. Milliot, Casablanca 1927; ʿAbd al-Raḥmān b. ʿAbd al-Ḳādir al-Fāsī, *Al-ʿAmal al-Fāsī*, with a commentary by Sidjilmāsī, lith. Fez, 2nd ed. n.d., and two other editions in 1298 and 1317; Sidjilmāsī Ribāṭī, *al-ʿAmal al-Muṭlaḳ*, lith. Fez 1196 (?), printed ed. Tunis 1290. The most commonly used compendia of jurisprudence are: in the North, the works of Aḥmad b. Yaḥyā al-Wansharīsī (d. 914/1508-9), the compiler of a legal encyclopaedia, the *Miʿyār*; Muḥammad called al-Ḳāḍī al-Miknāsī (835-917/1432-1522); ʿAlī b. Hārūn (d. 951/1545); Yaḥyā al-Sarrādj (d. 1007/1598); ʿAbd al-Ḳādir al-Fāsī (1007-1091/1598-1680); Muḥammad Burdalla (1042-1133/1632-1720); Muḥammad al-Madjdjaṣī (d. 1139/1726-7); ʿAlī b. ʿĪsā al-ʿAlamī (12th/18th century); al-Mahdī al-Wazzānī (1266-1342/1849-1923-4), author of a new *Miʿyār*. In the South: the works of ʿĪsā al-Suktānī; the "Pole" Muḥammad b. Nāṣir al-Darʿī (d. 1085/1674-5); Aḥmad al-ʿAbbāsī (d. 1152/1739-40); Aḥmad al-Rasmūkī (d. 1133/1720-21).

The theory of *ʿamal* as positive law was expounded for the first time by L. Milliot, *Démembrements du habous*, Paris 1918, 23-30, with translation of a passage from Sidjilmāsī's commentary on the *ʿamal*, 109-17; idem, *Recueil de jurisprudence chérifienne*, Paris 1920-23, 3 vol., in section iv of the Introduction; idem, *La conception de l'État et de l'ordre légal dans l'Islam*, Paris 1949, 644-47. The most recent summary of L. Milliot's ideas is contained in his preface to vol. iv of *Recueil de jurisprudence chérifienne*, Paris 1952, v-xix.

For Moroccan doctrines on *ʿamal*: Aḥmad b. ʿAbd al-ʿAzīz al-Hilālī (d. 1175/1761), *Nūr al-Baṣar*, lith. Fez 1309, fasc. i-fasc. ii, 6; al-Mahdī al-Wazzānī, *Ḥāshiya* on the *Lāmiyya*, Cairo 1349, 330-38; idem, *Sharḥ al-ʿAmal al-Fāsī*, lith. Fez n.d. ii, 22-27; Muḥammad al-Ḳādirī, *Rafʿ al-ʿItāb wa 'l-Malām ʿamman ḳāla al-ʿamal bi 'l-daʿīfi ikhtiyāran ḥarām*, n. p. 1308, 7-10, 17-20; Muḥammad al-Ḥadjwī, *Al-Fikr al-Sāmī*, iv, Fez, n.d. 229 ff., trans. J. Berque, *Essai*, 126-29; also cf. *ibid.*, 63 ff.).

(J. BERQUE)

4. *ʿAmal* as a legal and economic term, denotes the labour, as opposed to capital; as such, it occurs in the discussion of a number of contracts, e.g. *idjāra* (hire), *muḍāraba* (or *ḳirāḍ*, sleeping partnership), *musāḳāt* and *muzāraʿa* (agricultural partnerships); [*qq.v.*]. It also denotes the performance of an act or a duty (opp. *niyya*, "intention"); hence Suyūṭī's [*q.v.*] *ʿAmal al-Yawm wa'l-Layla* ("Acts to be performed every day and night"; Brockelmann, II, 190, no. 113), and its Shīʿite counterpart, *Aʿmāl al-Yawm w'al-Layla w'al-Usbūʿ w'al-Shuhūr w'al-Sana* ("Acts to be performed every day and night, week, month and year") by Muḥammad al-Iṣfahānī (Brockelmann, S, II, 795, no. 16), and the tradition *al-aʿmāl bil-niyyāt*, "acts are valid according to the intention" (cf. Goldziher, *Vorlesungen*, 45, *Vorlesungen*², 41). (Ed.)

AMĀLĪ [see TADRĪS].

ʿAMĀLĪḲ (or ʿAMĀLIḲA), the Amalekites of the Bible. Not mentioned in the Ḳurʾān, this ancient people is connected by Muslim literary tradition to the genealogical table in Genesis x, either to Shem (through Lud-Lāwudh or Arpakhshad), or to Ham. They take the place of the Philistines (the people of Djālūt-Goliath) and of the Midianites (Balaam persuaded them to incite the Israelites to debauchery), and the Pharaohs are alleged to be of their race. On the other hand, in the mythical pre-Islamic history of Arabia and in the legendary cycle of the Yamanite migrations, they are listed among the first tribes speaking the Arabic tongue, with Ṭasm, Djadīs and Thamūd. At the time of Hūd, they lived in the Ḥidjāz, but the same prophet is supposed to have preached to them in Babel. Ishmael's first wife, who was repudiated, was an Amalekite. Their moral corruption merited their destruction. The evil deeds of King ʿAmlūḳ belong to the folklore concerning *jus primae noctis*. Joshua fought against them, and the establishment of Jewish tribes at Yathrib is said to be an unforeseen result of the war of extermination waged on them by Jushua's order, but not fully carried out. David also made war on them. Reference is also made to an Amalekite settlement in the Yamāma. Even the confused memories of the Palmyrene empire of Odenathus and Zenobia have been associated with the Amalekites. Nöldeke has clearly shown that apart from the confused biblical references, there is no historical basis to these accounts.

Bibliography: Ibn Hishām, *Sīra*, (Wüstenfeld), 5; *al-Tīdjān*, Hyderabad, 1347/1928, 29 ff., 45 ff.; Ṭabarī, i, 213, 771, 1131; *Aghānī*, iii, 12-3; xiii, 109; xix, 94; Masʿūdī, *Murūdj*, ii, 293; iii, 91-104, 270, 273 ff.; Kisāʾī (I. Eisenberg), 102, 144 ff., 241; Thaʿlabī, *ʿArāʾis al-Madjālis*, Cairo 1370/1951, 62, 82. A useful résumé of most of legends in Caussin de Perceval, *Essai sur l'histoire des Arabes*, Paris 1847, index s.v. Amālica; Th. Nöldeke, *Über die Amalekiter, Orient und Occident*, ii, 614 ff. (printed separately at Göttingen 1864); D. Sidersky, *Les Origines des légendes musulmanes dans le Coran et dans la vie des Prophètes*, 1933, 51-3; G. Wiet, *L'Égypte de Murtadi*, Paris 1953, 22-26. (G. Vajda)

AMĀN, safety, protection, safe conduct, quarter; *mustaʾmin*, the person who has received an *amān*. The term does not occur in the Ḳurʾān; it is derived from sūra ix, 6: "If a Polytheist asks you for *djiwār* (see below), give it to him so that he may hear Allāh's words, then let him go to his place of safety (*maʾman*)" (cf. also sūra xvi, 112). In Muḥammad's letters to the Arab tribes, *amān* (or *amana*) occurs as a synonym of *ʿahd* [*q.v.*], *dhimma* [*q.v.*] and *djiwār*. The institution of *amān* continues, in fact, the pre-Islamic Arab institution of *djiwār* by which a stranger, who was in principle outlawed outside his own group, received for his life and property the protection of a member of a group to which he did not belong, and therefore the protection of the group as a whole (cf. E. Tyan, *Institutions du droit public musulman*, i, 60 ff.). All this goes back to Semitic antiquity (cf. the Hebrew *gēr*). Muḥammad replaced tribal by religious solidarity, and stated in the so-called Constitution of Medina (year 1 or 2 A. H.): "The *dhimma* of Allāh is one and indivisible, and a *djiwār* given by the lowest (of the Believers) engages all" (Ibn Hishām, 342). Similar sayings are reported from the Prophet in traditions (cf. Wensinck, *Handbook*, s.v. *dhimma*, *djār*). The opening passage of sūra ix, of which the verse quoted above forms part, details the scope of the pacts of security, called *ʿahd*, between the Believers and the Polytheists (cf. Blachère, *Le Coran*, trad., ii, 1076). The relevant letters, whether genuine or not, from the Prophet, the first Caliphs and their commanders (cf. M. Hamidullah, *Documents sur la diplomatie musulmane*, Paris 1935, with bibliography) are almost exclusively concerned with the granting of permanent security, which is acquired either by conversion to Islam or by political submission to the Islamic state (cf. AHL AL-DHIMMA); at least one reference to safe conducts for foreign travellers exists (Ibn Saʿd, i/2, 37), but *amān* in its later technical meaning was not, as yet, distinguished from the general concept of *dhimma*. This distinction was made when the religious law of Islam was elaborated.

Amān, in Islamic religious law, is a safe conduct or pledge of security by which a *ḥarbī* or "enemy alien", i.e. a non-Muslim belonging to the *dār al-ḥarb* [*q.v.*], becomes protected by the sanctions of the law in his life and property for a limited period. Every free Muslim, man or woman, who is of age, and according to most doctrines even a slave, is qualified to give a valid *amān*, either to an individual or to a restricted number of *ḥarbīs*. The *imām* alone is qualified to give an *amān* to undetermined groups, such as the population of a whole city or territory, or to all traders. An *amān*, properly given, is valid whether the fundamental state of war exists between the Muslims and the community to which the *ḥarbī* in question belongs, or whether it has for the time being been suspended by treaty or truce. It can be given verbally in any language, or by an intelligible sign. The *mustaʾmin* has the right to go, with his property, to his "place of safety", where he is not exposed to immediate attacks by the Muslims, when his *amān* expires (or earlier), or at the latest one lunar year (according to the Shāfiʿīs: four months) after the grant of the *amān*, unless he prefers to stay in Islamic territory under the status of the *ahl al-dhimma*. Diplomatic envoys who are known or can identify themselves as such, automatically enjoy *amān*; but that is not true of traders or of shipwrecked persons. During his stay in Islamic territory, the *mustaʾmin* is, generally speaking, assimilated to the *dhimmī* as far as civil law is concerned; as regards criminal law, the doctrine hesitates, with many variants on details, between subjecting him to the *ḥadd* punishments applicable to the *dhimmī* or making him only civilly responsible; in any case, if the *mustaʾmin* acts against the interest of the Muslims or otherwise misbehaves, the *imām* may terminate his *amān* and deport him to his "place of safety". The corresponding safe conduct given by the *ḥarbīs* to a Muslim in their territory, is not called *amān* but *idhn* (permission).

In practice, letters of *amān* for individuals are attested from the late Umayyad period (104-108/723-726) onwards. The oldest grants of *amān* proper, given to whole groups for the purpose of travel or trade, are contained in the treaties between the Muslim administrators of Egypt and the Nubians and the Bedja, of 31/651-2 and 104-116/722-734 respectively. Formularies of a later period are found in al-Ḳalḳashandī, *Ṣubḥ al-Aʿshā*, xiii, 321 ff. (summarized in Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 170 f.). Al-Ḳalḳashandī mentions, too, the issue of letters of *amān* by the Muslim political authorities to Muslims and gives examples, mostly from the later period. These are free pardons issued to rebels, and they are, strictly speaking, superfluous or even incompatible with religious law. They were, nevertheless, issued frequently, and the historians provide numerous examples of this kind of *amān*, which was on occasion unscrupulously broken, from the early ʿAbbāsid period onwards. The institution of the regular *amān*, on the other hand, made not only diplomatic relations (cf. M. Canard, *Deux épisodes des relations diplomatiques arabe-byzantines au Xᵉ siècle*, in *B Et. Or.*, xiii, 51-69) but trade between the Islamic and the Christian world down to the middle of the 6th/12th century possible, and letters of *amān* were regularly granted to traders and pilgrims. It has been suggested that the Islamic doctrine of *amān* was elaborated, on an old Arabian and Islamic basis, under the influence of the corresponding rules of Roman Byzantine law. From the end of the 6th/12th century onwards, coinciding with the increase in trade across the Mediterranean, the institution of *amān* was in practice superseded by state treaties between Christian and Islamic powers, which gave the strangers more security and rights. There are natural similarities in details, even the term *amān* is sometimes used in the Arabic versions of the treaties, and the Muslim scholars, when called upon to give *fatwās* on questions arising out of them, naturally thought only in terms of *amān* (cf. A. S. Atiya, *An Unpublished XVIth Century Fatwā*, in *Studien zur Geschichte und Kultur des Nahen und Fernen Ostens* [*P. Kahle Festschrift*], Leiden 1935, 55-68). Nevertheless, these treaties, which later gave rise to the Capitulations [cf. IMTIYĀZ], did not develop out of the Islamic concept of *amān*, but represent a type of treaty which had already come into being between the trading cities of Italy and the Byzantine Empire and the states of the Crusaders (cf. R. Brunschvig, *La Berbérie orientale sous les Ḥafṣides*, i, Paris 1940, 430-40).

(J. SCHACHT)

AMĀN, MĪR, (commonly spelt in English Mir Amman, an Indian writer, born at Delhi, who was active at the beginning of the 19th century at the Fort William College, Calcutta. His fame as a graceful writer of Urdu prose rests almost entirely on *Bāgh o-Bahār*, which is an adaptation of the story of the four Dervishes, entitled *Ḳiṣṣa Çahār Darwīsh* in its Persian original. It was completed in 1217/1802; and thanks to its plain and perspicuous style, has been widely used as a text-book by Western students of Urdu, and has in consequence been repeatedly printed in India. It has also been translated into English by L. F. Smith under the title of *The Tale of the Four Durwesh*, Calcutta 1813. Other translations are due to Duncan Forbes, Hollings and Eastwick. There is also a French translation by Garcin de Tassy: *Bag o Behar, Le jardin et le printemps, poème hindoustani traduite en français*, Paris 1878. Another less known work of Mīr Amman is *Gandj-i Khūbī*, which is a free translation into Urdu of *Akhlaḳ-i Muḥsinī*, an ethical treatise by Ḥusayn Wāʿiẓ Kashifī. The date of its composition is posterior to that of *Bagh o-Bahār*. He was stimulated to this literary activity by the Director of the Fort William College, Dr. J. B. Gilchrist (d. 1841). The writings of Mīr Amān are generally reckoned among those early works which have powerfully contributed to the development of a simple, natural and direct style in Urdu literature.

Mīr Amān occasionally wrote poetry under the poetical name of Luṭf; but he did not excel in it and his *ghazals* seem to have been lost.

AMĀN ALLĀH [see AFGHĀNISTĀN].

AMĀNAT, the poetical name of SAYYID ĀGHĀ ḤASAN (1231-75/1815-58), a poet of Muslim India, in whom the artificiality and conventionality of the Lucknow school of Urdu poetry reached its culminating point. He began by composing *marthiyas* or elegies on the tragic death of Ḥusayn the son of ʿAlī; but soon turned to the *ghazal*. His poetical compositions have been preserved in two collections, viz., *Guldasta-i Amānat*, compiled in 1269/1853, and his *Dīwān*, also known as *Khazā'in al-Faṣāḥa*, collected in 1278 A. H. and published for the first time at Lucknow in 1285 A. H. He also wrote two *wāsokhts*, the second of which is longer (307 stanzas) and of a better literary quality. In the last days of his life, he became inordinately fond of composing

riddles and enigmas, which seem to have afforded him some sort of mental diversion. He is, however, chiefly remembered for his *Indar Sabhā*, a musical comedy, completed in 1270/1853 and published the next year, along with *Sharḥ Indar Sabhā*, lithographed on the margin. It took the Indian public by storm and became the prototype of many similar plays, written by various authors in subsequent years. In the *Sharḥ*, he reproduces the whole story and also describes the action scene by scene, for those unable to see the play on the stage.

AMANUS [see ELMA DAGH].

ʿAMĀRA (47° 13′ E, 31° 50′ N), until 1333/1914 the capital of the Turkish *sandjaḳ* of that name in southern ʿIrāḳ, has been since 1340/1921 the headquarter town of a *liwā* of the ʿIrāḳ kingdom, containing also the dependent *ḳaḍās* of ʿAlī al-Gharbī and Ḳalʿa Ṣāliḥ. Pleasantly situated on the Tigris left bank thirty miles from the nearest Persian hills, and potentially rich from the great flood-canals, the abundant crops of rice and dates, and the sheep-breeding of its half marshy and half corn-land territory, ʿAmāra was founded only in 1279/1862 as a Turkish military post to control the ever warring Banū Lām and Āl Bū Muḥammad tribes. It grew rapidly as a local market and entrepôt, as a centre for the civil administration, as a refuelling station for the river steamers, and as from 1308/1890 as a headquarters for administering the great estates acquired for Sultan ʿAbd al-Ḥamīd II. The town's main population elements were, and are, Shīʿī and (fewer) Sunnī Muslim Arabs, with communities of Chaldaean Christians, of resident Lurs and Persians, of the "Sabaean" silversmiths, and, until 1370/1950, of Jews. Under the British occupation and Mandate (1334/1915 to 1351/1932) and the ʿIrāḳ Government the town has expanded and acquired modern buildings, communications and public services; but the particularly difficult problems presented by this district in tribal administration and land-tenure remain largely unsolved.

Bibliography: For Turkish period, V. Cuinet, *Le Turquie d'Asie*, Paris 1892, iii, 279; S. H. Longrigg, *Four Centuries of Modern ʿIraq*, Oxford 1925: J. G. Lorimer, *Persian Gulf Gazeteer*, iii, Calcutta 1908. For 14th/20th Century, S. H. Longrigg, *ʿIraq 1900-1950*, London 1953. (S. H. LONGRIGG)

AMARKOT, town situated 25° 22′ N and 69° 71′ E, in the Tharparkar district of West Pakistan (population in 1951: 5,142, including 1,957 Muslims), was, according to tradition, founded by a branch of the Sūmra Rādjpūts who embraced Islam during the reign of ʿAlāʾ al-Dīn Khaldjī (694/1294-716/1316). The Sūmras lost the town in 624/1226 to the Soda Rādjpūts, who were expelled in 731/1330 by the Sūmras. In 843/1439 the Sodas again came into power. In 949/1542, Humāyūn, after his defeat by Shīr Shāh, sought refuge in Amarkot with the Soda prince, variously named Bīr Sāl, Prasād or Parsiyā. Akbar was born in Amarkot on 5 Radjab 949/23 Nov. 1542. In 999/1590, when ʿAbd al-Raḥīm Khān Khānān conquered Sind, Amarkot became part of the Mughal Empire, but in 1008/1599 Abu 'l-Ḳāsim Sulṭān, an Arghūn prince, drove out the Mughal commander. In 1149/1736 Nūr Muḥammad Kalhorā, the ruler of Sind, expelled the last Soda chief and took possession of the town. In 1152/1739 Nādir Shāh, on his way back to Persia after the sack of Delhi, forced Nūr Muḥammad into submission. Later one of the Kalhorās sold the fort to the chief of Djodhpūr from whom it was captured by the Tālpūrs in 1228/1813, after which it lost its strategic importance. It passed into British possession with the conquest of Sind in 1843. The old fort in which Akbar was born was demolished by Nūr Muḥammad in 1746, and it was he who built the present fort. The birth-place of Akbar, about half-a-mile to the north-west of the town, is marked by a stone-slab erected in 1898.

AL-**AʿMASH**, ABŪ MUḤAMMAD SULAYMĀN B. MIHRĀN, traditionist and Ḳurʾān "reader". Born in 60/679-680, or 10 Muḥarram 61/10 October 681, of a Persian father, he lived at al-Kūfa and died probably in Rabīʿ I 148/May 765. He received traditions from al-Zuhrī and Anas b. Mālik, and his instructors in *ḳirāʾa*, were: Mudjāhid, al-Nakhaʿī, Yaḥyā b. Waththāb, ʿĀṣim; Ḥamza was his disciple. His "reading", which followed the tradition of Ibn Masʿūd and Ubayy, appeared in the list of "the fourteen".

A great admirer of ʿAlī, he is supposed to have furnished the poet al-Sayyid al-Ḥimyarī [*q.v.*] with the material for the eulogies which he composed in honour of that Caliph.

Bibliography: Ibn Ḳutayba, *Maʿārif*, Cairo 1353/1934, 214, 230, 239; Ibn al-Djazarī, *Ḳurrāʾ*, index; al-Nawawī, *Tahdhīb*, 765; Ibn Abī Dāwūd, *Maṣāḥif*, 91; A. Jeffery, *Materials*, Leiden 1937, 314 ff.; R. Blachère, *Introduction au Coran*, 123, 127. (C. BROCKELMANN-[CH. PELLAT])

AMASYA, town in northern Anatolia and capital of a *wilāyet*. It preserves the name of Amaseia, under which it was known in antiquity (for its ancient history see Pauly-Wissowa, s.v.; F. Cumont, *Studia Pontica*, ii-iii; A. H. M. Jones, *Cities of the Eastern Provinces of the Roman Empire*, index). In 712 it was for a short time occupied by the Arabs (cf. Brooks, in *Journal of Hellenic Studies*, 1898, 193).

In the 11th century Amasya came under the dominion of the Dānishmandids, and was annexed with the rest of their territories by the Rūm Saldjūḳ Ḳılıdj Arslan II. At the division of his kingdom among his sons (588/1193) Amasya fell to Niẓām al-Dīn Arghūn Shāh (Ibn Bībī, ed. Houtsma, 5), but was seized by his brother Rukn al-Dīn Sulaymān. Subsequently it was under Mongol governors, though it came for some time into the hands of Tādj al-Dīn Altıntash, the son of the last Saldjūḳ sultan, Masʿūd II. In 742/1341 it was occupied by Hābil-oghlu, and

then passed under the rule of Eretna and his successors. The *amīr* Ḥādjdjī Shādgeldi seized Amasya from ʿAlī Bey Eretna-oghlu (Astarābādī, *Bazm u-Razm*, 100 ff., 137-40). Subsequently strife broke out between Shādgeldi and his confederate Malik Aḥmad on the one side, and Ḳāḍī Burhān al-Dīn on the other, for the possession of the town (ibidem, 225, 235 ff.). After Shādgeldi's death, his son Aḥmad managed, with the help of the Ottoman sultan Bāyezīd I, to hold Amasya against Burhān al-Dīn; finally it fell into the hands of Bāyezīd. After the latter's capture by Tīmūr, his son, Meḥmed Čelebi, succeeded in escaping to Amasya, from which town he started on his campaign against his brothers. Under Ottoman rule Amasya enjoyed the special favour of the ruling house. Bāyezīd II when crown-prince was the governor of the town; Sulaymān I often stayed in it, and received there the Austrian ambassador, Busbecq. Amasya, which had been a cultural centre already in the Saldjūḳ period, became one of the main seats of learning in Anatolia. In the 17th century it was described by Ewliyā Čelebi and Kātib Čelebi. By the end of the 19th century Amasya, lying on the Samsūn-Sīwās-Kharpūt road, became an important centre of transit traffic; the Samsūn-Sīwās railway was completed in 1930. At the end of the 19th century the town had 25,000-30,000 inhabitants (some of them Armenians), in 1940 13,732 (500 non-Turks); the whole *wilāyet* in 1950 had 163,494 inhabitants. Its economy is based on fruit, silk and textiles.

Amasya is situated on the main arm of the Yeshil Irmaḳ (called Tozanlî or Tokat Suyu), above the confluence of the Tersakan Čay, 400 m. above sea-level, in a narrow and rocky gorge, running from east to west; the gorge widens above and below the town, where its renowned orchards are to be found. The mountain on the right, southern, side of the river is called Farhād Dagh (local legend makes Farhād the founder of Amasya), while that on the opposite side contains the tombs of the kings of antiquity and the fortress. The most populous quarters and the greater part of the old buildings are on the southern side, which suffered greatly from a fire in 1915. The two sides are joined by five bridges.

The fortress, of Hellenistic origin, was restored in the Byzantine, Saldjūḳ and Ottoman periods and is described by Ewliyā Čelebi; now it is in ruins. In the fortress are the ruins of a *medrese* built by Kara Meḥmed Agha (890/1485) and of a school added by his son Muṣṭafā Pasha (917/1511); also ruins of an ʿimāret, a Khalwetī *tekkiye* and two baths. The mosque called Burmalî Mināre was originally a Saldjūḳ foundation; the inscription over the gate bears the name of Kaykhusraw II and the date 634-44/1237-47, but it was repeatedly restored and is now derelict. The same is true of the Gök Medrese, also belonging to the Saldjūḳ period; it was built, together with the adjoining *türbe*, by Sayf al-Dīn Turumtāy, governor of Amasya, in 665/1266-7. Of the Ottoman mosques, those of Bāyezīd Pasha (812/1419), of Yürgüč Pasha (834/1430), of Sultan Bāyezīd (891/1486), of Meḥmed Pasha (891/1486), and the Pazar Djāmiʿi (unknown date) deserve mention. There are, furthermore, a lunatic asylum (708/1308), the *tekkiye* of Pir Ilyās (815/1412), the *medreses* of Ḳapî Aghasi (894/1488) and of Küčük Agha; the *türbes* of Khalīfet Ghāzi (622/1225), of Turumtāy (677/1278), one attributed to Sultan Masʿūd, those of Shādgeldi (783/1381), of „Shehzāde", and of various Ottoman princes: finally the ruins of the palace built for some Ottoman princes (Beyler Sarāyî). The monuments of the town have suffered from the earthquakes of 1734, 1825 and 1939.

Bibliography: Abu 'l-Fidāʾ (Reinaud), ii, 138; Ibn Baṭṭūṭa, ii, 292; Ewliyā Čelebi, ii, 183 ff.; Kātib Čelebi, *Djihān-nümā*, 625 f.; W. J. Haton, *Researches in Asia Minor*, London 1842; H. AMAZĪGH [see berbers].

AMBĀLA, town in East Pandjāb, India, situated 30° 21' N and 76° 52' E, 125 miles from Delhi on the way to Sirhind. The town consists of the old town and the cantonments, four miles away. The population in 1951 was 146,728. Though the neighbourhood of Ambāla played an important role in early Indian history, the town itself is first mentioned in the *Safar-nāma-i Ḳāḍī Taḳī Muttaḳī* (Bidjnawr 1909, 2 ff.), according to which it was occupied by the Muslims at the time of the second invasion of India by Muʿizz al-Dīn b. Sām in 587/1192. Iltutmish (608-33/1211-36) is reported to have appointed a *ḳāḍī* here. In 781/1379 Fīruz Tughluḳ occupied the town together with Sāmāna and Shāhābād. Bābur camped here on his march to Pānīpat for the decisive battle of 933/1526. In 956/1545 Ambāla was the scene of a severe engagement between the Niyāzī insurgents from the Pandjāb and the Pathān troops under Islām Shāh Sūr. During the Mughal period the town was a dependency of Sirhind and was a favourite camping ground of the Mughal sovereigns on their way to Lahore or Kashmīr (the place of the camp is still known as Bādshāhī Bāgh). It was also a centre of cultural activity. Two of its learned men (ʿAbd al-Ḳādir and Nūr Muḥammad) are mentioned in the *Maktūbāt* of Aḥmad Sirhindī (i, no. 284, ii, nos. 56, 63, 94, iii, no. 317). A number of *madrasas* flourished here in the days of Shāhdjahān. Ṣādiḳ Muṭṭalibī, the compiler of the *Ādāb-i ʿĀlamgīrī*, a collection of Awrangzīb's letters, was a native of Ambāla. In 1122/1710 the town was captured by the Sikhs under Banda Bayrāgī. During the anarchy which followed the rout of the Marathās at the hands of Aḥmad Shāh Durrānī in 1175/1761 and the decline of the Mughal empire, it was occupied in 1763 by the Sikh adventurer Sangat Singh. On his death it passed into the hands of his brother-in-law, Dhiyān Singh, who leased it to Gurbakhsh Singh Kabka; on the latter's death in 1198/1783 his widow, Māʾī Dayā Kawr, succeeded him. She was ousted in 1808 by Randjīt Singh, but re-instated by the British a year later. On her death in 1823 the town passed into the possession of the East India Company. During the Mutiny the town remained quiet. In it took place in 1864 the "Ambāla Trials", as an aftermath of the Ambeyla campaign against the followers of Aḥmad Brēlwī. The town is a rail-head, an important military and air base, and has a busy grain market; it is famous for its „durries", or cotton carpets. It has a mosque of the Pathān period and some pillars erected by Shīr Shāh Sūr; also the shrines of Ḥaydar Shāh Lakhkhī and Sāʾīn Tawakkul Shāh, and the congregational mosque, an imitation of the Masdjid al-Aḳṣā, deserve mention.

AMBASSADOR [see elči, rasūl].

AMBON, the central island of the South Moluccas, Indonesia. Nearly one half (ca. 25,000) of the population is Muslim, especially in the northern part. Already before the arrival of the Portuguese (1512 A.D.), Islam had been introduced in Hitu, a supply station for the East Javanese spice trade, and in some other villages; according to local tradition, this was done by chiefs who had traveled to East Java, Pasai and Mecca. After the turbulent times of the 16th and 17th centuries the Muslims have remained a stationary, neglected but prosperous community, where the original language and much of the old costumes are preserved.

AMBRA [see ʿanbar].

ĀMEDDJI (t.), an official of the central administration of the Ottoman Empire; before the *tanẓīmāt*, he was directly subordinate to the *Reʾīs ül-Küttāb*; he made copies of reports written by the latter, and also drafted reports on minor matters; in short, he performed all the clerical duties connected with the office of *Reʾīs ül-Küttāb*. Moreover, he was present at meetings between the *Reʾīs Efendi* and ambassadors, and kept official minutes of the proceedings. He, like the *Beylikdji*, held the title of *Khʷādjagānlïḳ*. The name and origin of this office derives from the Persian word *āmad* meaning "has come, has been obtained", an endorsement on documents acknowledging receipt of the dues payable to the *Reʾīs ül-Küttāb* by newly installed military personnel for their *tïmārs* and *ziʿāmets*. The person making this endorsement was called the *Āmeddji*, and the administrative bureau where the formalities connected with these documents were completed, *Āmedī*. The terms *Āmedī Kātibi* (secretary to the *Āmedī*), and *Āmedī Ḳalemi* (the *Āmedī* department), were also used.

This office seems to have come into being later than the 17th century. After the *tanẓīmāt*, the office of *Āmeddji* increased in importance and was also known as *Āmedī-i Dīwān-i Hümāyūn*: its function was to make copies of the documents sent to the *ṣadāret* by other ministries and administrative departments which required the sanction of the Pādi**sh**āh, after resolutions of the Council of Ministers or the *Ṣadr-i Aʿẓam*; in the case of documents which did not require this formality, its duty was to correct them, register them and send them to the Head Chamberlain; and, on the other hand, to register imperia decrees communicated to the *ṣadāret*. The *Āmeddji* supervised the secretaries whose duty it was to keep the minutes of the Council of Ministers. He was one of the five principal officials of the Sublime Porte; this department was more important and more distinguished than the other departments of the *ṣadāret*. After the proclamation of the Second Constitution, the name *Āmedī-i Dīvān-i Hümāyūn* was changed to Secretariat of the Council and Interpreters' Department, under one official, but later (1912) it was restored. — See also my article in *I.A.* (M. Tayyib Gökbilgin)

AMÉNOKAL, the current spelling of the Berber *amənūkal*, meaning "any political leader not subordinate to anyone else"; it is applied to foreign rulers, to highranking European leaders, and to the male members of certain noble families; in some regions of the Sahara, the title of *amənūkal* is given to the chiefs of small tribal groups, but in the Ahaggar [*q.v.*], it is only conferred on the overlord of a confederation of noble or subject tribes. The *amənūkal* must be selected from among the Ihaggarən nobles, and his nomination is submitted for approval to an assembly of the nobles and the chiefs of the subject tribes; political succession is, in principle, transmitted, according to rules deriving from the matriarchal regime, to the eldest brother of the preceding *amenūkal*, to the eldest son of his maternal aunt or to the eldest son of his eldest sister, but these rules are not always strictly observed. The *amənūkal* has as a sign of rank a drum (*əṭṭebəl*, see Ch. de Foucauld, *Dict.*, iv, 1922-5), and receives tribute from subject tribal groups. His principal role was that of war leader, but in normal times, he applies the criminal law, settles disputes and concerns himself with relations with neighbouring tribes; he is always assisted by the assembly of notables which ratifies his decisions, and can dismiss him.

(Ch. Pellat)

AMGHAR, Berber word corresponding to the Arabic **sh**ay**kh** [*q.v.*], and meaning "an elder (by virtue of age or authority)". Among the Touareg, it applies to chief of a tribal group who acts as an intermediary between the *aménokal* [*q.v.*] and his tribe (see Ch. de Foucauld, *Dict. touareg-français*, Paris 1952, iii, 1237; H. Lhote, *Les Touaregs du Hoggar*, Paris 1944, 157-8), or even to the chief of a confederation (cf. H. Bissuel, *Les Touaregs de l'Ouest* Algiers 1888, 23). In Kabylia (see A. Hanoteau and A. Letourneau, *La Kabylie et les coutumes kabyles*[2], Paris 1893, ii, 9) and among the Imazi**gh**ən of Morocco (see G. Surdon, *Institutions et coutumes berbères du Maghreb*[2], Tangier-Fez 1938, 187-90), the *am**gh**ar* is both the president elected by the *djamāʿa* [*q.v.*] and its executive agent among the tribe or tribal groups which compose it. In the **Sh**lūḥ group in Morocco, the chief elected by the *djamāʿa* has the title of *mḳəddəm* (*muḳaddam*), and the *am**gh**ar* is more particularly the temporal ruler who owes his authority to force and not to regular election (R.

Montagne, *La vie sociale et politique des Berbères* Paris 1931, 78 ff., 94 ff.; G. Surdon, *op. cit.*, 307).

(CH. PELLAT)

ĀMID [see DIYĀR BAKR].

ʿAMĪD (Ar.), title of high officials of the Sāmānid-Ghaznawid administration, which the Saldjūḳids, the inheritors of their institutions and personnel, extended throughout their empire. The word, properly speaking, does not denote a function, but the rank of the class of officials from whom the civil governors, *ʿāmil* (as opposed to the military governors, *sallār*, *shiḥna*), were recruited; thus Sibṭ Ibn al-Djawzī, *Mirʾāt al-Zamān*, MS Paris 1503, 193v: "one of the *ʿumadā*" is appointed governor; the same author, supplemented by Ibn al-Athīr, enables one to follow with considerable accuracy the career of the *ʿumadāʾ* of Baghdād at the time of the Great Saldjūḳs. Some people continued to be known by the title of *ʿamīd* after ceasing to be governor: for instance the *ʿAmīd-Khurāsān* Muḥammad b. Manṣūr al-Nasawī, a celebrated personage under the rule of the Great Saldjūḳs; and (according to Ibn Khallikān) the cultured *wazīr* of the Būyids Ibn al-ʿAmīd derived his usual name from his father's title.

On the other hand Barthold, *Turkestan* 229, has established that the title *ʿamīd al-mulk* was held under the Sāmānids and Ghaznawids by the *ṣāḥib al-barīd*; this is supported by various passages, also in the *Dumyat al-Ḳasr* of Bākharzī; it is possible that the great *wazīr* of Tughril-Beg, ʿAmīd al-Mulk al-Kundurī, began his career in this way. Their former title of *ʿamīd* was perhaps also kept by *wazīrs*; the famous Djayhānī is perhaps a case in point (Ibn Faḍlān, ed. Kratchkovsky, 197b).

Under the Būyids, the word *ʿamīd* is found in compound titles like *ʿamīd al-dawla*, *ʿamīd al-dīn*, *ʿamīd al-djuyūsh*.

In the 6th/12th century the title still sometimes occurs, even at Baghdād, but it was becoming a rarity at a period when the prerogatives of the civil authorities were being curtailed by the military governors. It does not occur under the Mongols.

It does not seem to have spread to other Muslim countries, which only possessed *laḳabs* with *ʿimād*, *ʿumda*.

ʿAMĪD AL-DĪN AL-ABZĀRĪ AL-ANṢĀRĪ, ASʿAD B. NAṢR, minister and poet, hailing from Abzār, south of Shīrāz. He was in the service of Saʿd b. Zangī, *atabeg* of Fārs; was sent by his master as an ambassador to Muḥammad Khwārizmshāh, refused the offers which were made to him, succeeded Rukn al-Dīn Salāḥ Kirmānī as minister and held his position until the death of Saʿd. Saʿd's son and successor, Abū Bakr, had him arrested on the charge of having held a correspondence with the ruler of Khwārizm and of having acted as a spy for him. He was imprisoned in the fortress of Ushkunwān, near Iṣṭakhr and died there at the end of five or six months (Djumādā I or II 624/April June 1227, after having dictated to his son Tādj al-Dīn Muḥammad an Arabic poem of 111 verses (*al-ḳaṣīda al-*Ushkunwāniyya) in which he deplored his misfortunes and which achieved celebrity as a collection of rhetorical figures.

AL-ĀMIDĪ, ʿALĪ B. ABĪ ʿALĪ B. MUḤ. AL-TAGHLABĪ SAYF AL-DĪN), Arab theologian, born at Āmid in 551/1156-7; at first a Ḥanbalite, he later, at Baghdād, entered the ranks of the Shāfiʿites; he embarked on a study of philosophy which he continued in Syria, became a teacher at the *madrasa* of al-Ḳarāfa al-Ṣughrā adjoining the mausoleum of al-Shāfiʿī in Cairo, and in 592/1195-6 became professor at the Djāmiʿ al-Ẓāfirī. His intellectual powers and his knowledge of the "rational sciences" (*ʿaḳliyya*) gave him a brilliant reputation, but caused him to be accused of heresy and to flee to Ḥamāt, where he placed himself at the service of the Ayyūbid sovereign al-Malik al-Manṣūr (615/1218-9); on the death of the latter he was summoned to Damascus by al-Malik al-Muʿaẓẓam who conferred on him the chair of the *madrasa* al-ʿAzīziyya (617 1220-1); he was dismissed from this post after 629/1229 by al-Malik al-Ashraf, for having taught philosophy. He died at Damascus in Ṣafar 631/ November 1233.

His numerous works relate to theology (*Abkār al-Afkār*, in MS, a refutation of philosophers, Muʿtazilites, Sabeans, Manicheans); the sources of the law (*Iḥkām al-Ḥukkām fī Uṣūl al-Aḥkām*, dedicated to al-Muʿaẓẓam, Cairo 1347, summarized in the *Muntahā al-Suʾūl*, Cairo, n.d.); the art of controversy (*al-Djadal*, in MS); and philosophy (*Daḳāʾiḳ al-Ḥaḳāʾiḳ fī 'l-Manṭiḳ*, in MS, *Kashf al-tamwīhāt*, in MS, dedicated to al-Manṣūr and aimed at Ibn Sīnāʾ).

Bibliography: Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, v, 129-30; Ibn Khallikān, Cairo 1948, ii, 455, no. 405; Ibn Abī Uṣaybiʿa, ii, 174; Ibn al-Ḳifṭī, 240-1; al-Nuʿaymī, *al-Dāris*, Damascus 1948-51, i, 362, 389, 393 and ii, 4, 129; Brockelmann, *GAL*, i, 393/494, *S*, i, 678; *Mash*. 1954, 169-81.

(D. SOURDEL)

AL-ʿAMĪDĪ, RUKN AL-DĪN ABŪ ḤĀMID MUḤAMMAD B. MUḤ. AL-SAMARḲANDĪ, Ḥanafī lawyer, d. on 9 Djumādā II 615/3 Sept. 1218 in Bukhārā. His chief merit lies in the art of dialectics, which he treated in his *al-Irshād* and his *al-Ṭarīḳa al-ʿAmīdiyya fi'l-Khilāf wa'l-Djadal* (in MS).

His name is connected with the translation of an Indian work on Yoga, called *Amṛtakuṇḍa*. Of this work there exists an Arabic translation, under the title of *Mirʾāt al-Maʿānī li-Idrāk al-ʿĀlam al-Insānī*, the various MSS of which offer a slightly divergent text. It was published on the basis of five MSS (which are not all those extant) by Yusuf Husain, in *JA*, 1928, 291 ff. Persian and Turkish versions also exist. (Cf. also M. de Guignes, in *Mémoires de l'Académie des Inscriptions et Belles-Lettres*, ancienne série, xxvi, 791; J. Gildemeister, *Script. ar. de rebus indicis*, 115; W. Pertsch, in *Festgruss an Roth*, 1893, 208-12). In the preface a story is told of a certain Bahučara Brahman Yogi, who came from Kamrup (modern Assam) to Lakhnawti under the governorship of ʿAlāʾ al-Dīn ʿAlī b. Mardān (ca. 605/1208) and was converted to Islam by Rukn al-Dīn al-Samarḳandī; Rukn al-Dīn in his turn learned from him the practices of the Yoga, and according to the version in some of the MSS, translated the book into Persian and then into Arabic. The account, which is moreover coupled with another, different one, does not, however, throw full light on the true history of the translation of the work and more especially on al-ʿAmīdī's share in it.

ʿĀMIL (a.) signifies tax-collector, agent, prefect.

ʿĀMIL (pl. *ʿummāl*), active, agent. As the verbal adjective corresponding to *ʿamal* (see ʿAMAL, section 1), *ʿāmil* denotes the Muslim who performs the works demanded by his faith, and is often used in conjunction with the term *ʿālim* (pl. *ʿulamāʾ*, [*q.v.*]) as an epithet of pious scholars. As a technical term, *ʿāmil* denotes (1) the active partner in a society of *muḍāraba* [*q.v.*] or *ḳirāḍ*; (2) the government agent or official, particularly the collector of taxes. In this last meaning, it occurs already in Ḳurʾān, ix, 60, though not yet as a technical term.

The Prophet appointed representatives among the tribes or in the areas under his authority in order to collect the *ṣadaḳāt* [see ZAKĀT] from Muslims and the tribute from non-Muslims; some of them had political and military duties (M. Hamidullah, *Documents sur la diplomatie musulmane*, Cairo 1941, 63, 212; al-Ṭabarī, *Annales*, i, 1758, 1999-2008; Kattānī, *al-Tarātīb al-Idāriyya*, i, 243; Abū Yūsuf, *Kharādj*, Būlāḳ 1302, 46 f.). The *ʿāmil* of Khaybar was sent to receive the Muslims' share of the crop (al-Kattānī, i, 245).

Under the Caliphs of Medina, *ʿāmil* generally meant a provincial governor or administrater (al-(Ṭabarī, i, 2665 f., 2933 f., 2936, 2944; Hamidullah, 224). Among ʿUmar's *ʿummāl* in ʿIrāḳ are mentioned the governor, the ḳāḍī who was also the keeper of the provincial treasury, and two assessors of *kharādj* (Abū Yūsuf, 20 f.; al-Balādhurī, *Ansāb*, v, 29). The commander of the fleet in Syria under ʿUthmān is called *ʿāmil* (al-Ṭabarī, i, 3058). The collectors of *kharādj* and *djizya* [*qq.v*] and administrative officers in the districts (*kūra*), whose main function was the collection of taxes, were also called *ʿummāl* (al-Ṭabarī, i, 3058, 3082-3087; Abū Yūsuf, 59).

In the Umayyad and the early ʿAbbāsid periods, *ʿāmil* continued to be used both of the higher and the lower ranks in the hierarchy of government officials. Under the Umayyads, *ʿāmil* could mean the governor of a province or his lieutenant (al-Ṭabarī, ii, 1481; al-Balādhurī, v, 273; al-Kindī, *Governors*, 63, 65 f.). When finances were separated from other administrative matters, *ʿāmil* tended to be used more especially of the director of finances in the capital of a province, such as Egypt (al-Kindī, 73-75, 84), ʿIrāḳ (al-Ṭabarī, ii, 1305) or Khurāsān (al-Ṭabarī, ii, 1256, 1458). These *ʿummāl* were appointed either by the governors or by the Caliph (al-Kindī, 70-75; al-Ṭabarī, ii, 1305, 1356). Tax collectors in the districts, too, were called *ʿummāl*, as appears from the papyri (A. Grohmann, *Arabic Papyri in the Egyptian Library*, iii, 12 f., 121 ff., 137). ʿUmar ii complained of the grave injustices committed by the *ʿummāl* in Kūfa (al-Ṭabarī, ii, 1366). In Khurāsān, these *ʿummāl* were usually non-Muslims (ibid. 1740), in other provinces they were recruited both from Muslims and non-Muslims (Zaki Hasan, *Les Tulunides*, 213, 248). Occasionally the *ʿāmil was* appointed by the people (al-Ṭabarī, ii, 1481: *ʿāmil al-ḥadar*). There is a mention of an *ʿāmil maʿūna* or chief of the local police (al-Tabarī, iii, 1740).

Under the early ʿAbbāsids, *ʿāmil* could still mean the governor of a province (al-Djahshiyārī, *Wuzarāʾ*, Cairo 1357, 134, 139, 151; al-Balādhurī, v, 402). For Egypt, the *ʿāmil kharādj* was usually appointed by the central government in Baghdād (al-Maḳrīzī, *Khiṭaṭ*, i, 15), though full powers were occasionally given to the governor (al-Kindī, 120, 125). More commonly, however, the term is used of tax collectors in the districts; we hear of an *ʿāmil kūra* (*Rasāʾil al-Bulaghāʾ*, ed. Kurd ʿAlī, iii, 403), of *ʿummāl* al-*Sawād* [see SAWĀD] (al-Djahshiyārī, 134), of *ʿummāl kharādj* (ibid., 93, 233), of *ʿummāl* of a governor and *ʿummāl* of cities (al-Kindī, 194, 200; *Rasāʾil al-Bulaghāʾ*, iii, 86).

By the 4th (10th) century, *ʿāmil* had normally come to mean a finance officer. The *amīr* of a province had beside him an *ʿāmil* (al-Ṣābī, *Wuzarāʾ*, 156), and when the *amīr* and the *ʿāmil* worked together, their power on the province was practically unlimited (Ibn al-Athīr, viii, 165 f.). The local *ʿummāl* (*ʿāmil kūrā*, *ʿāmil ṭassūdj*, *ʿāmil nāḥiya*) were responsible for encouraging agriculture, for keeping irrigation works in order, for collecting revenue, and for submitting balance sheets of their areas (al-Ṣābī, 71, 193, 313, 318; Miskawayh, *Eclipse*, i, 27 f., ii, 23; al-Ṣābī, *Letters*, ed. Arslan, 211). There are also references to *ʿummāl* appointed for specific duties, not all of them purely financial, such as the *ʿāmil maʿāwin*, in charge of the police (Miskawayh, i, 139; combined with *kharādj*, ii, 29), the *ʿāmil masāliḥ*, in charge of the fortified frontier posts (ii, 48), or the *ʿāmil djahbadha*, in charge of the financial administration (Ḳummī, *Taʾrīkh*, 149). Occasionally, a chief *ʿāmil* was represented at the seat of the central government by a *nāʾib* (Miskawayh, i, 324).

The full development of the system of *ʿummāl* is presupposed by the writers on the constitutional law of Islam (*al-aḥkām al-sulṭāniyya*), such as al-Māwardī and Abū Yaʿlā. They distinguish *ʿummāl* (governors) of provinces with full and with limited powers, and *ʿummāl* appointed for specific duties. The *ʿāmil* of a province is appointed by the Caliph, by the *wazīr* or by the governor, and the governor or the *ʿāmil* can appoint *ʿummāl* for the districts.

The same system prevailed under the independent dynasties, with variations in details. Under the Ṭūlūnids and Ikhshīdids in Egypt, most of the tax collectors were Copts (Zaki Hasan, *Les Tulunides*, 213, 248; Kāshif, *The Ikhshidids*, 136 f.). Mention is made of the *ʿāmil al-maʿūna*, the chief of police (Ibn al-Dāya, *al-Mukāfaʾa*, ed. A. Amīn and al-Djārim, 70 f.). The *ʿummāl* of the Fāṭimids in Egypt were supervised by *nāẓirs* and *mushrifs* (al-Maḳrīzī, *Ittiʿāẓ*, 179; *Khiṭaṭ*, iv, 77 f.). The same is true of the *ʿummāl* of the Ayyūbids (Ibn al-Mammātī, *Ḳawānīn al-Dawāwīn*, ed. ʿAzīz Suryāl ʿAṭiyya, 303). Under the Mamlūks, the local *ʿummāl* or *ʿummāl al-bilād* were landlords of villages or local farmers (A. N. Poliak, *Feudalism*, 45 n. 1, 47 n. 1). For the Sāmānids, see Gardīzī, *Zayn al-Akhbār*, Berlin 1951, 51; for the Ghaznawids, Niẓāmī ʿArūḍī, *Čahār Maḳāla*, 48; for the Saldjūḳids, Niẓām al-Mulk, *Siyāsat-nāma*, 28; Balkhī, *Fārs-nāma*, 121; for the Ilkhānids, the Djalāʾirids and the Aḳ Ḳoyunlu, Djuwaynī, *Taʾrīkh-i Djahān-gushāy*, ii, 33; V. Minorsky, in *BSOAS*, ix, 950; A. K. S. Lambton, *Landlord and Peasant in Persia*, 102 f.; for the Tīmūrids, Khʷāndmīr, *Dastūr*, 179; for the Ṣafawids, Minorsky, *Tadhkirat*, fol. 75*b*-76*a*, 82*a*-*b*; Lambton, 116.

In Muslim India, *ʿāmil* at first denoted a governor in charge of the general administration, then came to mean a collector of taxes in a small district (Moreland, *Agrarian System of India*, 270; Lybyer, *Ottoman Government*, 294).

The Ottomans used *ʿāmil* of a tax farmer; later, the term was little used, except occasionally for a

subordinate tax collector in the provinces (Mantran and Sauvaget, *Règlements fiscaux ottomans* 20).

Muslim North Africa and Spain continued the Umayyad usage, and *ʿāmil* meant a governor or administrative officer, responsible for general administration and finance. This continued until the end of the Umayyad Caliphate (Ibn ʿIdhārī, *al-Bayān al-Mughrib*, passim; E. Lévi-Provençal, *Histoire de l'Espagne musulmane*, i, 92).

(A. A. Duri)

ʿĀMIL (A.; pl. *ʿawāmil*), derived from *ʿamila fī* (= to act upon), signifies as a grammatical term a regens, or to express it in the way of the Arabic grammarians a word, which, by the syntactical influence which it exercises on a word that follows, causes a grammatical alteration of the last syllable of the latter, i. e. a change of case or mood. Two kinds of regentia are distinguished, one which can be recognized externally (*lafẓī*) and one which is only to be supposed logically, but which is not expressed (*maʿnawī*).

The *ʿāmil lafẓī* again is of two kinds: (1) the case where it concerns a whole series of mutually dependant words, which can be treated analogously according to the same rule (as for example in the *iḍāfa* construction); (2) the case in which each regens requires special treatment (e. g. *bi*, *lam*); these two sub-divisions are named *ʿāmil ḳiyāsī* and *ʿāmil samāʿī* respectively. It makes no difference whether the regens is expressed as in *ḳāma Zayd*, or whether it must be supplied grammatically from the sentence as a form of the verb, as in *Zayd fi 'l-dār*. Indeed the absence of a regens is a very frequent occurrence in Arabic grammar (cp. al-Zamakhsharī, *al-Mufaṣṣal*, index s. v. *iḍmār ʿāmil*). This case must be distinguished from the complete absence of the regens in the case of the *ʿāmil maʿnawī*, for in this second kind it is impossible to supply the *ʿāmil* grammatically, although it can be done logically; grammarians usually cite as an example the subject of the nominal sentence, whose *ʿamil* cannot possibly be supplied.

Bibliography: Sprenger, *Dict. of techn. terms*, 1045; Djurdjānī, *Kitāb al-Taʿrīfāt* (Flügel), 150; ʿAbd al-Ḳāhir al-Djurdjānī, *Kitāb al-ʿAwāmil al-Miʾa* (ed. Erpenius).

(G. Weil)

ʿĀMILA, an old tribe in North-Western Arabia. The reports concerning their past (al-Ṭabarī, i, 685; *Aghānī*², xi, 155) are unworthy of belief. In the later genealogic system the ʿĀmila are reckoned as belonging to the South-Arabian Kahlān [cf. DJUDHĀM]. At the time of the Muslim invasion we find them settled S. E. of the Dead Sea; they are mentioned among the Syro-Arabian tribes which joined Heraclius (al-Balādhurī, 59; al-Ṭabarī, i, 2347); but do not appear again in the history of the conquest. Shortly afterwards we find them established in Upper Galilee, which is named after them Djabal ʿĀmila (al-Yaʿḳūbī, 327; al-Maḳdisī, 162; al-Hamdānī, 129, 132). They play a very unimportant part and are almost completely absorbed by the Banū Djudhām. ʿAdī b. al-Riḳāʿ, the poet of al-Walīd I, was their chief pride; he celebrated the Djudhāmite Rawḥ b. Zinbāʿ, as the *sayyid* of his tribe (*Aghānī*, viii, 179, 182); and thereby gives a further proof of their small importance. Ibn Durayd (*Ishtiḳāḳ*, 224-5; cf. *ʿIkd*, ii, 86) finds few notable men among them; satire rarely deals with them (e. g. Ḥuṭayʾa, lx). After the 5th/11th the ʿĀmila seem to have spread S. of the Lebanon, in the present district of Bilād al-Shaḳīf which is still called Djabal ʿĀmila (Abu 'l-Fidāʾ, 228; al-Dimashḳī, 221).

According to Yāḳūt, iv, 291, they also occupied a part of the country of the Ismāʿīlīs, a day's journey to the S. of Aleppo, which he says was named after them ʿĀmila Mountain. This isolated reference (cf. *JA*, 1855, i, 48) is the more surprising in that the corresponding text of the *Marāṣid* gives ʿĀmira instead of ʿĀmila. To avoid the difficulty, G. le Strange (*Palestine*, 75) supposes an emigration towards the N. during the crusades, but without giving references. The Arabic historians of this period are ignorant of this change of place, and continue to use the synonymy ʿĀmila-Djalīl (*Recueil des historiens des croisades, Hist. or.*, ii, 88 for *Khalīl* read *Djalīl*; iii, 491, 543). The application to the ʿĀmila of the passage from the Ḳurʾān, lxxxviii, 3, by the poet Djarīr is only a sneer of the Tamīmite who was jealous of the favours enjoyed by Ibn al-Riḳāʿ. The Djabal ʿĀmil(a) in the Lebanon was, and is, an important Shīʿite centre, and several eminent Shīʿite authors bear the *nisba* al-ʿĀmilī. [For further details see MUTAWĀLĪ.]

(H. Lammens-[W. Caskel])

AL-**ʿĀMILI**, Muḥammad b. Ḥusayn Bahāʾ al-Dīn, with the *takhalluṣ* of Bahāʾī, born in 953/1547, died 1030/1621; author of several works in Arabic and Persian, on a variety of subjects. Originating from Djabal ʿĀmila in Syria, he migrated to Persia, and eventually obtained an honoured place at the court of Shāh ʿAbbās. The best-known of his works is the anthology *al-Kashkūl* ("the beggar's bowl"), frequently printed in the East; he also wrote an exposition of Shīʿite *fiḳh* (in Persian), under the title of *Djāmiʿ-i ʿAbbāsī*, and was the author of various works on astronomy and mathematics. As a Persian poet, he distinguished himself by a *mathnawī* called *Nān u-Ḥalwā* which, according to Éthé, formed a sort of introduction to the *Mathnawī* of Djalāl al-Dīn Rūmī. A second *mathnawī* entitled *Shīr u-Shakar*, is less known.

AL-**ʿĀMILĪ**, AL-**ḤURR** [see AL-ḤURR AL-ʿĀMILĪ].

AMĪN, "safe", "secure"; in this and the more frequent form *āmīn* (rarely *āmmīn*, rejected by grammarians) it is used like *āmēn* and (Syriac) *amīn* with Jews and Christians as a confirmation or corroboration of prayers, in the meaning "answer Thou" or "so be it", see examples in al-Mubarrad, *al-Kāmil*, 577 note 6; Ibn al-Djazarī, *al-Nashr*, ii, Cairo 1345, 442 f., 447. Its efficacy is enhanced at especially pious prayers, e.g. those said at the Kaʿba or those said for the welfare of other Muslims, when also the angels are said to say *amīn*. Especially it is said after *sūra* i, without being part of the *sūra*. According to a *ḥadīth* the prophet learned it from Gabriel when he ended that *sūra*, and Bilāl asked the prophet not to forestall him with it. At the *ṣalāt* the *imām* says it loudly or, according to others, faintly after the *fātiḥa*, and the congregation repeats it. It is called God's seal (*ṭābaʿ* or *khātam*) on the believers, because it prevents evil.

(J. Pedersen)

AMĪN (Ar. pl. *umanā*), "trustworthy, in whom one can place one's trust", whence al-Amīn, with the article, as an epithet of Muḥammad in his youth. As a noun, it means "he to whom something is entrusted, overseer, administrator": e.g. *Amīn al-Waḥy*, "he who is entrusted with the revelation", i.e. the angel Gabriel. The word also frequently occurs in titles, e.g. Amīn al-Dawla (e.g. Ibn al-Tilmīdh others), Amīn al-Dīn (c.g. Yāḳūt), Amīn al-Mulk, Amīn al-Salṭana.

In addition to these general and undefined uses of the word *amīn*, there are other more technical uses, of importance in the history of Muslim institutions. Thus *amīn* is used to denote the holders of various positions "of trust". particularly those whose functions entail econimic or financial responsibility. In legal works the word denotes "legal representatives"; under the early ʿAbbāsids the *amīn al-ḥukm* was the officer in charge of the administration of the effects of orphan minors (Tyan, *Organisation judiciaire*, i, 384). In a wider connotation the word applied to treasurers, customs officers, stewards of estates etc. (see Ibn Mammātī, *Ḳawānin al-Dawāwīn* (Atiya), ch. 3, regarding Egypt, and for the West, Lévi-Provençal, *Hist. de l'Espagne Musulmane*, iii, 40, 52; Le Tourneau, *Fès avant le Protectorat*, index, and in particular 299 n. 3; etc.).

The most important technical meaning of the word *amīn* is "head of a trade guild". In this sense the word often has the plural *amīnāt* (Le Tourneau *loc. cit.*). But the use of the word *amīn* in this sense seems to have been always limited to the various countries of the Muslim west; the east, in pre-Ottoman times, preferred in general the term *ʿarīf* [*q.v.*], and, in modern times, has employed a variety of terms. For general information on the heads of trade guilds, and for the bibliography, see ʿARĪF, ṢINF. For the Ottoman period, see EMĪN. (CL. CAHEN)

AL-**AMĪN**, MUḤAMMAD, ʿAbbāsid Caliph, reigned 193-8/809-13. Born in Shawwāl 170/April 787, of Hārūn al-Rashīd and Zubayda, niece of al-Manṣūr, he was thus of pure Hāshimite stock both on his father's and his mother's side; hence he was given priority in the order of succession over his brother ʿAbd Allāh (the future al-Maʾmūn), who was born six months before him but of a slave mother. In fact, the first *bayʿa* as heir to the throne was accorded to him by al-Rashīd in 175/792, when he was barely five years old, and it was not until 183/799 that al-Maʾmūn was designated second successor. The whole question of the double succession was settled with due solemnity by al-Rashīd in 186/802, in the "Meccan documents", designed to eliminate all uncertainty and all conflict between the two heirs: in the first of these documents, al-Amīn acknowledged al-Maʾmūn's right of immediate succession to himself, and his virtually absolute sovereignty over the eastern half of the empire; in the second document, al-Maʾmūn took cognizance of these rights, and declared in his turn his loyalty and obedience to his brother as caliph, whether or not the latter had respected his obligations. The system of obligations and counter-obligations by these documents shows clearly that al-Rashīd recognized the delicacy of the situation created by the double nomination and by the latent conflict between the two brothers (profoundly different both in character and interests), and tried to preserve a precarious equilibrium between them by these juridical and religious formulas.

When al-Rashīd died at Ṭūs, on 3 Djumādā II 193/24 March 809, al-Amīn was recognized as caliph at Baghdād and throughout the empire, while al Maʾmūn hastened to return to his fief of Khurāsān. The following year (194/810) al-Amīn, by suddenly introducing the name of his own son Mūsā in the Friday Prayer after that of al-Maʾmūn, took a step which, without formally violating the Meccan agreement, revealed his intention of setting it aside, by placing alongside his brother a later successor who suited him better. There followed a brisk exchange of diplomatic correspondence between the two brothers (supported respectively by the *wazīr* al-Faḍl b. al-Rabīʿ, and by the future *wazīr* al-Faḍl b. Sahl), the text of which has been preserved by al-Ṭabarī, and which assumed the form of political manoeuvring or a "cold war" between Baghdad and Marw preceding the armed conflict. Al-Amīn tried to entice his brother to Court, to persuade him to give up his right to the control of several important areas of Khurāsān, and to obtain his consent to a modification in the order of succession. The respectful and prudent, but firm, resistance of al-Maʾmūn induced him to precipitate matters and, at the beginning of 195/end of 810, he formally violated the Meccan documents and substituted the name of his own son for that of al-Maʾmūn (and of the third brother al-Ḳāsim, the future al-Muʿtaṣim), as direct heir to the throne. To smash the resistance of al-Maʾmūn, who was declared a rebel, ʿAlī b. ʿĪsā b. Māhān was despatched at the head of an army, an act which marked the commencement of open hostilities between ʿIrāḳ and Khurāsān (Djumādā II 195/March 811).

The war was conducted for al-Maʾmūn by his redoubtable general Ṭāhir b. al-Ḥusayn [*q.v.*]: in the first clash near al-Rayy, the latter defeated and killed ʿAlī b. ʿĪsā, and then ʿAbd al-Raḥmān b. Djabala al-Abnāwī who was sent against him with a second army. The whole province of al-Djibāl fell rapidly into the hands of the Khurasānī troops, against whom al-Amīn vainly flung contingents levied from among the Syrian Arabs. The attempt to use this Arab element as a weapon against the Persian element, which supported al-Maʾmūn en bloc, failed completely, while in Syria grave disorders occurred, and in Baghdād itself, as the result of a coup effected by al-Ḥusayn b. ʿAlī b. ʿĪsā, al-Amīn was temporarily declared deposed and al-Maʾmūn was recognized as caliph; but the attempt failed (Radjab 196/March 812) and al-Amīn, restored to the throne, had to face the Khurasānī armies which were then approaching the capital. Baghdād was invested in Dhu 'l-Ḥidjdja 196/August 812 by two corps under the command of Harthama b. Aʿyan and Ṭāhir, who had meanwhile completed the conquest of Khūzistān; throughout the remainder of the empire (ʿIrāḳ, Mesopotamia, Arabia) al-Amīn's authority waned; he was declared deposed (*makhlūʿ*) and replaced by his brother. Despite this, the desperate defence of the capital lasted for more than a year, during which there grouped themselves around the Caliph the most turbulent social elements of the metropolis (known as "the naked", *ʿurāt*), who in the course of bloody fighting barred the path of the besiegers. The position was not clarified until Muḥarram 198/September 813, when all resistance was overcome and al-Amīn requested Harthama for a safe-conduct. But while he was making his way towards that former loyal general of his father, who had promised him his life, he was intercepted by Ṭāhir's men, who feared that their prey might escape, and was captured and put to death (night of 24 of 25 Muḥarram 198/24-5 September 813). It

appears that al-Maʾmūn was not directly responsible for the murder of his brother which, however, was not unwelcome to him and which left him *de facto* and *de jure* the sole ruler of the empire.

The war between the two brothers has been viewed by some as an aspect of the conflict between Arabism and Iranism at the beginning of the ʿAbbāsid dynasty; in fact, it was primarily a dynastic dispute, although admittedly there were certain ethnic factors in the origin of the two rival brothers and in the deployment of the forces on which they relied for their support; but although Khurāsān and Persia in general supported the al-Maʾmūn bloc, it cannot be asserted that al-Amīn was the conscious champion of Arabism, or that the Arabs were solidly behind him. He had the superficiality and indolence of the hedonist, ignorant of the complexities of political intrigue, and was concerned solely to secure supreme power for himself and his descendants; the policy necessary for the achievement of this aim, conducted, incidentally, without much serious consideration, was less his own work than that of his minister and counsellor al-Faḍl b. al-Rabīʿ [*q.v.*], who is depicted by the sources as his evil genius and who, in the hour of danger, abandoned him to his fate in order to secure a pardon for himself from the victor. The loyalty and obstinate resistance of Baghdād during the siege was not due so much to legitimist and dynastic ideals as to the excessive liberality of the Caliph and to the belligerent instincts of the dregs of the city, who regarded the situation as an opportunity for licence and booty. Thus al-Amīn had no one actually at his side except a small group of courtiers and poets, companions of his debauches, like Abū Nuwās, who remained faithfully at his side until the end and who sincerely lamented his death in his elegies. His memory, in Muslim historiography, is associated with that of the Umayyad Caliphs Yazīd I and Walīd II, who were also libertines and hedonists, but who possessed political and artistic abilities altogether lacking in the frivolous ʿAbbāsid. During the four years of his reign (or three years if the year of the siege is not counted), there is no outstanding administrative or political measure with the exception of the cold (and later hot) war designed to eliminate his brother who, far superior in intellect and political acumen, in the end justly supplanted him.

Bibliography: The chief source is Ṭabarī, iii, 603-974 (summarized in Ibn al-Athīr, vi, 152-207); other sources are Yaʿḳūbī, ii, 493 ff., 524-38; Dīnawarī, 388-96; *Fragmenta Historicorum Arabicorum* (de Goeje), 320-344; Ibn al-Ṭiḳṭaḳā, 291-97; more anecdotal, but valuable for the siege of Baghdād, Masʿūdī, *Murūdj*, vi, 415-87. Western works, apart from general histories of the caliphate, include F. Gabrieli, *Documenti relativi al califfato di al-Amīn in aṭ-Ṭabarī*, in *Rend. Lin.*, 1927, 191-220, idem, *La successione di Hārūn al-Rašīd e la guerra fra al-Amīn e al-Maʾmūn*, in *RSO*, 1928, 341-97.

(F. GABRIELI)

AMĪNA, a legendary wife of Solomon. He one day entrusted to her the ring, on which his dominion and his wisdom depended. She gave it to a demon who had assumed the form of Solomon, and it only returned to the king after many adventures.

Bibliography: Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, 222 ff.

ĀMINA, Muḥammad's mother. Her father was Wahb b. ʿAbd Manāf of the clan of Zuhra of the tribe of Ḳuraysh, and her mother Barra bint ʿAbd al-ʿUzzā of the clan of ʿAbd al-Dār. It is said that she was the ward of her uncle Wuhayb b. ʿAbd Manāf, and that on the day he betrothed her to ʿAbd Allāh b. ʿAbd al-Muṭṭalib he also betrothed his own daughter Hāla to ʿAbd al-Muṭṭalib (Ibn Saʿd, i/1, 58). If this report is correct it may be an example of some forgotten marriage-custom. Āmina seems to have remained with her own family and to have been visited there by ʿAbd Allāh, who is usually said to have died before Muḥammad's birth. So long as Āmina lived, Muḥammad was under her charge, and hence presumably lived with her family (except when sent to a wet-nurse in a nomadic tribe). Āmina's death when Muḥammad was six is said to have taken place at al-Abwāʾ, between Mecca and Medina, as she returned from a visit to Muḥammad's kinsmen there. Though this visit to Medina is mysterious, there are no strong reasons for rejecting the above details. The same is not true of the stories connected with her pregnancy, such as her alleged statement that she saw a light going from her, which lit up the palaces of Buṣra (Bostra) in Syria.

(W. MONTGOMERY WATT)

AMĪR, commander, governor, prince. The term seems to be basically Islamic (Naḳāʾiḍ, 7, 964; Ibn Durayd, Djamhara, iii, 437. In the Ḳurʾān, only the expression *ulu ʾl-amr* is found (sūra iv, 59, 83), but *amīr* occurs often in traditions (cf. Wensinck, *Concordance*, s.v.).

The sources for the early period frequently use the terms *ʿāmil* [*q.v.*] and *amīr* as synonyms (cf. Hamidullah, Documents, 36, 38 and 39, 83). In the reports on the meeting of the *saḳīfa*, *amīr* is used for the head of the Muslim community (Ṭabarī I, 1840, 1841; Ibn Saʿd, II, 3, 126, 129). During the caliphate of Medina, the commanders of armies, and occasionally of divisions of an army were called *amīrs* (or *amīr al-djaysh* or *amīr al-djund*), and so were the governors who were initially the conquering generals (Ṭabarī, *Annales*, I, 1881-4, 2013, 2054, 2532, 2593, 2606, 2634, 2637, 2645, 2662, 2775, 2864, 3057; Kindī, *governors*, 12,13, 31, 32, 300, 302, 305; Hamidullah, 207, 257).

The Umayyads began to distinguish between administrative and financial duties. Yet during most of this period, *amīrs* had full powers, administrative and financial, and felt that their authority in their province was equal to that of the caliph (Ṭabarī, *annales*, II, 75; Kindī, *governors*, 35; Masʿūdī, Murūdj, V, 308-312). The local population in the Eastern provinces saw the *amīr* as a *Katkhudā* (Lord) (Tabarī, II, 1636) or *Shāh* (King) (Ṭabarī, II, 300).

The *amīr* organizes the army and appoints *ʿarīfs* who keep the register of their units, maintain discipline, distribute pay and report incidents. He conducts expeditions personally or through his lieutenants, and concludes agreements. He leads prayers, builds mosques and sees to the establishment of Islam in conquered territories. The administration of justice is usually in his hands and, with a few exceptions, *amīrs* appoint Ḳāḍīs. The amīr maintains peace and order through the prefect of police (*ṣāḥib al-shurṭa*) whom he appoints. He usually has a chamberlain (*ḥādjib*) and a bodyguard. He appoints a postmaster (*ṣāḥib al-barīd*) to report on his subordinates and generally on matters of interest. Representatives (*ʿāmils* or *amīrs*) in

important sub-provinces are appointed with the approval of the Caliph and at times directly by him (Ṭabarī, II, 1140, 1501, 1504).

The *amīr* supervises the mint and strikes silver coins, usually with his name on them. Some *amīrs* were famous for their good dirhams. But the type of currency, its weights and minting places are at times regulated by the caliph.

The *amīr* with full powers is responsible for financial policy. He issues instructions about the time and methods of levying taxes, the measures used and the amounts required. An *amīr* could revise the system of taxation and revise the rates of pay of the troops. The *amīr* pays his troops and officials, provides funds for public works such as the construction and repair of bridges, canals, roads, public buildings and fortresses, and sends the balance of the revenue to Damascus.

The powers of the amīr are greatly reduced, however, when the caliph appoints an *ʿāmil* for the *kharādj*. Ibn al-Ḥabḥāb, *ʿāmil* of Egypt under Hishām, could even have the amīr changed (Kindī, 72, 76; Ibn ʿAbd al-Ḥakam, *Futūḥ miṣr*, 178).

The amir takes the *bayʿa* or oath of allegiance in his province for the caliph or to the heir designate. He may lead a delegation from his province to convey their views to the caliph or to offer their homage. He tries to influence public opinion in his province through tribal chiefs, poets, quṣṣāṣ, or money and threats (Balādhurī, *Ansāb*, IV/ii, 101, 116-7; Pedersen, in *Mélanges Goldziher*, I, 232).

When the *amīr* leaves his province or capital, he appoints a *khalīfa* to represent him (Kindī, 13, 35, 49, 62, 65; Ṭabarī, II, 1140).

Amīrs receive salaries and administrative allowances (*ʿamāla*). Some *amīrs* looked for other sources of wealth such as trade, appropriation of part of the revenue, speculation on the sale of crops taken in taxation, and presents. Some *amīrs* amassed great wealth, and the caliphs tried to bring them to account; this degenerated to a system of torturous investigation at the end of the appointment under the later Umayyads.

The caliph, especially in difficult times, takes the views of the Arabs of the province into consideration when appointing an *amīr* (Balādhurī, *Futūḥ*, 146; Djahshiyārī, 57). A new caliph usually appoints new *amīrs*, especially in the later Umayyad period.

Umayyad administrative traditions were carried by the ʿAbbāsids, but were gradually modified by new tendencies. The ʿAbbāsids created a bureaucracy to replace the tribal aristocracy and stressed centralization.

Amīrs were frequently members of the ʿAbbāsid family, but generally they were members of the bureaucracy, and whereas they were generally Arabs under the Umayyads, many were now Persians and later Turks. The *aṣḥāb al-barīd* now played a prominent role and were expected to report regularly on the actions of the *amīr* and the affairs of the province. The Ḳāḍī, too, became practically independent of the *amīr* since he was appointed directly by the caliph. The *amīr*'s term of office is generally short.

A new official, the *ṣāḥib al-naẓar fi 'l-maẓālim*, is appointed to consider complaints about injustices of the government officials, including the *amīrs*.

Most *amīrs* in the early ʿAbbāsid period continued to be responsible both for civil and financial administration, but soon it become customary to appoint a finance officer (*ʿāmil*) together with the *amīr* (Kindī, 185, 192, 213).

The *amīr* was primarily concerned with maintaining order and ensuring the collection of taxes. *Amīrs* occasionally increased taxes, abolished them or exempted people from paying arrears. Local discontent with the *amīr*, especially when it lead to trouble, was at times investigated and could lead to his dismissal (Djahshiyārī, 99-100; Kindī, 192; *Ṭabarī*, III, 716-721).

New developments took place before the end of the first ʿAbbāsid period. Maʾmūn appointed his brother Abū Isḥāḳ *amīr* of Egypt, but he stayed at the capital and sent two representatives, one for *kharādj* and the other for *ṣalāt*. Absentee *amīrs* in Egypt followed until the rise of the Ṭūlūnids (Kindī, 185 ff.).

Another development was the appearance of *amīrs* who, appointed by the caliph, were given a free hand in their province against payment of tribute. Such *amīrs* established dynasties and limited their relations with the caliph to receiving his *ʿahd* (decree of appointment), reciting his name in the *khuṭba* and striking coins in his name. This was the case of the Aghlabids and the Ṭāhirids. Others shared with the caliph the attributes of sovereignty by adding their own names to his in the *khuṭba* and on gold coins, for instance the Ṭūlūnids, the Ikhshīdids, the Sāmānids and the Ḥamdānids.

We further notice the rise of *amīrs* who conquered their territories by force and then sought the *ʿahd* of the caliph, in order to acquire a legitimate basis of their authority. Such were the Ṣaffārids and the Ghaznawids. These amirs were practically independent. The Buwayhids, *amīrs* by conquest, went even further. They conquered Baghdad, usurped all authority from the caliph and made him their pensioner, appointed *wazīrs*, and interfered with the succession to the caliphate. Only the fact that the Caliph was still considered the source of all political authority by the people prevented the Buwayhids from overthrowing the ʿAbbāsids and made them seek the *ʿahd* from them.

The Umayyads in Spain called themselves *amīrs* until ʿAbd al-Raḥmān al-Nāṣir assumed the title of caliph. Their governors and the governors of the Fāṭimids were called not *amīr* but *wālī*.

Al-Māwardī (d. 422/1031) reflects the full development of the institution. After distinguishing *amīrs* with full powers from *amīrs* with limited powers, he deals with the amīrate acquired by force (*imārat al-istīlāʾ*); he admits this as lawful in order to avoid rebellion and division, on condition that the *ʿahd* given requires the *amīr* to follow the *sharīʿa* (cf. Gibb in Isl. Cult., 1937).

On the other hand, during the 4th/10th and 5th/11th centuries the traditional bureaucratic administration collapsed and was replaced by the rule of the military. This influenced the status of the amīrate, and under the *Saldjūḳs*, the Ayyūbids and the Mamlūks, the title *amīr* was given to military officers of all ranks (also to the smaller Saldjūḳ princes). Ibn Djamāʿa (d. 733/1333) reflects this development when he states that in his days *amīrs* were commanders who were given fiefs in order to maintain their troops, and that their primary duties were military (Isl. III, 367).

Bibliography: the main literary source for the ancient period is Ṭabarī, *Annales*, supplemented by the other historians, in particular Balādhurī, Ibn ʿAkd al-Ḥakam, Kindī Maḳrīzī and Ḳalḳashandī; the primary archaeological sources are the coins and (for Egypt under the Umayyads) the papyri. See also A. A. Dūrī, *al-Nuẓum al-islāmiyya*, and the references given in the text. (A. A. Duri)

AL-ĀMIR BI-AḤKĀM ALLĀH ABŪ ʿALĪ AL-MANṢŪR, the tenth Fāṭimid caliph, b. 13 Muḥarram 490/31 Dec. 1096. He was proclaimed caliph as a mere child of five by the vizier al-Afḍal on the death of his father al-Mustaʿlī (14 Ṣafar 495/8 Dec. 1101). For the next twenty years the government was in the hands of al-Afḍal [*q.v.*]. In 515/1121 al-Afḍal was assassinated by Nizārī emissaries, but the caliph was accused of complicity. Al-Maʾmūn b. al-Baṭāʾiḥī [*q.v.*] was made vizier, but was in his turn imprisoned on 4 Ramaḍān 519/1125 (and executed three years later). No new vizier was appointed, but the Christian chief collector of revenue, Abū Nadjāḥ b. Ḳannāʾ, exercised great influence until his arrest and execution in 523/1129-30.

During al-Afḍal's vizierate a certain activity was shown against the crusaders and various expeditions were undertaken, under the command of Saʿd al-Dawla al-Ṭawāshī (495/1101); Sharaf al-Maʿālī, al-Afḍal's son (496/1102); Tādj al-ʿAdjam and Ibn Ḳādūs (497/1103); Djamāl al-Mulk (498/1104); Sanāʾ al-Mulk al-Ḥusayn, another son of al-Afḍal (499/1105); and later under that of al-Aʿazz (505/1112) and Masʿūd (506/1113). (The main base in Palestine was ʿAsḳalān). Nevertheless, the greater part of Palestine and the Syrian coast fell into the hand of the crusaders; Ṭarṭūs, 495/1102; ʿAkkā, 497/1103; Ṭarāblus, 502/1109 [cf. ʿAMMĀRIDS]; Ṣaydā, 504/1111; Ṣūr, 518/1124). Egypt itself was invaded in 511/1117 by Baldwin, king of Jerusalem, who took Faramā and reached Tinnīs; he was, however, forced to retreat because of his illness and died on the way.

A noteworthy event was the invasion by the Luwāta in 517/1123, who reached as far as Alexandria, but were repelled by al-Maʾmūn.

During the reign of al-Āmir the Nizārī schism, which caused the Fāṭimids to lose the support of the greater part of the Ismāʿīlī "diaspora", threatened Egypt itself. Al-Maʾmūn had to take police measures in order to prevent the infiltration of their agents, and a great public demonstration was held in Cairo (Shawwāl 516/1122) in order to publicize the falsity of the Nizārī claims and the legality of the Mustaʿlian line. A document issued on this occasion has been preserved under the title of *al-Hidāya al-Āmiriyya* (ed. A. A. A. Fyzee, Oxford 1938).

In 524/1130 a heir, named al-Ṭayyib, was born to al-Āmir; his fate, however, is shrouded in obscurity. On 2 Dhu 'l-Ḳaʿda 524/8 Oct. 1130 the caliph was assassinated by Nizārīs and a period of *coups d'état* followed [cf. AL-AFḌAL KUTAYFĀT, AL-ḤĀFIẒ].

(S. M. STERN)

ʿĀMIR, the name of a South Arabian tribe [see DJAʿDA].

BANŪ **ʿĀMIR** (BENI AMOR), a camel- and cattle-owning nomadic tribe, pop. approx. 60,000, in Western Eritrea and the adjacent area of the Sudan. The tribe is divided into 17 sections, some speaking Bedja (a hamitic language) others Tigrē (a semitic one), though there is a firm tradition of common descent, traced in considerable detail to the ancestor ʿĀmir, some 10 generations ago. This applies only to the small ruling caste (*nabtāb*), not to the heterogeneous and much more numerous serf population (called *hedareb* or *tigrē*), which seems to have come under Banī ʿĀmir domination at different times, either through conquest or voluntary submission. A few serf groups are subject only to the Paramount Chief, while the large majority live in hereditary bondage to particular *nabtāb* families, tributary to them and charged with all the menial tasks, especially herding and milking. The masters, in turn, are bound to protect their serfs and care for their welfare. Though tempered by personal loyalties, the caste division is kept rigid by the prohibition of intermarriage and by certain taboos imposed on the serfs. Formerly there was also a class of slaves, who were the absolute property of their masters.

The whole tribe is Muslim, though the purity of the belief and adherence to observances vary widely not only individually but among the sections. Their political unity is a tenuous one, resting on a loose federation not infrequently threatened by secession. Tribal government is in the hands of a paramount chief (*diglāl*) and a council of headmen (*sherfaf*) elected by the different sections. Formerly elective, the chief's office became hereditary in 1829, and since 1897 separate chiefs, though close kin, have been ruling over the Eritrean and Sudanese branches of the tribe.

The relations of the tribe with neighbouring groups were, and still are, marked by frequent raids and blood feuds. Though internal conflicts were not infrequent they never followed class lines. The modern political and economic changes, however, which seriously weakened *nabtāb* prestige, also caused the serfs to show signs of restiveness, visible in sporadic acts of lawlessness and 'passive resistance'.

ʿĀMIR I. (al-Malik al-Ẓāfir Ṣalāḥ al-Dīn) founded in Yemen the dynasty of the Banū Ṭāhir, after the fall of that of the Rasūlids about the year 855/1451 in conjunction with his brother ʿAlī (al-Malik al-Mudjāhid Shams al-Dīn). He lost his life during an unsuccessful attempt to capture the town of Ṣanʿāʾ in 870/1466.

Bibliography: see the following art.

ʿĀMIR II. (b. ʿAbd al-Wahhāb, al-Malik al-Ẓāfir Ṣalāḥ al-Dīn), was the last prince of the house of the Banū Ṭāhir; he ruled in Yemen 894/1488-923/1517. Already in 922/1516, the Egyptian admiral Ḥusayn occupied the capital of Yemen, Zabīd, because ʿĀmir refused to supply the fleet sent out against the Portuguese with provisions. Ḥusayn left his brother Barsbay behind in the city; and in the following year ʿĀmir, who had taken flight together with his brother ʿAbd al-Malik, fell in a battle with Barsbay. As in the interval the Mamlūk dynasty had been overthrown by Selīm, the Ottoman Sultan, Yemen also fell into the power of the Ottomans.

Bibliography: Ḳuṭb al-Dīn, in *Notices et Extraits*, iv, 421; C. Th. Johannsen, *Historia Jemanae*, 1828, 186 f., 229 f.; Weil, *Gesch. d. Chalifen*, v, 398 f.; Zambaur 121, O. Löfgren, *Arab. Texte zur Kenntnis der Stadt Aden*, index; Khalīl Edhem, *Düwel-i Islāmiyye*, 133 f.

ʿĀMIR b. ʿABD al-ḲAYS (later ʿAbd Allāh al-ʿANBARĪ, *tābiʿī* and ascetic of Baṣra. His way of life attracted the attention of the agent of ʿUthmān, Ḥumrān b. Abān, who denounced him to the Caliph; ʿĀmir was interrogated by ʿAbd Allāh b. ʿĀmir and exiled to Damascus where he died, probably during the caliphate of Muʿāwiya. His way of life seems to have consisted of various kinds of abstinence (he despised wealth and women) and pious works, and it is possible that the measures taken against him were dictated by the desire to prevent the advocacy of celibacy at a time when Islam needed fighting men; Ibn Ḳutayba, *Maʿārif*, 194, states on the other hand that his puritanism led to his being suspected of Khāridjism, even though these events happened between 29-35/650-6. In the eyes of posterity, ʿĀmir b. ʿAbd al-Ḳays is not only an eloquent man whose sayings have been preserved, but Ṣūfism, which includes him among the "eight" principal *zuhhād*, still recognizes him as a forerunner and attributes to him a number of miracles.

(Ch. Pellat)

ʿĀMIR b. ṢAʿṢAʿA, a large group of tribes in Western Central Arabia. It is mentioned first in a South Arabian inscription of Abraha in 547 or 544-45 (G. Ryckmans, No. 506, in *Le Muséon*, 1953; J. Ryckmans, ibid., 339-42; Caskel, *Entdeckungen in Arabien*, 1954, 27-31). Judging by that inscription and by the later area of the ʿĀmir, their original area began to the west of the Turaba oasis and extended towards the east, past Ranya, to the upland south of the Riyāḍ-Mecca road. Here it ended at about the 44th degree of longitude, but the north-western borderline can not be ascertained. From this area the tribe of Kilāb (b. Rabīʿa b. ʿĀmir) advanced to the north and northwest into that territory in which the *ḥimā* Ḍariyya [*q.v.*] was later founded, and into the adjacent southern district as far as Siyy to the west; the tribe of Kaʿb (b. Rabīʿa b. ʿĀmir) advanced to the east and northeast into the southern Ṭuwayḳ. Only the Hilāl (b. ʿĀmir) never left their territory, Ḥarrat Banī Hilāl = Ḥarrat al-Nawāṣif. Earlier inhabitants of the *Ḥimā*, such as a part of the Muḥārib, the Ghanī and the Numayr (who are counted among the ʿĀmir in later genealogies, cf. however ʿĀmir b. al-Ṭufayl, xiii, 1) became more or less dependent on the Kilāb, whilst the Kaʿb assimilated the little-known inhabitants of the Ṭuwayḳ oases, and later on settled there themselves, particularly the sub-tribes of Djaʿda and Ḥarīsh. Of the sub-tribes of the Kilāb, the Ḍibāb migrated between the centre of the *Ḥimā* and their old villages near Turaba, the ʿAbd Allāh along what is today known as ʿArḳ al-Subayʿ, the Abū Bakr migrated from the southern *Ḥimā* in a south-easterly direction to Karish = Ḳarsh on the Riyāḍ-Mecca road, and the ʿAmr from the south-eastern *Ḥimā* to Damkh, whence both turned to the southwest into the above mentioned upland. The sub-tribes of Kaʿb also migrated between their old and their new areas: the Ḳushayr north of the Wādī Birk (= Birḳ)-Surra towards the road, the ʿAdjlān went there along that Wādī, the ʿUḳayl migrated from the Wādī Dawāsir-Wādī Ranya northwards to the upland, but they also went south in the direction of Nadjrān. Thus the two areas of migration touched along a considerable stretch. This fact and also the fact their migrating areas were large, explains the remarkable solidarity of the Kaʿb and the Kilāb, while their internal unity, as usual, left much to be desired. The Kilāb had the Ribāb and Tamīm as neighbours in the east, the Asad in the northeast and tribes of the Ghaṭafān in the north and northwest. There was a latent state of war with all these, whilst relationships with the Sulaym, and especially the Hawāzin, in the south-west were amicable. To the south, Kilāb and Kaʿb had a feud with the tribes on the border, especially with the Khathʿam, but also with South Arabian tribes like the Murād, Ṣudāʾ and Djuʿfī (of Saʿd al-ʿAshīra) which had been bedouinized for some time and were pressing towards the north. They did, however, live in peace with the Bal-Ḥārith b. Kaʿb and their satellites Nahd and Djarm in the Nadjrān region, until that peace was broken by ʿĀmir b. al-Ṭufayl's marauding expeditions. Noteworthy among the "days" of ʿĀmir are the battle of Shiʿb Djabala (on the eastern border of the *Ḥimā*), where they repulsed an army of Asad, Dhubyān and Dārim-Tamīm ca. 580).

The house of Djaʿfar (rather a family than a subtribe before the times of Islam) had some vague authority over the Kilāb. It held this position thanks to a pact with the ʿAmr b. ʿĀmir (b. Rabīʿa, according to the later genealogy a "brother" of the Kilāb and Kaʿb), without always being a match for the Abū Bakr, the strongest Kilāb tribe.

The ʿĀmir, as Ḥums [*q.v.*], were on good terms with the inhabitants of Mecca. Nevertheless, the relations with the rising community of the Muslims in Medina were peaceful, since both were opposed to the Ghaṭafān. These relations were not seriously threatened—not even by the incident of Biʾr Maʿūna —until the prophet demanded not only the political, but also the religious, union of the tribes. In 629, a gang of marauding Muslims penetrated as far as Siyy; soon afterwards, the head of the older line of the Djaʿfar, ʿAlḳama b. ʿUlātha, embraced Islam. ʿĀmir b. al-Ṭufayl, however, his opponent, remained unregenerate. After Muḥammad's victory over the Hawāzin near Ḥunayn (8/630), the ʿĀmir effected their union without further friction. There was hardly any fighting against the ʿĀmir in the *ridda*.

The part played in the wars of conquest by the ʿĀmir was not considerable. Yet the ʿUḳayl reached Spain with the Syrian armies, and the Djaʿda and Ḳushayr reached Persia with those of Kūfa and Baṣra. Other groups followed after the conquests.

Some ʿĀmir settled in Northern Syria and others on the far side of the Euphrates. There they settled on the land, whilst those on this side of the Euphrates slowly reverted to a nomad existence. Here we meet of the old units of ʿĀmir: Kilāb, Ḳus̲h̲ayr, ʿAd̲j̲lān, ʿUḳayl, as well as Numayr. The Kilāb remained on the Syrian side. From them sprang the Mirdāsid [*q.v.*] dynasty. The Numayr and ʿUḳayl, however, went over to the D̲j̲azīra between 940 and 955. Some decades later, their leaders attained political power there [cf. NUMAYRIDS, ʿUKAYLIDS].

There was little immediate change amongst those ʿĀmir who had stayed in Arabia. Through the establishing of the *Ḥimā*, the existing dissensions between the D̲j̲aʿfar on the one side and the Ḍibāb and Abū Bakr on the other grew worse, while the ʿUḳayl temporarily occupied areas near Bīs̲h̲a and Tat̲h̲līt̲h̲ which had been left empty after emigration. Larger displacements did not occur until after the first ʿAbbāsids. The Ḳus̲h̲ayr advanced into the steppes to the northwest until the Numayr stopped them. The Kilāb were also concerned, in the Central Arabian risings shortly before the middle of the 9th century (defeated 846). After the annihilation of the Numayr (847), the Kilāb began to advance from the west, and the ʿUḳayl from the south, into areas which had been swamped by the former for so long. The expeditions of the East-Arabian Ḳarmaṭians started a new wave of migrations: in the east, the K̲h̲afād̲j̲a [*q.v.*]—ʿUḳayl and later the Muntafiḳ [*q.v.*], reached ʿIrāḳ, the ʿUḳayl in the west reached Palestine, and the Kilāb Transjordania.

There were no important poets among the Kilāb before the last quarter of the 6th century (Labīd, ʿĀmir b. al-Ṭufayl); among the Kaʿb until shortly before the *hid̲j̲ra* (al-Nābig̲h̲a al-Djaʿdī). Of the poets of early Islam Ṭahmān must be mentioned among the Kilāb, Ibn Muḳbil al-ʿAd̲j̲lānī and Muzāḥim al-ʿUḳaylī among the Kaʿb.

Bibliography: The *diwāns* of the poets mentioned above [cf. articles on each]; *Naḳāʾiḍ D̲j̲arīr wa'l-Farazdaḳ*, ed. Bevan, passim; Wāḳidi, transl. Wellhausen, 308; Wellhausen, *Skizzen*, iv, 115, 142-6; the Arabic Geographers; Max Freiherr von Oppenheim, *Die Beduinen*, i, 58 f., 222-7, 281, ii, 174, iii, 12-8, 127-32, 208 ff. [Cf. also HILĀL, ḲUS̲H̲AYR, NUMAYR, ʿUḲAYL.]

(W. CASKEL)

ʿĀMIR B. AL-ṬUFAYL, ancient Arab hero and poet, sprung from the Mālik, the younger line of the D̲j̲aʿfar b. Kilāb, belonging to ʿĀmir b. Ṣaʿṣaʿa. In the nineties and past the threshold of the 7th century he took part in many marauding expeditions, sometimes leading his own men. After the death of his father, who appears to have fallen in the south fighting against the K̲h̲at̲h̲ʿam, he took over the conduct of the war until the loss of an eye at the battle of Fayf al-Rīḥ (against the K̲h̲at̲h̲ʿam, ca. 614) rendered him unsuited for this post. In the beginning he suffered some setbacks, and he himself lost eight or nine of his relatives. In one battle other tribes of the ʿĀmir b. Ṣaʿṣaʿa must have suffered grievously, for bitter reproaches were made to him from their side. The unfortunate result of Fayf al-Rīḥ was not his fault; nevertheless the D̲j̲aʿfar held him responsible for the loss of men and horses. It is possible that this dissension formed the basis for the legal contest, or the struggle for precedence, which brook out a short time after between ʿĀmir and the head of the older line, ʿAlḳama b. ʿUlāt̲h̲a. Though the arbiter gave no verdict, ʿĀmir recovered his good reputation through this suit; the poet al-Aʿs̲h̲ā seems to have provided essential help in accomplishing this. After the death of his uncle ʿĀmir Abū Barāʾ (ca. 4-5/624-5), he became, formally, the head of the D̲j̲aʿfar, the mightiest Bedouin leader of Central Arabia, as before he had been the greatest warrior.

Legend connects ʿĀmir several times with the Prophet and depicts him as his bitterest Bedouin opponent. He is supposed to have attacked Muslim missionaries treacherously at Biʾr Maʿūna and have organised a plot to assassinate the Prophet. This is true to the extent that he did not submit to the sovereignty of Medina and died a heathen, probably shortly before the taking of Mecca. The accusation of treachery goes back to an exchange of *hid̲j̲āʾ* between the poets of Medina and those of the D̲j̲aʿfar (the verses of whom have been lost or suppressed). In this ʿĀmir was accused of occasioning the catastrophe of Maʿūna by breaking the covenant of protection. It is true that there was an engagement of protection entered into by his uncle, only that ʿĀmir could not fulfil it among the Sulaym, who had killed the "holy band", in reality a pillaging expedition; cf. Lyall, *Diwāns*, 84-91.

The fragmentary impression left by the *diwān* of ʿĀmir is caused not only by the unsatisfactory tradition. ʿĀmir appears really to have cultivated only the small forms of *fak̲h̲r* and *hid̲j̲āʾ*. In the case of no. 29 he created a perfect work of art through expansion of a framework which also occurs elsewhere; no. 11 is moving through its humanity, the complaint about the loss of his eye. In no. 16 he shows himself, uplifted by a recently won victory, equal to the hurtful scorn of al-Nābig̲h̲a.

Sir Charles Lyall, 1913; Aʿs̲h̲ā (Geyer), nos. 18,19; Labīd (Brockelmann), nos. 45, 51; *Mufaḍḍaliyyāt* (Lyall), no. 5; *Ag̲h̲ānī*[2], xv, 50-4, 132; Ibn al-At̲h̲īr, i, 482 f., 484 f.; Ibn ʿAbd Rabbih, *ʿIḳd*, iii, *ayyām*, nos. 15, 16; *Mufaḍḍaliyyat*, 30-4, 704 ff.; *Naḳāʾiḍ* (Bevan), 469-72 and index. (The prose texts have no independent historical value and can serve only in helping to understand the poems.)

(W. CASKEL)

AMĪR ĀK̲H̲ŪR, in Persian MĪR ĀK̲H̲ŪR, "high equerry", one of the highest officials in the court of Oriental princes. Under the Mamlūks the *amīr āk̲h̲ūr* was the supervisor of the royal stables. He was generally an *amīr* of a thousand and had under his orders three *amīrs* of fourty. In the Circassian period he occupied the fourth place among the grand *amīrs*, cf. A. N. Poliak, *Feudalism in Egypt, Syria, etc.*, London 1939, 30; D. Ayalon, *Studies on the Structure of the Mamluk Army*, *BSOAS*, 1954, 63, 68.

(D. AYALON)

AMĪR ʿALĪ, SAYYID (1849-1928), Indian jurist and writer, descended from a Shīʿite family which had come from K̲h̲urāsān with Nādir S̲h̲āh and remained in India, finding service with successively the Mug̲h̲al and Āwad̲h̲ courts and finally the East India Company. He was educated at the Muḥsiniyya ("Hooghly") College near Calcutta, where he learned Arabic and also came into close contact with the English and their literature, as well as studying their law (see his *Memoirs*, in *IC*, 1931-2). He was in England in 1869-73, being called to the Bar in 1873, and settled there permanently with his English wife (née Isabelle Ida Konstam) on retirement from the Bengal High Court in 1904. His activities were significant in many fields: as a professor of

Islamic Law, at the Bar, on the Bench, in social service, government administration, politics, and as a writer. Some of his works became, and have remained, standard authorities for Anglo-Mohammedan Law. In 1883 he became one of the three Indian members (and the only Muslim) on the Viceroy's Council, and in 1909 he was appointed the first Indian member of the Judicial Committee of the Privy Council in London. In the field of social service he sponsored a juvenile reformatory in ʿAlīpur (Calcutta), and in London he was a protagonist in the British Red Crescent Society.

On the political front he founded in 1877 a "National Mahommedan [*sic*] Association", which presently was a nation-wide organization with 34 branches from Madras to Karachi; its programme was "primarily to promote good feeling and fellowship between the Indian races and creeds, at the same time to protect and safeguard Mahommedan interests and help their political training" (*Memoirs*, 1932, 10). Amīr ʿAlī sensed, expressed and fostered a nascent political self-consciousness in Indian Islām, disagreeing with the then conviction of Sir Sayyid Aḥmad Khān [see AḤMAD KHĀN] as to the adequacy of modern (western) education for the Indian-Muslim community as a guarantee of its position in the country. After moving to England he was instrumental in setting up the London branch of the Muslim League (speech in *IC*, 1932, 335 ff.); his loyalty to and real affection for Britain led him, however, to resign in 1913 when the League joined with the Indian National Congress in talk of "Home Rule." He was involved in negotiations in London over the projects for political reforms in India. After the First World War he came into prominence as London champion of the *khilāfat* movement; a letter to ʿIṣmet Pasha signed by him and the Agha Khān, being published in Istanbul before reaching the government in Ankara, roused drastic opposition in Turkey, where the *khilāfa* was presently abolished altogether.

It is, however, as a writer that his basic contribution was made. While a student at the Inner Temple, he wrote in answer to a western account of Islam a study of Muḥammad's life and message, which was published in London (1873). This became the basis of a developing work which he subsequently kept revising and republishing throughout his life, under the eventual title of *The Spirit of Islam* (editions in 1891, 1922, 1953). This liberal modernist interpretation of Islam was favourably received and has remained influential in the West; its influence in the Muslim world, not least outside of India, has also been marked, and it has been translated into Turkish.

His other major book (apart from legal works), *A Short History of the Saracens* (London 1899; 10th repr. (revised) 1951; also in Urdu transl.), also contributed to a new attitude towards the Islamic past on the part of many, both western and Muslim. These two books, and the other smaller presentations on Islam which he proferred, were supplemented by a steady stream of articles, both in India and especially in Britain (chiefly in the *Nineteenth Century*), in which he pleaded the cause of Islam before the bar of world opinion. His historical significance lies in considerable part in his role in the creation of favourable appreciation of Islam in the West, and perhaps also in awakening or facilitating such a favourable appreciation of Islam among westernized Muslims.

Bibliography: In addition to works mentioned in the article; Bibliography of Amīr ʿAlī's writings, by W. C. Smith, *Islamic Review*, London; *Eminent Mussulmans*, Madras c. 1922, 145-76; W. C. Smith, *Modern Islām in India*², London 1947, index; H. R. A. Gibb, *Modern Trends in Islam*, Chicago 1947, index. (W. CANTWELL SMITH)

AMĪR DĀD, "*amīr* of justice", minister of justice during the Saldjūḳ rule, especially in Asia Minor; other *amīrs* bore this name as a fixed title (cf. Ibn al-Athīr, index s.v.).

AMĪR AL-ḤĀDJDJ, leader of the caravan of pilgrims to Mecca. In 9/630, after which date non-Muslims were excluded from the *ḥadjdj*, the Prophet nominated Abū Bakr to conduct the pilgrimage and to prevent pagans from taking part in it. In 10/631 he presided over it himself. Thereafter this duty belonged directly to the caliphs, who either undertook it themselves or nominated an official to act in their place (e.g. the Governor of Mecca or Medina, a high official etc.). When the authority of the Caliph was disputed, there were sometimes several rival leaders of pilgrimages to the Holy Places (e.g. in 68/688 there were four, of whom one was ʿAbd Allāh b. Zubayr). Great importance was attached to the function of presiding at the ceremonies, which entailed authority over all the assembled pilgrims (*ḥadjdja bi 'l-nās*). When this president came from the seat of the caliphate, the sources sometimes underlined his role as leader of a particular caravan, for example by calling him *amīr al-ḥādjdj al-ʿIrāḳī*. Under the shadowy ʿAbbāsid Caliphs of Cairo (after 660/1262) the office became secularized and nominations were made by the Mamlūk sultans. The *amīr al-ḥādjdj al-Miṣrī*, usually a commander of a thousand appointed annually, claimed pre-eminence at the Holy Places. The title of *amīr al-ḥādjdj* was sometimes used for the leaders of other caravans (Damascus, ʿIrāḳ). Each of these had absolute authority over his own pilgrims (supply organization, travel arrangements, protection of merchants, the sick and the poor, police duties, application of Ḳurʾānic penalties). He was assisted by a specialized staff, and took any measures necessary to avoid attack by Bedouin. The Mamlūk sultans of Cairo used their *amīr al-ḥādjdj* to support their policy of establishing gradual control over the Ḥidjāz, symbolized by the *maḥmal* [*q.v.*], and to distribute gifts or *ṣurre* [*q.v.*]. The Ottoman sultans did the same after 923/1517, but their *amīr al-ḥādjdj* (Cairo, Damascus and, for a short period, Yemen), were appointed for a period of years until recalled. In Egypt under the Ottomans, up to the end of the 18th century, one of the principal *beys* held the post. The discharge of their duties necessitated heavy expenditure, a large part of which was met by the sultans; but as a result of the fact they received many gifts; that the effects of those who died on the way without heirs legally reverted to them, and that they carried on trade on their own account, the holders of this office could make a handsome profit. It was a great honour to be required to fill the post. Ibn Saʿūd, who ruled the Hidjāz from 1924-5, prohibited any practice which recalled former Egyptian or Ottoman control of the Holy Places. The military escorts and the *maḥmal* which formerly accompanied the *amīr al-ḥādjdj* could no longer appear in Saʿūdī Arabia. The *amīr al-ḥādjdj* had now only a diplomatic role, andt he ministries of their respective countries dealt with the material organization of the pilgrimages. In 1954, Egypt abolished the title of *amīr al-ḥādjdj*, replacing it by *raʾīs baʿthat al-ḥadjdj* (Head of the Pilgrimage Mission).

Bibliography: J. Jomier, *Le Maḥmal et la caravane égyptienne des pèlerins de La Mecque*, Cairo 1953 and references quoted. (J. JOMIER)

AMĪR ḤAMZA [see ḤAMZA B. ʿABD AL-MUṬṬALʾB].

AL-**AMĪR** AL-**KABĪR**, "great *amīr*", title which had originally been granted in the Mamlūk kingdom to "all those who had seniority in service and in years" Consequently there was a whole group of *amīrs* of which every individual was called *al-amīr al-kabīr*. In the days of Shaykhūn al-ʿUmarī (752/1352) the title became reserved for the commander-in-chief (*atābak al-ʿasākir*) of the kingdom. From that date onward it became the most common title of the commander-in-chief beside that of his rank.

Bibliography: M. van Berchem, *CIA*, *L'Égypte*, 276, 290, 452, 593; Makrīzī, *Histoire des Sultans Mamlouks*, transl. Quatremère, i, 3; Poliak and Ayalon, as quoted in AMĪR ĀKHŪR.

(D. AYALON)

AMĪR KHĀN, 1768-1834, the famous Paṭhān predatory chief and associate of Djaswant Rāo Holkar, was born at Sambhal in the Murādābād district of Rohilkhand. As a young man he and his adherents were employed by various *zamindārs* and Marātha officials as *sihbandi* troops for the collection of the revenues. He rapidly developed into a leader of banditti and as such was successively employed by the rulers of Bhopāl, Indore and Djaypūr. In 1798 he received the title of *nawāb* from Djaswant Rāo Holkar. The following year he plundered Saugor and the surrounding country. In 1809, in combination with the Pindāris, he planned to attack Berar but his designs were frustrated by Lord Minto's despatch of troops to that area. By the year 1817 the strength of his army had increased to 8,000 infantry, 20,000 cavalry, and 200 guns. In the same year, realizing the strength of the British, he concluded a treaty with Lord Hastings, the governor-general, by which, provided he disbanded his army, he was guaranteed in the possession of his territories. He thus became the founder of the state of Tonk [*q.v.*] which, since 1948, has been merged into the Union of Rādjāstān.

AMĪR KHUSRAW DIHLAWĪ, the great Indo-Persian poet, was born in 651/1253 at Paṭiyālī in the district of Etah, Uttar Pradesh, India. His father, Sayf al-Dīn Maḥmūd, was a Turk who had entered India in the time of Sultan Shams al-Dīn Iltutmish under whom he took service as an army officer. His mother was a daughter of ʿImād al-Mulk, muster master of the kingdom. Amīr Khusraw, according to his own statements, early showed great promise as a poet. From the age of eight when his father died, Amīr Khusraw was cared for by his maternal grandfather. After the latter's death, Amīr Khusraw took service with ʿAlāʾ al-Dīn Kishlū Khān, nephew of Sultan Balban and then with Nāsir al-Dīn Bughrā Khān, son of the sultan, when he was appointed governor of Sāmāna. After accompanying Bughrā Khān to Bengal, Amīr Khusraw returned to Dihlī and accepted the patronage of the sultan's eldest son, Muḥammad Ḳāʾān Malik and accompanied him to Multān. In 683/1284 Muḥammad was killed in battle with the Mongols and Amīr Khusraw himself was captured only to escape soon after. He returned to Dihlī and attached himself to Malik ʿAlī Sardjāndār Ḥātam Khān and went with him to Oudh when Sulṭān Muizz al-Dīn Kayḳubād went to meet his father Bughrā Khān in 686/1287. Ḥātam Khān was appointed governor of Oudh and Amīr Khusraw remained with him for two years before seeking permission to return to Dehlī, where he accepted the patronage of the Sultan.

In the reign of Djalāl al-Dīn Khaldjī 689/1290-695/1295, Amīr Khusraw was given a royal pension of twelve hundred tankahs annually and, according to Barnī, was a great favourite of the Sultān. But on the murder of Djalāl al-Dīn Khaldjī the poet transferred his allegiance to his assassin ʿAlāʾ al-Dīn Khaljī who confirmed him in his pension but proved an exacting patron. ʿAlā al-Dīn Khaldjī's reign, 695/1295 to 715/1315, saw Amīr Khusraw's most prolific period. Amīr Khusraw also enjoyed favour under Sultans Ḳutb al-Dīn Mubarak Shāh 716/1316-720/1320 and Ghiyāth al-Dīn Tughluḳ, 720/1320-725/1325.

During his lifetime, Amīr Khusraw became a disciple of the Čishtī saint Niẓām al-Dīn Awliyā of Ghiyāthpūr and when the poet died in 725/1325, a few months after the accession of Sultan Muḥammad Tughluḳ, he was buried at the foot of Niẓām al-Dīn Awliyā's grave.

The following works of Amīr Khusraw are extant. (1) Five *dīwāns*, viz., (a) *Tuḥfat al-Ṣighār*, poems of adolescence collected about 671/1272; (b) *Wasaṭ al-Ḥayāt*, poems of middle life collected originally about 683/1284; (c) *Ghurrat al-Kamāl*, poems of maturity collected originally about 693/1293; (d) *Baḳiyya Naḳiyya*, collected about 716/1316; (e) *Nihāyat al-Kamāl*, collected about 725/1325.

(2) The *Khamsa*, viz., (a) *Maṭlaʿ al-Anwār*, 698/1298; (b) *Shīrīn u-Khusraw*, 698/1298; (c) *Āʾina-i Sikandarī*, 699/1299; (d) *Hasht Bihisht*, 701/1301; (e) *Madjnūn u-Laylā*, 698/1298.

(3) The *Ghazaliyyāt*, or lyrical poems.

(4) The Prose Works, viz., (a) *Khazāʾin al-Futūḥ*, the victories of Sultan ʿAlāʾ al-Dīn Khaldjī; (b) *Afḍal al-Fawāʾid*, a collection of the sayings of Niẓām al-Dīn Awliyā presented to the saint in 719/1319; (c) *Iʿdjāz-i Khusrawī*, completed in 719/1319, specimens of elegant prose composition.

(5) The historical poems, viz., (a) *Ḳirān al-Saʿdayn*, completed in 688/1289, a *mathnawī* on the meeting of Sultan Muʿizz al-Dīn Kayḳubād and his father Nāṣir al-Din Bughrā Khān on the banks of the Sardjū in Oudh.; (b) *Miftāḥ al-Futūḥ*, a *mathnawī* on four victories of Djalāl al-Dīn Fīrūz Khaldjī, completed in 690/1291 and forming part of the *Ghurrat al-Kamāl*. (c) *Duwal Rānī Khiḍr Khān* or *ʿAshīḳa*, a *mathnawī* completed in 715/1316 on the love story of Khiḍr Khān, son of Sultan ʿAlāʾ al-Dīn Khaldjī, and Devaldi, the daughter of Rādja Karn of Nahrwāla, with a later continuation telling of Khiḍr Khān's estrangement from his father, his confinement in the fortress of Gwalior, his blinding and eventual murder at the instigation of Malik Kāfūr; (d) *Nuh Sipihr*, a *mathnawī* describing the glories of Sultan Ḳuṭb al-Dīn Mubārak Shāh Khaldjī's time, completed in 718/1218; (e) *Tughluḳ-nāma*, a *mathnawī* on the victory of Ghiyāth al-Dīn Tughluḳ over Khusraw Khān in 720/1320.

Amīr Khusraw and the History of his Times. The works of Amīr Khusraw provide the fullest single expression extant of medieval Indo-Muslim civilisation. They reveal, as perhaps does no other surviving body of Indo-Persian literature of the time, the religious, ethical, cultural and aesthetic ideas of courtly, educated and wealthy Indian Muslims of the 8th/14th and 9th/15th centuries.

Amīr Khusraw was not an historian. No more in his "historical poems" than in his *dīwāns* and *ghazals* does he attempt a critical account of the human past. Amīr Khusraw wrote to please his patrons by appealing to their imaginations, emotions and to their vanity as courtly educated Muslims. For Amīr Khusraw the life of man in history is a pageant of stereotyped formal action by god-like sulṭāns and great men, who personify Muslim ideals of conduct.

AMĪR MADJLIS, master of audiences or ceremonies, one of the highest dignitaries of the Saldjūḳs of Asia Minor (see SALDJŪḲ). In the Mamlūk kingdom the *amīr madjlis* had charge of the physicians, oculists and the like. The sources do not elucidate the connection between the rank of *amīr madjlis* and this particular task, which seems to be of no special importance. Altho \ the rank of *amīr madjlis* was in the early Mamluk period superior to that of *amīr silāḥ* [*q.v.*], neither of them was of great significance at that time. In the Circassian period the *amīr madjlis*, though inferior to the *amīr silāḥ*, was third in importance amongst the highest *amīrs* of the kingdom.

AMĪR AL-MUʾMINĪN, "Commander of the Believers" (the translation "Prince of the Believers" is neither philologically nor historically correct), title adopted by ʿUmar b. al-Khaṭṭāb on his election as caliph. *Amīr*, as a term designating a person invested with command (*amr*), and more especially military command, is in this general sense compounded with *al-muʾminīn* to designate the leaders of various Muslim expeditions both in the lifetime of the Prophet and after, e.g. Saʿd b. Abī Waḳḳāṣ [*q.v.*], the commander of the Muslim army against the Persians at Ḳādisiyya. Its adoption as a title by ʿUmar may more probably, however, be connected with the Ḳurʾānic verse "Obey God and obey the Apostle and those invested with command (*uli ʾl-amr*) among you" (iv, 58/62). From this time until the end of the Caliphate as an institution, *amīr al-muʾminīn* was employed exclusively as the protocollary title of a caliph, and among the Sunnīs its adoption by a ruler implied a claim to the office of caliph [see KHALĪFA], whether in its universal significance (as by the Umayyads, ʿAbbāsids, and the Shīʿite Fāṭimids) or as implying independent Islamic authority (as by the Umayyads in al-Andalus from 316/928 [see ʿABD AL-RAḤMĀN III], the Muʾminids in the Maghrib [see E. Lévi-Provençal, *Trente-sept lettres officielles almohades*, *Hesp.*, 1941, 1 ff.], and several of the minor dynasties in al-Andalus before and after the Muwaḥḥid conquest). The Muʾminid caliphate was claimed from 650/1253 by the Ḥafṣid *amīrs* of Ifrīḳiya, and was after the extinction of the ʿAbbāsid caliphate at Baghdād in 656/1258 fleetingly recognized as the universal caliphate by the Mamlūk sultans of Egypt, until their establishment of the new line of ʿAbbāsid caliphs in Cairo [see ʿABBĀSIDS]. In the Maghrib itself the Ḥafṣid claim was contested by the Marīnids in Morocco, who also adopted the title of *amīr al-muʾminīn* in the 8th/14th century, and were followed by all the succeeding dynasties in Morocco.

By the political jurists the title *amīr al-muʾminīn* was interpreted in a general sense, without special reference to command in the Holy War, except in so far as the proclamation of *djihād* remained a prerogative of the caliphate. In other Muslim circles, however, especially among the Zaydīs (see below), its association with active prosecution of the *djihād* still survived. In this sense it was occasionally employed by the early Ottoman sultans (see H. A. R. Gibb, in *Bibl.*); but it was never formally adopted by their successors as implying a claim to the universal caliphate, even after the occupation of Egypt by Salīm I in 922/1517. In the same sense it was assumed by various leaders of Muslim armies in West Africa [see AḤMAD AL-SHAYKH and AḤMAD LOBBO], and is still employed as the style of their successors in N. Nigeria.

Among the Shīʿa, the Imāmīs in general limit the title to ʿAlī b. Abī Ṭālib exclusively; the Ismāʿīlīs apply it to such of the Fāṭimid caliphs as each sect recognizes; while the Zaydīs regard it as legimately claimed by any ʿAlid who seeks to establish his claim by force of arms (hence its present use by the Imāms of al-Yaman). Among the Khawāridj the title was rarely used, except by the Rustamids [*q.v.*] of Tāhart.

Very occasionally the term is applied in a figurative sense to outstanding scholars; e.g. the traditionist Shuʿba b. al-Ḥadjdjādj is described as *amīr al-muʾminīn fi ʾl-riwāya* (Abū Nuʿaym, *Ḥilyat al-Awliyāʾ*, vii, 144), and the grammarian Abū Ḥayyān al-Gharnāṭī as *amīr al-muʾminīn fi ʾl-naḥw*(Makkarī, *Analectes*, 826).

Bibliography: M. van Berchem, *Titres califiennes d'Occident*, *JA* 1907/i, 245-335; E. Tyan, *Institutions de Droit public musulman. I. Le Califat*, Paris 1954, esp. 198 ff.; H. A. R. AMĪR AL-MUSLIMĪN, i.e. lord of the Muslims, a title which the Almoravids first assumed, in contra-distinction to *Amīr al-Muʾminīn* [*q.v.*]. The latter title was born by the independant dynasties; the Almoravids, however, recognized the supremacy of the ʿAbbāsids and did not wish to arrogate to themselves this title of the Caliphs. So they established a kind of sub-caliphate with a title of their own. Afterwards the African and Spanish princes bore either the one or the other of these titles, according as they sought after the independent caliphate or recognized any supremacy.

Bibliography: M. van Berchem, *Titres califiens d'Occident* (*Journ. As.*, series 10, ix, 245-335). (A. J. Wensinck)

AMĪR SILĀḤ, grand master of the armour. In the Mamlūk kingdom he was in charge of the armour-bearers (*silāḥdāriyya*) and supervised the arsenal (*silāḥkhāna*). It was his duty to bear the sultan's arms in public ceremonies and to convey them to him in battle and other occasions. In the early Mamluk period the office of *amīr silāḥ* was not

very high (cf. AMĪR MADJLIS); under the Circassians it was the second office among the highest *amīrs* of the kingdom. The *amīr silāḥ* had the right of sitting as the *raʾs al-maysara* in the sultan's presence.

Bibliography: L. A. Mayer, *Saracenic Heraldry*, index; D. Ayalon, in *BSOAS*, 1954, 60, 68, 69. (D. AYALON)

AMĪR AL-UMARĀʾ, chief Emīr, commander-in-chief of the army. As the name shews this dignity was originally confined to the military command. But the pretorians continued to become more powerful, and already the first bearer of the title, the eunuch Mūnis, soon became the real ruler, for it was to him that the weak and incapable Caliph al-Muḳtadir owed his rescue on the occasion of the conspiracy on behalf of ʿAbd Allāh b. al-Muʿtazz in 296 (908). After the appointment of Muḥammed b. Rāʾiḳ the governor of Wāsiṭ in 324 (Nov. 936) as Amīr al-Umarāʾ by the Caliph al-Rāḍī, this desperate ruler could not but hand over to him the entire civil authority, and his name was even mentioned in the public prayers together with that of the Caliph. So the Emīrs became in reality virtua rulers, while the Caliphs sank more and more to mere shadows of their former power.

This title is very rarely met with in Mamlūk sources. According to one source it was synonymous with *baklarbakī*, a title given to the *atābak al-ʿasākir*. It seems, however, that other *amīrs* also bore the same title. Cf. D. Ayalon, in *BSOAS*, 1954, 59.

In Ottoman usage *amīr al-umarāʾ* and its equivalent *mīr-i mīrān* are common synonyms for *beylerbeyi* [*q.v.*].

AMĪRGHANIYYA [see MIRGHĀNIYYA].

ʿĀMIRĪ (not Amīrī, as often implied in literature), territory of the ʿĀmir, a sub-tribe of the Djaʿda, forming one of the "nine cantons" in the Western Aden Protectorate, with some 27,000 inhabitants (Brit. Agency, 1946). The sultan (*amīr*) resides at Ḍāliʿ (Dhala), a small town on the south-eastern slope of Djabal Djiḥāf, about 10 miles south of Ḳaʿtaba and the border of Yaman. According to von Maltzan the name Shāfil was applied not only to the country and the capital (Bilād Shāfil) but also to the reigning sultan, a *mamlūk* of the Zaydī Imāms of Yaman who had made himself independent and created fairly good order in the district. A treaty with the British was signed in 1904 and supplemented in 1944 by an adviser agreement with the Government of Aden, which gives instructions to the tribal guards of the *amīr*. Ḍāliʿ has a permanent military landing ground for aicraft. A sub-grade school has an average of 50 pupils.

Bibliography: v. Maltzan, *Reise*, 353 ff. (with full details); Abdullah Mansûr (Wyman Bury), *The land of Uz*, 1911, 17 ff.; and the references given in ʿALAWĪ. (O. LÖFGREN)

ʿĀMIRIDS, the descendants (and clients of al-Manṣūr b. Abī ʿAmir [*q.v.*], in the first place his sons ʿAbd al-Malik and ʿAbd al-Raḥmān [*qq.v.*]. ʿAbd al-ʿAzīz al-Manṣūr, a son of ʿAbd al-Raḥmān, founded the dynasty of the ʿĀmirids in Valencia, where he ruled 412-53/1021-61. He was succeeded by his son ʿAbd al-Malik al-Muẓaffar [*q.v.*], 453-7/1061-5. After a ten years' interval under al-Maʾmūn of Toledo, ʿAbd al-Malik's brother, Abū Bakr b. ʿAbd al-ʿAzīz, ruled in Valencia 468-78/1075-85. In this last year the city was wrested from Abū Bakr's son, the *ḳāḍī* ʿUthmān b. Abī Bakr, and fell into the power of al-Ḳādir, who had been dethroned in Toledo. [For further details, see BALANSIYA.] — To the former clients of the house belong Muhārak and Muẓaffar, who ruled Valencia for a short time from 401/1010-1 onwards, and Mudjāhid al-ʿĀmiri [*q.v.*], who became the ruler of Denia and the Balearic Islands. (C. F. SEYBOLD *)

AL-ʿAMḲ, large alluvial plain of northern Syria, situated N-E of Antioch and framed in the tectonic depression which separates the Elma Dagh, or Amanus, from the Kurd Dagh, and which stretches as far as the lower spurs of the Taurus. With a mean elevation of 260 ft. above sea level, it is largely covered by a lake fringed with marshes, called Buḥayrat Anṭākiyya ("the lake of Antioch") or Buḥayrat Yaghrā, and in Turkish Aḳ Deniz; fed from the north by the ʿAfrīn [*q.v.*] and the Ḳara Su, streams which are violent when in spate, the lake discharges its waters in the direction of the Orontes which, before receiving this outlet, the Küčük ʿĀsī, follows the depression without discharging its waters into it; it flows several metres above the depression and is separated from it by an alluvial or rocky shelf. The marsh, which varies in size with the season, lends itself to the raising of buffalo and to fishing (eels and silurus; hence the alternative name Buḥayrat al-Sillawr, which appears in the "Casal Sellorie" of the Crusaders), while the perpetually flooded areas bordering the marsh are reserved for the extensive cultivation of cereals.

About the 9th century before Christ, Assyrian inscriptions point to a kingdom centred on the plain of Antioch, the lake being perhaps of less consequence than now, named ʿUnki; the toponym *ʿamḳ*, Semitic in origin and vouched for by the Aramaic stele of King Zakir, derives from a common noun which still has the meaning in Arabic of "depression", or more exactly, according to Ibn Khurradādhbih (97), "any prairie surrounded by mountains"; this explains the title *ʿamḳ* Tīzīn formerly given by historians to this country, as distinct from the *ʿamḳ* Marʿash [*q.v.*] further north.

As a corridor region commanding the approaches to Antioch, the plain of the ʿAmḳ, under the name of Amykès Pedion, was the site of important battles in the Hellenistic era. After the Muslim conquest, it became part of the disputed zone between the Arabs and the Byzantines, to whom it was given by the treaty of 359/969. Guarded by various forts which cut it off from the Syrian hinterland (Artāḥ, ʿImm, Ḥārim, Tīzīn), it was, like Antioch, momentarily reoccupied by the Muslims; the latter had to cede it to the Crusaders, and it was only finally recovered by Nūr al-Dīn in 543/1149 after the battle fought near Yaghrā, a place situated north of the lake where the sultan Ḳayt-bāy later camped during his famous tour of inspection of the Syrian territories. During the Mamlūk and Ottoman periods, the ʿAmḳ formed part of the province of Aleppo, and was crossed by the routes from Antioch to Aleppo (via Djisr al-Ḥadīd, south of the lake) and from Antioch to Marʿash, and by the post road Ayas-Baghrās-Aleppo, which passed to the north of the marsh after crossing the Amanus by the Baylān pass [see BAGHRĀS].

The numerous projects under the French mandate, designed to increase the value of the plain and to drain the lake, all failed to provide a satisfactory solution. The return to Turkey in 1939 of the *sandjak* of Alexandretta, which included the ʿAmḳ, deprived

the plain of its position as a corridor region, which was one of the main reasons for the interest displayed in it, and explains its present neglected state.

AL-ʿĀMMA WA'L-KHĀṢṢA [see AL-KHĀṢṢA].

ʿAMMĀN, capital of the Hashemite Kingdom of Jordan. Population (1953) approximately 108, 304 plus a small floating population, chiefly refugees from Palestine of about 30,000.

The site has been occupied since earliest prehistoric times. The Citadel Hill (Djabal al-Ḳalʿa) is undoubtedly the site of the ancient city often referred to in the Old Testament as Rabbath Ammon, "Rabba of Ammon". Of this ancient city little now remains save some tombs on the hill sides, and a short stretch of Iron Age city wall, perhaps 9th or 8th. century B.C. The early Israelites (c. 1300 B.C.) failed to secure control of either the city or the district until the determined assault of David in the 11th century B.C. During this attack occurred the episode of Uriah the Hittite, whose name was still traditionally associated with the site in the 10th century A.D. (al-Maḳdisī, 175). Under Solomon ʿAmmān regained its independence. In common with the rest of the country it became a vassal of Assyria during the 8th. and 7th. centuries B.C., but maintained a precarious independence during the Babylonian period. When Ptolemy Philadelphus (285-227 B.C.) conquered the town he renamed it Philadelphia, by which name it was known in Roman and Byzantine times. The Seleucid King Antiochus III captured it about 218 B.C. In the first century B.C. ʿAmmān joined the league of the Decapolis, and the Nabateans occupied the city for a short time, but were driven out by Herod the Great about 30 B.C. From him the Romans took over and rebuilt it on the standard Roman provincial plan, with theaters, temples, Forum, Nymphaeum and a main street with columns. Some of these monuments still exist. In Byzantine times ʿAmmān was the seat of the Bishopric of Philadelphia and Petra, one of the sees of Palestina Tertia under Bosra. This title is still held by the Greek Catholic Bishop. (For details of ancient history, see Pauly-Wissowa, s.v. Philadelphia.)

Excavation on the Citadel on the site of the present Museum have shown that it was still flourishing when it was captured by the Arab general Yazīd b. Abī Sufyān in 14/635, almost immediately after the fall of Damascus, and on the Citadel at least there were some fine private houses of the Umayyad period. These are of some importance archaeologically, as only the palaces of the Ommayad Caliphs have so far been excavated, and they give us the first evidence of how the ordinary man lived in this period. There is also a square Ghassānid or Umayyad building on the Citadel.

In common with the rest of Jordan, a decline apparently set in with the removal of the Caliphate from Damascus to Baghdād. Ibn al Faḳīh, 105, writing in 292/903, mentions ʿAmmān as belonging to Damascus. Al-Maḳdisī, writing some 80 years later (375/985) gives a rather full account of the city as it then was (175; quoted by Yāḳūt, iii, 760). Al-Maḳdisī puts the town in the district of Filasṭīn and calls it the capital of the Balḳā' district (156; cf. also 180, 184).

Yāḳūt, iii, 710, in 622/1225 refers to it as the city of Dakiyanus or the Emperor Decius, and connects the legend of Lot and his daughters with ʿAmmān. He still calls it one of the fruitful towns of Filasṭīn and capital of the Balḳa. But al-Dimashḳi, 213, writing about 699/1300, assigns it to the Kingdom of Karak and says that only ruins remain. Abu 'l-Fidā', 247, writing a mere 20 years later says "it is very ancient town, and was ruined before the days of Islam".

It is difficult to account for this sudden drop in the town's fortunes, for no historical or natural catastrophe has been recorded from this period. Thereafter writers are silent on the subject of ʿAmmān, and when the first western travellers started to penetrate east of the Jordan in the early 19th century, it was no more than a very small village. In 1295/1878 a group of Circassians were settled there by the Turkish authorities, but it remained a mere handful of houses for many more years.

The first systematic exploration of the town and its environs was that made by Major Conder and his party in 1881, when the ruins of the mosque with a square minaret, perhaps the one mentioned by the al-Maḳdisī, were still standing. They were still there when the much fuller survey of Butler was carried out in 1907, but he considers the main wall to have been either Roman or Byzantine. Exactly when it was destroyed cannot be ascertained probably soon after the first World War.

In 1340/1921 ʿAbd Allāh b. al-Ḥusayn [*q.v.*] made it the capital of Transjordan, and it has grown steadily ever since. Its greatest period of prosperity came during and immediately after World War II since the end of which the city has increased in size at least 50%. It is now the capital and administrative centre for the Kingdom on both sides of the Jordan, and contains the Royal Palace, Houses of Parliament and head offices of all the Ministries. Some fine Government buildings, including a Museum, and Schools have been erected during the last few years, but in the early days of its growth many monuments of the past have disappeared.

AMMAN, MIR [see AMĀN, MĪR].

ʿAMMĀR, BANŪ, a family of ḳāḍīs who governed the principality of Tripoli (in Syria) for forty years preceding the capture of the town by the Crusaders in 502/1109.

The first ruler of the family, Amīn al-Dawla Abū Ṭālib al-Ḥasan b. ʿAmmār, who had been *ḳāḍī* of the town, declared himself independent after the death of the Fāṭimid governor, Mukhtār al-Dawla b. Bazzāl in 462/1070. He made the town an important intellectual centre and founded a rich library.

On his death in 464/1072 his two nephews quarreled about the succession. Djalāl al-Mulk ʿAlī b. Muḥammad succeeded in evicting his brother. The authority of Djalāl al-Mulk must have been considerable, as he maintained himself for almost thirty years. In 473/1081 he took Djabala from the Byzantines. He manoeuvred as well as he could between the Fāṭimids and the Saldjūḳids, as Ibn al-Ḳalānisī has pointed out: "The towns on the sea, Tyre and Tripoli, were in the hands of their *ḳāḍīs* who were their independent rulers. Not satisfied with renouncing the authority of the *amīr* of the armies Badr al-Djamālī, they tried to obtain the good will of the Turks by diplomacy and presents".

The last ruler, Fakhr al-Mulk ʿAmmār (brother of the preceding), succeeded in 49/1099, and for some years withstood the attacks of the Crusader Raymund of St. Gilles and his successor. In 501, however, he decided to leave the town in order to seek help against the Franks. The inhabitants, however, faithful to the Fāṭimid dynasty, called in the Egyptians, but in spite of the great efforts made by the Fāṭimids, their fleet arrived in Tyre eight days after the fall of Tripoli. Fakhr al-Mulk passed first into the service of the Saldjūḳids, then of the princes of Mosul, and finally that of the ʿAbbāsid caliph and died in 512/1118-9.

A fragmentary inscription by Djalāl al-Mulk is extant, in which his name figures alone. One can therefore conclude that the Banū ʿAmmār had detached themselves from the Fāṭimids and that this action drove them towards the caliphate of Baghdād; they proceeded, however, with caution, as their subjects showed ʿAlid sympathies.

ʿAMMĀR, BANŪ (or BANŪ THĀBIT, dynasty which ruled in Tripoli (of the West) 727/1327-803/1400. Its founder, Thābit b. ʿAmmār, a Huwwāra Berber, died after a rule of a few months, and was succeeded by his son Muḥammad. During the reign of Muḥammad's son, Thābit, the Genoese surprised and plundered Tripoli (756/1355); Thābit was killed by the neighbouring Arab chiefs with whom he was seeking refuge. In 771/1370 or 772/1371 Abū Bakr b. Muḥammad expelled from Tripoli the governor of the Banu Makkī of Ḳābis (Gabès). Abū Bakr died in 792/1392 and was followed by his nephew ʿAlī b. ʿAmmār. In 800/1397-8 the Ḥafṣid Abū Fāris succeeded in arresting ʿAlī whom he replaced by two members of the same family, Yaḥyā b. Abī Bakr and his brother ʿAbd al-Wāḥid. On 6 Radjab 803/31 May 1401 Abū Fāris captured Tripoli, imprisoned the brothers and brought to an end the dominion of the ʿAmmārids.

ʿAMMĀR B. **YĀSIR** B. ʿĀMIR B. MĀLIK, ABU 'L-YAḲẒĀN, a Companion of the Prophet, later a partisan of ʿAlī. His father, a *mawlā* of the Makhzūmite Abū Ḥudhayfa, had married one of his master's slaves, Sumayya, who was manumitted, but Yāsir and his family remained with Abū Ḥudhayfa. They were early converts to Islām, and suffered severe tortures. ʿAmmār is said eventually to have emigrated to Abyssinia; after the *hidjra* he returned to Medina. He took part in the early campaigns, and fought at Badr, at Uḥud, and, in general, in all the battles of Muhammad, who at the time of the *muʾākhāt* between the Muhādjirūn and the Anṣār, paired him with Ḥudhayfa b. al-Yamān. Under Abū Bakr, he lost an ear at the battle of Yamāma; in 21/641 he was made governor of Kūfa by ʿUmar; in this capacity he took part in the conquest of Khūzistān. He was from the first a partisan of ʿAlī; from 35/656 onwards, ʿAlī placed exceptional confidence in him. Before the Battle of the Camel (see AL-DJAMAL), he helped to rally the population of Kūfa to ʿAlī, and he was one of those who led the Prophet's widow ʿĀʾisha prisoner to Baṣra. He lost his life at Ṣiffīn (37/657) at an extremely advanced age. Several centuries later, his tomb near Ṣiffīn was still pointed out.

ʿAmmār was considered to have an excellent knowledge of the Traditions of the Prophet, and in addition owed his renown to his great piety and to his devotion to Islām. Later, writers hostile to the Umayyads did not fail to glorify him by inventing *hadīths* in his favour, and by discovering in the Ḳurʾān allusions referring to him (ii, 207; iii, 62; vi, 52, 122; xvi, 43, 108, 111; xxviii, 4, 61; xxix, 1; xxxix, 12); a notable prophecy attributed to Muḥammad concerns the death of ʿAmmār at the hands of the "rebel band", which he condemns to Hell.

ʿAmmār had a son, Muḥammad, also famous for his knowledge of *ḥadīth*, and a daughter, Umm al-Ḥakam.

Bibliography: Ibn Saʿd, iii/1, 176 ff.; Ibn Ḳutayba, *Maʿārif*, 48, 111-2, 239, 252; Nawawī, *Tahdhīb*, 485-7; Ibn Ḥadjar, *Iṣāba*, no. 5704; Djāḥiẓ, *ʿUthmāniyya* (ed. by Pellat, in preparation), index. (H. RECKENDORF *)

ʿAMMĀR AL-**MAWṢILĪ,** ABU 'L-ḲĀSIM ʿAMMĀR B. ʿALĪ, one of the most famous, and certainly the most original of Arab oculists. He lived first in ʿIrāḳ, then in Egypt; he travelled widely, as he himself informs us in his book, and on his travels, which took him to Khurāsān in one direction, to Palestine and Egypt in the other, he practised his profession and performed operations. His work on ophthalmology was composed in Egypt, in the reign of al-Ḥākim (996/1020); thus he was a contemporary

of the more famous, but less original, oculist ʿAlī b. ʿĪsā [*q.v.*]. If ʿAlī's *Tadhkira* became for the Arabs the standard work on ophthalmology and overshadowed ʿAmmār's work, the reason lies in the greater completeness of the former. ʿAmmār's book has a strictly logical arrangement and is extremely succinct, as even the title shows: *al-Muntakhab fi ʿIlādj al-ʿAyn*. After a preface containing an account of its compilation, the book deals first with the anatomy of the eye, then with diseases of the eyelid, the corner of the eye, the conjunctiva, the cornea, the pupil, the albumen, and the visual nerves. The descriptions of the diseases and of their treatment are in general very clear, and often, especially when he describes operations which he performed himself, of a dramatic vividness. This is more especially the case in the six cases of operation for cataract described by ʿAmmār; in effect, his most significant achievement was the radical operation for soft cataract by suction through a hollow metal tube invented by him. Ṣalāḥ al-Dīn of Ḥamāt (end of 7th/13th century) has borrowed that part of ʿAmmār's book almost verbatim in his *Nūr al-ʿUyūn*. At an earlier date al-Ghāfiḳī (6th/12th century) made considerable use of ʿAmmār's book in his medical work *al-Murshid*.

The Arabic original is preserved in MSS of the Escurial. There is a Hebrew translation of a slightly different version by Nathan ha-Meathi (13th century). The Latin *tractatus de oculis Canamusali* is, however, a forgery. German transl. by J. Hirschberg, J. Lippert and E. Mittwoch, *Die arabischen Augenärzte nach den Quellen bearbeitet*, Leipzig 1905, ii.

(E. MITTWOCH*)

ʿAMMĀRIYYA, Algerian religious order deriving its name from Ammār Bū Senna, born about 1712; his tomb is situated at Bū Ḥammām in the province of Constantine, which is also the site of the parent foundation (*zāwiya*) of the order. Actually, the order was only founded in 1822 by al-Ḥādjdj Mubārak (Embārek) al-Maghribī al-Bukhārī. According to Depont and Coppolani, *Les Confréries religieuses musulmanes*, Algiers 1897, 356-7, the order comprised, at the end of the 19th century, 26 *zāwiyas* and 6,435 adherents.

ʿAMMŪRIYA, Arabic form of the name of the famous stronghold of Amorium (Syriac Amūrīn) in Phrygia, situated on the great Byzantine military road from Constantinople to Cilicia, S-E of Dorylaeum, S-W of Ankara, and S. of the Upper Sangarios (Saḳarya). The site of the town for long remained unknown. Its ruins were discovered by the English traveller Hamilton about 7½ m. E. of Emirdağ (formerly ʿAzīziyye) near the village of Hamza Hacīlī and Hisar, at a place which, he said, was called by the inhabitants Hergan Kale. The name Hergan Kale is unknown to-day, and the ruins are called Asar (or, according to Murray's guide Asar Kale). The name Hergan Kale was also recorded by Texier, and was reproduced along with that of Asar Kale on Kiepert's map (scale 1 : 400,000, sheet B III Angora). The name Amorium, according to Ramsay, survived in the name of the plain which stretches to the east: Ḥadjdjī ʿUmar (Haciömer) - owa.

Amorium, fortified by Zenon (474-91) — al-Masʿūdī, *Murūdj*, ii, 331, says that it was built by Anastasius (491-518) — was on several occasions threatened, besieged or captured by the Arabs. Muʿāwiya reached it in 25/646; ʿAbd al-Raḥmān b. Khālid b. al-Walīd forced it to capitulate in 46/666; it was occupied in 49/669 in the course of Yazīd's expedition against Constantinople, but was retaken by Andreas, the general of Constans. In 89/708, Maslama b. ʿAbd al-Malik defeated a Byzantine army before Amorium. In 98/716, at the time of Maslama's expedition against Constantinople, it was beseiged by one of his lieutenants, and relieved by the future emperor Leo the Isaurian. Leo subsequently made it a formidable stronghold, which successfully resisted al-Ḥasan b. Ḳaḥtaba in 162/779, in the reign of al-Mahdī, then in 181/797, in the reign of Hārūn al-Rashīd. It only fell in 223/838 to the powerful forces of al-Muʿtaṣim, whose Turkish troops besieged it for twelve days, and who finally took it only as the result of treachery.

The capture of Amorium was the subject of a famous poem of Abū Tammām. Forty-two of the prisoners taken to Sāmarrā were executed there on 6 March 845. Their martyrdom is celebrated in the *Acta XLII martyrum Amoriensium*. The town destroyed by al-Muʿtaṣim was rebuilt, but was again burnt down in 319/931 by Thamal, *amīr* of Ṭarsūs. Thereafter it does not seem to have played a part in history, although in the 12th and 14th centuries it was still an important place, according to the geographers al-Idrīsī and Ḥamd Allāh Mustawfī.

(M. CANARD)

AMORIUM [see ʿAMMŪRIYA].

AMR, a term which occurs in many verses of the Ḳurʾān in the sense of command, viz. of God. (A paper by J. M. S. Baljon, *The amr of god in the Koran*, is to appear in *Acta Orientalia*.) These Ḳurʾānic passages formed the point of departure for speculations of theologians and philosophers, in which the Muslim element is often so contaminated, with doctrines of Hellenistic origin, that it loses all distinctive character. Nevertheless, the term itself does not seem to have an exact parallel in the relevant Greek terminology, so that it seems that the various theological notions about the divine command were originally conceived by Muslims.

This conclusion supports the hypothesis according to which the longer version of the *Theology of Aristotle*, the one which forms the basis of the Latin translation and of which the Arabic original has been discovered by Borisov, was elaborated in a

Muslim environment. In effect, there are in that version passages dealing with the theory of the *amr*. On the other hand, the fact that the doctrine as it appears in that version seems to be identical with the teaching of certain Ismāʿīlī theologians, is suggestive: it is very probable that the Ismāʿīlī authors and the author of the longer version of the *Theology* used a common source, which cannot, however, be identified.

According to the longer version of the *Theology*, the *amr* is one of the designations of the word (*kalima*) of God; also called His will, which is an intermediary between the Creator and the first intelligence and the immediate cause of the latter. In a certain sense it can be qualified as the cause of causes. It also can be called "nothing" (*laysa*), as it transcends movement and rest. Intellect, which is the first created thing, is so intimately united with the word that it is identical with it.

This theory recurs in an identical, or almost identical, form among the Ismāʿīliyya, for instance in the *Khʷān-i Ikhwān* attributed to Nāṣir-i Khusraw. Other writings which go under the name of Nāṣir-i Khusraw, however, show doctrinal divergences. The *Zād al-Musāfirīn* does not regard as correct the thesis expounded in the *Khʷān-i Ikhwān* according to which the *amr* is identical with the *ibdāʿ*, the creative act of God; and the *Gushāʾish wa-Rahāʾish* calls the *amr*, which in the *Khʷān-i Ikhwān* is qualified as "non-being", "the first being".

Another Ismāʿīlī author, Ḥamīd al-Dīn al-Kirmānī, seems to have regarded the *amr* as an influx (this seems to be the meaning which ought to be attributed, in this context, to the term *mādda*) coming from God and united to the intellect. In his view, the *amr* is not a principle superior to the intellect; in common with other Ismāʿīlī theologians, he considers it identical with the divine will.

In the *Rawḍat al-Taslīm*, or *Taṣawwurāt* (ed. W. Ivanow, 54 f., cf. 29), an Ismāʿīlī work attributed to Nāṣir al-Dīn al-Ṭūsī, the doctrine of the divine *amr* is connected with the notion that at the psychic level the ascension marked by the stages of the sense-perception, estimation (*wahm*), soul (*nafs*) and intellect, ends in the *amr*.

There is a certain similarity between these Ismāʿīlī doctrines and the concept of *amr* found in the theological dialogue commonly called *Kuzari*, by the Jewish thinker Judah Halewi. On the one hand he seems to postulate, or at least to consider as admissible, the identity of the *amr* with the will (ed. Hirschfeld, 76), on the other, he calls divine *amr* the power which is given to the prophet as an inherent faculty and which is superior to the intellect (e.g. 42 ff.).

On the basis of Ḳurʾān, vii, 53, *amr* is sometimes opposed to *khalḳ*: the first term then designates the creation of the spiritual substances, or these substances themselves, while the second refers to the creation of the material substances, or the material substances themselves (cf. ʿĀLAM; for the contrast between *amr* and *khalḳ* according to Ibn Ḥanbal, see Massignon, *La passion d'Al-Hallaj*, ii, 627, n. 2). This idea recurs in some Ismāʿīlī writings, such as the *Taṣawwurāt* (55), where it interferes with the concept of *amr* in the sense explained above; in texts related to Ismāʿīlism, such as the *Rasāʾil Ikhwān al-Ṣafā* (cf. Goldziher, in *REJ*, 1905, 38 n. 4); and in the "dispute of the Ṣābians and the Ḥanīfiyya". This last is found in the *al-Milal wa 'l-Niḥal* of al-Shahrastani (ed. Ahmad Fahmī Muḥammad, Cairo 1948, ii, 118), a Sunnī author; nevertheless, in the discourse of the representative of the Ḥanīfiyya one finds notions current among the Ismāʿīlīs, but put in a form which avoids giving offence to Sunnī orthodoxy. In the *Djāmiʿ al-Ḥikmatayn* attributed to Nāṣir-i Khusraw (ed. Corbin, 154) the "world of the *amr*" is the Ismāʿīlī hierarchy, while the "world of the *khalḳ*" is the physical world.

Another theme, often treated by the Ṣūfīs, is the contradiction, assumed by some as possible, between the *amr*, God's command to perform an action, and the divine will which prevents it.

ʿAMR B. ʿADĪ B. NAṢR B. RABĪʿA, first Lakhmid King of al-Ḥīra. His father ʿAdī employed a ruse (which frequently appears in Arab legend, cf. the story of ʿAbbāsa bint al-Mahdī) to win the hand of Raḳāsh, sister of Djadhīma al-Abrash [*q.v.*], whose favourite he was; ʿAmr, the offspring of this union, succeeded in winning the favour of Djadhīma, but was then carried off by the *djinn*, was considered lost, and was finally restored to his uncle. After al-Zabbāʾ (identified with Zenobia, queen of Palmyra) had seduced and killed Djadhīma, ʿAmr succeeded the latter on the Lakhmid throne and established his capital at al-Ḥīra; then, with the aid of the sage Ḳuṣayr, he succeeded, by means of a stratagem related at length in the historical sources, in avenging his uncle's death and in killing al-Zabbāʾ. Such is the account of the Arabic sources, and it is difficult to doubt the existence of ʿAmr b. ʿAdī, who lived in the 3rd century A.D. (Caussin de Perceval, *Essai*, ii, 35, gives the dates of his reigns as 268-88, but the historians credit him with a reign of 118 years); moreover, his name appears in the inscription of al-Namāra. On the other hand, the fact that he is mentioned in the commentary on numerous proverbs proves that, as the historical reality of this personage and of the events involving Zenobia became blurred, legend made use of his name to fix the time of events displaced from their historical sequence, and of stories invented to explain proverbs which had become unintelligible; thus, in representing him as the conqueror of Zenobia, legend attributes to him the role played by Aurelian who, in 270-3, seized possession of the Kingdom of Palmyra.

Rothstein, *Laḫmiden*, Berlin, 1899, index. (CH. PELLAT)

ʿAMR B. AL-AHTAM (SINĀN) B. SUMAYY AL TAMĪMĪ AL-MINḲARĪ, an eminent Tamīmite famous for his poetic and oratorical talent, and also for his physical beauty which earned him the surname of al-Mukaḥḥal ("anointed with collyrium").

Born a few years before the *hidjra*, he made his way to Medina in 9/630 with a delegation from his tribe; in 11/632, he was a follower of the prophetess Sadjāḥi [*q.v.*], but he was converted to Islam and took part in the wars of conquest; he conveyed the news of the capture of Rashahr to ʿUmar in verse; he is said to have died in 57/676. His poems, some of which have come down to us, are superficially brilliant rather than profound; according to tradition his eloquence provoked the famous comment by the Prophet: *inna min al-bayān la-siḥr^an^*.

Bibliography: Ibn Ḳutayba, *Shiʿr*, 401-3; al-Mufaḍḍal al-Ḍabbī, *Mufaḍḍaliyyāt*, (Lyall), 245-54, 830-7; *Aghānī*[1], iv, 8-10, xii, 44, xxi, 174; Balādhurī, *Futūḥ*, 387; Mubarrad, *Kāmil*, i, 476; Ṭabarī, i, 1711-16, 1919; *Ḥamāsa* (Freytag), i, 722; Ibn al-Athīr, *Usd*, Cairo 1286, iv, 87 ff.; Ibn Ḥadjar, *Iṣāba*, no. 5770; Ibn Nubāta, *Sarḥ al-ʿUyūn*, Alexandria 1290, 77 ff.; Marzubānī, *Muʿdjam*, 262. (A. J. Wensinck-Ch. Pellat)

ʿAMR B. AL-**ʿĀṢ** (al-ʿĀṣī) AL-SAHMĪ, a contemporary of Muḥammad of Ḳurayshite birth. The part which he played in Islāmic history begins with his conversion in the year 8/629-630. At that time he must already have been of middle age, for at his death which took place circa 42/663 he was over ninety years old. He passed for one of the most wily politicians of his time, and we must endorse this verdict. The more clear-sighted inhabitants of Mekka already foresaw shortly after the unsuccessful siege of Medīna that this fact was the turning-point in Muḥammad's career. It is not strange therefore that men like Khālid b. al-Walīd, ʿUthmān b. Ṭalḥa and ʿAmr b. al-ʿĀṣ went over to Islām even before the capture of Mecca. Not much importance is to be attached to the story of their conversion. That of ʿAmr is said to have taken place in Abyssinia under the influence of the Christian Negus! — Muḥammad at once made use of his newly-gained assistance: after a few small expeditions he sent ʿAmr to ʿUmān, where he entered into negotiations with the two brothers who ruled there, Djayfar and ʿAbbād b. Djulanda, and they accepted Islām. He was not to see the Prophet again. The news of the latter's death reached him in ʿUmān, and occasioned his return to Medīna. But he did not remain there long. Probably in the year 12/633 Abū Bakr sent him with an army into Palestine. The accounts of the conquest of this country [see FILASṬĪN] are known to be somewhat confused (cf. also Caetani, *Annali dell' Islām*, A. H. 12); but this is certain, that in this undertaking ʿAmr played a most prominent part. The subjection of the country west of the Jordan especially was his achievement, and he was also present at the battles of Adjnādayn and the Yarmūk as at the capture of Damascus.

Yet his real fame is due to his conquest of Egypt. According to some sources he betook himself there with his troops on his own responsibility. It is more probable, however, that ʿUmar was informed of the matter (cf. Wellhausen, *Skizzen und Vorarbeiten*, vi. p. 93) or even that it was undertaken under his orders. It is certain that re-inforcements were soon sent out to him, under al-Zubayr. For the history of the conquest cf. the article MIṢR; only the following need be mentioned here: In the summer of 19/640 the Greeks were defeated at Heliopolis. In 20/641 Babylon was occupied by the Arabs, in 21/642 Alexandria lay in their power [see MUḲAWḲIS]. But not only the conquest of Egypt was the work of the genius of ʿAmr; he also regulated the government of the country, administration of justice and the imposition of taxes. He founded Fusṭāṭ, which was later called Miṣr and in the 4th/10th century al-Ḳāhira.

We can understand, that ʿAmr felt himself wronged, when the Caliph ʿUthmān recalled him in favour of ʿAbd Allāh b. Saʿd, shortly after his accession to the throne. He retired in disgust from active life, occasionally giving utterance to his mortification. When circumstances became threatening for ʿUthmān, ʿAmr was wise enough not to commit himself as a partisan of his enemies; but he secretly incited ʿAlī, Ṭalḥa and al-Zubayr against him. From his estates of al-Sabʿ (Beer-Shebaʿ) and ʿAdjlān he awaited the developement of events with the greatest anxiety. Yet it was not till after the Battle of the Camel (see AL-DJAMAL), when only the two opponents ʿAlī and Muʿāwiya survived, that he once more came to the front, associating himself with Muʿāwiya. At the battle of Ṣiffīn he commanded the Syrian cavalry. When the battle turned in favour of ʿAlī, he conceived the clever device of placing leaves of the Ḳurʾān on the lances. The ruse was successful and the battle remained undecided. A court of arbitration was agreed upon, which was to consist of Abū Mūsā 'l-Ashʿarī and ʿAmr b. al-ʿĀṣ. Before the day appointed came, ʿAmr rendered Muʿāwiya the important service of occupying Egypt for him. It was an easy task to dispose of the youthful ʿAlid governor, Muḥammad b. Abī Bakr: he defeated him (early in 38/658) and put him to death.

In the same year (*Shaʿbān*) ʿAmr proceeded to Adhruḥ [*q.v.*] to the court of arbitration (according to al-Wāḳidī's chronology in Ṭabarī, i. 3407). Here again he gave a brilliant proof of his political talent. He succeeded in conducting matters so far that Abū Mūsā declared both ʿAlī and Muʿāwiya unworthy of the highest office. ʿAlī lost thereby his title of Caliph, Muʿāwiya however, who had only fought for "ʿUthmān's blood", lost nothing. Until his death [see above] ʿAmr remained Governor of Egypt. On 15 Ramaḍān 40/22 January 661 he escaped by mere chance assassination at the hands of Zādawaih, one of the three Khāridjites who are said to have chosen the three leaders, ʿAlī, Muʿāwiya, and ʿAmr, as the victims of their fanaticism. ʿAmr felt unwell on that day and left the leadership of the *Ṣalāt* to Khāridja b. Ḥudhāfa. So the latter was mortally wounded. "I meant ʿAmr, but God meant Khāridja", the assassin is reported to have said after accomplishing his deed.

ʿAMR B. **HIND**, son of the Lakhmid prince al-Mundhir and of the Kindite woman Hind; after the death of his father, he became "king" of al-Ḥīra (554-570 A.D.). He was a warlike and cruel prince; the story of how he sent the poets al-Mutalammis and Ṭarafa to the governor of Baḥrayn with letters

containing their own death warrants, is well-known. The severity of his character earned him the surname of Muḍarriṭ al-Ḥidjāra ("he who makes the stones emit sounds"). He was also called Muḥarriḳ ("burner"); in explanation of this surname, the Arabs recount that in order to avenge the death of one of his brothers, he had ten Ḥanẓalites seized and burnt. However, as several other Lakhmids were also called Muḥarriḳ, this surname could well be the name of an ancient idol (see Rothstein, *Laḫmiden*, 46 ff.). He was assassinated while dining by the poet ʿAmr b. Kulthūm [*q.v.*], because the latter's mother had been offended by the mother of ʿAmr b. Hind.

(A. J. Wensinck)

ʿAMR b. ḲAMĪʾA b. Dhirrīḥ (Dharīḥ) b. Saʿd al-Ḍubaʿī, pre-Islamic Arab poet of the Bakrite tribe of Ḳays b. Thaʿlaba. The only biographical details we possess concern his disputes with his uncle Marthad b. Saʿd, whose wife had tried to seduce him, and his journey to Byzantium with Imru 'l-Ḳays [*q.v.*]. According to Ibn Ḳutayba (*Shiʿr*, 45), he lived in the entourage of Ḥudjr, father of Imru 'l-Ḳays, but according to the *Aghānī* (xvi, 165-6), the two poets met when ʿAmr had already reached an advanced age, and ʿAmr died in Byzantine territory (between 530-540 A.D.), thereby gaining the soubriquet of ʿAmr al-Ḍāʾiʿ. His poems, collected by the philologists of the 2nd/8th century, have often been quoted by critics who appreciate their delicacy and simplicity; they have been edited and translated into English by Ch. Lyall, *The Poems of ʿAmr son of Qamīʾah*, Cambridge 1919.

As he is commonly called Ibn Ḳamīʾa, he must not be confounded with others possessing the same *maʿrifa*, notably ʿAbd Allāh (or Maʿmar) b. Ḳamīʾa, father of Djamīl al-ʿUdhrī [*q.v.*], and the poet Rabīʿa b. Ḳamīʾa al-Ṣaʿbī (see Āmidī, *Mukhtalif*, 168).

Bibliography: Among the sources quoted in the edition of the *dīwān*, the following can be mentioned: Ibn Ḳutayba, *Shiʿr*, 222-3; *Aghānī*, xvi, 163-6; Baghdādī, *Khizāna*, ii, 247-50; Cheikho, *Naṣrāniyya*, 293-7. See also: G. Rothstein, *Laḫmiden*, Berlin 1899, 76-7; O. Rescher, *Abriss*, i, 71-3; Brockelmann, S I, 58. (Ch. Pellat)

ʿAMR b. KULTHŪM, pre-Islamic *sayyid* and poet; through his mother he was the grandson of the *sayyid* and poet al-Muhalhil [*q.v.*]. While still a youth he became chief of his tribe, the Djusham branch of the Taghlib [*q.v.*] of the Middle Euphrates. What we know of his life is confined to a few traditions (*khabar*); one describes the circumstances of his assassination of the King of al-Ḥīra, ʿAmr b. Hind, about 568 A.D.; another serves as a commentary on some epigrams against another ruler of that town, al-Nuʿmān b. al-Mundhir (580-602 A.D.). To his Taghlibite fellow-tribesman at the end of the 1st/8th century, ʿAmr. b. Kulthūm seemed a man weighty in years (he was included among the *muʿammarūn*!) surrounded by an aura of prestige derived from his resistance to the domination of the kings of al-Ḥīra, and from his being an incarnation of the virtues of the *djāhiliyya*. Above all, they proudly attributed to him a poem celebrating their deeds in their conflict with the Bakr. Inserted several generations later in the anthology of the *Muʿallaḳāt* [*q.v.*], this poem, in so far as it is not a pastiche, bears the mark of a later hand; see Ṭ. Ḥusayn. In addition to this poem, there are several fragments attributed to ʿAmr, forming a small *dīwān* edited by Krenkow in *Machr.*, 1922, 591-611. These pieces, all of pre-Islamic inspiration, are notable for their impetuosity of style and simplicity of language.

Bibliography: Ibn Ḳutayba, *Shiʿr* (de Goeje), 117-20; *Aghānī*[3], xi, 42-5, 52-60 (reproduced by Cheikho, *Poètes Chrétiens* 197-220 and followed by Caussin de Perceval, *Essai sur l'histoire des Arabes*, Paris 1847, ii, 363-5, 373-84; Marzubānī, *Muʿdjam* (Krenkow), 202, Rothstein, *Die Dynastie der Laḫmiden in Ḥīra*, Berlin 1899, 100; Nöldeke, *Fünf Moʿallaḳāt*, Vienna 1899, i; Ṭ. Ḥusayn, *Fi 'l-Adab al-Djāhilī*, Cairo 1345/1927, 236-41. Translations of the *Muʿallaḳa* by Kosegarten 1819, Caussin de Perceval 1847; see Brockelmann, S I, 52. (R. Blachère)

ʿAMR b. al-LAYTH, Persian general, brother and successor of Yaʿḳūb b. al-Layth [*q.v.*], the founder of the Ṣaffārid [*q.v.*] dynasty in Sidjistān. Said to have been a mule-driver in his youth, and later on a mason, he was associated with his brother's campaigns and in 259/873 captured for Yaʿḳūb the Ṭāhirid capital Naysābūr. After Yaʿḳūb's defeat at Dayr al-ʿĀḳūl and subsequent death (Shawwāl 265/June 879), ʿAmr was elected by the army as his successor. He made his submission to the caliph, and was invested with the provinces of the former Ṭāhirid principality in Eastern Persia and Sind, together with Fārs, and the command of the *shurṭa* in Baghdād and Sāmarrā (Ṣafar 266/Oct. 879). He reoccupied Fārs in 268/881-2, but obtained effective control of Khurāsān only in 280/893, after a long struggle with Aḥmad b. ʿAbd Allāh al-Khudjistānī (d. 268/882) and Rāfiʿ b. Harthama. In the interval, he was twice dismissed from the command of the *shurṭa* and formally divested of his provinces (in 271/885, after a severe defeat by the caliph's forces under Aḥmad b. ʿAbd al-ʿAzīz b. Abī Dulaf, and again in 276/890), and also lost Fārs in 274/887. Confirmed for the third time as governor of Khurāsān and Sidjistān in 279/893, he finally reestablished his control of the former in 283/896, after a transient reoccupation by Rāfiʿ b. Harthama. Thereafter, at his own request (arising out of his ambition to restore in his own favour the former Ṭāhirid suzerainty over the Sāmānid family in Transoxiana) he was granted the *tawliya* of *Mā warāʾ al-Nahr*, in 285/898. His attempt to enforce his rights of suzerainty was, however, cut short when in Rabīʿ II, 287/April 900 the Sāmānid Ismāʿīl [*q.v.*] defeated his forces and captured him at Balkh. ʿAmr was sent to Baghdād and after remaining in captivity there for over a year was executed on 8 Djumādā I, 289/20 April 902. For his organization of government and the general significance of his campaigns in the history of Persia, see the art. ṣaffārids.

ʿAMR B. LUḤAYY, the legendary founder of polytheism in Arabia and the ancestor of the Khuzāʿa [*q.v.*] at Mecca. The Kaʿba being, according to the Ḳurʾān (iii, 96/0), "the first sanctuary appointed for mankind", it was necessary to believe that polytheism was a later corruption. Neither the Djurhum, Ismāʿīl's relatives, nor the Prophet's tribe, the Ḳuraysh, were likely to be responsible for it. So the blame was laid on ʿAmr b. Luḥayy, the leader of the Khuzāʿa, who was said to have expelled the Djurhum from Mecca. He was said to have "changed the religion of Abraham" by introducing the idols either from Hīt in Mesopotamia or from Maʾāb in the Balḳāʾ and placing them around the Kaʿba. Others maintained that he fetched the five idols of Noah's contemporaries (mentioned in Ḳurʾan, lxxi, 23) from Djidda and distributed them amongst the Arabs over whom by dint of his wealth und liberality he was believed to have an absolute command. He was also accused of setting free certain camels in honour of the idols, a superstition denounced in Ḳurʾān, v, 103/2 as an invention of the unbelievers. He was made responsible for the divination by arrows, for the pagan *talbiya*, in short for everything heathen. It was even told, that the Prophet had seen him in hell and that he closely resembled in appearance to one of Muhammad's followers (showing that appearances are deceiving). The Prophet is also made to decide the dispute about the genealogy of Khuzāʿa by stating that "ʿAmr b. Luḥayy b. Ḳamaʿa b. Khindif is the father of Khuzāʿa" in contradistinction to the prevailing opinion of the genealogists that the Khuzāʿa are of Yamanite origin and that ʿAmr's father Luḥayy was Rabīʿa b. Ḥāritha b. ʿAmr b. ʿĀmir al-Azdī. These differences and the fact that ʿAmr's name does not occur in any ancient poem, point to the conclusion that even if he be a historical personality, no reliable information about him exists.

(J. W. FÜCK)

ʿAMR B. MAʿDĪKARIB B. ʿABD ALLĀH AL-ZUBAYDĪ, ABŪ THAWR, famous Arab warrior and *mukhaḍram* poet. Born of a noble Yamanite family, he is depicted as a fighter of uncommon strength who, armed with his legendary sword al-Ṣamṣāma, took part in many battles during the *djāhiliyya*. In 10/631, he went to Medina and was converted to Islam, without, however, making any radical change in his way of life; on the death of the Prophet, he apostatised and took part in the rebellion of al-Aswad al-ʿAnsī [*q.v.*]; taken prisoner in the course of the suppression of the *ridda* by Abū Bakr, he was freed by the caliph and fought at the battle of the Yarmūk (15/636) and with distinction at that of al-Ḳādisiyya (probably 16/637). The sources differ regarding the date of his death; some, relying on the legends which grew up about his exceptional longevity, place his death in the caliphate of Muʿāwiya; but it is more likely that he lost his life either at al-Ḳādisiyya or at the battle of Nihāwand (21/641), as stated by the most reliable authorities.

His poetry, devoted to fighting, seems to have been characterised by its brevity and clarity of expression, but only a few examples of it have come down to us.

Bibliography: Verses and appreciation can be found in: Abkaryūs, *Rawḍat al-Adab* 239-43; F. E. A. Nallino, *Letteratura* (= *Scritti*, vi) 48 (Fr. Trans. 76-7); O. Rescher, *Abriss*, i, 117. (CH. PELLAT)

ʿAMR B. MASʿADA B. SAʿĪD B. ṢŪL, secretary of al-Maʾmūn, was of Turkish origin, and was a relative of Ibrāhīm b. al-ʿAbbās al-Ṣūlī [*q.v.*]. His father had been secretary of chancellery under al-Manṣūr. He himself served the Barmakides, and was later for many years one of al-Maʾmūn's chief assistants, in charge of the Chancellery and also of various financial posts which seem to have brought him substantial profits, but he never received the title of *wazīr*. He accompanied the Caliph to Damascus and on his expedition into Byzantine territory, and died at Adana in 217/832. He was noted for his epistolary talent, and the Arab authors have preserved several specimens of his work.

ʿAMR B. SAʿĪD B. AL-ʿĀṢ B. UMAYYA AL-UMAWĪ, known as **AL-ASHDAK,** Umayyad governor and general. Governor of Mecca when Yazīd b. Muʿāwiya came to the throne (60/680), he was the same year appointed governor of Medina. On Yazīd's orders, he sent an army to Mecca to subdue the anti-Caliph ʿAbd Allāh b. al-Zubayr, and entrusted the command to a brother of the latter, ʿAmr; but ʿAmr was taken prisoner and, with his brother's consent, flogged to death by his personal enemies. At the end of the following year, al-Ashdaḳ was dismissed. Later he went with the Caliph Marwān on his Egyptian expedition and, when Musʿab b. al-Zubayr invaded Palestine in an attempt to reconquer Syria during the Caliph's absence, Marwān sent against him al-Ashdaḳ, who forced him to withdraw. At the time of the conference after the death of Yazīd, ʿAmr had been mentioned as a possible eventual successor to Marwān; he was the Caliph's nephew through his mother, and was also related to him on his father's side; since he was also well liked in Syria, he could have become a source of danger; but when Marwān had consolidated his position he enforced the *bayʿa* in favour of his two sons ʿAbd al-Malik and ʿAbd al-ʿAzīz. When ʿAbd al-Malik came to the throne, he entertained fears of ʿAmr which were not entirely without foundation; in fact, in 69/689, when the Caliph undertook a campaign against ʿIrāḳ, al-Ashdaḳ took advantage of his absence to assert his

right to the caliphate and to stir up a dangerous revolt at Damascus; ʿAbd al-Malik had to return, and ʿAmr only submitted after receiving a promise safeguarding his life and liberty. The Caliph, however, soon decided to remove this potential threat; he had al-As̲h̲daḳ brought to the palace where, according to tradition, he was killed by ʿAbd al-Malik himself (70/689-90).

Bibliography: Balād̲h̲urī, *Ansāb al-As̲h̲rāf*, iv/B, index; Ibn Saʿd, v, 176-7; Yaʿḳūbī. ii, 81 ff.; Ṭabarī, i, 1779 ff.; Ibn al-At̲h̲īr, ii, 318 ff.; Masʿūdī, *Murūd̲j̲*, v, 198 ff.; 206, 233 ff.; ix, 58, *Aghānī*, index; Marzubānī, *Muʿd̲j̲am*, 231; Wellhausen, *Das arabische Reich*, 108, 118; Buhl, *Die Krisis der Umajjadenherrschaft im Jahre* 684, in *ZA*, xxvii, 50-64. (K. V. Zettersteén*)

ʿAMR B. ʿUBAYD B. BĀB, one of the first of the Muʿtazila, with the *kunya*, Abū ʿUt̲h̲mān. His grandfather Bāb was captured by Muslims at Kābul. He himself was born at Bal̲kh̲ in 80/699 and was a *mawlā* of a branch of Tamīm. His father apparently moved to Baṣra, and ʿAmr seems for a time to have been a member of the school of al-Ḥasan al-Baṣrī, though al-D̲j̲āḥiẓ also speaks of him as a pupil of al-Faḍl b. ʿĪsā al-Raḳās̲h̲ī. He also had some connexion with Yazīd III. He gained a great reputation as an ascetic, and was known at the court of al-Manṣūr, to whom he apparently spoke fearlessly on religious and moral questions, while refusing all reward. For his strength of character al-Manṣūr respected him highly, and on his death composed a eulogy of him in verse. He died in or about 144/761.

There is some obscurity about his precise relationship to Wāṣil b. ʿAṭāʾ and their respective parts in founding the Muʿtazila. The story of how Wāṣil went apart (*iʿtazala*) from the circle of al-Ḥasan is also told of ʿAmr both with al-Ḥasan and with his pupil Ḳatāda; and the early writer Ibn Ḳutayba (d. about 270/884) knows of ʿAmr but not of Wāṣil. Bis̲h̲r b. al-Muʿtamir (d. 210/825) speaks of his own party as followers of ʿAmr and some opponents as followers of D̲j̲ahm (*Intiṣār*, 134). ʿAmr's views are usually said to be similar to Wāṣil's, apart from a slight difference in attitude towards the parties at the battle of the Camel; and Wāṣil had married ʿAmr's sister. So there was doubtless some relation between them, but it is possible that ʿAmr did more than Wāṣil, who died thirteen years earlier, to create the later Muʿtazila, especially as Abu 'l-Hud̲h̲ayl al-ʿAllāf was ʿAmr's pupil (*Intiṣār*, 67).

AMRITSAR, capital of a district in the Pand̲j̲āb (India). Pop. (1951). town-325,747, district-1,367,047, of whom 4,585 Muslims. The population of the Muslims in the district declined sharply after Partition. It was founded by the fourth *guru* of the Sikhs [*q.v.*], Rām Dās (1574-81), upon a site granted by the emperor Akbar, where he excavated the holy tank from which the town derives its name (*amrita saras*, «pool of immortality»; initially it was called *guru ka chak* or *chak guru* and Rāmdāspura). The next *guru*, *Ardjun* (1581-1606) completed the *Harmandir* (in English, the «Golden Temple»), the chief worshipping place of the Sikhs. In 1762, Aḥmad S̲h̲āh Durrānī destroyed the temple and the tank, but it was quickly rebuilt by the Sikhs. With the establishment of independent Sikh power after 1764, the importance of the town increased, and the Sikh rulers, especially Rand̲j̲īt Singh, endowed the temple heavily. The town passed under British rule in 1849. For about two centuries the town has been important for its entrepôt trade.

ĀMŪ DARYĀ, the river Oxus.

Names. The river was known in antiquity as Ὦξος (also Ὦξος, Latin Oxus); length 2494-2540 kms. The present Iranian designation is traceable to the town of Āmul [*q.v.*], later Āmū, where the route from K̲h̲urāsān to Transoxania crossed the river as long ago as the early Islamic period. The Greek name is, according to W. Geiger and J. Markwart (*Wehrot*, 3, 89) derived from the Iranian root *wak̲h̲s̲h̲*, "to increase"; a derivation from the homonymous root meaning "to sprinkle" is also possible. (Cf. the name of the Wak̲h̲s̲h̲āb, a tributary of the Āmū Daryā). In Sāsānian times the river was called Weh-rōd̲h̲ or Beh-rōd̲h̲ (Markwart, *Wehrot*, 16, 35). The Arabs and Islamicised Persians for a long time called it, especially in learned works, D̲j̲ayḥūn (used by Gardīzī in the 11th century as an appellative for a river in general); this name derives from the Biblical Gihon, one of the rivers of Paradise. In Chinese it is known as Kui-s̲h̲ui, Wu-hu or Po-tsu. The region north of the Āmū Daryā is called by the Muslims Mā warāʾ al-Nahr [*q.v.*], "land on the other side of the river", Transoxania.

The upper course of the river. The Āmū Daryā rises from several rapid head-waters. The most southerly of these, the Pand̲j̲ (rising from the Wak̲h̲k̲h̲āb—in the Middle Ages D̲j̲aryāb, cf. Markwart, *Wehrot*, 52; Barthold, *Turkestan*, 65—and the Pāmir Daryā), has its source in the Pāmir. After following initially a course from East to West, it turns North near Is̲h̲kās̲h̲im and receives on the right (E.) the G̲h̲ūnd and the Aḳ Ṣu [*q.v.*], and flows from there once more westwards. There follow as tributaries on the right bank the Yāzgulām and the Wančāb, and lastly the Kūlāb Daryā. All these rivers as well as those to be named later are fed by several headwaters and tributaries.

The most important and highest tributary of the Pand̲j̲ on the right bank is the Wak̲h̲s̲h̲āb (also known as Ḳızıl Ṣu or Surk̲h̲āb), which is regarded as the upper course of the Āmū Daryā in the *Ẓafar-nāma* of ʿAlī Yazdī (1424-5, ed. M. Ilāhdād, Calcutta 1885-8, i, 179 ff.). On the other hand the inhabitants of today, as well as the mediaeval geographers, consider the Pand̲j̲ as the upper course proper; modern geography favours the Aḳ Ṣu.

The area of the source of the Āmū Daryā began to become known from the 19th century onwards (cf. the map in A. Schultz, *Landeskundliche Forschungen im Pamir*, Hamburg 1916, 24-5; details in PĀMIR). The Arabic geographers did not entirely grasp the true state of affairs; moreover, the inter-

pretation of the names of the headwaters given by them is controversial. Al-Iṣṭakhrī, 296 (= Ibn Ḥawḳal (Kramers), 475), names five headwaters of the Āmū Daryā; the co-ordination of these names with the designations in use today proposed by W. Barthold, with which, in general, V. Minorsky associates himself, appears the most plausible. (See Barthold, *Turkestan*, 68 ff.; Minorsky, *Ḥudūd*, 208, 360; different identifications were proposed by Marquart *Ērānšahr*, 233 f., and *Wehrot*, 53, and Le Strange, 435). The area of confluence of these streams was known in the 13th century as Ārhan (in the *Ẓafar-nāma* Arhang), in al-Bīrūnī Ḥu(b)sāra. Al-Maḳdisī, 22, counts as sixth headwater the Kawādhiyān river. The Kūkča and the Kunduz river are other left-hand tributaries mentioned by the Arabs (al-Ṭabarī, ii, 1590; Ibn Khurradādhbih, 33; Ibn al-Faḳīh, 324, Ibn Rusta, 93; Minorsky *Ḥudūd*, 353 f.). From the right enter the Kāfirnihān (260 kms.; in the Middle Ages Rāmidh, in Ibn Rusta, 93, Zāmil, today the name of one of its headwaters) and the Surkhān (200 kms.; in the Middle Ages and in the 14th century Čaghān Rūdh). It is from the mouth of the Kāfirnihān at Pandjāb (Aywadj of today; Barthold, *Turkestan*, 72) that some geographers consider the Oxus proper to begin. The last (right-hand) tributary before the mouth (1175 km. distant) is the Surkhān Daryā, as the Shīrābād and Kālif rivers do not, under normal circumstances reach the Āmū Daryā, and the Zarafshān [*q.v.*] too loses its waters and does not join the Oxus. Similarly numerous rivers on the left-hand side run out in the sand before reaching the Āmū Daryā. The (lower) Murghāb did not in Islamic times reach it; it remains doubtful how far Greek sources, which indicate that this did occur in their time, are correct (Ptolemy, vi, 10 [cf. MURGHĀB]); the Harī Rūdh [*q.v.*], Arius, ran out in the sands of the Ḳara Ḳum (Strabo, xi, 58; Ptolemy, vi, 17, cf. Pauly-Wissowa, ii, 623 f.).

In the upper region of the Āmū Darya lie the districts of Wakhān (on the Pandj), then Badakhshān (on both sides) and Shughnān with Ghārān (Gharān) S. and S.E. of the junction of the Pandj with the upper Murghāb, further N. Darwāz. Between the Āmū Daryā and the Wakhsh lies Ghuttalān. The Wakhsh flows through the Pāmir region (the name Fāmir occurs already in al-Yaʿḳūbī, *al-Buldān*, 290 and al-Dimashḳī) and then touches Žasht (thus correctly in Gardīzī, ed. Nāẓim, 35) and Kumīdh. Between the Wakhsh and Kāfirnihān lay in maedieval times Wāshdjird (the Fayḍābād of today) and Ḳuwādhiyān (the Ḳabādiyān of today). The Surkhān valley contained the province of Čaghāniyān (Arabic Ṣaghāniyān). On the left bank lay, W. from Badakhshān, the province of Ṭukhāristān (approximately up to Balkh). At this point the Āmū Daryā enters the desert tract between the Ḳara Ḳum of the present day (on the left) and the Ḳizil Ḳum (on the right) where it loses a considerable proportion of its waters through evaporation. It skirts the ancient Sogdia and finally reaches Khʷārizm.

In the 19th and 20th centuries the Amīrates of Bukhāra and Khīwa lay here, while towards the S, since the frontier adjustment of 1886-93, the Amu Darya forms the N. frontier of Afghānistān for 1100 kms. from the Pāmir Daryā past Kalʿa-yi Pandj to Bosaga below Kālif. Since 1924 the Āmū Daryā forms the southern boundary of Tādjikistān and, since the latest revision of provincial frontiers (1936) in the Soviet Union, in its lower course approximately separates Uzbekistān (with Ḳara-ḳalpaḳia which embraces the whole delta) from Turkmenistān.

Historical maps for the mediaeval period in Minorsky, *Ḥudūd*, 339; Le Strange, maps ix and x; *Atlas Istorii SSSR*, i, Moscow 1949, 6, 12, 26; A. Herrmann, *Atlas of China*, Cambridge (Mass.) 1935, 24, 32, 49, 60; for later times cf. *Atlas Istorii SSSR*, ii, Moscow 1949, 15, 17 right bottom, 18; Burhān al-Dīn Khān Kushkekī, *Kattagan i Badakhshan*, transl. from Persian into Russian by A. A. Semenov, Tashkent 1926; A. Herrmann, *Atlas of China*, 66 (distribution of nationalities); *Westermanns Atlas zur Weltgeschichte*, iii, Brunswick 1953, 134, 135.

The following were places of particular importance on the Āmū Daryā in the Middle Ages: Tirmidh, Kālif, Zamm (Karkhī; left), opposite to which lies Akhshīkath, Āmul (Čardjūy; left), opposite to which is Firabr, finally various towns of Khʷārizm. [Cf. the articles].

The water of the Āmū Daryā rises in its middle course, which is 3570-5700 ms. broad and 1, 5-8 ms. deep, in April-May, and becomes low again in July. It frequently floods the areas on its banks, particularly to the right, hence from time to time a more luxuriant growth of bushes and vegetation is produced there. The river is in this neighbourhood not directly tapped for irrigation; nevertheless there ran along its left bank in the Middle Ages a strip used for agricultural purposes; from the 14th century on it apparently began to turn into a steppe (Barthold, *Turkestan*, 81 f.).

The lower course and its changes. From the middle course onwards, somewhat beyond Kālif, the course of the Āmū Daryā shifted in various directions in prehistoric or even in historical times. According to Ptolemy the course of the Āmū Daryā in the area between Kālif and Zamm (Karkhī) turned in approximately a W. direction (as opposed to the NW direction of the present day) and ran into the region of the Ḳara Ḳum desert. Al-Bīrūnī too assumed such a course for the river in a previous epoch (cf. A. Z. V. Togan, *Biruni's Picture*). In actual fact it is possible to trace a former bed which branches off at Karkhī, goes between Repetek and Üč Hādjdjī and finds its continuation in the (former) Unguz river bed. Between 1928 and 1940 for instance the Āmū Daryā showed a tendency to flow S. in this vicinity, so that from the geological point of view a similar course is not out of the question. The theory of a bed in Unguz (in spite of the molluscs which al-Bīrūnī reports having found there) requires further geological research before further conclusions can be drawn from the extremely uncertain reports of the old geographers. Al-Bīrūnī's account is that the Āmū Daryā/Unguz flowed into a great desert lake but did not reach the Caspian. On the other hand Strabo (xi, 50) reports a discharge into the Caspian Sea. The culture of Khʷārizm, however, which has ten centuries' history behind it, and which would have been impossible without irrigation from the Āmū Daryā, is a sure indication that in that time the Unguz cannot have been the sole lower course of the Āmū Daryā.

Al-Bīrūnī supposes that as a result of obstructions of the riverbed, the Āmū Daryā later, instead of flowing into the Unguz, squeezed through the narrow river-gorge (360 m.) between the Düldül Atlaghān and the Tüye Moyun (at the present day Pitnyak, 384 kms. from its mouth); it is called Dahān-i Shīr = Fam al-Asad, "lion's mouth"). But geological research here too indicates that this break-through must have come about already in prehistoric times. Below this pass there branch off the large side canals which render possible the oasis culture of Khʷārizm.

The Arabic geographers of the 10th century give Ṭāhiriyya, S. of the river-gorge, as the southern limit of this area of irrigation. In the 11th century Dargh̲ān, further NW (N. of the gorge) was generally regarded as the limit (Bayhaḳī, ed. Morley, 859). The S. boundary of the K̲h̲ānate of K̲h̲īwa was first fixed further S. (S. of Pitnyak) after the Russian conquest of 1873.

Opposite the present-day Sadwar (three *farsak̲h̲s* on the other side of the gorge) there branch off to the right the Gawk̲h̲ʷāra, and after five more *farsak̲h̲s* the Kirya canal. They extended, respectively, N. to the Sulṭān Uways Dag̲h̲ī chain and E. from it to the same latitude and formed the basis of the rich cultural development during and preceding the Islamic era on the lower right bank of the Āmū Daryā N. of the present-day Dörtkül (Turtkul), the capital of the province of Ḳaraḳalpaḳia. (Cf. Tolstov, in *Bibl.*, and K̲h̲ʷārizm).

Further NW and N. the main bed of the Āmū Daryā has repeatedly shifted in historical times and does so even at the present day. The question has been thoroughly debated whether the Āmū Daryā had in earlier times a different lower course. De Goeje quoted historical sources to the effect that this river has always in historical times emptied itself—albeit in separate main branches—into the Aral Sea. W. Barthold opposed this view and supposed that the Mongols by piercing a main dam with the object of conquering the town of (Old) Urgand̲j̲ [*q.v.*] in 1221, diverted the river towards the W., so that it flowed into the depression and the sea and marsh tracts of the Sarī Ḳamīs̲h̲ and finally into the Caspian along the eastern edge of the Čiñ (Čink) ridge and further through the Özboy (Russian Uzboy) until the end of the 16th century. Barthold quotes in support of his thesis statements by Ḥamd Allāh Mustawfī (213 transl., 206; 117, transl. 170), Ḥāfiẓ-i Abrū (see W. Barthold, *Aral*, 48 f.), and Ẓahīr al-Dīn Marʿas̲h̲ī. The latter (ed. B. Dorn, *Mohammed. Sources etc.*, i, St. Petersburg 1850, 436, transl. 436) speaks of a fleet which travelled up on the D̲j̲ayḥūn from the mouth of the Özboy in the Caspian. K̲h̲ʷāndamīr (iii, 244-6) reports that the sultan Ḥusayn Bayḳara travelled from Ag̲h̲riča (the Balk̲h̲ān mountains) to Ad̲h̲aḳ (now Aḳ Ḳalʿa) and crossed the Āmū Daryā "after seven days". But most of this evidence is subject to doubt, and K̲h̲ʷāndamīr himself in his geographical appendix definitely makes the Āmū Daryā flow into the Aral Sea. Everything considered, the evidence adduced by de Goeje seems to have more weight than that relied on by Barthold.

Barthold's views, however, found widespread support among historians and Le Strange, A. Herrmann and A. Zeki Velidī Togan (*Biruni's Picture*; recapitulated in *IA*, i, 423-6) contended that the Āmū Daryā flew into the Caspian even at an earlier period.

Barthold, and following him Togan, viewed the 16th century as the time of the shifting back of the mouth of the Āmū Daryā to the Aral Sea. Both refer in this connection to the reports of the English traveller Anthony Jenkinson in 1558 (in R. Hakluyt, *The Principal Navigations etc.*, i, London 1927, 449) and of the Ottoman traveller Sayfī in 990/1582 (Barthold, *Aral*, 71; idem, *Oroshenie*, 93) as well as to Abu 'l-G̲h̲āzī (b. 1603), who dates a shifting of the Āmū Daryā 30 years before his birth (thus ca. 1573). The K̲h̲ʷārizmian writer Āgihī and the chronicle of K̲h̲īwa by Muʾnis (19th century) place this event in the year 1578 (Barthold, *Aral*, 69-74). Thus the discharge of the Āmū Daryā into the Aral Sea is unequivocally established for the period following the 16th century.

Although the question of the course of the lower Āmū Daryā seemed to be settled to the satisfaction of the historians by the theory that the Özboy up till the 16th century formed the lower bed of the river (cf. A. Herrmann, *Gibt es noch ein Oxus-Problem?*, *Petermanns Mitteilungen*, 1930, 286 ff.), yet geographers and geologists have always rejected this view (see A. S. Keś, I. P. Gerasimov and K. K. Markov, and S. P. Tolstov, in *Bibliogr.*). At the present state of geological research, it appears that a temporary diversion of the Āmū Daryā into the Sarī Ḳamis̲h̲ has been established; on the other hand, the Özboy was clearly not the river-bed of the Āmū Daryā on its way to the Caspian in historical times.

Shifting of the channels of the Āmū Daryā in the delta proper is not a matter of doubt either in historical times or at present. The early Islamic capital of K̲h̲ʷārizm, Kāt̲h̲ [*q.v.*] gradually decayed owing to shifting of the bed of the river. The interpretation of the reports of the 10th century geographers is, however, uncertain. They speak of a series of lakes (K̲h̲alīd̲j̲ān); according to Ibn Rusta, 92, these were on the edge of the Siyāh Kūh (Čin), but according to al-Iṣṭak̲h̲rī, 303, and Ibn Ḥawḳal (Kramers), 480, on the Aral Sea; al-Maḳdisī, 288, 343 f., gives no details. (Cf. also Barthold, *Turkestan*, 152; idem, *Oroshenie*, 84; idem, *Aral*, 22). The town of (Old) Urgand̲j̲ lay after the Mongol conquest "on the right bank of the river" (i.e. the Daryālik). The breaking off of the connection to the Sarī Ḳamis̲h̲ in the 16th century may be accepted as a fact: possibly the resumed intensive irrigation took away the necessary water. At all events (Old) Urgand̲j̲ lost its water-supply and was replaced by the towns of Wazīr (since ca. 1450, ruined in the 17th century, ruins near the present day fortress of Dēw Ḳalʿa) and (New) Urgand̲j̲. Finally the emergence of K̲h̲īwa as capital of the province is to be attributed to these shiftings. The delta "island" (Aral) now took on importance. From here a new system of canals going to the left was constructed in the 19th century, and (Old) Urgand̲j̲ was once again enabled to regain some kind of existence.

For the settlement and the population in the area of the mouth of the Āmū Daryā, cf. K̲H̲ʷĀRIZM, K̲H̲ĪWA, ALĀN, PEČENEG, OG̲H̲UZ, TURKMEN, UZBEK, ḲARAḲALPAḲ, SART.

In the delta and in the lower reaches of the Āmū Daryā occurs a covering of ice, which on the average holds from the end of December to the end of March, and which caused astonishment to the Arab geographers and travellers (Ibn Baṭṭūṭa, ii, 450 f., iii, 1 f.). It nearly cost Yāḳūt his life in 1219 during his flight from the Mongols. In particularly severe winters it is up to 12 in. thick. The upper reaches also frequently freeze over in the mountainous regions.

In recent times there have been various projects for the diversion of the Āmū Daryā into the Caspian. In 1716 Peter the Great commissioned Prince Alexander Bekovič-Čerkasskiy (actually Dewlet Kizden Mīrzā, cf. Brockhaus-Efron, *Entsikl. Slovar*, iii, 356 f.; *Bol'shaya Sovetskaya Entsikl.*², iv, 406, with references) to investigate the possibilities of establishing a waterway almost right up to the frontiers of India. In 1873 the project was once more explored and pronounced basically feasible. It appeared that the way from Čard̲j̲ūy through

the Unguz was the most suitable, since it would thus not be necessary to await the protracted fulling up of the Sarî Ḳamîsh depression (cf. A. I. Glučovskiy, *Propusk vod r. Amu-Dar'i po staromu yeya ruslu v Kaspiyskoe More*, St. Petersburg 1893). After an extensive flood in 1952 the Soviet Government is said to have tackled anew in 1953 the project for a diversion of the powerful and incalculable Āmū Daryā through a part of the Özboy. It is planned to have power-stations at Tashiz and Ṭash, on the old course of the river. The main portion of the water however would be led off by a canal 1100 kms. long into the lower Özboy, and would fall into the Caspian at Kîzîl Suw (Krasnovodsk). Two barrages with large lakes are to produce further electricity and in addition ensure the irrigation of 1.3 million hectares of land for cottongrowing. In order to provide for the settlements thus brought into being two fresh-water canals are to be constructed. It is impossible to ascertain how far this project has actually been put into effect, or when if ever its completion is to be expected.

(B. Spuler, shortened by the Editors).

ʿAMŪD (Ar.) (tent pole, hence a monolithic column and capital; less commonly, a constructed pillar).

The use of the column and the capital in Muslim art, and in particular in religious architecture, is connected with the adoption by the builders of mosques of the oratory with multiple aisles and of the court surrounded by galleries. The column, like this type of oratory and peristyle, appears to be a Hellenistic legacy, especially since in Syria, Egypt, Ifrīḳiya and Spain the columns of the early mosques are constructed of used materials. However, after a period of more or less faithful imitation of earlier models, types which are characteristically Muslim emerge, with a more simple outline. The shaft of the column is no longer slightly convex, and its diameter is equal throughout its length, the plan being circular or polygonal. The capital assumes various forms which can be classified in two main groups, both perhaps derived from the Corinthian capital, but each possessing a distinctly localized development and descent.

The first group consists of capitals whose campanula or lyre-shaped outline (Herzfeld) has perhaps been contaminated by the lotus-bud capital of ancient Egypt. This capital appears in the 3rd/9th century in the ʿAbbāsid monuments of Sāmarrā and Raḳḳa (*A*). It passes, with many other elements, into the Ṭūlūnid architecture at Cairo (end of 3rd/9th century) (*B*), and is preserved in Egypt under the Burdjī (*C*) and Circassian (*D*) Mamlūks. The base has a similar, though inversed, outline. This bell-shaped capital is also found in Persia, whose brick and tile architecture admits of few real columns. It crowns the small imitation columns of the faience *miḥrābs* (*E*).

The general outline of the second group of capitals is rather that of the Corinthian corbel; it appears as a simplified form of the latter, by eliminating the vigorous reliefs of the Corinthian and its local variants, and predominates in western Islam. In the 3rd/9th century, al-Ḳayrawān possessed small capitals related to Coptic models, with four smooth leaves joined at the bottom and curving inwards at the point like a hook (*F*). From them derived, in

the same region, the Fāṭimid capitals of the 4th/10th and 5th/11th centuries, with a limb of flowing floral designs surmounting shafts decorated with whorls or inscriptions in scroll form (*G*), and, from the 7th/13th century onwards, the Tunisian capitals (*H*). About the same period, the monuments of the Umayyads of Spain were ornamented with capitals copied from the two classical models: Corinthian and Composite (*I*), rounded off, as in the Great Mosque at Cordova, or scored with deep grooves as at Madīnat al-Zahrā (2nd half of the 4th/10th century). These were the prototypes of the many beautiful variants offered by the Aljaferia of Saragossa (5th/11th century) and the Almohad mosques of Tīnmāl (*J*) and Marrākush (6th/12th century). In the 7th/13th century there emerged the Hispano-Morisco capital with a cylindrical lower portion and a paralleliped upper portion (*K*), which is recognizably a development from the Corinthian corbel which is both logical and in harmony with the Islamic plastic ideal. Various types can be found in the mosques and *madrasas* of North Africa and in the Alhambra at Granada. The latter has also some capitals in the shape of stalactites, probably an imitation of Persian originals. (G. MARÇAIS)

ĀMUL, name of two towns: (1) A town in the south-west corner of the east Māzandarān plain; it stands on the west bank of the Harhāz river, 12 miles south of the Caspian Sea, in the district which, according to the Classical writers, was the home of the Μάρδοι (ʾΑμάρδοι) (Āmul may be the Modern Persian form of the (hypothetical) Old Persian Amardha). Ibn Isfandiyār (*Taʾrīkh-i Ṭabaristān*, Teheran 1941, 62 f.) states that Āmul was founded by Āmula, daugther of a Daylamite chieftain and wife of King Fīrūz of Balkh, while Ḥamd Allāh Mustawfī (*Nuzhat al-Ḳulūb*, 159) maintains that King Ṭahmūrath was the founder, but these are mere legends. In the Sāsānid era, the district of Āmul, together with Gēlān (the modern Gīlān), formed a Nestorian episcopal see (*ZDMG*, xliii, 407); the town is also entioned several times in the *Shāh-nāma*. In Muslim times Āmul became an important industrial and trading centre. The great historian al-Ṭabarī and the famous jurist Abu ʾl-Ṭayyib al-Ṭabarī were born there. The anonymous author of the *Ḥudūd al-ʿĀlam* (134, 135) described Āmul as a great town and the capital of Ṭabaristān. It was then very prosperous, and many merchants and scholars resided there. It had a number of industries, and the surrounding disctrict produced large quantities of fruit of various kinds. Writing at much the same time, Ibn Ḥawḳal stated that Āmul was larger than Ḳazwīn.

Āmul was sacked by Masʿūd, the son of Maḥmūd of Ghazna, in 426/1035-36, and again by Tīmūr some 350 years later. Sir Thomas Herbert, who visited Āmul in 1628, described it as being "fruitfull and blessed", and as having "three thousand houses and those not builded in the meanest fashion" (*A Relation of a Journey begun in* 1610, London 1632, 106-7). Āmul has been devastated by earthquakes and floods several times; despite these disasters, it is still a considerable town (modern Āmul, however, stands a little to the east of the old town, the site of which is marked by extensive ruins).

Its houses of burnt brick, with their red-tiled roofs, give Āmul a picturesque apperance. It is connected with its suburb on the east bank of the Harhāz by a fine twelve-arched bridge. It is linked by roads with the small port of Maḥmūdābād on the Caspian, with Bārbul (Barfurūsh) to the East, and with Čālūs and Rasht to the west. In 1941 Āmul had a population of 14, 166 (but the number of inhabitants undergoes seasonal variations, as many retire to the mountains in summer to escape from the heat and the mosquitoes).

(2) A town situated at 39° 5′ N. Lat. and 63° 41′ east of Greenwich, 3 miles from the left bank of the Oxus (Āmū Daryā). In the Arabic Middle Ages, Āmul belonged to the large province of Khurāsān; it is now (under the name of Čārdjū or Čardjūy) in the Turkmen S. S. R. Although surrounded on all sides by desert, Āmul was once of great importance for the caravan trade, as the meeting place of the roads connecting Khurāsān with Transoxiana and Khīwa. The Sāmānid Ismaʿīl routed the ʿAlid Muḥammad b. Bashīr and his army near Āmul in 287/900. The town is frequently mentioned in the sources dealing with the Mongol invasion and Tīmūr's campaigns. The name Āmul (like that of Āmul no. 1) may be connected with the Μάρδοι (Αμάρδοι), more especially with an eastern branch (cf. Pliny, vi, 47). In order to distinguish the town from Āmul no. 1, definitions were sometimes added to the name, as Yāḳūt points out, and it was called either Āmul Zamm (cf. *e.g.* al-Balādhurī, ed. de Goeje, 410 and 420), *i.e.* the Āmul near Zamm (the modern Kerki, 125 miles to the south-east), or Āmul Djayḥūn, *i.e.* the Āmul on the Djayḥūn (Oxus), or Āmul al-Shaṭṭ, *i.e.* the Āmul on the river. Yet another name of the town, which occurs already in the Middle Ages, is Āmūya (cp. especially al-Balādhurī, 410; Yāḳūt, i, 365) or Āmū (Yāḳūt, i, 70); this last is perhaps merely a dialectical form of Āmul, from which the later medieval name of the Oxus, Āmū Daryā ('river of Āmu') may have been derived (thus Barthold, cf. ĀMŪ DARYĀ); it seems more likely, however, that Āmūya may be derived from Āmū, an ancient local name of the Oxus. The modern name, Čārdjūy, "the four streams", refers to the important ford over the Oxus near by. Čārdjūy is now connected by rail with Marw and Krasnovodsk to the west, and with Bukhārā, Samarḳand and Tashkent to the north-east; the railway crosses the Oxus by a long bridge go the north-east of the town.

Bibliography: Yāḳūt, i, 69, 70, 365; Le Strange, 403 f., 434; Marquart, *Ērānšahr n. d. Geogr. d. Pseudo Moses-Xorenacʿi*, Berlin 1901, 136, 311; id. *Untersuchungen zur Gesch. von Eran*, Leipzig 1895, ii, 57. (M. STRECK*)

The town appears to have received its present name of Čārdjūy in the time of the Tīmūrids; in his account of the events of 903/1477-8, Bābur (*Bābur-nāma*, ed. Beveridge, f. 58) mentions the passage of the river at Čārdjū (*Čārdjū güzari*). In 910/1504 the fortress of Čārdjū (in Muḥammad Ṣāliḥ, *Shaybānī-nāma* (Melioranski), 197: *Čārdjū ḳalʿasī*, in Banāʾī's Persian *Shaybānī-nāma*, quoted by Samoilovič, *Zap. Vost. Otd. Arkh. Obshc.*, xix, 173: *Ḳalʿa-yi Čahār-djūy*) had to surrender to the Uzbegs.

During the period of Uzbeg domination, as in the Middle Ages, the most important passage of the

Oxus was at Čārdjūy; boats were always kept in readiness for this purpose; bridges of boats were occasionally built for the passage of large armies, as, for example, for Nādir Shāh's army in 1153/1740. Čārdjūy, is, however as far as is known, nowhere mentioned in any authority as a large town in this period, still less as the residence of a prince or governor of importance. (Cf. Burnes, *Travels*, iii, 7 ff. [visited the town in 1832]; more reliable than J. Wolff, *Narrative of a Mission to Bokhara*, 1844, 162 ff.; Mushketow, *Turkestan*, St. Petersburg 1886, 606 ff. [visit of 1879]).

In 1884, the Turkmens of Marw had to submit to the Russians; the old caravan route was replaced by a railway which reached the Āmū Daryā in 1886. The importance of Čārdjūy, as a result, rapidly increased; the town, which was the residence of a *beg* of Bukhara, had before the Revolution about 15,000 inhabitants.

10 miles from Old Čārdjūy near the Āmū Daryā railway station, on ground ceded by the *amīr* of Bukhārā to the Russian Government, a new town arose which was the seat of a Russian military commandant and which had a population in 1914 of 4-5,000. In 1901 a railway bridge was built across the Āmū Daryā thus ensuring railway communication between Čārdjūy-Bukhārā and Tāshkent.

Under the Soviet regime new Čārdjūy has become an important administrative and, since 1924 industrial centre. In 1926, its population increased to 13,959, of whom 8,069 were Russians, 846 Armenians, 525 Uzbeks and only 458 Turkmens; in 1933 it rose to 54,500, the Turkmens always forming a small minority. In 1955 it was the second town of the Soviet Republic of Turkmenistān, and for a time (before 1930) there was a proposal to make it the capital of the Republic. Since 21 Nov. 1939 New Čārdjūy has been the chief town of the *oblast'* of the same name. It is a modern town designed on a rectilinear plan, and the town-planning scheme visualises an eventual population of about 200,000. It is the home of numerous industries, and an important centre of communications—rail (Krasnovodsk-Tāshkent and Čārdjūy-Kungrat lines); road (the Čārdjūy-Khīwa motor road); and river, the Āmū Daryā being navigable from Termez (Tirmidh) to the Aral Sea.

Old Čārdjūy (now Kaganovičesk) is now a small workers' town situated 5 miles from the outskirts of Čārdjūy, and has retained its character as an ancient indigenous town. In 1931 its population was only 2,042, mainly Turkmens of the Salor tribe, and Uzbeks.

The district (*oblast'*) of Čārdjūy, created on 21 Nov. 1939, has a total area of 36,000 sq.m. and is situated in Eastern Turkmenistān. The oasis of Čārdjūy, which stretches between the Āmū Daryā and the Ḳara Ḳum desert, forms the centre of this disctrict; it is a rich agricultural area (cultivation of silk, horticulture, cotton plantations, vine-growing, breeding of *ḳaraḳul* sheep). (A. Bennigsen)

AMULETS [see ḤAMĀʾIL].

ʿAMŪR (Djabal), a mountain massif in southern Algeria. The mountains of the ʿAmūr, named after a section of the people who live there form part of the Saharan Atlas of Algeria, together with the mountains of the Ḳṣūr and the Ouled Nail which form a continuation to the S-W and N-E. Nearly all over 3,900 ft., they rise slightly above the high steppes of Oran (3,275-3,900 ft.), and drop sharply down to the Saharan foothills (2,975-3,275 ft.). Between the ranges, which run S-W to N-E, stretch large synclinal watercourses with flat beds, with the occasional contrast of deep valleys which form scarped plateaus such as that of El-Gāʿda. The altitude gives the region cold winters, temperate summers and a relatively heavy rainfall. Thus the mountains of the ʿAmūr, are still covered with forests, especially in the north-western ranges (4920-5575 ft.) and on El-Gāʿda (3935-4590 ft.) : these forests are mainly of juniper. Mediterranean flora mingles with that of the steppe, such as alfa, which prevails on the southern slopes.

Inhabited from very early times, as is witnessed by the rock carvings and graves scattered over the massif, the Djabal ʿAmūr was for long ignored by the historians. The earliest inhabitants mentioned are the Rashīd Berbers who have given their name to the massif. They were to some extent superseded, in the course of the 8th/14th century, by the Arabicised nomads of the Sahara, the ʿAmūr, perhaps partly of Hilālian origin, who settled in this mountain massif. and the name Djabal ʿAmūr was substituted for that of Djabal Rashīd.

Numerous traces of villages (*ḳṣūr*) point to the early existence of agricultural life on a wider scale than to-day. The Djabal ʿAmūr is primarily a pastoral mountain region; flocks of sheep and goats move from the north to the south of the massif and along its fringes, and the inhabitants live in tents often carried on the back of oxen. The ʿAmūr make excellent knotted carpets. Aflou, the administrative and economic centre, has developed at the expense of the four surviving *ḳṣūr*.

ʿAMWĀS or ʿAmawās, the ancient Emmaus, still marked by a large village, was situated in the plain of Judæa at the foot of the mountains, some 19 miles from Jerusalem, and commanding one of the principal approach routes to the latter. The site of a victory won by Judas Maccabaeus in 166 B.C., it was fortified by the Seleucid general in 160 B.C. and became under Caesar the chief tow of a toparchy, only to decline to the size of a small market-town after being burnt by Varus in 4 B.C. Its strategic importance, however, led to its being selected by Vespasian as the site of a fortified camp, and it had again grown to the size of a small city when it obtained from Elagabalus in 221 A.D. the title of Nicopolis, its Christian colony embellished it with a basilica which, as excavations have discovered, was rebuilt successively by the Byzantines and the Crusaders.

The conquest of the area by the Arabs, which according to the sources occurred in 13/634 after the victory of Adjnādayn, or in 17/638 after that of the Yarmūḳ, marked its final decline; it was chiefly known as the source of the notorious "ʿAmwās plague" which left its tragic record in contemporary annals and which claimed 25,000 victims including the famous chiefs Abū ʿUbayda, Muʿādh b. Djabal and Yazīd b. Abī Sufyān. Its position as administrative capital was taken over by Ludd, and then by Ramla, founded in Umayyad times; the Arab geographers confined themselves to mentioning the small town, which played no part even during the period of the Crusades, when it experienced the same fortunes as Jerusalem down to the temporary

retrocession to the Franks under the treaty of Jaffa between al-Malik al-Kāmil and Frederick II.

ĀNA [see sikka].

ʿĀNA—in the Middle Ages also ʿĀnāt, and in Turkish official usage ʿAna—is a town of modern ʿIrāḳ situated on the Euphrates right bank (41° 58′ E, 34° 28′ N.), some 245 kilometers southeast of Dayr al-Zūr and 148 north-west of Hīt. The river, not here navigable by steamers (in spite of attempts a century ago), is used by *s͟hak͟htūrs* (wooden rafts), downstream only; and the traditional caravan-road from central ʿIrāḳ to northen Syria, passing through ʿĀna—a main element in its early importance—is little used since the appearance of trans-desert motor traffic. The town is flanked to the west by the tribal area of the ʿAniza sections in the Syrian desert, and to the east by the S͟hammar D͟jarbaʿ in the D͟jazīra, while the river banks are the area of the settled cultivating and sheep-breeding Dulaym. It is, under the ʿIrāḳ Government, the headquarters of a *ḳaḍā* in the *liwā* of Dulaym (headquarters, Ramādī), and contains the additional *nāḥiyas* of al-Ḳāʾim, Djubba, and Ḥadīt͟ha. The townspeople, practically all Sunnī Arabs—with small Jewish communities till 1369-70/1949-50—were for centuries at bitter enmity with those of Rāwa, immediately across the river: the feud was composed in 1340/1921.

ʿĀna, utilising the thin strip of land between the river and the line of low cliffs to the west, has the singular form of great length—some 7 miles—and extreme narrowness. The buildings lie within a dense date-belt, irrigated by water wheels (*nāʿūr*, pl. *nawāʿir*): there is also cultivation, and dwellings, on the mid-stream islands in the river. The town is reckoned as healthy and picturesque.

The women of ʿĀna are famed for their beauty, and for their weaving of cotton-cloth and woollen mats and cloaks: the men, whom lack of space for expansion forces largely to emigrate, are known for their skill as Euphrates boatmen, and in earlier days for their monopoly of water-carrying in Bag͟hdād. The educational standard, with eight schools in 1946, is relatively high.

The modern ʿĀna is the heir of a history disappearing into remote antiquity. Its name, recorded in cuneiform inscriptions as Anat or K͟hanat, was identical with the Greek Anatho (Ἀνάθω) (see Pauly-Wissowa, i, 2069, Suppl. i, 77; M. Streck, in ZA, xix, 25; idem, in *Klio*, vi, 197; *ZDMG*, lxi, 701) and occupation (probably with minor variations of site) has apparently been continuous, as a centre of cultivation, trading-post, and at times military headquarters; the islands, and sites on high ground west of the town, have at various periods been fortified as strong points or places of refuge. In ʿAbbāsid times ʿĀna belonged to D͟jazīra province, lying close to the frontier of al-ʿIrāḳ; it was known to travellers as a prosperous town with extensive date and fruit gardens and a reputation for wine-making. Its wine is already praised by the old poets; cf. S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, 157; G. Jacob, *Altarab. Beduinenleben*, 98, 248. The caliph al-Ḳāʾim took refuge here in 450/1058 from the contemporary Daylamī ruler of ʿIrāḳ. In early modern times, 8th/14th to 11th/17th centuries, it was the headquarters of tribal rulers, who about 1750 were replaced by first a rudimentary and later (after about 1267/1850) an organised Turkish administration; under the latter ʿĀna was the headquarters of a *ḳaḍā* grouped directly under the *wilāyet* of Baghdād. The town and district were occupied by the British in 1337/1918, and became part of the Kingdom of ʿIrāḳ, with their present administrative grouping, in 1340/1921.

ANADOLU, Anatolia, Asia Minor.

(i) — The name.
(ii) — Physical geography.
(iii) — Historical geography of Turkish Anatolia.
1. The conquest of Anatolia by the Turks, first phase, and the state of the Sald͟jūḳs of Rūm.
2. The conquest of Anatolia, second phase, and the beginnings of the Ottoman empire.
3. The political divisions of Anatolia.
4. Population.
5. Communications.
6. Economy.

(i) THE NAME

Anadolu (Arabic spelling أناطولي, Anaṭōlī i.e. Greek Ἀνατολή in Byzantine pronunciation), Anatolia, Asia Minor, the mountainous peninsula—including its base—proceeding from the southern part of the Asiatic continent towards Europe (Balkan peninsula) —known as Asia Minor (Μικρὰ Ἀσία) in antiquity—is situated between 36° and 42° N and 26° and 45° E. Together with the Balkan peninsula it has formed a bridge between Central Europe and Western Asia throughout its history. Arab geographers in the Middle Ages, and Turks until far into Ottoman times, called the country Bilād al-Rūm (country of the Rhomaeans).

The name Ἀνατολή ("rising" of the sun) is used first and foremost as a geographical term by the Byzantines, as "Orient" or "Levant", to denote all that lies east of Constantinople, i.e. especially Asia Minor and Egypt. A prefecture "per Orientem" (ἔπαρχος τῆς Ἀνατολῆς) appears, however, in the reorganization of the administration by Diocletian and Constantine as one of the four large sections of the empire; it consists of the five dioceses of Aegyptus, Oriens (Ἀνατολή in the stricter sense), Pontus, Asiana and Thracia, that is to say, the Middle East, Thrace, Egypt and Libya. The administrative term Ἀνατολή disappears with the introduction of the division into themes (at the beginning of the first half of the 7th century); the name Ἀνατολικόν or θέμα τῶν Ἀνατολικῶν is now applied to the theme (administrative area) around Amorium and Iconium. This considerably smaller administrative unit is called al-Nāṭolūs, or some-

thing similar, (explained as *al-mashrik*, "the east") by Ibn Khurradādhbih (107, transl. 79); al-Nāṭolīk (explained as *al-mashrikī*, "the eastern") by Ḳudāma, (ed. de Goeje, 258, transl., 198); cf. H. Gelzer, *Die Genesis der byzantinischen Themen-Verfassung*, Leipzig 1899, 83; F. W. Brooks, *Arabic Lists of Byzantine Themes, Journal of Hellenic Studies*, 1901, 67-77). The name of the theme Anatolikon disappears again with the Turkish conquest. The general geographical term Anaṭōlī reappears, however, and gradually becomes Anadolu with the Turks. To begin with, this meant only western Anatolia. The large Ottoman province (*eyālet* or *wilāyet*) of this name embraced the area of the former western Anatolian Turkish principalities [see next article]. The term Anadolu as name of a province disappeared at the time of the reorganisation of the provinces during the *tanẓīmāt* (middle of the 19th century). From then on "Anatolia", used geographically, came to mean the whole peninsula (roughly as far as the line Trebizond (Trabzon) Erzindjan-Biredjik-Alexandretta) which today forms the main part of the area of the Turkish republic. "Anadolu", as it is used today in Turkish, is the whole Asiatic part of modern Turkey, including those areas which geographically belong to upper Mesopotamia: al-Djazīra (Diyārbakr), Kurdistān (Van and Bitlis), as well as to Armenia (Kars). It is in this sense that the term is used in the present article (the islands in the Aegean Sea are not taken into account). In 1950 the overall area of Turkey was stated to be 767,119 sq. km. Of these, Thrace has 23,485 sq. km. and Anatolia 743,634 sq. km. The number of inhabitants in the whole of Turkey was 20,934,670 in 1950; of these, 1,626,229 lived in the European part of Turkey, and 19,308,441 lived in Anatolia.

[For pre-Turkish Anatolia, see RŪM].

(F. TAESCHNER)

(ii) PHYSICAL GEOGRAPHY

General survey of the nature of the country. Anatolia consists of a spacious high plateau, ringed by longitudinal and even higher mountain ranges to the north and south. The central plateau contains Central Anatolia. The northern part of this ring may best be collectively called the northern Anatolian border mountains; the southern section is formed by the Taurus system. Central Anatolia is ringed off by hills to the east and west as well, where the northern and southern ranges come into contact. Thus there is the mountainous ridge of western Anatolia, with the Aegean coastlands lying beyond it. In the east, there are the chains of mountains of the upper Euphrates region and—as a sort of outpost of Anatolia—the high plateau of Mount Ararat.

As might be expected from the geographical position, the winter temperatures along the coast of Anatolia are mild, ranging from an average of over 5° C. on the Black Sea coast to over 8° C. on the southern coast during January. A large part of the country lies within the reach of the system of low atmospheric pressure which moves from west to east and influences the weather in western and central Europe throughout the year. Hence humidity in Anatolia is comparatively high during the winter. In summer, the coastal areas become oppressively hot, with average temperatures for July and August of 22° in the north and over 27° C. in the south. Northern winds prevail and bring a dryness, typical of the mediterranean climate, to the west and south coast in summer, whilst, coming from the sea, they bring rainfall even in summer to the northern coast. On the south and west coast, natural vegetation is largely of the evergreen variety common in mediterranean countries. In many places it has been made into arable land, whilst the rest has deteriorated into shrubs and sparse grazing ground. More luxuriant vegetation appears along the northern coast, which is more humid in the summer and where plants which need more water grow in woods, bushes and cultivated fields.

The border mountains naturally have colder —in parts extremely cold—winters, their summers are less hot, and the humidity is higher than along the coast. The sides of the mountains are naturally wooded. In the case of the western, southern, and eastern rims, these woods consist largely of "dry forest", particularly oak and coniferous trees. Many of them had to be sacrificed in the drive for arable and grazing land. In the northern mountain chains nearer the coast, "damp forest" prevails, in which the beech and the pine play a large part in the higher regions. "Dry forest" replaces "damp forest" even in northern Anatolia on the inner mountain ranges, owing to the decreased humidity. "Damp forest" has great resilience and is therefore less threatened by human activity.

The central Anatolian plateau—ringed by its border mountains—is cold in winter, with average temperatures for January below freezing point, whilst it is very hot in the summer, the July/August average reaching 24° C. Since there is considerably less rainfall here than there is in the coastal areas and their mountains, it is a steppe. Despite erroneous information on some maps, there are no stretches of desert in central Anatolia. Even in the driest districts it is possible to grow barley and wheat without artificial irrigation, relying solely on natural rainfall, with moderate success.

There are steppes on the southern edge of the eastern Taurus where Anatolia and Mesopotamia meet. Although they are not much above sea level, they are a long way from the sea, and as a result winters are less mild and less humid than along the mediterranean coast, and summers very hot and dry.

The Northern Anatolian border mountains. The range of north Anatolian border mountains (often known as the Pontic Mountains in Europe) consists of comparatively straight parallel mountain ranges from 1200 m. to 1500 m. in height, often rising to over 2000 m. These are fairly broad and some have plateaux. To the east, in the so-called Zigana mountains (called after the Zigana pass south of Trabzon) there is a long stretch over 3000 m. in height, and here one finds alpine formations. The mountains are made up largely of slate, sandstone, marl, volcanic stone, and crystalline substances. In the west one can trace—through the mountains south of the Sea of Marmara—a relation to the inner Dinaric mountain ranges of the Balkan peninsula. In the east, the southern Caucasus mountains form the link with the northern Iranian mountain ranges.

On the plateaux of the naturally wooded northern Anatolian mountain ranges, especially in the middle part, woodland has been turned into arable land up to a height of 1500 m. Growing of grain and raising of sheep and goats (in the east also cattle) form its economic basis. The long spacious valleys between the ridges, where hot summers and the presence of water make agriculture possible, are the main areas of settlement. Of these the most important is the row of basins of Bolu-Gerede-Čerkesh-Ilgaz-Tosya

in the eastern part of the ancient Bithynia, the basin area of Safranbolu-Ḳastamonu-Boyabat, the centre of the ancient Paphlagonia, and, in the regions of the ancient Pontus, the basins on the upper Yes̲h̲il Irmaḳ (Iris) around Amasya, Zile and Toḳat, and in the east, the Kelkit-Čoruh furrow which is over 500 km. long.

On the north coast, mountains rise steeply out of the Black Sea; there are few bays. The coastal strip is very narrow and much cut up by valleys; it is densely populated, especially in the east, and maize, beans, and particularly hazelnuts are grown around Giresun [*q.v.*] (Cerasus), Ṭarabzun [*q.v.*] (Trapezus, Trebizond, modern Trabzon), and Rize [*q.v.*] The only larger flats are in the deltas of the rivers Yes̲h̲il Irmaḳ [*q.v.*] (Iris) and the Ḳîzîl Irmaḳ [*q.v.*] (Halys), but these are partly swamp. The more fertile soil produces excellent tobacco. The peninsula of Kod̲j̲a-eli [*q.v.*] and the Thracian peninsula are flat, and the plains of Adapazarî [*q.v.*] on the lower Saḳarya (Sangarius) are very fertile.

A part from the Bosporus, there is only one harbour which is protected against the north-westerly gales of the Black Sea, and that is Sinob [*q.v.*] which, however, because of its unfavourable hinterland, is at present of little importance. Samsun [*q.v.*] (Amisus) has the best access—both rail and road—to central Anatolia. The coal-mining and industrial areas of Zonguldaḳ [*q.v.*] and Eregli [*q.v.*] (Heraclea Pontica) are now being greatly developed. In the past, the silver, lead, and copper mines in the Zigana mountains were of some importance (Gümüs̲h̲-k̲h̲āne [*q.v.*], Murgul near Borčka, and others).

The subsidence of land which has created the Aegean between Anatolia and the Balkan peninsula, has also affected the northern Anatolian mountain ranges in the Marmara region. As a result, there are hilly districts and plains around the Sea of Marmara (the basin of which is only deep in parts). These have a very favourable mediterranean climate. Silkworm is cultivated near Bursa [*q.v.*] (Brusa), and wine produced around Tekir Dag̲h̲ [*q.v.*] (Rodosto). Owing to its unique geographical position, the city of Byzantium, Constantinople, Istanbul [*q.v.*] grew up and retained its importance for thousands of years. Situated on the bridge between Anatolia and the Balkan peninsula, the most important times of the city were naturally those in which it played the rôle of the natural capital of an empire stretching over both areas. Yet even today, it is Turkey's gate to the world and her principal import harbour. The straits here are obviously not a borderline of continents or cultures. Such a boundary might rather be found in the sparcely populated steppes and heather regions in eastern Thrace.

The Taurus (Toros) System. On the whole, the Taurus system in southern Anatolia is considerably higher than the northern Anatolian border ranges. For long stretches, the mountain chains and broad waves of elevations rise to more than 2000 m. and at times to more than 3000 m. To the south-east of Lake Van (Wān) there are even heights up to 4176 m. in the ice-covered D̲j̲ilo Dag̲h̲. Limestone predominates in these mountains. The mountain ranges are often strongly bow-shaped, thereby making clear sections. To the west of the Gulf of Antalya (Adalia, Attalia) the mighty ranges of limestone mountains of the Western Taurus—the highest of which are sometimes referred to as Lycian Taurus—point outwards in a S and SW direction towards the sea and towards Rhodes, Crete and the outer fringes of the Dinaric Mountains of the Balkan peninsula. Between the Gulf of Antalya and the Adana plain stretches the mighty arc of the Central Taurus. The name Cilician Taurus, which often occurs, refers to its better known eastern wing. The Taurus system continues in two parallel chains to the east of the Gulf of Alexandretta. An outer chain stretches from the Amanus Mountains to the chains south of Lake Van by way of the chains south of Malatya and south of the Murād River. An inner chain—the western section of which is sometimes called Anti-Taurus (a name given with little justification)—runs from the ridges of the upper Seyhan region north of Adana to the Urmiya area by way of the chains south of the upper Euphrates (Ḳara Su) and the upper Aras (Araxes). Between these two there are a number of basins, those of Elbistan, of Malatya-Elaziğ (Elaziz, K̲h̲arpūt), of Čapakčur, Mus̲h̲ and Van. This whole mountain sytem is best called the Eastern Taurus. (In earlier works, nomenclature varied: in addition to Anti-Taurus, other names for parts of the system were employed, such as Armenian Taurus and Kurdish Taurus, without determining the precise use of each). The above-mentioned row of basins separates the chains of the inner from those of the outer Taurus. Thus, seen as a whole, the eastern Taurus system (with these two ranges) describes an arc towards the north, and its southern end merges into the southern Iranian border ranges.

There are considerable longitudinal basins between the mountain ranges in the Western and the western part of the Central Taurus. Several of them contain lakes, the famous lakes of the old districts of Pisidia and Isauria. These basins are the main centres of habitation. In some places there are valuable special cultures, as for instance near Isparta [*q.v.*] and Burdur [*q.v.*]. The limestone mountains are thinly populated because of the scarcity of water. Grazing ground of a poor quality—used by goats and sheep in summer—has largely replaced the former "dry forest". Habitation in the Central Taurus, which is really one large massif, is restricted to the few narrow valleys. Here, too, the higher regions serve chiefly as grazing ground (*yayla*) for sheep and goats in summer. The eastern Taurus, which, as we have seen, stretches out more broadly, has a larger area in its basins which could be inhabited, but at present they are only thinly populated. As far as rainfall—which decreases with the distance from the mountains—permits agriculture exclusively based on rain water, habitation is also possible in the as yet thinly populated southern foothills of the eastern Taurus. It is possible in the vicinity of the ancient centres of Diyarbakîr (Diyār Bakr [*q.v.*] Diyarbekir, Āmid), Urfa [see AL-RUHĀ] (Edessa), Gaziantep (ʿAynṭāb [*q.v.*]), Ḥalab [*q.v.*] (Aleppo), but not much further to the south. The most propitious area of these eastern foothills is the Hatay [*q.v.*] in the west around Anṭāḳiya [*q.v.*] (Antioch), where the nearby Mediterranean makes the growing of citrus fruits and other mediterranean crops possible.

On the whole, the coastal strip of the Taurus offers only a narrow stretch of alluvial land and few hills which invite habitation. These few make possible the cultivation of mediterranean plants, and in parts of citrus plants. There is, however, danger from malaria. Generally we find limestone mountains (with little water) rising at a small distance from the sea. The only really large arable area is the Adana [*q.v.*] plain—in which also Ṭarsūs [*q.v.*] lies—the Cilician plain of antiquity, formed by deposits from the rivers Sayḥān [*q.v.*] (Saros) and D̲j̲ayḥān [*q.v.*] (Pyramos). In recent years cotton growing in this

area has increased considerably. The tufaceous limestone plain of Antalya [*q.v.*] with sheer drops of 30 m. to the sea, is less favourable.

Anatolia's southern coast—in as much as it is a longitudinal one—has no protected landing places for larger ships. Iskandarūn [*q.v.*] (Alexandretta) and Mersīn [*q.v.*] have some importance as harbours of the Adana plain and the Hatay and as the harbours for shipping the chromium ore of the eastern Taurus. This part is played more to the west by the small harbour of Fetḥiyye for the western Taurus.

Aegean Anatolia (Ege region). The areas between the two bordering mountain systems show less relief. There are several distinguishable units. In the west, there is Aegean Anatolia, in modern Turkish called the "Ege region", between the southern Marmara mountains in the north, and the western Taurus in the south, which corresponds roughly to the area of Ionian colonisation of the ancient Greeks. Here the broad valleys of the Bakîr Čay (Caicus), Gediz (Hermus), the greater and lesser Menderes (Kayster, Maeander), penetrate to a depth of 200 km. into the peninsula, in an area of crystalline rocks (called Lydian-Carian rock by Philippson) between the mountain peaks running from west to east at heights between 1000 m. and 2000 m. Thanks to these valleys, the mediterranean climate can penetrate deeply into the country. This area is densely populated. Tobacco, olives, figs, and grapes —largely dried for raisins—are grown here. More recently, cotton growing has gained some importance.

The coast, running at right angles to the mountain ranges, has many bays, coves and good natural harbours. The larger rivers, however, carry a great deal of sediment and gradually fill in the bays. Ephesus and Miletus, which were harbours in antiquity, are today several kilometres inland, and the otherwise excellent harbour of Izmir (Smyrna) is only saved from being filled up by diversion of the river Gediz Čay. Izmir [*q.v.*] is linked by railway to all the above mentioned valleys, and has thus become the economical centre of the region and the principal harbour for exporting the agricultural produce of Turkey. Bergama [*q.v.*] (Pergamum), Manisa [*q.v.*] (Magnesia), Tire [*q.v.*] Aydîn [*q.v.*] (Güzel Ḥiṣār) and Denizli [*q.v.*] are local centres of this area.

The Western Anatolian Ridge. Where in the east the valleys of Aegean Anatolia come to an end, a huge ridge rises between the re-entrant angle of the Taurus system on the one hand, and the southern border chains of the sea of Marmara on the other hand, in the area around Afyūn Ḳara Ḥiṣār-Kütahya-Ushaḳ. This is formed by huge plateaux which reach a height of 1200 m. to 1500 m. Massive ranges rise above these which frequently exceed 2000 m. There is a gradual decline in height to 1100 m towards the northeast and the upper Saḳarya (Sangarius). This large rise is the western Anatolian ridge. The plateaux consist largely of flat tertiary deposits of clay and sand which had once risen and were later cut into by the valleys we see today. They are steppes. Only the higher mountains reach the natural tree-line, but most of the woods have been cut down.

The growing of grain and the raising of sheep and goats form the livelihood of the scanty population. Several roads and railways lead to the inland plateau on the one hand and branch off near Afyun Ḳara Ḥiṣār [*q.v.*] (Afyonkarahisar) to the basins in the western Taurus, to the lowlands of the Ege region and to the Sea of Marmara on the other.

Central Anatolia. The inland plateau of central Anatolia comprises large stretches of flat country at a height of 800 m. to 1200 m. These were formed by recent sedimentation in the bottoms of the landlocked basins of Ḳonya (Iconium), such as the Tuz Gölü ("salt lake"), a huge flat salt pan at a height of 900 m. often erroneously marked down as Tuz Čölü ("salt desert") on our maps. They also exist on the upper Saḳarya and in certain places on the Ḳîzîl Îrmaḳ. There are also other broad plateaux of horizontal new tertiary deposits, and flat plains over creased subsoil.

Mountains of considerable height are, however, also found in central Anatolia. They rise from 500 m. to 1500 m. above the surrounding plateaux. There are some gigantic recent volcanoes which are, however, not active at present, such as the Erdjiyas Dagh [*q.v.*] (3916 m.), the Argaeus of antiquity, near Ḳayseri, and the Ḥasan Dagh (3258 m.) near Nigde.

The mountains are of vital importance to human existence. In dry central Anatolia, surrounded by high mountains, the lowest areas are the driest, while the high mountains catch the rain. Hence the most favourable regions for settlement are, on the one hand, on the highest plateaus, such as for instance in the area of the bend of the Ḳîzîl Îrmaḳ, in the Cappadocia of antiquity, and on the other hand at the foot of the surrounding mountains, where fast rivulets come forth. Most of the important towns are in the latter of these two positions, such as Anḳara [*q.v.*] (Ancyra, Angora), Eski Shehir [*q.v.*], Ḳonya [*q.v.*] (Iconium), Nigde [*q.v.*] Ḳayseri [*q.v.*] (Caesarea), and Sivas [*q.v.*] (Sebastia). All these have—or had—land that can easily be irrigated. There is little population in the steppes, where the basis of livelihood is the growing of wheat and barley and the raising of sheep and angora goats, although thanks to recent mechanisation the cultivated areas have been increased and improved; there is least of all in the particularly dry basin of the Tuz Gölü and of Ḳonya, the Lycaonia of antiquity, with a great deal of "Artemisian steppe".

Traffic is easier through the central plateau than through the mountainous borders. For this reason this plateau, which has always been the centre of Anatolia, has become even more important since the capital shifted to Ankara and the road and rail network of Turkey was extended.

The upper Euphrates area and the Ararat highlands. Geographically, the eastern limit of Anatolia is to be found on the upper Euphrates, where the mountain chains of the northern Anatolian border mountains and the eastern Taurus are joined by the rising of new mountains between the two systems. In this region of mighty chains of high mountains, where peaks generally exceed an altitude of 2500 m. (often 3000 m.), the scanty population is found only in the valleys, more especially in the longitudinal ones. Along these, too, run the roads from Anatolia to Ādharbaydjān and Iran. The rôle of the towns of Erzindjān [*q.v.*] and Erzurum [*q.v.*] (Erzerum) has always been to guard these roads.

The eastern Taurus on the one hand, and the northern Anatolian border mountains on the other, divide again east of the meridian of Erzurum, thus forming a highland which, at 1500 m. to 1700 m., is an even higher basin than that of Central Anatolia. There are considerable volcanic deposits of recent formation over a creased basis. Huge recent (at present inactive) volcanoes, such as Ararat (Aghrî-dagh [*q.v.*]) (5172 m.), Alagöz Dagh (4094 m.),

Sübḥān Dagh (4434 m.) rise above the highlands, and in places, such as at lake Van, have led to a damming up of basins.

This rough highland with low winter temperatures is used chiefly for grazing, since somewhat more favourable conditions for agriculture and habitation exist only in the comparatively small basins. It is generally known as Armenia. Historical events have resulted in the fact that there have been no Armenians living there for a generation. The scanty population speaks either Turkish or Kurdish. Thus it seems appropriate to give this eastern border region of Turkey—which is actually outside the geographical Anatolia—the name of the Ararat Highlands. This name would be neutral, yet geographically characteristic.

(iii) HISTORICAL GEOGRAPHY OF TURKISH ANATOLIA

(1) *The conquest of Anatolia by the Turks, first phase, and the state of the Saldjūḳs of Rūm.*

The main part of Anatolia remained untouched by the conquests of the Muslim Arabs. The boundaries of the Byzantine empire remained: in the north-east, the Christian states of Armenia and Georgia; to the south of these, Ḳālīḳalā (formerly Theodosiopolis, then Arzan al-Rūm, Erzurum) and —at times—Kamākh were the furthest outposts of the empire of the caliphs; thence the Taurus, the "land of the passes" (*bilād al-durūb*), formed the boundary as far as the Mediterranean. Although frequent raids into Byzantine territory were made, the Arabs never occupied the land. These border regions, comprising the outermost parts of Northern Syria and Upper Mesopotamia, were the "military area of the protecting fortresses" (*djund al-ʿawāṣim*, or simply *al-ʿawāṣim*, [*q.v.*]); Manbidj or Antāḳiya (Antioch) was the capital of this region, whilst the armed fortresses of the "Syrian marches" (*thughūr al-Shaʾm*) with Ṭarsūs as its centre, and the "Mesopotamian marches" (*thughūr al-Djazira*) with Malaṭiya (Melitene) as their centre, formed the outer border. In the changing fortunes of the war between Byzantines and Arabs, these border areas suffered greatly, but they remained, on the whole, in the possession of the Arabs. Not until the conquests of the great emperors Nicephorus II Phocas (963-69), John Tzimiskes (969-76), and Basil II (976-1025) did these areas return to Byzantine ownership. At the time of the death of the last of these three, the whole of the territory of Turkey as we know it today, with the exception of Amida (Diyār Bakr) and its surroundings, was Byzantine (compare E. Honigmann, *Die Ostgrenze des Byzantinischen Reiches von 363 bis 1071*, Brussels 1935). Then, however, the rivalries between the military nobility and the nobility of civil servants began in Byzantium. These, particularly when the latter were in power, led to a weakening along the borders.

The Turkish conquerors of the house of Saldjūḳ found the Byzantine borders in one of these weak periods, when, after conquering the whole of the Middle East, they sent their Turkish warriors against the frontier, in order to fight the holy war (*djihād*). They did, in fact, achieve several breaks through into Byzantine Anatolia (456/1064 conquest of Ānī in the Byzantine-Armenian border area, laying waste Cilicia and storming Caesarea (Ḳaysariyya). After the death of emperor Constantine X Ducas, a champion of the civilian nobility (May 1067), Romanus IV Diogenes, a member of the military nobility, was raised to the throne on the battlefield (1 Jan. 1068) because of the desperate position which had arisen. To begin with, he fought the Turks successfully, so that the Saldjūḳ sultan Alp Arslan was obliged to go against him in person. The numerically superior Byzantine army was routed by Alp Arslan near Mantzikert (Malāzgird) in the vicinity of Lake Van, (463/19 August 1071) because of lack of discipline among the mercenaries and treachery by the opponents of the emperor. The emperor was captured, but he was freed by the sultan after a lenient treaty had been concluded. The defeat, however, caused a revolution in Constantinople, which brought the opposing party to power. Romanus IV lost his throne and was blinded. He died soon afterwards (summer 1072).

With the fall of the Emperor Romanus, the treaties between him and Alp Arslan became void, and the Turks renewed the holy war against Byzantium. This was fought not by regular Saldjūḳ troops, but by individual leaders, the most successful of whom was Malik Dānishmand [*q.v.*] Aḥmad Ghāzī who operated in north-eastern Anatolia. Bands of Turkish warriors roamed the countryside and interrupted communications between towns, paralysing Byzantine administration. Eventually the successor of Alp Arslan, sultan Malikshāh (since 465/1072), despatched a member of the house of Saldjūḳ, Sulaymān b. Ḳutlumish, to lead the Turkish cavalry in Anatolia in the war being waged against Byzantium. His task was facilitated by the existing confusion over the succession to the throne in Byzantium. Emperor Michael VII Ducas and—after his abdication (1078)—Nicephorus III Botaniates, obtained Sulaymān's assistance to gain their aims. On their

part, they had to recognise his rights to those parts of the country which the Turks had occupied, and to hand over the recently conquered cities of Cyzicus and Nicaea (1081). Sulaymān established his headquarters in Nicaea (Turkish Iẓnik). The Emperor Alexius I Comnenus, who began his reign in 1081, confirmed Sulaymān's rights to settle his Turkish troops in the occupied territory, whilst nominally retaining Byzantine suzerainty. In actual fact, Sulaymān ruled over practically the whole of Anatolia through his troops which roamed the country. Byzantine administration was virtually superseded.

After his successes in Anatolia, Sulaymān turned to the east, to extend his rule in this direction. He did succeed in capturing Antioch (Anṭāḳiya), which was still Byzantine, but met with heavy opposition from the Saldjūḳ *amirs*, especially from Tutush, the brother of Malikshāh, when advancing towards Aleppo. He was beaten and fell in battle (1086).

In the meantime, Turkish bands fighting the holy war in Ādharbaydjān had conquered the Christian kingdom of the Bagratids in Armenia (473/1080). Following this, the Bagratid Ruben and his faithful followers founded a new state in Cilicia, known as the kingdom of "Lesser Armenia". It survived until the 14th century (1375) under his successors, the Rubenids. [See sīs.]

After the death of Sulaymān, Anatolia was left to its own devices for some time. Other Turkish leaders settled in the country together with their troops and founded dominions there: the aforementioned Malik Dānishmand Aḥmad Ghāzī in the north-east, with Sebastia (Sivas) as headquarters; the *amir* Mengüdjek [*q.v.*] Ghāzī with Tephrike (Divrigi) and Erzindjān; and in the west, in Smyrna, a certain *amir* called Tzachas by the Byzantines. Only after the death of sultan Malikshāh (1092) did his successor, Barkiyāruḳ, permit the son of Sulaymān, Ḳílídj Arslan, to return to Anatolia, but he found it difficult to establish himself among the Turkish princes. Tzachas, who was advancing against Constantinople by sea, was repelled with Byzantine aid.

At the beginning of the first crusade, the allied Byzantines and crusaders gained a victory over the Turks under Ḳílídj Arslan and Malik Dānishmand (or his son, Ghāzī Gümüshtegin) near Nicaea. The Turkish headquarters at Nicaea was besieged and taken on 20 June 1097. On 1 July 1097, the victory of the crusaders near Dorylaeum, near the Eskishehir of today, decided the fate of western Anatolia and opened the way for the crusaders through the rest of the Turkish territories. They reached Antioch, which was taken after a long siege (3 June 1098). Here the principality of Antioch, the first crusader state, was founded under the suzerainty of Byzantium. The county of Edessa (today Urfa), in Mesopotamia, was founded in the same year. After these successes by the crusaders, the Emperor Alexius found little difficulty in driving the Turks from western Anatolia and in re-incorporating this area into the Byzantine empire. He also re-inforced the border—running straight through the middle of Anatolia—against the region remaining under Turkish occupation. This, for the time being, checked the Turkish conquests.

After this set-back, the area of Turkish conquest remained limited to central Anatolia for over a century. The whole of the west (roughly from Dorylaeum), and the Black Sea and Mediterranean coasts remained in Byzantine possession, Cilicia became the Kingdom of Lesser Armenia, and the regions of Antioch and Edessa formed the afore-mentioned crusader states. Āmid (Diyār Bakr) was the seat of the *atabeg* dynasty of the Artuḳids [*q.v.*]. Later (1144), Edessa was conquered by the *atabeg* Zengī of Mosul; later still (1268), Antioch was taken by the Mamlūk sultan Baybars. Ḳílídj Arslan had to share the centre of the country, occupied by Turks, with Malik Dānishmand, or his son, and Mengüdjek. The former retained the steppe in Central Anatolia, with Ḳonya—the Iconium of antiquity—as his capital; the latter retained the mountainous north-east with Sivas and Erzindjān respectively. There was a heated quarrel over some places, especially Melitene (Malaṭya), which Ḳílídj Arslan eventually managed to decide in his own favour (1104 or 1106). Ḳílídj Arslan failed, however, in his attempt to make conquests further to the east, in Mesopotamia (Mosul). He was beaten by the confederated Saldjūḳ *amirs* on the banks of the Khābūr, and died during the retreat (9 Shawwāl 500/3 June 1107). Concerning events at this period, see also Cl. Cahen, *La première pénétration turque en Asie Mineure*, *Byzantion*, 1946, 5-67).

Thus the Rūm Saldjūḳ state [see SALDJŪḲ] or the Sultanate of Iconium, as the crusaders called it, was a rather limited territory in the poorest part of Anatolia. The Rūm Saldjūḳs under Masʿūd I retained this area and, having beaten the crusaders of the second crusade in the second battle near Dorylaeum (26 Oct. 1147), forced them to continue their way through Byzantine instead of Turkish territory. The Rūm Saldjūḳ state was considerably extended when Ḳílídj Arslan II succeeded in incorporating the Dānishmandid state (1174), which he secured against the claims of the Byzantine Emperor Manuel I Comnenus by the victory in the Phrygian mountain passes, near Myriocephalon (pass of Čardaḳ, 17 Sept. 1176), in which he surrounded and routed the Byzantine army. The aged Sultan Ḳílídj Arslan II was involved in the disputes which arose after he had divided his land among his sons. Owing to this, the German Emperor Frederic Barbarossa was able to take the route through Turkish Anatolia and even capture its capital Ḳonya (18 May 1190), but this had no lasting consequences, particularly as the emperor himself was drowned not long afterwards (10 June 1190) in the river Saleph (Calycadnus in antiquity, Göksu today).

The crusaders of the so-called fourth crusade conquered Constantinople (1204) and erected a Latin Empire there, at the instigation of the Doge Enrico Dandolo of Venice; the Byzantines, under Theodore Lascaris, founded a Greek Counter-Empire in western Anatolia with Nicaea for its capital; and the brothers David and Alexis, of the imperial house of the Comneni, had, with the help of Queen Thamar of Georgia, formed the empire of the so-called "Great Comneni" in Trebizond. The Rūm Saldjūḳ sultan Ghiyāth al-Dīn Kaykhusraw I, the youngest son of Ḳílídj Arslan II, succeeded in conquering Attalia (Adaliya, Anṭāliya), thereby gaining access to the Mediterranean for his kingdom (1207). He was not, however, successful in advancing further into western Anatolia. He was beaten by Theodor Laskaris near Honas, in 1210, and fell in battle (possibly in single combat with his adversary). Theodor Laskaris and his successors protected the eastern border of their Nicaean empire with a strong system of fortifications which, for the time being, made it impossible for the Turks to advance in that region. In 1214, Kaykhusraw's son and successor

ʿIzz al-Dīn Kaykāwus I, forced the emperor of Trebizond to cede Sinope (Sinob), and so the Rūm Saldjūḳ Kingdom also gained access to the Black Sea. This extension meant traffic with the outside world. Connections were made with the Italian trading republics, trade flourished and brought undreamed-of prosperity to the country. ʿAlāʾ al-Dīn Kayḳubād, the brother and successor of Kaykāwus, and the greatest of the Rūm Saldjūḳ sultans, extended the frontier of his empire on the mediterranean and took the fort of Galonoros (καλὸν ὄρος), which he expanded into a sizable harbour town, to which he gave the name ʿAlāʾiyya (now Alaya or Alanya), and where he had his winter residence. In the east, in upper Mesopotamia, he also won territory from the Artuḳids of Āmid and Ḥisn Kayfā and forced them to recognise his supremacy. In 625/1228, he annexed the Mengüdjek principality of Erzindjān, and in the east he also made further conquests (Erzerum 1230, Akhlāṭ 1231, Kharpūt 1234). Under his rule, Rūm Saldjūḳ culture and power reached their peak. His son and successor Ghiyāth al-Dīn Kaykhusraw II (acc. 634/1237) succeeded in incorporating Āmid into his empire, and at that time the eastern borders of the Rūm Saldjūḳ kingdom were roughly those of Turkey today.

(2) *The conquest of Anatolia, second phase, and the beginnings of the Ottoman Empire.*

Two things in the middle of the 13th century brought about a change of conditions. The first of these was the Mongol invasion of the Middle East, which also affected Anatolia. Although the Rūm Saldjūḳ army was defeated by the Mongols under Baydju Noyon near Köse Dagh in eastern Anatolia (6 Muḥarram 641/26 June 1243), there was no actual conquest of the Rūm Saldjūḳ Kingdom, but the Mongols advanced as far as Ḳaysariyya and did much plundering. The Kingdom grew more and more into the role of a vassal state of the Mongols, first of Bātū, the conqueror of eastern Europe, then of the Mongol rulers of Persia, the Ilkhāns. A new stream of Turkmens came to Anatolia with the Mongols, partly as their followers, partly because they had been driven by them from their original homes. They increased the partly-nomad Turkmen element already present in Anatolia, and played an important part. Those of most immediate importance were the hordes led by Ḳaraman [*q.v.*] b. Nūra Ṣūfī (thus probably a member of a *darwish* family). He founded a state on the border of Lycaonia and Cilicia around Ermenik (the ancient Germanicopolis) in the Taurus foothills. In 1277, Ḳaraman's son, Muḥammad Beg, tried to gain the dominion over the Rūm Saldjūk kingdom by means of a pretender by name of Djimrī, and he conquered Ḳonya for his protégé. But the town was re-taken by a Mongol retaliatory expedition, and Muḥammad Beg had to retreat into the mountains with his Turkmens. Djimrī escaped to the north-west, but he was beaten by Saldjūḳ troops on the Saḳarya (Muḥarram 676/June 1277), taken prisoner, and executed.

The other important event was the reconquest of Constantinople by the Byzantines under the Emperor Michael VII Palaeologus, and the restoration of the Byzantine Empire. The power of the empire was, however, past. The emperors of the house of Palaeologus were increasingly engaged in the Balkan peninsula, and they had to ward off the covetousness of the Latins. The remaining strength of the empire was taken up with this. The emperors were unable to devote the necessary attention to conditions in Anatolia, and allowed the defensive system—built up by the Lascarids—to fall into decay. This made it easy for the Turkmen hordes which were pouring into Anatolia to pursue the holy war and to gain a hold on the western parts. These, with their greater fertility as compared with the inner region, had already tempted them. The Palaeologi were thus forced progressively to surrender their Anatolian territories, and the Turks—especially in the open country—met with hardly any resistance. By about 1300 most of western Anatolia was in Turkish hands, and there was now hardly a district in which there were no Turks among the non-Turkish inhabitants. Eventually, only a few fortresses (such as Prusa, Nicaea and Nicomedia in Bithynia; Sardes, Philadelphia and Magnesia in Lydia) and some ports (such as Smyrna and Phocaea on the Aegean and Heraclia on the Black Sea) remained in Byzantine possession, as isolated Byzantine possessions in Turkish territory.

The Turkish hordes generally operated independently of each other under their leaders who founded principalities (amīrates) in the conquered districts. We know little about their early history, although one gathers that there were quite a number of such small semi-nomadic states, of which some were of only ephemeral importance. By about 1300, a small number of principalities had emerged. The most powerful of these was, to begin with, Germiyān [*q.v.*] in Phrygia, with Kütāhiya (the ancient Cotyaeum) as its capital. According to al-ʿUmarī, the Turkish *amīrs* of western Anatolia paid tribute to the Germiyān at some periods, and according to Ibn Baṭṭūṭa they were feared by them. Temporarily they extended their power into central Anatolia, in 1300 as far as Ankara (according to an inscription). Incidentally, they do not seem to have been Turkmens originally, but possibly Yazīdī Kurds (compare Cahen, *Notes sur l'histoire des Turcomans d'Asie Mineure au XIII*ᵉ *siècle* in *JA*, 1951, 335-54; concerning the origin of the Germiyān, especially 349 ff.). A whole circle of principalities grew up around Germiyān and some of the founders of these seem to have come from Germiyān. The second greatest of these western Anatolian principalities at that time, was Djāndār [*q.v.*] in Paphlagonia, with Ḳasṭamoni (Castra Comneni, today Kastamonu) as its capital, and the harbour town of Sinob (Sinop, Sinope) also belonging to it. To the west of it, in northern Phrygia (around Eskishehir-Dorylaeum), was the principality of ʿOthmān with Sögüd as its centre. After the conquest of some fortresses there, it soon expanded as far as the Sea of Marmara. Still further west, in Mysia, was Ḳarasī [*q.v.*] with Balikesri (Palaeocastro) and Berghama (Pergamum), which included the coastal area of the Sea of Marmara as far as the Hellespont (Dardanelles). Next to this, in the Aegean coastal region, were Ṣarukhān [*q.v.*] in northern Lydia, with Maghnisa (Magnesia, now Manisa); Aydīn [*q.v.*] in southern Lydia and the hinterland of Smyrna with Tire; and Menteshe [*q.v.*] in Caria, with Milas (Mylasa) and Mughla. Lastly, in furthest south-western Anatolia, were Tekke [*q.v.*] in Lycia and Pamphylia with Adalia (Antalya), and Ḥamīd [*q.v.*] in Pisidia with Isbarta.

At about the same time, the Rūm Saldjūḳ state ceased to exist. For some time past, the importance of the reigning sultans had been replaced by that of the Mongol governors who resided in Sivas. After the death of ʿAlāʾ al-Dīn Kayḳubād III (707/1307 or 708/1308), the last of the shadow sultans, the empire simply became a province of

the Mongol Ilkhān Empire of Persia. By exploiting this condition, the Ḳaramans [*q.v.*] tried to extend their territory from their Taurus foothills; they succeeded in conquering the town of Laranda (now Karaman), which they made their capital. They did not, however, succeed in taking Ḳonya, as this was held by the Ilkhān governor Čōpān and his son Temürtash. The latter actually extended the domain of the Ilkhān Empire by conquests in the west, where he fought with the Turkish petty princes. In the twenties, unrest in the Ilkhān Empire spread to Anatolia (Temürtash fled to Egypt in 728/1328). The conquered territories were lost, and the Ḳaramans succeeded in capturing Ḳonya; but they kept Laranda as their capital. During the course of the 14th century, the Ḳaramans extended their rule westwards in southern Anatolia, and thereby came into contact with the Turkish states which were developing in western Anatolia.

With the continuing decay of the Ilkhān Empire, the Mongol governors declared themselves independent as *amīrs* (or sultans) of Rūm, and sought the support of the Mamlūk sultans of Egypt. In 1375 the latter brought the kingdom of Lesser Armenia to an end, and a Turkmen dynasty, named Ramaḍān [*q.v.*], founded a new state in its Cilician territory soon afterwards, with Adana as capital, under Egyptian supremacy. Another family of Turkmens, the Dulghadir (Arabicised as Dhu 'l-Ḳadr [*q.v.*]) settled in the Eastern Taurus area including Elbistan, also under Egyptian supremacy.

In the west, the principality of Ghāzī ʿOthmān, and his descendants, the Ottomans [see ʿUTHMĀNLĪ], extended more and more at the expense of the remaining Byzantine territory. After northern Phrygia and the territory as far as the Sea of Marmara had become Ottoman, the towns of Prusa (Brusa, Bursa, 6 April 1326), Nicaea (Iznik, 2 March 1331) and Nicomedia (Iznikomid, now Izmit, 1337) fell into the hands of Orkhan, the son of ʿOthmān. Brusa became his capital. Turning quarrels over the succession in the neighbouring principality of Ḳarasī to his advantage, Orkhan annexed its territory (736/1336). Thus the whole southern coast of the Sea of Marmara became Ottoman territory, including the access to the Dardanelles. Acquisitions in Anatolia—usually peaceful ones—coincided with the conquests on the Balkan peninsula under Murād I. Soon after his accession (761/1360), he gained Ankara, which was nominally under the Mongol governors—and later under their successors the amīrs of Rūm (Sivas)—but governed in actual fact by the heads of the guilds forming the *akhī* [*q.v.*] union and practically independent. Some time later, he obtained the principality of Ḥamīd (783/1381), thereby extending Ottoman territory considerably to the east and south. Murād's son and successor Bāyezīd I simply annexed all Anatolian Turkmen principalities shortly after his accession (792/1389), including Ḳaraman and the territory of the Mongol governors. This, however, resulted in an attack by Tīmūr, and Bāyezīd I was beaten in the battle near Ankara (19 Dhu 'l-Ḥidjdja 804/20 July 1402). Tīmūr reinstated the deposed Anatolian rulers, and, apart from the original Ottoman territory, only the original Mongol territory in the northeast of Anatolia remained in Ottoman hands. From there, Meḥemmed I unified the empire once more, and under Murād II the western Anatolian principalities gradually merged with the Ottoman Empire. The Ottomans' only remaining rival was Ḳaraman. Murād's son, Meḥemmed II, completed the rounding off of Ottoman territory in Anatolia after having given it a natural centre by conquering Constantinople (29 May 1453). He put an end to the empire of Trebizond in 1461, and to the principality of Ḳaraman in 1467, incorporating both into the Ottoman Empire. The attempt of the Turkmen ruler Uzun Ḥasan, of the House of the Aḳ Ḳoyunlu, to force Meḥemmed to cede the annexed provinces failed with the loss of the battle of Terdjān (east of Erzindjān, 878/1473). Ottoman rule in Anatolia was completed in the east when Meḥemmed's grandson, Selīm I (921/1515) incorporated the principality of Dulghadir into the empire and conquered Diyar Bakr, and when he reduced the principality of the Ramaḍānoghullarī (in Cilicia) to vassalage and gained the allegiance of the Sunnite Kurdish chieftains. In the north-east, his rule was further extended into the Caucasian foothills by campaigns of the Ottoman Sultans and their generals against Persia. These were generally directed towards the north-east (Süleymān, 940/1534, 955-56/1548-49, the *ser-ʿasker* Muṣṭafā Pasha, 986/1578, against Georgia, and Murād IV, 1045/1634, against Erivan). The whole of Anatolia henceforth remained undisputedly in Ottoman possession and has been taken over by the Turkish Republic in our day.

The only change in more recent years has been the transfer of the districts (*sandjaḳs*) of Kars, Ardahān and Batum which went to Russia in accordance with the Berlin Treaty of 13 July 1878, which in this respect confirmed the peace of San Stefano (3 March 1878). But the peace of Brest-Litovsk (3 March 1918) returned this territory to Turkey. This was finally ratified (with the exception of the town of Batum and a small hinterland, today known as Adjaristān) by the USSR in the Treaty of Moscow (16 March 1921), and by the—then still nominally independent—Soviet Republics of Georgia, Armenia and Ādharbaydjān in the Treaty of Ḳarṣ (13 Oct. 1921) (cf. G. Jäschke, *Geschichte der russisch-türkischen Kaukasusgrenze*, *Archiv des Völkerrechts*, 1953, 198-206). In the Franco-Turkish Treaty of 23 June 1939, Syria ceded the *sandjaḳ* of Iskandarūn to Turkey, and it was incorporated into her territory as the (63rd) *wilāyet* of Hatay.

(3) *Political division of Anatolia.*

The earlier Ottoman organisation. The Ottoman Empire extended so quickly that it soon became necessary to divide it up into political regions. In the beginning these were simply districts of the feudal cavalry, "standards" (*sandjaḳ* [*q.v.*] or *liwāʾ*) which were under a district commander of the "standard" (*sandjaḳ begi* or *mīr-liwāʾ*). Under Orkhan, the second Ottoman ruler, there were already four of these. (1) Sultan-üyügi [*q.v.*] which incorporated the original territory of the Ottomans around Eskishehir and Sögüd; (2) Khudāwendkār (eli) "the ruler's (land)", administered by the ruler himself, with Brusa and Iznik; (3) Ḳodja-eli [*q.v.*] the feudal tenure which Orkhan had bestowed upon his general Aḳče Ḳodja, the Bithynian peninsula with Izmid; and (4) Ḳarasī-eli [*q.v.*] the former principality of Ḳarasī, with Balikesri and Berghama. Under Murād I, when the empire extended still further after the conquests in the Balkan peninsula and further regions of Anatolia, Ottoman territories were united into one province on each side of the straits (*eyālet*, later *wilāyet*), each under a *pasha* with the title of *beglerbegi* (later *wālī*). Thus, to begin with, there were two provinces, with the names of Anatolia (Anaṭōlī, later pronounced

Anadolu) and Rumelia (Rūm-eli). Each of these was subdivided into districts of the feudal militia (*sandjak* or *liwā'*). When the Turkish principalities in Anatolia became part of the Ottoman Empire, they were made into such *sandjaks*, but retained their original names. The gradual growth of the empire is thus shown in its political divisions. Later on, when the Ottomans penetrated further to the east, under Bāyezīd I and particularly under Meḥemmed II and Selīm I, newly acquired areas no longer became *sandjaks* of the *eyālet* of Anadolu, but became provinces in their own right. Independent of this division into provinces and *sandjaks* was a separate division into judicial districts (*ḳaḍā*), each of which was under a judge (*ḳāḍī*). Furthermore, there were domains (*ḥükūmet*) ruled by local dynasties, direct vassals to the Sublime Porte. This whole system was finally fixed by the laws of Sultan Süleymān I Ḳānūnī. According to this, (cf. the printed edition of Kātib Čelebi, *Djihān-nümā*; cf. also J. v. Hammer, *Des osmanischen Reiches Staatsverfassung und Staatsverwaltung* ii, 249 ff. and P. A. v. Tischendorf, *Das Lehnswesen in den muslimischen Staaten*, Leipzig 1872, 62 ff.), there were the following *eyālets* in Anatolia: (1) Adana (601, also mentioned as *sandjak* of Aleppo); (2) Anadolu (630; cf. also ANADOLU the following art.); (3) part of Čildir (408, later Akhiska in Transcaucasia); (4) Diyār Bakr (436); (5) Arzan-i Rūm (Erzerum, 422); (6) Ḳaramān (Ḳonya, 614); (7) Ḳarṣ (407); (8) Dhulḳadriyya (Mar'ash, 598); (9) Raḳḳa (Urfa, 443); (10) Sīwās (also simply called Rūm 622); (11) Ṭirabzon (Ṭarabzon, 429); (12) Wān (411); (13) from the *eyālet* of Ḥalab (Aleppo) the *sandjaks* Anṭāḳiya (595, the modern Hatay), Bīre (Biredjik, 597) and Kilis (598); (14) the western Anatolian *sandjaks* Bīghā (667), Ḳarasī (661) and Sughla (Izmir, 667), and the areas of Ičel (Selefke) and Alaya with the island of Ḳubrus (Cyprus) on the south coast, which were under the Ḳapudān Pasha. [See individual articles for each of the preceding.]

Basically, this division was adhered to until the beginning of the 19th century, although, at times of weak central governments, some local *pashas* rose and attempted to extend their rule beyond their original provinces. Such governors who acquired independent power and founded dynasties were known as "Princes of the Valleys" (*dere begi* [*q.v.*]). They were no longer civil servants, but vassals of the Sublime Porte, and—reluctantly—recognised as such, contributed troops to the sultan. Because they had an interest in the prosperity of their regions, their rule was generally a beneficial one, whilst the governors sent from the Porte changed frequently, and their main interest was to amass wealth for themselves as quickly as possible. The 18th century in particular saw the development of several such dominions in Anatolia, e.g. that of the Ḳara 'Othman in the Aegean region, and that of the Čapan (or Čapar) in the area of the middle Ḳizil Irmaḳ (Halys).

Tanẓīmāt. In the course of his reforms, Maḥmūd II abolished the dominions of the *derebeys*. During the subsequent times of reform (*tanẓīmāt*), a new division of the empire on European lines was made by the law of 7 Djumādā II 1281/8 Nov. 1864. Now there were provinces (*wilāyet*), administrative areas (*sandjak*) and districts (*ḳaḍā*); many of the old *sandjaks*, especially those of the *eyālet* of Anadolu—later (1875) also those of the *eyālet* of Erzerum—were raised to the status of *wilāyets* and then subdivided into smaller *sandjaks*. Some other *eyālets* of smaller size were assigned to a *wilāyet* as *sandjaks*. After some vacillation, Anatolia consisted of the following *wilāyets* (according to Cuinet, *La Turquie d'Asie*, Paris 1890): (1) Adana; (2) Anḳara, (3) Aydin (Smyrna/Izmir); (4) Bitlīs; (5) Diyār Bakr; (6) Erzerūm; (7) the *sandjaks* of Mar'ash and Urfa of the *wilāyet* of Ḥalab (Aleppo), as well as some *ḳaḍās*; (8) some *ḳaḍās* and *nāḥiyes* of the *wilāyet* of Istanbul; (9) Ḳasṭamūnī; (10) Khudāwendigār (Brusa); (11) Ḳonya; (12) Ma'mūret al-'Azīz (Kharpūt, since 1880); (13) Sīwās; (14) Ṭirābizōn; (15) Van; and the two independent *sandjaks*; (16) Bīghā; (17) Izmīd. [Articles on each of the preceding.] This division was kept—with some alterations—until after the First World War.

Under the Turkish Republic, the *wilāyets* were abolished, and *sandjaks* were raised to *wilāyets*. These were called *il* in the course of the language reform. Their number varied. On 20 October 1935, there were only 57 *wilāyets*, at the end of 1935, a further 5 were formed (from the districts, *ḳaḍā*, now *ilče*, of the neighbouring *wilāyets*); in 1939, Hatay was added (ceded by the French mandate of Syria, see above) as the 63rd. (The 63 provinces of January 1st 1940 with their districts at that time are enumerated by G. Jäschke, *Türkei*, Berlin 1941, 22-4). In 1953 Uşak was added as the 64th *wilāyet*. On January 4th 1954 the overall area of the Turkish state consisted of 64 provinces (of which only 4 are in the European part of Turkey, the other 60 in Anatolia) and 523 districts. Of the Anatolian provinces, however, Çanakkale is partly on European ground; the province of Istanbul, on the other hand, is mainly in Europe.

Geographically the provinces are grouped into the following 8 zones (*bölge*) (the names in the modern spelling): (1) the Black Sea Coast: the provinces of Trabzon, Ordu, Rize, Zonguldak, Giresun, Samsun, Sinob, Kastamonu, Bolu, Çoruh; (2) the coast of the Sea of Marmara and the Aegean Sea: the Asiatic parts of the provinces of Istanbul (districts Üsküdar, Kadiköy, Beykoz, Adalar, Kartal, Şile, Yalova) and Çanakkale (districts Çanakkale, Ayvacik, Biğa, Bayramiç, Bozcaada, Ezine, Lapseki, Yenice), and the provinces Izmir, Kocaeli (Izmit), Aydin, Balikesir, Bursa, Manisa, Muğla; (3) the Mediterranean coast, the provinces of Hatay (Iskenderun), Seyhan (Adana), Içel (Selefke), Antalya; (4) European Turkey: the European provinces of Istanbul, (districts Beyoğlu, Beşiktaş, Sariyer, Fatih, Eyüp, Eminönü, Bakirköy, Çatalca, Silivri) and Çanakkale (districts Eceabat, Gelibolu, Imroz), and the provinces Kirklareli, Tekirdağ, Edirne; (5) western Anatolia: the provinces of Denizli, Bilecik, Kütahya, Afyonkarahisar, Isparta, Burdur, Eskişehir—and since 1953—Uşak; (6) central Anatolia, the provinces Tokat, Çorum, Amasya, Kayseri, Malatya, Ankara, Çankiri, Yozgat, Sivas, Maraş, Niğde, Kirşehir, Konya; (7) south-eastern Anatolia: the provinces Gaziantep, Mardin, Urfa; (8) eastern Anatolia: the provinces Kars, Elaziğ, Diyarbakir, Gümüşane, Erzurum, Erzincan, Siirt, Bitlis, Tunceli, Ağri Muş, Bingöl, Van, Hakâri.

(4) *Population*.

Turks and non-Turks. At the time of the Turkish conquest of Anatolia, it had already been Hellenised. The Hellenisation of the various old-Anatolian peoples (begun in Greek and Roman times) was completed during the course of Christianisation. Now, remnants of the old peoples (for example the Lazes), remain only in the mountains, especially those near the Caucasian foothills. Such areas are at the same time refuges in which ancient

religious communities, such as the Paulicians, survived as sects. By the time the Turks came, Anatolia was, however, on the whole Greek speaking and mainly adhered to the Byzantine Orthodox Church. Only the Armenians in the east, who were Monophysites (Gregorians), remained ecclesiastically apart from the Greeks and were not Hellenised. Being merchants, Armenians had probably spread towards the west as far as the capital, even in pre-Turkish times.

A new central-Asiatic race with a new religion, Islam, came to Anatolia with the Turks. In the beginning it may well have been a minority, compared with the Greeks, but, since it consisted of the ruling classes in the Turkish occupied territories, it succeeded in spreading. The reason for this was probably that many members of the old population, who had lost contact with their spiritual centre in Constantinople, felt this spiritual isolation, turned to Islam and were thereby assimilated to the Turks. Initially, this process was a very slow one. In any case, at the time when Marco Polo travelled through Anatolia in 1272, the inhabitants do not appear to have been Turkicised (cf. E. Oberhummer, *Die Türken und das Osmanische Reich*, Leipzig-Berlin 1917, 42). On the other hand, the documents of the Patriarchate of Constantinople prove clearly, as A. Wächter. (*Der Verfall des Griechentums in Kleinasien im XIV. Jahrhundert*, Leipzig 1903) shows, that, especially in the 14th century, when increased numbers of Turks occupied Anatolia, the Orthodox Christianity gradually receded, and with it the land gradually lost its Greek character. This may be due, on the one hand, to emigration from the Turkish occupied areas, but on the other hand also to assimilation to the Turks. Here one must distinguish, however, between the regions with long established Greek inhabitants, such as the western Anatolian coastal regions, which held on to Greek culture and Christianity with great tenacity (as also did those areas which had been under Greek rule for a long time, like Trebizond), and the central Anatolian regions with their only superficially Hellenised and Christianised population (especially in northeastern Anatolia, where the Persian Mongols, the Ilkhāns—who themselves had only taken to Islam since Ghāzān—ruled for some time with the true ardour of renegades). Christianity in Anatolia was hard hit by Tīmūr, who—as everywhere else he appeared—let the Christian population feel his hardness and cruelty with a special severity.

The position of the Christians improved when Meḥemmed II granted the Greek Orthodox Church a secure position in the Ottoman state for political reasons after the conquest of Constantinople, and made it into a pillar of his empire side by side with Sunnite Islam. Thus the Christian communities, Greek [see RŪM] as well as Armenian [see ARMAN] in Anatolia were freed from their spiritual isolation, and hold their own until this day. The so-called system of the *millets* [*q.v.*] according to which non-Muslim religious communities within the Ottoman Empire enjoyed considerable autonomy, saved these from further shrinking. In this manner, a *modus vivendi* evolved during the flowering of this empire which did justice to both Muslims and non-Muslims. In the 18th and 19th centuries, there was a positive revival of Anatolian Hellenism, and Armenians were still referred to as "The faithful nation" (i.e. faithful to the state) (*millet-i ṣādiḳa*) in the 19th century. On the whole, linguistic and religious areas were identical, except in central Anatolia (in Ḳonya and Ḳayseri), where the Greeks adopted Turkish as the language of social intercourse and of the house (partly in Greek script), whilst the Armenians by and large accepted Turkish as the language of social intercourse (partly in Armenian script), whilst retaining Armenian—their ecclesiastical language—as the language spoken at home.

Apart from Turkish inhabitants, either city dwellers or peasants, there are—or were—nomad and semi-nomad elements as well as migrating shepherds in Anatolia, who belonged to Islam but were of differing languages and races: Turks, Kurds and Circassians. In the case of Turks (so-called Yürüks and Turkmens [*qq.v.*]), their origin is debatable: they may be Turkmens who kept to their nomadic way of life, or remnants of races of varying origin which became Turkicised. By religion they are mostly ʿAlawites, i.e. they confess to Shīʿism of some type or have at least Shīʿite leanings. The Kurds [*q.v.*] who are for the most part Sunnite Muslims, have a closed area of settlement in the south-eastern provinces. The Circassians (Čerkes [*q.v.*]), lastly, had mostly immigrated from the Caucasus at the time whem Russo-Christian rule spread over the Caucasus. Apart from these, one frequently meets returned Muslim emigrants (*muhādjirūn*) all over Turkey especially from the Balkan countries, who preferred to leave a country with a Christian government and to seek a new home in Turkey which belongs to the *dār al-islām*. Those people are, however, not nomads but are assimilated by the town or country area in which they settle.

The comparatively amicable relations between Muslims and non-Muslims deteriorated when the western powers began to meddle in the affairs of Turkey in the 19th century. On the grounds of the treaty of Küčük Ḳaynardja (1774), Russia claimed the protectorate over the Christian Orthodox inhabitants of Turkey, and awakened anti-Turkish feelings in them. Coming from western Europe, nationalism gained ground amongst the Christian part of the population. The Turkish reaction to this was a dislike for these Christians which soon became hatred. The Armenians felt this most strongly, since they, as neighbours of Russia, were particularly under the suspicion of being in Russian service. The insistance on effecting the reforms laid down in the Berlin Treaty (1878) led to bloody clashes with the Kurds in the years 1894-96. In the First World War, following an invasion by the Russian Caucasus army into the Van region, during which —according to Turkish opinion—the Armenian population behaved disloyally, the whole population was forcibly moved to Mesopotamia, and many of them perished. The remainder emigrated after the war. There was a war against the Greeks in 1919, when, supported by Great Britain, they occupied Smyrna and advanced as far as the Sakarya in 1921. The Turks under Muṣṭafā Kemāl Pasha beat the Greek army which retreated from Anatolia, and the greater part of the Greek population retreated with it. The remainder was exchanged by treaty (30 January 1923) for the Muslim inhabitants of Greece (with the exception of the Turks in western Thrace and the Greeks in Istanbul). Through this action Anatolia became a 90% Turkish and 99% Muslim country. With the exception of the Arabs living on the Syrian border, the small non-Turkish Muslim pockets will hardly be able to withstand Turkish influence indefinitely. One may also expect a gradual Turkicisation through military service and the influence of the schools among the Kurds, who have no cultural tradition of their own.

End of the 19th century. The statistics on p. 472 show the population of Anatolia during the last decade of the last century according to their religions, as given in the work of V. Cuinet (see Bibl.) on the basis of the imperial and provincial *sāl-nāmes*. As there was no official census in Turkey at that time, the numbers are largely based on estimates and only to a small extent on actual figures. Additional inaccuracies come from the fact that the principle on which these statistics were based was not consistent throughout the various *wilāyets*. For some of them we have detailed figures (in certain cases, even separate data for men and women), in others only summary ones. Thus, for example, the fact that Shīʿites and Yazīdīs are mentioned separately only in some *wilāyets*, does not necessarily mean that there were none in some others. The statistics may, nevertheless, serve to give at least a rough picture of the composition of the population of Anatolia before the First World War.

Abbreviations:
w = *wilāyet*, s = *sandjak*, k = *kaḍā*,
n = *nāḥiye*, i.s. = independent *sandjak*.

In the case of the administrative areas belonging to the *wilāyets* of Istanbul and Ḥalab (Aleppo), Ist. and Ḥal. respectively is added in brackets.

The proportion prevailing there (1 : 4) might also prove right for the other *wilāyets*.

Concerning the races, the statistics show clearly that at that time the Armenians (Gregorian, Catholic and Protestant Armenians together 1,142,775) were concentrated in some eastern *wilāyets* (Erzerum, Bitlīs and Sivas, to a lesser extent also in Van, Maʿmūret al-ʿAzīz, Diyār Bakr and Adana), although even there they were a minority in comparison with the Muslim part of the population (Turks and Kurds). In the case of the Greeks, one must add to the Orthodox (1,042,612 — 25,890 Syrian Orthodox = 1,016,722 Greek Orthodox) the Uniates (16,811), who were included under Catholics in these statistics; their total was thus 1,033,533. They were concentrated in the districts belonging to the *wilāyet* of Istanbul, and in the *wilāyets* of Khudāwendigār, Aydīn (Izmir) and Trabzon, to a lesser extent in Sivas, Ḳonya, and Adana. They, also, were a minority everywhere compared with the Muslims (and in Sivas and Adana also as compared with the Armenians). It is more difficult to arrive at the racial composition of those elements of the population which are described as Muslims, because the statistics generally give merely a total figure. Only for some eastern *wilāyets* are the races for the Sunnite Muslims given as follows:

	Turks	Kurds	Arabs	Circassians	Total
w. Adana	93,200	39,600	12,000	13,200	158,000
w. Diyārbakr	310,644	—	8,000	10,000	328,644
Anat. districts of *w*. Ḥalab	177,048	119,588	123,536	4,500	424,672
w. Maʿmūret al-ʿAzīz	267,616	54,650	—	—	322,366
w. Van	30,500	210,000	—	500	241,000
	879,008	424,138	143,536	27,500	

If one adds up the members of non-Islamic religions, then the composition of the population —according to religions—appears as follows for the time of Cuinet (actual figures and percentages):

Muslims	9,676,714 :	78.9 %
Non-Muslims	2,577,745 :	21.1 %
Total	12,254,459 :	100.00 %

Of the non-Muslims, 2,410,272 were Christians of various denominations.

These statistics show some peculiarities which need explanation. Particularly obvious is the high number of "Copts" (2,867), but only a very small number of these are actual Copts (i.e. Christian Egyptians); by Copts (Ḳibṭī), the Turks usually mean the non-Muslim gipsies. These "Copts" should therefore be added to the number of gipsies (2,867 + 37,752 = 40,619). The Column "foreigners' includes not only real "foreigners", (*edjnebī*) but also immigrated Ottoman citizens (*yabandjī*), whose home is not in the *wilāyet* in question. The two categories are mentioned separately only for the *wilāyet* of Erzerum (1,220 *edjnebī* + 4,986 *yabandjī* = 6,206).

One can only surmise to which race the occasionally separately mentioned members of Muslim sects (usually Shīʿites) belonged (total number 533,677). In Van and Bitlīs they are given as Yazīdīs (5,400 + 3,863 = 9,263), and in the case of Diyār Bakr it is stated that the figure 6,000 for members of different sects also includes Yazīdīs. We may assume that these were on the whole Kurds. Of the others, by far the greater part probably consisted of Shīʿite Turks, in Arab areas probably also Nuṣayrī Arabs. If one deducts the figures for Shīʿites and Yazīdīs as well as those of Arabs, Kurds and Circassians there remains the figure 8,537,863 for supposedly Sunnite Turks, which still contains small elements of Shīʿites, non-Turkish Sunnites, and also Lazes, and emigrants from former Ottoman provinces which had come under Christian rule (*muhādjir*). To the number of Arabs a considerable number of Christians of various denominations should be added as follows:

	Syrian Orthodox	Syrian United	Chald. United	United Maronites	Total
w. Adana	20,900	—	—	4,539	25,439
w. Diyārbakr.	4,990	—	—	—	4,990
w. Bitlīs	—	—	2,600	—	2,600
Anat. distr. of *w*. Halab	—	13,687	9,865	—	23,552
w. Van	—	—	6,002	—	6,002
Total	25,890	13,687	18,467	4,539	62,583

With the addition of the total of the non-Uniate Jacobites, Chaldaeans and Nestorians (168,706) one arrives at the total of 231,289 for Christian Arabs of differing denominations; of these, however, some Chaldaeans and Nestorians, as well as Uniate

	Muslims (* Shīʿites and Yazīdīs)	Greek and Syr. Orthodox	Armen. Gregorian	Armen. Catholic	Armen. Protest.	Other Catholics (Uniate and Latin)	Non-Uniate Jacobites Chaldaeans and Nestorians	Jews	«Copts»	Gypsies	Others (Foreigners)	Total

Chaldaeans have to be added to the Kurds. In these statistics, one may assume that the 2,675 Catholics not contained in the number of the Uniates were largely Latins, i.e. occidentals (missionaries etc.) with or without Ottoman nationality, who had not been included under the heading "foreigners".

Thus, for the time of Cuinet we have roughly the following picture of the ethnic composition of Anatolia:

	Sunnites	Shīʿites	Yazīdīs	Christians	Jews	unknown and foreigners	Total
Turks	8,547,863	462,414 ?	—	—	—	—	9,010,277
Kurds	424,138	?	9,263 ?	?	—	—	433,401
Arabs	143,536	62,000 ?	—	231,289 ?	—	—	436,825
Circassians	27,500	—	—	—	—	—	27,500
Greeks	—	—	—	1,033,533	—	—	1,033,533
Armenians	—	—	—	1,142,775	—	—	1,142,775
Jews	—	—	—	—	47,299	—	47,299
Gipsies	—	—	—	—	—	40,619	40,619
Unknown and foreigners	—	—	—	2,675	—	79,555	82,230
Total	9,143,037	524,414	9,263	2,410,272	47,299	120,174	12,254,459

H. Louis, *Die Bevölkerungskarte der Türkei*, Berlin 1940, bases his work on the publication of the census in Turkey in 1935. It can be seen from the map that the three most densely populated areas in Anatolia are the following: 1) the western Anatolian coastal strips together with the river valleys, leading into the interior, especially that of the Maeander (Büyük Menderes Čay), 2) the coastal area of the Black Sea, 3) Cilicia, the new *sandjak* of Hatay, and the plain towards the Euphrates, which, geographically, belongs to northern Syria; compared with this, the centre with its steppes and the mountainous north-east show the lowest density of population. The distribution is caused by the nature of the country, and has probably always been roughly the same—at least since the Middle Ages—and should remain so at any rate in the near future.

The figures for several official censuses for the Turkish Republic are already available: namely, those of 1927, 1935, 1940, 1945, and 1950, but the last of these is given as only "provisional" (*muvakkat*). The particular figures can be found in the individual articles on the capitals of the various *ils* (*wilāyets*) enumerated above, ch. 3, last paragraph.

The total for 1945 is 18,790,174 and 20,934,670 for 1950: 1,496,612 and 17,293,562 in European Turkey and Anatolia respectively in 1945; 1,598,255 and 19,336,415 in European Turkey and Anatolia respectively in 1950.

Definite figures for some towns exist for 1950. According to these, there are 5 towns of over 100,000 inhabitants: Istanbul (1,000,022), Ankara (286,781), Izmir (230,508), Adana (117,799), and Bursa (100,007); and the following 6 towns between 50,000 and 100,000 inhabitants: Eskişehir (88,459), Gaziantep (72,743), Kayseri (65,489), Konya (64,509), Erzurum (54,360), Sivas (52,269).

There are also figures for the distribution of the town and the country population for 1945 and 1950. The percentage rate, worked out for the purpose of this article, is:

	1945	1950
in towns:	4,687,102 : 25.06 %	5,267,695 : 25.16 %
in the country	14,103,072 : 74.94 %	15,666,975 : 74.84 %
	18,790,174 : 100.00 %	20,934,975 : 100.00 %

At Turkey's overall area of 767,119 sq. km., this produces a density of population of 24.49 per sq. km. in 1945 and 27 in 1950. The official percentage of town and country population (both as a whole and according to individual *wilāyets*) is only available for 1935. According to this, there were then 23.5% of the population in towns and 76.5% in the country. With these figures, one must bear in mind that according to the law of 1930, every place with a municipal government (*belediye teşkilatı*) counts as a town. Such a body is to be set up both in all places of more than 2,000 inhabitants and also (irrespective of this minimum figure) in all *ḳaḍā* centres, of which some have hardly 500 inhabitants. If judged by western standards, the proportion would alter in favour of the country population.

Figures for religious and linguistic divisions are only available for 1945 (*21 Ekim 1945 Genel Nüfus Sayimi, Recensement général de la population du 21 Octobre 1945, Türkiye Nüfusu, Population de la Turquie*, vol. 65, Ankara 1950). According to these, Turkey can be divided up linguistically as follows:

people with		
Turkish as mother-tongue	16,598,037 :	88.34%
a non-Turkish language as mother-tongue	2,192,006 :	11.66%
Unknown	131 :	
Total	18,790,174 :	100.00%

According to religions:

Islam	18,497,801 :	98.45%
non-Islamic religion	292,152 :	1.55%
unknown denomination	221 :	
Total	18,790,174 :	100.00%

Of the non-Muslims there were:

Christians.	202,044 :	69.16%
Jews	76,965 :	26.34%
Without religion	561 :	0.19%
Other denominations	12,582 :	4.31%
Total	292,152 :	100.00%

These rough statistics, when compared with those at the end of the last century as given by Cuinet, clearly show an enormous change which was caused by the events during and shortly after the First World War.

More detailed information can be gained from the following division into both categories which is reproduced here in shortened form.

mentioned under "other denominations"—with the exception of a few foreigners of unusual religious denominations—are largely Kurds (probably of extreme Shīʿite sects or Yazīdīs) who either do not count themselves members of Islam or are not recognised as such by the Sunnites and Moderate Shīʿites. Those giving Georgian as their mother-tongue are Lazes, and not real Georgians—who are

Language	Muslims	Catholics	Orthodox	Protestants	Gregorians	Christians of unknown denomination	Jews	Without religion	Others	Unknown	Total
Turkish	16,546,681	4,955	10,705	1,099	17,581	3,847	11,836	298	1,017	18	16,598,037

Greek	9,898	4,546	73,083	6	177	460	290	2	80	3	88,680
Circassian	66,681	1	5	—	—	3	1	—	—	—	66,691
Armenian	3,396	2,295	2,880	979	42,019	4,301	124	40	136	9	56,179
Yiddish	602	22	57	14	43	16	50,216	5	42	2	51,019
Laz	46,979	2	3	—	—	—	3	—	—	—	46,987
Georgian	39,870	21	23	—	—	1	159	—	—	2	40,076
Other languages: Albanian, Bosnian, Judaeo-Spanish, Tartar etc.	78,447	11,214	19,951	2,342	305	10,712	13,286	196	4,582	181	118,608
Unknown	47	8	4	2	—	70	—	—	—	—	131
Total	18,497,801	21,950	103,839	5,213	60,260	10,782	76,965	561	12,582	221	18,790,174

With regard to the totals of the division into languages, the following facts stand out from the figures given for individual *wilāyets*, (the numbers are again given in round figures). The Kurdish speaking people live together densely in the south-eastern *wilāyets*, and form the large majority in the *wilāyets* of Ağrı (80,000), Bingöl (42,000), Bitlīs (43,000), Diyar Bakr (180,000), Hakâri (30,000), Mardin (155,000), Muş (53,000), Siirt (100,000), and Van (78,000). In Tunceli (48,000) and Urfa (123,000) they have a slight majority over the Turks (43,000 and 103,000), and in Elaziğ (82,000), Kars (66,000), and Malatya (141,000), they form a large minority. The Arabic speaking people are everywhere in the minority compared with the Kurds; 60,000 in Mardin compared with 155,000 Kurds, but in the majority compared with the Turks (15,000); 40,000 in Urfa compared with 123,000 Kurds and 105,000 Turks; 100,000 in Hatay, where the largest number of Arabs live, compared with 150,000 Turks. The smallest number of Turks is found in the *wilāyets* of Mardin and Siirt (in each ca. 15,000) and in Hakari (4,000). Greeks, Armenians and Jews (including ca. 10,000 who speak Judaeo-Spanish) live almost exclusively in Istanbul. There are also some 7000 Greeks in Çanakkale and some 12,000 Jews in Izmir; there are only extremely small groups elsewhere. Other small racial groups, such as the Circassians (most of these in the *wilāyet* of Kayseri), Lazes, and Georgians (both of these especially in the eastern Black Sea provinces), form a very small minority in all these places in comparison with the Turks.

The division into religions is also very informative. Above all, it is worth noting that all those religious groups which have Turkish as their mother-tongue have increased. In the case of Islam, no distinction is made between Sunnites and Shīʿites. But those

Christians—as can be seen clearly from the fact that most of them give Islam as their religion. The relatively high figure for Catholics and Protestants under "other languages" obviously refers to foreigners. The number of Jews under "other languages" includes the 10,866 who speak Judaeo-Spanish. The Gipsies, who in Cuinet's statistics were given with the rather large figure of 40,000, have disappeared altogether from the new statistics. As they do not speak a different language from that of the people amongst whom they live, nor profess a different religion, one may assume that they are present, unrecognised, in the various groups of the statistics.

(5) *Development of Communications.*

Being a thinly populated peninsula with steppes in the centre and few usable harbours, Anatolia has little traffic. Long distance traffic from Istanbul to the east mostly tries to bypass Anatolia, preferring to the difficult overland roads the easier sea routes to Trabzon on the Black Sea, or to Ayas at the mouth of the Djeyhān in the Middle Ages, to Payas in the Gulf of Issus under the Ottomans, and to Iskenderun (Alexandretta) in recent times. Throughout the ages the main caravan tracks led from these harbours to the interior of Asia. Traffic inside Anatolia was generally only of local importance. There were always through-roads, usually leading to or from Istanbul (which was regarded as the undisputed metropolis even at times when Anatolia did not regard it as its political capital).

Three types of such roads can be distinguished in Turkish times: (1) Military roads; (2) Caravan routes; (3) Postal routes. All three types follow the nature of the country and circumvent the interior steppes, passing through adjoining regions, but keeping to the inside of the border-mountains. They prefer the edges of the steppe where animals

can graze and where the towns are situated. The routes follow roughly the same lines, though they do not coincide altogether.

The main Military road (on which the armies of the sultans moved in the 16th and 17th centuries against Persia and Caucasia) described a large arc south of the central Anatolian steppe from Üsküdar via Izmid, Eski**sh**ehir, Aḳ**sh**ehir, to Ḳonya and from there via Eregli, Nigde, Ḳayseri to Sivas, then via Erzin**dj**ān and Erzurum to the east. When Selīm I marched against Syria, he too went to Ḳayseri and only from there through the Anti-Taurus to Elbistān and Marʿa**sh**. The route from Eregli through the Cilician Gate (Gülek Bo**gh**azl) to Adana and further into Syria was usually avoided, particularly for difficult transports, and especially because the Gülek Bo**gh**azl is easy to block. In 1638, for instance, Murād IV sent the artillery he needed for the capture of Ba**gh**dād by sea as far as Payas, only transporting it overland from there onwards with the aid of buffaloes. The northern Caravan route (to be mentioned below) was used for small detachments only. The reports of the Imperial armies often give the sites of the camps on the main Military road, but these are frequently at a considerable distance from the inhabited places along the route.

The most important of the Caravan routes is the one leading diagonally across from Üsküdar via Gebze, then, after crossing the Gulf of Izmid from Dil to Iznik, following roughly the Military route via Eski**sh**ehir to Ḳonya and Eregli, then through the Cilician Gute (Gülek Bo**gh**azl) to Adana and thence to Syria or Mesopotamia. The route via Antāḳiya to Syria is, at the same time, the route which pilgrims took (via Damascus) to Mecca and Medina, the holy places of Islam, and it is often mentioned in this capacity. There is also a northern caravan route of some importance which goes from Üsküdar to Amasya via Izmid, Bolī and Ṭosya (or, bypassing Amasya, via Niksar), and thence to Erzin**dj**ān and Erzerum and further to the east; alternately, from Amasya via Ṭoḳat, Sivas and Malaṭya to Diyārbakr and further to Mosul and Ba**gh**dād; from Üsküdar onwards this route is called Ba**gh**dād Yolu. An older variant of this—used by Busbecq in 1555—follows the diagonal route as far as Eski**sh**ehir and then goes on to Amasya via Ankara. Lastly, the north-south route which bypasses the central Anatolian steppe to the east is of some importance. In Sal**dj**ūḳ times, this route branched off at Ḳonya, the capital, and went right across the steppe, past the beautiful Sulṭān **Kh**ān and Aḳsarāy to Ḳayseri and on to Sivas, where it connected with the northern route as well as with those leading to the east (Erzin**dj**ān and Erzerum). In Ḳaraman and Ottoman times it went from places at the foot of the Taurus, Laranda (Ḳaraman), or Uluḳl**sh**la via Nigde to Ḳayseri. In western Anatolia, only roads leading from Izmir seem to have had some local importance and little is reported of them.

Postal routes, like the caravan routes, were divided into three "arms" (*ḳol*, for this term, which is also used as a technical term in administrative language, cf. Redhouse, *A Turkish and English Lexicon*, 1942; H. W. Duda, *Balkantürkische Studien*, Vienna 1949, 98 ff. note 8). In the 17th century, according to the *Djihān-nümā*, the middle one of these "arms" embraced the entire length of the diagonal route together with its offshoots as far as Damascus; the right one, the whole west Anatolian network, and the left, the northern caravan route with its extension as far as Ba**gh**dād. According to reports of postal routes in the 19th century, the diagonal route forms the right arm together with the western Anatolian network, the northern caravan route the central one, whilst the left one does not leave the central one until Ṭoḳat, whence it embraces the eastern network to Erzerum. (Concerning the development of road and route-nets in Anatolia prior to the 19th century, cf. F. Taeschner, *Das Anatolische Wegenetz nach Osmanischen Quellen*, Leipzig 1924; idem, *Die Verkehrslage und das Wegenetz Anatoliens im Wandel der Zeiten*, *Petermanns Geographische Mitteilungen*, 1926, 202-6).

The word "roads" can be applied to these routes only in a limited sense, as roads were not built with foundations; except where Roman roads could still be employed, they are simply much used and well-trodden tracks, along which caravanserais, wells, and bridges have been erected by benefactors for the comfort of the travellers.

This tripartite route-system has been gradually falling into disuse with the expansion of railways in the 19th and 20th centuries, though the railway follows roughly the track of the old routes—at least in the case of the diagonal road.

The building of railways naturally did not replace the building of roads, which also has been encouraged (to a certain extent) since the *tanẓīmāt* period. (For the means devised to finance the building of the roads: corvée and road-tax, "*yol parasī*", see G. Young, *Corps de Droit Ottoman*, IV, Oxford 1906, 245 ff., "Routes et Prestations").

The history of railway building in Anatolia began with the granting of a concession to a British company for a railway from Smyrna (Izmir) to Aydln in 1856, and the line was opened 10 years later. In the last decades of the Ottoman Empire the following sections were opened in Anatolia:

(1) British Company: Smyrna (Izmir)—Aydln 1866,—Dinar 1889 (with branchlines to Ödemiş, Tire, Söke, Denizli and Čivril)—Egirdir 1912; (2) Franco-Belgian Company (British until 1893): Smyrna (Izmir)—Manisa—Kasaba 1866,—Ala**sh**ehir 1873 (?),—Afyūn Ḳara Ḥiṣār 1897; Manisa—Soma 1890,—Ballkesir—Bandlrma 1912; (3) Narrow Gauge Railway Mudanya-Brusa (Bursa) 1875, rebuilt by a Franco-Belgian Company in 1892 (not in use now); (4) German Company (since 1888) Anatolian Railway: Ḥaydar Pa**sh**a—Izmid 1873 (with a branchline to Adapazar)—Eski**sh**ehir—Ankara 1892; Eski**sh**ehir—Afyūn Ḳara Ḥiṣār (with a branchline from Alayunt to Kütahya)—Ḳonya 1896; Ba**gh**dād Railway: Ḳonya—Bulgurlu 1904; Toprakkale—Iskenderun 1913; Bulgurlu—Adana—Toprakkale—Aleppo (Ḥaleb)—Nuṣaybīn 1918 (with a branchline to Mardīn); (5) British Company: Mersin—Adana 1886 (1906 taken over by the Ba**gh**dād Railway Company).

Thus the railways consisted—with the exception of the short stretches which linked Adana and Brusa with their harbours—on the one hand of a network based on Smyrna (Izmir) and opening up the rich agricultural districts of western Anatolia, on the other hand of a diagonal line, with a branch to Ankara, which linked the capital to the far-distant Arab provinces of Mesopotamia, ʿIrāḳ and Syria. Plans for a railway system in the Black Sea area and in north-eastern Anatolia broke down because of Russian opposition.

Existing railways were nationalised at the beginning of the Turkish Republic in 1920 ("Türkiye Cumhuriyeti Devlet Demiryollarī"), and the system has since been extended and based on Ankara as

its centre. This extension began as early as 1922 with a narrow-gauge railway Ankara—Irmak—Yahşl Han 1925—Yerköy and in the Kayseri direction 1925. This was later extended in wide gauge.

There are the following lines: (1) Ankara-Kayseri 1927,—Sivas 1930,—Erzincan 1938,—Erzurum 1939, —Horasan 1950;—Sarlkamlş under construction. Here it will link up with the broad gauge railways which the Russians built in 1896: Gümrü (Alexandropol, now Leninakan) via Kars to Sarlkamlş. The line was continued in narrow gauge from there to Mamahatun via Erzerum during the First World War. (2) Ilica (in the Gulf of Edremit)—Edremit—Palamutluk (narrow gauge) 1924 (unused since 1953); (3) Fevzipaşa (on the Adana—Aleppo line)—Malatya 1931,—Diyarbekir (Diyarbaklr) 1935 (with a branchline to Elazlğ),—Kurtalan 1944; (4) Samsun —Çarşamba (narrow gauge) 1926 (no longer in use); Samsun—Amasya—Sivas 1932; (5) Kütahya—Balikesir 1932; (6) Kayseri—Uluklşla (more specifically: Bogazköptü—Kardeşgediği) 1933 (since then through-trains to Syria and Iraq—the Taurus Express—go via Ankara and no longer via Konya); (7) Irmak—Filyos 1935,—Zonguldak 1937,—Kozlu 1943,—Eregli planned, under construction as far as Çamll; (8) Afyon Karahisar—Karakuyu (near Dinar), Baladiz (near Eğirdir)—Burdur, and Bozanönü (also near Egirdir)—Isparta 1936; (9) Çetinkaya (on the Sivas—Erzincan line)—Malatya 1937; (10) Elazlğ—Genç 1947, — Muş under construction — Tavan (on Lake Van) planned; (11) Köprüağrl (near Fevzipaşa)—Maraş 1948; (12) Narll (near Fevzipaşa)—Gazianteb 1953,—Karkamlş formerly D̲j̲arābulus (on the Euphrates, on the Aleppo—Nusaybin line) under construction. (Cf. G. Jäschke, *Geschichte und Bedeutung der türkischen Eisenbahnen*, *Zeitschrift für Politik*, 1942, 559-566; concerning the Bag̲h̲dād railway in particular, cf. H. Bode, *Der Kampf um die Baghdadbahn* 1903-1914, Breslau 1941; R. Hüber, *Die Baghdadbahn*, Berlin 1943.)

The increased use of motor-transport and the consequent decrease in rail-transport, has already resulted in the closing of local lines (Mudanya—Brusa, Ilica—Edremid—Palamutlu) and threatens to outdo rail-transport in Turkey. As a result there has been a fresh emphasis on road construction (Mukbil Gökdogan, *Strassenbau und Verkehrspolitik in der Türkei*, Stuttgart 1938). In recent years the road network in Turkey has been greatly expanded —partly with American aid—and there are now numerous bus lines (cf. R. W. Kerwin, *The Turkish Roads Programme*, *The Middle East Journal*, 1950).

Since the Anatolian rivers are not navigable, there is no real inland shipping (except in the case of the greater rivers just above their months, and the use of rafts of inflated skins (*kelek* [*q.v.*]) on the Tigris). Nor are there any artificial waterways. The project of linking the Saband̲j̲a lake with the Ḳarya on the one side and the Gulf of Izmit on the other by canal has been considered twice (999/1590-91 and 1064/1653), but on neither occasion did it get past the preliminary stages [see SABAND̲J̲A].

Conditions for sea shipping are not very favourable either: the north and south coasts have few natural harbours, and the many bays along the west coast are of little use because the river estuaries are silted up by the rivers (cf. above, ii, "Aegean Anatolia"). Apart from Smyrna (Izmir [*q.v.*]), the most important harbour, there are a few—admittedly unimportant—harbours along the west coast, such as Foča [*q.v.*] (Phocaea; in ancient times and in the Middle Ages it was a considerable rival of the port of Smyrna, because it jutted further out into the sea), Bodrum (Halicarnassus), and Fethiye (Makri), which are only of importance for coastal shipping. In recent times only Smyrna has had any importance as an overseas harbour, though Foča also held a similar position in the Middle Ages.

Unlike the ports on the western coast which can be easily reached by the river valleys from the centre of Anatolia, the few ports on the north and south coasts are difficult to reach. On the north coast, Sinob (Sinope) [*q.v.*]—rather inaccessible because of its mountainous hinterland—and Samsun [*q.v.*] (Amisos) are of some importance, particularly in traffic with the Crimea which lies opposite. Samsun, situated in the plain between the mouths of the rivers Ḳlzll Irmaḳ (Halys) and Yes̲h̲il Irmaḳ (Iris), has grown more important than Sinob, particularly in the 19th century. On the south coast, the ports of Antalya [*q.v.*] (Adalya, the ancient Attaleia and Satalia of the Crusaders) and Alanya [*q.v.*] (ʿAlāʾiyya, Galonoros in Byzantine times, the Candelor of the European merchants in the Middle Ages) have been of importance ever since the Middle Ages. More recently, the harbour of Mersina (now Mersin [*q.v.*]) has also been of importance since it was built in 1832. The only points for landing which would link up with traffic across the continent were actually those at the "base" of the Anatolian peninsula i.e. Ṭarabzun [*q.v.*] (Trebizond) on the Black Sea, and one on the Mediterranean (in the Middle Ages Ayas [*q.v.*], Laiazzo of the crusaders, Payas in Ottoman times, now Iskenderun, Alexandretta); caravans from Trebizond went to Ād̲h̲arbayd̲j̲ān and Persia, and from the above-mentioned Mediterranean ports to northern Syria (Aleppo), Mesopotamia (Mosul) and ʿIrāḳ (Bag̲h̲dād).

(6) *Economy*.

Anatolia has always been an agricultural country and it has largely remained one in spite of the considerable incipient industrialisation. In the centre—wherever the land is fit for more than grazing—the main crop is grain, whilst fruit and vegetables are cultivated in the coastal areas and near rivers where gardens can be watered with the aid of water-wheels. Fruit-growing is characteristic particularly of the districts on the Black Sea (apples from Amasya are famous throughout the country, and Cerasus, now Giresun, is supposed to be the original home of the cherry), hazelnuts are grown in many areas. Along the Aegean Sea (with its Mediterranean vegetation) figs, olives, melons (watermelon, *karpuz* and sweet melon, *kavun*), and mulberry trees and vines are grown. The woods in the Black Sea area (especially the "Wood Sea", *ag̲h̲ač denizi*, of former times near Saband̲j̲a) were extensive enough to meet not only the local demands for timber for building, wood for burning and charcoal but also part of the need of the capital, which got the remainder of its supply from woods on the European side.

The steppes in the centre of the country are most propitious for the raising of cattle. Various types of sheep and goats are found here, including Angora goats whose wool (*tiftik*) is in great demand (mohair). Anatolian horses have been famous since the Middle Ages. The ʿAzlziyye stud farm in Phrygia used to breed the horses for the Ottoman cavalry. The growing of silkworms is a speciality of north-west Anatolia thanks to the cultivation of the mulberry tree there. Brusa is the centre for this and for the silkspinning industry.

The silver mines of Gümüsh-khāne between Trabzon and Erzurum, and those of Gümüsh Ḥādjdji Köy near Amasya, must be mentioned as the oldest; here, too, were the mints for silver coins. Copper was found in Küre (between Inebolu and Ḳasṭamonu) and in Ergani Maʿden (near Diyārbakr). Near Eskishehir is the only area in the world where "Meerschaum" is found. This was in great demand in the 19th century for pipes (*lüle*) and similar articles, but since "Meerschaum" is no longer in fashion now, production is much reduced.

Arts and crafts have been playing a considerable part, especially ceramics (introduced from Persia as early as the Saldjūḳ period). Magnificent examples of Rūm Saldjūḳ ceramics are found especially in buildings in Ḳonya. The golden age of Ottoman ceramics began when Selīm I brought craftsmen back from Tabrīz during his Persian campain (1514), and settled them in Istanbul and Izniḳ. In the 16th and 17th centuries, Izniḳ was the centre for the production of the classical Ottoman pottery with blue and green as the main colours, contrasting effectively with the interspersal bright "Bolus-red". The tiles produced in Izniḳ adorn mosques and *türbes* in Istanbul, as well as the Topḳapî Sarāy. Of vessels, the plates (known as "Rhodes plates" to the trade) are the best known and most exported product of the potteries. In later years (under Aḥmed III) potteries were founded in the Teḳfūr Sarāy in Istanbul and in Kütahya (concerning Turkish Fayence manufacture in Izniḳ and other places, cf. K. Otto-Dorn, *Das islamische Iznik*, Berlin 1941, 109 ff., and the list of sources by R. Anhegger, ibid., 165 ff.). [Cf. also KHAZAF]·

Besides pottery, textile goods form a characteristic part of Anatolia's produce, particularly rugs. The Turks brought this skill from the east and developed it (mainly in ʿUshaḳ, Ḳula, Gördez and others) partly in the Persian tradition, partly in a more popular style. The rugs best known in Europe are those made in the 19th century, which are loosely knotted, with long threads and known as "Smyrna" rugs after their harbour of export, although they were actually made in the ʿUshaḳ area. The Anatolian silk industry was also of great renown; the centre for which was in Brusa. Its products, of which the brocades with inwoven gold and silver threads are of an especially high artistic quality, were chiefly woven for the court and for higher society. (Concerning Turkish textile production cf. Tahsin Öz, *Türk Kumaş ve Kadifeleri*, Istanbul 1946-51; idem, *Turkish Textiles and Velvets*, Ankara 1950). Lastly, coarser weaving (*kilim*) of rugs and mats must be mentioned; such mats cover the mosque floors in winter. [Cf. also BISĀṬ, NASĪDJĪ].

Trades in towns were organised into guilds. These guilds (*eṣnāf*, from the singular *ṣinf* [*q.v.*]) which were "fraternities" somewhat similar in character to a darwīsh order, maintained and guarded traditions, quality and integrity. In cases of accident, their members were protected against loss by the spirit of comradeship, and the resultant esprit de corps gave them a power to which—at times—even the government had to yield. The guilds were supervised by the clerk of the market (*muḥtesib*), who, in turn, was subordinate to the Ḳādī—an institution belonging to the sharīʿa. (Concerning Turkish guilds cf. Osman Nuri, *Medjelle-i Umūr-i Belediyye*, I, Istanbul 1922, chap. *Eṣnāf*, 479-768; Taeschner, *Die Zünfte in der Türkei, Leipziger Vierteljahrsschrift für Südosteuropa*, 1941, 172-88; and ṢINF; concerning economy in early Ottoman times in general, cf. Afet Inan, *Aperçu général sur l'Histoire économique de l'Empire Turc-Ottoman*, Istanbul 1941.)

The ancient guilds began to disintegrate in the 19th century when state reform (*tanẓīmāt*) opened the way to commercial reforms on western European lines and to a western legal code (partly by direct adoption of European legal codes). Finally the guilds were formally dissolved on 13 Febr. 1325 M./26 Febr. 1910 (the *Gedik* on 16 Febr. 1328 M./ 1 March 1913). Modern organisations (grouped into trade unions in 1943) took their place. Improvements were made in agriculture, as for instance the irrigation to bring water to the Ḳonya plain carried out by the Baghdād Railway (1907-1913), and new cultivations (e.g. cotton in the Cilician plain) were introduced.

Attempts to bring Anatolia into line economically with European countries have been particularly marked since the foundation of the Turkish Republic. Cf. (amongst others): Orhan Conker and Emile Witmeur, *Redressement économique et industrialisation de la Nouvelle Turquie*, Paris 1937; Ahmed Oguz, *Die Wirtschaftslenkung in der Türkei*, Berlin 1940; Schewket Raschid, *Die türkische Landwirtschaft als Grundlage der türk. Volkswirtschaft*, Berlin-Leipzig 1932; M. Thornburg, G. Spry, G. Soule, *Turkey. An Economical Appraisal*, New York 1949; *The Economy of Turkey. An Analysis and Recommendations of a Development Program*. Baltimore 1951.

Bibliography: al-Idrīsī, *Kitāb Rudjār* or *Nuzhat al-Mushtāḳ* (K. Miller, *Mappae Arabicae*, iv, Stuttgart 1927, plates 35, 45, 55; *Edrisii Geographia Arabice*, Rome 1592, fol. 113r-114v, 139r-142r, 153v-154v; P. Amédée Jaubert, *Géographie d'Edrisi*, Paris 1836-40, II, 129, 305, 391); Yāḳūt, *Muʿdjam al-Buldān* and al-Ḳazwīnī, *Āthār al-Bilād*, s.v. al-Rūm; Abu 'l-Fidāʾ, *Taḳwīm al-Buldān* (*Géographie d'Aboulféda*, ed. Reinaud and de Slane, Paris 1840; French translation by Reinaud, Paris 1848, continued by St. Guyard, Paris 1883); Ibn Baṭṭūṭa (Arabic text with French translation: *Voyages d'Ibn Batoutah*, by Defrémery and Saguinetti, ii, Paris 1877, 254-354; French translation with annotations by Defrémery in *Nouvelles Annales des Voyages*, Dec. 1850-April 1851; English translation by H. A. R. Gibb, *Ibn Battuta, Travels in Asia and Africa 1325-1354*, London 1953, 123-66); al-ʿUmarī, *Masālik al-Abṣār* (F. Taeschner, *Al-ʿUmarī's Bericht über Anatolien*, Leipzig 1929; incomplete translation by Quatremère in *Notices et Extraits*, xiii, Paris 1838, 151-384); Ḥamd Allāh Mustawfī, *Nuzhat al-Ḳulūb*, (*The geographical part of Nuzhat al-qulub*, ed. by G. le Strange, Leyden-London 1915, English translation 1919); G. le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, 127-58; F. Taeschner, *Ein altosmanischer Bericht über das vorosmanische Konstantinopel*, in *Annali Ist. Univ. Or. Napoli*, N.S. I, Rome 1940, 181-9. Muḥammad ʿĀshiḳ's *Manāẓir al-ʿAwālim* (1006/ 1598) brings to an end the geographical literature of the mediaeval type. In the geographical section, he begins with a Turkish translation of what older authors—al-Idrīsī, Abu 'l-Fidāʾ and others—have said; in the case of places which he himself has visited, this is followed by an account of what he has seen. These reports, which are interspersed throughout the work, are of the greatest importance and would merit an edition, especially since they were used as a basis for later works.

Those original works by Ottoman writers which have survived are more revealing than any of the

above-mentioned ones: Pīrī Rēīs, *Kitāb-i Baḥriyye*, Istanbul 1935, Facsimile edition, from p. 746; Kātib Čelebi (or Ḥādjdjī Khalīfa), *Djihān-nümā*, of which there are two recensions (cf. Taeschner, *Zur Geschichte des Djihānnumā, MSOS*, 1926, ii, 99-111; idem, *Das Hauptwerk der geographischen Literatur der Osmanen, Kātib Čelebis Gihānnumā, Imago Mundi* 1935, 44-7). The former exists only as an unfinished fragment in a series of manuscripts of which the Viennese one, Mxt. 389 (Cat. Flügel, ii, No. 1282) is the most important because it seems to have been the working copy of the great scholar. Abū Bakr b. Bahrām al-Dimashḳī (d. 1102/1691) continued Kātib Čelebi's work and wrote a description of Anatolia, a manuscript of which is in London (Brit. Mus., Or. 1038). Ibrāhīm Mutafarriḳa printed the *Djihān-nümā* (10 Muḥ. 1145/23rd July 1732; an inaccurate translation into Latin by Matth. Norberg, *Gihan Numa, Geographia Orientalis*, 2 vols. Lund 1818; French translation by Armain, *Déscription de l'Asie Mineure*, in Louis Vivien de Saint Martin, *Histoire des découvertes géographiques*, iii, Paris 1846, 637 ff.), in which he completed the part left unfinished by Kātib Čelebi from the work of Abū Bakr (p. 422 ff., Norberg, i, 618 ff.) Thus this book—which is one of the incunabula of Turkish printing—became a geographical description of Asia. Of Anatolia, however, (Norberg, i, 589 ff.) only the parts on the *eyālet* of Van (p. 411) are actually by Kātib Čelebi, everything else, i.e. the description of the *eyālets* Ḳarṣ (inserted, p. 407), Erzerum (422), Ṭirabzon (429), Diyārbakr (436; from here onwards Norberg, ii), Cilicia (Ičel, 610) Ḳaraman (614), Sivas (622), and Anadolu (631), is by Abū Bakr.

Further sources of information on Anatolia in Ottoman times are the few reports of travellers in Turkish and in Arabic: Ewliyā Čelebi, *Seyāḥat-nāme* (i-vi, badly edited in Istanbul 1314-6, vii and viii slightly better in 1928, ix and x (in Latin script) in 1935 and 1938; the first two volumes were rather inadequately translated into English from a bad manuscript by Joseph von Hammer, *Narrative of Travels in Europe, Asia and Africa*, London 1834, 1846 and 1850), which we have only as a rough sketch. Those parts of the work which relate to Anatolia (vols ii-v) are brought together in Taeschner, *Das Anatolische Wegenetz nach osmanischen Quellen*, i, Leipzig 1924, 37-39, 44. Further, there are the travel guides for pilgrims going to Mecca, such as Muḥammad Adīb's work of 1193/1779 (printed in Istanbul 1232/1817, French translation by Bianchi, *Itinéraire de Constantinople à la Mecque*, Paris 1825, in which the date of writing is erroneously given as 1093/1682, cf. Taeschner, *Wegenetz*, i, 82).

To complete the picture given by the above-mentioned Oriental travel accounts, there are those by Europeans (the older ones listed by L. Vivien de Saint-Martin in *Histoire des découvertes Géographiques*, iii, 743-808: vi, Bibliographie; the more recent by Selčuk Trak, *Türkiyeye ait Coğrafi eserler genel bibliografyasî*, i, Ankara 1942, 30-9).

A wealth of information may be expected from documents kept in Turkish archives, but research into these is only in its beginning (Ömer Lutfi Barkan, *Türkiyede Imperatorluk devirlerinin nüfus ve arazi tahrirleri ve Hakana mahsus defterler*, Istanbul 1941, and *XV ve XVIinci asîrlarda Osmanlî Imperatorluğunda zirat ekonominin hukukî ve malî esaslarî, Kanunlar*, Istanbul 1943).

Finally, the official handbooks (*Dewlet-i ʿAliyye-i ʿOthmāniyye Sāl-nāmesi*) which are available for the 68 years from 1263 H/1847 to 1334 Māliyye/1918 and the *Sāl-nāmes* of the individual *wilāyets* may be used as sources of information for the last decades of the Ottoman Empire. (The imperial and provincial *Sāl-nāmes* of that time, together with other sources, are exploited in the important work by V. Cuinet, *La Turquie d'Asie*, Paris i/ii, 1892, iii/iv, 1894). Under the Turkish Republic, a similar series was started (*Türkiye Djümhūriyeti Dewlet Sāl-namesi*), but only 5 volumes have appeared so far (i, 1926; ii, 1927; iii, 1928; iv, 1929; v, 1930), and they do not contain nearly as much material as the earlier *sal-nāmes* of Ottoman times.

Lastly, the lists of place-names may serve as sources for the most recent period, for instance: *Son teşkilat-i mülkiyede Köylerimizin adlarî*, Istanbul 1928; *Idare Taksimatî*, 1942, Istanbul 1942; *Türkiye'de Meskun Yerler Kîlavuzu*, 2 vols., Ankara 1946 and 1950.

Key to the map of Anatolia in the 17th century.

This map is based on the *Bevölkerungskarte der Türkei*, 1 : 4,000,000, by H. Louis, 1938. The entries are mainly taken from the *Djihān-nümā* of Kātib Čelebi, and therefore reflect conditions in Anatolia in the 17th century. The map shows the approximate limits of the *eyālets* (within the present-day boundary of Turkey) as red broken lines, and in some cases those of the *liwās* (or *sandjaḳs*), within the *eyālets*, as red dotted lines. It further shows the more important roads indicated by Kātib Čelebi, Ewliyā Čelebi and other sources, the main communication routes as double red lines, other routes as single red lines. The names of towns (in red) and of mountain peaks (in black, with heights in metres) are abbreviated, and the following list explains these abbreviations; first comes the name as it appears in the *Djihān-numā* and in the other sources of the 17th century, then, in brackets, the antique or Byzantine name (if known), the modern name (if different from the old one), the administrative district (except in the case of towns which have gained importance only later and therefore do not occur in the ancient sources; these have been put in brackets on the map), and finally the reference to the squares of the map. The names of the capitals of *eyālets* are printed in small capitals, those of the capitals of *liwās* in italics. General abbreviations : B. = Büyük; Ç. = Çay, Çayî; D. = Dağ, Dağî; E. = Eyālet; G. = Göl, Gölü; I. = Irmaḳ; L. = Liwa; N. = Nehir, Nehri. For practical reasons, the transliteration has been based on modern Turkish orthography.

A D = Ağrî Dağî (Ararat: L 3)
AD = Adana (E. Adana: F 4)
Adc = Adilcevaz (E. Van: K 3)
(Adp) = Adapazar (D 2)
A Dy = Amid/Diyārbekr (Diyarbakîr; E. Diyārbekr: I 4)
A E = Akşehir (Enderes: L. Karahisar-i şarki: H 2)
Ah = Ahiska (K 2)
Ahl = Ahlat (E. Van : K 3)
Ak = Antakya (Antiocheia; L. Antakya : G 4)
Akh = Afyon Karahisarî (L. Karahisar-i Ṣāḥib : D 3)
Aks = Aksaray (E. Karaman : E 3)
Al = Alaya (ʿAlāʾīya, Alanya, Kalonoros; L. Içel : E 4)
Ala D = Ala Dağ (F 4)
Alş = Alasehir (Philadelphia; L. Aydîn : C 3)

Am = Amasya (Amaseia; E. Sivas : F 2)
Amr = Amasra (Amastris; L. Bolu : E 2)
Ank = Ankara (Ankyra, Angora; L. Ankara : E 3)
Anl = Antalya (Attaleia, Adalya : L. Tekke : D 4)
Ard = Ardahan (E. Cıldır : K 2)
As = Ayas (E. Adana : F 4)
Aş = Akşehir (Philomelion; E. Karaman : D 3)
Atb = ʿAyntāb (Gaziantep; E. Marʿaş : G 4)
Atş = Altıntaş (L. Germiyan : D 3)
Av = Artvin (E. Çıldır : I 2)
Ay = Ayaş (L. Ankara : E 2)
Ays = Ayasoluk (Ephesos, Hagios Theologos, Selçuk; L. Aydın : B 4)
Bb = Bayburt (E. Erzerum : I 2)
Bb D = Binboğa Dağı (G 3)
Bd = Bodrum (Halikarnassos; L. Menteşe : B 4)
Bdr = Burdur (L. Hamid : D 4)
Be = Benderegli (Heraclea Pontica, Eregli; S. Bolu : D 2)
Bg = Biğa (L. Biğa : B 2)
Bir = Bire (Birecik; L. Bire : H 4)
Bk = Balikesri (Balikesir; L. Karası : B 3)
Bl = Bolu (L. Bolu : D 2)
Blk = Bilecik (L. Sultan Üyügi : C 2)
Boz D = Boz Dağı (Tmolos : C 3)
Bp = Beypazar (L. Ankara : D 2)
Br = Bursa (Prusa, Brussa; L. Hudavendigâr : C 2)
Brg = Bergama (Pergamon; L. Karası : B 3)
Bs = Bitlis (E. Van : K 3)
Bş = Beyşehir (E. Karaman : D 4)
Bt = Batum (I 2)
Buz D = Buz Dağı (H 3)
Bv = Bolvadın (L. Karahisar-i Sahib : D 3)
By = Bayezid (Doğu Bayazit; E. Kars : L 3)
Çav = Çay (L. Karahisar-i Sahib : D 3)
Çk = Çerkeş (L. Kânkırı : E 2)
Çʟ = Çıldır (E. Çıldır : K 2)
Çln = Çaldıran (E. Van : K 3)

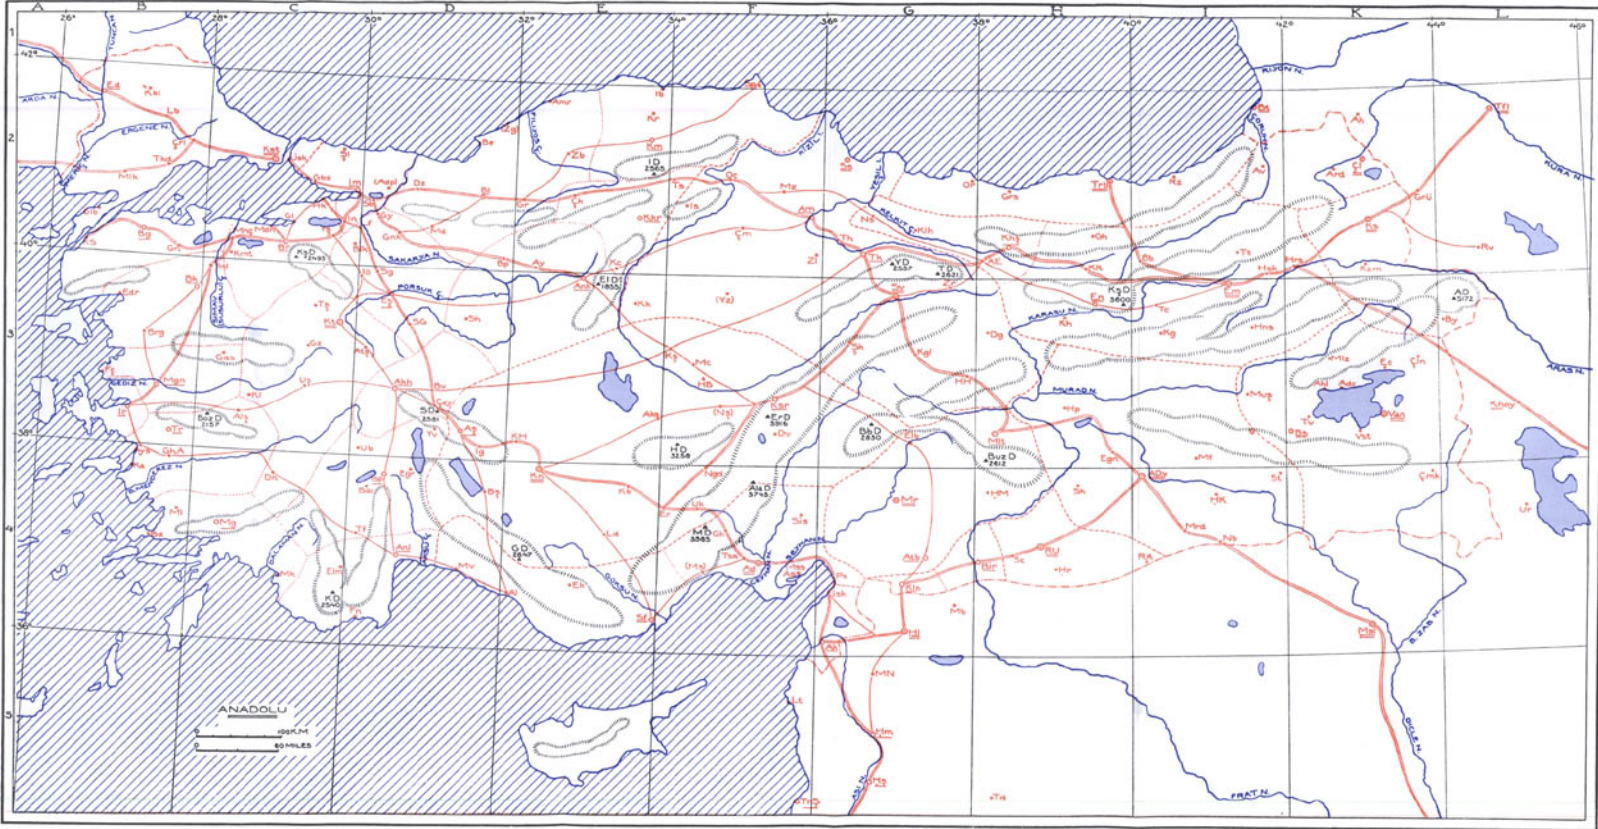
(F. Taeschner)

ANADOLU. In the time between the 15th and the 18th century, this was the name applied to the province (*eyālet*) comprising the western half of Anatolia [cf. preceding article] and embracing largely the western Anatolian Turkish principalities. At the beginning, Ankara was the capital and the seat of the governor (*beglerbeg*), later it was Kütahya. The *eyālet* of Anadolu contained the following military districts (*sandjaķ* or *liwā*) which were partly former principalities (in the order given by Katib Čelebi in *Djihān-nümā*): 1) Germiyān with Kütāhya as its capital; 2) Ṣarukhan with Maghnisa (now Manisa); 3) Aydîn with Tire; 4) Menteshe with Mughla; 5) Tekke with Anṭāliya; 6) Ḥamîd with Isbarta: 7) Ķaraḥiṣār-i Ṣāḥib with the capital of the same name (later Afyūn Ķara Ḥiṣār); 8) Sulṭān Üyügi (often in the corrupted form of Sulṭān Öni) with Eskishehir; 9) Anķara with the capital of the same name (also called Engüri); 10) Kānķîrî with the capital of the same name (now Çankîrî); 11) Ķasṭamoni with the capital of the same name (now Ķastamonu); 12) Bolî with the capital of the same name (now Bolu); 13) Khudāwendigār with Brusa (Bursa); 14) Kodja-eli with Iznikomîd (later Izmid, Izmit). In addition there were the following *sandjaķs* which were under the Ķapudan Pasha: 1) Ķarasî with Balikesri; 2) Bîghā with the capital of the same name and Ķalʿe-i Sulṭāniyye (or Čanak Kalʿesi); 3) Sughla with Izmir. [Cf. individual articles on each of the preceding].

When other *eyālets* besides Anadolu were formed in the Asiatic part of Turkey, the term Anadolu was loosely applied to the whole Asiatic half of the empire, inasmuch as there was in addition to the "Military Judge" (*ķāḍi ʿasker*, pronounced *kazasker*) of Rumelia as highest judge in the European part of the empire, also such a one for the Asiatic half. The latter had to accompany the Pādishāh on his campaigns into Asia. Besides the "accountant" (*defterdār*), i.e. the Minister of Finance, in Rumelia there was also one in Anatolia whose post, however, became a mere sinecure in comparison with the former.

The law of 7 Djumādā 1281/5 Nov. 1864, concerning *wilāyets*, dissolved the exessively large *eyālet* of Anadolu, raised the *sandjaķs* of Khudāwendigār, Aydîn, Anķara and Ķasṭamonî to the status of *wilayets*, and assigned the remaining *sandjaķs* to these.

Bibliography: Kātib Čelebi, *Djihān-nümā*, Istanbul 1145/1732, 630 ff. For further bibliography cf. Anadolu, preceding article.

(F. Taeschner)


ANATOLIA IN THE XVII[TH] CENTURY

ANADOLU ḤIṢĀRI, a fortress (also known as Güzeldje Ḥiṣār, Yenidje, Yeni, or Akča Ḥiṣār) at the narrowest part of the Bosporus, built by Bāyezīd I in 797/1395 in order to cut off communications between Byzantium and the Black Sea (cf. ʿĀshīkpasha-zāde, ed. Giese, Leipzig 1928, 61, 121, 131; Neshrī, ed. Taeschner, i, Leipzig 1951, 90; Bihishtī, *Taʾrīkh*; Ṣolaḳ-zāde, *Taʾrīkh*, Istanbul 1298, 64; Saʿd al-Dīn, *Tādj al-Tawārīkh*, Istanbul 1279, i, 148; Münedjdjim-bashī, *Ṣaḥāʾif al-Akhbār*, Istanbul 1285, 310). Some improvements were made by Meḥemmed II during the erection of Rūmeli Ḥiṣārī [*q.v.*] in 856/1452 (hence he is wrongly named as the founder of Anadolu Ḥiṣārī cf. Kātib Čelebi, *Siyāḥat-nāme*, i, 664). Anadolu Hiṣārī played an important role before the battle of Varna, during the passage of Murād I's army from the Anatolian to the European shore (cf. Neshrī, loc. cit.; Saʿd al-Dīn, 379; Münedjdjim-bashī, 358; Luṭfī Pasha, *Tawārīkh-i Āl-i ʿOthmān*, Istanbul 1341, 117). After the conquest of Istanbul, the fortress lost its military importance, and when further changes in political power made it necessary to protect the Bosporus again, Murād IV built fortifications at Rūmeli Kavaghī and Anadolu Kavaghī in order to repel the incursions of the Cossacks. The fortress is described by Ewliyā Čelebi (*Siyāḥat-nāme*, loc. cit.); after a long period of neglect, it was thoroughly restored in 1928. The sub-district called Anadolu Ḥiṣārī (already mentioned by Ewliyā Čelebi), has about 5000 inhabitants (including Kanlīdja and Čubuklu). The rivulets Gök-su and Küčük Su, known as the Sweet Waters of Europe, were formerly one of the most popular places for excursions from Istanbul, often mentioned in literature. Here, between the fortress and Kanlīdja, stands the "maison de plaisance", the only surviving part of a villa built by ʿAmūdja-zāde Ḥusayn Pasha towards 1695, and one of the few remaining examples of early Ottoman civil architecture.

Bibliography: S. Toy, *The Castles on the Bosporus*, Oxford 1930, 225 ff.; H. Högg, *Türken-Burgen am Bosporus und Hellespont*, Dresden 1932, 9 ff.; A. Gabriel, *Châteaux Turcs du Bosphore*, Paris 1943, 9 ff.; *IA*, s.v. (R. Anhegger)

ANĀHĪD [see zuhara].

ʿANĀḲ, name given by the Arabs to the daughter of Adam, the twin sister of Seth, wife of Cain and mother of ʿŪdj [*q.v.*]; see Djāḥiẓ, *Tarbīʿ* (Pellat) index.—In zoology, *ʿanāḳ* denotes a kind of lynx, the caracal (from the Turkish *ḳara ḳulaḳ* "black-ear", Persian *siyāh gūsh*) found in much of Asia and Africa, which is thought to walk in front of the lion and, by its cry, to announce the latter's approach.—In astronomy, *ʿAnāḳ al-Banāt* is the ζ of the Great Bear, and *ʿAnāḳ al-Arḍ*, γ Andromedae; see A. Benhamouda, *Les Noms arabes des étoiles*, in *AIEO*, Algiers, ix, 1951, 84, 97. (Ed.)

ANAMUR, small town and harbour on the southern coast of Anatolia, 36° 6′ N, 32° 10′ E, capital of a *ḳaḍā* in the *wilāyet* of Ičel, with 2734 inhabitants (1945; the *ḳaḍa* has 23,725 inhabitants). It is situated in a plain formed by the mouth of a little river, ca. 5 km. from the promontory of Anamur Burnu which forms the southernmost point of Anatolia. The town is called in medieval portulans Stallimuri, Stalemura, etc. On the coast, at the foot and on the slopes of the Anamur Burnu lie the extensive ruins of the late antique and early Christian town of Anemurium or Anemorium.

At the east end of the plain of Anamur, close to the shore, lies Maʿmūriyye Ḳalʿesi, a well-preserved medieval fortress, which was made use of and repaired by the Ottomans; this is recorded by an inscription from 874/1469-70. Inside there is a small mosque.

Bibliography: V. Cuinet, *La Turquie d'Asie*, ii, 81 f.; W. Tomaschek, *Zur historischen Topographie von Kleinasien im Mittelalter*, Vienna 1891, 59. (F. Taeschner)

ʿĀNĀNIYYA, Jewish sect of the adepts of ʿĀnān b. David (*c.* 760 A.D.), rather incorrectly considered to be the founder of the Karaite schismatic faction; his schism was only one of many which affected Rabbinical Judaism during the 8th-9th centuries. The Muslim authors seem to have taken most of their information about ʿĀnān and his sect from Karaite sources, especially Ḳirḳisānī, but they have only used a small part of the mass of information supplied by him. The author of the *al-Badʾ wa 'l-Taʾrīkh* represents ʿĀnān as a sort of Muʿtazilite, who professes the divine unity and justice and rejects anthropomorphism. The ʿĀnāniyya of Ibn Ḥazm are in fact the Karaites. Al-Bīrūnī is interested in their particular views regarding the calendar. Al-Shahrastānī, in addition to briefly mentioning their calendar and their prohibitions concerning food (M. Badran has rejected the correct reading into the footnote) comments on their favourable attitude to the person of Jesus. The later Muslim sources throw no fresh light on the subject. No Muslim author mentions the alleged meeting between ʿĀnān and Abū Ḥanīfa in the prisons of al-Manṣūr. Although *ḳiyās* is recognized as a source of the law both by the Karaites and by the Ḥanafīs, there is nothing to suggest that the latter influenced the former.

Bibliography: Abū Yaʿḳūb al-Ḳirḳisānī, *al-Anwār wa 'l-Marāḳib*, ed. L. Nemoy, New York 1939-45, index, s.vv. Anan and Ananites; *Le Livre de la Création et de l'Histoire*, ed. and trans. by Cl. Huart, iv, Paris 1907, text 34-6, trans. 32-5; Ibn Ḥazm, *Fiṣal*, Cairo 1317, i, 99 (1347, 82); Bīrūnī, *Āthār* = *The Chronology of Ancient Nations*, ed. and trans. by E. Sachau, text 58-9, cf. 284, trans. 68-9, cf. 278; Shahrastānī, *Milal*, ed. Cureton, 167-8, ed. M. Badran, 503-5. The most recent statement of the problems concerning ʿĀnān and the origins of Karaism is contained in the articles of Leon Nemoy: *Anan ben David. A re-appraisal of the historical data*, *Semitic Studies in Memory of Immanuel Löw*, Budapest 1947, 239-48; idem, *Yivo-Bleter*, 1949, 95-112; *JQR*, 1950, 307-15: the essentials of the earlier bibliography will be found there. (G. Vajda)

ANAPA, a former fortress on the Black Sea, situated on the Bugur river 40 km. S. W. of the Kuban estuary. Built by French engineers for Sultan ʿAbd al-Ḥamīd I in 1781, it was unsuccessfully attacked by the Russians in 1787 and 1790, but stormed by Gen. Gudovich in 1791. Returned to Turkey by the treaty of Yassy (1791), it was in 1808 taken by the Russians but returned to Turkey in 1812. In 1828 it was blockaded by Admiral Greig and Prince Menshikov and ceded to Russia by the treaty of Adrianople of 1829 (article 4). In 1846 a town was built at Anapa. During the Crimean war it was first blown up by the Russians, then reoccupied in 1856. In 1860 the inhabitants of Anapa were transferred to Temruk. In recent decades Anapa was used as a beach and rest home for children. It was destroyed by enemy action in 1942-3, and is now restored.

Bibliography: Novitsky, *Anapa*, *Zap. Kavk. Otd. Imp. Geogr. Obš.*, 1853, ii, 14-43; P. P. Semenov, *Geogr. Slovar Ross. imperii*, i, 96; Russian and Soviet Encyclopaedias. (V. Minorsky)

ANAS b. MĀLIK Abū Ḥamza, one of the most prolific traditionists. After the *hidjra* his mother gave him to the prophet as servant; according to his own statement he was then ten years of age. He was present at Badr, but took no part in the battle, and is therefore not counted among the combatants. He remained in Muḥammad's service up to the time of the Prophet's death; later he took part in the wars of conquest. He also played small parts in the civil wars. In the year 65/684 he officiated as *imām* of the *ṣalāt* at Baṣra on behalf of the rival caliph ʿAbd Allāh b. al-Zubayr. When ʿAbd al-Raḥmān b. al-Ashʿath revolted, al-Ḥadjdjādj charged Anas with being a partisan of the rebel just as he had formerly taken the part of the enemies of the Umayyads, ʿAlī and Ibn al-Zubayr; and although Anas was highly respected as a Companion of the Prophet, al-Ḥadjdjādj had no scruples in putting round his neck a cord with his seal (72/691). It is said however that the caliph ʿAbd al-Malik apologised for al-Ḥadjdjādj's disrespectful act. Anas died at Baṣra at a very advanced age, which is variously given as from 97 to 107 years, the dates most frequently mentioned are 91-93/709-711.

Traditions attributed to Anas are found, collected together, in the *Musnad* of al-Ṭayālisī (Ḥaydarābād 1321, Nos. 1959-2150) and in the *Musnad* of Aḥmad b. Ḥanbal (Cairo 1313, iii, 98-292). Al-Dhahabī states that al-Bukhārī and Muslim record between them 278 traditions from Anas, of which 80 occur in al-Bukhārī alone, 70 in Muslim alone, and 128 are common to both. It is not surprising that many traditions were attributed to the servant of the Prophet; but while they may contain some genuine material, it is likely that they are mainly attributions of a later age; so Anas should not be blamed for all the strange statements given currency on his authority.

Bibliography: Ibn Saʿd, *Tabaḳāt*, vii, 10 ff.; Bukhārī, *al-Taʾrīkh al-Kabīr*, Ḥaydarābād 1361, no. 1579; Balādhurī, *Futūḥ*, index; Ṭabarī, *Annales*, index; Ibn Ḳutayba, *Maʿārif* (Wüstenfeld), 157; Nawawī, *Biographical Dictionary*, 165 ff.; Dhahabī, *Tadhkirat al-Ḥuffāẓ*, i, 42; Ibn al-Athīr, *Usd al-Ghāba*, i, 127 ff.; Ibn Ḥadjar, *Iṣāba* (Cairo 1358/1939), no. 277; *Tahdhīb al-Tahdhīb*, i, 276 ff.; Samʿānī, *Ansāb*, f. 553 b; Yāḳūt, *Muʿdjam* (Wüstenfeld), index; Ibn Khallikān, transl. de Slane, i, 587 f.; Damīrī, *Ḥayāt al-Ḥayawān*, 350 (quoted by Caetani, *Annali dell' Islām*, Introd., § 26, note 1). (A. J. Wensinck-J. Robson)

ANATOLIA [see anadolu].

ANATOMY [see tashrīḥ].

ʿANAZA, short spear or staff (*LA*, vii, 251), usually synonymous with *ḥarba*. In the Muslim ritual the *ʿanaza* first appears in the year 2/624. When Muḥammad first celebrated the *ʿīd al-fiṭr*, Bilāl carried a spear (reputedly the gift of al-Zubayr, who had received it from the Nadjāshī) before him on his way to the *muṣallā* [*q.v.*]; during the service this spear was planted in the ground and served as *sutra* and *ḳibla* [*q.v.*]. The same was done on the *ʿīd al-aḍḥā*. This custom or carrying a spear or staff on ceremonial occasions was observed and expanded by the early caliphs. It became the rule for the preacher to hold in his hand, or to lean upon, a staff (*ḳaḍīb*), sword or bow when he ascends the pulpit at the Friday service. All these are symbols expressing the same idea as the *ʿanaza*, essentially that of authority (cf. the spear of Marduk). Among the ancient Arabs staff and pulpit were attributes of judge and orator.

The word survives as an architectural term in the Maghrib, where it signifies an external *miḥrāb* for those praying in the court of the mosque; see *Ḳirṭās* (Tornberg), 30, 31, 32, 37 (inscript. dated 524 H.; cf. *RCIA*, no. 3031); E. Pauty, in *Hesp.*, 1923, 515-6.

C. Miles, *Miḥrāb and ʿanazah*, *Archaeologica orientalia in memoriam Ernst Herzfeld*, N.Y. 1952, 156-171 (early iconographical representation, full references). (G. C. Miles)

ʿANAZA, a very ancient, but still existing, Arab tribe. The classical genealogical scheme ʿAnaza b. Rabīʿa (Wüstenfeld, Tab. A 6) has in recent times been changed in the same way as in the case of other tribes such as the Banū ʿAṭiyya in Northern Ḥidjāz and Wāʾil, the ancestor of the Bakr and Taghlib, is taken to be their tribal ancestor; in the most recent genealogies Ḳuraysh appears above Wāʾil. Whether or not the Rabīʿa groups are inter-related, as implied in the genealogy, they were in any case connected by neighbourly and other ties in their home, the Yamāma. The ʿAnaza were living in the Ṭuwayḳ to the south of the Wādī Nisāḥ; there, in Haddār, a remnant of them, the Banu Hizzān, remain to this day. Sections in al-Aflādj have disappeared and ʿAnaza villages south of Ṭāʾif were destroyed by the plague in about 1200. The Banū ʿOtba/ʿOtūb, to which the ruling houses of Kuwayt and Baḥrayn belong, also come from Haddār.

Accompanying some migrating Bakr, ʿAnaza elements reached as far as the Euphrates in the second half of the 6th century, and like them, eventually stayed there. As allies of the Ḳays b. Thaʿlaba, whose area was to the south of Baṣra, they took part in the East Arabian *ridda*. It is not known how and when they, and the ʿAnaza who had remained behind, went over to Islam. It is said that they had previously worshipped the god Suʿayr/Saʿīr, and, together with the "Rabīʿa", Muḥarriḳ, whose image stood in Salmān, to the south of Ḥīra.

Some ʿAnaza settled in Kūfa, others migrated together with a group of Shaybān (Bakr) to the region of Mosul, where they can be traced up to the second half of the 9th century. The ancestors of the present-day ʿAnaza appear in the Ḥarra of Khaybar in the 12th century. We do not know exactly whence they came: perhaps from the Ṭuwayḳ, perhaps from the area between ʿAyn al-Tamr and al-Anbār (Ibn Saʿīd quoted by Ibn Khaldūn, *Hist. des Berbères*, i, 14). This new emigration must be connected with the movements of the Eastern Arabian Ḳarmaṭians which completely changed the face of Bedouin Arabia. In the 16th century they extended as far as the Ḳasīm in the east, to Djafr ʿAnaza (= Wāḳiṣa ?) east of al-ʿUlā in the north. Later they occupy that oasis itself and Madāʾin Ṣāliḥ. The tribal division we find today begins to be recognisable as early as 1700: the Djelās (Ruwala) roamed to the south of the Ḥarrat Khaybar from Medina via Ḥanakiyya to Samīrā, the Sbaʿa in the Wādī 'l-Ruma, as far as the Ḳasīm; the ʿAmārāt in the Shammar mountains and in Eastern Arabia. The Fadʿān may have been to the north of the Ḥarra

where we find today the Wald Sulaymān, who are closely connected with them. The Wald ʿAlī were to the west of Khaybar, and their close relatives, the Ḥesene, were most probably there too.

The new migration of the ʿAnaza, the first stage of which lasts for over a century (ending with the arrival of the Djelās (Ruwalā) in Syria in the second half of the 18th century), began before 1700. In 1703 there is mention of them in Maʿān, in 1705 on the Euphrates. This migration achieved its aims because the power of the *amīrs* of the Mawālī in the north of the Syrian desert had been waning since the end of the 17th century, and because the tribe of Ghaziyya was about to vacate the hinterland of Karbalāʾ and go over the Euphrates. The second stage of immigration into Syria and Mesopotamia began about 1800 and was due to the Wahhābīs: the ʿAnaza were partly on their side (ʿAmārāt), and partly fled from their tax-collectors. In the 19th century the history of the ʿAnaza is governed by their relations with the Turkish authorities and the house of Rashīd, the Shammar *amīrs* of Ḥāyil. At the turn of the 20th century the Ruwalā and their hereditary *shaykhs*, the Shaʿlān, play an important part (the oasis of Djōf was in the possession of the Shaʿlān from 1909 to 1922). In the first World War, the ʿAmārāt joined the English after the fall of Baghdād (11 March 17). The Ruwalā did not take part in allied operations until September 1918. Their *shaykh*, al-Nūrī b. Shaʿlān, entered Damascus with the British and Arab troops in October 1918. In the post-war troubles the ʿAnaza frequently changed sides. The political reorganisation in the Middle East distributed the ʿAnaza over Syria, ʿIrāḳ, Transjordan and Saudi-Arabia. The Fadʿān, Sbaʿa and Ruwalā are regarded as Syrian, the ʿAmārāt (with the exception of those who stay permanently in the Nadjd), are regarded as ʿIrāḳī citizens, although they periodically leave the territory of that state during their migrations.

There have always been two opposing groups within the ʿAnaza: the Ḍanā Muslim (Ḥesene, Wald ʿAlī, Djelās/Ruwalā) and the Bishr (Fadʿān, Sbaʿa and ʿAmārāt). The last flare-up of this old animosity was quelled by the French in 1929. The Shammar, especially since the ʿAnaza's advance to the north, and the inhabitants of the Ṣafā and the Ḥawrān, particularly the Druzes, are the hereditary enemies of the ʿAnaza. This is the reason why the ʿAnaza sided with the government in all Druze risings.

The ʿAnaza's modern grazing areas are as follows. The Fadʿān: in summer the area east of Aleppo and Ḥamā, especially to the east of the Euphrates; in winter the Syrian desert (al-Bishrī—al-Ḳaʿara, at times as far as al-Rōḍa). The Sbaʿa: in summer to the east and northeast of Ḥamā; in winter in the Syrian desert to the south of the Syria-ʿIrāḳ border. The ʿAmārāt: in summer in the Djazīra, southeast of the Khābūr, mostly on ʿIrāḳī territory, in winter in the south-eastern Syrian desert (al-Wudyān). The Ḥesene: in summer to the east of Ḥoms; in winter in the Syrian desert close to the Syria-ʿIrāḳ border. The Wald ʿAlī: in summer to the northeast of Damascus and in the Ḥawrān plain; in winter in the heart of the Syrian desert as far as Djōf and Taymāʾ. Of the sections which remained in Arabia, the Fuḳarāʾ and the Wald ʿAlī (both Ḍanā Muslim) have their tents between the Ḥarra of al-ʿUwayriḍ and that of Khaybar; the Wald Sulaymān (Bishr) migrate between the Ḥarra of Khaybar and the southern border of the Nufūd as far as Bēḍā Nathīl (to the southwest of Ḥāyil), where a *hudjra* settlement of the *ikhwān* was founded in the twenties.

The northern ʿAnaza are camel breeders. Sheep breeding is the main occupation of the Ḥesene and the Wald ʿAlī (since 1900), and since 1920 the Fadʿān and Ruwalā have also increasingly taken to this. The Ḥesene and Wald ʿAlī—also, more recently, the Sbaʿā—have for some time been farming the land. In former times the ʿAnaza had a right to part of the harvest of Khaybar; the tribes living there have retained that right. In Ottoman times the ʿAnaza had a right to the *ṣurra*, a payment for protecting the pilgrims' caravan in their area. If this was not, or only partly, paid, then they reimbursed themselves by plundering the *ḥadjdj* (as e.g. in 1700, 1703, 1757). A further source of income was the tolls raised from the caravans, and the *khuwwa* (protection money) collected from the settled population. The more prominent families among whom the office of shaykh is held, have considerable property in land, some of which dates back to donations of ʿAbd al-Ḥamīd. In the Djazīra this is partly cultivated, following American methods, in partnership with town-dwellers.

ANBADUḲLĪS, the Arabic form of the name of Empedocles (often corrupted into Abīduḳlīs, etc.). Some authentic information about his doctrines came down to the Muslims by way of such channels as the works of Aristotle, the doxography of Ps.-Plutarch (e.g. i, 3, cf. ed. Badawī; also quoted in Abū Sulaymān al-Manṭiḳī, *Ṣiwān al-Ḥikma*, introduction; al-Maḳdisī, *al-Badʾ*, i, 139, ii, 75), etc. The authentic Empedocles, however, plays no role in Islamic philosophy; on the other hand, his figure was appropriated by late Neoplatonic circles, and treatises in which Neoplatonic speculations were put into his mouth were translated into Arabic. The main representative of this literature is the *Book of the Five Substances*, the Arabic translation of which is lost, but parts of which are preserved in excerpts from a Hebrew translation made from the Arabic (see D. Kaufmann, *Studien über Salomon b. Gabirol*, Budapest 1899, 1 ff.). It seems that the quotations in Ps.-Madjrīṭī, *Ghāyat al-Ḥakīm*, 285, 289, 293-4, are from some closely related source (289 = ed. Kaufmann, § 13). Various Neoplatonic ideas are attributed to Empedocles in Ammonius, *Ārāʾ al-Falāsifa* (MS Aya Sofiya 2450: see fols. 109v ff., 130r), in which Neoplatonic doctrines are distributed among a number of ancient Greek philosophers. This work, quoted in al-Bīrūnī, *India*, 41-2, transl. 85 (the passage from Empedocles = MS Aya Sofiya, fol. 130r), was also the main source of al-Shahrastānī's account of the ancient philosophers and also of that of Empedocles (*al-Milal*, 230 ff.). In addition, however, al-Shahrastānī reproduces another text by "Empedocles" (262 l. 1-263 l. 18) from some other source. Al-Shahrazūrī, in his *Rawḍat* al-Afrāḥ, though mainly basing himself on al-Shahrastānī and Ibn al-Ḳifṭī, also has some additional passages (extracts in Asín Palacios).

According to Ṣāʿid al-Andalusī Ibn Masarra was acquainted with books by Empedocles; for a discussion of his alleged indebtedness to Ps.-Empedoclean doctrines, see IBN MASARRA.

In the biographical literature Empedocles is counted as the first of the five great philosophers Empedocles, Pythagoras, Socrates, Plato, Aristotle) and is deemed to have been a contemporary of David and to have derived his philosophy from Luḳmān; see al-ʿĀmirī, *al-Abad ʿala 'l-Amad*, quoted in the *Ṣiwān al-Ḥikma*, introduction; Ṣāʿid al-Andalusī, *Ṭabaḳāt al-Umam*, 21 (who follows al-ʿĀmirī or a common source); Ibn al-Ḳifṭī, 15-6 and Ibn Abī Uṣaybiʿa, i, 36-7 (both of whom follow Ṣāʿid); al-Shahrastānī, loc. cit. (who uses the *Ṣiwān*).

Bibliography: M. Steinschneider, *Die arabischen Übersetzungen aus dem Griechischen*, Philosophie, § 4; idem, *Die hebräischen Übersetzungen*, index; P. Kraus, *Jābir ibn Ḥayyān*, ii, index; M. Asín Palacios, *Ibn Masarra y su escuela*, chs. iv-v (= *Obras escogidas*, i, 53 ff.); a monograph on the Ps.-Empedoclean writings is being prepared by S. M. Stern. (S. M. STERN)

ʿANBAR (A.), ambergris (*ambre gris, ambra grisea*, to distinguish it from *ambre jaune* = *amber*), a substance of sweet musk-like smell, easily fusible and burning with a bright flame; highly valued in the East as a perfume and as a medicine. It is found floating on the water in tropical seas, (spec. gravity 0.78-0.93), or on the shore, sometimes in large lumps. Ambergris probably is a morbid secretion of the gall-bladder of the sperm-whale in whose intestines it is found. Ḳazwīnī mentions it amongst the oily minerals, together with mercury, sulphur, asphalt, mineral tar and naphtha, and states, in addition to various marvellous theories of its origin, that it is secreted by an animal and found in the body of salt-water fish. There is, he says, no difference of opinion as to its originating in the sea; the 'sea of Zandj' especially (i.e. the part of the Indian Ocean stretching along the east coast of Africa) washes it ashore at certain times in big lumps, mostly of the size of a head, the largest lumps weighing 1000 *mithḳāl* (4-5 kg).—He states further, that it strengthens the brain, the senses and the heart in a wonderful way; it increases the mental substance, and is of the greatest use to old men owing to its subtle warming effect.—The fullest account of the medicinal effects of ambergris are found in Ibn al-Bayṭār, the most detailed account of its origin, of the various commercial varieties and their provenance in the Encyclopaedia of al-Nuwayrī who follows Aḥmad b. Abī Yaʿḳūb (*i.e.* al-Yaʿḳūbī) and al-Ḥusayn b. Yazīd al-Sīrāfī (*i.e.* Abū Zayd al-Ḥasan al-Sīrāfī, the continuator of the *Akhbār al-Ṣīn wa 'l-Hind*; both sources are known to him through the *Djayb* (or *Ṭīb*) *al-ʿArūs wa-Rayḥān al-Nufūs by* the physician Muḥammad b. Aḥmad al-Tamīmī (*GAL*, I, 237). There is an interesting reference to varieties called 'fish-ambergris' and 'beak-ambergris': the former also called 'swallowed ambergris' (*al-mablūʿ*) is said to be got from the belly of a large fish called *bāl* or *ʿanbar* which swallows the ambergris floating on the sea and dies in consequence; the body is cast ashore and, bursting open, gives forth the ambergris which it contains. The 'beak-ambergris' (*al-manāḳirī*) contains the claws and beak of a bird which alights on the lumps and being unable to get away perishes on them. This fable is obviously founded on the fact (pointed out by Dr. Swediaur) that ambergris frequently contains the hard mandibles (beaks) of a cuttle-fish which serves as food to the spermwhale. Al-Dimashḳī specifies various kinds with regard to their commercial value.

ʿANBAR, BANU 'L- [see TAMĪM].

AL-ANBĀR, town on the left bank of the Euphrates, 43° 43' E, 33° 22.5' N. Arab geographers give the distance from Baghdād to al-Anbār on the mail route as twelve (Yāḳūt: ten) *farsakhs* (cf. Streck, *Babylonien*, i, 8); as measured by Musil (p. 248) it is 62 km. = 38 m.

Al-Anbār lies on the north-western projection of the Sawād on a cultivable plain near the desert, near the first navigable canal from the Euphrates to the Tigris (the Nahr ʿĪsā), and controlled an important crossing on the Euphrates (cf. Musil, 267-9, 307; Le Strange, in *JRAS*, 1895, 66). The town is pre-Sāsānid. Maricq identifies it with MŠYK or Maskin, but Arab authors (al-Balādhurī, 249-50; Ibn Khurradādhbih, 7; Ḳudāma, 235) distinguish between the two. The suggestion that al-Anbār is of Babylonian origin (Hilprecht, *Explorations in Bible lands*, Philadelphia 1903, 298) needs confirmation by excavations, though the head of an ancient canal and the remains of an ancient settlement (Tell Aswad, ca. 3000 B.C.) can be seen north of the plain.

Al-Anbār's strategic importance as the head of the irrigation system of the Sawād and the western gate (from the side of the Roman Empire) to the capital led Shāpūr I (241-72 A.D.) to rebuild it and turn it into a garrison town with a double line of fortifications and a citadel. He named it Pērōz Shāpūr ("victorious Shāpūr") to commemorate his victory over Gordian IV in 243 A.D. (Herzfeld, *Samarra*, 12; Maricq, 47; cf. al-Maḳdisī, *al-Badʾ*, 94; Ḥamza, 49; al-Dīnawarī, 51). Other authors erroneously referred the name to Shāpūr II (al-Ṭabarī, i, 839; Yāḳūt, i, 367, ii, 919; Ḥamd Allāh Mustawfī, 37). The official name appears as Pirisabora in Ammianus Marcellinus, as Βηρσαβῶρα in Zosimus; it is also used in Syriac and by the Jews. The Arabs retained the name Fīrūz Shāpūr for the surrounding district (*ṭassūdj*) belonging to the province (*astān*) of al-ʿAlī (Le Strange, *Lands*, 56-66; Streck, i, 16, 19). The name Anbār (storehouse" or "granary" in Persian) came into use by the 6th century A.D. and is due to the storehouses of the citadel (Maricq, 115-6; cf. al-Balādhurī, 296; Yāḳūt, i, 368, 749).

The town was an extensive and populous one, the second in ʿIrāḳ (Ammianus, xxiv, 2). It was the seat of a Jacobean and a Nestorian bishop (cf. I. Guidi, in *ZDMG*, xliii, 413), and was an important Jewish centre (Musil, 356; Maricq, 114; Newman, *Jews in Babylonia*, 14). Its garrison was Persian, while its population contained an Arab element (al-Ṭabarī, i, 749, 2095). The tower played a considerable part in the Emperor Julian's campaign against Persia

Al-Anbār was taken as early as 12/634 by Khālid,

who expelled the Persian garrison and concluded a treaty with the inhabitants (al-Balādhurī, 245; al-Ṭabarī, i, 2059; Musil, 295, 308-9). The third mosque in ʿIrāḳ was built in al-Anbār by Saʿd b. Abī Waḳḳāṣ (al-Balādhurī, 289-90). When asked by ʿUmar to found a garrison town (*dār hidjra*) in ʿIrāḳ, Saʿd first thought of al-Anbār, but changed his mind because of the fever and the flees infesting the town (al-Dīnawarī, 131; al-Ṭabarī, i, 2360). Al-Ḥadjdjādj cleared the canal of al-Anbār (al-Balādhurī, 274-5, 333).

In 134/752 Abu 'l-ʿAbbās moved his seat to al-Anbār and built a city at half a *farsakh* (ca. 2.5 km.) above the town for his Khurāsānī troops, with a great palace in the centre (al-Baladhurī 287; al-Dīnawarī, 273; al-Ṭabarī, iii, 80); he died and was buried there (al-Yaʿḳūbi, i, 434; al-Balādhurī, 283; cf. al-Maḳdisī, *al-Badʾ*, iv, 97). Al-Manṣūr resided in the town before the foundation of Baghdād (145/762). Al-Rashīd stayed twice (180/799 and 187/803) at al-Anbār, the population of which partly consisted of descendants of the Khurāsānīs (al-Dīnawarī 38; al-Yaʿḳūbī, i, 510; al-Ṭabarī, iii, 678). Judging by its *kharādj*, al-Anbār was still prosperous in the early decades of the 3rd/9th century (Ibn Khurradādhbih, 8, 42; Ḳudāma, 237). As the caliphate weakened, al-Anbār was exposed to the raids of the bedouins, who attacked the town in 269 and the district in 286 (al-Ṭabarī, iii, 2048, 2189). Its capture and devastation by Abū Ṭāhir the Ḳarmatian in 315/927 accelerated the process of decay (al-Masʿūdī, *Tanbih*, 382). In 319/929 the bedouins caused much damage (ʿArīb, 158). Al-Istakhrī (73) describes the town as a modest but populous town, in which the remnants of Abu 'l-ʿAbbās' buildings could still be seen. Ibn Ḥawḳal (227) states that al-Anbār was declining and al-Maḳdisī (123) says that the number of the inhabitants was small. The population was mainly engaged in agriculture, but as the the town was lying on both the land and river route to Syria (cf. Yaʿḳūbī, transl. Wiet, 250; Ibn Ḥawḳal, 166; Le Strange, in *JRAS*, 1895, 14, 71; Ibn Khurradādhbih, 154), it had some commercial importance, and there were boat-builders in the town. An anecdote in Ibn al-Sāʿī (597/1200, p. 19-20) shows that the town was divided into quarters with a *shaykh* responsible for each. In 1262 the Mongol commander Kerboka plundered al-Anbār and slew many of the inhabitants (al-Maḳrīzī, *Sulūk* (Quatremère), i/5, 171-3). Under the Mongols al-Anbār remained an administrative centre. Djuwaynī dug a canal from near al-Anbār to Nadjaf. Reference is still made to al-Anbār during the first half of the 8th/14th century (al-ʿAzzāwī, *ʿIrāḳ*, i, 204, 337, 548) as the centre of a district; it was surrounded by a wall of sun-dried bricks (part of which is visible at the north end of the ruins).

The ruins of al-Anbār are situated five km. north-west of al-Fallūdja (cf. Musil, 296; Herzfeld, *Samarra*, 13); they extend from NW to SE and have a circumference of irregular shape of about six km. The ruins have kept the name Anbār (cf. Musil, 174; Obermeyer, 219; Ward, in *Hebraica*, ii, Chicago 1885, 83 ff.). The remains of a square fortified building, built of Parthian sun-dried bricks, are to be seen in the NE corner. The mosque lies ca. one km. SW from the former and belongs to early Islamic architecture: it is rectangular, with one line of columns on three sides and five lines on the side facing the *ḳibla*.

The Nahr al-Ḳarma or al-Saḳlāwiyya, which leaves the Euphrates to the west of these ruins, cannot (at any rate in the earlier part of its course) be identical with the Nahr ʿĪsā (see Herzfeld, 13; Le Strange, *JRAS*, 1895, 70), as the latter was excavated under the ʿAbbāsids and branched off one *farsakh* below al-Anbār. It is more probable that Nahr al-Saḳlāwiyya is identical with the pre-Islamic Nahr al-Rufayl, and flows partly in the bed of a ancient canal (cf. Musil, 268; Maricq, 116; Suhrāb, 123; map of the Iraqi Directorate of Survey, 1934, 1: 50,000). It seems that this canal lost its importance in Islamic times.

(C. BROCKELMANN*)

AL-**ANBĀRĪ, ABU 'L-BARAKĀT** ʿABD AL-RAḤMĀN B. MUḤ. B. ʿUBAYD ALLĀH B. ABĪ SAʿĪD KAMĀL AL-DĪN (properly IBN AL-ANBĀRĪ), Arabic philologian, b. Rabīʿ II 513/July 1119, studied philology at the Niẓāmiyya in Badjdād under al-Djawālīḳī and Ibn al-Shadjarī and himself became a professor for this subject in the same *madrasa*; subsequently, however, he retired from public life in order to devote himself entirely to his studies and pious exercises. He died on 9 Shaʿbān 577/19 Dec. 1181. He wrote a biographical history of philology, from the beginning to his own time, under the title of *Nuzhat al-Alibbāʾ fi Ṭabaḳāt al-Udabāʾ*, lith. Cairo 1294. His easy manual of grammar, *Asrār al-ʿArabiyya*, has been edited by C. F. Seybold, Leiden 1886, his great collection of differences between the schools of Baṣra and Kūfa, *al-Inṣāf fi Masāʾil al-Khilāf bayn al-Naḥwiyyin al-Baṣriyyin wa 'l-Kufiyyin* by G. Weil, Leiden 1913. Other treatises by him are extant in MS. A dictionary by him, *al-Zahūr*, is quoted by ʿAbd al-Ḳādir al-Baghdādī, *Khizānat al-Adab*, ii, 352; *al-Waḳf wa 'l-Ibtidāʾ* by al-Suyūṭī, *Sharḥ Shawāhid al-Mughnī*, 158.

Bibliography: Ibn al-Ḳifṭī, *Inbāh al-Ruwāt*, ii, 169-71; Ibn Khallikān, 469; Kutubī, *Fawāt*, i, 262; Subkī, *Ṭabaḳāt*, iv, 248; Brockelmann, I, 334, S I 494. (C. BROCKELMANN*)

AL-ANBĀRĪ, ABŪ MUḤAMMAD AL-ḲĀSIM B. MUḤ. B. BASHSHĀR, traditionist and philologian, d. 304/916 or 305/917. He wrote a commentary on the *Mufaḍḍaliyyāt* which was revised by his son, Muḥammad: *The Mufaḍḍaliyāt ... according to the recension and with the commentary of Abū M. al-Q. b. M. al-Anbārī*, ed. Ch. J. Lyall, Oxford 1918-21.

Bibliography: *Fihrist*, 75; Zubaydī, *Ṭabaḳāt*, 144; al-Khaṭīb al-Baghdādī, *Ta'rīkh Baghdād*, xii, 440-1; Yāḳūt, *Irshād*, vi, 196-8; Ibn al-Ḳifṭī, *Inbāh al-Ruwāt*, iii, 28; A. Haffner, in *WZKM*, xiii, 344 ff.; F. Kern, in *MSOS*, xi/2, 262 ff.; Brockelmann, S I, 37. (ED.)

AL-ANBĪḲ, in medieval Latin Alembic, is the name for that part of the distilling apparatus which is also called "head" or "cap". The word was borrowed from Greek ἄμβιξ. *Al-anbīḳ* occurs as early as the 10th century in a translation of Dioscorides, in the *Mafātīḥ al-ʿUlūm* and in al-Rāzī. The *anbīḳ* is often referred to as "one of the apparatuses used in distilling rose-water".

The complete distilling apparatus consists of three parts: the "cucurbit" (*ḳarʿa*), the "head" or "cap" (*anbīḳ*) and the "receiver" (*ḳābila*). Modern retorts have the "cap" and the "cucurbit" made into one.—Illustrations of distilling apparatuses in Arabian manuscripts are to be found in al-Dimishḳī's *Cosmography* (Mehren) 194 ff. Whereas usually however the cucurbit is surmounted by the cap, here it is placed in front of it. In the former case the cap has the shape of a cupping-glass, as it is represented in the *Mafātīḥ* (ed. van Vloten, 257). The *anbīḳ* is described by Ibn al-ʿAwwām (transl. Clément Mullet, ii, 344) where he explains how rose-water is distilled. But in this description the name does not always refer to the entire "cap", but often to the additional faucet-pipe only, which fits onto it (that is, if the text is not corrupt). The *anbīḳ* is also called the *ra's* (head) of the cucurbit.

The *anbīḳ* is mentioned in the various lists of chemical apparatuses, amongst others in the *Mafātīḥ al-ʿUlūm*, in the *Kitāb al-Asrār* of al-Rāzī, where different kinds are enumerated and described, and in a text written in Karshūnī, which has been published by Berthelot and shows close similarity to al-Rāzī's account.

Special kinds of *anbīḳ* are the blind *anbīḳ*, which has no additional faucet and is consequently closed, the *anbīḳ* with a beak, and others of various shapes. In Ibn al-ʿAwwām the appendix is also called *dhanāb* (as Cl. Mullet prefers to read it) or *dhabāb* as the text has it and as Dozy would like to retain, because he combines the additional faucet with a worm-pipe used in condensing (but no illustrations of the latter can be found).

As the Arabian alchemists mainly depend on the Greek alchemists, the illustrations which are found in the works of the ancients can be turned to account. Some also occur in the Latin translations of works which are attributed to Geber.

AL-ANDALUS, or DJAZĪRAT AL-ANDALUS, geographical term which, in the Islamic world up to the end of the Middle Ages, denoted the Iberian peninsula, that is, modern Spain and Portugal.

(i) Toponymic significance of the term al-Andalus; (ii) Geographical survey; (iii) Outline of its historical geography; (iv) Population of al-Andalus; (v) Development; (vi) Survey of the history of al-Andalus; Appendix: The *Andalus* in North Africa; (vii) Islam in al-Andalus; (viii) Andalusian literature and culture; (ix) Andalusian art; (x) Spanish Arabic.

(i) TOPONYMIC SIGNIFICANCE OF THE TERM AL-ANDALUS

The name al-Andalus is hypothetically connected with that of the Vandals (al-Andalīsh), who named Baetica "Vandalicia" when they crossed the Iberian Peninsula before their invasion of North Africa; al-Andalus is mentioned as early as 98/716 on a bilingual *dīnār*, the Latin inscription giving as its equivalent the term "Spania". The latter term, or its doublet "Hispania", were the only ones by the earliest Spanish Latin chroniclers to denote the Iberian Peninsula as a whole, that is, the two Spains, Christian and Muslim. On the other hand, the use of the term al-Andalus by Arab writers appears always to have been confined to Muslim Spain, whatever its territorial extent, which was progressively reduced in size by the Christian Reconquest (the Spanish equivalent "Reconquista" will always be used in this article). Even when Islamic power in the Peninsula was restricted to the tiny Naṣrid principality of Granada, the term al-Andalus was used to denote the territory of this small Kingdom alone. On the other hand, there had been in existence for some time in the Muslim chroniclers the names (in Arabic form) of Ishbāniya (Hispania, España) and the Christian principalities formed as a result of the Reconquista: Liyūn (Leon), Ḳashtālla or Ḳashtīla (Castilla, Castile), Burtuḳāl (Portugal), Arāghūn (Aragon), Nabārra (Navarre).

From the name al-Andalus—the form al-Andulus is sometimes found, especially in Ibn Ḳuzmān—derive the ethnic form *andalusī* and the collective form *ahl al-Andalus*. This term is retained in modern usage to denote the geographical area formed by the Sub-Mediterranean region (littoral zones and highlands) corresponding, from East to West, from the modern province of Almeria to that of Huelva, to the natural region of Andalusia (Span. Andalucía), the inhabitants of which are called Anduluces (sing. Andaluz).

(ii) GEOGRAPHICAL SURVEY

1. Physical situation. S-W of Europe, the Iberian Peninsula forms a massive promontory almost pentagonal in shape, joined to the continent by the range of the Pyrenees, and washed on the remaining sides by the Atlantic and the Mediterranean. It is situated between 43° 27′ 25″ and 35° 59′ 30″ N, and 9° 30′ and 3° 19′ E. Its surface area is about 229,000 sq. m., modern Portugal constituting less than a fifth of this total (modern Spain has an area of 195,000 sq. m.).

The situation of the peninsula at the western end of the Mediterranean basin, with a large Atlantic seaboard, explains many episodes in its history.

Cut off by the barrier of the Pyrenees from the rest of the continent of Europe, it is only separated from Africa by the narrow Straits of Gibraltar, bounded to the N. and S. by the bridgeheads of Tarifa and Ceuta. It has as a result acquired an insular character, which has for long isolated the Iberian bloc from trans-Pyrenean influences, while leaving it open from earliest times to Oriental influences via the classical Mediterranean approach route.

The Spanish Peninsula has one of the most broken terrains in Europa. A general examination of its structure reveals that it consists basically of a large central plateau which constitutes at least half of the total area, the Meseta, with a mean altitude of 1,965 ft., comprising the two Castiles, Old (Castilla la Vieja) and New (Castilla la Nueva), and the Estramadura. The Meseta is bounded by high mountain escarpments; to the North, the Cantabrian range; to the North-East and East, the range of the Iberian Mts., to the South, the successive tiers of the Sierra Morena (Subbaetic range); to the West, the high table-lands of Galicia and Portugal. The plateau possesses three deep lateral depressions; those of the Ebro, the Gualdaquivir and the lower Tagus. To the South, the upheaval of the "Penibaetic system" has thrown up a mountain mass which comprises the greater part of Upper Andalusia and forms a confused series of ranges (Span. *sierra*, "saw"; Ar. *al-shārrāt*), of which the highest is the Sierra Nevada (highest point; the Mulhacén, 11,420 ft.).

As a result of this tortuous orographic formation, the mean ground elevation of the Peninsula is not less than 2,160 ft. The additional fact that the proportion of lowlands, of an altitude of less than 1,645 ft., is only 40%, shows the difficulties which have always been encountered, over the greater part of the country, in exploiting a soil which, because of the inadequate rainfall and the meagre supply from the rivers, is generally arid.

2. Climate.—The Peninsula has a dry, generally temperate, climate, despite extreme variations of temperature in the high and mean altitude regions, which escape the moderating influence of the Atlantic or the Mediterranean. Here the winters are severe and the summers torrid. The sub-littoral zones are an exception, especially the largely exposed depression of maritime Andalusia.

As regards rainfall, a distinction must be drawn between dry Spain and wet Spain. The latter comprises, starting from the western prong of the Pyrenees, the Basque country, the Cantabrian coast and nearly all modern Portugal. Dry Spain, which covers nearly 2/3 of the Peninsula, has an essentially erratic rainfall, varying from the annual average of 23 ins. to less than 15 ins. In many cases, the beneficial effects of the rain are nullified by evaporation, wherever it is not possible, as in the Levant (the region of Valencia and Murcia), to remedy this state of affairs by the irrigation of parched lands.

The North and North-West of the Peninsula, and in general all the Atlantic seaboard, enjoy, as a result of the humidity and prevalence of clouds which are features of the region, comparatively mild weather. Similarly, in the Mediterranean zone, from Catalonia and Levante to the Andalusian coast, the winters are mild, with a characteristically high sunshine record and clear, bright atmospheric conditions.

3. Hydrography. The physical formation and climate of the country, and the frequently impermeable nature of the soil, explain the Peninsula's water shortage and the irregularity of the supply from its rivers, which are nearly always dry during the dog-days, when evaporation is at its highest. These rivers have the same characteristics as North African *wādīs*; they are either almost completely dry, or else sudden spates transform them into torrents, with the disastrous concomitant effects of erosion and removal by alluvion.

The rivers which flow towards the north and west are in general coastal rivers of no great length, the chief one being the Miño (Portuguese Minho), which forms the northern frontier of Portugal and discharges its waters into the Atlantic. Three other rivers, which have an extremely irregular supply of water and which drain the waters of the Meseta, also flow towards the Atlantic; the Duero (Port. Douro), the Tagus (Span. Tajo, Port. Tejo), and the Guadiana, whose estuary forms the southern frontier between Spain and Portugal. The most important river of the Peninsula is the Guadalquivir which, rising in one of the mountain groups in the South-East of the Meseta, is swelled by several tributaries, the most important being the Genil, which issues from the Sierra Nevada and is fed in summer by the melting snows from that massif. The Guadalquivir is the only river in the Peninsula whose lower course is navigable (over the last 75 miles). Several *wādīs* of a torrential nature reach the Levantine coast; they issue from the edge of the Meseta and provide, by means of dams, rather uncertain reserves of water for irrigation. The chief of these are the Segura and the Jucar, to-day used for the improvement of the *huerta* of Valencia.

The Ebro, which rises in the Basque country, is fed by the southern slopes of the Pyrenees (Aragón, Segra) and, after a difficult course, during which the gentleness of the gradients gradually reduces the volume of its waters in its lower reaches, turns towards the Mediterranean, into which it discharges after crossing an alluvial delta of considerable size.

4. General characteristics. The subsoil of the Peninsula is especially rich in metalliferous strata: lead, silver, iron, copper, manganese, marble. It is also rich in the natural salts, saltpetre, magnesium and silicates. The vegetation varies completely between dry Spain and wet Spain. In the former, three types of vegetation, more often associated with the Mediterranean zone, predominate: the forests (non-deciduous trees, various kinds of pines and holm oaks or cork-trees), the foothills (Span. *monte bajo*), and the steppe (scrub, esparto). In wet Spain, on the other hand, the countryside is green all the year round, owing to the presence of forests and natural prairies.

As a result of this natural variety Spain is a country of the greatest possible contrast. It is a commonplace to state that it is frequently possible to pass almost without transition from a river valley (*vega*), with its luxuriant vegetation, to the steppe burnt by the sun and the wind.

Bibliography: Geography manuals; in particular, M. Sorre, *La Péninsule ibérique*, vol. vii of the *Géographie universelle* by Vidal de Lablache and Gallois.

(iii) Outline of the historical geography of al-Andalus

1. Descriptions of al-Andalus. The works of the Arab geographers, both eastern and western, which have come down to us constitute the essential part of our knowledge of al-Andalus in the Middle Ages, its development and the exploitation of its

natural resources. First, there are the Road Books (*masālik*) published by De Goeje in *BGA*, which only devote a limited amount of space to Spain: the oldest, those of Ibn Khurradādhbih, al-Yaʿḳūbī, Ibn al-Faḳīh and Ibn Rusta, contain such brief descriptions that one assumes that up to the 4th/10th century al-Andalus was a province of Islam little known to the eastern world. From the time of the restoration of the Marwānid Caliphate at Cordova, the geographical documentation on al-Andalus becomes systematised, although still not elaborated in great detail. The expositions on al-Andalus by al-Iṣṭakhrī (d. 322/934) concern agriculture and commerce, and describe fourteen itineraries in the interior of the Peninsula. His contemporary Ibn Ḥawḳal had the advantage of having himself visited Spain and of having brought his documentation up to date by the interrogation of informants en route; the picture of al-Andalus revealed by the pen of this pro-Fāṭimid writer, is too often partial, but it is nevertheless the first rational description, at once full and coherent, of the Cordovan Kingdom, which has come down to us. Equally worthy of attention is the account of the Palestinian al-Muḳaddasī (end of 10th century) who, although he had not himself visited the Peninsula, makes important statements, apparently based on good authority, concerning in particular the intellectual life, the language, the metrology and the trade of the country.

From the time of the Caliphate, and in the centuries following, all the descriptions of al-Andalus, written primarily in the West, were indebted to the description which the celebrated Cordovan chronicler of oriental origin Aḥmad al-Rāzī (d. 344/955) placed at the head of his great history of al-Andalus, now lost, and which was used as a source for quotation, usually without acknowledgement, particularly by the compiler Yāḳūt in his *Muʿdjam al-Buldān*. The "Description" of al-Rāzī is only known to us in a Castilian version, published in 1852 by P. de Gayangos and derived from a Portuguese version executed about the beginning of the 14th century at the order of King Denis of Portugal (1279-1325); the author of the present article has translated it into French and attempted to reconstruct the original Arabic (in *And.*, 1953, 51-108).

It is thus clear that the plan of the "Description" of Aḥmad al-Rāzī, though on the whole only sketched in outline, has served as a framework for most later descriptions; among the latter pride of place must be given to the description of the Andalusian Abū ʿUbayd al-Bakrī (d. 487/1094), which unfortunately is lost, but which can be largely reconstructed from the notices on al-Andalus in the *al-Rawḍ al-Miʿṭār* of the Maghribī compiler of the 7th/14th century Ibn ʿAbd al-Munʿim al-Ḥimyarī, who has also made use of material from al-Sharīf al-Idrīsī. To this list must be added, in addition to the collections of *ʿadjāʾib* relative to al-Andalus contained in the works of al-Ḳazwīnī and al-Dimashḳī, the notices, sometimes of considerable length, collected by the Maghrībī al-Maḳḳarī (17th century) in the first volume of his *Nafḥ al-Ṭīb*.

Bibliography: General survey in Lévi-Provençal, *Hist. Esp. mus.*, iii, 233-9. The descriptions of Spain appearing in the *BGA*, are: Ibn Khurradādhbih and Ibn Rusta (French trans. by G. Wiet, Cairo 1937, 217-221), al-Iṣṭakhrī, *BGA*, v, 37-46; Ibn Ḥawḳal, *BGA*, ii, 74-9, to be studied in the new edition of J. H. Kramers, Leiden 1938, i, 108-17; al-Muḳaddasī, *BGA*, iii, 215-48 (French trans. by Ch. Pellat, Algiers, 1950). On the geographical literature of al-Andalus, the most complete work, despite many imperfections, is that of J. Alemany Bolufer, *Le Geografia de la Peninsula ibérica en los escritores árabes*, Granada 1921 (extract from the *Rev. del Centro de Est. hist. de Granada y su reino*). Cf. also al-Idrīsī, *Nuzhat al-Mushtāḳ* (Dozy and de Goeje, *Description de l'Afrique et de l'Éspagne*, Leiden 1866, text 165-214, Fr. trans. 197-266); E. Lévi-Provençal, *La Péninsule ibérique au moyen âge d'après le Kitab al-Rawḍ al-miʿṭār*, Leiden 1938.

2. Physical geography of al-Andalus according to Muslim geographical tradition.—According to al-Rāzī, al-Andalus forms the extremity of the fourth clime towards the West. It is a country mainly watered by numerous rivers and sweet water springs. The geographers, after this declaration, usually launch into panegyrics and devote much space to *laudes Hispaniae* rather in the manner of Isidore of Seville.

Al-Andalus is triangular in shape. Each of the angles of this triangle corresponds to a place famous in the traditions of Hispanic legend. On the angle at the apex, in the South-West, rises the temple of Cadiz, *Ṣanam Ḳādis* [*q.v.*]; the second angle is situated on the latitude of the Balearic Islands between Narbonne and Bordeaux (*sic*); the third, in the North-West, corresponds to the Torre de Hercules, near Corunna. These ideas are also partly illustrated by the maps of the Road Books, Ibn Ḥawḳal and al-Idrīsī. Al-Rāzī has clearly grasped one of the characteristics of the physical structure of the Peninsula: in his opinion, a distinction must be made between western Spain and eastern Spain, taking into account the differences in the direction of the winds, the rainfall and the course of the rivers. In western Spain, the rivers flow towards the Atlantic and rain in brought by the westerly winds. The opposite is true of eastern Spain, where easterly winds prevail and the rivers flow eastwards.

Other landmarks are often given to mark some of the points of the "triangle" formed by al-Andalus: Cape St. Vincent, at the south-western extremity of Portugal, in Arabic the "Church of the Crow" (Kanīsat al-Ghurāb); the Temple of Venus, at the opposite extremity, Haykal al-Zahra (Port-Vendres).

On approaching al-Andalus from continental Europe, Gaul (*Ghālish*) or the "Great Land" (*al-Arḍ al-Kabīra*), one must cross the range of the Pyrenees by one or other of the passes (*abwāb*) or "gates" (*burtāt*) in order to reach the land of the Gascons (al-Bashkūnish) or that of the Franks (al-Ifrandj). From there, it is possible to reach the shores of the Atlantic, called the "Sea of Darkness" (*Baḥr al-Ẓulumāt*) or the "green sea" (*al-Baḥr al-Akhḍar*) or the "Surrounding Sea" (*al-Baḥr al-Muḥīṭ*). In this dangerous ocean a number of intrepid mariners carried on coastal trade from the land of the Blacks and the Canary Islands, the "Fortunate Islands" (*al-Khālidāt*), as far as the confines of Great Britain (Briṭāniya). The Mediterranean is known as the "Great Sea" (*al-Baḥr al-Kabīr*), the "Middle Sea" (*al-Baḥr al-Mutawassiṭ*) or even the "Tyrrhenian Sea" (*Baḥr Tīrān*).

In the opinion of al-Rāzī, there are only three mountain ranges in Spain, which traverse the Peninsula from one sea to the other, and none of which is crossed by a river. The first of these ranges is the Sierra Morena, called Mountains of Cordova (Djibāl Ḳurṭuba), which rises from the Mediterranean coast of Levante and terminates in Algarve, on the Atlantic. The second is the Pyrenean range,

between Narbonne and Galicia. The third cuts Spain obliquely, from Tortosa to Lisbon. It corresponds to the transverse range called al-Shārrāt, according to al-Idrīsī. However, the geographer is obliged to mention in addition the Sierra Nevada (Djabal Shulayr, "Mons Solarius") and the Serrania of Malaga (Djabal Rayyo) which extends as far as Algeciras.

The chief river of al-Andalus is the "Great River" (*al-Wādi 'l-Kabīr*), Guadalquivir, also known as al-Nahr al-Aʿẓam and Nahr Ḳurṭuba "River of Cordova". It is sometimes referred to by its ancient name of Nahr Bīṭī ("Baetis"). It is 310 miles in length. It is the river of Baetica, the richest part of the Peninsula, and waters Cordova and Seville. Its chief tributaries are the Genil (Wādī Sindjīl or Shanīl), which flows through Granada, Loja and Ecija; the Guadajoz (Wādī Shūsh); the Guadalimar (al-Wādi 'l-Aḥmar), thus named because of the reddish colour of its waters; and the Guadalbullón (Wādī Bullūn).

The Guadiana (Wādī Ānā) has a total length of 320 miles and rises not far from the source of the Guadalquivir. It runs underground for part of its course, and re-emerges in the Calatrava region. It discharges into the Atlantic at Ocsonoba.

The Tagus (Wādī Tādjū) rises in the mountains of Toledo and, after a course of 580 miles, flows into the Atlantic at Lisbon. Further north still is the Duero (Wādī Duwayro), 780 miles long, which is fed by several tributaries and flows into the Atlantic at Oporto (Burtuḳāl). Another important river, also flowing into the Atlantic, is the Miño (Portuguese Minho), Nahr Mīnyo, which crosses Galicia from East to West and is 300 miles long.

Of the rivers which flow towards the Mediterranean, al-Rāzī only mentions the Segura (Wādī Shaḳūra) which rises near the sources of the Guadalquivir and the Ebro (Río Ebro = Wādī Ibro); the latter rises at Fontibre, in Upper Castile and eventually reaches the sea not far from Tortosa, a distance of 204 miles. The Ebro has numerous tributaries, including the Río Gallego (Nahr Djillīḳ), which comes down from the mountains of Cerdagne (Djibāl al-Sīrṭāniyyīn).

3. Urban toponymy and territorial divisions of al-Andalus. Al-Andalus is notable, at all periods of its Muslim history, for the number of its urban centres, and provides a contrast with the relative poverty of North Africa, as regards population centres of equal importance. Nearly all the towns of Roman Spain survived the Arab invasion and continued to prosper. On the other hand, the new towns founded by the conquerors were not numerous and were almost always built for strategic reasons or as coastal bases intended to neutralise the aggressive ambitions of the Fāṭimids in the western Mediterranean, for instance, Murcia (Mursiya) which replaced the old town of Ello, and Almeria (al-Mariyya), which was at first simply a coastal observation post before being developed in the 10th century as an arsenal and naval station. In most cases, the old Latin place-names survived virtually intact, for instance, Corduba/Ḳurṭuba, Hispali/Ishbīliya, Caesaraugusta/Saraḳusṭa, Valentia/Balansiya, or else assumed a diminutive form, as *Toletum*, Toledo becoming Toletula/Ṭulayṭula. Certain place-names of historical interest had their origin in puns, Ocili becoming Madīnat Sālim/Medinaceli, which gave rise to the mythical existence of a pseudo-founder named Sālim. Towns with a descriptive Arabic name were the exception: e.g. the "Green Island", al-Djazīra al-Khaḍrāʾ (Algeciras). Some places bore the name of the Arab or Berber tribe which had populated them after the conquest: Baliy (Poley), Ghāfiḳ north of Cordova, Miknāsa (Mequinenza) in Aragon. In Levante, as evidence of a more profound Arab influence, many place-names were the names of "stages" coupled with an Arab forename: e.g. Manzil ʿAṭāʾ (Mislata) and Manzil Naṣr (Masanasa), in the suburbs of Valencia. Many place-names of the Valencia region were formed like names of tribes, with *Beni* plus the name of the eponymous ancestor (see Lévi-Provençal, *Hist. Esp. mus.*, iii, 326-8).

At the time when Aḥmad al-Rāzī wrote his description of al-Andalus, Muslim Spain was already separated from Christian Spain by a boundary line, a sort of no man's land, flanked along its periphery by three Marches (thughūr): *al-aʿlā, al-awsaṭ, al-adnā*. Already many regions of the Peninsula, long since evacuated under the pressure of the first manifestations of the Reconquista, had been finally severed from al-Andalus; the Hispanic March in the East, the Basque country in the centre, the Cantabrian coast in the West. The famous expedition led against Santiago de Compostela (Shant Yāḳūb) by the ʿĀmirid al-Manṣūr was no more than a spectacular raid without lasting effect. During the period of the Caliphate, therefore, Islam definitively lost part of Spain and did not seek to recover it. The provincial organisation of al-Andalus, however, remained unchanged.

This organisation dated from the 8th century, and was therefore prior to the Marwānid restoration. It was based on the provincial districts (*kūra*), which had a chief town, a governor and a garrison. The lists of *kūras* under the Caliphate differ widely; al-Muḳaddasī gives an incomplete list of only 18 names. Yāḳūt enumerates 41, a figure approached by al-Rāzī, who describes successively 37. Later, al-Idrīsī introduced a division not into *kūras*, but into "climes" (*iḳlīm*), with no administrative significance and putting forward many names which must be firmly rejected as apocryphal. By utilising the information given by al-Rāzī, who follows a concentric order round the capital, and al-Bakrī, the principal features of each of the main *kūras* of the provincial organisation under the Caliphate can easily be determined. The *kūras* usually had the same name as their chief town, apart from a few exceptions noted below: the most important *kūra* was that of Cordova, bounded to the north by that of the Faḥṣ al-Ballūṭ (Llano de los Pedroches, "plateau of the oaks"), whose chief place was Ghāfiḳ (doubtless the modern Belalcazar: cf. F. Hernandez, in *And.*, 1944, 71-109). On the other side of the fluvial plain of Cordova (al-Ḳanbāniya, modern la Campiña), to the south of the Guadalquivir, lay the small *kūras* of Cabra (Ḳabra) and Ecija (Istidjdja). Further west were the rich districts of Carmona (Ḳarmūna), Seville (Ishbīliya) and Niebla (Labla). The *kūra* of Ocsonoba (Ukhshūnuba), with Silves (Shilb) as its chief town, corresponded to Algärve (Gharb al-Andalus, i.e., the southern border of modern Portugal on the Atlantic. North of this district lay that of Beja (Bādja). The southernmost part of al-Andalus was divided into four *kūras*: Meron (Mawrūr), Sidona (Shadhūna), chief town Calsena (Ḳalshāna), Algeciras and Tacaronna (Tākurunnā), chief town Ronda (Runda). Further east, the *kūra* of Malaga (Mālaḳa), which was called Rayyo, had as its first chief town Archidona (Urdjudhūna); it was adjacent to the *kūra* of Elvira (Ilbīra, formerly Iliberris), a

little to the west of modern Granada (Gharnāṭa). The *kūra* of Elvira adjoined those of Jaén (Djayyān) and Pechina (Badjdjāna), the chief town of which was transferred to Almeria under al-Ḥakam II.

The Levante seaboard (Shark al-Andalus) on the Mediterranean was divided from South to North into three large *kūras*: Tudmīr, the old kingdom of prince Theodemir the Goth, with Murcia as its chief town, Játiva (Shāṭiba) and Valencia (Balansiya), which extended as far as the delta of the Ebro. Inland, beyond the Sierra Morena, the region of Toledo constituted a *kūra*, extended eastwads by the *kūra* of Santaver (Shantabariyya), with Uclés (Uklīdj) as its chief town. It is probable that, under the Caliphate, the Balearic Islands (al-Djazā'ir al-Sharkiyya) constituted a separate provincial district. In the western half of al-Andalus, the same applied to regions which had recently been pacified, such as Merida (Mārida), Badajoz (Baṭalyaws), Santarem (Shantarīn), Lisbon (al-Ushbūna) and perhaps Coïmbra (Kulumriyya).

Nine of these *kūras*, called *mudjannada*, still enjoyed under the Caliphate a privileged position, because their territories had been granted as fiefs in 125/742 by the Governor Abu 'l-Khaṭṭār al-Kalbī to the Syrian *djunds* brought to Spain by the general Baldj b. Bishr [*q.v.*]: these were the districts of Elvira, fief of the Damascus *djund*; Rayyo, fief of the al-Urdunn *djund*; Sidona, fief of the Filasṭīn *djund*; Niebla and Seville, fief of the Ḥimṣ *djund*; Jaén, fief of the Kinnasrin *djund*; Beja, Ocsonoba, and also Murcia, fief of the *djund* of Egypt.

A certain number of outlying districts are mentioned by al-Rāzī in the territory of the Upper Marches: Tarragona (Ṭarrākūna), adjacent to Lerida (Lārida); Barbitāniya (Boltaña), with its stronghold of Barbastro (Barbashtro); Huesca (Washka); Tudela (*Tuṭīla*), with the fortified towns of Tarazona (Ṭarasūna); Arnedo (Arnūṭ); Calahorra (Kalahurra); and Najera (Nādjira).

(iv) Population of al-Andalus

The complete absence of reliable statistics, and the silence of the geographers, precludes any computation, even a relative one, of the size of the population of al-Andalus at the period of its greatest geographical expansion, i.e. at the end of the 10th century. If one agrees with the conjectural estimate that the population was about ten millions during the Visigoth period on the eve of the Conquest, it must, in view of the small number of Muslim emigrants of other races, have remained roughly the same, with probably a higher proportion of urban dwellers and villagers than rural elements. On the other hand, more weight can be attached to the hypothesis that the distribution of the population over the various regions of the Peninsula was always dictated by physical environment, and that the density of the population in any particular area depended on the altitude and the nature of the country, the climate, the fertility of the soil and the possibility of irrigating it. It is not going too far to conjecture that those regions of al-Andalus which to-day have the smallest numbers of inhabitants already displayed the same characteristic at the time of the Caliphate of Cordova.

Among the components of the Muslim population of al-Andalus, a distinction must be drawn between the mass of neo-Muslims, i.e. Spaniards who became Muslims after the Conquest as the result of more or less spontaneous conversions, and the elements of other races. Among the latter, who settled in the country in the wake of successive, though numerically small, waves of immigrants, the Berber element seems to have been the most important; the Berbers do not seem to have come from all parts of Barbary, but from the regions of the Maghrib nearest to al-Andalus, the Moroccan Djabal and Rīf. These Berbers, who came from the other side of the Straits of Gibraltar, when political or economic circumstances did not force them to return with all speed to their country of origin, were thrust back towards the uplands by the Arab emigrants who formed the aristocracy so that the latter might enjoy exclusive rights over the most fertile tracts of Andalusian soil. From certain information given by authors such as Ibn Ḥazm, in particular in his *Djamhara*, it might be supposed that the Berber colonies only occupied in a sporadic fashion certain territories of the coastal zone, and that they were obliged to settle in the Meseta. Once they were established, presumably these Berbers of al-Andalus rapidly became arabicised, even to the extent of ceasing to use their original dialects. It was not until the end of the 10th century that the influx of further contingents, justified by the large-scale recruitment of Berber mercenaries in central and eastern Maghrib, introduced into al-Andalus a mass of North Africans, who precipitated the ruin of the structure of the Caliphate and congregated in ethnical groups, which formed the following century the Berber *ṭā'ifa* opposed to the Andalusian *ṭā'ifa*.

The Arab element in al-Andalus was never more than a minority. The majority entered the country either at the time of the Conquest or in the course of the following years, and were later reinforced by contingents of Syrian *djundīs* and by the emigrants who flocked from Asia at the time of the Marwānid restoration in Spain. The Arabs originally probably only numbered a few thousand before inter-marriage with the native women and the system of *walā'* produced an impressive number of people who, rightly or wrongly, claimed an Arab origin. At all events, it is a fact that the Arabs represented an especially turbulent and aggressive element in the early centuries of the history of al-Andalus, and that although they despised work on the land, they nevertheless retained for themselves the best land, and left to crop-sharing colonists the task of farming the land and paying them their due share of the crops.

A third alien element in Andalusian society, which should be alluded to here although it formed only a relatively small proportion of the population, was the Negroes and Slavs. The Negroes (*ʿabīd*) of the Sudan, brought to Spain by traders specialising in the slave trade, eventually not only constituted a steadily increasing guard of mercenaries, but intermixed with the rest of the urban populations as the result of the marriage of Negro women, who were specially prized, and sought after also for their domestic virtues. The Slavs (Ṣakāliba [*q.v.*]), on the other hand, who were the product of captures in continental Europe from Germany to the Slav countries, or were captured in the course of *ṣā'ifas* on the borders of al-Andalus, eventually, during the second period of the Caliphate, constituted, especially at Cordova, a numerous and active group which weighed heavily in the economy of the Cordovan

AL-ANDALUS

state and contributed in no small measure to its rapid collapse.

The Berber, Arab and other Muslim foreign elements, important though they were, were numerically far inferior to the much more important group of the Spanish neo-Muslims, who were known in al-Andalus by the generic terms *musālima* or, more especially, *muwalladūn*. These were Spaniards who, during or after the Conquest, had adopted Islam in order to enjoy a better personal status than that of *dhimmī*. The complete and rapid arabicisation of all these converts to Islam, to which in the vast majority of cases they displayed a deep and sincere attachment, is a remarkable phenomenon. In a short time the *muwallads* became assimilated into Muslim society and enabled the rulers of the country, by the rational use of their services, to make good the lack of emigrants of old Muslim stock. Many *muwallads*, soon fused in the melting-pot of Andalusian society, lost even the memory of their Spanish (Iberian or Gothic) origin, although they often bore Romance names. The co-existence within Islam of elements of population of such diverse origin, led to their gradual fusion, a process which was aided by the adoption of an identical way and rhythm of life and by the bilingualism which, at least in everyday life, placed Spanish Arabic and the Romance tongue (*al-ʿadjamiyya*) on the same footing.

The Muslim population of al-Andalus, which was so composite in origin, but which gradually became relatively homogeneous, was divided in the 10th century into a certain number of social classes, in the same way as the rest of the Islamic world: *khāṣṣa* and *ʿāmma*. The former comprised the great noble families who were often hereditary grantees, while the middle class, composed of merchants and small land owners, soon became a sort of urban bourgeoisie, though without charters or immunities. In contrast, the plebs or *ʿāmma*, in the towns and particularly in the country, constituted an obscure mass subjected to severe vexation by authority. As there is virtually no information on the agrarian law which was in force in al-Andalus, one is compelled to postulate the existence, undoubtedly necessary, of a rural proletariat, composed of day-labourers tied to the soil and leading a particularly wretched existence, mostly unable to escape their servile condition.

The tributaries (*muʿāhidūn*) in Andalusian society formed an important part of the population and comprised both Christians and Jews. The former, usually grouped under the general name of Mozárabes, all belonged to that part of the Spanish population which, at the time of the Conquest, had refused to renounce its faith in order to adopt that of the conquerors. In the large towns at least, notably in Cordova, Seville and Toledo, the Mozarab communities were organised under the protection and control of the Muslim central authority, with a leader responsible to that authority, the *comes* (*ḳūmis*), sometimes also called *defensor* or *protector*. He exercised over his community the powers of a police magistrate, and had the duty and responsibility of collecting the taxes; he was assisted by a special judge, *censor* or *ḳāḍi 'l-ʿadjam*, who settled disputes between the Mozarabs. The territory of al-Andalus, up to the end of the 11th century, remained divided into the same ecclesiastical districts as at the time of the Visigoths, namely, three metropolitan provinces (Toledo, Lusitania and Baetica), each with an archbishopric and several dioceses. The details have been preserved for us by al-Bakrī in what he calls "Constantine's partition". The names have been preserved of some very rare church dignitaries of al-Andalus under the Caliphate. The Mozarab community about which we possess the most information, though not numerically the most important, is that of Cordova.

We have even less information as to the numbers and activities of the Jewish communities in the towns of al-Andalus, each of which had a Jewish quarter (*ḥārat* or *madīnat al-Yahūd*, Span. *Judería*). At the same time, in the 11th century, and especially in the Zīrid Kingdom of Granada, the part played by Jewish excise officials and treasurers, the importance of the Banu 'l-Naghrallā family, the pogrom unleashed in Granada following the murder of the Crown Prince Buluggīn b. Bādīs b. Ḥabūs b. Zīrī, and the importance accorded in the economy of the small state of Granada to the large Jewish community which formed the bulk of the population in the town of Lucena (*al-Yussāna*), give rise to the belief that the Jews of al-Andalus, at all stages of the Reconquista, in the service of Muslims or Christians, played an active part in the country as counsellors and ambassadors, and that they controlled the main commercial channels between al-Andalus and continental Europe on the one hand, and the Muslim East on the other. In this connection, much may be expected from the study of the documents obtained in particular from the Geniza of Cairo.

(v) The development of al-Andalus

It is primarily the geographers who have given us more or less detailed information on the manner in which the soil of al-Andalus was cultivated and its vegetable and mineral resources exploited. We also possess a fairly extensive technical literature, formed by agronomic works of various periods, notably those of al-Ṭighnarī, Ibn Wāfid, Ibn Baṣṣāl, Ibn Luyūn and Ibn al-ʿAwwām. Mention must also be made of the "Cordovan Calendar of the year 961", published in 1873 by Dozy, at the same time as a definitely later version, and attributed to the Cordovan chronicler ʿArīb b. Saʿd [*q.v.*]. Unfortunately, this technical literature gives us practically no information on the methods of cultivation and on contracts of lease, questions on which certain juridical works give us information which is too vague for complete reliance to be placed on it.

1. Agriculture. As to-day in Spain, there was a distinction between dry land (Span. *secano* = Ar. *baʿl*) and irrigated land (Span. *regadío* = Ar. *saḳy*), the former being reserved for the cultivation of cereals. Owing to the poor quality of the soil and unfavourable climatic conditions, the cultivation of cereals was quite inadequate to provide the population with wheat and other bread grains; consequently al-Andalus, at certain periods of famine, had to rely on imports of North African wheat. Some varieties of Andalusian wheat (Toledo) were especi-

ally renowned. Millers used either horse-driven mills (*ṭāḥūna*) or water-mills (*raḥā*).

Vast stretches of country, especially in Andalusia and the Aljarafe region, were covered with olive-trees, and the olive oil industry was always extremely active there. Extraction methods were primitive, but the quantities of oil produced were sometimes in excess of local needs, and the surplus was exported to the rest of the Islamic world.

The cultivation of the vine, like other forms of dry cultivation, seems to have been extensively practised. Raisins were used for cooking, and above all the consumption of wine was virtually tolerated and its sale regulated.

It was, however, in the sphere of crops needing suitable irrigation that the Andalusians soon achieved an unchallenged supremacy, although it is not possible to attribute to them the invention of the system of irrigation which they used, in particular in the East of al-Andalus, and which still exists without substantial modification. The simplest form of irrigation was that practised with the aid of a network of irrigation channels (*sāḳiya*, Span. *acequia*) which criss-crossed the littoral plains of the Murcia and Valencia regions, and in which the flow of water depended entirely on differences of level. Water rights were fixed by custom according to a code, patriarchal in character, which is also still in use to-day. On the higher ground and in the valleys of rivers such as the Guadiana, Tagus and Ebro, irrigation could only be carried on with the aid of pumping machines, named, according to their type and function, *naʿūra* (Span. and Fr. *noria*) or *sāniya* (Span. *aceña*). This irrigation was used for the cultivation of vegetables and trees. The geographers vie with one another in their praises of the fruits of al-Andalus: cherries, apples and pears, almonds and pomegranates, and above all figs, of which numerous varieties were known in Spain. In some unusually sheltered coastal strips it was possible to grow crops of a sub-tropical nature: sugar-cane, bananas. The palm-groves of Elche (*Als͟h* [*q.v.*]) were one of the sights of the country.

Finally, the cultivation of aromatic herbs and plants used for making cloth was also carried on on a considerable scale; saffron, safflower, cumin, coriander, madder and henna, on the one hand, flax and cotton on the other. Silk cultivation flourished, mainly between Granada and the Mediterranean.

The geographers, in their descriptions, have devoted little space to the rearing of saddle- and draught-animals or animals for meat. Horses were bred in the grass-lands of the lower Guadalquivir, and Andalusian mules were already celebrated by the time of Ibn Ḥawḳal. Cattle, sheep and goats were reared everywhere, making use of the meagre pasture available. Apiculture, for the production of honey, was also practised.

The forest region of al-Andalus was exploited for the needs of the towns, notably charcoal. Pines, numerous on the edge of the Meseta, were felled for use as joists or ships' masts. The great steppe-like expanses of the south-east furnished an abundance of dwarf palms and esparto, used in basket-making and domestic purposes.

2. Mineral exploitation. The richness of the subsoil of al-Andalus justified mineral exploitation from earliest times, and the process continued during the Muslim era. Apart from gold, extracted from the gold-bearing sand of certain rivers, veins of silver and iron were mined north of Cordova, and deposits of cinnabar were exploited at Almaden and Ovejo. Copper was produced from pyrite mines of the Huelva region. Alum, sulphate of iron, lead and galena were also extracted. Muslim Spain was also renowned for its marble and precious stones. Like the Romans before them, the Andalusians made use of many thermal springs, nearly all of which still retain their old name of Alhama (Ar. *al-ḥāmma*).

The exploitation of the rock-salt mines and the salt-deposits on the coast at Cadiz, Almeria and Alicante was a flourishing industry. Fishing was carried on, especially with string-nets and tunny-nets (Ar. *al-maḍraba*): sardines and tunny were caught in large quantities.

Bibliography: The preceding is developed at length in Lévi-Provençal, *Hist. Esp. mus.*, iii, 233-98; see also idem, *Esp. mus. Xe siècle*, 157-94. Cf., for the period 11th to 13th century, C. E. Dubler, *Über das Wirtschaftsleben auf der iberischen Halbinsel vom XI. zum XIII. Jahrhundert*, Geneva-Zürich 1943; A. Carbonel T.-F., *La mineria y la metalurgia entre los Musulmanes en España*, Cordova 1929.

(vi) General survey of the history of al-Andalus

It is only possible to give here a brief outline of the development of the history of al-Andalus during the seven centuries of Muslim occupation of the Iberian Peninsula. For greater clarity, this outline will be divided into a number of chronological compartments, which will allow the presentation of a chronologically connected account without the necessity in most cases of going into events in greater detail.

1. The conquest of al-Andalus.
2. The history of al-Andalus up to the Marwānid restoration.
3. The Marwānid Kingdom of Cordova.
4. The Caliphate and the ʿĀmirid dictatorship.
5. The collapse of the Marwānid Caliphate and the partition of the Kingdom of al-Andalus.
6. The Kingdoms of the *ṭāʾifas* up to the battle of al-Zallāḳa.
7. Spain under the Almoravids.
8. Spain under the Almohads and the progress of the Reconquista.
9. The Naṣrid Kingdom of Granada and the conclusion of the Reconquista.

1. The conquest of al-Andalus. Of all the conquests undertaken by the Arabs in the first century of Islam, the conquest of al-Andalus is most remarkable for the speed and despatch with which it was accomplished. The accounts which have reached us of successive stages culminating in the extension of Muslim power over the whole of the Iberian Peninsula are particularly brief and unreliable; legend rapidly obscured historical reality with a veil which is nearly always impenetrable. It is clear that at the opportune moment the Arabs profited by the decayed state of the Visigoth Kingdom of Spain to turn their attention to it, and that they had the effective co-operation of many of the Spaniards themselves, desirous of throwing off a yoke which had become insupportable to them, to aid them in conquering it. The opportunity was tempting, at a moment when Arab power had just established itself firmly in North Morocco, and when the post of Governor of Ifrīḳiya and the Mag͟hrib was in the hands of Mūsā b. Nuṣayr [*q.v.*]. To the latter, and to his lieutenant, the *mawlā*

Tārik b. Ziyād [*q.v.*], belonged the glory of the conquest of al-Andalus.

It seems certain that Mūsā b. Nuṣayr himself took the decision to try to occupy new territories on the other side of the Straits of Gibraltar before referring the matter to the Caliph at Damascus; Mūsā took this step as a result of promises of support which he had received from the exarch of the town of Septem (Ceuta), which had remained a Byzantine possession despite the recent fall of Carthage into Muslim hands. This dignitary, Count Julian, facilitated the first Muslim landing, which was merely a raid led by the Berber officer Ṭarīf on the island of Tarifa (Djazīrat Ṭarīf) in Ramaḍān 91/July 710. The success of Ṭarīf's raid encouraged Ṭārik, the lieutenant of Mūsā b. Nuṣayr, to place on a war footing an assault force of 7,000 men, which, with the aid of Count Julian's flotilla, established itself on Andalusian soil in the neighbourhood of Gibraltar (Djabal Ṭārik) in Radjab or Shaʿbān 92 April-May 711.

The decisive battle between the Muslim assault force and the regular troops of the Visigoth king, Roderic, which occurred a few weeks later, on 28 Ramaḍān 92/19 July 711, at Wādī Lago (Rio Barbate), ended in disaster for the Visigoths, who wavered and fled, while Ṭārik decided to advance further. The cities of the Gothic kingdom fell one after another: Cordova was taken by the freedman Mughīth at the beginning of 93/Oct. 711 and Toledo fell without resistance. Mūsā b. Nuṣayr, anxious not to leave to Ṭārik alone all the prestige of the conquest, entered Spain shortly afterwards, in Ramaḍān 93/June 712, with a force of 18,000 men, mainly Arabs, and captured successively Seville and Merida (Shawwāl 94/June-July 713). Mūsā effected a junction with Ṭārik at Toledo and from there marched to occupy Saragossa. At that moment he received the order of the Caliph al-Walīd to return to Syria with Ṭārik. They both left Spain, which was almost completely conquered, never to return.

2. The history of al-Andalus up to the Marwānid restoration. The departure of Mūsā b. Nuṣayr to the East inaugurates a period during which a number of governors (*wālī*) succeeded one another as rulers of the newly-conquered territory with powers delegated by the central authority at Damascus, or simply as delegates of the nominal governor at al-Kayrawān. It is an extremely obscure period during which the rivalry of the Arab clans re-awoke in Spain, resulting in the greatest political confusion, and only marked by various fruitless attempts to extend Muslim power towards Gaulish territory (capture of Barcelona, Gerona and Narbonne), a raid against the Narbonnaise and Toulouse (100-2/719-721), and, in 725, an expedition to the valley of the Rhône as far as Burgundy. The last expedition of any size, led by the governor ʿAbd al-Raḥmān al-Ghāfikī, who was killed in action, ended in the defeat of the Muslims by the Duke of the Franks Charles Martel, at *Balāṭ al-Shuhadā'*, a battle more commonly known as the Battle of Poitiers (Ramaḍān 114/October 732).

List of the governors of al-Andalus responsible to the Caliphs of Damascus

1. ʿAbd al-ʿAzīz b. Mūsā b. Nuṣayr [*q.v.*], succeeded his father on the latter's death on 94/712-3. Assassinated in Radjab 97/March 716.
2. Ayyūb b. Ḥabīb al-Lakhmī (97/716), for six months.
3. al-Ḥurr b. ʿAbd al-Raḥmān al-Thakafī [*q.v.*] (97-100/716-719).
4. al-Samḥ b. Mālik al-Khawlānī (Ramaḍān 100-Dhu 'l-Ḥidjdja 102/719-721).
5. ʿAnbasa b. Suḥaym al-Kalbī (102-107/721-726).
6. ʿUdhra b. ʿAbd Allāh al-Fihrī (107/726).
7. Yaḥyā b. Salāma al-Kalbī (107-110/726-728).
8. Ḥudhayfa b. al-Aḥwaṣ al-Kaysī (110/728).
9. ʿUthmān b. Abī Nisʿa al-Khathʿamī (110-111/728-729).
10. al-Haytham b. ʿUbayd al-Kilābī (111/729-730).
11. Muḥammad b. ʿAbd Allāh al-Ashdjaʿī (111-112/730).
12. ʿAbd al-Raḥmān b. ʿAbd Allāh al-Ghāfikī ([*q.v.*], 112-114/730-732).
13. ʿAbd al-Malik b. Kaṭan al-Fihri [*q.v.*] (114-116/732-734).
14. ʿUkba b. al-Ḥadjdjādj al-Salūlī (116-123/734-741).
15. ʿAbd al-Malik b. Kaṭan (for the second time) to 123/741.
16. Baldj b. Bishr al-Kushayrī [*q.v.*] (123-124/741-742).
17. Thaʿlaba B. Salama al-ʿĀmilī (124-125/742-743).
18. Abu 'l-Khaṭṭār al-Ḥusām b. Ḍirār al-Kalbī (125-127/743-745).
19. Thawāba b. Salama al-Djudhāmī (127-129/745-746).
20. Yūsuf b. ʿAbd al-Raḥmān al-Fihrī (129/746-138/756, date of the proclamation of ʿAbd al-Raḥmān I.

Bibliography: (For 1 and 2): Sources and bibliography listed in detail in Lévi-Provençal, *Hist. Esp. mus.*, i, p. 8, note 2, *Ibid.*, 1-89, contains a detailed account of the conquest and the period of the governors. Cf. also Dozy, *Recherches*[3], i, 1-83; E. Saavedra, *Estudio sobre la invasion de los Arabes en Espana*, Madrid 1892.

3. The Marwānid Kingdom of Cordova. (138-300/756-912). The circumstances attending the arrival in Spain of the Marwānid pretender ʿAbd al-Raḥmān b. Muʿāwiya, which enabled him to rally to his cause a large number of clients and partisans of his family and eventually defeated the governor Yūsuf b. ʿAbd al-Raḥmān al-Fihrī near Cordova, where he was proclaimed *amīr* of al-Andalus on 10 Dhu'l-Ḥidjdja 138/15 May 756, are narrated in the article on this prince [see ʿAbd al-Raḥman I].

List of amīrs of al-Andalus up to the proclamation of ʿAbd al-Raḥmān III

1. ʿAbd al-Raḥmān I b. Muʿāwiya b. Hishām b. ʿAbd al-Malik b. Marwān, born 113/731, *amīr* of al Andalus 138/756 to 172/788.
2. Hishām I b. ʿAbd al-Raḥmān I, born 139/757, *amīr* 172/788 to his death, 3 Ṣafar 180/17 April 796.
3. al-Ḥakam I b. Hishām I, born 154/770, *amīr* 180/796 to his death, 25 Dhu 'l-Ḥidjdja 206/21 May 822.
4. ʿAbd al-Raḥmān II b. al-Ḥakam I, born 176/792, *amīr* 206/822 to his death, 3 Rabīʿ II 238/22 September 852.
5. Muḥammad I b. ʿAbd al-Raḥmān II, born 207/823, *amīr* 238/852 to his death, 28 Ṣafar 273/4 August 886.
6. al-Mukdhir b. Muḥammad I, born 229/844, amīr 273/886 to his death, 15 Ṣafar 275/29 June 888.
7. ʿAbd Allāh b. Muḥammad I, brother of the latter, born 229/844, *amīr* from 275/888 to his death, 1 Rabīʿ I 300/16 Oct. 912.

Among the noteworthy features of this period of the Marwānid amīrate of al-Andalus, which lasted more than a century and a half, are the introduction

of the Mālikī *madhhab* into Spain during the peaceful reign of Hishām I, and the efforts of the *amirs* throughout almost the entire period to deal with the revolts instigated in the Marches by the Berbers, the Arabs and the *muwallads*, and to wage a holy war on the frontiers of the Kingdom. The attempts made against al-Ḥakam I (in particular the famous "revolt of the Suburb") on several occasions placed him in a dangerous position. Moreover the Reconquista, as a result of the aggressive spirit of the first Asturio-Leonese princes and the Franks of the Spanish March, gradually gained ground (final recapture of Barcelona).

The internal crisis was relieved for a time by ʿAbd al-Raḥmān II [*q.v.*], who fought simultaneously against the Franks, the Gascons and the Banū Ḳasī [*q.v.*] of the Ebro valley, crushed the Mozarab revolt at Cordova (850-9), and threw back into the sea the Norsemen (*Urdumāniyyūn* or *Madjūs*) who had landed on the coast of Seville. This great ruler, who broke with the "Syrian tradition" introduced into Spain by his great-grandfather ʿAbd al-Raḥmān I, organized the state of the ʿAbbāsid model.

His work was continued by his son Muḥammad I, at the end of whose reign, however, occurred the renewed insurrection of ʿAbd al-Raḥmān b. Marwān b. al-Djillikī [*q.v.*] and the rising of the whole of southern Andalusia under ʿUmar b. Ḥafṣūn [*q.v.*], whose revolt continued during the following reigns; further, during the reign of the amir ʿAbd Allāh, serious fighting broke out between Arabs and *muwallads* in the Elvira and Seville regions.

Bibliography: Lévi-Provençal, *Hist. Esp. mus.*, i, 91-396, with details of sources and bibliography. Dozy's history, *Hist. Mus. Esp.*[2], vol. ii, is now out of date.

4. The Caliphate and the ʿĀmirid dictatorship. On the long and fruitful reign of ʿAbd al-Raḥmān III al-Nāṣir, the restoration of the Cordovan Caliphate, and home and foreign policy, see ʿABD AL-RAḤMĀN III, and Lévi-Provençal, *Hist. Esp. mus.*, ii, 1-164.

His reign of fifty years represented not only the high-water mark of Marwānid rule in the Peninsula, but also the most flourishing period in the Muslim history of al-Andalus. On the death of ʿAbd al-Raḥmān, 22 Ramaḍān 350/4 November 961, he was succeeded by his son al-Ḥakam II, who was already nearly fifty years old, and who reigned until his own death on 3 Ṣafar 366/1, October 976. The latter's reign was also a successful and prosperous one. Cordova, in the words of the Saxon poetess Hroswitha, was the "ornament of the world", and at the same time, under the stimulus of a prince like al-Ḥakam II, who was a man of letters and a bibliophile, one of the most active centres of philological, literary and juridical culture in the entire Muslim world at that time, Christian Spain requested his arbitration, and the Reconquista seemed finally to be checked.

When he died, al-Ḥakam II only left as his successor a young son unfit to rule, Hishām II, born in 354/965 of the union of the Caliph with the Gascon *umm walad* Ṣubḥ. Once the palace intrigues were frustrated, the way was clear for a man of ambition and energy, who soon seized the reins of power and directed the destinies of the Caliphate with a dictatorial hand: the celebrated "major-domo" Muḥammad b. Abī ʿĀmir, the future al-Manṣūr [*q.v.*]. The stages in the brilliant career of Ibn Abī ʿĀmir, which speedily led him to the highest honours, will not be recounted in detail here. But this highly-talented politician showed himself also to be a general and a strategist who was both able and successful in his undertakings. He mounted successive attacks in the *djihād* against the Christian kingdoms to the North, inflicted on them severe defeats and even succeeded in capturing and destroying the famous sanctuary of Saint James of Compostela (Santiago, *Shant Yāḳub*) in the course of his campaign of 387/997 against Galicia. Al-Manṣūr died at Medinaceli (Madīnat Sālim), on his return from a final campaign to North Castile, on 27 Ramaḍān 392/9 August 1002. He left Muslim Spain intact and, following ʿAbd al-Raḥmān III and al-Ḥakam II, had even been able to extend Andalusian political influence over the whole of western Barbary.

One of al-Manṣūr's most skilful archievements was to respect throughout his life the external trappings of the Caliphate and to keep intact certain of its prerogatives on behalf of his nominal master Hishām II. The latter bequeathed the same powers of "major-domo" or *ḥādjib* to the favourite son of al-Manṣūr, ʿAbd al-Malik, who succeeded his father and adopted the honorific surname of al-Muẓaffar. He remained in power until his death in 399/1008 see ʿABD AL-MALIK B. ABĪ ʿĀMIR for the details of the history of his "septennate". The death of ʿAbd al-Malik b. Abī ʿĀmir and his replacement by his brother ʿAbd al-Raḥmān ushered in a period of disastrous disorders in the Spanish Caliphate which soon brought about its downfall.

Bibliography: Lévi-Provençal, *Hist. Esp. mus.*, ii, 1-290.

5. The collapse of the Marwānid Caliphate and the partition of the Kingdom of al-Andalus. The military policy of al-Manṣūr had resulted in the introduction into Muslim Spain of a large number of mercenaries of North African Berber origin who, after his death and that of his successor, formed a centre of agitation against the Andalusians themselves and against the powerful Slav bloc. The train was fired by the insane desire of ʿAbd al-Raḥmān Sanchuelo to have himself designated heir-presumptive to the throne by the Caliph Hishām II (Rabīʿ I 399/November 1008). This designation was extremely badly-received at Cordova and, following a plot against him, the ʿĀmirid *ḥādjib* was executed by the supporters of the Marwānid pretender Muḥammad b. Hishām b. ʿAbd al-Djabbār near Cordova on 3 Radjab 399/3 March 1009 [see ʿABD AL-RAḤMĀN B. ABĪ ʿĀMIR].

From then on, the Kingdom of Cordova went through a period which was fatal to its destinies: pretenders and counter-pretenders, supported by the Berbers or by the enemies of the Berbers, hastened the ultimate downfall of the Caliphate.

List of the last Caliphs of Cordova

1. Hishām II b. al-Ḥakam II al-Muʾayyad biʾllāh (366-399/976-1009: 400-403/1010-1013).
2. Muḥammad II b. Hishām b. ʿAbd al-Djabbār al-Mahdī (399-1009).
3. Sulaymān b. al-Ḥakam b. Sulaymān b. ʿAbd al-Raḥmān III al-Mustaʿīn (399/1009; 403/1013).
4. ʿAbd al-Raḥmān IV b. Muḥ. b. ʿAbd al-Malik b. ʿAbd al-Raḥmān III al-Murtaḍā (408/1018).
5. ʿAbd al-Raḥmān V b. Hishām b. ʿAbd al-Djabbār al-Mustaẓhir (414/1023-24).
6. Muḥammad III b. ʿAbd al-Raḥmān b. ʿUbayd Allāh b. ʿAbd al-Raḥmān III al-Mustakfī (414-416/1024-1025).
7. Hishām III b. Muḥ. b. ʿAbd al-Malik b. ʿAbd al-Raḥmān III al-Muʿtadd (420-422/1029-1031).

Ḥammūdid Caliphs

1. ʿAlī b. Ḥammūd (407-408/1016-1018).
2. al-Ḳāsim b. Ḥammūd (408-413/1018-1023).

The Andalusian, Slav and Berber "factions" (*ṭāʾifa*, pl. *ṭawāʾif*) did not wait for the collapse of the Cordovan caliphate before splitting up the territory of al-Andalus into a multitude of small states, most of which had only an ephemeral existence and among which emerged only a few large political blocs, the Kingdoms of the ʿAbbādids of Seville, the Afṭasids of Badajoz, the Zīrids of Granada, the Dhu 'l-Nūnids of Toledo and the Hūdids of Saragossa.

Bibliography: Lévi-Provençal, *Hist. Esp. mus.*, ii, 291-341 (and bibliography quoted on p. 291, note 1); and see ḤAMMŪDIDS. For 3-5 see UMAYYADS.

6. The Kingdoms of the *ṭāʾifas* up to the battle of al-Zallāḳa. The history of Spain in the 11th century is characterized by the vigorous efforts of the Reconquista, stimulated by energetic and enterprising Christian monarchs who were more and more conscious of the necessity of re-establishing national unity at the expense of Islam. The internal history of the Kingdoms created by the dismemberment of the Spanish Caliphate is particularly dull and devoid of interest. As portrayed by the chroniclers, it presents a picture of constant turmoil—opposing interests, rivalries and perpetual disputes, through which it is not always possible to trace a guiding thread. The ethnic groups, to which belonged the dynasties which outlived those which were rapidly absorbed by their more powerful rivals, joined issue with one another. Andalusians fought against Berbers, and Slavs fought against both. Before long there was no hope of restoring the Caliphate, and the increasing weakness of each of these states only whetted the appetite of the Christian monarchs, who levied heavy tribute from them: this policy was followed particularly by King Alfonso VI, who succeeded, by skilful diplomacy, in effecting the peaceful occupation of Toledo (1085) and in making himself the arbiter in disputes between the *mulūk al-ṭawāʾif*.

The danger became so great that, whether they wished to or not, the *mulūk al-ṭawāʾif* were forced to seek help from the Almoravids. The turning-point came with the intervention of North African troops led by the *amir* Yūsuf b. Tāshufīn, who defeated the forces of Alfonso VI at Sagrajas (al-Zallāḳa [*q.v.*]) on 22 Radjab 479/2 November 1086. This victory was not followed up, and Yūsuf b. Tāshufīn, soon wearying of the spectacle of the disunion of the Andalusian kings and their compromises with the Christian monarch, dethroned them one after the other and simply annexed the greater part of al-Andalus to his dominions. From that moment, Muslim Spain was only the vassal of the Maghrib.

Bibliography: See the usually accurate lists given by A. Prieto y Vives, *Los Reyes de Taifas: estudio historico-numismatico de los Musulmanes españoles en el siglo V de la hégira (XI de J. C.)*, Madrid 1926. See also Dozy, *Hist. Mus. Esp.*[2], vol. iii; A. Gonzales Palencia, *Hist. de la Esp. mus.*, 54-69; and ʿABBĀDIDS, AFṬASIDS, DHU'L-NŪNIDS, HŪDIDS, ZĪRIDS etc.; for a list of the dynasties of the *ṭawāʾif* cf. MULŪK AL-ṬAWĀʾIF.

7. Al-Andalus under the Almoravids. The Almoravid occupation of Muslim Spain was completed by the recapture of Valencia (495/1102), which had fallen into the hands of the Cid Campeador Rodrigo Díaz in 478/1085, and by the surrender of the Hūdid capital of Saragossa on the death of al-Mustaʿīn (503/1110). Al-Andalus then experienced, despite the domination of society by the *faḳīhs*, several decades of prosperity, marked by the indisputable successes of Almoravid arms (victory of Uclés in 502/1108) which, however, were unable to recapture Toledo. Saragossa itself fell in 512/1118 into the hands of Alfonso the Warrior. Christian pressure on al-Andalus increased, and achieved the greater success because the son and successor of Yūsuf b. Tāshufīn, ʿAlī, threatened in Morocco itself by the Almohads, soon became incapable of offering serious resistance to the manifestations of revolt which were appearing on all sides. The time was ripe for another change of masters in al-Andalus. [See AL-MURĀBIṬŪN].

Bibliography: R. Menendez Pidal, *La España del Cid*, definitive edition, Madrid 1947, F. Codera, *Decadencia y desaparición de los Almoravides en Espana*, Saragossa 1899.

8. Al-Andalus under the Almohads, and the progress of the Reconquista. After a period of thirty years, in the middle of the 12th century, during which certain movements took shape to weave a new pattern of "Kingdoms of *ṭāʾifas*", al-Andalus submitted to the authority of the Muʾminid dynasty of Morocco. The Almohads maintained for nearly a century an increasingly precarious grasp on those parts of the Peninsula which still belonged to Islam. The Reconquista won back more territory each year. In Catalonia, Ramón Berenguer IV occupied successively Tortosa and Lerida, but the chief architect of the Reconquista was King Alfonso VIII of Castile (1158-1214), who gained possession of Silves, Evora, and Cuenca. The Muslim victory at Alarces (*al-Arak*), won by the Almohad Caliph Abū Yūsuf Yaʿḳūb, 8 Shaʿbān 591/18 July 1195, had no lasting effect. Less than fifteen years later, the Christian coalition, comprising troops from Castile, Leon, Navarre and Aragon, inflicted a crushing defeat on the Muslims at Las Navas de Tolosa (*al-ʿIḳāb*), 15 Ṣafar 609/17 July 1212, which was followed by the fall of Ubeda and Baeza. The capture of Cordova occurred less than a quarter of a century later, followed by the capture of Valencia by Jacques I of Aragon (636/1238) and of Seville by Ferdinand III (646/1248).

Bibliography: See AL-ARAK, AL-ʿIḲĀB, ISHBĪLIYA, BALANSIYA, ḲURṬUBA, MUʾMINIDS.

9. The Naṣrid Kingdom of Granada and the conclusion of the Reconquista. For a further two and a half centuries the "Kingdom of Granada", despite successive amputations, continued to be the only territory on the Iberian Peninsula still under the authority of a Muslim ruler; bounded by the Mediterranean from Gibraltar to Almeria, this Kingdom did not extend inland beyond the mountain massifs of the Serranía de Ronda and the Sierra d'Elvira. The ancestor and founder of the Naṣrid dynasty (or Banu 'l-Aḥmar), Muḥammad I al-Ghālib biʾllāh, took possession of Granada in 635/1237-8 and organized the fortress called al-Ḥamrāʾ, the Alhambra, as a royal palace; at the same time, he agreed to become the tribute-paying vassal of the King of Castile, Ferdinand I, and then of his successor Alfonso X. Henceforth the policy of kings of Granada was to try to achieve a precarious balance in their alliances concluded either with the Christians, or with the Mārinids of Morocco, who intervened militarily on Andalusian territory and occupied certain points such as Ṭarīfa. Moroccan co-operation was gradually proved to be illusory:

the sultan Abu 'l-Ḥasan suffered a grave defeat on the Rio Salado (741/1340). Granada still retained some of the prestige of a capital by virtue of its monuments and literary gatherings, in which men like Lisān al-Dīn b. al-Khaṭīb were conspicuous. In the following century, with the advent of the Catholic Kings, Ferdinand of Aragon and Isabella of Castile, the Christian offensive became co-ordinated and was conducted on a wider scale. Loja fell in 1486, Vélez-Malaga, Malaga and Almeria the following year, Baza in 1489, and Granada eventually surrendered to the Catholic monarchs on 2 Rabīʿ I 897/3 January 1492.

Bibliography: See NAṢRIDS. See also, on the fate of Spanish Muslims, whether converted to Christianity of not, after the conclusion of the Reconquista, MORISCOS. (E. LÉVI-PROVENÇAL)

Appendix: the "Andalus" in North Africa

As a generic term *al-Andalus* is especially well known in the North African context where it denotes that element of the Islamic population which derives its origins from Spain. Generally speaking, the Andalusian element only appears in relief from about the end of the 15th century, but here we have to do with nothing more than the culmination of a long historical trend.

In the course of Hispano-Islamic history emigration to the Maghrib not infrequently served the inhabitants of al-Andalus as a means of escape from internal crisis. Andalusian commercial and external interests also played a great part in bringing Hispano-Islamic elements to the littoral of the Western and Central Maghrib.

From about the middle of the 12th century, when Muslim disasters in Western Andalusia sent a stream of emigrants to Ḳaṣr al-Kutāma (al-Ḳaṣr al-Kabīr), the advance of the Reconquista was to prove an increasingly important, though by no means the sole cause of emigration to North Africa. With the protracted disintegration of Islamic Spain emigration progressed sporadically until the 15th century when the critical events which foreshadowed the fall of Granada marked the beginning of what was to prove a veritable diaspora, of which North Africa experienced appreciable effects. By the end of the 16th century the number of Andalusian expatriates on Maghribī soil was such that they could be accounted an important minority of its population.

The advent of the 17th century brought new developments and it is not long before we see the outcome of the general expulsion of the Moriscos. From their ports of disembarkation large numbers are said to have made for Fez and Tlemsen, but of these a great proportion suffered death or spoliation at the hands of the Arab tribes. Many others succeeded in joining their compatriots at Algiers, and in Tunisia, where a policy of immigration was actively encouraged by ʿUthmān Dāy, the influx was considerable.

Of the Andalusians thus established in 17th century Tunisia a fairly detailed picture can be drawn. Their case is somewhat different from that of their 13th century precursors who are best known for their great political role in the Ḥafṣid state. Appearing as a highly organised and exclusive community under a supreme head (*shaykh al-Andalus*), they seem in their village communities to have enjoyed certain legal rights together with a large measure of independence in local government. The monopoly of a highly successful and well organised *shāshiya* industry enabled them so to modify the economic system that the *amīn al-shawwāsha* became *de jure amīn* of commerce, presiding over a commercial tribunal to which all corporations were subject and whose members were, with only two exceptions, recruited from the Andalusian *shawwāsha*. In the agricultural field Andalusian skill, fostered by the enlightened ʿUthmān Dāy, was turned to the exploitation of the fertile north, where the Moriscos ably applied their knowledge of irrigation and the techniques of husbandry to arboriculture and market gardening. During the 16th and 17th centuries the production and traffic of raw silk as well as the manufacture of stuffs, fabrics and embroidered goods were great specialities of the exiles. At Algiers, for instance, the silk industry was very much in their hands and contributed much to the wealth of the city. Much, on the other hand, that they might have contributed to the Maghrib was lost. In Morocco, for instance, the Saʿdids sought mainly to exploit them as a military force. For the rest, their occupation with piracy, and the slave trade must have accounted for the disappearance of traditional skills. Their traces, however, still survive in many spheres and many North Africans proudly proclaim their Andalusian origin which is in many cases apparent from their patronymics.

Bibliography: No comprehensive work has yet been published. The following list is a selection from the vast literature. (vii) ISLAM IN AL-ANDALUS

Al-Andalus was always a stronghold of Mālikism and a centre of orthodoxy from the beginning of the 9th century, when the *madhhab* of Medina was adopted and supplanted that of al-Awzāʿī. During the Marwānid period, as the new *madhhab* had the official support of the rulers of the country, there was no possibility of the implantation of other rites, and all Khāridjī or Shīʿī tendencies were suppressed in their early stages; the Andalusians could only direct their legal and theological activity towards the elaboration of manuals of *furūʿ*, and to a permanent attachment to the method of *taḳlīd*. In the 3rd-4th/9th-10th centuries, however, there is apparent an infiltration, admittedly slight, of the Shāfiʿī and Ẓāhirī schools, the latter represented in Spain by the *ḳāḍī* Mundhir b. Saʿīd al-Ballūṭī (d. 355/966) until it found its "standard-bearer" in the person of the famous Ibn Ḥazm [*q.v.*]. Similarly, there is apparent at certain periods a certain spread of Muʿtazilism, which corresponded to a revival of ascetic tendencies, whose principal representative was the Cordovan philosopher Ibn Masarra [*q.v.*] (d. 319/931).

The representatives of Andalusian Mālikism whose names and sometimes works have come down to us are legion. Nearly all of them have received biographical notices in the collections printed in the *Bibliotheca arabico-hispana*. After the fall of the Caliphate, jurisprudence was held in even greater esteem than before, and the social class of the *faḳīhs* frequently formed the most influential and active section of the population, especially under the Almoravids. From a doctrinal point of view, al-Andalus was scarcely affected by Almohad propaganda, and Mālikism reigned supreme up to the end.

(viii) ANDALUSIAN LITERATURE AND CULTURE

See ʿARABIYYA, B, *Appendix*.

(ix) ANDALUSIAN ART

The Iberian Peninsula, by virtue of its geographical position, which encloses the western end of the Mediterranean, and by reason of its predominantly Mediterranean characteristics, has been since ancient times an area favourable to the germination of Oriental influences. Possession of a common religion and a common language, the two factors, says Sarton, which constitute the strongest bond between peoples, strengthened relations between the two regions, relations which benefited also by the religious obligation of the pilgrimage to Mecca.

Artistic trends and forms reached the Iberian Peninsula from the Orient over a period of eight centuries; some of these were developed to a greater degree and extent than in their country of origin. In Hispanic art there are echoes of the art of Byzantium and its cultural zones, of Syria, Mesopotamia, Persia, Egypt and Ifrīḳiya. In Syria as on Iberian soil, the art of the Middle Ages was modelled on the pattern of the art of Imperial Rome. The coincidence of certain forms in the works of these two countries points sometimes to their common origin and not to a direct relationship between the two. But, whereas in the eastern Mediterranean, civilisation developed without interruption from the first centuries of the Christian era and during the first centuries of Islam, the Iberian Peninsula, and the West as a whole, experienced grave crises and a considerable decline in its standard of civilisation.

We do not know many details of the transition from Visigothic Spain, whose lack of homogeneity and decadence are shown by its feeble resistance to the invaders, to Spain under Islamic domination. In the artistic sphere, works and remains of this obscure period and of the subsequent Islamic periods are lacking, with the result that in many cases the gaps must be filled by guesswork.

The art of al-Andalus developed with an original and distinctive character of its own. During the period of contact with the Orient, between the 2nd/8th and 9th/15th centuries, certain monuments of incomparable beauty, perfection and originality, such as have been preserved in no other Muslim country, were built there: the mosque at Cordova, unique both for its complex and skilful construction and for the richness of its decoration; the palaces of Madīnat al-Zahrāʾ, whose art and magnificence have never been surpassed; the Aljaferia of Saragossa, a palace of extraordinary originality and decorative profusion, the reconstruction of which is being undertaken at the present time; the Giralda tower, a monumental minaret which is one of the most beautiful in the Islamic world; and, finally, a huge palace, the Alhambra of Granada, wonderfully preserved despite its extreme fragility, in which architecture and the natural beauties of water and vegetation have combined to create one of the most inspiring scenes in the world.

Architecture

Umayyads. In default of older buildings, the study of Islamic architecture in al-Andalus must start from the oldest part of the Cordova mosque, built by ʿAbd al-Raḥmān I between 168 and 170/784-6, i.e. three-quarters of a century after the invasion and conquest of the Peninsula. By the time of the death of this *amīr*, only the finishing touches remained, and these were executed by his son Hishām (172-180/788-96).

This early oratory occupies the N.-W. portion of the building, which is still preserved to-day. The mosque is rectangular, with stone walls, divided into eleven aisles running North to South, perpendicular to the *ḳibla* wall, the central aisle being larger than the others. The aisles are separated by marble columns deriving from Roman or Visigothic buildings. On the capitals rest square impost blocks, which in their turn carry rectangular stone piers, the overhang being supported transversely by means of corbels and terminating above in an impost. The piers are linked longitudinally by two ranges of arches; the lower arches, horseshoe-shaped, are suspended and support nothing; above, a second range consisting of semi-circular arches, springs from the imposts and supports the walls. By this method of construction it was possible to erect a huge building on slender columns, making the maximum use of the interior space and, for the faithful, ensuring a good view of the *imām* leading the prayer. Owing to the fact that the width of the supports was

increased in proportion to their height, it was possible to support the roofs and to place rain-water gutters in the thickness of the walls.

The method of construction with double superimposed arches, which gives the Cordova mosque an original beauty and a unique character in mediaeval architecture, is not found in any other mosque. In the other hypostyle mosques, the arches separating the aisles are supported by means of wooden beams which give them the appearance of temporary constructions. It is astonishing to find in Cordova in the second half of the 8th century such a perfect structure, in view of the apparent lack of architectural ability which is suggested by the use of columns originating from earlier buildings.

Repeated attempts have been made to establish the origin of these forms. The system of double arches could be inspired by Roman architectural works, for example aqueducts. Stone was used as constructional material in Syrian architecture, but also in Visigothic architecture in Spain. The arrangement of the ashlars alternately as stretchers or as parpens is frequently found in Roman buildings of the East and the West, which have inherited it from Greek buildings. Visigothic architecture made more general the use of the horseshoe arch, specimens of which are found in Roman and eastern Islamic architecture, although fewer than in the Peninsula. The alternate use of stone and brick in the voussoirs of the arches was frequent in Roman architecture, from which it passed into Byzantine architecture. The originality of the mosque of ʿAbd al-Raḥmān I resides in the plan and general arrangement of the building, with its numerous parallel aisles, the central aisle being larger, as in the eastern mosques, and perhaps also in the wall buttresses and probably in the stepped crenellations which crown them.

The growth of the population of Cordova, in the reign of ʿAbd al-Raḥmān II (206-38/822-52), necessitated the enlargement of the mosque. By demolishing the *miḥrāb* and piercing the *ḳibla* wall, the aisles were extended southwards. The portion added follows the lines of the earlier work, but, among a large number of capitals originating from earlier buildings, there are eleven which were finely cut for the purpose and were inspired by classical models, and four, from the *miḥrāb*, which were later transferred to that of al-Ḥakam II. The latter are not inferior to the finest Roman capitals, and are evidence of the existence of a workshop of selected artisans. These works were commenced in 218/833; the first prayer before the new *miḥrāb* took place in 234/848, but the work was incomplete at the death of ʿAbd al-Raḥmān II. His son and successor Muḥammad I completed them in 241/855, a date which appears in an inscription on the St. Stephen door, whose bevelled decorations, inspired without doubt by Roman mosaic motifs, are of the Byzantine type.

ʿAbd al-Raḥmān III (300-50/912-61), left in the Great Mosque a memorial of his long and glorious reign, by constructing in 340/951 a new and monumental minaret, of square section like the Syrian minarets.

In 326/936, ʿAbd al-Raḥmān III, proclaimed caliph, began the construction of the royal city of Madīnat al-Zahrāʾ, at the foot of the Sierra, less than five miles from Cordova. The work proceeded until 365/976, a period of forty years during which the grandeur and power of the Andalusian caliphate reached their zenith, as is witnessed by the disfigured ruins of the palaces of this city, the seat of the court and officialdom, and by the enlargement of the Cordova mosque on the initiative of al-Ḥakam II.

The portions of Madīnat al-Zahrāʾ until now brought to light are the ruins of stone buildings-dwellings, offices and reception halls, the last-named situated at the end of *patios* and consisting of several parallel aisles, separated by horseshoe arches on columns, following a basilica-type arrangement common in the East. For its decoration, the two caliphs, fired by the ambition to construct buildings of exceptional spendour and richness, imported materials and skilled craftsmen from the other end of the Mediterranean. The roofs and ceilings have gone—Madīnat al-Zahrāʾ was sacked and burnt several times during the early years of the 11th century and later served as a quarry up to a recent date—but there remains part of the stone and marble surfaces of the walls of many of the rooms, numerous columns and capitals of the same materials, and pavements of stone, marble and brick. The richly decorated surface of these buildings was entrusted to workshops of skilled craftsmen, some of whom came from the eastern Mediterranean; they possessed different training and different techniques for the working of stone and marble, but were especially familiar with the general characteristics of two-dimensional reliefs with vegetal motifs (there are a few simple geometrical motifs, of Byzantine origin), the majority far-removed from the vine and the acanthus motifs which derive from them. A magnificent hall, discovered in 1944, and at present in course of reconstruction because among its ruins were found many reliefs from the decorated surfaces of the inner walls, was decorated from 342 to 345/953-7.

The same craftsmen from the palaces of al-Zahrāʾ worked on the enlargement of the Great Mosque at Cordova; this work, initiated by al-Ḥakam II, was put in hand in 350/961, and the principal part was completed in 355/966. Workers in mosaic, requested from the emperor of Byzantium, had a hand in its decoration. An Oriental influence is also noticeable in the four vaults of intersecting arches in the extension, although no comparable example of an earlier date has yet been discovered in the East. The increase in the height of the walls of some bays in order to form vaulted lanterns probably comes from the mosques of Ifrīḳiya of the 9th century, although the vaults of the latter are of Byzantine origin. The arches, intersecting equally, but in plan and not in space, form an open lattice-work which, by an ingenious and skilful constructional technique, supports the cupolas. Some of the arches are cusped and ʿAbbāsid in origin; there are also a number of broken arches. The former were, from then on, combined with intersecting arches, one of the favourite themes of Hispano-Muslim art, used purely as decoration—following a process common to all Islamic art, but in al-Andalus carried to its ultimate conclusion.

In this extension, which dates from the reign of al-Ḥakam II, and which in fact constitutes a new mosque contiguous to the original, decorative forms of an incredible richness blend with a magnificent blaze of colour to cover the walls and the vaults, composed of vivid mosaics, with arabesques (*atauríque, al-tawriḳ*), the majority of cut stone, with the background painted red and inscriptions in other kinds of blue, and veined marble in the columns and pedestals. The mosque of al-Ḥakam II, like the hall of ʿAbd al-Raḥmān III at al-Zahrāʾ, illustrates an art utilising its resources to the full, at its peak,

which, without parallel in the contemporary West, is an expression of the grandeur of the Cordovan caliphate.

The third and final enlargement of the Great Mosque was due to the initiative of the powerful al-Manṣūr, the minister of Hishām II, and was carried out between 377-80/987-90. It maintained the unity of the whole by repeating once more, as regards the engaged piers and the arches, the construction of the originals, without any novel feature, and inferior in richness and style. The doorways reveal a process of unification of the great variety of decorative techniques displayed at Madīnat al-Zahrā', but the result is heavy and monotonous.

Few traces remain of the work executed during the period of the *ṭā'ifas* in the 5th/11th century. In the mosques, on the evidence of the texts and such traces as remain, the division into aisles perpendicular to the *ḳibla* wall by means of horseshoe arches on columns, is repeated. The princes of the *ṭā'ifas* built palaces rather than religious edifices. They could not rival their predecessors, rulers of a unified Spain, in power or wealth but they tried to imitate, at least in appearance, their splendid residences. In place of the solid stone walls of Madīnat al-Zahrā' they erected walls of clay and brick. The surfaces of stone and marble covered with arabesques (*ataurique*) were replaced by decoration in plaster, and the columns of marble, as in the Alcazaba of Malaga, by wooden columns. The polychromy conceals the poverty of the interior under an ephemeral display of richness and luxury. The reduction in grandeur and solidity, and the lack of architectural greatness, were compensated for not only by the more agreeable and picturesque aspect of the 5th/11th century buildings, but also by the introduction of running water in the halls and patios, and by the use of plants in the patios, doubtless as a result of an Oriental influence, perhaps via Ifrīḳiya.

The decorative art which sought to conceal the structural poverty of these palaces was a direct successor of the art of the caliphate but with an evolution towards the baroque, essentially Hispanic, by the transformation of the architectural elements of Cordova and Madīnat al-Zahrā' into other purely decorative elements, consisting of involved and complex designs and profuse ornamentation.

A work which is highly characteristic of the art of the *ṭā'ifas* is the palace built in the immediate vicinity of Saragossa by al-Muḳtadir b. Hūd (441-74/1049-81).

The 6th/12th century, i.e., the period of Almoravid and Almohad domination in al-Andalus, was one of the most fruitful periods of Western Islamic art, and at the same time one of the periods in which there occurred the greatest assimilation of forms originating from the eastern Mediterranean.

The Almoravids, Berber nomads from Africa, without a cultural tradition, remained on the fringe of the artistic trend. But the political union of Muslim Spain and Barbary for a period of just over a century (the 6th/12th and the first years of the 7th/13th), at first under the Almoravids and then under the Almohads, resulted in the spread of Andalusian art across the Straits of Gibraltar, into regions with a mainly rural civilization and without large urban centres. [Cf. AL-MURĀBIṬŪN (section on art)].

The construction of the Almoravid mosques shows changes as compared with the earlier Hispanic mosques, probably as the result of Mesopotamian influence. In place of the columns which had hitherto separated the aisles, they built brick pillars; this resulted in increased stability, enabling them to do away with the wooden tie-beams, but also in a loss of space and in reduced visibility. Compared with a hypostyle oratory, an oratory with brick pillars always seems heavy and monotonous.

No Almoravid mosque has been preserved in al-Andalus. The Great Mosques of Tlemcen and Algiers, originally devoid of decoration, were built probably in the last years of the 5th/11th century, before Andalusian influence reached the African shore. This occurred during the reign of ʿAlī b. Yūsuf (500-37/1106-43), during which the mosque at Tlemcen was enriched with splendid and profuse Hispanic decoration, which covers the surface of the *miḥrāb* as well as the walls and the cupola of the bay which precedes it. This decoration, according to an inscription in cursive letters which forms part of it, was completed in 530/1136. About 529/1135, ʿAlī b. Yūsuf enlarged the al-Ḳarawiyyīn Mosque at Fez, still closed to non-Muslims, in which there are intersecting arches obviously of Cordovan origin, and vaults formed by stalactites (called *mocárabes* in Spanish), originating from Persia or ʿIrāḳ, which span some of the bays. Its amazing perfection shows that this was not one of the first experiments with these imported elements.

The most characteristic Almoravid work of the decorative style is the Ḳubbat al-Barūdiyyīn of Marrākush, built probably between 514 and 526/1120-1130. The central portion of this small rectangular building is covered by a small cupola of curved brick. Within, eight arches intersect, in a fashion similar to those of the cupola which covers the bay before the *miḥrāb* in the mosque at Cordova. The arches are mixtilinear in the Marrakush specimen, composed of cusps, curves and right-angles, and the surfaces contained between their springings are covered, like almost all the others, with delicate plaster arabesques, around large scallops. This is a Hispanic work of extraordinary richness and unusual imagination; it expresses in an eloquent manner the anti-classical tendency to fragmentation and decorative excess which breaks out periodically in the course of the history of Spanish art.

The Almohads who, like their predecessors, lacked a cultural tradition, and were governed by their fundamental asceticism which condemned all luxury and all excess, as befitted a movement purporting to restore the purity of early Islam, influenced artistic evolution by placing severe restrictions on ornamentation, which was reduced to basic essentials, with precise and well-defined lines, on large, plain backgrounds. [Cf. AL-MUWAḤḤIDŪN, section on art]. As no Almohad oratory has survived in Spain, we do not know whether these characteristics extended to them also; the remains of the Great Mosque at Seville, completed during the reign of Yaʿḳūb al-Manṣūr (572-94/1176-98), lead one to suppose that they displayed richer decoration than those preserved in the Maghrib.

The Almohads influenced artistic evolution in other respects as well. Inspired hy the memory of the past greatness of the Cordovan caliphate, as witnessed by its buildings, they built huge, symmetrical and well-planned mosques, solid, tall minarets, and great city gates, veritable triumphal archways in honour of the dynasty.

In the remainder of the Almoravid and Almohad palaces there appear two types of patios which later reached an extraordinary pitch of development in the art of Granada: the court with two transverse

pathways forming four squares of vegetation, with projecting pavilions on the shorter sides (El Castillejo, in the Vega of Murcia), and the type with a portico on one or two of its sides (the Yeso, in the Alcazar of Seville).

Almohad military architecture uses, in al-Andalus, arrangements deriving from Byzantine architecture and as yet unknown in the West. For instance, the bent gates (walls of Badajoz, Seville and Niebla); the barbicans; the polygonal towers (Cáceres, Badajoz, Seville) and the *albarranas* or towers outside the walls (Cáceres, Badajoz, Écija). With the stalactites, there arrived from the Orient cursive epigraphy (plaster decorations of the Mauror at Granada, and of the Castillejo at Murcia), and glazed or varnished ceramics used for exterior architectural decoration, of which the first example known in Spain is in the Torre del Oro at Seville (617/1220-21).

After the collapse of the Almohad empire, the last foothold of Islam in Spain was the tiny Kingdom of Granada, established a little before the middle of the 7th/13th century. The universally famous palace of the Alhambra at Granada, and nearly all the other buildings remaining from this final period, are not earlier than the 8th/14th century.

Naṣrid [see NAṢRIDS] or Granadan art, is a brilliant final phase of Islam in the Peninsula, which maintained its position partly on the fringes of official dynastic Almohad art, enriched by the legacy of the latter and by a few importations from the East, without forgetting the changes wrought by the inexorable march of time. It also represented, in its decorative aspect, the revival of the national tradition of dense, flat and fine ornamentation, after the brief Almohad deviation; the extent to which the latter spread through Spain is not known.

The craftsmen of Granada adorned the last days of a moribund civilisation with the most exquisite examples of what human genius and art can produce in the decorative field. With poor and fragile materials, they created large, strong, plain masses and severe, purely architectural volumes, like the Tower of Comares and the Gate of Justice, in the Alhambra, compositions as serene, harmonious and original as the patio of the Alberca, and cleverly planned interiors, such as those which are arranged in echelon from the Lions' Court to the platform of Daraja, in the royal palace at Granada. At the same time they constructed fortifications which are more important than the Hispano-Almohad ones which have been preserved, and Granada was enriched by public buildings, houses and palaces embellished with exquisite art. From modest residences to the royal palaces which surrounded the city, every building had its patios, fountains, cisterns, pavements of brilliant coloured tiles, plaster decoration and skilfully-assembled wooden roofs.

It is in the royal palace of the Alhambra, miraculously preserved despite its great fragility, that the art of Granada acquires its characteristics of magnificence and grandeur. The patios of the Alberca and of the Lions, built in the middle of the 8th/14th century, are the development are the development respectively of the types with porticos built on the shorter sides and with two transverse pathways of the Almoravid era. The stalactites in the Alhambra form complex vaults, cover the extrados of the arches, serve as imposts and cover the surface of some capitals. Above the socles of the glittering *alicatados* (*al-lukāṭ*)—mosaics of coloured tiles—the walls of the rooms are covered, as if hung with carpets, with plaster panels in which vegetal motifs—leaves divided into small leaflets, in Almoravid tradition, and others smooth, derived from Almohad decoration—are combined with complex geometrical outlines and inscriptions in Kufic and cursive. There is a tremendous wealth of ornamentation in the Alhambra, but the paucity of relief and the orderly arrangement on the walls within the panels obviate any sense of superabundance disorder. The whole is harmonious, light, and pleasant to look at.

At the time when these palaces were being built, Granada was being enriched by the construction of a series of important public buildings: a *funduḳ*, the "Alhondiga nueva"; a *madrasa* completed in 750/1349; a *māristān* or lunatic asylum (767-8/1365-7). These three buildings—only the first is preserved—conform to foreign plans, but their form represents the local style.

In the first half of the 9th/15th century, which coincided with the final political decadence, the art of Granada, failing to receive new contributions from the eastern Mediterranean, and exhausted by amazing but sterile refinements and subtleties, owing to self-repetition and dwelling exclusively in the past, became an empty formula. In a petrified form, it still survived in the Maghrib for several centuries, almost up to the present day.

Industrial Arts

Trade, mainly in the hands of the Jews and Syrians, distributed throughout al-Andalus many products of the decorative and industrial arts of the Orient, a number of which were easily transported. During the reigns of ʿAbd al-Raḥmān II and his son Hishām I, a taste for refined luxury and ostentation prevailed at Cordova, under the influence of Baghdād and Byzantium. There rapidly developed in al-Andalus the manufacture of textiles, jewelry, productions in ivory and ceramics, furniture, etc., imitations of imported work, in order to satisfy the demands of a large clientele in Muslim territory and the Christian kingdoms of the Peninsula and north of the Pyrenees. The copy was sometimes so faithful that it is difficult to say whether certain articles emanated from countries at the other end of the Mediterranean, or whether they were made in al-Andalus. In the case of various bronze works in the Fāṭimid style, it is impossible to say definitely whether they were made in Egypt or Spain. It is only after a most careful scrutiny that one can say whether certain fabrics had their origin in the workshops of the ʿAbbāsids or al-Andalus.

The activity of the Hispanic workshops did not slacken in the 5th/11th century, but only in the following one, when the austerity of the first Almohad caliphs imposed a check, particularly on the royal workshops. In the Kingdom of Granada, in contrast, in spite of its smallness, the industrial arts reached a magnificent and final peak of development. In addition to satisfying the needs of an extravagant court, the export of its products helped to support a large population, which was obliged to pay a heavy tribute to the King of Castile.

Religious furniture in al-Andalus, commencing at least from the 4th/10th century, was of extraordinary richness and perfection. "The most skilful craftsmen", wrote an 8th/14th century historian, "agree that the *minbars* of the mosque at Cordova and of the Kutubiyya at Marrākush are the finest in existence; Orientals, to judge from their works, are not experts in wood-carving". According to al-Idrīsī, the *minbar* of the Great Mosque at Cordova is without equal in the world; it was made in the reign

of al-Ḥakam II. It is described as an incomparable example of the cabinet-maker's art, with inlays of ivory and fine woods.

The *minbar* of the Kutubiyya was made at Cordova between 534/1139 and 538/1143. It is covered with a delicate ornamentation of geometric interlacing figures in marquetry, consisting of small pieces of rich woods of various colours, bordered by fine lamellae of ivory; exquisite wood-carving fill the spaces between the traceries.

One of the greatest artistic glories of the caliphate was the caskets and jars of ivory (*ʿādj*, [*q.v.*]), whose antecedents must be sought in the sphere of Byzantine culture. They were in the court workshops during the 4th/10th century and the first half of the 5th/11th, Arabesques are the predominant feature of their ornamentation, although there is no lack of representations of animals and human beings, whose Mesopotamian origins go back to eras well before Islam.

Ceramics also achieved a singular development in al-Andalus [cf. KHAZAF]. During the period of the caliphate were manufactured what are known as "ceramics of Madīnat al-Zahrāʾ", or of "Medina Elvira", because numerous examples have been found in the ruins of these two cities. On a white background, the decoration consisted of patterns in green (oxide of copper) outlined in dark brown (manganese). These ceramics are of Byzantine origin, but they developed independently in al-Andalus.

From ʿIrāḳ and Iran came the immensely rich gold faience. There is evidence of its manufacture in al-Andalus from the 5th/11th century; it may be earlier still. This luxury technique reached its greatest development and perfection in the 8th/14th century, with productions which were exceptional for their shape and richness, such as the superb vases of Malaga, the pride of those museums and collections which possess the rare specimens which have been preserved. Some have only decoration in gold; in others, gold ornamentation is combined with blue. From the 4th/10th century, we have fragments of ceramics with the colours separated by thin outline plates (*cuerda seca*), which appear to be of Spanish manufacture; on the other hand, engraved pottery, without glazing, only appeared, it seems, in the 6th/12th century.

Several specimens of the famous "baldachins", imported from Baghdād, which mark the peak of mediaeval silk-manufacture, are preserved in Spain. *Sirico* (Syrian) and *Grecisco* (Byzantine) fabrics, mentioned in numerous documents of Christian Spain of the 4th/10th and 5th/11th centuries, are evidence that the rich fabrics emanating from the Orient reached Spain.

At Seville and Cordova, there were in the 4th/10th century workshops producing *ṭirāz*, i.e., silken fabrics and brocades designed for ceremonial robes. Fabrics and robes were among the best-appreciated gifts. At the time of the Almoravids, the looms of Almeria were famous. During that period, the Byzantino-Sasanid tradition of decoration was still in force; it consisted of tangential circles with representations of animals arranged symmetrically inside, following the technique and the style of the ʿAbbāsid capital. The Almohad sovereigns suppressed the *ṭirāz*. The circle then disappeared from silks, and was replaced by geometric designs, traceries of straight and curved lines, rhombi, star-shaped polygons, etc.; from the 7th/13th century, decoration by means of multiple parallel bands bearing inscriptive and geometric elements, finally prevailed. The silks of Granada are of this type.

We have already alluded to the bronzes of the caliphate—lamps, chandeliers, *ḳandīls*, waterspouts in the form of animals, mortars, perfume-burners, etc.—and to the difficulty of establishing their place of origin because of their resemblance to the Fāṭimid bronzes. The perfection of the artistic metal-working technique in the 6th/12th century is illustrated by the plaques of engraved and chased bronze which cover the wooden leaves of the door of the patio of the Great Mosque at Seville, and its magnificent door-knockers, of cast and chased bronze, which remain on the very spot where they were made.

Museums and collections have preserved specimens of repousse silver bracelets dating back to the period of the caliphate. The technique of *repoussage* is less commonly found in gold jewelry, in which there is a predominance of filigree-work and wire threads forming settings filled with precious-stones or pieces of glass, a technique which survived until the last days of the Kingdom of Granada. Several swords are of this type, such as that of Boabdil in the Military Museum at Madrid, a masterpiece of the goldsmith's craft, of consummate elegance, whose hilt, of silvergilt and ivory, has a decoration of filigreework and polychrome enamels set in frames.

(x) SPANISH ARABIC

I. Of all post-classical Arabic dialects, the Arabic spoken in the Iberian Peninsula is the best known, as regards the mediaeval period.

As early as the 4th/10th century, the philologist al-Zubaydī al-Ishbīlī wrote a treatise on the errors of speech of the common people in al-Andalus. In the middle of the 6th/12th century, Ibn Ḳuzmān [q.v.] wrote some *zadjals* [*q.v.*] full of linguistic and sociological interest, the majority of which have been preserved. In the 7th/13th century, the mystic al-Shushtarī [*q.v.*] also composed *zadjals* of which numerous collections are known. Unfortunately, the nature of the subjects dealt with in these dialect poems means that they are of less interest than those of the preceding poet.

In the middle of the 13th century, too, the reconquest of the Kingdom of Valencia by the Christians and the requirements of religious propaganda among the Muslim population, resulted in the production of a copious anonymous *Vocabulista*, Arabic-Latin and Latin-Arabic, which has been published. At the end of the 9th/15th century, the reconquest of the Kingdom of Granada led Br. Pedro de Alcala to compile in his turn an *Arte* and a *Vocabulista*, giving the Arabic in Roman transcription; the latter work is particularly valuable, but the prose texts of the *Arte* are often incorrect.

These are only the essential sources. Many secondary sources exist: minor composers of *zadjals*; several *khardjas* of *muwashshaḥs* [*q.v.*]. As regards

prose, there are documents in archives, private correspondence, account sheets, etc. Finally, as regards vocabulary, the authors of technical works written in classical Arabic point out numerous dialectal names: historians, geographers, doctors, botanists, agronomists, works on *ḥisba*, etc.

There is reason to suppose that Spanish Arabic must have ceased to be a living language towards the end of the 10th/16th century, the date of its extinction probably varying in different provinces. At all events, the Moriscos who, driven out of Spain, reached Tunisia and Morocco about 1610, seem to have no longer spoken Arabic, but Spanish. The Arabic-speaking period, in the Iberian Peninsula, would therefore have lasted for about eight centuries. This long period of time, combined with the division of the country into separate physical and political units, as well as the heterogeneous character of the Arab population, ought, it would seem, to have favoured the formation of separate Arabic dialects, as had occurred within the Romance linguistic framework: this does not seem to have happened. It is true that the documents we possess are disparate, both in time and space, thus precluding any worthwhile comparison. At the most, one can try to distinguish between the dialects of the South (Seville, Cordova, Granada), those of the East (Valencia, Murcia) and those of the Marches (Aragon). In the case of Toledo, we only possess notarial documents, drawn up in an extremely debased form of the classical language.

To sum up, as far as we are able to tell, Spanish Arabic seems to have preserved a high degree of homogeneity. But one must not forget that our only documentation relates to the urban dialects. It is possible that the rural dialects, spoken by people who moved about less than the inhabitants of towns, may have been more differentiated.

Although Spanish Arabic became extinct towards the end of the 10th/16th century, as a spoken language, it survived in the poems which still served as 'words' to the "Andalusian" airs that were played and sung by the inhabitants of the towns, from Tunisia to Morocco.

II. General characteristics: (In what follows, the origin of certain linguistic facts will be denoted as follows: Q = Ibn Ḳuzmān; V = *Vocabulista* of Valencia; G = *Vocabulista* of Granada).

A. *Phonetics. Consonants*

As in all post-classical dialects, the lateral *Ḏ* (ض) is represented, phonetically, by *Ḏ* (ظ) and, exceptionally, by *Ḍ*. The interdentals: *t*, *d*, *ḍ* are preserved, at least until late 15th century Granadan. ج appears to have been, originally, an affricate: *ǧ* = *dž*. In Q and V it does not assimilate the definite article. In G, it does assimilate, which can correspond either to a pronunciation *ž*, or to a weakening of the first occlusive element. As regards *ḳāf*, there is evidence of a "weak" Spanish pronunciation, but we do not know exactly what this "weakness" consists of. Apart from the consonants of classical Arabic, Spanish Arabic has the following, usually in Romance loan-words (or developments from the substratum): *p* and *č*, written respectively in Arabic پ and چ. *G* (Old Romance or Ibero-Visigoth), transliterated by غ; this creates a problem for Romance scholars. There is a noticeable tendency, especially marked in G, for the final-*n* after *ay* to disappear: *ay* "where?", *bay* "between", *s͟haharay* "two months".

Vowels.

Short Vowels. We must wait for the transliteration of *G* into Roman characters in order to have an idea of the nuances of the short vowel system: a/e, i/e, u/o, governed by the nature of the preceding or following consonants. This is largely the position in present-day Mag͟hribī.

Up to the end of the 15th century, short vowels in open syllables are relatively stable. The only short vowel threatened with elimination is that occurring in the second of two *internal* open syllables: *yat(a)kallam* "he speaks", *yat(a)k͟hāṣamu* "they quarrel with one another", *dak͟h(a)lat* "she enters". Of the short vowels, that of the quality *a* is the most dominant. In nouns, it is that of *segol* whatever the nature of the preceding stressed vowel. It is also that of the first syllable of nouns of instrument of the classical type *mifʿal*, and that of the last syllable of the diminutives = C^1uC^2ayya C^3 and $C^1uC^2aiC^3aC^4$. In verbs, the quality *a* appears at the beginning of the imperative of I: *aktub*! "write!", and at the beginning of the imperfect of the forms V, VI, VII, VIII and X. By analogy with the vocalisation of the perfect, this quality also appears in the imperfect of all derived forms (except, sometimes, III) and in both forms of the quadriliterals. Many vowels (short and always unstressed), seem to separate consonantal groups which are difficult to pronounce. Such a group may be initial (a process known to classical Arabic): *ufrunṭāl* "frontal" or final: *katábti-lak* "I have written to you". In addition, in poetry, a disjunctive vowel freely appears after a word ending in CVC and followed by another word beginning with a consonant. It can be internal, as in the case of nouns of the type, $R^1vR^2R^3$, in which $R^3$is either *R*, *L*, *N*, *M*, or *B*, or ʾ. E.g. *ʿaḳal* "intellect", *ʿid͟jal* "veal", *s͟hog͟hal* "work", *raṭab* "smooth and supple", *ḥumar* "red", *Aben-Zuhar* "Ibn Zuhr".

Long Vowels. In nouns, the sequence *ā-ū* tends to become *ai-ū*. The vowel *ā*, not supported by a strong (back) consonant tends to become palatalised. The stage most readily reached is *ē*; the Arabic letter *alif* is also regularly used in *aljamiado* to transliterate the Romance vowel *e*. In G., this last pronunciation is reserved for the *ā* of bookish vocabulary. In the words (not verbs) belonging to popular vocabulary, the palatalisation reaches the maximum degree: *ī*, hence *bīb* "door" written بيب, with a *yāʾ*.

Diphthongs: The classical diphthongs *ai*, *au* are preserved in their correct form, except in a few link-words: *kif*, *kaf*, *kayfa*; *lis las*, *laysa*.

Accent: This is only known to us as regards of the 15th century—the result of the notations of P. de Alcala, which have been assembled and studied by A. Steiger. Several Granadan scripts in Arabic characters show that, under the influence of stress accent, short vowels in open syllables become prolonged.

B. *Morphology*

The Verb: There are no 2nd persons feminine. In the perfect tense, the suffix of the 2nd person plural is—*tum*. In the imperfect, the 1st persons are of the pattern *naktub*—*naktabu*. In the 1st and 2nd persons of the perfect, the "doubled" verbs in the 1st form follow the classical conjugation: *ḥalalt* "I have opened". In the case of verbs with R^3 weak, the imperfect plural is of the pattern *yamsu* "they set out", *yaltaḳu* "they meet". In the derived forms including the IInd, the form of the imperfect is in—*a*—,

like that of the perfect. The use of the passive with vowel-change is well attested, but only in the Ist form; it is sometimes imitated by the VIIth. While the majority of the real settled dialects created an indicative present, Spanish Arabic evolved a contingent tense, which also functions as an unfulfilled conditional (after a protasis with *lau*) and as an optative. It is formed by the imperfect preceded by *kan* (G. = *kin*), which is constant and of which the final *-n* is normally assimilated by the preformatives *t-* and *y-*. The patterns of the perfect, for forms V and VI, are *atfaᶜᶜal, atfāᶜal*, derived secondarily from the imperfects *yat(a)faᶜᶜal, yat(a)fāᶜal*. On the same basis, we have *atfaᶜlal* for the IInd form of the quadriliteral. Note that, in these forms, the formative *t* is assimilated, not only by the dental occlusives, but also by the sibilants (*s, z, ṣ*) and the fricatives (*ṣ, ġ*). In a nominal clause, various negative copulas derived from the classical *laysa*; *las*; *lis*; *is*; *is* G. are used. Finally the use of *-shi*, to reinforce an interrogative or a negative, appears to be unknown.

Substantives: A real indefinite article is found: *waḥd-al-faras* "a (certain) horse". The dual is clearly obsolescent. It is only used for parts of the body occurring in pairs, and for words expressing measure. The plurals *afᶜul* and *afᶜila* are those ordinarily used. The type *mafāᶜil* is only used for singulars with second vowel long. The diminutive of triliteral words without medial or final long vowel is of the type fuᶜayyal: *kulayyab* "small dog (m.)", but *kulaiba* "small dog (f.)". In the construct state, the ending *-a* becomes *-at-*.

Numerals: For "2", we find *zaudj* followed by a plural. From 11 to 19 the numerals in their free state retain the ending *-ar*.

Qualifiers: Note, in Granadan, a diminutive of the type *fuᶜaiᶜal* for qualifying adjectives of the patterns *kabīr* and *aḥmar*.

Personal Pronouns: 2nd pers. sing.: *ant, att, at*. The third person has the abridged forms: *hu, hi, hum*, which perform the function principally of copulas in a nominal clause. On the other hand, there are the expanded forms: *huwat, hiyat, humat* (emphatic forms). For the 1st person of the plural, there are many variant forms: *nuḥan, niḥin, niḥinat* V.; *aḥan, ḥan, ḥenat* G. The reflexives are of the form *ana annassi* "myself", perhaps for *la-nafsi*. We find traces of a suffix *-ah* for the 3rd pers. fem. (after a consonant).

Relatives: The most usual is *alladhī*, indeclinable. Sometimes, from Q. onwards, we find it appearing as *addi*. In G., there occurs a mysterious form *allé*. Between an undefined noun and the adjective or clause (nominal or verbal) which qualifies it, there occurs an indeclinable conjunctive particle: *-an-*. This may possibly have some connexion with an old *tanwin* with a highly-developed usage: *laḥyat-an baydha* "a white beard", *ᶜaynayn-an sūd* "black eyes", *hawādjib-an riḳāḳ* "eyebrows", *kilmat-an fīha ḳāf* "a word containing a *ḳāf*, *kiṭṭ-an madhā-li* "a cat which I have lost", *waḳt-an tudhkar* at the moment when your name is mentioned".

C. *Prepositions*

The word *matāᶜ/mitāᶜ* is used as a preposition to introduce, analytically, the determinative complement (noun or pronoun) when direct connexion (*iḍāfa*) would be awkward. Between two nouns, the shortened form *mata/mité* (written متى) is found. The preposition *maᶜ-* is used to express a meaning corresponding to our verb "to have"; before personal suffixes with an initial vowel, it becomes *māᶜ-*: *māᶜu ḳiṭāᶜ* "he has money". The preposition *dh* which one meets fairly frequently in Toledan texts, is merely the transcription of the Romance *de*.

Grammatical link-words: The following should be noted: *ashḥāl*? "how much?", *baḥāl* "as", *dhāba* "now", *ḥurma f-ash* "for what reason?", *makkaī*, "at all events, at least", *yaddā* "also, equally" (the classical *ayḍan*), *niᶜma, saraf, akdās* "very, many" *shuway* "a little", *fawāt* "late", *ikkān* "if" (for *inkān*), *yā-ᶜalā* .... "would to God that ...." (*utinam*).

D. *Vocabulary*

Attention will only be drawn to the following: *duḳām* "mouth"; *udjdi* "face"; plur. *ḳiṭāᶜ* "coins, minted silver"; *wild* "father"; *muḳārib* "poor, bad"; *akḥal* "black".

Bibliography: A) *Texts*: De Gunzburg, *Le Divan d'Ibn Quzman*, fasc. I (the only one which has appeared): photographic reproduction of the *unicum*, Berlin 1896; Nykl, *El Cancionero de Aben Quzman*, Madrid 1933 (-the preceding text transliterated in Roman characters, with the translation of a selection of *zadjal*s; see review, in *Hesp.*, 1933, 165). Schiaparelli, *Vocabulista in Arabico*, Florence 1871; Pedro de Alcala, *Arte para ligeramente saber la lengua arauiga-Vocabulista arauigo en letra castellana*, Granada 1505 (photographic reproduction issued by the *Hispanic Society of America*, New York 1928; a re-issue, partially corrected of the first edition by Paul de Lagarde, *Petri Hispani de Lingua Arabica libri duo*, Göttingen 1883); Martin de Ayala, *Doctrina, en lengua arauiga y castellana*, Valencia 1566 (reproduction in photogravure by Roque Chabas, Valencia 1911). The Arabic Ms. No. 3 (1389) of the Fagnan catalogue of the Bibliothèque-Musée d'Alger shows that it consists of a translation, in Spanish Arabic, by a certain cleric Bartolome Dorador, at Guadix, of a Castilian text written in 1554 by M. de Ayala, then Bishop of Guadix; Yafil, *Madjmūᶜ al-aghānī wa 'l-alḥān min kalām-al-Andalus*, Algiers, n.d.

(G. S. COLIN)

ANDARĀB "between the waters", a frequent toponymic in Iranian countries.

(1) A district in northern Afg͟hānistān watered by the river Andarāb and its tributary Kāsān, al-Iṣṭak͟hrī 279 (Andarāba). Its present centre is Banū, see Burhān Kūsk͟hakī, *Ḳattag͟hān wa-Badak͟hs͟hān*, Russian transl., Tashkent 1926, 28-34. The K͟hāwak pass connects it with the silver-mines of Pand͟jhīr (Pand͟js͟hīr). The mint of Andarāb was used by several dynasties, and especially by the local Abū Dāwūdids (coins 264-310/877-922), see R. Vasmer in *Wien. Num. Zeit.*, 1924, 48-63. The rulers of Andarāb bore the title of *shahrsalēr*. See *Ḥudūd al-ʿĀlam*, 109, 341; Le Strange, 427.

(2) A town (Andarāba) near Marw in which Sultan Sand͟jar had a castle built, see Barthold, *Istoriya oros͟heniya Turkestana*, 1914, 63.

(3) A place in Arrān, at one day's march from Bardaʿa, al-Iṣṭak͟hrī 182, probably identical with the present-day Lambarān on the K͟hačēn river, which flows to the south of the Terter.

(4) According to the *Nuzhat al-Ḳulūb*, 223, a place on the river of Ardabīl (now Balīk͟hlī-su), where it flows north of Mt. Sawalān above its junction with the Ahar river. (V. Minorsky)

ANDARŪN [see enderūn].

ANDI. The term "Andi peoples" embraces eight small Ibero-Caucasian Muslim peoples, some 50,000 in number, ethnically akin to but linguistically distinct from the Awar [*q.v.*]. They live in the basin of the Koysu of Andi, which runs from north to south across the mountainous western portion of the Soviet Autonomous Republic of Dāg͟histān [*q.v.*].

The group comprises: (1) the Andi proper, numbering 8,986 in 1933, about 10,000 in 1954; (2) Ak͟hwak͟h (or Ačwado); 4,610 in 1933; (3) Bagulal (or Kvanada), 3,637 in 1933; (4) Botlik͟h, 1,864 in 1933; (5) Godoberi, 1,500 in 1946; (6) Čamalal, 5,101 in 1933, about 7,000 in 1954; (7) Karata (or Kirdī-Kalal), 6,235 in 1939; (6) Tindi (or Tindal, Ideri), 4,777 in 1933.

The Andi peoples were converted to Islam by the Awar between the 13th and the 15th centuries, and are, like them, Sunnīs of the S͟hāfiʿite school. Each Andi people has its own language, belonging to the Awar-Ando-Dido group of the Dāg͟histān branch of the Ibero-Caucasian languages, differing both from the language of the neighbouring people and from Awar; only the following peoples are able to understand the language of each other: Karata-Ak͟hwak͟h, Bagulal-Tindi, and Godoberi-Botlik͟h. No language of the Andi group is fixed by writing, the Andi using Awar, or less commonly Russian, as the language of administration and of education. Bilingualism (Awar and the local tongue) is general. On the eve of the 1918 Revolution Andi still had a pre-feudal system, and had never formed or belonged to a principality (despite the attempts of the Awar K͟hānate to subdue the Botlik͟h and the Ak͟hwak͟h in the 17th-18th centuries). They formed clans or "free societies", some of which combined as "federations". Each clan was governed by the assembly (*d͟jamāʿa*) of the *uzden* (free peasants). Women had more freedom than among the other Dāg͟histān peoples (absence of the *čadra* and of polygamy). Before 1918, the economy of the Andi was linked with Čečnya, which imposed its authority on them [see čečen], and with Central Causasia. To-day, especially since the suppression of the Soviet Republic of Čečeno-Ingus͟hen in 1945, they incline politically and culturally towards the Awar, and constitute with the latter, the Dido [*q.v.*], and the Arči [*q.v.*], a single "Awar nation". The economy of the Andi peoples is still of the traditional type—based on sheep-breeding on the seasonal migration system, cultivation on the terrace system, and the existence of a skilled body of artisans. The *aul* of Botlik͟h is an important market in the mountainous part of Dāg͟histān.

(H. Carrère d'Encausse)

ANDID͟JĀN, town in Farg͟hāna, 40 43° north, 72 25° east, on the left of the upper Jaxartes (Sīr Daryā). In the 4th/10th century the town—then known as Anduk(g)ān—was under the rule of the Ḳarluḳs and later under their Ḳarak͟hānid rulers; in the 11th century it was under the Sald͟jūḳs (Yāḳūt, Cairo ed., i, 347). In the 12th century the town is mentioned as the centre of Farg͟hāna (cf. *Zap. Imp. Russk. geogr. ob-va xxix*, 72). Apparently the town suffered greatly from the Mongol raids and had to be rebuilt towards the end of the 13th century under the Čag͟hatay K͟hāns Kaydū and Duwā (Ḥamd Allāh Mustawfī, 246). Since then the place has been inhabited almost exclusively by Turks whose separate tribes apparently settled in different quarters of the town (Barthold, *Vorlesungen*, 221 following "the Anonym of Iskandar"). Their language became the model for the whole of Farg͟hāna. It was used by ʿAlī S͟hīr Nawāʾī (according to the *Bābur-nāma*, Kazan 1857, 3). Andid͟jān remained the capital of Farg͟hāna and the centre of trade with Kās͟hg͟har throughout the 14th and 15th centuries. In the 15th century it became the capital of the K͟hānate of K͟hūḳand [*q.v.*] and continued to be an important market for agricultural products.

In 1875, when the Khanate was subjected, it was conquered by the Russians (Russian form of the name: Andižan). At that time it had 30,620 inhabitants who lived largely by agriculture and horticulture. Since then, petroleum fields and iron mines have been opened in the district. On the 17th and 18th of May 1898 a national-religious rising under the *īs͟hān* [*q.v.*] Madalī from Miñ Tepe (in the Margilān district) which Soviet historians attribute entirely to social motives, was put down after much bloodshed. (cf. such Soviet literature as *Revolyutsiya v Sredney Azii*, i, Tas͟hkent 1928, in which: Sang-zāda: *K 30-letiyu Andižanskogo vosstaniya 1898 g.*; E. G. Fëdorov, *Očerki natsional'no-osvoboditel'nogo dviženiya v Sredney Azii*, Tas͟hkent 1925; K. Ramzin, *Revolyuciya v Sredney Azii v obrazakh i kartinakh*, Moscow 1928). In 1902 the town lost 4500 inhabitants (there were 49,682 in 1900) in an earthquake (F. N. Černyšëv, etc., *Andižanskoe zemletryasenie 1902 g.*,

St. Petersburg 1914). After the suppression of the Basmači [*q.v.*] rising (since 1916) Andidjān became part of the Soviet Republic Uzbekistān in 1924 (number of inhabitants in 1939: 83,700; partly Russian) and it is now the centre of a separate district (since 6 March 1941; 3,800 sqkm.) and the centre of an important cotton-growing area. Since 1937/38 there have been petroleum finds in the area (comp. W. Leimbach: *Die Sowjetunion*, Stuttgart 1950, 340 f., with map). Today the town has a teachers' training college, an agricultural college a training college for women, an Uzbek theatre, a regional museum etc.

Kostenko, *Turkestanskiy kray*, St. Petersburg 1880. (B. SPULER)

ANDJUMAN, a Persian word already in frequent use in the *Shāh-nāma* of Firdawsi (5th/11th century) in the sense of "meeting, assembly, army". In modern times, it denoted primarily religious or confessional associations; then, at the beginning of the 20th century, at the time of the establishment of the parliamentary régime in Irān, political groups. One of the most celebrated of these groups was the *andjuman-i millī* ("national club") of Tabrīz, founded 1 Ramaḍān 1324/17 December 1906, by the leaders of the constitutional movement; other groups, moved by the same liberal tendencies, were then organised in the principal provincial towns [see IRĀN]. Later, other *andjumans* were set up by Persians in Istanbul and Bombay, and in India by the inhabitants of those parts. To-day, the term is applied primarily to learned or professional societies: the *andjuman-i adabī-i Īrān* ("Persian Literary Society" preceded the foundation of the Farhangistān-i Īrān ("Iranian Academy") in 1355/1936; since 1346/1926, the *andjuman-i āthār-i millī* ("Committee for National Monuments") has published scholarly editions of old texts (notably the works in Persian attributed to Avicenna). More recently, this term is also used for local associations, for example *andjuman-i Khurāsānīhā* ("Association of the People of Khurāsān resident in Tehran").

Bibliography: *As. Fr. B.*, May 1908, 175-6; *RMM* (National Club of Tabriz), May 1907, 1-9; August, 116-7; January 1908, 85, 161; March, 597; May, 167; Sept. 745; Oct. 291; Nov. 534; Women's Club: August 1905, 145; May 1907, 311, 379; Nov. 569; Muslim Associations of India: Nov. 1906, 77-8; Nov.-Dec. 1907, 579; Jan. 1908, 172; March 600). (H. MASSÉ)

The term is also used in Turkey, where it is pronounced *Endjümen*. In 1267/1851 the first modern academy of letters and sciences in the Middle East was created in Istanbul, under the name of *Endjümen-i Dānish*. Inspired by Aḥmed Djewdet Pasha [*q.v.*], it was modelled on the French Academy, with forty Turkish members and a number of corresponding members, including such European orientalists as Hammer, Bianchi, and Redhouse. Its programme included the encouragement of the letters and sciences in Turkey and the advancement of the Turkish language. The Academy was first mooted at the Council of Education (*Medjlis-i Maʿārif*) in 1261/1845, and was formally authorised by an *irāde* of 27 Radjab 1267/26 May 1851. It was publicly inaugurated on 19 Ramaḍān 1267-18 July 1851, with a speech by Muṣṭafā Reshīd Pasha, indicating the part the academy was to play in the renovation of Turkey. Its work was however impeded by the political instability of the time, and it petered out in 1279/1862 without having accomplished much more than the sponsorship of a few books, which included the Ottoman Grammar of Djewdet and Fuʾād Pashas, part of the history of Djewdet Pasha and his Turkish translation of the Prolegomena of Ibn Khaldūn. After the revolution of 1908 a number of learned societies appeared, the most important of which was the Ottoman Historical Society (*Taʾrīkh-i ʿOthmānī Endjümeni*), founded in 1911.

The term *Endjümen* was also used in Turkey for various parliamentary and administrative committees, for the standing provincial and municipal committees, and for certain educational committees operating under the Ministry of Education. Such were the *Endjümen-i Teftīsh we-Muʿāyene*, (established 1299/1882, and the provincial and local educational committees (*Maʿārif Endjümeni*) established in 1328/1910 to initiate and supervise elementary education.—The word was also used for certain clubs founded on the European model, the first of which appears to have been the *Endjümen-i Ülfet*, founded in Istanbul in 1287/1870. In recent yars it has been replaced in most contexts by words of Western or Turkish origin.

In India and Pakistan there have been and are several *andjumans* in different fields; the two most important, influential, and enduring are:

(1) The *Andjuman-i Taraḳḳi-i Urdū* which was founded in 1913 within the scientific section of the *Mohammadan Educational Conference* (itself established by Sir Sayyid Aḥmad Khān) with Sir Thomas Arnold and Muḥammad Shiblī Nuʿmānī as its first president and secretary respectively. Its aims were to defend the Urdū language against Hindī as the *lingua franca* of India, and to develop and enrich it. Under its impulse and auspices books were written in Urdū and various others were translated from the English. In 1912 the *Andjuman* moved its headquarters from Aligarh to Awrangābād (Deccan) since when it ha been under the able and zealous secretaryship of Mawlawī ʿAbd al-Ḥaḳḳ. In its new seat, where it was supported by the Ḥaydarābād State, the *Andjuman* showed vigorous activity not only in writing and editing Urdū works and classics but also in translating from the English (some translations were also made from the French, Arabic and Persian), works on history, philosophy, science and others of general interest. The *Andjuman*, thus, supplemented the work of the ʿUthmāniyya University (established 1918) which, in pursuance of its programme of giving all instruction in Urdū, concentrated on translating texts rather than general

works. But, besides issuing a learned quarterly called "Urdū" (which still continues) and another entitled "Science", and attempting to find means of improving Urdū script and print, perhaps the most important pioneering work has been the publication of the lists of translations of scientific, philosophical and professional technical terms and the issuing of English-Urdū and Urdū-English Dictionaries, modelled on the Oxford Concise Dictionary of English. In 1936, the *Andjuman* moved to Delhi and in 1948 to Karachi, where an Urdū College has been established giving all instruction (including modern science) in Urdū and hoping to become a University.

(2) The *Andjuman-i Ḥimāyat-i Islām* of Lahore, founded in 1884 under Sir Sayyid Aḥmad Khān's inspiration of spreading Western education among Muslims and working for their social welfare, established in 1912 the Islāmiyya College at Lahore (and since the creation of Pakistan, has acquired another, a formerly Hindu College), where, like Aligarh, Western education was given along with the compulsory instruction of Islamic theology. The *Andjuman* has played, through its institutions and its leaders, an important role in the awakening of the Muslims of the Panjāb. Besides High Schools for boys and girls, the *Andjuman* runs an Islāmiyya College for Women, an Industrial School, a Ṭibbiyya College and Dispensary (on traditional lines but with some blend of modern medicine), an orphanage etc., and had a missionary school (Ishāʿat-i Islām College). It also issues a weekly paper called *Ḥimāyat-i Islām* and has its own press.

Bausani, also *Taʾrīkh-i Adab-i Urdū* by Rām Babū Saksena (Urdū translation by Muḥammad ʿAsfarī, Nawalkishore, Lucknow 1929, 392-4). For (2) see *Pakistan* by Dr. Gamāl-Eddine Heyworth-Dunne, Cairo 1952, 38.

(F. Rahman)

ANDKHŪY, in Yāḳūt, i, 372, Andakhūdh, also written Addakhūd and al-Nakhūd, name of a town in Afghānistan situated in the northwestern province of Mazār-i Sharīf. Located on the steppes sloping north some 50 kilometers to the Amū Daryā (Oxus) river, this town of about 25,000 people is on the perennial Andkhūy river and along the motor road which joins Harāt, Mazār-i Sharīf and Kābūl. Its modern fame is as a leading center of the *ḳaraḳul* (lambskin) trade. The single structure of architectural interest and considerable antiquity is the domed shrine of Bābā Walī Ṣāhib, a local Moslem saint whose proper name may have been Bābā Shukr Allāh Abdāl.

ANEIZA [see ʿUnayza].

ANFĀ the old name of Casablanca (Ar. al-Dār al-Bayḍāʾ, dial.: Ḍār l-Bēḍa), often written as Anafe in the Portuguese chronicles. The word, according to E. Laoust (*REI*, 1939) is a variant of the Berber *afa* «summit, hillock», which induces one to place the early site on the hill now occupied by the residential quarter called «upper Anfa». Marmol attributes the foundation to the Carthaginians, Leo to the Romans, but neither theory is supported by any text or archaeological remains. Al-Zayyānī ascribes it to the Zānāta *amīrs*, and places it at the end of the 1st/7th century, but does not quote his sources. Al-Idrīsī mentions the port, already busy with the export of cereals. Nothing is known of the part played by the town during the episode of the Baraghwāṭā. Under the Marīnids, it figures as the capital of the province of Tāmasnā; it had fortifications, a governor, and a *ḳāḍī*; Abu 'l-Ḥasan built a *madrasa* there. In the anarchy which accompanied the decline of the dynasty, the town became virtually independent, and formed a small corsair republic. The Portuguese decided to terminate the activities of the corsairs, and in 1468 or 1469, during the reign of Alfonso V, an expedition led by the *infante* D. Fernando captured Anfā, which had been evacuated by its inhabitants. The Portuguese destroyed the town, razed the ramparts and re-embarked. Several authors state that they returned in 1515 and occupied the town until the middle of the 18th century. This is a legend, probably having its origin in the plan actually conceived by the Portuguese in 1515 of reoccupying Anfā and building there a stronghold when they had completed that of al-Maʿmūra. Their setback at the latter place forced them to abandon their plan. Anfā remained deserted and in ruins until its reconstruction by the sultan Sīdī Muḥammad b. ʿAbd Allāh, in the 18th century, when it assumed the name of al-Dār al-Bayḍāʾ [*q.v.*].

ANGELS [see Malāʾika].

ANGORA [see Anḳara].

ANHALWĀRA, in Arabic and Persian literature nahrwāla, modern Paṭan (pop., 1951 census, 43,044), situated 20° 51′ N, 72° 11′ E on the left bank of the Saraswatī in the Miḥsāna district of Bombay State, was the headquarters city of the Muslim *wilāyat* of Gudjarāt from 699/1299 to 816-817/1413-1414 when Aḥmad Shāh, grandson of Muẓaffar Khān, the first of the independent ṣulṭāns of Gudjarāt, made Aḥmadābād his capital.

History. Hindu and Jain tradition ascribes the foundation of Anhalwāra to the Cāvaḍā ruler Vanarāja in either 128/746 or 148/765 (see K. M. Munshī, *The Glory that was Gurjaradeśa*, II, Bombay, 1944). Capital of the Chaulukya-Solānkī dynasty from the beginning of the 4th/middle of the 10th century, Anhalwāra was abandoned to Maḥmūd of Ghaznīn by Bhīmadeva in 416/1025, but Maḥmūd, intent upon Somnāth, paused there only to replenish his supplies. Although Ḳuṭb al-Dīn Aybak plundered the city in 593/1196-7, the definitive Muslim conquest by the forces of the ṣulṭān of Dihlī did not occur until 699/1299, when Anhalwāra, ruled then by the Chaulukya-Vāghelās, was sacked by Ulugh Khān and Nuṣrat Khān, generals of Ṣulṭān ʿAlāʾ al-Dīn Khaldjī. (See K. S. Lal, *History of the Khaljīs*, Allahābād, 1950, on the date of this conquest). For a century Anhalwāra remained within Dihlī's area of paramountcy. Under the descendants of the wālī Muẓaffar Khān, who formally proclaimed himself independent in 810/1407, Anhalwāra sank to a *djāgīr*; after Akbar's conquest of

Gudjarāt in 980/1572, it became the centre of the *sarkār* of Paṭṭan in the *ṣūba* of Gudjarāt. (See Āʾīn-i-Akbarī, ed. H. Blochmann, Calcutta, 1877).

Buildings. The Muslim remains at Anhalwāra date from the beginning of the 8th/14th century. The Ādīna or Djāmiʿ Masdjid, built of white marble c. 705/1305, was destroyed by the Mahrattas in the 12th/18th century and was used as a quarry for the modern town walls. The Gumada und Shaykh Djodh masdjids still stand, but the most magnificent Muslim construction now at Anhalwāra is the Khān Sarowar, "a really noble sheet of water", 1228 by 1273 feet, given its present form by Akbar's foster brother Mīrzā ʿAzīz Kōka between 997/1589 and 1002/1594.

Burgess, *Archaeological Antiquities of Northern Gujarat*, Archaeological Survey of Western India, IX, 1903. *Bombay Gazetteer*, VII, (Baroda), Bombay 1883. M.S. Commissariat, *A History of Gujarat*, London 1938.

(P. HARDY)

ĀNĪ, ancient Armenian capital, whose ruins lie on the right bank of the Arpa-Čay (called by the Armenians Akhuryan) at about 20 miles from the point where that river joins the Araxes. A suggestion has been made that the town may owe its name to a temple of the Iranian goddess Anāhita (the Greek Anaïtis). The site was inhabited in the pre-Christian period, for pagan tombs have been found in the immediate vicinity of the town. As a fortress Ānī is mentioned as early as the 5th century A.D. Its foundation was conditioned by its position between the ravine of Tsalkotzadzor, through which a stream coming from the hills of Aladja flows towards the Arpa-Čay, and the steep bank of that river. In the ensuing centuries the princely house of the Kamsarakan (connected with the Arshakids) had a castle at Ānī, and the foundations of this building erected of stone blocks without mortar right on the rock, have been discovered. The oldest portion of the structure seems to be a little church which may have been built before the 7th century castle, and later used by the Kamsarakan as a house-chapel.

From the 8th century onward the district of Ānī, like the rest of Armenia, was under the suzerainty of the caliphs. During this period the dynasty of the Bagratids succeeded in gradually consolidating their possessions and establishing direct relations with the caliphs. In A.D. 887 the Bagratid Ashot, "prince of the princes of Armenia and Georgia", was proclaimed king by the nobles of his country and confirmed in this dignity by the caliph. The son of this first king, Smbat (called by Arabic authors Sanbāṭ b. Ashūṭ), was crucified in the year 914 by the governor Yūsuf b. Abi 'l-Sādj, whose act is stigmatised as tyranny and rebellion against God and His Prophet" by Ibn Ḥawḳal, 252. Even under Smbat the kingdom of the Bagratids is said to have included the whole region from Dwin (Arab. Dabīl) to Bardhaʿa reaching southwards as far as the frontiers of Mesopotamia (al-Djazīra; thus al-Iṣṭakhrī, 188, 194). The son of the murdered king, "the Iron" Ashot, succeeded, partly with Byzantine assistance, in reconquering his kingdom; as ruler of Armenia he bore the Persian title *shāhānshāh* (king of kings) which had already been conferred on his predecessor and rival, Ashot, son of Shapuh, by Sabuk, the successor of Yūsuf.

In the first half of the 9th century the Bagratid Ashot Msaker ('the meat-eater') bought the district of Ānī from the Kamsarakan; but only under Ashot III (961-77) did Ānī become the royal capital. The wall which is still extant was built by Smbat II (977-89); the site of an older wall erected in 964 has been fixed by the excavations of 1893, and a comparison of the areas enclosed by the two walls indicates the rapid growth of the population. At a later period, town life overstepped the comparatively narrow space within the walls. The Bagratids built several bridges over the Arpa-Čay thus enabling the trade between Trebizond and Persia to take the shorter route through Ānī instead of passing through Dwin. The zenith of the Bagratids and their capital was reached under Gagik I (990-1020); from 993 onwards Ānī was the residence of the Catholicos of Armenia. As numerous inscriptions prove, Gagik retained the Persian title of *shāhānshāh* which also appears in an Armenian form (*arkʿayitz arkʿai*); he was also styled "king of the Armenians and Georgians". The remains of a church erected by Gagik in 1001 were excavated in 1905 and 1906; among them was found a statue of the king, with the model of the temple in his hand, and wearing a Muslim turban; the same headgear is also found in a relief portrait of his predecessor Smbat II, preserved in the monastery of Halbat.

Under Gagik's successors the kingdom rapidly decayed and in 1044 it became a part of the Byzantine empire but the growth of the town of Ānī was further encouraged by the Byzantine governors (*catapans*): an Armenian inscription ascribes to the catapan Aaron the erection of a magnificent aqueduct conducting water from the hills of Aladja to the town.

The Greek rule was ended by the sultan Alp Arslan who conquered and destroyed Ānī in the year 1064; according to Ibn al-Athīr, x, 27, the town possessed at that time 500 churches. In 1072, a year after the defeat of the emperor Romanos Diogenes, the sultan sold Ānī to the Muslim dynasty of the Shaddādids [*q.v.*], and down to the end of the 12th century the town remained (apart from a few interruptions) the residence of a branch of that family. At that period the town had two mosques, one of which collapsed during the second half of the 16th century; the other, which had survived, was used (since 1907) as a museum for the objects discovered during the excavations. There are also Christian buildings belonging to the same period; the Shaddādids acted as beneficent rulers even towards their Christian subjects, and being related by marriage with the Bagratids, they were recognised by the Christian population as native and lawful kings. The walls of the town were repaired and furnished with some towers during their rule.

Ānī was for the first time conquered by the Georgians in 1124, under David II, who laid the foundation of the power of the Georgian kings; the town was given as a fief to the Armenian family of the Zakʿarids, (in Georgian: *Mkhargrdzeli* = Longimani), who extended the walls of the town so as to reach the steep banks of the Arpa-Čay. The Armenian tradition ignores the fact that the Georgian rulers (like their Greek predecessors) favoured the Greek-Orthodox tendency, which accordingly predominated in the architecture of the period. There was no religious persecution of Muslims during this period, just as there had been no persecution of Christians under the Shaddādids; a Muslim contemporary, whose gloss is found in Ibn Ḥawḳal, 242, confirms that the Georgian king protected Islam against all injury, and made no distinction between Muslim and Georgian. Probably in connection with the

foundation of the Trebizond Empire (1204), Ānī became an important centre of international trade; see A. Manandian, *O torgovle i gorodakh Armenii*[2], Erevan 1954, 278.

Ānī was besieged unsuccessfully by the Khwārizmshāh Djalāl al-Dīn in 1226, and conquered by the Mongols in 1239; but even after this conquest the town remained for a time in the possession of the Zakʿarids; an inscription on the main gate shows that at a later period it was considered the 'private domain' (*khāṣṣ-indjū*) of the Mongol rulers of Persia; but it never regained its former importance. According to tradition, Ānī was finally destroyed by an earthquake in the year 1319; but both inscriptions and coins of a later date have been found. A variety of copper coins struck at Ānī by the Īlkhān Sulaymān (1339-1344) is called by the Turks "monkey-coin" (*maymūn sikkesi*), the coins bearing the image of a hairy figure. Coins bearing the name of Ānī were struck as late as the 14th century by the Djalāʾir, and even in the 15th century by the Ḳara Ḳoyunlu, though actually the mint must have stood outside the town, perhaps in the fortress of Maghazberd (less than 2 miles from Ānī). The excavations have shown that, after the decay of the palaces and churches, a rude and miserable population had built their dwellings on the ruins. At the time of Ker Porter's visit (November 1817) it was possible to distinguish these houses and their separate rooms, as well as the streets of the later period, which are but 12-14 feet wide. Later the name of Ānī was preserved only by a Muslim settlement standing near the ruins. After the war of 1877-8 Ānī was incorporated in Russia, but restored to Turkey by the treaty of 1921. It is now in the *ḳaḍā* of Arpaçay in the *wilāyet* of Kars, and has a population of ca. 350.

Bibliography: Accounts of the history of Ānī are chiefly found in Armenian sources, especially in Stephan Asolik, a contemporary of king Gagik I. The Arabic and Persian accounts are extremely scanty, and the town is not mentioned by the Arabic geographers of the 9th and 10th centuries; Yāḳūt, i, 70, gives Ānī a single line; Ḥamd Allāh Mustawfī, *Nuzhat* 93, states merely that the district has a cold climate and produces much corn and little fruit. The only Islamic source containing firsthand material on Ānī in the 6th/12th century is al-Fāriḳī's *Taʾrīkh Mayyāfāriḳīn*, Br. Mus., Or. 5803 and Or. 6310; see also the didactic chronicle by the local scholar Burhān al-Dīn Anawī (*Anīs al-Ḳulūb*, written in Persian in 608/1211, and described by F. Köprülü in *Bell.*, 1943, 379-521). Cf. also Ibn al-Athīr, x, 27 (not quite accurate). See Minorsky, *Studies in Caucasian History* 1953, 79-106.

The ruins were first visited in 1693 by Gemelli-Carreri (*Collection de tous les voyages faits autour du monde*, ii, Paris 1788, 94) and described at length in 1817 by Ker Porter (*Travels*, i, London 1821, 172-5). In 1839 plans of the town were sketched by Texier (*Voyages en Arménie*, Paris 1842, *Atlas*, plate no. 14) and in 1844 by Abich (cf. M. Brosset, *Rapports sur un voyage dans la Géorgie et dans l'Arménie*, St. Petersburg 1851, *Atlas*, plate no. 23 and Brosset, *Les ruines d'Ani*, St. Petersburg 1860, *Atlas*, plate no. 30). The Christian monuments were described by Muravyev, *Gruziya i Armeniya*, St. Petersburg 1848; for the Muslim inscriptions see Khanykov (in 1848), cf. *Mélanges Asiatiques*, i, 70 ff. and M. Brosset, *Rapports etc.*, 3-*e rapport*, 121-50); the *Album* compiled by Kästner (1850) contains pictures of architectural monuments on 36 leaves, and a collection of Armenian, Arabic, Persian and Georgian inscriptions on 11 leaves (cp. Brosset, *Les ruines d'Ani*, 10-63). Among Armenian writers Nerses Sarkisyan and Sarkis Djalalyantz collected Armenian inscriptions, and their material was used in Alishan's historical work on the history of the town (Venice 1855, in Armenian, cp. Brosset in *Mélanges Asiatiques*, iv, 392-412), now obsolete.

Russian excavations began in 1892 and were carried on systematically by Prof. N. Y. Marr in 1904-1917. Their results were published in numerous reports in Russian periodicals and in a special series (*Aniyskaya seriya*) containing guide books and studies by Marr, J. Orbeli, Barthold etc. In more detail see N. Marr, *Ani. Kniznaya istoriya goroda i raskopki*, Moscow 1934, and the architectural studies by Tʿoros Tʿoramanian (in Armenian), Erevan 1942-4. V. and I. Kratchkovsky, *Iz arabskoy epigrafiki v Ani*, in the presentation volume to N. Y. Marr, Moscow 1935, 671-93. (W. Barthold-[V. Minorsky])

ANIMALS [see ḤAYAWĀN[.

ANĪS, the pen-name of Mīr Babar ʿAlī, Urdu poet of Lucknow, India, who was noted chiefly as a writer of *marthiyas* or elegies on the tragic fate of Ḥusayn b. ʿAlī and other martyrs of Karbalā. He was born at Fyzabad (Fayḍābād) in 1216/1801 or 1217/1802; but, in his early manhood, migrated to Lucknow, where he enjoyed the patronage of the Shīʿite rulers of Oudh and their nobles. When the kingdom of Oudh was annexed by the British in 1856, he left Lucknow and visited many other places like Patna, Benares, Allahabad and Hyderabad-Deccan; but ultimately returned to his favourite city in his old age and died there in 1291/1874.

The chief merits of his poetry lie in the beauty and appropriateness of his diction, the perfection of his art, his remarkable powers of description, his successful delineation of character and the striking use of rhetorical figures. The emotional effect of his *marthiyas* was heightened by the forceful and dramatic manner in which he recited them in the presence of large audiences. In his special branch of poetry, Anīs had a serious rival in the person of his contemporary Dabīr [*q.v.*]. Each poet had thousands of enthusiastic partisans, who maintained that he was superior to his rival. The citizens of Lucknow were thus divided into two camps, the Anīsites and the Dabīrites, each extolling the qualities of its own favourite poet. Opinion is still divided on their relative merits; but there is general agreement that they share the honour of raising the Urdu *marthiya* to its greatest heights and that their cultivation of the poetic art undoubtedly contributed to the refinement and enrichment of the Urdu language.

The works of Anīs were published under the title, *Marāthī Anīs*, in four volumes at Lucknow in 1876, and have been reissued several times since then. There is another edition in three volumes by S. ʿAlī Ḥaydar Ṭabāṭabāʾī (Badāyūn 1921-30). A good idea of his writings may also be obtained from *Wāḳiʿāt-i Karbalā*, a volume of selections so arranged by S. Manẓūr ʿAlī Kākawrawī as to make a single connected story (2nd ed., Lucknow 1342).

ʿANḲĀʾ (often followed by *mughrib* as an epithet or in *iḍāfa*) a fabulous bird approximating to the phoenix, which was also located by the Greeks in the deserts of Arabia. The belief in this creature is of long-standing among the Arabs, who connect it with the Aṣḥāb al-Rass [*q.v.*], but it received its confirmation in a *ḥadīth* reported by Ibn ʿAbbās (al-Masʿūdī, *Murūdj*, iv, 19 ff.), which states that, created by God, the *ʿanḳāʾ*, in the beginning endowed with all perfections, had become a plague; one of the prophets of the "Interval" (*fatra*), either Khālid b. Sinān or Ḥanẓala b. Ṣafwān, is credited with having put an end to the havoc wrought by this species of bird. After Islam, the *ʿanḳāʾ* was definitely assimilated with the *sīmurgh*, which plays some part in Iranian mythology, and probably with the Indian *garuda*, the mount of Vishnu; thus a Shīʿite group, the Shumayṭiyya (see al-Shahrastānī, in the margin of Ibn Ḥazm, ii, 3), adopted it and included it among the attributes of the Hidden Imām. Some authors give precise descriptions of this bird, although recognizing that it is extinct, but others claim that the Fāṭimids possessed specimens of it in their zoological gardens; there is no doubt that it is a type of heron.

Bibliography: Djāḥiẓ, *Ḥayawān*², vii, 102 ff. and index; idem, *Tarbīʿ* (Pellat), index; Thaʿālibī, *Thimār*, 356-7; *Rasāʾil Ikhwān al-Ṣafāʾ*, ii, 190-1; Maydānī, *Amthāl*, Cairo 1352, i, 210; Ḳazwīnī (Wüstenfeld), i, 419-20; Damīrī, s.v. (Ch. Pellat)

ʿANKABŪT (A.), the spider. Al-Ḳazwīnī and al-Damīrī mention several species, the most dangerous of which is the poisonous tarantula, *al-Rutailāʾ* or *al-Ruthailāʾ*. Al-Damīrī also describes a fieldspider of reddish colour with fine hair on its body; at the head it has four claws with which it bites; it digs a nest in the ground, and seizes its prey by night. The weaving spiders make their webs according to mathematical rules; according to some the male spins the warp and the female the woof; according to others the female only is capable of making a web; as material they use spittle. When the web is finished the spider sits down in a corner waiting for a fly to enter the web, and pounces on it at once. Others suspend themselves on threads, others sit motionless on the ground and catch their prey at a jump; after rendering it helpless by entangling it in their web they carry it off to their lair and suck its blood. According to al-Djāḥiz the spiders young are among the most wonderful of existing things because they are able to spin without being taught. The spider lays eggs out of which come small worms which, after three days, change into spiders; the act of copulation lasts a very long time, Damīrī describes how the male approaches the female.—Spiders webs are applied to external wounds to stay the flow of blood; they are also used for polishing cornished silver. The spiders themselves when pounded, are said to be a good remedy against mucous fever etc.—According to the tradition a spider once saved Muḥammad from a great danger. When during the Hidjra he and Abū Bakr had sought refuge in a cave the Ḳuraish who pursued him found a spider web in its opening. They therefore gave up the search thinking that no one could have entered the cave a short time previously. This and similar legends are founded on the fact that the spider makes its web with extraordinary rapidity.—*Sūrat al-ʿAnkabūt* is the title of sūra 29. See also asṭurlāb.

ANḲARA (Greek and Latin Ancyra, modern Greek Angora; known as Anḳira, Anḳūriyya and also as Ḳalʿat al-Salāsil, "fortress of the chains", to the Arab geographers; in Turkish times formerly Engüriye, Engüri, Engürü, forms which also occasionally appeared on coinage), town in the district of Galatia, in central Anatolia, capital of the Turkish Republic (at the same time of a *wilāyet*); 38° 55′ N, 32° 55′ E; 835 m. above sea level. It is situated near the northern edge of the central Anatolian steppe where three small rivers meet: the Bent Deresi or Hatip Suyu, the Incesu (Indje Su) and the Čubuḳ Suyu, which subsequently flow into the Saḳārya under the name of Anḳara [formerly Engürü] Suyu (or Čayl). It is at the foot and on the slopes of a mountain which lies north to south and rises towards the north, being crowned at its summit by an extensive castle. This summit is 978 m. above sea level and 110 m. above the valley of the neighbouring Hatip Deresi. The other side of the valley is flanked by a second hill, called Hlzlrllk (Khlḍlrllḳ).

Anḳara has probably always been a centre for the caravans going through Anatolia in all directions, and thus also a political centre. The old town—dating back to prehistoric times—was situated on the plateau of the castle hill; it gradually spread over the slope outside the fortifications and even to the western side of the plain at its foot. The original layout of the castle itself may well date back to the prehistoric period. In its present form it dates back to Byzantine days, and it was frequently extended and restored in Saldjūḳ times. Its walls contain many ancient remains. There are three distinct parts: the "outer castle" (Dlsh Ḳalʿe) which can be reached by the Ḥiṣār Ḳaplsl, whose walls encircle the castle to the south and to the west; the "inner castle" (Ič Ḳalʿe), a fairly regular rectangle; and, on the crest of the mountain to the north, the citadel, called Aḳ Ḳalʿe ("white castle").

Ancyra, at one time the capital of the Galatian tribe of the Tectosages, and later within the sphere of power of the Pontic King Mithridates, was finally incorporated into the Roman Empire in the year 25 B.C. It was then embellished with the buildings required by a Roman town. Of those which survive, the one deserving most mention is the temple of Roma and Augustus, erected on older foundations. On its walls we find the most famous of all antique inscriptions: the *Monumentum Ancyranum*, an account (in Latin and in Greek) given by the Emperor Augustus of his reign. In Christian times the temple was converted into a church; in Muslim times, the building was the seat of a Dervish saint, Ḥādjdjī Bayrām Walī, whose *türbe* and mosque stand beside the ruined temple. A column (Bilḳīs Minăresi) erected by Emperor Julian (or Jovian?) should also be mentioned. The foundations of a large Roman bath have recently been discovered on the road towards the north (to Čanklrl).

In the year A.D. 51 Ancyra was visited by St. Paul, who founded one of the oldest Christian communities there—to which he addressed his *Epistle to the Galatians*. Christianity survived in this town until the First World War.

In A.D. 620 Ancyra was taken by the Persian King Khusraw II Parwīz on his campaign against Asia Minor. After his defeat near Niniveh A.D. 627 he had to withdraw from the country—hence also from Ancyra. Subsequently Ancyra—capital of the Bukellarion theme—frequently suffered at the hands of Arab raiders. As early as 654, the Arabs held the town for a short space of time. In 806, the Caliph Hārūn al-Rashīd besieged and plundered the town; as did his son, the Caliph al-Muʿtaṣim, in 838. In 871 the town was plundered by the Paulicians of Thephrike (Diwrigi), and in 931 it was threatened by the Arabs of Ṭarsūs.

Ancyra came under Turkish supremacy after the Emperor Romanus IV was defeated by the Saldjūḳ Sultan Alp Arslan, near Malāzgerd, in 1071 (the exact date is not known—the city was still Byzantine in 1073). During the First Crusade, however, it was re-conquered for the Byzantine Emperor by Raymond of Toulouse in 1101. Soon afterwards (it is not known exactly when), the city reverted to the Turks: first the Saldjūḳs; then, in 1127, the Dānishmendids; and finally, after the death of the Dānishmendid Malik Muḥammad Ghāzī (1143), back to the Saldjūḳs. When the Rūm Saldjūḳ empire was divided up under Ḳılıdj Arslan II (1190), Anḳara went to his son Muḥyi 'l-Dīn Masʿūd. In 1204, however, it was taken from him by his brother Rukn al-Dīn Sulaymān Shāh, who re-unified the Rūm Saldjūḳ empire. The oldest dateable work of Rūm Saldjūḳ art is of the time of Prince Masʿūd (Safar 594/Dec. 1197-Jan. 1198), a wooden *minbar* in the so-called ʿAlāʾ al-Dīn mosque in the fortress of Anḳara.

After the death of the Sultan Kaykhusraw I in 1210, his son ʿAlāʾ al-Dīn Ḳayḳobād—revolting against his elder brother, the Sultan ʿIzz al-Dīn Kaykāwūs I—obtained the fortress of Anḳara. After a year's siege, however, the city had to surrender to the other brother and Kayḳobād was imprisoned in Malaṭya, whence he returned only after the death of Kayḳāwūs (in 1219) to succeed to the throne. His reign (1219-37) introduced the Golden Age of the Rūm Saldjūḳ Empire. It is commemorated by the "White Bridge" (Aḳ Köprü) over the Čubuḳ Suyu, of 619/1222, an hour's journey to the north-east of Anḳara. This bridge connects Anḳara with Beypazar and the west. It cannot be stated with any degree of certainty whether the beautiful bridge over the Ḳızıl Irmaḳ near Köprüköy (to the south-east of Anḳara) on the road to Ḳırshehir and Ḳayseri, the Çeşnigir Köprüsü, is of the same period. It bears no inscription but its name may well refer to the *amīr* Sayf al-Dīn Ayna Čāshnegīr who is repeatedly mentioned by Ibn Bībī, e.g. in connection with the handing over of Anḳara to Kaykāwūs I (Ibn Bībī, ed. Houtsma, index).

The large so-called Arslan-Khāne mosque, outside the gate to the fortress (which may be regarded as the main Friday Mosque for the area of the city lying outside the fortress), dates from the late Saldjūḳ period, when the empire had sunk to the position of a protectorate of the Mongol Ilkhān Empire of Iran. It is a mosque with wooden pillars and with open beam work, containing a beautiful wooden *minbar* which was donated by two brothers belonging to the Akhīs in the year 689/1290. It also contains a *miḥrāb* with beautiful faience facing. The Ḳızılbey Djāmiʿ is of roughly the same period. Its *minbar* bears an inscription of 699/1299-1300 mentioning a certain *amīr* Yaʿḳūb b. ʿAlī Shīr as donor. He was possibly a member of the Turkmen dynasty of the Germiyan-oghlu. Towards the end of the 13th century the Saldjūḳ rule appears to have been merely nominal, whilst other rulers made their influence felt in Anḳara, such as the Germiyanid Yaʿḳūb and the members of the Akhī fraternity [*q.v.*].

In the beginning of the 14th century, after the collapse of the empire of the Saldjūḳs of Rūm, Anḳara belonged to that part of Anatolia which was incorporated into the Mongol Ilkhān empire of Iran. There are coins made in Anḳara for the Ilkhāns from the year 703/1304 to 742/1342. There is also a Persian inscription of the Ilkhān Abū Saʿīd (over the entrance to the fortress) dated 730/1330, in which the taxes payable by the population are recorded (cf. W. Hinz, in *Bell.*, 1949, 745 ff.). The Ilkhān rule extended over the area towards the west, beyond Anḳara, as far as Siwri-ḥisār. After the collapse of the Ilkhān Empire, Anḳara belonged to the territory of the *amīr* (after 1341, Sultan) Eretna of Sīwās, and his descendants. It may be assumed, however, that the rule over Anḳara of both the Ilkhāns and the Eretnids, was merely one of military occupation and tax collection, whilst the actual government remained in the hands of rich merchants and craftsmen of the city who were able to exercise considerable influence through the Akhī organisation. Akhī Sharaf al-Dīn (d. 751/1350) appears to have been the most prominent personality. He made donations to the main mosque in Anḳara, the Arslan-Khāne mosque, and he lies buried in a *türbe* beside this mosque. In the inscription on his wooden sarcophagus (now in the ethnographical museum in Anḳara), he calls himself *akhī muʿaẓẓam*.

According to John Cantacuzenus (ed. Bonn, iii, 284), Anḳara is supposed to have been occupied for the first time by the Ottomans in 1354 under Süleymān, the son of Orkhan, but the Ottoman chronicles make no mention of this. This occupation, if it occured, can only have been a temporary one. It was not until the beginning of the reign of Murād I (762/1361) that Anḳara became Ottoman. The early chronicler Neshrī (ed. Taeschner, i, 52, ii, 80 (57) reports that Anḳara was at that time in the hands of the Akhīs, and that they handed it over to Murād Beg. Murād's rule in Anḳara in the year 763/1361-2 is proved by an inscription in the ʿAlāʾ al-Dīn mosque in the fortress. In the early days of Ottoman rule, the wealthy Akhī families seem to have retained some influence in Anḳara, as we can gather from inscriptions in the mosques they built (such as that of a certain Akhī Yaʿḳūb of 794/1391 and a certain Akhī Evran of 816/1433). Later on there is no mention of them.

On July 20th 1402, there took place, on the Čubuḳ Owasī, north of Anḳara, the battle in which Tīmūr defeated Bāyezīd I and took him prisoner. During the time of the subsequent fights between Bāyezīd's sons, Anḳara belonged to the area of Meḥmed Čelebi. On various occasions he had to defend the city against his brothers, in 1404 against ʿĪsā Čelebi, in 1406 against the *amīr* Süleymān. During the quarrels between Sultan Bāyezīd II and his brother Djem, the governor of Anḳara decided in favour of Djem in 1482, until Bāyezīd succeeded in conquering the city. During the reign of Aḥmed I, Anḳara became the centre of a revolt led by a native of the town, a robber chieftain by name of Ḳalender-

oghlu. This revolt spread over most of Anatolia (1607) until it was put down by the Grand Vizier Ḳuyudju Murād Pasha in 1608.

The most prominent figure in Ottoman Anḳara is Ḥādjdjī Bayrām Walī [*q.v.*] (753/1352 to 833/1429-30), the founder of the darwīsh order of the Bayrāmiyya. His *türbe* and the mosque belonging to it (an attractive building with a tiled roof and a flat wooden ceiling inside, built in the beginning of the 15th century) are close up against the ruins of the temple of Augustus.

There are a number of small and medium sized mosques of Ottoman times in Anḳara. Amongst these some are worthy of special mention, such as the ʿImāret Djāmiʿ (built in 831/1427-28 by a certain Ḳaradja Beg, perhaps the one killed in the battle of Varna in 848/1445) in the style of an ancient Ottoman mosque on a ⊥ shaped plan, and the mosque of Djenābī Aḥmed Pasha, also called Yeni or Kurshunlu Djāmiʿ. This was built in 973/1565-66 by Sinān, the greatest of Ottoman architects. It has one dome, and beside it stands the *türbe* of its founder (d. 969/1561-62; concerning mosque and *türbe* see Hikmet Turhan Dağlıoğlu and A. Saim Ülgen, in *Vakıflar Dergisi*, ii, 1942, 213-22; E. Egli, *Sinan, Der Baumeister osmanischer Glanzzeit*, Stuttgart [1954], 86-8). Other ancient buildings of Ottoman times which deserve a mention here, are the *khān* (Kurshunlu Khān, *waḳfiyye* of 1159-1746; see A. Galanti, ii, 133) and the *bedistān* beside it, which are halfway up the fortress hill. Both these were in ruins until recently, when they were restored for use as a museum of antiquities.

In Ottoman times, Anḳara was the capital of a *sandjaḳ* (*liwā*) of the *eyālet* of Anadolu. In the beginning it was at the same time the capital of the *eyālet*, until Kūtāhiya took over this function. Under the re-organisation of the internal government in the *tanẓīmat* times (law of 7 Djumādā II 1281/7 Nov. 1864), Anḳara became the capital of a *wilāyet* with the *sandjaḳ*s of Anḳara, Yozgad, Ḳïrshehir and Ḳayseri. The *sandjaḳ* of Anḳara had the following *ḳaḍā*s: Anḳara, Ayash, Bala, Zir, Beypazar, Djïbuḳābād, Haymana, Sifriḥiṣār, Mihalïcdjïḳ, Nallïhan, Yabanābād.

Anḳara is famous under the name by which it was formerly known in Europe, Angora, as the home of the beautiful white long-haired goats, which are bred all over central Anatolia. Their silky hair (mohair, Turk. *tiftik*) is a commodity in great demand.. The long-haired Angora ("Persian") cats and rabbits also enjoy considerable fame.

Since 1892, the town has been connected by railway with Ḥaydarpasha, opposite Istanbul. Before the First World War it was a small town; Cuinet gives 27,825 inhabitants for the time round about 1890, with a Christian minority of ca. 10%. Other reports about the number of inhabitants of Anḳara agree with this. The figure 70,000, given by Sāmī Bey Frāsherī, *Ḳāmūs al-Aʿlām*, i, 439, is undoubtedly exaggerated.

After the meeting of the National Congress at Sīwās in June 1919, that town remained for some months the centre of the revolutionary government. The seat of the government was moved to Anḳara in October, and Muṣṭafā Kemāl entered it on 27 Dec. 1919. On 13 Oct. 1923, by a decision of the Great National Assembly, Anḳara was declared the capital of Turkey. (Cf. Gazi Mustafa Kemal, *Nutuk*, i, 240, 372; G. Jäschke, in *WI*, 1924, 262 ff.). In view of its increased importance and growing population Anḳara underwent great and rapid changes after 1925. The town plan was designed by H. Jansen. The most important suburb, on a spur of the Elmā Dagh, is Čanḳaya. The mausoleum of Atatürk, a work of the Turkish architect Emīn Onan, stands on a hill in the SW. Anḳara is the seat of a University and of other educational institutions. According to the preliminary returns for the census of 1955 Anḳara had 453,151 inhabitants.

ANNA [see SIKKA].

AL-ʿ**ANNĀBA**, the present town of Bône, on the Algerian coast, east of Algiers. It is not known when it received the name of al-ʿAnnāba or, according to Leo Africanus, *Bilād al-ʿUnnāb*, "city of the jujubes", a reference to the fruit grown there. The early Arab geographers call it Būna, derived from its ancient name Hippona and testifying to its long history. It was successively a Phoenician settlement, a Punic city, a possession of the Numidian kings, and a Roman city named Hippo Regius, it played a major role during the Christian era when Saint Augustine was bishop there (395-430). Captured by the Vandals (430), retaken by the Byzantines, it became a Muslim possession at the end of the 7th or beginning of the 8th century.

The urban centre has occupied various sites in the course of the centuries. Al-Bakrī is the most precise on the question. He distinguishes three settlements: the town made famous by "Agushtīn, the doctor of the Christian religion", situated on an eminence, very probably that on which the basilica of Saint Augustine stands to-day. At its foot, stretches "the city of Sibus", also called Madīnat Zāwī, from the name of the Zīrid prince who had received it as his portion (?). This site of the old town, which is in the process of being uncovered by excavation, and of the first Muslim city which in the 5th/11th century was flourishing, must gradually have been abandoned, as being too exposed to raids from oversea, and disappeared under the silt of the Seybouse. Finally, three miles from Madīnat Zāwī, rose New Bône, *Būna al-Ḥaditha*, in a more secure position and, after 450/1058, encircled by a rampart. This is the present Muslim quarter, which occupies the height overlooking the port and the European city. Since 425/1053 it has possessed a Great Mosque, certain

features of which recall the Great Mosques at al-Ḳayrawān and Tunis, and which later received the name of the holy man Sīdī Abū Marwān (died 505/1111).

Like al-Bid̲j̲aya, Bône was a base for active piracy, and was for this reason attacked by the Pisans and Genoese (1034). Roger II of Sicily captured it in 1153 and installed a Ḥammādid prince there. In 1160, it was taken by the Almohads. In the middle of the 13th century, it was annexed to the Ḥafṣid dominions; but, frequently independent of Tunis, it was furnished with governors, from al-Bid̲j̲aya or Constantine. In 1533, it appealed to K̲h̲ayr al-Dīn, the ruler of Algiers, and was occupied by a Turkish garrison, which remained there until 1830.

ʿANNĀZIDS (Banū ʿAnnāz), a dynasty (c. 381-511/991-1117) in the frontier region between ʿIrāḳ and Iran, which was one of the manifestations of the period "between the Arabs and the Turks" when, in the wake of the westward expansion of the Būyids, numerous principalities of Iranian origin sprang up in Ād̲h̲arbāyd̲j̲ān and Kurdistān.

As the rise of the Banū ʿAnnāz was based on the S̲h̲ād̲h̲and̲j̲ān Kurds, the dynasty should be considered as Kurdish, although the Arabic names and titles of the majority of the rulers indicate the Arab links of the ruling family. The organisation of the Banū ʿAnnāz was typically semi-nomadic, in that it combined clans living in tents with strongholds serving as treasuries and refuges in time of danger. The characteristic feature of the Banū ʿAnnāz dominion was the unusual flexibility of the organisation, now expanding and now shrinking. The existence of several rival branches of the family contributed even more to the vagueness of their territories and the constant displacement of their little-known centres.

There were two periods in the history of the ʿAnnāzids. At first the external centres between which the family shifted were Bag̲h̲dād, with its branch of the Būyids issued from ʿAḍud al-Dawla, and Rayy, with its branch of descendants of Rukn al-Dawla. In the immediate west the Shād̲h̲and̲j̲ān were constantly involved in the tribal affairs of the Arabs Banū ʿUḳayl and Banū Mazyad. In the east, they were separated from Rayy by the dominions of the Kurdish Ḥasanwayhids. In the second period, the appearance of the Sald̲j̲ūḳs and their Turkish (G̲h̲uzz) tribes completely disorganised the life of the Banū ʿAnnāz who leaned now on the newcomers, now on the Būyid epigons, or fended for themselves in various tribal combinations.

The founder of the dynasty was (1) Abu 'l-Fatḥ Muḥammad b. ʿAnnāz who ruled in Ḥulwān (at the foot of the pass leading up to the Iranian plateau). The fact that Hilāl b. Muḥassin (*Eclipse*, iii, 422) calls him *ḥād̲j̲ib* and *nad̲j̲īb* suggests that he was attached to the administration of Bahāʾ al-Dawla (379-403/989-1013) and through that channel established himself in Ḥulwān where he ruled 20 years (381-401/991-1010). In 387/997 he temporarily seized Daḳūḳā from the ʿUḳayl. In 392/1002 he joined the commander Ḥad̲j̲d̲j̲ād̲j̲ b. Hurmuz in the campaign against the Banū Mazyad. Later in the year he entered the service of ʿAmīd al-D̲j̲uyūs̲h̲. In 389/999 he destroyed the family of Zahmān b. Hindī, lord of K̲h̲āniḳin. In 397/1006 Badr b. Hasanūya temporarily dislodged him from Ḥulwān and he retired to Bag̲h̲dād, though according to Ibn al-At̲h̲īr, ix, 157, he died in Ḥulwān.

(2) His son Ḥusām al-Dīn Abu 'l-S̲h̲awk Fāris (401-37) succeeded him in the principal fief (Ḥulwān), but at the same time his brothers became autonomous: Muhalhil b. Muḥammad in Shahrazūr [*q.v.*], and Surk̲h̲āb in Bandanīd̲j̲īn (Mandalī), on the border of the southern Kurdish tribes and the Lurs [*q.v.*]. This division led to a number of complications. In 405/1014 the Būyid S̲h̲ams al-Dawla (of Hamadān) clashed with the Ḥasanwayhid Hilāl b. Badr who was killed and his son Ṭāhir captured. During S̲h̲ams al-Dawla's absence in Rayy Abu 'l-S̲h̲awk occupied Kirmāns̲h̲āh (Ḳarmīsīn). S̲h̲ams al-Dawla returned to Hamadān and released Ṭāhir (in 405/1015) who rapidly defeated the ʿAnnāzids. Abu 'l-Shawk submitted to him and gave him his daughter, but then suddenly attacked and killed him. S̲h̲ams al-Dawla himself marched against Abu 'l-S̲h̲awk but in the battle fought near Kirmāns̲h̲āh (and witnessed by Avicenna, see his autobiography in Ibn Usaybīʿa, ii, 4), lost the day (*c.* 406/1015).

The Būyids of Rayy were succeeded (in 398/1007) by their maternal relative the Kākūyid ʿAlāʾ al-Dawla. By that time Abu'l-S̲h̲awk had already expanded up to Daynawar (and Shābūr-k̲h̲ast?), which ʿAlāʾ al-Daula now occupied. In the struggle between the western Būyids Abū Kālid̲j̲ār and D̲j̲alāl al-Dawla, Abu 'l-S̲h̲awk (420/1020) helped the latter but insisted on the reconciliation of the rivals. In the same year parties of G̲h̲uzz occupied Mawṣil and Abu'l-S̲h̲awk was ready to assist D̲j̲alāl al-Dawla, but the Arabs lost the day. In 428/1037 Abu 'l-S̲h̲awk sided with Abū Kālid̲j̲ār who was besieging D̲j̲alāl al-Dawla. In 460/1039 he again occupied Kirmāns̲h̲āh and the castles K̲h̲ūland̲j̲ān and Aranba (probably K̲h̲alind̲j̲e and Aranga near Kangāwar?) which belonged to the Ḳūhī Kurds (i.e. the Kurds of the Ḥasanwayhid federation).

In 431/1040 a war broke out in the region of Daynavar between his son Abu'l-Fatḥ and Muhalhil, who took Abu'l-Fatḥ prisoner. Abu'l-S̲h̲awk marched against his brother (in S̲h̲ahrazūr). But Muhalhil appealed to the Kakūyid ʿAlāʾ al-Dawla who arrived and annexed Kirmāns̲h̲āh and Daynawar (432/1040). When his other brother, Surk̲h̲āb, made a pact with the D̲j̲āwānī (now D̲j̲āf) Kurds, Abu 'l-Shauk turned for help to D̲j̲alāl al-Dawla. Meanwhile ʿAlāʾ al-Dawla pushed on to Mard̲j̲ (Kerind?) and Abu 'l-S̲h̲awk took refuge in the castle of Sīrwān (on the Diyālā?). Finally ʿAlā al-dawla contented himself with Daynawar and then suddenly died in 433/Sept. 1041. In 434/1042 Abu 'l-S̲h̲awk again attacked Muhalhil who fled to Snda (perhaps Senne?). Abu 'l-Fatḥ had died in captivity and the brothers made peace.

In 435/1043 D̲j̲alāl al-Dawla died and at the same time a new enemy threatened the ʿAnnāzids. In 437/1045 Tug̲h̲ril sent his half-brother Ibrāhīm Yinal to the west, and Abu 'l-Shawk fortified himself in the castle of Sīrwān (see above), while the G̲h̲uzz devastated his dominions. He died in Ramaḍān 437/April 1046.

The Kurds rallied now round (3) Muhalhil who hastened to reoccupy Kirmān<u>sh</u>āh and Daynawar (438/1047), whence he ousted Badr b. Hilāl appointed by Ibrāhīm Yinal. It is possible that Muhalhil relied on some local tribes of <u>Sh</u>ahrazūr, for his nephew (4) Saʿdī (Suʿdā) b. Abi ʾl-<u>Sh</u>awk felt disappointed by his uncle's neglect of himself and the Shā<u>dh</u>an<u>dj</u>ān. He went to join Ibrāhīm Yinal (438/Sept. 1046), who reinforced his Shā<u>dh</u>an<u>dj</u>ān by a troop of Ghuzz. In Ḥulwān Saʿdī read the *khuṭba* for Ibrāhīm. He also occupied Bandanī<u>dj</u>īn, and his uncle Sur<u>kh</u>āb sought refuge in Diz-i Dēlōya (cf. the name of the Kurdish tribe Dēlō between Sharabān and Khaniḳīn), but then defeated and captured Saʿdī and his ally, the chief of the <u>Dj</u>āwān tribe. Soon, however, the Lurs, who were Sur<u>kh</u>āb's subjects, extradited their master to Ibrāhīm who had one of his eyes blinded. By that time, Saʿdī had been liberated by a rebel son of Sur<u>kh</u>āb. As Saʿdī was not too favourably received by Ibrāhīm, he returned to Daskara (near <u>Sh</u>ahrabān) and sought the help of Ba<u>gh</u>dād.

Ibrāhīm appointed a relation of his to occupy Sur<u>kh</u>āb's dominions and remitted Surkhāb to him to facilitate the surrender (<u>Dj</u>umādā II 439/Dec. 1047), but the envoy was defeated by Saʿdī's ally Abū ʾl-Fatḥ b. Warrām (*Warām < Bahrām?) <u>Dj</u>āwānī. Then the <u>Gh</u>uzz defeated Saʿdī and spread on the left bank of the Tigris. Saʿdī sought refuge among the Banū Mazyad Arabs and Ibrāhīm captured the last important castle of the ʿAnnāzids, Ḳalʿat al-Sīrwān (see above). Muhalhil had also to flee from <u>Sh</u>ahrazūr (439/1047). During the siege of Tīrānshāh (Tirhān?) by the <u>Gh</u>uzz, plague broke out among them and in 440/1048 Ibrāhīm Yinal recalled them to Māhīda<u>sh</u>t (west of Kirmānshāh).

Muhalhil re-occupied <u>Sh</u>ahrazūr but in 442/1050 he felt obliged to pay homage to Tu<u>gh</u>ril-bek, who received him kindly and re-instated the ʿAnnāzids: Muhalhil in Sīrwān, Daḳūḳā, <u>Sh</u>ahrazūr and Ṣāmghān (Zimkān? a left affluent of the Diyālā); Sur<u>kh</u>āb in Diž-i Māhkī (cf. the Kurds Māhkī in north-western Luristān) and Saʿdī in the two Rāwands (near Nihāwand). In 444/March 1053 Saʿdī was placed in command of Tu<u>gh</u>ril's van and advanced to Nuʿmāniya, clashed with his uncle Muhalhil and made him prisoner.

Meanwhile Baghdad was occupied by al-Basāsīrī [*q.v.*]. Muhalhil's son (5) Badr went to ask Tu<u>gh</u>ril to intervene for the liberation of his father. Tu<u>gh</u>ril offered to exchange Muhalhil for one of Saʿdī's sons kept by him as a hostage. Saʿdī disliked the offer and suddenly revolted against Tughril and sided with al-Malik al-Raḥīm, the Būyid. He was defeated by Tughril's generals and Badr. Muhalhil must have died at that time. Badr proceeded to <u>Sh</u>ahrazūr, while Saʿdī remained in the castle of Raw<u>sh</u>an-Ḳubā<u>dh</u> (on the right bank of the Diyālā?), and even in 446/1054 the <u>Gh</u>uzz were unable to dislodge him.

After the occupation of Ba<u>gh</u>dād by Tu<u>gh</u>ril (447/18 December 1055) the sources are silent on the ʿAnnāzids but some survivors of the dynasty can be traced even at a considerably later time. Under 495/1101, Ibn al-A<u>th</u>ir, x, 238, reports on the attack of Ḳarabuli (a Sal<u>gh</u>ur Turkman) on (6) Surkhāb b. Badr. The commanders in <u>Kh</u>uftī<u>dh</u>agān (Yāḳūt, ii, 456, <u>Kh</u>uftiyān Sur<u>kh</u>āb, which G. Hoffmann, *Auszüge*, 1880, 264, identifies with Koysan<u>dj</u>aḳ?), seized his treasure, out of which they sent a present to Sultan Bark-yaruḳ. The Turkmans occupied Sur<u>kh</u>āb's dominions, except Daḳūḳā and <u>Sh</u>ahrazūr. <u>Kh</u>uftī<u>dh</u>a<u>gh</u>ān was also restored to Sur<u>kh</u>āb, who died in 500/1106 and was succeeded by his son (7) Abū Manṣūr. On this occasion Ibn al-Athīr, x, 305, mentions Sur<u>kh</u>āb's great wealth and great number of horsemen adding that (up to that date) the family had ruled for 130 years. Nothing is known of Abū Manṣūr but from the *Tārī<u>kh</u>-i Guzīda*, 547 (clearer in the *Sharafnāma*, 32-4) we learn that in the second half of the 6th/12th century under the Af<u>sh</u>ār ruler of <u>Kh</u>ūzistān called <u>Sh</u>ūhla (read: *<u>Sh</u>umla? [cf. AF<u>SH</u>ĀR]) there existed a ruler in Luristan called (8) Sur<u>kh</u>āb b. ʿAnnāz (misspelt: *ʿAyyār*). After *<u>Sh</u>umla's death (in 570/1174, Ibn al-Athīr, xi, 280) the founder of the dynasty of Lesser Lur [*q.v.*] <u>Kh</u>ur<u>sh</u>īd (Silūrzī) curtailed Sur<u>kh</u>āb's possessions, until the latter contented himself with being a mere *shiḥna* on his behalf in Mānrūd (near the Mungerre range in Central Luristān). Finally the whole of Mānrūd was incorporated by <u>Kh</u>ur<u>sh</u>īd. This Sur<u>kh</u>āb was undoubtedly a descendant of Sur<u>kh</u>āb, lord of Bandanī<u>dj</u>īn and Māhkī, and with him the last scion of the ʿAnnāzids must have diasppeared.

Bibliography: Hilāl b. Muḥassin, in Margoliouth, *The Eclipse*, iii; *Mu<u>dj</u>mal al-Tawārī<u>kh</u>* (written in 520/1126), Teheran, 1318/1938; this book adds some interesting details to our principal source Ibn al-A<u>th</u>īr, ix-x, who repeats some of Ibn al-<u>Dj</u>awzī's data in *al-Muntaẓam*, Ḥaydarābād, viii-ix, but is much more explicit. <u>Sh</u>araf-<u>Kh</u>ān, *<u>Sh</u>araf-nāma* (Veliaminof-Zernof), 22-3; Müne<u>dj</u>-<u>dj</u>im-ba<u>sh</u>i, *Ṣaḥāʾif al-A<u>kh</u>bār*, Turk. translation, ii, 503; C. Huart, *Les Banoû-ʿAnnâz*, *Syria*, 1921, 265-79, and 1922, 66-79 (based mainly on Ibn al-A<u>th</u>īr, ix). See also Bergmann, *Beiträge z. muh. Numismatik*, in *WNZ*, 1873, 25. An undated coin struck by Ḥusām al-Dawla Abu ʾl-<u>Sh</u>awk (or one of his vassals?) under the caliph al-Ḳāʾim (422-67) belongs to the American Numismatic Society (information by G. C. Miles). (V. MINORSKY)

ANNIYYA, an abstract term formed from the conjunct particle *ʾan* or *ʾanna*, "that", is the literal translation of the Aristotelian term τὸ ὅτι and means therefore the fact that a thing is, its "thatness" (the particle *ʾanna* is used also substantively and *al-ʾanna* has the same meaning as *al-ʾanniyya*). The principal passage where Aristotle employs this term is in *Anal. Post.* II. 1 and the important distinction he makes there between the fact that a thing is (τὸ ὅτι) and the question what it is (τὸ τί ἐστιν) is the fundamental source of the later discussions about *existentia* and *essentia*. Indeed, the most pregnant sense in which the term *ʾanniyya* is used by the Muslim philosophers is the meaning of *existentia*, i.e. the existence in reality of a particular individual in opposition to its *essentia*, its intrinsic nature, its "whatness", *māhiyya*, *quidditas* in the Latin translations. When, for instance, <u>Gh</u>azālī in his *Maḳāṣid al-falāsifa* expounds the general doctrine of the Muslim philosophers that in God existence and essence are unified, he uses the terms *ʾanniyya* and *māhiyya*. Since, however, in philosophy existence and non-existential being are often confused—in Greek philosophy the terms ὄν and εἶναι serve to express both meanings and Aristotle himself uses (*Met.* VII 17. 1041ᵃ 15) τὸ ὅτι and τὸ εἶναι as synonyms (the Arabic translation of these terms here, in the edition of Bouyges p. 1006.9, is *al-ʾanna* and *al-ʾanniyya*)—we find the term *al-ʾanniyya* used also for non-existential being. For instance in a passage in Aristotle's Metaphysics IX 10.1051ᵇ 23 the non-existential being of truth and falsehood is rendered

by *ʾanniyya* (the Greek has ὑπάρχειν) and Averroës in his comment on this passage explains the term by *māhiyya*.

A special feature of the pseudo-Aristotelian neoplatonic treatises the "Theology of Aristotle" and the *liber de causis* in which ὄν and εἶναι are constantly translated by *ʾanniyya*, is the introduction of Plotinus' five intelligible categories (cf. Plotinus, *Enn.* VI, 2); the category ὄν (being) is translated here by *ʾanniyya*, whereas the category ταὐτότης (identity) is rendered by *huwiyya*. But in other translations e.g. the translation of Aristotle's Metaphysics ὄν is often translated by *huwiyya* (e.g. in Book V. 7, where a definition of ὄν is given) and we find the terms, *ʾanniyya*, *wudjūd* and *huwiyya* often used interchangeably.

It may be remarked that the fanciful derivation of *ʾanniyya* from *ʾanā*, ego, given by some Persian mystics and which has been adopted also by some modern European scholars, cannot be maintained, if only for grammatical reasons. The correct derivations from *ʾanā*: *ʾanāniyy^un^* and *ʾanāʾiyy^un^* are both found in later Arabic philosophy for instance in Shīrāzī (17th Century).

Bibliography: We do not possess a satisfactory lexicon of Arabic philosophical terms. However, the examples given by Bouyges in the accurate indexes to his edition of Aristotle's Metaphysics with Averroës' Commentary may be studied with profit. Although the term is frequently used by Avicenna, it is found neither in Ghazālī's *Tahāfut* nor in Averroës' *Tahāfut al-Tahāfut*. (S. VAN DEN BERGH)

AL-**ANṢĀR**, 'the helpers', the usual designation of those men of Medina who supported Muḥammad, in distinction from the Muhādjirūn or 'emigrants' i.e. his Meccan followers. After the general conversion of the Arabs to Islam the old name of al-Aws and al-Khazradj jointly, Banū Ḳayla, fell out of use and was replaced by Anṣār, the individual being known as an Anṣārī (cf. Ḳurʾān, ix, 100/101, 117/118). In this way the early services of the men of Medina to the cause of Islam were honourably commemorated. *Anṣār* is presumably the plural of *naṣir*, but the latter is never used as a technical term. The verb *naṣara* has the connotation of helping a person wronged against his enemy. This is sufficient to explain why the Muslims of Medina were called *al-Anṣār* (sometimes *anṣār al-nabī*, "the helpers of the Prophet"), but the choice of the name may have been influenced by the resemblance to Naṣārā, "Christians"; e.g. Ḳurʾān, lxi, 14, "Be helpers of God as ʿĪsā b. Maryam said to the disciples, Who are my helpers towards God?" (cf. iii, 52/45).

Muḥammad's first effective contacts with Medina were at the pilgrimage of 620 A.D. with six men of the Khazradj. As the reconciliation of the Aws and the Khazradj, however, was part of his aim, he seems to have insisted on the Aws being represented at the negotiations; and in the traditional accounts of "the first and second ʿAḳaba" [*q.v.*] about a sixth of those who pledged themselves to Muḥammad were men of the Aws. Medina had suffered so much from the feuds of the two tribes [see AL-AWS, AL-KHAZRADJ, AL-MADĪNA], that the ready acceptance of Muḥammad's claims must have been partly due to the hope that he would be able to restore and maintain peace. While there is much obscurity about the details, it is clear that most of the inhabitants of Medina, apart from the Jews, had entered into the agreement with him. The chief exceptions were four clans of the Aws, called Khaṭma, Wāʾil, Wāḳif and Umayya b. Zayd, and part of a fifth, ʿAmr b. ʿAwf, all of which had close relations with the Jews. These non-Muslims are to be distinguished from the Munāfiḳūn or 'hypocrites', since the latter were parties to the agreement with Muḥammad who afterwards disapproved of him. Despite these defections, the Aws were important among the Anṣār, and indeed the leading Anṣārī, until his death in 5/627, was Saʿd b. Muʿādh, chief of the clan of ʿAbd al-Ashhal of the Aws.

The following table shows the number of men of the various clans present at "the first ʿAḳaba" (A 1), "the second ʿAḳaba" (A 2), and the battle of Badr (B). The last column (W) gives the number of women of the clan who are given notices in Ibn Saʿd, viii; this may be taken as a rough indication of the total strength of the clan

Clan	A1	A2	B	W
ʿAbd al-Ashhal	1	3	15	35
Ẓafar	—	—	5	23
Ḥāritha	—	3	3	23
ʿAmr b. ʿAwf	1	5	40	28
Aws Manāt (Khaṭma)	—	—	—	12
al-Aws (total)	2	11	63	121
al-Nadjdjār	3	11	56	83
al-Ḥārith	—	7	19	30
Banu 'l-Ḥublā, al-Ḳawāḳila	3	6	25	21
Sāʿida	—	2	9	12
Salima	2	29	43	54
Zurayḳ	2	4	16	16
Bayāḍa	—	3	7	12
al-Khazradj (total)	10	62	175	228

These figures suggest that a leading part in the approach to Muḥammad was played by clans like al-Nadjdjār and Salima, which had many members but had produced no great leaders in war. The two chief men of Medina at this time, Saʿd b. Muʿādh and ʿAbd Allāh b. Ubayy were not at al-ʿAḳaba, and their clans (ʿAbd al-Ashhal and Banu 'l-Ḥublā) seem to be relatively badly represented.

It is disputed in the primary sources whether the Anṣār took part in any of the first small Muslim expeditions. They constituted, however, about three quarters of the Muslim force at Badr. Of the leaders Saʿd b. Muʿādh was the most zealous in the cause of Islam; not merely ʿAbd Allāh b. Ubayy, but Usayd b. Ḥuḍayr (a rival of Saʿd b. Muʿādh for the chieftaincy of ʿAbd al-Ashhal) and Saʿd b. ʿUbāda were absent from Badr. At least until the siege of Medina in 5/627 ʿAbd Allāh b. Ubayy was trying to prevent the growth of Muḥammad's power; but the others threw in their lot with Muḥammad after Badr. At the meeting to deal with "the affair of the lie (*ifk*)" against ʿĀʾisha's chastity, it was clear that the first man among the Khazradj was now Saʿd b. ʿUbāda. Indeed, shortly afterwards, on the death of Saʿd b. Muʿādh, he was recognized as the leader of the Anṣār as a whole. These continued to be one of the main foundations of Muḥammad's power, though about the time of the expedition to Tabūk in 9/630 a small section became disaffected.

Throughout Muḥammad's residence at Medina the old feuds were slowly being forgotten, and the

Anṣār were coming to feel themselves a unity, especially in contrast to the Muhādjirūn or "emigrants", with whom they rarely intermarried. The cleavage between the Aws and the Khazradj was a factor of occasional importance as late as the meeting after Muḥammad's death at which Abū Bakr was made caliph; but nothing is heard of it subsequently. After the wars of conquest the Anṣār, despite their honourable position in the new Islamic nobility, declined in influence. They mostly opposed ʿUthmān and supported ʿAlī. Later they constituted a "pious opposition" to the Umayyads and took the side of the ʿAbbāsids. Before the ʿAbbāsids came to power, however, the Anṣār had largely become merged with members of Ḳuraysh and other tribes who had settled in Medina.

(W. MONTGOMERY WATT)

ʿANSĀRA, the name of a festival. Ibn al-Ḥādjdj (*Tādj al-Mulūk*, Cairo 1312) derives the word from the Arabic root *ʿṣr*. For more than three-quarters of a century, Dozy, on the one hand, and Eguilaz y Yancas on the other, have attributed it to the Hebrew *ʿaṣārā* (*ʿaṣereth*) "an assembly of the people to celebrate religious festivals, especially Pentecost". Among the Copts, it is still the name for Pentecost (Lane, *Modern Egyptians*, ii, 365). In Spain, existing in the forms *alhanzaro*, *alhanzara*, *alhansara*, it is the feast of St. John, among both Christians and Muslims (Cf. Dozy and Engelmann, *Glossaire*, 135-7; Eguilaz y Yancas, *Glosario*, 187-8). In the Maghrib, *ʿanṣara* (with the variants *ʿanṣra*, *ʿanṣla*, *ʿansāra*, *ʿansereth*, depending on the district) denotes the festival of the summer solstice, celebrated on the 24th June in the Julian calendar, or the 5th-6th July in the Gregorian. Though known throughout Morocco, and almost everywhere in Algeria, it is not known, it appears, in Tunisia. The magico-religious character of the acts which make up its popular ritual is not in doubt: (a) fire rites intended perhaps to give greater strength to the sun at the time of the solstice; the burning of braziers full of plants, of hives, or of huts, thus producing copious smoke which is supposed to have the virtue of purification and fecundation; (b) water rites, ablutions, sprinklings, the mingling of water with the ashes of the ritual brazier, by virtue of which the fructifying humidity is besought to combine itself with warmth, at the beginning of a new period of the solar cycle. It is reasonable to accept as clearly established the relationship between the rites of the *ʿanṣra* of the Maghrib and those of the Middle Eastern *nawrūz* [*q.v.*], and also the transference of the popular practices of the *ʿanṣra* to another festival, that of *ʿāshūrāʾ* [*q.v.*].

(PH. MARÇAIS)

AL-ANṢĀRĪ AL-HARAWĪ, ABŪ ISMĀʿĪL ʿABD ALLĀH B. MUḤ. B. ʿALĪ B. MUḤ. B. AḤMAD B. ʿALĪ B. DJAʿFAR B. MANṢŪR B. MATT AL-ANṢĀRĪ AL-HARAWĪ AL-ḤANBALĪ, born at Kuhandiz, the citadel of Harāt, on 2 Shaʿbān 396/4 May 1005. An infant prodigy, he was at a very early age the pupil of Abū Manṣūr al-Azdī, of Abu 'l-Faḍl al-Djārūdī and of Yaḥyā b. ʿAmmār, who instructed him in *ḥadīth* and *tafsīr*. Although commencing under Shāfiʿī teachers, he soon adopted Ḥanbalism with enthusiasm, because of its devotion to the Ḳurʾān and the Sunna. In 417/1026, he went to continue his studies to Nishāpūr, where he frequented the disciples of al-Aṣamm, and then to Ṭūs and Bisṭām. In 423/1031, he made the pilgrimage, breaking his journey at Baghdād in order to attend the lectures of Abū Muḥammad al-Khallāl; on his return he met Abu 'l-Ḥasan al-Khirḳānī, who had a decisive influence on his mystical career, on which he had first embarked under the guidance of his own father Abū Manṣūr, the *murīd* of the *sharīf* al-ʿAḳīlī of Balkh. He finally settled at Harāt, and divided his time between teaching his disciples and polemics against the theologians; as a result of the latter activity he was threatened with death on five occasions, and was thrice exiled. He died, honoured with the title of Shaykh al-Islām, in the city of his birth, on 22 Dhu 'l-Ḥidjdja 481/8 March 1089.

His biographers are unanimous in praising his piety, the breadth of his knowledge in all branches of the religious sciences, and the indomitable fervour of his devotion to the Ḳurʾān, the Sunna, and the school of Ibn Ḥanbal, which led him to be accused by his enemies of bigoted fanaticism and anthropomorphism.

His works are the exact expression of the varied aspects of his rich personality: in the field of mysticism, he bared his soul in the *Munādjāt* and other writings in *sadjʿ* or in verse, which are considered to be among the masterpieces of Persian literature; the *Manāzil al-Sāʾirīn*, a valuable spiritual guide, impresses by its originality, its conciseness and its masterly psychological analyses (the number of the commentators on this work alone places it in an eminent position in the history of Ṣūfism). The *Ṭabaḳāt al-Ṣūfiyya*, forming a link between al-Sulamī's work and the *Nafaḥāt* of Djāmī, is valuable both as a biographical document and as evidence of the dialect spoken at Harāt in the 5th/11th century. Finally, the *Dhamm al-Kalām wa-Ahlih* is a principal source for the history of the struggle against rational theology in Islam.

Among his chief disciples, the following are worthy of note: Abu 'l-Waḳt ʿAbd al-Awwal al-Sidjzī, Muʾtamin al-Sādjī and, above all, Yūsuf al-Hamadhānī, the inheritor of his ideas.

Islam.*, *IFAO*, 1954. (S. DE BEAURECUEIL)

AL-**ANṬĀKĪ**, DĀʾŪD B. ʿUMAR AL-ḌARĪR, Arab physician born at Antioch, son of the *raʾīs* of Ḳaryat Sīdī Ḥabīb al-Nadjdjār, undertook, though blind, long journeys which led him also into Asia Minor. There he learnt Greek, on the advice of a Persian physician who had cured him of a malady from which he had long suffered, in order to be able to study the sources of medical science in the original texts. Later, he lived at Damascus and Cairo, and died in 1008/1599 at Mecca, after less than a year's stay there.

His chief work is a large, exhaustive medical hand-book in which he followed Ibn al-Bayṭār, named *Tadhkirat Ūli 'l-Albāb wa 'l-Djāmiʿ li 'l-ʿAdjab al-ʿUdjāb*, Cairo 1308-9/1890-1 (in the margin: the *Dhayl* of a pupil and the work *al-Nuzha al-Mubhidja fī Tashḥīdh al-Adhhān wa Taʿdīl al-Amzidja*, on therapeutics); see Leclerc, in *Notices et Extraits*, XXIII, 13; recent study by Ḥasan ʿAbd al-Salām. As the Art of Love was then considered as an appendix of medicine, he also edited the work of Muḥammad al-Sarrādj (d. 500/1106) on love, under the title *Tazyīn al-Aswāḳ bi-Tafṣīl* (*Tartīb*) *Ashwāḳ al-ʿUshshāḳ*, Būlāḳ 1281/1864, 1291/1874, Cairo 1279/1862, 1302/1884, 1305/1887, 1308/1390; see Kosegarten, *Chrestom. arab.*, 22; A. V. Kremer, *Ideen*, 408; Goldziher, in *SBAK Wien*, Phil.-hist. Kl., lxxviii, 513 ff., no. 7. In addition to a few short monographs, he also wrote a work on the philosophers' stone, *Risāla fi 'l-Ṭāʾir wa'l-Uḳāb* (de Slane, *Cat. d. mss. de la Bibl. Nat.*, no. 2625, 8) and another on the use of astrology in medicine, *Unmūdhadj fī ʿIlm al-Falak* (ibid., no. 2357, 7).

Aerzte und Naturforscher*, no. 275; Brockelmann, II, 364; S II 491; Hasan ʿAbd al-Salām, *Dhakhīrat al-ʿAṭṭār aw Tadhkirat Dāʾūd fī Dawʾ al-ʿIlm al-Ḥadīth*, Cairo 1366/1947.

(C. BROCKELMANN-[J. VERNET])

AL-**ANṬĀKĪ** (Abu 'l-Faradj), Yaḥyā b. Saʿīd b. Yaḥyā, Arab physician and historian, a Melkite Christian, and close relative of Eutychius of Alexandria (Saʿīd b. Baṭrīḳ). He was born probably about 980 A.D., and spent the first 35-40 years of his life in Egypt. After the persecutions perpetrated against the Christians of Egypt by the Caliph al-Ḥākim, the latter, in an access of goodwill, in 404/1013-14 allowed the Christians to leave Egypt, and in 405/1014-15 Yaḥyā b. Saʿīd settled on Byzantine soil at Antioch, where he lived from then on. There, in 455/1063, he met the physician Ibn Baṭlān. He lived to an advanced age, and did not die until 458/1066.

Yaḥyā is mainly known as a historian and author of a sequel (*Dhayl*) to the Chronicle of Eutychius from 326/938. After publishing the first edition of this work about 397/1006-7, he modified it, on the basis of fresh historical sources, shortly before 405/1014-5. At Antioch, he had at his disposal new works, and he again revised his history and gradually completed it by an account of contemporary events, neglecting no opportunity to obtain material for this purpose. Although none of the manuscripts of his work which we possess goes beyond 425/1034, it is probable that his history continued beyond that date and that he brought it down to 455 and perhaps even to 458. Yaḥyā b. Saʿīd does not describe events year by year, but arranges his material under the reigns of the caliphs (first the ʿAbbāsids, then the Fāṭimids) and under countries. He displays special interest in Egypt, Syria and the Byzantine Empire, and a moderate interest in Baghdād, but only mentions North Africa in connection with the early Fāṭimids. He used not only the Muslim sources, but also the Greek and local Christian sources with which he became acquainted at Antioch. His work abounds in chronological information, in most cases both the *hidjrī* and the Seleucid dates being given, the latter being taken from the sources and converted, perhaps by himself, into the *hidjrī* dates. Yaḥyā's work is very important for the history of Syria—Mesopotamia and Byzantium in the 4th/10th and 5th/11th centuries; it is equally important for Fāṭimid Egypt and naturally for the life of Christian circles and ecclesiastical affairs. The problem of his sources and the relationship between his history and the Arab chronicles of the same period is difficult to solve.

Bibliography: This will be found in the notice on the author in the French edition of A. Vasiliev, *Byzance et les Arabes*, ii, *La dynastie macédonienne*, 2nd part, *Extraits des sources arabes*, by M. Canard, Brussels 1950; in this use was made of the fundamental study by V. Rosen in his work *The Emperor Basil the Bulgar-Slayer, Extracts from the Chronicle of Yaḥyā of Antioch* (in Russian), St. Petersburg 1883, a brief summary of which had been given by A. Vasiliev in the Russian edition of *Byzance et les Arabes*, ii, St. Petersburg 1902, 58-9. The only complete edition is that of L. Cheikho, B. Carra de Vaux and H. Zayyat, *CSCO*, *Script. ar.*, 3rd Series, bol. 7, Paris 1909; the ed. and transl. by Vasiliev (*Patrologia orientalis*, xviii, 1924, and xxiii, 1932) stops at the year 404; cf. also G. Graf, *Gesch. der christl. arab. Litteratur*, ii, 49-51. (M. CANARD)

ANṬĀKIYA, Arabicised form of ANTIOCHEIA, town in northern Syria, situated on the Orontes (ʿĀṣī) river, 14 m. from the Mediterranean coast. Founded about 300 B.C. by Seleucus I, and occupied by Pompey in 64 B.C., it became the largest and most important Roman city in Asia and capital of the Asian provinces of the Roman empire. Its gradual decay dates from the foundation of the Sāsānid empire, which diminished its political and economic influence in the Tigris-Euphrates basin and made it the object of repeated Persian attacks. It was occupied and pillaged for the first time in 258 and 260 by Shāpūr I, who removed many of its inhabitants to Djundē-Shāpūr [*q.v.*] in Susiana (cf. al-Ṭabarī, i, 827), and from 266 to 272 it was subject to Zenobia, queen of Palmyra. Nevertheless, despite endemic internal conflicts and disastrous earthquakes (to which the region has always been liable), it maintained its prosperity until its siege and destruction by Khusraw I (Anūsharwān) in 540, and a further deportation of its inhabitants to the Persian empire (cf. Th. Nöldeke, *Ges. d. Perser u. Araber zur Zeit der Sasaniden*, Leipzig 1879 165, 239; M. Streck, *Babylonien nach*

d. arab. Geographen, ii, 1901, 266 ff.). Rebuilt by Justinian within a much reduced but strongly fortified perimeter (which remained that of the city throughout the mediaeval period), it was again sacked by Persian armies in 602 and 611, and was occupied by the Arabs in 16/637-8.

Under the early caliphates Antioch is seldom mentioned. It was the headquarters of the frontier military organisation called al-ʿAwāṣim [*q.v.*], and appears to have remained an active centre of intellectual life. With the rest of N. Syria, it was annexed by Aḥmad b. Ṭūlūn [*q.v.*] in 265/878, remaining in the possession of his successors until 285/898, and occupied by the Ḥamdānid Sayf al-Dawla [*q.v.*] in 333/944. Recaptured in 358/969 by the Byzantine general Michael Burtzes, it was governed by Byzantine dukes until 477/1084, when it fell by treachery to the Saldjūḳid Sulaymān b. Ḳutlumish [*q.v.*]. His possession of the city was disputed by the ʿUḳaylid ruler of Mosul and Aleppo, Muslim b. Ḳuraysh [*q.v.*]; Sulaymān defeated the latter (who fell in the battle) near Antioch in Ṣafar 478/June 1085, but was himself defeated and killed by his kinsman Tutush in the following year. This conflict brought about the intervention of the Saldjūḳid sultan Malikshāh, who gave Antioch in fief to the Turkish amīr Yāghisiyān. It was from this governor that the city was captured by the Crusaders in Djumādā II, 491/2 June, 1098; and, after their defeat of a siege by the governor of Mosul, Karbughā, it remained in their hands until recaptured and destroyed by the Mamlūk sultan Baybars Bunduḳdārī [*q.v.*] on 4 Ramaḍān, 666/ 19 May, 1268. During this period it was ruled by the Norman dynasty descended from Bohemond, whose principality waxed and waned with the changing fortunes of the Crusading forces, but whose capital was never seriously challenged except for a brief moment by Ṣalāḥ al-Dīn [*q.v.*] in 584/1188.

Antioch remained thereafter a minor dependency of the Mamlūk *niyāba* and later Ottoman pashalïḳ of Aleppo. After the first World War it was occupied by French troops in February 1919 and attached to the French mandated territory of Syria. When a separate régime was established for the Sandjāḳ of Alexandretta (later called Republic of Hatay) in 1938, Antioch was selected as its capital, but the Sandjāḳ was ceded by France to the Turkish Republic on 23 June, 1939 (see M. Khadduri, *The Alexandretta Dispute, American Journal of International Law*, 1945, 406-425).

The extant remains of the Byzantine and mediaeval city are relatively small, the inhabitants having been permitted to use the remains of the walls to rebuild their homes after a severe earthquake in 1872. It has no Muslim monuments of importance except the sanctuary below Mt. Silpius, the former citadel, called by the name of Ḥabīb al-Nadjdjār ("the Carpenter") [*q.v.*], identified by Muslim tradition with the unnamed believer referred to in Ḳurʾān, xxxvi, 12 ff. In 1931, the population of the *ḳaḍāʾ* of Anṭākiya numbered about 99,347 (36,500 Turkmens, 32,602 ʿAlawīs, 21,926 Arabs, 8,319 Armenians).

(M. Streck-H. A. R. Gibb)

ANTALYA (the form Anṭāliya occurs already with Ibn Baṭṭūṭa, ii, 258, and the Arab geographers; Turkish formerly also Adalya, Greek Attaleia, in mediaeval western sources Satalia), *town* and harbour on the south coast of Anatolia in the innermost bend of the bay of Antalya, on a fertile plain, 36° 55′ N, 30° 42′ E; capital of a *wilāyet* with the *ḳaḍās* of Antalya, Akseki, Alanya, Elmalï, Finike, Gündoğmuş, Kash, Korkuteli, Manavgat, Serik; in 1945 the number of inhabitants was 25,037 (the *ḳaḍā* 56,935; the *wilāyet* 278,178); in pre-*tanẓīmāt* times the capital of the *sandjaḳ* of Teke in the *eyālet* of Anadolu, after the *tanẓīmāt*, capital of a *sandjaḳ* in the *wilāyet* of Konya. The town is 50 m. above sea level and surrounded by three city walls lapped by the river Düden Su. These walls date back to Roman times.

Antalya was conquered on 3 Shaʿbān 601/5 March 1207 by the Rūm Saldjūḳ Sultan Kaykhusraw I. When the Rūm Saldjūḳ empire collapsed, Antalya was occupied by the Turkomans under rulers of the house of Teke (an offshoot of the house of Ḥamīd) [see TEKE-OGHLU]. In 792/1390, the principality of the Teke was appropriated by the Ottoman Sultan Bāyazīd I, but it was re-established after Tīmūr had defeated him at Ankara in 1402. In 826/1423 it finally came under Ottoman rule, and the principality of Teke became an Ottoman *sandjaḳ* of the same name.

The Ulu Djāmiʿ (adapted from a Christian basilica) in Antalya dates from Saldjūḳ times, the Yïwlï Minaresi of 774/1373, which stands isolated and may well have been a lighthouse in the past, dates from the time of the princes of Teke, and the mosques of Ḳuyudju Murād Pasha and Meḥmed Pasha (beside the Yïwlï Minaresi) date from Ottoman times.

Antalya is a famous and favourite holiday resort because of its mild sub-tropical climate, its fertile surroundings (producing citrus fruit and sub-

tropical plants such as bananas) and because of its beautiful countryside. There are many waterfalls, and the Lycian mountain ranges on the western shores of the bay rise to a height of 2000 m. like a backcloth. The mountains are inhabited by a primitive population of Shīʿite religion, called the Takhtadjīs "woodcutters") [*q.v.*].

(F. TAESCHNER)

SĪRAT ʿANTAR, the romance of ʿAntar, rightly considered the model of the Arabic romance of chivalry. This *sīra* surveys five hundred years of Arab history and includes a wealth of older traditions. The story in the *Kitāb al-Aghānī* of how ʿAntar, the son of a slave-girl, was adopted into the tribe of Banū ʿAbs for saving them at a time of great crisis bears the stamp of a flourishing but already legendary tradition. The *Sīrat ʿAntar* far transcends the unconscious development of a legend. By a bold stroke ʿAntar, the solitary hero, is raised to be the representative of all that is Arab, ʿAntar the pagan is made the champion of Islām. The romance thus comes to reflect the vicissitudes of the Arabs and Islām through half a millennium; the tribal feuds of the old Arabs; the wars against Ethiopian rule in Arabia; the subjection of Arabia and especially of ʿIrāḳ to Persian suzerainty; the victories of the rising Islām over Persia; the remarkable historical position of the Jews in Arabia down to the seventh century; the conquests from Christianity by the Arabs, especially in Syria; the continuous wars of the Persian and later of the Muslim East against Byzantium; the victorious advance of Islām in North Africa and in Europe; the influence of the Crusades is also undeniable. The contacts between East and West are numerous. The romance is written in smooth rhymed prose into which have been interwoven some 10,000 verses. The editions printed in the East since 1286 A.H. divide the *Sīra* into 32 little volumes, none of which, like the separate nights of the 1001 *Nights*, ever ends at the conclusion of a tale.

Contents. The romance brings us through numerous legendary stories from early times down to the period when King Zuhayr is ruling over the Banū ʿAbs. The ʿAbsī hero Shaddād on a raid captures the negro slave-girl Zabība (not till the xviiith book do we get the denouement that she is a king's daughter, who had been carried off from the Sūdān), who becomes the mother of ʿAntar. As an infant, ʿAntar tears the strongest swaddling clothes, when two years old pulls down the tent, at four slays a large dog, at nine a wolf and as a young shepherd a lion. Soon he comes to the rescue of his oppressed tribe, for which he is acknowledged by his father and adopted into his tribe. He seeks ʿAbla, his uncle's daughter, in marriage; the latter promises her to him in an hour of need; but after ʿAntar has averted the danger, he imposes the most dangerous conditions to be carried out before the marriage. ʿAntar fulfils them all but is only allowed to marry ʿAbla after ten volumes of wonderful exploits. The area of his exploits widens continually. In his own tribe ʿAntar has first to overcome the resistance of his father, then the hostility of ʿAbla's relatives, to win over his rivals including the poet ʿUrwa b. al-Ward, to put an end to the feuds of the Banū Ziyād, Rabīʿ and ʿUmāra. In the feuds between the sister-tribes of ʿAbs and Fadhāra, ʿAntar proves himself the saviour of the Banū ʿAbs; outside of his tribe, he fights and overthrows the strongest heroes and makes them his friends; such are Durayd b. al-Ṣimma, Muʿammar, Hāniʾ b. Masʿūd, the victor over the Persians at Dhū Ḳār, ʿAmr b. Maʿdikarib, ʿĀmir b. al-Ṭufayl, ʿAmr b. Wudd, the knight of the Ḥarām, Rabīʿa b. Muḳaddam, the pattern of Arab chivalry and many others. He hangs up his *muʿallaḳa* in the Ḥaram of Mecca after defeating the other *muʿallaḳa*-poets in a competition, overcoming all his rivals in duels and passing an examination in Arab synonyms set by Amru 'l-Ḳais. From Mecca he goes to Khaybar and destroys the town of the Jews. But ʿAntar is also taken beyond the bounds of Arabia. The *Sīra* does not lack reasons for this. ʿAbla's father demands *aṣāfīr*-camels as a bridal gift, which are only bred by Mundhir, King of Ḥīra. This takes ʿAntar to ʿIrāḳ. From there he is summoned to Persia to fight the Greek champion Badramūṭ. Next we find him in constant association with the kings of ʿIrāḳ, Mundhir, Nuʿmān, Aswad, ʿAmr b. Hind, Iyās b. Ḳābiṣa and their viziers, notably ʿAmr b. Buḳayla. He also has constant dealings with the Shāhs, Khusraw Anosharwān, Khudāwand (no shāh of this name is found in Sāsānian history), Kawādh (probably Kawādh Shiroe) sometimes as a dreaded opponent, sometimes as a most welcome ally. The son of the king of Syria woos the promised bride of a friend of ʿAntar. The latter goes to Syria, kills his friend's rival, defeats King Ḥārith al-Wahhāb (Aretas), but becomes his friend and after the death of Aretas at the request of the princess Ḥalīma becomes guardian of the new king ʿAmr b. Ḥārith, who is still a minor, and as such ruler of Syria. Here ʿAntar comes into contact with the Franks, sometimes as an enemy and sometimes as their ally against the Persians. Syria is under Byzantine suzerainty. For the services which ʿAntar renders the Christians here, he is invited to Constantinople and entertained and honoured. Laylamān, the king of the Franks, objects to this and demands that the emperor should hand over ʿAntar to him. ʿAntar along with Heraclius, the emperor's son, then leads the Byzantine army into the land of the Franks, subjects them to the emperor, reaches Spain, defeats King Santiago, pursues his victorious march through his provinces in North Africa from Morocco to Egypt. When he returns from these conquests on behalf of Byzantium to Constantinople, an equestrian statue of him is erected out of gratitude; the statues of his two brothers, who had accompanied him to Byzantium, are placed at the side of his. Shortly before his death, ʿAntar comes to Rome. The king of Rome, Balḳām b. Markas is hard

pressed by Bohemund; ʿAntar kills Bohemund and liberates Rome. On a campaign of reprisal against the Sūdānese, ʿAntar goes from kingdom to kingdom deeper into Africa till he reaches the land of the Negus. Here he discovers in the Negus the grandfather of his mother Zabība. Even more fantastic are the campaigns against Hind-Sind, against the Christian king Laylamān in the land of Bayḍā, in the land of the demons. ʿAntar's death is brought about by Wizr b. Djābir called Asad al-Rahīṣ. ʿAntar had repeatedly defeated him and taken him prisoner but always set him free again. Wizr feels humiliated by this magnanimity and continually renews his attack. Finally ʿAntar blinds him. Though blinded, Wizr learns to shoot birds and gazelles with bow and arrow from their sound. ʿAntar is struck by one of his poisoned arrows, but Wizr dies before ʿAntar under the delusion that he has missed. While dying, and indeed when dead, still sitting on his steed Abdjar, ʿAntar still wards the enemy off from his people. ʿAntar's marriage with ʿAbla was childless but from his secret marriages and love-affairs, several children were born including two Christians, and indeed Crusaders, Ghadanfar, Coeur-de-Lion, son of ʿAntar and the sister of the king of Rome whom ʿAntar had married in Rome and left in Constantinople, and Djufrān (i.e. Geoffroi, Godfrey), the son of ʿAntar and a Frankish princess. ʿAntar's children avenge and lament the death of their heroic father. Ghadanfar and Djufrān then return to Europe. ʿAbs becomes a convert to Islām.

Analysis. The following are the main elements that have contributed to the growth of the *Sīra*: 1. Arab paganism; 2. Islām; 3. Persian history and epic; 4. The Crusades. 1. To Arab paganism it owes the chivalrous and knightly Bedouin spirit of the work, the majority of the characters in it, who often have historical features, the feuds between the sister tribes of ʿAbs and Fadhāra; in connextion with the race between Dāḥis and Ghabra, the most powerful of the Akhbār al-ʿArab, like king Zuhayr's marriage with Tumāḍir, Zuhayr's death, Mālik b. Zuhayr's death, Ḥārith and Lubna, Djaida and Khālid, anecdotes of Ḥātim Ṭayyī, the splendid figure of Rabīʿa b. Muḳaddam etc. 2. To Islām belong the introduction with a long midrash of Abraham, repeated legends of Muḥammad and ʿAlī, the conclusion of the work which forms a transition to Islām; the tendency of the book, to make ʿAntar really prepare the way for Islām; ʿAntar's victorious campaigns through Arabia, Persia, Syria, North Africa and Spain are modelled on the conquests of Islām. Certain details give the *Sīra* a slightly Shīʿite colouring. 3. Persian influence is found in the knowledge of Persian history and the Persian epic, in places of the Persian language, in the conception of kingship by grace of God, in the knowledge of Persian court life and ceremonial (throne, crowns, imperial carpet), court-hunts (falcons, cheetahs), pigeon-post, Persian offices and ranks (vizier, mōbedān mōbed, marzpān, pehlewān, eyes and ears of the Shāh) even the *sahāridja* (gentleman-carvers). 4. Christianity and the Crusades. The *Sīra* knows of Christians in the Syria of the Sāsānians, in Byzantium and among the Franks. The Franks appear as Crusaders (the romance even mentions the cross worn on the breast), fighting for Shiloe and Jerusalem. Djufrān (Godfrey) besieges Damascus and sends troops against Antioch. The *Sīra* mentions the cross, the dress of the priests and friars, the girdle of the order (which in the *Sīra* is the most important symbol of Christianity next to the cross), the crozier, the bell (clapper), incense, holy water, prayers for the dead, unction, sacrament and of holy-days, Christmas, Palm-Sunday, is aware that among the Franks the clergy are first in Church and state, that marriages between cousins are illegal, seems also to know of excommunication and describes a Spanish place of pilgrimage and day of pilgrimage. The Christians swear by Jesus, Mary, the Gospels, John the Baptist (Māri Ḥanna al-Maʿmadān, Yukhna), by Luke (Lūḳa), Thomas (Mar Tōma) and Simon. The Emperor Radjīm rules in Byzantium and his son is called Heraclius; Balḳām b. Markas is king of Rome. The Christian rulers of North Africa have names which end with the *-s*, common in Greek and Latin, e. g. Martos, Kardus, Hermes, Ibn al-ʿUrnūs, Kindaryas b. Kirmās, Sindaris, Theodoros. The king of Spain is called Santiago; of the names of Frankish kings and princes that of Bohemund alone is certain. The names of his brothers Mūbert, Sūbert, Kūbert and that of the prince "Shūbert of the Sea" show what is perhaps the commonest ending in personal names in Old French. ʿAntar's son by the Frankish princess is called Djufrān, which conceals the old French form (Jofroi, Jefroi, Geffroi) of the name of Godfrey of Bouillon. As the romance of ʿAntar knows nothing of Europe, but a good deal about Europeans, the author must have become acquainted with them outside of Europe, of course at the period of the Crusades; Bohemund is slain by ʿAntar. Godfrey is the son of ʿAntar, who comes as a Crusader to Asia, learns his paternity there, avenges the death of his father and then returns to Europe. Even the name "Tafur" of the king of the beggars in the army of Peter of Armenia, seems to be preserved in the *Sīra*: "Ḍāfūr" is the name of the usurper who drives the infant prince ʿAmr from the throne of Syria but is overthrown by ʿAntar. In regard to intelligent sympathy with and toleration of Christianity, the picture we get from the *Sīrat ʿAntar* is far in advance of that which the mediaeval Christian epic reveals of Islām, where the Muslims are made to worship idols, like Apollo, Cahu, Gomelin, Jupiter, Margot, Malquedant, Tervagant etc. The romance of ʿAntar regards the Crusades not without sympathy and admiration. It is true that Crusaders are mentioned, who go to the Holy Land to seek plunder and to escape punishment; but the Franks are fighting for God the Father, for the Son and for the spread of religion.

Folk-lore and literary parallels. There is remarkably little folk-lore in the *Sīrat ʿAntar* but it includes several noteworthy features: a splendid witches' kitchen, fine examples of allegorical speech, of omens, life-token. Most of the agreements with other narrative poetry may be regarded as commonplaces of the epic; the strength and growth of the hero, his exploits, the killing of a lion, ***muʿammarūn*** (longevity is as common in the ʿAntar as in the ***Shāh-nāma***), dreams, visions, Amazons, fights between father and son, the Gudrun motif of the bride's fidelity, the motif of the stupid man. There are very few borrowings: Nuʿmān's lucky and unlucky day, Khusraw's bell of justice (the motif of the legend of the Emperor Charles and the snake), a flight to heaven in a box borne by eagles, several African traditions (probably taken from geographical works on Africa). There are also links with

European legends. The marvellous signs at the birth of Charlemagne (in Pseudo-Turpin) resemble those recorded in our romance at the birth of Muḥammad, but Pseudo-Turpin undoubtedly borrowed from an older source. Artificial birds made of metal, which sing in various tunes by means of bells and organ pipes are described in French and German epics and also in the *Sīrat ʿAntar*. But here we have to deal with the historical marvel of the Chrysotriklinium in Constantinople, and with a similar thing in the Ctesiphon of the Sāsānids and also in the capital of the Tatar Khāns. Some coincidences are very striking. Ḥārith al-Ẓālim beats his sword Dhu 'l-Ḥiyāt against a rock, so that it may not fall into the enemy's hands; the rock is broken but the sword is uninjured, just as is the case with Roland's Durandal. ʿAntar instructs his son Ghadbān, who wishes to slay Khusraw and seize the power for himself, on the subject of kingship by God's grace just as Girard de Viane does his nephew Aimeri who wants to kill Charlemagne. ʿAntar's horse Abdjar takes flight to the desert after ʿAntar's death, so that he may not serve another master, just as Renaud de Montauban's Baiart escapes to the forests of the Ardennes. Very remarkable is the parallel between the duel between Roland and Oliver and that of ʿAntar and Rabīʿa b. Muḳaddam; the sword of the one combatant breaks in two and his magnanimous opponent gets him another; the duellists are reconciled and become brothers-in-law. But such poetical developments have their origin in a similar chivalrous outlook, the relations of the knight to his sword, to his horse, to his overlord and to his opponent.

Chivalry in the Sīrat ʿAntar. The *Sīra* is rightly recognised to be a romance of chivalry. In the pagan period among the Arabs the ideal of masculine virtue was *muruwwa*, *futuwwa*; alongside of this we have more frequently in the *Sīrat ʿAntar furusīya* along with *farāsa* and *tafarrasa*. The knight is called *fāris*. ʿAntar is called "a father of knights", *Abu 'l-Fawāris*, sometimes *Abu 'l-Fursān*, *ʿAlā 'l-Fursān*, *Fāris al-Fursān*, *Afrasu*. Not everyone who rides a horse is a knight. The knight's qualities are courage, fidelity, love of truth, protection of widows, orphans, and the poor (ʿAntar arranges special meals for them), magnanimity, reverence for women (ʿAntar begins and ends his heroic career protecting women; he swears by ʿAbla, by ʿAbla's eye, conquers in ʿAbla's name), liberality, especially to poets. The knights are also poets, especially poets of the Ḥidjāz, who are found in hundreds in the *Sīrat ʿAntar*. The *Sīra* also knows the institutions of chivalry. We meet pages and squires, not only the *sahāridja* of Ctesiphon; ʿAntar himself trains several thousand squires. The *Sīra* even describes tournaments on a great scale, in the Ḥidjāz, in Ḥīra, in Ctesiphon, the most splendid in Byzantium where ʿAntar's lance strikes the ring 476 times. These tourneys have many features in common with those of Europe, fighting with blunted weapons, tilting at the ring, decorating and beflagging the lists, the presence of ladies and girls. These agreements have been explained in the most diverse ways. On the one hand Delécluze saw in ʿAntar the model of the European knight, in the *Sīrat ʿAntar*, the source from which Europe had obtained all its ideas of chivalry, while on the other hand Reinaud simply found European ideas, customs and institutions imitated in the *Sīra* (*JA*, 1833, i. 102-105). In this some have seen the starting point for the study of the question of the origin of the *Sīrat ʿAntar*.

Origin. The *Sīrat ʿAntar* itself frequently and readily talks about itself and its origin. It professes to have been composed by al-Aṣmaʿī in the time of the Caliph Hārūn al-Rashīd at his court in Baghdād; Aṣmaʿī lived for 670 years, of which 400 were in the Djāhilīya; he was personally acquainted with ʿAntar and his contemporaries, concluded the composition in the year 473/1080 and recorded traditions from the mouths of ʿAntar, Ḥamza, Abū Ṭālib, Ḥātim Ṭayyī, Amru 'l-Ḳais, Ḥāniʾ b. Musʿūd, Ḥāzim of Mecca, ʿUbayda, ʿAmr b. Wudd, Durayd b. al-Ṣimma, ʿĀmir b. al-Ṭufayl. In fact we have a regular romance regarding the origin of the romance. The repeatedly mentioned *rāwī*, *nāḳil*, *muṣannif*, *ṣāḥib al-ibārat*, Aṣmaʿī and other authorities have the same significance for the *Sīrat ʿAntar* as the Dihḳāns, Pehlewi books and the hoary authorities in Firdawsī, or as the chronicles of St. Denis for the French epic. It is simply fiction when the *Sīrat ʿAntar* tells us that it exists in two versions, one for the Ḥidjāz and the other for ʿIrāḳ. The invention of a Ḥidjāz recension is intended to encourage the belief that Aṣmaʿī collected from ʿAntar and his companions in the Ḥidjāz the information, which was utilised in the romance. The Ḥidjāz as the home of the romance is a pure invention. On the other hand ʿIrāḳ may really have made a considerable contribution to the composition of the *Sīrat ʿAntar*. For the date of origin of the *Sīrat ʿAntar* we have the following clues: 1. In a religious dialogue between a monk and a Muslim (*Das Religionsgespräch von Jerusalem um* 800 *A.D. aus dem Arabischen übersetzt* von K. Vollers, *Ztschr. f. Kirchengeschichte*, xxix, 49) the monk mentions the exploits of ʿAntar. 2. About the middle of the xiith century the former Jew Samawʾal b. Yaḥyā al-Maghribī, a convert to Islām, describes his career and mentions that in his youth he was fond of long tales like that of ʿAntar (*MGWJ*, 1898, xlii, 127, 418). 3. The evidence contained in the book itself. The appearance of Bohemund, Djufrān (Godfrey of Bouillon), perhaps also of the king of the beggars, Tafur, brings us to the period after the first Crusade, that is at the earliest in the first half of the xiith century. The composition of histories of ʿAntar must therefore have already been begun in the viiith century—on the evidence of the religious dialogue above mentioned. According to Samawʾal b. Yaḥyā a book of ʿAntar of considerable size was actually in existence in the middle of the xiith century and if Bohemund and Djufrān already appeared in it, it must have been completed at the beginning of the xiith century. At the same time the meddāḥs may have continued to add a great deal to it and in particular continued its islāmisation. The midrash of Abraham which is quite an inorganic addition and the legends of Muḥammad and ʿAlī could belong to any period. An original ʿAntar can be reconstructed with philological probability. In vol. xxxi., the dying ʿAntar reviews his heroic career in his swan-song. He proudly recalls his victories in Arabia, ʿIrāḳ, Persia, and Syria. But he makes no mention of Byzantium or Spain, of Fez, Tunis, or Barka, of Egypt, or Hind-Sind, of the Sūdān or Ethiopia. This original ʿAntar may have arisen in ʿIrāḳ (under Persian influence or perhaps in emulation of Persian epic poetry). The swan-song makes

no mention of children, and knows of only one love of ʿAntar's. This original ʿAntar therefore should be called ʿAntar and ʿAbla. Following a genealogical stimulus, the later epic made royal ancestors be found in the Sūdān and royal descendants in Arabia, Byzantium, Rome, and the land of the Franks. The Crusades next found an echo and a reaction in the ʿAntar story. The Crusaders came from the land of the Franks via Byzantium to Syria. ʿAntar goes in a kind of reversed crusade from Syria via Byzantium to the land of the Franks and brings about the victory, if not yet of Islām, at least of Arab ideals and culture over European Christianity. The whole geographical area and historical range of the novel is filled with the exploits of ʿAntar.

The romance of ʿAntar seems to be first mentioned in Europe in 1777 in the *Bibliothèque Universelle des Romans* (*JA*, 1834, xiii. 256); it was first introduced to European scholarship in 1819 by Hammer-Purgstall and to comparative literature in 1851 by Dunlop-Liebrecht (*Geschichte der Prosadichtungen*, xiii-xvi). The study of the problem of scholarship raised by the *Sīrat ʿAntar* was begun by Goldziher (mainly in his Hungarian works). The *Sīrat ʿAntar* was for long a favourite subject of study in France. In the *Journal Asiatique* the work was often discussed and partly translated. Lamartine went into raptures of admiration and enthusiasm for ʿAntar (*Voyages en Orient*: *Vie des grands hommes* I. *Premières Méditations Poétiques*, Première Préface). Taine places ʿAntar beside the greatest epic heroes —Siegfried, Roland, the Cid, Rustam, Odysseus and Achilles (*Philosophie de l'Art*, ii, 297). These tributes are not unmerited. The *Sīrat ʿAntar* unfolds before us the ever changing, glowing panorama of a particularly attractive period with an extravagant power of imagination, a skill in narration which never palls throughout the 32 volumes, and a poetical style of inexhaustible richness.

Bibliography: A very full collection of references to the manuscripts, editions, translations of and treatises on the *Sīrat ʿAntar* is given in V. Chauvin, *Bibliographie des ouvrages arabes ou relatifs aux Arabes*, etc., iii; *Louqmâne et les fabulistes. Barlaam ʿAntar et les Romans de chevalerie*, Lüttich-Leipzig 1898, 113-126. Cf. also: I. Heller, *Der arabische ʿAntarroman, Ungarische Rundschau*, v. 83-107; do., *Az arab Antarregény*, Budapest 1918; do., *Der arabische ʿAntarroman, ein Beitrag zur vergleichenden Litteraturgeschichte*, Hanover 1925.

(B. HELLER)

ʿANTARA, "the valiant" (see *LA*, vi, 283, which also gives the meaning "blue-bottle"); the word is probably derived from the root *ʿtr* which expresses the idea of violence. Several warrior-poets of Pre-Islam bore this name; see Āmidī, 151-2.

"Antara b. Shaddād, warrior-poet of the 6th century A.D., belonged to the ʿAbs tribe of central Arabia (see GHAṬAFĀN). The short notice by al-Iṣfahānī, in the *Aghānī*, suggests that by the 4th/10th century responsible people tended to dismiss exaggerated popular accounts which had already made ʿAntara a hero of fiction. Restricted to positive facts, the biography of this man is extremely sketchy. Born of an Arab father and a black slave, ʿAntara, in his youth, lived in slavery as a shepherd; in the course of the conflicts between the ʿAbs and their Central Arabian neighbours, he had opportunity to display his prowess; in the "War of Dāḥis and al-Ghabrāʾ" especially between the ʿAbs and the Dhubyān, then the Tamīm, he seems to have particularly distinguished himself (see Cheikho, 805 f. and the scholia on *Dīwān* nos. 13 ff.; see also *Dīwān* nos. 12 and 26, diatribes against other poets). It is probable that ʿAntara was emancipated as a result of these exploits and that, at an advanced age, he fell in a raid against the Ṭayyiʾ (see the *Aghānī* for the different versions of his death). Legend soon clothed this bare outline, under the influence of ʿAbs particularism and Kharidjite equalitarianism. ʿAntara provided proof that a person of mixed race could, in the pre-Islamic era, achieve the status of a pure-blooded Arab. The embellishments were concerned with a limited number of themes: the valiant achievements of the hero, his passion for his cousin ʿAbla, his vain efforts to overcome her scorn and to be worthy of this heartless beauty. These developments eventually resulted in the composition of a celebrated epic entitled *Sīrat ʿAntar* (see the preceding article). As is frequently the case, fragments and poems form the sub-stratum of the biographical legend. At the beginning of the 3rd/9th century, the collection of these poetic works was undertaken by the scholars of Baṣra, notably by al-Aṣmaʿī [*q.v.*]; in a recension with commentary by the Spaniard al-Aʿlam al-Shantamarī (d. 476/1083), there are 27 poems and fragments: one of these, the *Ḳasīda* in *mīm* also appears in the *Muʿallaḳāt* anthology; numerous fragments, often of considerable lengtb, attributed to ʿAntara, and appearing in various works, have been assembled by Cheikho, 816-82 (without exact references). On the whole, these last texts appear to be clumsy pastiches; see for example the fragments given by Cheikho, 812, 820, 829, 855; scholars—or forgers—have too often been led to attribute to ʿAntara any poem containing the name of ʿAbla (see Cheikho, 846, 848-9 where a poet addresses himself to ʿAbla and celebrates his exploits against the Persians); many of the items attributed to ʿAntara are dubious (see Cheikho, 853 and *Agh*[3], 235); the *Muʿallaḳa*, suspect on account of its length, is composed to begin with of elements in juxtaposition. Taken as a whole, the poems and fragments placed under the name of ʿAntara which do not betray too obviously the forger's hand are generally short; poems introduced by a *nasīb* are rare (see *Dīwān*, ed. Ahlwardt, nos. 13, 21; and Cheikho, 817, poem in *bāʾ*). With the exception of a threnody (*Dīwān*, no. 24) and a few fragments of invective like *Dīwān* no. 11, the majority of the poems celebrate the poet's valour, his exploits, and the claim which these give him to the love of ʿAbla. Those which have some chance of not being clumsy forgeries are distinguished by their simplicity of language and style.

(R. Blachère)

ʿANTARĪ (a.), noun derived from ʿAntar [*q.v.*], denoting in Egypt: 1) a story-teller who narrates the *Sīrat* ʿ*Antar*; 2) a short garment worn under the *ḳafṭān*. The latter usage, assimilated by popular etymology to ʿAntarī, derives from the Turkish Entari, a word of Greek origin.

ANṬARṬŪS [see ṬARṬŪS].

ANTEMURU, tribe of south-eastern Madagascar, comprising 85,000 sedentary agriculturalists living in the low river valleys, from the Matatana in the south to the Namurana in the north, and eking out their livelihood by fishing. Of their number, 25,000 members of certain clans claim to come from Emaka, a region which they liken to Mecca. According to their written traditions, some *silamu* "Muslims", accompanied by *kafiri* "pagans", passing through the Comores and the north-east of Madagascar, settled, during the 7th/13th century, near their present territory. They found there, and assimilated, other groups of the same origins.

It seems likely that an Indonesian community was augmented by an influx of groups which had in varying degree been Islamicised, and came probably from the east coast of Africa, which had been penetrated by the descendants of immigrants from the Persian Gulf. The prestige of these "Islamicised" elements was such that the Indonesian dynasties and some clans ascribed to themselves an Arab origin.

It is possible to distinguish two successive waves of immigrants; the earlier introduced divination based on geomancy, while the Antalaotra of the more recent influx introduced writing in Arabic characters and paper-making. The Islamicised elements introduced in addition : plants (the vine, pomegranate, hemp, the copal-tree), the game of chess, a few prayers, a period of comparative fasting, some words of Arabic origin, and above all a calendar.

Since the 10th/16th century, the fame of the Antemuru magicians has extended their influence throughout Madagascar. Isolated from the Muslim world, they look upon writing not as a vehicle of communication, but as a means of preserving their magico-religious secrets. The development of the occult sciences has represented a corresponding decline of the Islamic tradition. The astrological calendar has supplanted the Muslim lunar calendar; prayers, their meaning not understood, have become magic formulas. This decadence is most marked in the tribe which dwells to the north of the Antemuru, namely the 12,000 Antambaok or Antambahwaka.

Since the beginning of the 19th century the over-population of Temuru territory has led to a temporary exodus to the north-west of Madagascar. There, they live with the Cormorian Muslims. This has given rise since 1913, and especially between 1926 and 1939, to an Islamic revival among some of the 2,000 literates belonging to the clans of the Antalaotra group.

After 1924, the development of coffee-planting, which created new resources, checked the migration to the north-west. Relations with true Muslims again came to an end. The Islamic revival, opposed by the Christians as well as by the traditionalist magicians, declined, despite several attempts by Pākistānī Khodjas to make converts.

ANTIOCH [see ANṬĀKIYA].

ANṬŪN FARAḤ [see FARAḤ].

ANŪSHARWĀN, Arabic form of the surname of Chosroës I (al-Ṭabarī, I, 862) [see KISRĀ], in Pahlawi *anoshagh-ruvān*, in Pazand *anosh-ruān* "possessed of an immortal soul", then in Persian Nūshīravān (Nūshīrvān), which is popularly explained as *nūshin-ravān* "possessed of sweet soul" (*Burhān-i Ḳāṭi*ʿ). Several persons in Islam bore this name (Zambaur mentions four), particularly a son of Manūčihr and of a daughter of Maḥmūd al-Ghaznawī, who was *amīr* of Djurdjān from 420/1029 to 434/1042 (Ibn al-Athīr, IX, 262), and Anūsharwān b. Khālid b. Muḥammad al-Kāshānī (see the following art.).

Bibliography: A. Christensen, *L'Iran sous les Sassanides*, chapter VIII; Zambaur, index, s.v. (H. Massé)

ANŪSHIRWĀN b. KHĀLID b. Muḥammad al-Kāshānī, Sharaf al-Dīn Abū Naṣr, was treasurer and ʿ*āriḍ al-djaysh* to the Saldjūḳ sultan, Muḥammad b. Malikshāh. After being succeeded by Shams al-Mulk b. Niẓām al-Mulk as ʿ*āriḍ al-djaysh* he went to Baghdād. He was imprisoned during the reign of Maḥmūd b. Malikshāh for a short period but subsequently appointed *wazīr* by Maḥmūd (521/1127-522/1128). From 526/1132-528/1134 he was *wazīr* to the caliph, al-Mustarshid. In 529/1134 he became *wazīr* to Masʿūd b. Muḥammad and held office until 530/1135-6. He died in Baghdād in 533/1138-9 according to Ibn al-Athīr, but according to the *Tadjārib al-Salaf* of Hindū Shāh b. Sandjar in 532/1137-8. He composed a work in Persian on the

events of his time, entitled *Futūr Zamān al-Ṣudūr wa Ṣudūr Zamān al-Futūr*, which was later translated into Arabic by ʿImād al-Dīn [*q.v.*]. Al-Bundārī's abridged version of this translation has been edited by Houtsma (*Recueil de textes relat. à l'hist. des Seldjoucides*, ii). Hadjdjī Khalīfa mentions another work by him, entitled *Nafthat al-Maṣdūr*, but this is probably the same as the *Futūr Zamān al-Ṣudūr* mentioned above (see Mīrzā Muḥammad Ḳazwīnī, *Maḳāla-i Taʾrīkhī wa Intiḳādī*, Tehran, 1308 solar). Anūshirwān was praised by various contemporary poets. It was he who encouraged al-Ḥarīrī to compose his *maḳāmas*.

Bibliography: *Recueil de textes relat. à l'hist. des Seldjoucides*, ii; Ibn al-Athīr, x, xi; Sibt b. al-Djawzī; Hindū Shāh b. Sandjar, *Tadjārib al-Salaf*. (A. K. S. Lambton)

ANWĀʾ (A.), a system of computation among the early Arabs. The singular *nawʾ*, connected with the root *nāʾa* "to rise with difficulty, to lean, to support a load with difficulty" (cf. Ḳurʾān, xxviii, 76), denotes the acronychal setting of a star or constellation and heliacal rising of its opposite (*raḳīb*); by extension, it is applied to a period of time and, in the language of the later Middle Ages and the modern era, it has come to mean "cloud, rain, storm, tempest" (see Dozy, *Suppl.*, s.v.; Beaussier, s.v.; H. Wehr, *Arab. Wörterbuch*, s.v.), on account of the pluvial role ascribed to the stars contemplated. In the plural, *anwāʾ* denotes the whole system based on the acronychal setting and helical rising of a series of stars or constellations; it also appears in the title of a number of works which constitute a separate class of their own.

1. The system of the *anwāʾ*.—To estimate the passage of time, the early Arabs possessed a primitive system—perhaps already influenced by the "Calendar of the Pleiades" (cf. J. Henninger, *Sternkunde*, 114 and references quoted)—which can be summarized as follows:—(a) on the one hand, the acronychal setting of a series of stars or constellations marked the beginning of periods called *nawʾ*, but within which the duration of the *nawʾ* proper was from 1-7 days. The stars themselves were responsible for rain and were invoked during the *istisḳāʾ* [*q.v.*]; knowledge of these *anwāʾ* enabled Bedouin trained in this science to foresee the state of the weather during a given period; (b) on the other hand, the helical rising of the same series of stars or constellations, at six monthly intervals, marked out the solar year by fixing a number of periods probably about 28. Such maxims as have survived suggest that this was the very basis of the calendar.

Some time before Islam (cf. Ḳurʾān x, 5; xxxvi, 39) the Arabs learnt from the Indians to distinguish the "stations" or "mansions" (*manzila*), pl. *manāzil* [*q.v.*]) of the moon, numbering 28. Perceiving that the list of these mansions corresponded *grosso modo* with their own list of *anwāʾ*, they proceeded to combine the two ideas and to adjust their *anwāʾ* to make them coincide with the *manāzil*, by dividing the solar zodiac into 28 equal parts of approx. 12° 50'; thus the 28 *anwāʾ* identified with the 28 *manāzil* (see list in the article MANĀZIL) are determined by 28 stars or constellations constituting 14 pairs (the acronychal setting of the one corresponding to the heliacal rising of the other) and marking the beginning of 27 periods of 13 days and one of 14. These modifications, the date of which cannot be fixed accurately, were definitely completed after Islam, the passage from one system to the other being favoured by the development of astronomy, and by the anathema hurled by the Prophet against the *anwāʾ*, which are not mentioned in the Ḳurʾān. The old system, however, still survived, on the one hand empirically among the Bedouin tribes (cf. for example the *nūwa*, pl. *nwāwi* of the Marāzīg of southern Tunisia in G. Boris, *Documents linguistiques* ..., Paris 1951, 208-11), on the other hand traditionally, and with complete identification of the *anwāʾ* with the mansions, in the specialised works which have perpetuated it among certain rural populations (see Ed. Westermarck, *Ritual and Belief in Morocco*, London 1926, ii, 177, and *Wit and Wisdom in Morocco*, London 1930, 313-17).

2. The *anwāʾ* in Arabic Literature.—As might be expected, it was the lexicographers who first assembled Bedouin ideas on the subject of the *anwāʾ* and published them in lexicographical works of which we shall consider only those entitled *K. al-Anwāʾ*, leaving aside the *K. al-Azmina* and others which fall into the same category. The following are the principal writers mentioned as being authors of works entitled *K. al-Anwāʾ*, none of which has as yet come into our possession: Ibn Kunāsa (d. 207/822), Muʾarridj (d. 195/810-11), al-Naḍr b. Shumayl (d. about 245/859), al-Aṣmaʿī (d. 213/828), Ibn al-Aʿrābī (d. 233/846), al-Shaybānī (d. about 245/859), al-Mubarrad (d. 285/898). On the other hand, we have the *K. al-Anwāʾ* of Ibn Ḳutayba (d. about 276/889) which has recently (1957) been printed at Ḥaydarābād, and we have fragments of that of Abū Ḥanīfa al-Dīnawarī (d. after 282/895); the works of al-Akhfash al-Aṣghar (d. 315/927), al-Zadjdjādj (d. 310/922), Ibn Durayd (d. 321/933), the *ḳāḍī* Wakīʿ (d. 330/941) and others are also lost. Basically these works contain an explanation of the system of the *anwāʾ*, a list of the mansions (i.e. the modified *anwāʾ*), a table of the dates of the rising and setting of the stars which determine them, the system of the winds and the rains, etc.; the explanation is accompanied by maxims and poetry, usually with a commentary.

From the 3rd/9th century, however, astronomers in their turn showed interest in the *anwāʾ*: al-Ḥasan b. Sahl b. Nawbakht, Abū Maʿshar al-Balkhī (d. 272/885-6), Thābit b. Ḳurra (d. 289/902), and Ibn Khurradādhbih (d. 300/912-3), wrote *K. al-Anwāʾ* while al-Bīrūnī (d. 440/1048) devoted to this subject a chapter of his *Āthār* and reproduced in part (243-75) the *K. al-Anwāʾ* of Sinān b. Thābit b. Ḳurra (d. 331/943), which is an almanac.

One would expect, indeed, to see Arab authors producing almanacs on the lines of those which they found in conquered territories, and, although we only have the almanac of Sinān for ʿIrāḳ, it is probable that Egyptian authors composed them at an early stage, as is proved by certain chapters of Ibn al-Mammātī and al-Maḳrīzī, and by the names of the Coptic months which appear in the calenders produced in Spain. For the latter country, we in fact possess an almanac published by Dozy under the title of *Calendrier de Cordoue de l'année 961* (Leiden 1873) and still entitled *K. al-Anwāʾ*, as is that of the mathematician of Marrākush, Ibn al-Bannāʾ (d. 721/1321) which has been published by H. P. J. Renaud (Paris 1948); other *K. al-Anwāʾ*, now lost, are attributed to al-Gharbāl (d. 403/1012-13) and al-Khaṭīb al-Umawī al-Ḳurṭubī (d. 602/1205-6). These calendars are solar and, under each day, the author gives information on the *anwāʾ*, the length of the day and night, agricultural practices, etc., with, in the *Calendrier de Cordoue*, notification of

the Christian festivals. The modern popular calendars (*raʿdiyya, taḳwīm* etc.) are a final re-incarnation of the *K. al-Anwāʾ*.

ANWARĪ, the *takhalluṣ* of AWḤAD AL-DĪN MUḤ. B. MUḤ. (? or ʿALĪ B. MAḤMŪD) KHĀWARĀNĪ, proclaimed in a well-known *bayt* to be master of the Persian *ḳaṣīda*. Of his life little is known for certain except that he became one of the court poets of the Saldjūḳ sultan Sandjar (d. 1157) at some period towards the end of the prince's life and that he was writing *ḳaṣīdas* in 540/1145—two of them being thus dated—when he must still have been quite young. He was born in the district of Khāwarān in Khūrāsān and received part of his education at the Manṣuriyya *madrasa* in Ṭūs. Either while he was there or subsequently his studies embraced astrology, his skill in which brought him renown, though it also, if legend can be trusted, led to his downfall. This was in 581/1185, when an extraordinary conjunction of the planets failed to produce the upheaval of the elements which he had foretold. He died a few years afterwards, probably in 585/1189 or in 587/1191, being buried at Balkh (thus Dawlatshāh) or at Tabrīz, in the Poets' Cemetery alongside Khāḳānī and Ẓahīr-i Fāryābī (cf. Mustawfī, *Nuzhat al-Ḳulūb*, 78), the former seeming more probable. His literary powers are considerable, as shown in his famous lament over the ruin caused by the Ghuzz tribesmen in Khurāsān, and his exercises in irony and ridicule make pungent reading. He shows little of self-criticism, being satisfied that he is an adept in astrology and superior to his contemporaries in logic, music, theology, mathematics and all other intellectual pursuits. It appears that his patrons after Sandjar failed to value his services as highly as he did himself; at any rate he considered their rewards inadequate. Either that fact or jealousy of his rivals caused him to renounce the writing of eulogies and of *ghazals*, although it is difficult to decide at what point in his career this took place. His satires doubtless brought him enemies and declining fortunes led to persistent complaint against capricious Fate. In style and language he is sometimes obscure, so that Dawlatshāh declares that he needs a commentary. That obscurity, and a change in literary taste, may be reasons for his comparative neglect in recent times.

ANWĀR-I SUHAYLĪ, title of the Persian version of *Kalīla wa Dimna* by Kāshifī [*q.v.*].

APAMEA [see AFĀMIYA].

APOLLONIUS OF TYANA [see BALĪNŪS].

AL-**ʿĀRA**, a place on the S. shore of Yaman, W. of ʿAdan, on Ṣubayḥī territory, between ʿUmayra (Khor Omeira) and Suḳyā (Sukayya). Ibn al-Mudjāwir (ca. 600/1200) makes it the starting point of several routes. Al-Shardjī (d. 893/1488) still calls this headquarter of the Banū Mushammir "a big village" (cf. Abū Makhrama *Taʾrīkh Thaghr ʿAdan*, ii, 91 f., in the biography of Saʿīd b. Muḥ. Mushammir). Since then, with the diminishing caravan trade, there has been a steady decline. The place is still on the map of von Maltzan (ca. two miles from the coast), but nowadays the name seems to survive only in Biʾr ʿĀra and Rās ʿĀra, which is the utmost Southern point of Arabia, the Promontorium Ammonii of the ancients.

AL-**ʿARAB**, the Arabs.

(i) The ancient history of the Arabs.
(ii) The expansion of the Arabs; general, and the "fertile crescent";
(iii) The expansion of the Arabs: Iran in early Islamic times; Appendix: The Arabs in Central Asia.
(iv) The expansion of the Arabs: Egypt.
(v) The expansion of the Arabs: North Africa.

(See also AL-ʿARAB, DJAZĪRAT, as well as ʿARABIYYA and the articles on the several Arab countries).

(i) THE ANCIENT HISTORY OF THE ARABS

(For the ethnic origins of the Arabs cf. AL-ʿARAB (DJAZĪRAT AL-), section on Ethnography, cf. also para ii, below).

The early history of the Arabs is still obscure; their origin and the events governing their early years are equally unknown to us. Probably we would know a good deal more about them, if Uranius' five books of Ἀραβικά, which constituted a special monograph on the Arabs, had been preserved. What we know about them is derived chiefly from the Assyrian records, the classical writers, and, as far as the history of the last three centuries before Islam is concerned, from Muslim tradition and some pre-islamic Nabataean and Arabic inscriptions.

Possibly "the Aramaean Bedouins", who in 880 B.C. interfered in the affairs of Bet-Zamāni on the upper Euphrates and helped to overthrow the local vassal of the Assyrian king Assur Naṣirpal, were predecessors of the Arabs. Their anti-Assyrian policy was subsequently followed by the Arabs, who first appear in the light of history in 854 B.C.: Gindibu, the Arab with 1000 camel troops from Aribi territory, joined Bir-ʾidri of Damascus (the biblical Benhadad II) against Salmanassar III at the battle of Ḳarḳar in which, it is said the Asyrian king was successful. Perhaps the camp of Gindibu

was situated somewhere south-east of Damascus. Certainly the bedouin element of the Arabian Peninsula—for which Aram, ʿEber, and Khabiru are probably synonyms—was to be found originally in the area which extended between Syria and Mesopotamia and which, including Syria, was the oldest centre of the Semites.

If the hypothesis, presented by F. Hommel (*Ethnologie*, 550), that the land of Magan corresponds to Arabic Maʿān and forms the starting point for the foundation of the South-Arabian kingdom of Maʿīn, were established—though it would be difficult to prove it—the South-Arabian tribe of the Minaeans must have detached themselves from Arab nomads settled in this country, which had already been included in the Babylonian Empire by Naram-Sin (2320 to 2284 B.C.). The traditional pro-Babylonian policy of the Arabs would, therefore, be understandable because of their old political and cultural relations with Babylonia.

The geographical position of the land of Aribi between Syria and Mesopotamia, and the rôle of the Arabs in the traffic on the commercial routes leading from the Persian Gulf to Syria, from Syria to Egypt and Southern Arabia, and along the Wādī Dawāsir through the highlands of Nadjd to Maʿīn, influenced historical events in the Near East. The struggle for the possession of these important high roads characterises the course of history during the last two millennia B.C. and the Roman period.

Already in 738 B.C., during the reign of Tiglat-Pilesar III (745 to 726 B.C.), who had occupied Gaza, the terminal point of the "incense" road from Southern Arabia to the Mediterranean Sea, Zabibē, the queen of the Aribi region, sent tribute to the Assyrian king. She probably ruled the oasis of Adumu (Dūmat al-Djandal) and was high priestess of the Ḳedar tribe, to which the oasis paid tribute. In 734 B.C. Tiglat appointed the Arab Idibaʾil as his representative in the land of Muṣri (Midian and Northern Hidjaz), through which the "incense" road passed, and in 732 B.C. he subdued another queen of Aribi, Samsī—who had apparently joined a coalition of the king of Damascus and several Arab tribes, among them Masʾa (Massa in Genesis xxv, 13 f.), Tema (Taymāʾ), Khayappa (ʿEfa, a Midianite tribe in the territory of Ḥesma, east of Taymāʾ), the Badana (south-east of the oasis of el-ʿElāʾ-Daydān) and Sabʾa (the Sabaeans)—conquered two of her cities and besieged her camp, so that she sent white camels as a tribute; the aforementioned Arab tribes were also compelled to pay tribute, and Idibaʾil (the Adbeʾēl of Genesis xxv, 13), who resided near Gaza, was forced to recognise Assyrian suzerainty. In order to be sure of the loyalty of queen Samsī's land, Tiglat-Pilesar III appointed a resident at her court. As the cities subdued by the Assyrian king were situated on the caravan road in southern Ḥawrān and northern Ḥidjāz, it is obvious that the object of the struggle was the possession of the northern part of the caravan road from Mārib to Gaza (Ghazza). Nevertheless his success in subduing these people was neither complete nor lasting, for in 715 B.C. king Sargon II (722 to 705 B.C.) again defeated the Khayappa as well as the Tamūdi (Thamūd, west of the oasis of Taymāʾ) and the Marsimani (south of al-ʿAḳaba), and Samsī, queen of Aribi, and the Sabaeans are again recorded as paying tribute. In 703 B.C. the Arabs (Yatiʾe was then queen of Aribi) helped the Babylonian king Marduk-apal-iddina against Sennacherib, king of Assyria (705 to 681 B.C.); but the Arab troops were taken prisoner by the Assyrians, and Sennacherib seems to have possessed considerable influence over the Arabs, as Herodotus (ii, 141) calls him "king of the Arabs and Assyrians" (F. Hommel, *Ethnologie*, 574). In 689 B.C., after the defeat of Babylon, Sennacherib attacked the camps of the Arab clans subject to queen Teʾelkhunu, routed them and pursued them into the inner desert around Adummatu (Dūmat al-Djandal). The settlers of this large oasis were dependent upon the Ḳedar tribe which had control over Northern Arabia (the Palmyrene). The queen and priestess of Adummatu, Teʾelkhunu, and her lieutenant Khazaʾil, king of Aribi, had taken refuge here; the latter, after a dispute with the queen, fled into the inner desert, but was pardoned by Assarhaddon, Sennacherib's successor, who recognised him as chief of all the Ḳedar. Khazaʾil died in 675 B.C., and his son Uaiteʾ (Yataʾ) succeeded him, paying a heavy tribute to the Assyrian king, who had sent back Teʾelkhunu's daughter Tabuʾa to Khazaʾil as queen and priestess. In 676 B.C. Assarhaddon made an expedition against the Bāzu (Būz) and Khazu (Khazō) in the depression of the Wādī Sirḥān. When Shamash-shum-ukīn, the king of Babylon, revolted against Assurbanipal, the Ḳedar under Uaiteʾ began hostilities against him and plundered the western borders of the country between Ḥamāʾ and Edom, but were driven back to the desert; when they again plundered the Assyrian provinces, they were forced to flee to Ḥawrān, while king Uaiteʾ, expelled by his own subjects, who were enraged by the devastation of their lands during the campaign, was captured and brought to Niniveh. The Nabayati and the Ḳedar, settled in the Palmyrene and south of Damascus, and the Ḥarar in the southern Sirḥān valley were also subdued by Assyrian forces coming from Damascus, while an auxiliary detachment, which fought in Babylon on the side of the Babylonian king, was completely destroyed after the capture of that capital. Aribi and the tribes of the Nabayati and Ḳedar again recognized Assyrian suzerainty. About 580 B.C. the Ḳedar are mentioned as having been subdued by Babylon.

Strenuous efforts had been made during the Assyrian period to restore order in Arabia, but as a whole this was an impossible task. The utmost that could be achieved, was the protection of the important trade routes and the punishment of razzias, undertaken by the independent or rebellious tribes. If the title of "kings" reappears frequently in the Assyrian records, this title scarcely meant more than a local chief or shaykh, and it is much later before a really kinglike power is exercised by these Arabian chiefs. So "the kings of Arabia and all the kings of the Arabs, who live in the desert", of whom Jeremiah xxv, 23 f. foretells the ruin, are the nomad chiefs. The kings of Arabia are the chiefs of the settlements, e.g. the inhabitants of the oasis of Būz in the depression of Wādī Sirḥān. Some of these settlements are occupied by the Neo-Babylonian kings, e.g. Taymāʾ, which was occupied by Nabonid (552 to 545 B.C.). Some years later (539 B.C.) Arab warriors helped King Cyrus II to take Babylonia (Xenophon, *Cyropaedia*, vii, 4, 16; v, 13).

When the Near East was annexed to the Achaemenid Empire, the Arabs again furnished camel troops to the Great King of Persia, e.g. to Xerxes (Herodotus, vii, 86), but sometimes the Arabs also joined the kings of Asia Minor in their struggle against Persia; for instance their king Aragdes (or Maragdes, Khāridja?) was a confederate of Croesus

(Xenophon, *Cyropaedia*, ii, 1, 5). The "King of the Arabs" mentioned in Herodotus (iii, 4) may be a king of the Liḥyānites (the Laianitai of Agatharchides; the latter had occupied the Northern Ḥidjāz, i.e. the colony of the Minaeans known as Muṣrān ("border-land") in the land of Midian, with the centre of Agra-Hegra, between 500 and 300 B.C., and were followed by the Nabataeans.

When Alexander the Great had conquered the Achaemenid Empire, he also subdued Arabia according to Livy (xlv 9) and Pliny (*Nat. Hist.* xii, 62). The Arabs now had to supply clothes and arms to the Greek army, and they participated in military actions, e.g. in the defence of Gaza (Arrian, *Anabasis*, ii, 25, 4, Curtius Rufus, *Memorabilia*, iv, 6, 30) and in the battle of Raphia (217 B.C.) on the side of Antiochus III. Although the western part of Arabia was occupied by Ptolemy after the death of Alexander, the majority of the Arabs joined Antiochus (Polybius, v, 71); presumably these Arabs are the predecessors of the Nabataeans. Arab colonies, established at the foot of the Lebanon and in Syria, mainly served the traffic on the great commercial route Petra-Damascus-Mesopotamia (Pliny, *Nat. Hist.*, vi, 142; Strabo, xvi, 749, 755, 756), as nomad Arabs (Ἄραβες Σκηνῖται) were also settled by Tigranes with this end in view (Plutarch, *Lucullus*, 21; Pliny, *Nat. Hist.*, vi, 142). In the Mithridatian war Arabs fought along side the Romans, but in the Syrian war they harassed the Roman army under Pompey and were defeated by him. Arabs served with Cassius (53 B.C.) and Crassus against the Parthians. The Roman policy of winning over Arabs as confederates and auxiliaries against their own kindred in the Arabian-Syrian desert and against the Parthians was continued and extended by the Eastern Roman Emperors. The Arabian-Syrian border-land was under the rule of the Ghassānids [*q.v.*] as phylarchs, as was the border-land of the Euphrates in Southern Babylonia (al-Ḥīra) which remained under the rule of the Lakhmids [*q.v.*] until 602 A.D.

In the meantime Arabs had even infiltrated in the 4th century A.D. into Southern Arabia apparently in connection with camel-breeding and traffic on the "incense" road. They are mentioned in the Sabaean inscriptions as Aʿrāb and form a notable part of the population, along with the ancestral sedentary population. Their importance is emphasised by the mention of these Aʿrāb in the title and style of the Sabaean ruler. But this political position did not prevent their kindred in North-West Arabia from entering into warlike disputes with the South Arabian kings. King Amr al-Ḳays b. ʿAmr besieged Nadjrān, which belonged to the king Shammar Yurʿish, and it may have been this Amr al-Kays who put an end to the prevailing influence of South Arabia in the region of ʿAsīr and Southern Ḥidjāz.

At the beginning of the fourth century, the aforementioned Amr al-Ḳays b. ʿAmr, who succeeded in gaining power over the tribes of Asad and Nizār and called himself "king of all the Arabs", put a detachment of Arab cavalry at the disposal of the Romans. This fact is clearly stated in the Nabataean inscription of al-Namāra dated 328 A.D.

From the end of the fourth century A.D. for about a hundred years the princes of the family of Dadjāʿima, the leaders of the tribe of Banū Ṣāliḥ, were vassals of the Byzantine Empire on the Syrian border, and held territories there which were gradually yielded to the Ghassānids in the second half of the fifth century A.D. Unfortunately we do not learn very much about them from Arabic sources.

About the middle of the 4th century A.D., the tribe of Kinda [*q.v.*], which after a long struggle with Ḥaḍramūt, to which it was inferior, had to leave the Yaman, and migrated to the country of Maʿadd, where it settled at Ghamr Dhī Kinda in the south-western corner of Nadjd, two days journey from Makka. Although the leaders of Kinda, as kings of the tribes of Rabīʿa and Muḍar, may have possessed a certain influence on the Bedouin tribes in Nadjd from the time when they settled there, the real kingdom of Kinda, governing a coalition of Arabian tribes in close connection with the Ḥimyarite Power in the Yaman, actually begins with Ḥudjr Ākil al-Murār. Yamanī tradition says that he was made king of Maʿadd, when Tubbaʿ ibn Karib invaded al-ʿIrāḳ, but possibly the attacks, directed against Persia or its vassals in al-Ḥīra, were made by the Kindites supported by the Ḥimyarites. It is further said that Ḥudjr made military expeditions with the tribes of Rabīʿa to al-Baḥrayn and at the head of the Banū Bakr attacked the frontiers of the Lakhmids, depriving them of their possessions in the country of Bakr, so that Ḥudjr is called "King of the Arabs in Nadjd and of the border-lands of al-ʿIrāḳ". His dominion probably comprised most of Central Arabia including al-Yamāma, and he died after a long and successful reign; he was buried in Baṭn ʿĀḳil on the road between Makka and al-Baṣra south of the Wādī al-Rumma. After his death about 478 A.D., the tribe of Rabīʿa denied ʿAmr al-Maḳṣūr, son of Ḥudjr, the dominions of his father; we find the tribe of Rabīʿa now under the guidance of Kulayb Wāʾil, leader of the Banū Taghlib, and at war with the Ḥimyarites, who supported ʿAmr b. Ḥudjr. Kulayb as well as ʿAmr were killed in these struggles about the last decade of the fifth century (*c.* 490 A.D.). With al-Ḥārith ibn ʿAmr the dynasty of Kinda attained its greatest power. He is known to the Byzantine historians as Arethas, chief of the Saracens, and concluded an alliance with the Romans, directed against Persia and the Lakhmids of al-Ḥīra. In the struggles and expeditions against the latter, the tribes of Bakr and Taghlib played the most important rôle (about 503 A.D.).

At any rate al-Ḥārith succeeded in uniting the tribes of the Nadjd into a great kingdom and made invasions into Roman as well as Persian territory. The statement that al-Ḥārith subjugated Syria and the Ghassānid kings may be an exaggeration. The peace of 502 A.D. put an end to the war against the Romans, and in the following year (503 A.D.) al-Ḥārith's troops attacked al-Ḥīra, doubtless with the consent and help of the Romans. Al-Ḥārith became master of all the Arabs in al-ʿIrāḳ (503-506 A.D.), and the Lakhmid al-Mundhir, who got no assistance at all from his suzerain, the Persian king Ḳubādh, submitted to al-Ḥārith and married his daughter Hind. However, the domination of the Lakhmid country was not complete; according to a South Arabian tradition, by an agreement between Ḳubādh and al-Ḥārith, the Euphrates or the canal al-Ṣarā near the Tigris not far from Baghdād was fixed as the northern boundary of al-Ḥārith's territory, and it is said, that, after King Anūshirwān had restored al-Mundhir to power in al-Ḥīra, al-Ḥārith kept what was on the other side of "the river of al-Sawād" until 527-28 A.D. So the Kindite interregnum in al-Ḥīra may have lasted some time between the years 525 to 528 A.D., when the Persian Empire was weakened by the Mazdakite movement. It seems, that al-Ḥārith for some period even ruled

over al-ʿIrāḳ as far as ʿUmān, possibly as a feofee of the Persian king Ḳubādh. After the fall of the Mazdakites al-Ḥārith had to flee; he lost all his property and 48 members of his family were put to death by al-Mundhir. He nevertheless could again approach the Romans and was even appointed as a phylarch of the Arabs, on the side of East-Roman Empire. In 528 A.D., the date of his death, he is mentioned in this position by Byzantine sources. With his death the second climax of the Kindite power in Arabia came to an end. Al-Ḥārith had divided his dominion, comprising all Nadjd, great parts of al-Ḥidjāz, al-Baḥrayn and al-Yamāma, between his sons, who had been placed as chiefs over the tribes of Maʿadd. His eldest son Ḥudjr, who had a certain supremacy over the whole kingdom of Kinda, was killed in a rebellion of the tribe of Asad. Between Shuraḥbīl and Salama, ruling the tribes of Rabīʿa and Tamīm and possessing the eastern half of the kingdom of Kinda, a discord arose concerning the division of power after their father's death, and Shuraḥbīl was killed in the battle of al-Kulāb (a well between al-Kūfa and al-Baṣra) a few years after 530 A.D.; it is highly probable that this dissension was caused or nourished by the intrigues of al-Mundhir, whom the Banū Taghlib as well as the Bakr joined after the expulsion of the victorious Salama. Maʿdikarib, the chief of the Ḳays-ʿAylān, went mad, or fell in the battle of Uwāra, and the fifth son of Ḥudjr, ʿAbdallāh, who ruled over the Rabīʿa tribe of ʿAbd al-Ḳays, in al-Baḥrayn, is not mentioned further. So the kingdom of the family of Ḥudjr Ākil al-Murār broke down, and the Kinda, or considerable parts of them, migrated to Ḥaḍramūt, where they settled about 543 A.D. according to a Sabaean inscription at the dam of Mārib. Ḥudjr's son, the famous poet Imraʾ al-Ḳays, tried in vain to regain the power of his father with the help of the Byzantine Emperor, and died in Anḳara perhaps before the year 554 A.D. A cousin of Imraʾ al-Ḳays, Ḳays ibn Salama, chief of the Kinda and Maʿadd, is possibly identical with Kaisos (Κάϊσος), who received from the Emperor the governorship of Palestine and defeated the Lakhmid al-Mundhir b. al-Nuʿmān, who died in 554 A.D.

The disputes and struggles between the nomad tribes in Arabia are listed under the well known "Ayyām al-ʿArab", and an expedition to Khaybar in 567 A.D. is referred to in the Arabic inscription of Ḥarrān (dated 568 A.D.). That there existed "kings" of individual tribes along with those mentioned here is proved by a Nabataean inscription found in Umm al-Djimāl and dating from about 250 A.D., in which a king of Tanūkh is mentioned.

(A. GROHMANN)

(ii) THE EXPANSION OF THE ARABS: GENERAL, AND THE "FERTILE CRESCENT"

If the expansion of the Arabs is regarded as a continuous process certain permanent features can be detected: the expansion consists usually in the emigration of large or small nomadic groups, rarely in that of groups with permanent habitations; it may be military, by means of service in foreign armies or in their own army which has set out for conquest; or through the founding of trading colonies. Apart from this last case, the extent of emigration depends partly on particular coincidences, partly on a recurrent, but incalculable, factor, the increase in the pressure of population in Arabia. This is brought about by the decline of cultivation (in South Arabia also of industry) and of the caravan trade (in Islamic times also of the pilgrim traffic); there is a corresponding increase in the nomadic population. The expansion was preceded by the immigration into the central parts of the peninsula, which had been sparsely occupied by an earlier population. It was facilitated by the taming of the camel in the second (?) half of the second millennium B.C. Nor is it likely that the occupation of South Arabia took place earlier, to judge from the philological, ethnological and archeological evidence. The forerunners of these immigrants into South Arabia were presumably traders who followed the ancient trade routes into the land of incense and myrrh. A little later the Arabs begun to expand in the North, at first in the direction of Sinai and Transjordan. The evidence of the inscriptions shows that in 853 they were present in the north of the Syrian desert, shortly afterwards on both edges of the Fertile Crescent; they were camel-breeders, oasis-dwellers, traders. This formed the chief objective of the Arab expansion. It did not, however, remain the only one, as the emigration of the Sabaeans into Ethiopia (about 400?) shows. It depended on the strength of the various states of the Fertile Crescent whether this immigration could be canalised in the form of colonisation, and, on the borders, of semi-nomadic life, or whether it led to the flooding of the cultivated land by nomads. In the 1st century B.C. the nomads (Scenites) on the near side of the Euphrates crossed the border of the arable land as far as the line Apamaea-Thapsacus, while in the Djazīra they roved as far as the border of the arable

land to the south of the Khābūr and the Sindjār. We cannot here examine exceptional developments, like that of the trading state of the Nabataeans which expanded in the same century, in the north to the Ḥawrān, in the south to N.-W. Arabia.

The incorporation of the Syrian part of the Nabataean kingdom in 105 A.D., and the abandonment of the Roman sphere of interest in N.-W. Arabia some sixty years later, shook the security of these countries. It is, however, impossible to discern what were the consequences of the incursions of the "Saracens" in the west and of the Ṭayyiʾ settled in the central mountain ridges of North Arabia (al-Djabal). Different is the case of the entry of two tribes into the steppe lying between the Lower Euphrates and the sandy desert, which was perhaps originated by Ardashīr I, the first Sāsānid (d. 241). They were the Tanūkh and Asad (2), who came from East Arabia; and they were followed by Nizār from Middle and Western Arabia. The Nizār, with the exception of Iyād, were absorbed by the population of the Euphrates frontiers; the Tanūkh and the Asad, on the other hand, continued their wanderings, the Tanūkh, for the most part, to Northern Syria and the Asad to the south of the Ḥawrān. Since the 4th century these countries saw also the arrival of tribes from West Arabia. In the meantime, the recession in the incense trade (from the 3rd century ?) and its extinction (at the latest in the 5th century) had led to the bedouinisation of part of the population of South Arabia. Groups of such tribes, taking part in military expeditions of the Ḥimyārite kings, reached the district of Nadjrān and also Central Arabia (e.g. Kinda). All through the 6th century we can observe an advance into the north, sped forward initially by the campaigns of the kings of Kinda; its path lay along the northerly ʿĀriḍ = Ṭuwayḳ to the steppe on the lower Euphrates (Bakr, Tamīm), from Bīsha to the Wādī al-Ruma (ʿĀmir), from the country north of Medina in the direction of Palmyra (Bahrāʾ, Kalb). The Taghlib, dwelling formerly on the lower Euphrates, moved upstream and settled at the beginning of Islam in the Djazīra to the north of the Sindjār.

The expansion at the beginning of the Islam came about in the first place through enlistment in the armies and auxiliary troops which were sent by Medina to the Euphrates, to Transjordania and to Southern Palestine and after that conquered al-ʿIrāḳ, Syria and al-Djazīra; later through participation in the campaigns which led, across the Persian Gulf or from the garrison cities of Kūfa and Baṣra, to Iran, from Damascus to Egypt, North Africa and Spain. It occurred further through the displacement of tribes from Transjordania to Palestine (in the north ʿĀmila and Djudhām, in the south Lakhm); the emigration of parts of Balī and Djuhayna from the Ḥidjāz to Egypt; through continuous infiltration of families and groups into the garrison towns and the Djazīra; and through resettlement of the people of Kūfa and Baṣra in Khurāsān. With the enrolment of 400 families of the Sulaym and other West Arabian Ḳaysites as colonists for Lower Egypt, followed spontaneously by three times their number, the first period of expansion in Islamic times ends. The curtain between the Fertile Crescent and Arabia falls again.

It took a considerable time before the loss which the population of Arabia incurred by the emigration during and after the campaigns of conquests was made good again. The first new movement led from the Djabal towards the north-east: before the middle of the 9th century the Asad (1) began to advance along the pilgrims' road of Kūfa, and Ṭayyiʾ followed close on their heels. In the second half of the 10th century, quarrels under the Buwayhids allowed the Asad to penetrate into the cultivated land; a part of them wandered on to Khūzistān, where already before Islam a small Arab island (Tamīm) had been formed. In the meanwhile the campaigns of the Ḳarmaṭians of East Arabia into ʿIrāḳ (311-25/923-37), Syria and Egypt (353-68/964-78/9), had driven new waves of migration to the north: Khafādja (ʿUḳayl) moved out of East Arabia into the steppe on the lower Euphrates, followed in the 11th century by Muntafiḳ (also of ʿUḳayl). Their place in East Arabia was filled by tribes which immigrated from ʿUmān; part of these too later moved to ʿIrāḳ. Some Ṭayyiʾ settled in southern Transjordania, and subsequently acquired the overlordship over the older immigrants of the same tribe in Palestine. The stream of tribes from South Palestine to Egypt, which began in early Islamic times, began again in the middle of the 11th century (originated by orders of the government), until in the late Middle Ages it was brought to a halt by a movement in the opposite direction. Since the end of the 12th century there is a trickle of Djudhām from Northern Ḥidjāz over Sinai to Egypt and particularly to Transjordania, until in the 17th century this source dries up. They are followed by Balī. Finally since the end of the 15th century groups of the pariah tribe of Hutaym penetrate into the same districts from the territory east of Khaybar. Meanwhile a new expansion had begun in the Djabal. Around 1200 the Ghaziyya (Ṭayyiʾ) appeared in the north between Transjordania and ʿIrāḳ, the Banu Lām (also of Ṭayyiʾ) in the south between Medina and the Ḳasīm. Since the 15th century Ghaziyya camped on the Euphrates, but did not cross it for good till around 1800. The Banū Lām penetrated at the end of the 15th century to the northern frontier of the Ḥidjaz, but were repelled by the Ottomans, and following their ancient route turned in the middle of the 16th century to the east, and on to the lower Tigris and Khūzistān.

The last great emigration, that of Shammar and ʿAnaza, commenced in the same district. At the end of the 17th century the Shammar came from the Djabal to the frontier of ʿIrāḳ. ʿAnaza (whose territory had been till that time from Madāʾin Ṣāliḥ to the Ḳasīm) penetrated at the same time, accompanied by the Banū Ṣakhr, as far as Transjordania. In the 18th century ʿAnaza, coming from S.-W. and S.-E., occupied the Syrian desert. Into the midst of this movement burst the campaigns of the Wahhābīs. In the nineties the Shammar-Djarbā left their homeland occupied by the Wahhābīs and went to the Euphrates. At the beginning of 1802 they crossed it with the agreement of the government and soon pushed on into the Djazīra up to the edge of the mountains of Asia Minor. Other parts of ʿAnaza reached the Syrian Desert together with the troops of the Wahhābīs or in the course of flight from their tax-collectors.

As the result of the progress of agriculture in North Arabia since 1911 and the exploitation of the oil resources in the last two decades, the expansion of the Arabs has ended for the moment.

Some features of the expansion must still be mentioned, which it was not possible to fit into this article: the settlement on the Iranian coast of the

Persian Gulf (which had pre-Islamic antecedents); the foundation of trading colonies on the coasts and the islands of the Indian Ocean from the early to the late Middle Ages: Malabar, Madagascar, East Africa (Peta-Kilwa, with antecedents in the ancient South Arabian period); the more recent colonial policy of ʿUmān; the continuous emigration from Ḥaḍramawt, which in the 19th century was principally, but not exclusively, directed towards Indonesia (mercenaries in Ḥaydarābād); and infiltration into Upper Egypt across the Red Sea. (W. CASKEL)

(iii) THE EXPANSION OF THE ARABS: IRAN IN EARLY ISLAMIC TIMES

The Arab conquest of Iran brought a part of the Arab people to that country. There appear to be two separate developments in settlement. (1) The immigration from the opposite Arab coast to the south coast of Iran along the Persian Gulf. The Arabs also spread in a south-easterly direction along the coast from the mouth of the Euphrates and Tigris. Apparently Arab settlements could be found here already in pre-Islamic times (see A. Christensen: *L'Iran sous les Sassanides*[2], 87, 128). The number of Arabs increased considerably here in early Islamic times; there is, for example, explicit mention as settlers of the ʿAbd al-Ḳays from the coast of ʿUmān (al-Balā̲dh̲urī, 386, 392; al-Iṣṭak̲h̲rī, 142; Ibn al-At̲h̲īr (Būlāḳ), iii, 49). From then on Arab settlements remained along the coast and at some places inland (e.g. Māhān, in the district of Bardsīr, 985 A.D.: al-Maḳdisī, iii, 462) until at least the times of the Mongols (B. Spuler: *Die Mongolen in Iran*, [2]Leipzig 1955, 142, 149 f., 164). It seems reasonable to suppose that there is a connection between those settlements and the ones of today, in view of the continued migration of Arabs across the Persian Gulf and from Baṣra. (2) There was a second influx of Arab settlers into Iran from Mesopotamia. In the 7th century Arab colonies were formed in several towns such as Kās̲h̲ān, Hamadān and Iṣfahān; Ḳumm became a predominantly Arab (and S̲h̲īʿite) town, and remained so for a considerable time (al-Balād̲h̲urī, 314, 403, 410, 426; Nars̲h̲ak̲h̲ī (Schefer), 52; Ibn al-At̲h̲ir (Būlāḳ), v, 15; E. G. Browne, *Account of a rare ms. hist. of Iṣfahān*, Hertford 1901, 27 [offprint from *JRAS*, 1901]; B. Spuler: *Iran* [see *Bibl.*] 179). The number of Arab settlers in Ād̲h̲arbayd̲j̲ān (al-Balād̲h̲urī, 328, 331; al-Ṭabarī, i, 2805 f.; Ibn Ḥawḳal[2], 353; al-Yaʿḳūbī, *Taʾrīk̲h̲*, ii, 446; *Aghānī*[1], xi, 59) was apparently much smaller.

K̲h̲urāsān, however, remained the main goal throughout all these migrations. The actual settlement was partly made by large groups: there are reports of 25,000 from Baṣra and an equal number from Kūfa, who arrived in 52/672; a further batch reached the country in 683. On the basis of this number of men capable of bearing arms (50,000) and in view of the strictness of recruiting, J. Wellhausen (cf. *Bibl.*) estimates the number of Arab settlers in the beginning of the 8th century at 200,000. They did not live only in the towns—where in some cases quarters were put at their disposal after the conquest—but were scattered all over the country, as for example in the oasis of Marw, where they acquired possessions and adapted themselves to the *dihḳāns'* way of living. The geographical contours of K̲h̲urāsān suited the Arabs very well: they could easily travel across the large plains and the steppes, although they were somewhat more awkward than the natives both at crossing rivers and in the mountains (cf. Barthold, *Turkestan*, 182).

The main body of Arabs in K̲h̲urāsān had come from Baṣra. Of the tribes settled there, the Ḳays (especially in the 8th century: al-Ṭabarī, ii 1929) were in the majority in the west, while the Tamīm and Bakr were mixed together in the east and in Sīstān; thus the outcome of inter-tribal feuds was varied. Ibn al-At̲h̲īr (Būlāḳ, v, 6) states their numbers for 715 as follows: Baṣrans 9,000, Bakr 7,000, Tamīm 10,000, ʿAbd al-Ḳays 4,000, Azd 10,000, Kūfans 7,000 (= 47,000 which tallies almost exactly with the above mentioned number for Kūfans and Baṣrans); in addition altogether 7,000 *mawālī* of these tribes. (In this list the people from Baṣra and from Kūfa must stand for elements from the two towns which could not be reckoned among the tribes mentioned). The tribal divisions valid in Baṣra were taken over into K̲h̲urāsān. On the one side were the Rabīʿa (= Bakr and ʿAbd al-Ḳays) and the Yamanite Azd (who had arrived later), and on the other the Tamīm and Ḳays (collectively known as "Muḍar"), who were very pround of their descent [cf. articles on these]. The bloody battle between these began in connexion with the great civil war for the Caliphate in 683; a static war raged outside Harāt for one year, 64-5/684-5 between Bakr and Tamīm (al-Ṭabarī, ii, 490-6), which eventually came to an end because of internal dissensions among the Tamīm. Inspite of the fact that a neutral Ḳuray̲s̲h̲ite became governor in 74/693-4, fighting continued until 81/700 (al-Ṭabarī, ii, 859-62). The attitude of the governor often made the difference between victory and defeat, and his attitude, in turn, depended to a great extent on the party divisions in the west (Syria and Mesopotamia). In 85-6/704-5, the ascendancy of the Azd and Rabīʿa was temporarily checked by a change of governors. Ḳutayba b. Muslim, the conqueror of Transoxania, who was not linked to either of the powerful groups by descent, tried to remain neutral. It was thanks to him that the Arabs had the chance of spreading to Samarḳand, Buk̲h̲ārā and K̲h̲ʷārizm, often moving into specially cleared quarters (al-Balād̲h̲urī, 410, 421 f.; al-Ṭabarī, ii, 156; Ibn al-At̲h̲īr (Būlāḳ), iii, 194; Nars̲h̲ak̲h̲ī, 52). After his death the Azd resumed power under Yazīd II, until the Tamīm took over in 720. The misrule of the latter and of the Ḳays brought Umayyad rule in K̲h̲urāsān into such disrepute that even the open-minded governor Naṣr b. Sayyār could not find a way to settle the disputes of the opposing groups after 744. The ʿAbbāsid revolution, caused largely by the behaviour of the Arabs, passed them by. Its victory in 748-50 brought about new conditions for the Arabs in the east.

A few of the Arabs had, of course, entered into friendly relations with the Iranians soon after the conquest of K̲h̲urāsān. Some of the *marzbāns* and *dihḳāns* had come quickly to terms with the Arab rule and the Arabs frequently took part in the cultural life of the Iranians (especially the celebrations of the *nawrūz* and the *mihragān*, as, similarly, they had also done in Egypt on the occasion of Coptic festivities). There were mixed marriages (mentioned expressly only where more prominent persons were concerned, yet even more likely to have taken place among the ordinary people) and the descendants of such unions in Iran were undoubtedly inclined to attach themselves to, and disappear among, the islamicised Iranians. In addition, there were cases of Arabs (as, for instance, Mūsā b. ʿAbd Allāh b. K̲h̲āzim in Tirmid̲h̲) who quarrelled with the government and joined forces politically with the natives. Furthermore, since the time of ʿUmar II

717-20, there was a growing religious consciousness among some Arabs (such as Ḥārith b. Suraydj) which demanded—with increasing insistance—equal treatment for the Iranian Muslims (cf. Wellhausen, *Das arab. Reich*, 280). Hence the many attempts to come to a reasonable solution of the question of the personal and land taxes where converted Iranians were concerned. In any case, one has the impression that the tribal feeling was more and more superseded by a new, predominantly religious, grouping from round about 720 onwards, when a new process of assimilation began which became important for the general feeling of pan-Arab unity. From this time onwards, political events can no longer be explained as deriving their main spring from tribal feuds.

Because of this, Umayyad politics, which had been built up on the tribal structure, were doomed, and the future belonged to the ʿAbbāsid movement (and also to that of the ʿAlids connected with the former in the beginning) which worked on a different basis. The collaboration between the Arabs, who often took a leading part in the ʿAbbāsid movement, on the one hand, and the Iranians on the other, went smoothly—at least until the fall of the Umayyads (nor was there much friction on a national basis subsequently). Hence the victory of the years 746-50: at that time, however, the greater part of Arabs in Abū Muslim's army spoke Persian (al-Ṭabarī, iii, 51, 64 f.).

There were, however, Arabs, who took no part in this process of assimilation. The greater part of these were pushed out of Khurāsān in the course of the ʿAbbāsid campaign. The remaining settlers, towards whom the Iranians showed no more animosity, were politically (i.e. as Arabs) of little importance. Tribal warfare now ceased completely, although some tribes are still mentioned in the 10th century (cf. the authorities quoted below). Assimilation continued, however, without interruption so that many Arabs eventually merged completely with the Iranians: more quickly, certainly, where they lived in isolation on their estates (as for instance in the oasis of Marw). One must also take into account a further distribution of the Arab element all over the country during the ʿAbbasid period, and further immigration from the west. Consequently there were places which had a partly Arab population as late as the 11th and 12th century, though the gradual decrease in their numbers is already recognisable in the 10th century. Detailed statements regarding this are rather rare: compare for Iṣfahān: al-Yaʿḳūbī, *Buldān*, 274, for various places in Khurāsān, ibid., 294; al-Iṣṭakhrī 322/323, Ibn Ḥawḳal[2], 499; al-Maḳdisī, 292, 303; for Kāshān: *Ḥudūd al-ʿĀlam*, 133, and ibid. 104, 108, 216 (Djūzdjān); al-Djāḥiẓ, *Tria opuscula*, (van Vloten), 40; *Aghānī*[1], xiv, 102, xvii, 69; Djuwaynī, ii, 46, (read *manzilgāh-i ʿArab*); S. A. Volin, *K istorii sredneaziatskikh arabov*, (in the *Trudy vtoroy sessii assotsiatsii arabistov*, Moscow and Leningrad 1941), 124; B. Spuler, *Iran*, 250. The family histories in Ibn al-Balkhī, *Fars-nāma*, xix f. = 116 f., and Ḳummī, *Taʾrīkh-i Ḳumm* (Tihrānī), 266-305 (family of al-Ashʿarī) are most illuminating for the gradual assimilation of Arab families of civil servants into the Persian people.

APPENDIX: ARABS IN CENTRAL ASIA AT THE PRESENT DAY

The origin of the Arabs living at the present day in Central Asia, and apparently also in Afghān Turkistān (where they speak Persian: *The Imperial Gazeteer of India*, V, Oxford 1908, 68; without definite mention of places) can not (or not yet) be fixed with certainty. According to their own tradition, they were brought there by Tīmūr, and they mention the Andkhuy [*q.v.*] district in Afghānistān and the nearby Aḳča (in the privonce of Mazār-i Sharīf) as the site of their original settlement, and Ḳarshī, Bukhārā and Ḥiṣār as places through which they had passed. There is, however, no mention of Tīmūr re-settling Arabs, in the sources concerning his life, nor can his son-in-law, Mīr Ḥaydar, who is frequently mentioned in the oral tradition, be identified. On the other hand there is proof that inhabitants of Marw were transplanted to Bukhārā, and those of Balkh, Shaburghān and Andkhuy into the Zarafshān valley in the year 1513 (ʿUbayd Allāh, *Zubdat al-Āthār*, in the *Zap. Vostočnago Otdĕleniya*, XV, 202 f.). We know, furthermore, that migration of "Arabs" was still possible in the first half of the 16th century between (Persian) ʿIrāk on the one side, and the areas of Bukhārā, Samarḳand and the valley of the Kashka Daryā on the other (ʿAbd Allāh b. Muḥammad al-Marwarīd: *Tarassul*, quoted by Volin 121-3; cf. also H. R. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 94 f., 177, with facsimile 38b-39a [without the factual part of the document]).

Thus it appears that the Arabs living in Central Asia today are not the immediate descendants of the immigrants of early Islamic times [see above iii], although one must allow for the possibility of an association with these settlers, who had already been Iranised in the 11th and 12th centuries. In the 16th century, the Central Asian Arabs were under a *mīr hazār* who collected taxes for the government; they were generally known as nomads (*aʿrāb*) (in addition to the above mentioned document cf. also an *inshā*-collection of Samarḳand of ca. 1530, published by Volin 117-20). In the 17th and 18th centuries there is no information concerning these Arabs, but there is mention of them in the beginning of the 19th century, especially in various travel reports (quoted by Volin). Here we must distinguish two concepts:

(1) A close group marked by strict endogamy, who are, however, in their physical appearance hardly different from their Iranian neighbours; they call themselves "Arabs" but accepted the language of the country they live in. There is a group of Tādjīk and a group of Uzbek-speaking "Arabs" in the Samarḳand area. Travellers mention similar groups of "Arabs" in Turkmenistān, Khīwa, Farghāna and mountain Tādjīkistān. In the 19th century their number was assessed at between 50 and 60,000; Vinnikov (see *Bibl.*), 9, sticks to these numbers (in spite of the result of the census) in 1926. In the 19th century these "Arabs" were still under a *mīr hazār*, but by this time he no longer exercised any fiscal function. The figure mentioned in a Soviet census of 1926 is 28,978, that of 1939, 21,793. According to this it would appear that these groups of "Arabs" who already spoke the language of their area, were absorbed more and more into their Uzbek or Tādjīk surroundings. Their economic situation is also like that of their neighbours. As

survivals of the matriarchal system, however, we still find the institution of the "avunculate" (a special connection between the nephew and his maternal uncle and the marriage of first cousins), in which at least one third of these "Arabs" lived before the revolution. (Compare M. O. Kosven, *Avunkulat* in *Sovetskaya Etnografiya*, 1948, no. i).

(2) From these self-styled "Arabs" (obviously in a historical sense), we must distinguish groups which still speak Arabic. According to the above mentioned documents, it appears that this distinction goes back as far as the 16th century. This would mean that the seltlement of these Arabs must have taken place some generations earlier, otherwise there could have been (in the case of nomads) no possibility of a partial linguistic assimilation. The Soviet census of 1926 gives the figure 4,655 for these Arabs, who can be divided into the dialectally different tribes of Saʿnōnī and Saʿbōnī. They live largely in Uzbekistān (2,170) and in Tādjīkistān (2,274). In 1939, Arab speaking inhabitants of Uzbekistan numbered about 1,750. It would appear that the Russian census of 1897, mentioning 1696 Arabs, had only the Arab speaking ones in mind; yet some doubt about this figure must remain, in view of the numbers mentioned in later years. Apparently this group, too, is in the process of being assimilated by its surroundings.

The language of these Arabs has developed from a Mesopotamian dialect but has (like Maltese) developed into an independent branch of Arabic, and has split in two. The Central Asian Arabic language developed *p* and *č* even in pure Arabic words, on the other hand it lost the *th*, *dh* and partly the *hamza*. *F* often disappeared, and *ḳ* often became *g*; the *ā* usually became *å*, the *u* in the personal suffix *uh* (*u*): *ü*. Stress vacillates; assimilation, inversion, and elision are frequent. The 2nd and 3rd person fem. pl. retain their endings (as in the bedouin dialects). One of the two dialects developed the prefix *mi-* in the imperfect tense (would this correspond to Iranian, or to Syrian and Egyptian Arabic?). A *durativus praesentis* developed under the influence of Turkish. As in the Caucasian languages (e.g. Old Georgian), the direct object is taken up again by a personal suffix in the verb (cf. also the Syrian development). "*Kāna*" is often used as an auxiliary verb (originally with a pluperfect meaning). The infinitive ends regularly in either *-aḥān* or *-ān*. The nūnation of the nouns is almost completely absent; plurals end in *-īn*/*-āt* (this also frequently in the case of masculine nouns), while broken plurals are rare. Arabic numerals have been replaced by Tādjīk ones almost completely. *Status Constructus* is retained, but word combinations of the Indo-Germanic type are frequent (*Ḥaṭab mibīh*, "wood-seller"). Usual word order: subject, object, predicate. Vocabulary largely Semitic, leaning to ʿIrāḳī and occasionally to peninsular Arabic.

(iv) EXPANSION OF THE ARABS IN EGYPT

At the end of the year 18/639, an Arab army appeared on the Syro-Egyptian frontier and commenced the conquest of Egypt. On 20 Rabīʿ II 20/9 April 641, a treaty was signed which wrested Egyptian territory or, more precisely the autochthonous population, from Byzantine domination. Alexandria still held out, and only surrendered eighteen months later. Viewed as a whole, the operations give the impression of an advance carried out no doubt with enthusiasm, but also of a carefully planned offensive. Certain papyri of this period assume particular importance. We possess requisition orders for the billeting and provisioning of Arab troops, and we learn that the expenses incurred by the villages were remitted from the taxes for the following year. From information supplied by the same documents, we see advancing into the country a well-equipped army: armoured cavalry and infantry, accompanied by a flotilla for operations in Upper Egypt. Teams of blacksmiths and armourers were formed for the repair of weapons. This information is based on Greek texts, some of which are indeed accompanied by an Arabic translation, but if the initiation of similar measures was the duty of the Coptic civil administrators, it is a fact that the Arab military leaders were fully aware of them. All this indicates training and discipline, and we may suppose that Bedouin elements did not form the major part of the Arab army. ʿAmr b. al-ʿĀṣ relied in the main on a first contigent of Yemenite origin, nearly all from the ʿAkk tribe, and it is apparent from the names of the districts of Fusṭāṭ that the majority of the groups were Yemenite. On the other hand, contingents of the Djudhām and Lakhm tribes, who had formed part of the population of the Ghassānid Kingdom and had remained neutral at the battle of the Yarmūk, had joined the army of Egypt. The largest figure recorded of the numbers of the Arab warriors is 15,000 men; this seems to be a maximum figure, but not an impossible one.

After the conquest the Arabs remained in their tribal groups: in this connexion, the names of the districts of Fusṭāṭ are again revealing. It may be questioned whether, in the beginning, the Arabs thought of anything but exploitation of the country by the military, who formed a *de facto* aristocracy which did not admit to its ranks any native of the country or mix with the inhabitants since it was forbidden to acquire land. The army of occupation was distributed between Fusṭāṭ, Alexandria, and various posts scattered along the Mediterranean coast, on the desert frontiers of the Delta, and on the Nubian borders. We lack any critical basis on which to form an estimate of the numbers of these garrisons, which were heavily reinforced, since in 43/663 12,000 men were needed in Alexandria alone. With a view to increasing their cohesion, these elements were organised in tribes. The members of each tribe were divided into sections of seven or ten,

under the control of a syndic, who received their pay, and also administered orphans' pensions under the supervision of the *ḳāḍī*. Every morning an official visited the tribes and registered new births.

In 109/727, the Comptroller of Finance in Egypt installed an important part of the Ḳays tribe in the region of Bilbais: the figure 3,000, which we are given, seems to include women and children. These Ḳaysites who, as camel-drivers, participated in the traffic on the Fusṭāṭ-Ḳulzum route, were probably liable to military service, since they were registered on the pay-rolls. These reinforcements had been to some extent necessitated by the first revolt of the Copts, which occurred in 107-725. When the Christian historian of the Alexandrian patriarchate is describing this, he writes "One tribe was situated in the eastern desert of Egypt, between Bilbais and Ḳulzum on the coast; these were Muslims, who were known as Arabs". This mode of expression seems to postulate that the indigenous Muslims, doubtless a minority of the whole population, were at that time more numerous than the Arabs.

These Arabs preserved for more than two centuries the memory of their tribe of origin, and in the majority of the funeral steles, in the cemeteries at Aswān and Fusṭāṭ, the name of the deceased is habitually followed by the ethnic appellation indicating the tribe. It was the Arab title of nobility, and Coptic converts were, in the beginning, second-class Muslims. Some of the latter aspired further, and a judicial scandal which took place in 194-5/810-2 proves that the Arab tribes were still strong enough to appeal to Baghdād against the judgement of a *ḳāḍī* of dubious integrity which conferred on Copts the status of pure-bred Arabs. We observe that in the course of the 3rd/9th century surnames relating to tribes give way gradually to surnames of geographical significance; here, too the funeral steles are documents of the greatest value, and furnish us with toponymic surnames.

The Muslims of Fusṭāṭ, at the beginning of the 3rd/9th century, must have been mainly autochthonous elements, installed in all types of sedentary employment, in government service or in trade; the Arabs, occupied in suppressing revolts in the Delta in the course of the preceding century, were then struck off the military rolls as a result of the influx of Khurāsānīs, and later of Turks, and had probably resumed in the country side the principal occupation of their ancestors, the raising of live-stock. At all events, from then on they are not mentioned in the towns. Descendants of former soldiers, moreover, acquired land: we find the proof of this in the fact that the government claimed from them the *kharādj*, or land tax. They thus became mingled with the indigenous population, which, at the beginning of the 3rd/9th century, was mainly Muslim; on the other hand, the Arabic language was used to an increasing extent by the Copts. The majority of the army, of Turkish stock, could not have made any distinction between the truly autochthonous elements and the descendants of Arab immigrants.

Finally, in 219/834, groups of the Lakhm and Djudhām tribes rebelled in the Delta: they were easily dispersed, and no further mention is made of their rights. The Arabs re-appear, even frequently, in the history of Egypt: they remained organised in tribes, some of which retained their nomad habits. They were mobilised as reserve troops in times of crisis, for example at the time of the landing by the Crusaders at Damietta. Later governments were obliged periodically to exercise their authority against them, either to collect taxes, or to suppress banditry. In general, these interventions were bloody affairs, and were virtually punitive expeditions.

The most significant events were set in train by the temporary migration, in the 5th/11th century, of the Banū Hilāl and the Banū Sulaym before their destructive onslaught on North Africa. It should not be forgotten that a group of Bedouin from the Arabian Peninsula tried to resist the advance of French troops in Upper Egypt in 1799.

Recent censuses have been vague in the extreme: it is estimated that the Bedouin scattered among the deserts of Egypt number about 50,000.

(V) EXPANSION OF THE ARABS IN NORTH AFRICA

It is extremely difficult to enumerate the Arab elements which, from the year 27/647 onwards, entered North Africa. Wec an only accept with the usual reservations the first number of 20,000, representing the fighting men from the Ḥidjāz, furnished by the tribes and grouped round their chiefs, reinforced by contingents taken from the army of Egypt. The first expeditions were nothing more than long-distance raids, without any intention of settling in the country. This ambition appears with ʿUḳba b. Nāfiʿ, who founded al-Ḳayrawān [*q.v.*] in 50/670. The death of this chief and the occupation of al-Ḳayrawān by the Berbers led to the despatch of fresh contingents. From then on, every serious failure on the part of the invaders, every Berber rising, every new phase in the arduous task of conquest, occasioned the arrival of reinforcements. Under the Umayyads, elements derived from the *djund*, detached from the Syrian garrisons, and constituting regiments which already had an individual character, took the place of the fighting men recruited in Arabia. Under the ʿAbbāsids, the Khurāsān militia joined forces with the Syrians, or relieved them. All these elements, living in groups as in the East, were distributed among the towns of the conquered territory. As is well known, their haughtiness as conquerors, their demands and their lack of discipline were a source of the gravest embarrassment to the governors of Ifrīḳiya, and the Aghlabid amirs, obliged to subdue them with great bloodshed, found them employment in Sicily.

Along with the fighting men intended to effect the first occupation of the country, the Arab world sent civilian elements. Apart from the governors and their entourage, kinsmen and clients, there were men of a religious character, who, from the time of the caliphate of ʿUmar b. ʿAbd al-ʿAzīz (99-101/717-20), undertook the methodical conversion of the Berbers. There were also merchants hoping to prosper in fresh territory reputedly rich in resources.

These Arab immigrants constituted exclusively urban elements. The towns, where they formed a considerable proportion of the population, were centres of arabisation. By virtue of the prestige enjoyed by the conquerors, through the education given in the Ḳurʾānic schools and the mosques, and through economic relations and mutual contact in

the markets, the Arabic language spread simultaneously with Islam in the cities and their environs. Al-Ḳayrawān played an important part in this process, but the other garrisons of Ifrīḳiya and its western marches were also able to spread their influence over a limited area.

The Arab immigration of which the Hilāli invasion was the first phase was very different from the Muslim conquest and its consequences, both as regards those who took part in it and their role in the history of Barbary. The initial cause of this disaster was as follows:—in the middle of the 5th/11th century, the amir al-Muʿizz of the Banū Zīrī [see ZĪRIDS] branch of the Ṣanhādja, which governed Ifrīḳiya in the name of the Fāṭimid caliph al-Mustanṣir, broke with his suzerain in Cairo, and the latter, on the advice of his minister al-Yāzūrī, despatched against the rebel kingdom the Arab nomads then encamped east of the Nile, recognising in advance their title to any towns and rural districts which they could conquer.

The Banū Hilāl [see HILĀL], who formed the first wave of this "westward movement" (*taghrib*), and also the Banū Sulaym, who came on the scene later, were connected through their common ancestor Manṣūr b. Ḳays with the powerful line of Muḍar. Both had previously dwelt in Nadjd, and groups of the two families continued to live there. Brought late within the pale of Islam, they had migrated in considerable numbers to Upper Mesopotamia and the Syrian desert. Their independent nature revealed itself immediately after the death of the Prophet. The Umayyads, and the ʿAbbāsids even more, had to punish their plundering activities conducted in particular at the expense of Meccan pilgrims. In the 4th/10th century they took part in the Carmathian revolt. The Fāṭimid caliph al-ʿAzīz crushed the movement (368/978) and forced the Arabs who had supported it to transfer themselves to Upper Egypt. It was from there that they set out to conquer Ifrīḳiya.

At the moment when their first bands, which could have numbered barely a million, reached the Zīrid kingdom of al-Ḳayrawān and caused its downfall, the most powerful of the Banū Hilāl were the Riyāḥ, who occupied the plains of Tunisia. Further east, the kingdom of the Ḥammādids [*q.v.*] and the Zāb]*q.v.*] received the Athbedj. This Arab expansion, whose limits in the 6th/12th century are described by Idrīsī, caused the exodus of Ḥammādids from the Ḳalʿa to al-Bijāya and drove the Zanāta nomads towards the plains of Oran.

The arrival of fresh bands led subsequently to an extension of the territory and to alterations in the distribution of the Arabs. The most important of these waves of immigrants was, starting from the end of the 12th century, that of the Banū Sulaym, who came from Tripolitania. At first allied to the Armenian adventurer Ḳaraḳūsh, then to the Banū Ghāniya who attempted to revive Almoravid power, they placed themselves at the service of the Ḥafṣids, the Almohad governors of Ifrīḳiya, who assured the fortunes of this great tribe. Thus Ifrīḳiya, the first domain of the Banū Hilāl, remained, with the Sulaym, the region where the Arabs were the most numerous and most powerful. But no part of North Africa escaped what was considered by Ibn Khaldūn to be an irreparable disaster. The quest by new arrivals for lands as yet unoccupied and for sedentary populations to exploit, the repulse of the weak by the strong, the advance of certain tribes, such as the Maʿḳil of Southern Morocco, from the western boundaries of the desert, were the quasi-normal causes of their "westward movement". To these must be added the mass transfers effected by the Maghribī rulers within their own territories of Arab contingents on whose collaboration they rashly counted. For example the transfer in 583/1187 of the tribes of Ifrīḳiya by the Almohad al-Manṣur who, wishing to use them in Spain, granted them the sub-atlantic plains of Morocco which were then uninhabited.

The whole economy of Barbary was overthrown by this expansion. With their North African territory, where they lived during the summer, these pastoral nomads combined the corresponding Saharan territories, where they migrated in autumn with their families and where they found new pasturages for their camels. At the two extremities of the annual migration, they possessed a source of income: by right of protection they claimed taxes in kind from the people of the oases, cultivators of date-palms; on the sedentary population of the north they levied imposts which the rulers had assigned to them in the form of *iḳtāʿ* [*q.v.*], or as part of the tax (*djibāya*) for whose collection they were responsible.

Intimately associated with Berber life, these eastern Bedouin naturally played a large part in the propagation of the Arabic language, and it has been thought possible still to recognise in dialect characteristics which seem to mark the difference between the contributions of the great tribes, Hilāl, Sulaym, and Maʿḳil. Simultaneously, however, with arabisation of the Berbers, one must take into account the berberisation of the Arabs, the progressive tendency towards a sedentary form of existence, and the adoption of the way of life of the autochthones by groups of immigrants who had become irremedially impoverished.

DJAZĪRAT AL-ʿ**ARAB**, "the Island of the Arabs", the name given by the Arabs to the Arabian Peninsula.

(i) Preliminary remarks.
(ii) Physical structure and principal geographical features.
(iii) Climate, drainage, and water resources.
(iv) Political divisions.
(v) Flora and fauna.
(vi) Ethnography.
(vii) History:
  1. Pre-Islamic.
  2. Islamic Middle Ages.
  3. The making of modern Arabia—from the 10th/16th century to the present.

(i) PRELIMINARY REMARKS

Although the Peninsula may not be the original cradle of the Arab people, they have lived there for thousands of years and regard it in a very special sense as their homeland. For students of Islam, Western Arabia occupies a unique position as the land in which the Prophet Muḥammad was born, lived, and died. It was there that the inspiration of Allāh descended upon the Prophet, and to this Holy Land come many thousands of Muslims every year from all parts of the Islamic world to make the pilgrimage to the Kaʿba, the House of Allāh in Mecca (Makka), and to visit the Prophet's tomb in Medina (al-Madīna al-Munawwara).

The Peninsula has the shape of a rough quadrilateral with a length of c. 2200 km. from north-west to south-east and a breadth of c. 1200 km. The symmetry of the quadrilateral is marred by the bulge of Oman (ʿUmān) on the eastern side reaching out close to the Iranian coast. On the west, south, and east the Peninsula is clearly defined by the Red Sea (al-Baḥr al-Aḥmar), the Gulf of Aden (Khalīdj ʿAdan), the Arabian Sea (Baḥr al-ʿArab), the Gulf of Oman, and the Persian Gulf (al-Khalīdj al-Fārisī). In the north, the Arabs themselves have often disagreed as to where Arabia ends and Syria (in the broad sense) begins. A vast steppe unrolls northwards from the Great Nafūd with no natural feature suitable as a limit for the Peninsula. For the purposes of this article the Peninsula is considered as extending only to the borders separating Saudi Arabia and Kuwayt from Jordan and ʿIrāḳ, even though these borders represent little more than artificial political concepts. This definition places the northernmost point of the Peninsula at ʿUnāza, a low mesa in the desert farther north than either Jerusalem or ʿAmmān. From ʿUnāza the borders between Saudi Arabia and Jordan, not yet fully agreed upon, reach the sea near the head of the Gulf of al-ʿAḳaba, while the borders between Saudi Arabia and Kuwayt on the one hand and ʿIrāḳ on the other run to the head of the Persian Gulf south of al-Baṣra. Along these eastern borders lie two small neutral zones, in one of which Saudi Arabia and ʿIrāḳ and in the other Saudi Arabia and Kuwayt share undivided half interests.

It is impossible to make a reasonably reliable estimate of the size of Arabia's population. All figures found in reference works are highly suspect, as none is based on proper statistics or sufficient familiarity with the whole Peninsula. In view of the extensive areas inhabited solely by scattered nomads and the relatively light density of population in most of the settled areas, one may doubt whether the total approaches 10,000,000, and it may well fall several millions short of this figure. The most densely populated country is the Yaman (al-Yaman). In Saudi Arabia the main concentrations are in a few cities of al-Ḥidjāz, the well watered mountains and plains of ʿAsīr and its Tihāma, some of the valleys of Nadjd, and the eastern oases of al-Ḥasā and al-Ḳaṭīf. Ḥaḍramawt and Oman both contain many towns and Bedouin tribes.

Present state of knowledge. The inhabitants of Arabia have naturally always known much about the land, but each man's knowledge is restricted to a certain region, being detailed and particularistic rather than general and comprehensive. No single work in Arabic gives a full and accurate description of Arabia. The best volume in the language is still *Ṣifat Djazīrat al-ʿArab* by al-Hamdānī (d. 334/945-46), which, though rich in information, fails to provide a coherent panoramic view of the whole Peninsula.

The serious scientific exploration of Arabia began with Carsten Niebuhr and the Danish expedition of 1762. While travellers of different nationalities pressed on with the penetration of the interior during the 19th century, British officers of the Indian Government undertook technical surveys of the surrounding seas and stretches of the coast. Technical surveying in the interior had to wait for the 20th century, when it began with an investigation of the southern border of the Yaman and preliminary studies for the Ḥidjāz Railway. In recent years oil companies have surveyed large parts of Eastern Arabia, using the highly refined methods of modern geological and geophysical exploration, besides engaging in extensive reconnaissance in other regions.

By 1374/1955 travellers—both Western and Arab—had visited virtually all of the remoter places, so that none of the old major mysteries regarding the surface of the land had been left unsolved. Travellers' reports, however, are often incomplete and sometimes inaccurate, and much remains to be done in checking and correlating those now available. A number of important reports remain unpublished or buried in archives.

Recent years have also seen the introduction of aerial photography as an indispensable procedure in mapmaking. By 1954 a good part of the Peninsula had been photographed for cartographic purposes, and some of the results had already been transferred to maps. Aerial photographs, however, are of maximum value only if supported by ground control, i.e., the establishment of fixed points on the ground whose relationship to the photographs is precisely determined. For much of Arabia such control is still lacking.

The general outlines and main features of the map of Arabia have now been delineated with a fair degree—and in a few instances a high degree—of reliability, but years of study lie ahead before all the details can be filled in. Surveys done in the earlier days, such as those of the Persian Gulf, are now being redone in the interests of greater thoroughness and accuracy. Errors of the past, many of which have become established on maps, are being corrected, but the process is long drawn out.

Arabian governments are now making available information about their countries in a growing body of official publications, and modern Arab authors keep producing books and articles dealing with different parts of the Peninsula. Interest in such diverse things as oil and South Arabian antiquities has called forth a flood of material by Western authors, part of which is sound but much of which is superficial, misleading, or flagrantly contradictory to fact. Arabic sources likewise are often unreliable, so that the student of Arabia must constantly be on the lookout for pitfalls along his path.

(ii) PHYSICAL STRUCTURE AND PRINCIPAL GEOGRAPHICAL FEATURES

Lying between Asia and Africa, Arabia is of such size and individuality of character as almost to justify its classification as a sub-continent. Usually considered an appendage of Asia, it also joins Africa through Sinai, which, though politically a part of Egypt, is closer to Arabia in both physical environment and the nature of its human life. Before the development of rift valleys provided a bed for the Red Sea, Western Arabia formed a part of the African land mass, and the southern half of Western Arabia still has a greater affinity in many ways with

Somalia-Ethiopia than with Northern Arabia or the rest of Asia. Northern Arabia, on the other hand, merges imperceptibly with Arab Asia through the Syrian steppe, and the Oman bulge contains a mountainous area closely resembling the ranges of Iran.

Geomorphologically the Peninsula consists of two main provinces: the ancient Arabian Shield of igneous and metamorphic rocks in the west, and the more recent sedimentary areas sloping away from the Shield to the north-east, east, and south-east into the vast basin consisting of Mesopotamia, the Persian Gulf, and the eastern part of al-Rubʿ al-Khālī. The Arabian Shield is actually only the eastern part of the Arabian-Nubian Shield, an immense mass of basement rocks—greenstones, schists, granite, gneiss, &c.—which have thrust upwards to form bare and forbidding mountains, with the whole mass split into two by the rift valleys running southwards from the Dead Sea and along the course of the Red Sea. The older igneous rocks of the Arabian part represent primarily plutonic activity of the more remote past, while more recent volcanoes have blanketed the surrounding ground with fields of lava (*ḥarra*, pl. *ḥirār*) often imposing in extent. Regions of igneous and metamorphic rocks may be rich in minerals and precious stones, but only insignificant quantities of these have so far been found in Arabia.

To the north and south the eastern limit of the Arabian Shield lies not far inland from the Red Sea. Between these two extremities the limit sweeps around in a rough bulge reaching as far east as the vicinity of al-Dawādimī, less than 200 km. west of the western wall of Ṭuwayḳ. The geomorphologically confused mountains of the Yaman, though composed of similar rocks, are physiographically highly different from the remainder of the Shield. Volcanic areas occur in the Yaman as well as in the mountains fringing the southern coast and those of the Oman bulge.

Valleys drop sharply westwards to the coast plain of Tihāma from the high mountains paralleling the Red Sea. The gentler eastward slope to the Persian Gulf is interrupted by cuestas in Nadjd such as Ṭuwayḳ and al-ʿArama, whose steep escarpments face westwards and whose backs then resume the downward trend. From the highlands of Ḥaḍramawt and Ẓufār the slope southwards to the Gulf of Aden and the Arabian Sea is short, while a longer slope runs northwards to al-Rubʿ al-Khālī. The Oman bulge has a short descent north-eastwards to the Gulf of Oman and a much longer descent south-westwards to the same sand sea, though the mountains here, unlike those elsewhere near the coast, are steep on both sides, forming a hogback range.

The sedimentary province consists predominantly of limestone, along with an abundance of sandstone and shale. These rocks are products of sediments left behind by seas that in the distant past spread out as far west as the Shield. The sedimentary deposits reach a depth of over several kilometers in the vicinity of the Persian Gulf. Organic matter from the plants and animals that lived in the old seas is the source of the enormous accumulations of petroleum discovered in Eastern Arabia during the 20th century.

Islands. The islands, islets, and coral reefs (*shaʿb*, pl. *shiʿbān*) off the Arabian coast increase in number as one proceeds southwards down the Red Sea. The Farasān Bank parallels the coast for nearly 500 km., its southern part including the Farasān [*q.v.*] Archipelago, where the largest islands on the eastern side of the Red Sea are found. Kamarān [*q.v.*] Island lies close to the coast of the Yaman. West of Kamarān the volcanic peak of Djabal al-Ṭayr in the fairway of the sea is reported to have been in eruption as late as the early 19th century. Also in the fairway is al-Zuḳur, the highest island in the Red Sea (nearly 700 m.). The island of Perim [*q.v.*] (Mayyūn) in the straits of Bāb al-Mandab, the entrance to the Red Sea, stands nearer Arabia than Africa.

The island of Suḳuṭrā [*q.v.*], c. 110 km. long and nearly 400 km. distant from the mainland on the southern side of the entrance to the Gulf of Aden, must for both political and ethnographic reasons be regarded as belonging to the Peninsula. The Kuria Muria Islands stand off the mainland in a large bay east of Raʾs Naws. The Arabic name for the group, Khūriyā Mūriyā [*q.v.*], is seldom used today, the more familiar names being al-Ḥallāniyya, al-Ḥāsikiyya, and al-Sawdāʾ, which belong to individual islands. Separated from Oman by a narrow channel is Maṣīra, the only island of considerable size lying along the whole southern coast. The Arabian side of the Gulf of Oman is also almost entirely devoid of islands worthy of the name; one encounters only rocky islets standing alone, such as al-Faḥl north-west of Muscat, or in clusters, such as al-Daymāniyyāt a little farther towards the west.

The mountains of Oman end abruptly at the Strait of Hormuz, the entrance to the Persian Gulf, and some of the peaks detached from the main range form inhospitable islands, the northern tip of one of which is Raʾs Musandam. Abū Mūsā, an island in the Persian Gulf north-west of the port of al-Shāriḳa, has deposits of iron oxide which are worked commercially. Close to the southernmost shore of the Gulf are a number of sandy islands, the largest of which is Muḳayshiṭ (shown on most charts as Abā al-Abyaḍ, the name of its northern part). In the western half of the embayment between the Trucial Coast and the Ḳaṭar Peninsula are islands presumed to be salt domes rising above the sea, among which are Ṣīr Banī Yās [*q.v.*], Dalmāʾ, Zarakkūh, Dās, and Ḥālūl. The main island of Baḥrain (al-Baḥrayn) has a scattering of attendant islets and a dependency of fair size, Ḥawār, which almost touches Ḳaṭar. Tārūt, Abū ʿAlī, and other islands hug the coast of Saudi Arabia, while al-ʿArabiyya [*q.v.*] and al-Fārisiyya [*q.v.*] lie out near the middle of the Gulf.

The Great Pearl Banks (*hayr*, pl. *hayarāt*) stretch along nearly the entire length of the Arabian side of the Persian Gulf, with the richer banks in the central portion. The term *shaʿb* is not used for a reef in this Gulf, its place being taken by *fasht* (pl. *fushūt*), *nadjwa*, and *ḳufʿa*. A *ḥidd* (pl. *ḥudūd*) is a sand bank, a *ḥāla* (pl. *ḥuwal*) is a low sandy islet which may be covered at high tide, and a *ḳaṣṣār* is a projecting rock. *Ruḳḳ* is the common word for a shoal, while an area of deep water—15 fathoms (*bāʿ*, pl. *abwāʿ* or *bīʿān*, the Arab fathom being a little less than the English fathom of 6 feet) or more—is called a *ghubba* (pl. *ghabīb*). The Persian Gulf is a shallow sea, with few depths greater than 90 m., in contrast to the Red Sea, the depth of which in places is in excess of 2,000 m.

Bays and Coasts. The coasts of the Peninsula on the three sides facing the sea are relatively unmarked by major bendings or indentations; no other great land mass on the surface of the globe provides such a paucity of shelter for ships. The Red Sea has few bays on the Arabian side, but many narrow inlets of the type called *sharm*, which penetrate

some distance inland and then broaden out into lagoons in which small sailing vessels can anchor. The one good natural harbour along the southern coast is Aden. Between Raʾs Fartak and Raʾs al-Ḥadd there are four large bays, here called *ghubba* (cf. the use of this term in the Persian Gulf mentioned above), but all are so open to the sea that they give no protection. Muscat on the Gulf of Oman offers a hill-encircled bay large enough for steamers of medium size. Excellent harbours exist in the cliff-walled inlets in the vicinity of Musandam, but they are so hot and inaccessible from the interior that good use has never been made of them. The Persian Gulf has a proportionally larger number of bays, here called *dawḥa*, but their waters are almost without exception extremely shallow. Inlets in the Arabian shores of the Persian Gulf go by the name of *khawr*, a term also used here for a submarine valley. One of the best examples of these inlets is Khawr al-ʿUdayd, which pierces the coast on the eastern side of the base of the Ḳaṭar Peninsula.

Mountains, Plateaux, and Plains. The chain or chains of mountains paralleling the coast of the Gulf of al-ʿAḳaba and the Red Sea are known collectively as al-Sarāt [*q.v.*], though use of this name is not particularly widespread. In many places a lower range lies close to the coast and is separated by a plateau from a higher range farther inland. The average height of al-Sarāt is considerably below 2,000 m. Between the region of Madyan and Mecca only the famous crags of Raḍwā [*q.v.*] west of Medina and a few other mountains reach noteworthy heights. Southeast of Mecca several peaks go up to over 2,500 m., and thence the chain rises to its greatest heights in southern ʿAsīr and the Yaman (Ḥaḍūr Shuʿayb west of Ṣanʿāʾ, c. 3,760 m.). The more precipitous western slopes are generally the higher, but many bold features are also met with along the inner eastern slopes. The range of Ḥaḍn east of Mecca, the historic boundary between al-Ḥidjāz and Nadjd, appears to have lost this distinction in the popular mind, though the dividing line is considered to be along the eastern slopes or among the foothills of al-Sarāt. Passes across al-Sarāt, called *ʿaḳaba* in ʿAsīr and *naḳīl* in the Yaman, are few and far between, and are usually difficult of transit. Notable gaps in the chain are those leading through to Medina and Mecca.

Interspersed among the mountains and occurring frequently along their eastern slopes are plateaux, among the most fertile of which are those in ʿAsīr and those surrounding Ṣanʿāʾ and Dhamār in the Yaman. The plateaux are often capped with a bed of lava, and in places the lava has spilled down the western slopes to reach the verge of the Red Sea.

The highlands of the Yaman present a steep face towards the south, the eastern stretch of which is al-Kawr, called after its indigenous tribes Kawr al-ʿAwādhil in the west and Kawr al-ʿAwāliḳ in the east. Northeast of Kawr al-ʿAwāliḳ is the highly dissected limestone plateau of al-Djawl which is split in twain by the eastward-trending channel of Wādī Ḥaḍramawt. The southern part of al-Djawl reaches heights of nearly 2,000 m., while the higher elevations of the northern part do not greatly exceed 1,000 m. The cliffs along the edges of al-Djawl are often awe-inspiring in their sheerness.

Farther east in the region of Ẓufār are the mountains of the tribe of al-Ḳarā with peaks well over 1,500 m. in height. The growth of trees and grasses on the range is so thick that the residents often call it the Black Mountain. North-eastwards of Raʾs Naws the mountains paralleling the coast begin to dwindle in size and number, and the coast from Raʾs Ṣawḳira to Raʾs al-Ḥadd has generally lowlying country behind it.

Mountains reappear again overlooking the Arabian shore of the Gulf of Oman, along which the range of al-Ḥadjar runs from Raʾs al-Ḥadd to Raʾs Musandam. The towering peaks of al-Ḥadjar are in the central portion, in the vicinity of Djabal al-Akhḍar, the highest exceeding 3,000 m. by a bare margin. Northwest of Djabal al-Akhḍar the mountains called al-Kawr form a part of the main range, while Djabal Ḥafīt rears its formidable hogbacked ridge in the open country west of the northern half of the range.

In the interior the range of al-Ṭubayḳ lies in the borderland between Jordan and Saudi Arabia. Just south of the Great Nafūd the parallel ranges of Adjaʾ [*q.v.*] and Salmā are together known as Djabal Shammar. The hills of al-Nīr lie in the central bulge of the Arabian Shield, near its eastern edge.

East of the Shield a series of roughly parallel cuestas curve around from north to south, following the contour of the crystalline bulge. The most striking of these is Ṭuwayḳ [*q.v.*], the backbone of Nadjd, with a length of c. 1,000 km. from Khashm Djazra to Khashm Khaṭma, where the sands of al-Rubʿ al-Khālī encompass its southern end. Just east of the sands of al-Dahnāʾ is the low rocky plateau of al-Ṣummān (classical al-Ṣammān [*q.v.*]).

Mesas, buttes, and ridges often rise singly or in groups above the plateaus and plains. The Bedouins use the term *djabal* for rocky hillocks as well as massive mountains, and other terms in common use are *ḍilʿ* (pl. *ḍulūʿ* or *ḍilʿān*, a general synonym for *djabal*, not necessarily a rib-shaped hill), *ḥazm* (usually lower than a *djabal*), *abraḳ* (pl. *burḳān*, whence the name of the great oil field of Kuwayt, al-Burḳān), and *barḳāʾ* (pl. *burḳ*), the last two being applied to hills whose sides are mottled with patches of sand. The promontories jutting out from the inland escarpments are called *khashm* (pl. *khushūm*), the word for nose.

Within the northern border of Arabia lies the southernmost portion of al-Ḥamād, a stony plain stretching on northwards into the steppe, and south-east thereof is al-Ḥadjara, another stony plain. Among the major *ḥadabas*—plains with a mantle of gravel—are al-Dibdiba in the north-eastern corner of the Peninsula and Abū Baḥr and Raydā south of the southern end of al-Dahnāʾ. The plain of al-Djalada south-west of Raydā is completely ringed about by the sands of al-Rubʿ al-Khālī. Other plains are found along the southern and eastern edges of al-Rubʿ al-Khālī, all sloping towards the basin occupied by the sands.

The coast plains in the west and south are confined within a fairly narrow space nearly everywhere by the mountains crowding down towards the sea. Tihāma [*q.v.*], the general name for the coast plain along the Red Sea, is sometimes subdivided into Tihāmat al-Ḥidjāz, Tihāmat ʿAsīr, and Tihāmat al-Yaman. On the Gulf of Oman no more than faint traces of plains exist between Raʾs al-Ḥadd and Muscat, but between Muscat and Shināṣ the plain broadens out into al-Bāṭina [*q.v.*], one of the great date-producing districts of Arabia. Salt pans are particularly common along the southern shore of the Persian Gulf, and much of the low ground in this region is covered with sand.

Sandy Deserts. Dunes may be star-shaped, dome-shaped, or crescent-shaped (the crescentic or

barchane dune = *muḥawwī*, pl. *maḥāwī*). Dunes bare of vegetation are called *ṭuʿūs* (sing. *ṭiʿs*, probably from classical *diʿṣ*), with the term *naḳā* (pl. *niḳyān*) being used for the larger ones. Masses of sand may form long single or parallel veins (*ʿirḳ*, pl. *ʿurūḳ*) or more complex arrangements underlying which an orderly pattern can often be discerned. Wide expanses of ground are covered with relatively thin sheets of drift sand. Barchane dunes occur in sizes ranging from c. 1 m. to c. 200 m. in height, and the largest are several km. or more in length. Almost all of the dunes consist of pure sand, with no core of rock or other substances. The colour and composition of the sand itself vary from place to place, with the predominant colour in the interior approaching red.

A sandy area is generally called a *nafūd* (pl. pauc. *nafāʾid*, pl. abund. *nifd*) in the north and a *ramla* (pl. *rimāl*) in the south. The term *ʿirḳ* may be applied to a whole area containing a number of *ʿurūḳ*, e.g., ʿIrḳ al-Maẓhūr embraces seven major veins. As frequently happens with the Arabs, these common nouns are transformed into proper names applied to the most noteworthy examples of their categories: the northern desert known to Westerners as the Great Nafūd is called by the Arabs simply al-Nafūd, the whole southern desert known to Westerners as al-Rubʿ al-Khālī is ordinarily referred to simply as al-Ramla, while al-ʿUrayḳ is a sandy area south of Ḳaṭar.

Almost all of the principal sandy deserts lie in the sedimentary province, where they curve around the central bulge of the crystalline Shield in the same fashion as the cuestas, along the western bases of which many of them lie. The two largest are the Great Nafūd [*q.v.*], with an area estimated at c. 70,000 km²., and al-Rubʿ al-Khālī [*q.v.*], with an area estimated at over 500,000 km²., making the latter the largest continuous body of sand in the world. These two are connected by the long thin arc of al-Dahnāʾ [*q.v.*] lying east of Ṭuwayḳ and al-ʿArama. A similar arc runs west of Ṭuwayḳ between the two main sandy deserts, but its continuity is broken in several places. This lesser arc begins with ʿIrḳ al-Maẓhūr, which leaves the Great Nafūd south of the point of departure of al-Dahnāʾ and merges into three parallel fingers of sand, which from east to west are Nafūd al-Thuwayrāt, Nafūd al-Sirr, and al-Shuḳayyiḳa. The southern extension of al-Thuwayrāt is named Nafūd al-Balādīn after the towns of the district of al-Washm lining its southwestern edge. Almost connected with al-Sirr is Nafūd Ḳunayfidha, the south-eastern end of which nestles under the western wall of Ṭuwayḳ. South of Ḳunayfidha occurs a major interruption in the arc, after which the sands reappear in ʿIrḳ al-Daḥy, which ends north of Wādī al-Dawāsir. The principal direction in which the sands migrate is southwards; in other words, they are slowly but steadily forsaking the Great Nafūd and working their way along the two arcs towards al-Rubʿ al-Khālī.

Although on the map al-Rubʿ al-Khālī appears to have two long arms extending northwards, the western of these, al-Djāfūra, is regarded by the Arabs as constituting a separate desert cut off from al-Rubʿ al-Khālī by the low ground of al-Djawb (Djawb Yabrīn). The eastern of the two arms, also regarded as a separate region, penetrates deep into the hinterland of the Trucial Coast.

Ramlat al-Sabʿatayn south of the south-western corner of al-Rubʿ al-Khālī lies outside the system just described. Perhaps the largest accumulation of sand on the Arabian Shield is ʿIrḳ Subayʿ in the southern part of the central bulge.

Various geographical features associated with drainage and water resources are discussed in the following section.

(iii) CLIMATE, DRAINAGE, AND WATER RESOURCES

The Tropic of Cancer bisects Arabia, passing between Medina and Mecca, between the districts of al-Khardj and al-Aflādj, and between Muscat and Raʾs al-Ḥadd, so that most of the land enjoys a generally temperate climate. Even in the south, where the tip of the Peninsula approaches 12° N. lat., much of the country is sufficiently elevated to avoid the rigours of tropical heat. Only the lowlands along parts of the Red Sea, the Gulf of Aden, and the Arabian Sea have a semitropical rather than a temperate environment.

Meteorological records, though improved in recent years, are still too scanty to provide a completely detailed picture of Arabian weather. The summer heat (*ḳayẓ*) is intense throughout the Peninsula, reaching over 50° C. in the hottest places. The dryness of much of the interior makes the heat tolerable there, but along the coasts and in some of the southern highlands the humidity in summer is high and debilitating. Fogs and dews are common in the humid regions, but over Inner Arabia the sun shines the year round, obscured only by an occasional sandstorm or even rarer shower. Although not the happiest on earth, the Arabian climate has often been damned more violently than it deserves. Many days in fall and spring are fresh or mild. The winters are invigoratingly cool, with bitter cold occurring only at the higher altitudes, where snow crowns some of the peaks, and in the far north, where the winds are biting.

The winds vary greatly in different parts, being subject in particular to the influence of the surrounding seas. In Eastern Arabia the wind tends to blow from the same quarter, but on occasion it suddenly shifts halfway round the full circle, the prevailing *shamāl* from c. NNW yielding to the *kaws* from c. SE. Winds whipping up into sandstorms may subside quickly or go on for days. In Nadjd the wind may box the compass, with drastic changes sometimes taking place every half hour. The monsoons of the Indian Ocean reaching parts of Southern Arabia profoundly affect the character of the country and the life of the people there.

Most of Arabia has been made and kept a desert by the scarcity of rainfall. In portions of al-Rubʿ al-Khālī no rain at all may fall for ten years on end, and in many other parts of the Peninsula the annual fall seldom if ever exceeds 150 mm. When rain does fall over the desert, it may come as a torrential downpour, providing enough moisture to carpet the ground with wild flowers. Periods of drought sometimes last for several years, bringing misery and even death to the people and causing some to migrate abroad. Higher areas tend to catch more rain than lower areas nearby: heavy winter rains may fall on the plateaus and plains in the north while the depression of Wādī al-Sirḥān remains completely dry. Only the areas where the monsoons blow receive fairly ample rains.

Although Arabia contains no large perennial rivers, in the monsoon zone water may be found throughout the year in some stretches of the valleys (called *ghayl* in the south-west). A few of the valleys descending to the sea blend their fresh water with the salt, but most of them dissipate it throughout

their alluvial fans on the coast plains. In the dry zone rainwater from the higher areas occasionally comes down in spate through the stream channels (*wādī*, pl. *widyān*, or *s̲h̲aʿib*, pl. *s̲h̲iʿbān*), which otherwise contain only a few pools or none at all. These flash floods (*sayl*, pl. *suyūl*) sometimes cause great damage, and much of their precious water may flow away unused. Other floods come in sheets over flat surfaces such as gravel plains or the fans at channel mouths. Part of the water that seeps underground is recovered by man through wells and springs.

Although the courses of some valleys can be traced for considerable distances, bodies of sand lying athwart them in places tend to prevent through drainage. A characteristic feature of the Arabian drainage system is the local enclosed basin, varying in size from very large to very small. Wādī al-Sirḥān is not a true *wādī* but a depression c. 300 km. long and 50-70 km. broad into which many *wādīs* on both sides empty their *sayls*. Types of smaller basins are the *k̲h̲abrāʾ*, a hollow with an impervious bottom holding water for a while after rain, and the *rawḍa* (called *fayḍa* in the north), whose bottom does not hold water, so that wild vegetation may be fairly abundant there. Another type of basin is the salt pan or saline flat (*sabk̲h̲a*, pron. *ṣabk̲h̲a*), which occurs with great frequency along the coasts and also in the interior, where it is fully enclosed.

The eastern tributaries of Wādī al-Ḥamḍ, which runs down to the Red Sea, originate in Ḥarrat K̲h̲aybar. A short distance farther east are the headwaters of Wādī al-Rumah (al-Rumma in al-Hamdānī), which through its extension al-Bāṭin runs to the Persian Gulf basin in the vicinity of al-Baṣra, though the connecting link between al-Rumah and al-Bāṭin is choked with sands of al-Dahnāʾ. The small area in Ḥarrat K̲h̲aybar between the sources of al-Ḥamḍ and those of al-Rumah is the one place in the whole Peninsula from which an easy slope to the seas on both sides can clearly be discerned.

Descending from the eastern slope of al-Sarāt, the three large valleys of Ranya, Bīs̲h̲a [*q.v.*], and Tat̲h̲līt̲h̲ converge on the upper reaches of Wādī al-Dawāsir [*q.v.*], which receives their waters in times of exceptional floods only to lose them again as it fans out against the sands of al-Rubʿ al-K̲h̲ālī after piercing through the wall of Ṭuwayḳ. Ḥabawnā (Ḥabawnan in al-Hamdānī) and Nad̲j̲rān [*q.v.*] are valleys coursing eastwards to the sands which lie south of the southern end of Ṭuwayḳ. From the highlands of the Yaman the valley of al-K̲h̲ārid [*q.v.*] flows down into the basin of al-D̲j̲awf [*q.v.*] (D̲j̲awf Ibn Nāṣir), the home of the ancient Minaeans.

The mountains of the Yaman send water southwards towards the coast in the vicinity of Aden through Tuban, Banā, and other valleys. Water from Banā is used for an extensive development of agriculture at Abyan. The southern outriders of al-D̲j̲awl give rise to Wādī Mayfaʿa and Wādī Ḥad̲j̲ar. Ḥad̲j̲ar is the one truly perennial river in Arabia, but its total length probably does not exceed 100 km. Its water, part of which comes from the hot springs of al-Ṣidāra in the uplands, supports cultivation in the area of Mayfaʿ at the river delta (not to be confused with Wādī Mayfaʿa to the west).

Wādī Ḥaḍramawt [*q.v.*], the principal artery of a great drainage system, is fed by valleys coming from both the southern and the northern parts of al-D̲j̲awl, those from the south being far more thickly settled than those from the north. Just beyond the town of Tarīm the Valley of Ḥaḍramawt assumes the name of al-Masīla, which it bears for the remainder of its course to the sea.

Samāʾil, one of the valleys flung out by the range of al-Ḥad̲j̲ar towards the Gulf of Oman, provides passage for the main road from the coast to Inner Oman. The chief valleys of al-Bāṭina are named after the tribes inhabiting their banks, al-Maʿāwil and others. Going up Wādī al-D̲j̲izy and Wādī al-Ḳawr, one comes to passes leading over the mountains to the Trucial Coast.

In the region east of al-Dahnāʾ between al-Bāṭin and al-Sahbāʾ the insufficiency of surface water has militated against the formation of true *wādīs* of any size. Wādī al-Miyāh northwest of al-Ḳaṭīf is a basin rather than a stream channel, deriving its name from the numerous wells and springs found within its confines. Other large basins are al-Farūḳ south of Wādī al-Miyāh and al-S̲h̲aḳḳ southwest of the city of Kuwayt.

In the far north a series of valleys known as al-Widyān (Widyān ʿAnaza) runs north-eastwards towards the Euphrates; among these are Tubal, ʿArʿar, and al-K̲h̲urr. In Nad̲j̲d a number of valleys between al-Rumah and Wādī al-Dawāsir cut through Ṭuwayḳ; al-ʿAtk [*q.v.*] is the northernmost of these. Wādī Ḥanīfa [*q.v.*], rising on the crest of Ṭuwayḳ rather than making a gap in the escarpment, twists down to the basin of al-K̲h̲ard̲j̲ where several important valleys empty into al-Sahbāʾ [*q.v.*], the course of which can be traced across al-Dahnāʾ and al-D̲j̲āfūra into the Persian Gulf basin. The valley of Birk cleaves through the wall of Ṭuwayḳ via a picturesque gorge and turns northwards under the name of al-ʿAḳīmī to follow a course towards al-Sahbāʾ.

Arabia contains no large permanent lakes. Deep pools occur in places, with the most unusual ones being those in the districts of al-K̲h̲ard̲j̲ and al-Aflād̲j̲. In oases such as al-Ḥasā big ponds may be formed by the run-off from irrigation. Dry lakes in the north may be filled with water over an area of 10 or more km². after a rain.

The thousands of wells (*biʾr*, pron. *bīr*, pl. *abyār*, or *ḳalīb*, pl. *ḳulbān*) in the desert, some of them even in the central portions of al-Rubʿ al-K̲h̲ālī, make possible the nomadic life of the Bedouins. The deepest is reported to descend c. 170 m. into the earth, and depths in excess of 70 m. are not uncommon. The wells may be steyned or unsteyned; they may be frequently visited or seldom seen by man. Other watering places are spots in the sand or in valley bottoms where exiguous water is secured by digging down a meter or more. Blowing sand rapidly fills in these shallow holes, so that finding them may tax even the navigational skill of Bedouins bred in the wild. The water in some of the desert wells is too salty for humans (such a well is called a *k̲h̲awr*, pl. *k̲h̲īrān*), but camels drink it and furnish milk to sustain their masters.

Around most of the flowing springs (*ʿayn*, pl. *ʿuyūn*) oasis settlements or towns have grown up. Other communities draw their water only from dug wells, while sometimes tanks and cisterns are used to catch rainwater. The larger oases consist of several or more villages or towns grouped close together, each with its own belt of date groves. The oasis name may apply to the whole group, which may cover tens or hundreds of square kilometers, rather than to any single community within its confines, e.g., al-Ḥasā with its chief towns al-Hufhūf and al-Mubarraz, and Bīs̲h̲a with al-Raws̲h̲an and Nimrān.

Various methods of irrigation are used wherever there is sufficient water. Terracing is much practised in the south with water being led from enclosure to enclosure. In some regions an old system of underground aqueducts (*faladj*, pl. *aflādj*) similar to the *ḳanāts* of Iran is common, while in others it is not known. In large oases such as al-Ḥasā and in Tihāma the rules governing the distribution of water for irrigation are elaborate and firmly fixed by custom. The building of dams, once an art in which the Arabs excelled, has been neglected in more recent times, but now, with a growing population and higher standards of life demanding an expansion of agriculture, it is being revived.

(iv) POLITICAL DIVISIONS

Political divisions in Arabia are often ill defined. Few international boundaries have been agreed upon by the parties concerned, and none has been properly demarcated throughout its full length. A rapid survey of the main political divisions as they existed in 1374/1954-5 will furnish examples of the truth of these statements.

The Kingdom of Saudi Arabia occupies the whole northern half of the Peninsula—with the exception of the small states of Kuwayt, Baḥrayn, and Ḳaṭar, and parts of Oman—and a good share of the southern half as well. Stretching from the Red Sea to the Persian Gulf, it incorporates the large regions of al-Ḥidjāz [*q.v.*], ʿAsīr [*q.v.*], and Nadjd [*q.v.*], and also most if not all of al-Rubʿ al-Khālī. Saudi Arabia and the Yaman agreed in 1354/1936 upon a boundary running from the Red Sea coast to a point short of al-Rubʿ al-Khālī, but no serious attempt has since been made to extend the line southwards from this point over a gap between 100 and 200 km. in breadth. No land boundaries have been fixed between Saudi Arabia and any of the following states, all of which may be assumed to have territories abutting on the Kingdom: the Aden Protectorate, the Sultanate of Muscat, the Imamate of Oman, the Amirate of Abū Ẓabī (the southernmost of the Trucial States), and the Amirate of Ḳaṭar. The boundary between Saudi Arabia and Kuwayt and the boundaries of their neutral zone have been agreed upon in a general way. [See further SAʿŪDIYYA, AL-AFLĀDJ, AL-ʿĀRIḌ, AL-ḤASĀ, AL-YAMĀMA.]

The Mutawakkilite Kingdom of the Yaman lies along the Red Sea between Saudi Arabia and the Aden hinterland. The British and Yamanite Governments have a not entirely satisfactory working arrangement regarding the boundary between the Yaman and the Aden Protectorate, and the joint commission provided for in the Agreement of 1370/1951 to demarcate boundary locations and to recommend solutions to disputes arising from conflicting positions has not yet been constituted. [See further AL-YAMAN.]

The British Crown Colony of Aden, the only possession of a Western power on the Arabian mainland, occupies a tiny area c. 160 km. east of the south-western tip of the Peninsula. Perim Island forms a part on the Colony, and Kamarān is subject to its administration. The Governor of Aden Colony is also Governor and Commander-in-Chief of the Aden Protectorate, which runs c. 1200 km. along the southern coast from Bāb al-Mandab to Raʾs Ḍarbat ʿAlī and reaches inland an undetermined distance. [See further ʿADAN, ḤAḌRAMAWT.]

The Sultanate of Muscat (Masḳaṭ [*q.v.*]) provides an outstanding example of the peculiarities of the political scene in Arabia. The ruler, who styles himself Sultan of Muscat and Oman, lays claim to virtually all the territory east of the eastern edge of al-Rubʿ al-Khālī, a space roughly 1200 km. long and 500 km. broad. Within this space, however, the Sultan administers only three relatively small areas, the remaining areas coming under the Imam of Oman or other independent chieftains. The Sultan's foothold on the southern coast—Ẓufār, which abuts on the Eastern Aden Protectorate—is separated from the main base of his power—the towns of Muscat and Maṭraḥ and the coast of the Gulf of Oman, including al-Bāṭina—by nearly 1,000 km. of coastline with its hinterland. Again, his domains on the coast of the Gulf of Oman are interrupted in the north by territories belonging to the Trucial States around Kalbā and al-Fudjayra before the third centre of his authority appears near Raʾs Musandam. The Sultan is of the line of Āl Bū Saʿīd, an Ibāḍī dynasty which first came into power c. 1157/c. 1744. Unlike his neighbours on both sides, the Sultan is not formally under British protection, though he does have special ties with the British Government.

Another Ibāḍī ruler, the Imam of Oman, whose authority rests more firmly on a religious foundation than does that of the Sultan, directs the destinies of the interior region occupied by the Ibāḍī community. No clear dividing line exists between the territories of the Imamate and the Sultanate; those of the Imam reach the crests of the main mountain range of al-Ḥadjar throughout much of its length, and a few of his governors (*wālīs*) are established on the seaward slopes. The Imam, whose theocratic realm is a continuation of the Khāridjī state founded in Oman c. 133/c. 750, has his capital at Nazwā, and his two principal lieutenants reside at Tanūf in Inner Oman and al-Ḳābil in the district of al-Sharḳiya. Of all the major rulers in Arabia, the Imam, who maintains no formal diplomatic relations with any other power, is the most self-sufficient and the least known to the outside world. [See further ʿUMĀN.]

The Trucial Coast (Sāḥil ʿUmān or simply al-Sāḥil) is the southern shore of the Persian Gulf running southwestwards and then westwards for an undetermined distance towards Ḳaṭar. When the Arabs living there in the early 19th century were preying vigorously on shipping in the Gulf, the region was known as the Pirate Coast; after the British forcibly stopped the marauding and imposed a maritime truce on the rulers of the ports, it came to be called the Trucial Coast. The Trucial States, all of which are in special treaty relations with the British Government, are regarded as being under that government's protection, though without having the formal status of protectorates. [See further BAḤR FĀRIS.]

The Sultan of Muscat claims a part of the oasis of al-Buraymī, but Saudi Arabia challenges this claim on the basis of its own connexions with the place. Saudi Arabia likewise challenges the claim of the Trucial State Abū Ẓabī to al-Djiwāʾ. Saudi Arabia claims an outlet to the Persian Gulf on the coast between Abū Ẓabī and Ḳaṭar, but the British Government, which by treaty controls the foreign relations of these two states, disputes this claim. In 1373/1954 the two parties agreed to submit the dispute to arbitration.

The Ḳaṭar [*q.v.*] Peninsula, jutting northwards into the Persian Gulf about halfway between its mouth and its head, is the seat of an Amirate under the rule of Āl Thānī, a dynasty of recent origin, with its capital in the port of al-Dawḥa. The boundary

between the Amirate and Saudi Arabia in the vicinity of the base of the peninsula has not been agreed upon, and the Amir of Baḥrayn claims a piece of territory around al-Zubāra in the northwestern part of the peninsula.

The archipelago of Baḥrayn [*q.v.*] between Ḳaṭar and the Saudi Arabian mainland constitutes an Amirate under the rule of Āl Khalīfa, a family from Nadjd which established itself in the islands in 1197/1783 and has ruled there ever since, with its capital in the port of al-Manāma on the main island. British interests in the Persian Gulf come under the supervision of a Political Resident with headquarters in al-Manāma. Also subject to his administration are the Kuria Muria islands, which belong to Great Britain.

On the Arabian mainland at the head of the Persian Gulf is the small roughly triangular Amirate of Kuwayt, partially separated from Saudi Arabia by a neutral zone and bounded on the north and west by ʿIrāḳ. Āl Ṣabāḥ, a family related to Āl Khalīfa of Baḥrayn, has ruled Kuwayt for over two centuries [see KUWAYT].

Ḳaṭar, Baḥrayn, and Kuwayt have all granted the British Government by treaty the right to conduct their foreign affairs and have agreed not to enter into relations with other powers without the consent of that government. Questions dealing with water boundaries and the appurtenance of a number of islands in the Persian Gulf remain to be settled between Baḥrayn and Kuwayt on one hand and Saudi Arabia on the other.

(V) FLORA AND FAUNA

Throughout most of the Peninsula a sharp contrast exists between the untilled stretches of desert and the green patches of cultivation in the oases. In places, particularly along the margins of the Peninsula where rain falls more frequently or where stream channels bring sufficient water down from the highlands, cultivation is more widespread, sometimes climbing the heights in skilfully built terraces and sometimes carpeting the narrow plains between the mountains and the sea. Arabia, however, boasts no endless prairies or pampas tamed by the plough, nor does it boast any rich belt of forests—the best it can offer are the juniper woods of High ʿAsīr.

The plant beyond compare in the oases is the date palm (*nakhla* [*q.v.*]), so much in a class by itself that the Arab tends to think of it as a thing apart from all other trees. Not only is the date the most important staple food, but the branches and bark of the palm are also used in building huts, in making baskets and mats, and for a myriad other purposes. The date palm does not flourish at the highest altitudes, so that the villagers there depend on grains. In Ẓufār and a few other spots coconut palms grow in place of or alongside the date, which is also replaced on occasion by the *dawm* palm (gingerbread tree).

Wheat, barley, and the millets are the chief grains. Alfalfa (lucerne = *ḳatt* or *ḳaḍb* or *barsīm*) is a common crop raised in the shade of the date palms, and cotton, rice, and tobacco are cultivated on a small scale.

On high terraces in the Yaman and ʿAsīr grows the coffee which made Mocha a goal for Western traders after the Portuguese found the way around Africa to India. Introduced only about five centuries ago into Arabia, coffee gave its Arabic name (*ḳahwa* [*q.v.*]) to the world, but the world now goes to Brazil for its everyday bean, the bean of the Yaman having become an exotic luxury. On many terraces coffee has yielded place to the more profitable *ḳāt* [*q.v.*], whose slightly narcotic leaves are chewed by people of all classes in the Yaman and other parts of the south.

Frankincense (*lubān*) [*q.v.*] and other aromatics, exported to the West over two thousand years ago by the Incense Road from South Arabia to the Mediterranean, still grow in the south, especially in the land of Mahra, but as articles of commerce they are now of virtually no value. Of greater use today is indigo, much favored as a dye in the south (the tree is called *ḥawīr* and the dye *nīl* [*q.v.*]). Other common dyes are the yellowish *wars* and the reddish henna.

Among the larger trees are tamarisks—sometimes planted in a row as a wind break or to stop the advance of drifting sand—acacias, mimosas, and carobs. The jujube (*Zizyphus spina christi* = *sidr* [*q.v.*] in the north, *ʿilb* in the south) bears an edible fruit, called *dawm* (a homonym of the name of the palm) by the Bedouins and *kunār* by the townsmen. The aloe and the euphorbia often grow to a considerable height, and some varieties of euphorbia closely resemble cactus.

Arid though Arabia is, it is not without flowers and fruits. For roses and pomegranates al-Ṭāʾif is famed, al-Khardj for watermelons (*djiḥḥ* in Nadjd, *ḥabḥab* in al-Ḥidjāz, and *dibshī* in the north), and al-Buraymī for mangoes (*anbā* or *hanb*). Figs, grapes, peaches, bananas, and other fruits sometimes vary the monotonous diet of the townsman, but the Bedouin seldom savours anything more than his milk and dates.

In the cool season the Bedouins roam far afield, sometimes going for months without resort to water wells—the forage supports the camels, whose milk supports their masters. The most sought after plants for forage are the annuals (*ʿushb*, pron. *ʿishb*)—grasses, wild flowers, and herbs which spring up green after a rain, especially in the *rabīʿ*, the season of plenty following the first and best rains (*wasmī*). The sands provide favorable soil for the growth of such annuals and so are reckoned by the nomads as among the most attractive types of desert terrain. Perennial shrubs and bushes (*shadjar*) eaten by camels are *naṣī*, *ḥādhdh*, and *sabaṭ* (pron. *ṣabaṭ*), as well as others too numerous to mention. From time to time camels hanker after bushes of the category called *ḥamḍ*, a prime source of the salt needed by their system. Among the many plants falling in this category are *rawtha*, *rimth*, *ʿarād*, *ʿudjrum*, *sūwād*, *shinān*, *ghaḍā*, and *ḥādhdh* (not *ḥādh* as in classical Arabic). Dry bushes are also essential to the Bedouins for firewood (*ḥaṭab*), among the best for this purpose being *ʿabl*, *ghaḍā*, and *rimth*. Burning with a fragrant scent, these woods help to make the ceremony of brewing coffee for a guest at the open door of the tent one of the chief pleasures of life. The Bedouin likes truffles (*faḳʿ*) and eats other desert plants, though by preference and philosophy there is little of the vegetarian in his being. Twigs of the *arāk* (pron. *rāk*) are in common use as a toothbrush (*miswāk*), and senna (*sanā*) is chewed as a purgative.

Vegetation would be more abundant in the deserts were it not for the migrating dunes, some of which move 20 m. in a year. In many places, however, bushes have taken root and fixed the sand, a hummock of which is built up around each bush. An area of such hummocks may extend for many kilometers, making very rough country known as *ʿafdja*. Less difficult types of sandy terrain with vegetation are called *marbakh* or *dikāka* (pl. *dikāk*, cf. class.

dakk, pl. *dikāk*; and *dakdak* = flat surface, sandy plain).

Among animals the camel occupies a place analogous to that of the date palm among plants. The vast majority of Bedouins in Arabia depend on the camel above all other material possessions. The tribes which herd sheep rather than camels range over the steppes north of Arabia, close to the great rivers of Mesopotamia, and do not pass beyond the territory of Kuwayt in their southward migrations. Milk is the camel's most precious product, but its meat, hide, and wool are also put to good use, its dung (*dimn*) is collected to be burned as fuel, and the tail of a dead camel makes a strong rope. Camels are sometimes harnessed for ploughing or drawing water from wells, and the nomads sell part of their stock to secure money for clothing and other necessities. In time of great thirst a Bedouin may slaughter a camel to drink the water stored in its stomach (*karsh*) and the urine in its bladder (*mibwāl*).

The general term for camels is *ibil* [*q.v.*] (often pronounced *bil*), with *bawsh* being common in the south. A riding camel is a *dhalūl* (pl. *djaysh*); the plural *rikāb* is used for both those that are ridden and those that are not. The most highly desired camels are the thoroughbreds (*aṣāʾil*), whose pedigree has been controlled and recorded over a number of generations. Many of these are from the breeds of Oman (ʿUmāniyyāt), among which the Bawāṭin of al-Bāṭina are particularly well known, though these have the disadvantage of wanting to drink every day and of not being adapted to rough country. The camels of the sands tend to be smaller and lighter in color than those raised in the mountains of the Yaman. Among the multitudinous names in the special vocabulary reserved for camels are ones describing beasts which graze on certain plants, e.g. *hawārim* (fem. sing. *hārim*) from the *harm* bush, and *awārik* (fem. sing. *ārika*) from the *arāk* tree. Along the coasts camels are often fed on dried sardines.

Along with camels, most of the nomads keep sheep and goats (*ghanam*), though not in great flocks like those of the northern steppes. Sheep and goats are valued for their milk, fleece, and skins. Sheep are in demand as the *pièce de résistance* of the Arab banquet; even royalty can offer nothing more appetising than a young lamb (*ṭali*, pl. *ṭulyān*) basted in a pot with *samn* and served on a platter heaped high with rice. *Samn*, clarified butter for cooking and greasing made from the milk of the ewe (*naʿdja*) or she-goat (*ʿanz*), is considered superior to *djabāb* from the milk of the she-camel (*nāḳa*) or *wadak* from the fat of camels, sheep, or cattle.

The Arabian horse, the ancestor of the Western thoroughbred and once the pride of the Peninsula, is a disappearing strain. Few Bedouins now own horses, and the export of stock to India, Egypt, and the West, formerly an important item in the Arabian economy, has dwindled away to insignificance. An occasional man of rank still maintains a stud, but even this is likely to be neglected. The speed of the motor car has captured the Arab's fancy; cars are now used in place of horses for hunting and as cavalry in some of the Arabian military forces.

Fine breeds of donkeys are raised, particularly the large white ones of Baḥrayn and al-Ḥasā. Donkeys are used for riding, drawing water, and as pack animals in the mountains, where their surefootedness makes them more reliable than camels. Cattle, which in most places are not numerous, are usually of the small humped variety, except in Suḳuṭrā, where the humpless kind is found.

The gazelle (*ẓaby*), which in days past used to speed across the plains in great herds, is rapidly being thinned out by rifles in the hands of hunters hurtling by in trucks or cars. The three common types are the *riʾm* (pron. *rīm*), the *ʿifrī* (cf. class. *yaʿfūr*), and the *idm*; the term *ghazāl* is used only for the newly born kid. The swift greyhound (*salūḳī*) of the Bedouins can on rare occasions outrun even the gazelle. Of the oryx (*wuḍayḥī* in the south, *baḳar waḥsh* in the north), a larger antelope, small numbers survive in the remoter parts of al-Rubʿ al-Khālī but none or almost none is now left in the Great Nafūd. The ibex or mountain goat (*waʿl* or *badan*) also seeks refuge in distant retreats on higher cliffs. Other large wild beasts are the hyena (*ḍabʿ*), jackal (*wāwī*), wolf (*dhiʾb*, pron. *dhib*, pl. *dhiyāba*), and cheetah (*nimr*). The lion has long been extinct in Arabia. In the mountains of the south baboons are common, often chattering along in troops; they are fond of raiding the millet fields. Smaller animals are the fox (*thaʿlab* or *thaʿl* or *ḥuṣnī*), the ratel (*ẓarinbān*, class. *ẓaribān*), the cony or hyrax (*wabr*), and the hare (*arnab*). The hedgehog (*ḳunfudh*) with its short quills is much commoner than the unrelated long-quilled porcupine (*nīṣ*). The jerboa (*djarbūʿ*, cf. class. *yarbūʿ*) hops about the desert on its long hind legs, resembling a miniature kangaroo; its cousin the *djirdhī* (cf. class. *djuradh*), on the other hand, runs on all fours.

Snakes live in the sands and rocks, though seldom seen because of their nocturnal habits. Some are poisonous, including the horned viper, as well as a species of Arabian cobra (= Egyptian asp) and a large snake called the *yaym* (cf. class. *aym*), which the Bedouins say has the power of flying or leaping over a considerable distance. According to popular report, perhaps the most deadly of all is the *bathn*, a small innocent-appearing snake living in the sands. The striped seasnakes of the Persian Gulf are poisonous, but they rarely if ever bite human beings. The two large lizards are the *ḍabb* and the Arabian or desert monitor (*waral*), the first of which is eaten by all the Bedouins with relish, while the second is ordinarily shunned. Among the smaller lizards of the sands are the fierce-looking *ṭuḥayḥī* and the slippery sand-swimming skink (*dammūsa*).

The ostrich appears to have become extinct in Arabia during the past few years. Fragments of ostrich eggshells are often found in the desert, and the word *naʿām* and other terms relating to ostriches occur frequently in place names. Trained falcons, often called simply *ṭuyūr*, are much used in the chase, their chief game among other birds being the lesser bustard (*ḥubārā*). Species of the sand grouse such as the *ḳaṭā* and the *ghaṭāṭ* are too fast for trained falcons, though they can be overtaken by the wild variety. The presence of wild falcons is attested to by the number of high places called *maṣḳara* = nesting-place of the falcon (*ṣaḳr*). Among the larger birds of the desert are the eagle, the vulture (*nasr*), and the owl, while the flamingo, the egret, and the pelican are found along the coasts. Smaller birds are commoner in the cultivated regions, among them being the cuckoo, the thrush, the swallow, the wagtail, the Syrian nightingale (*bulbul*), and the hoopoe (*hudhud*). The bifasciated lark (*umm sālim*) is ubiquitous in the desert, and the courser (*daradj*) nearly so. The pigeons of the Great Mosque in Mecca are famous throughout Islam.

The seas embracing the Peninsula are rich in fish, many of which, such as the king mackerel (*kanʿad*) and the grouper (*hāmūr*) of the Persian Gulf, are tasty and nutritious, but are not eaten as much by

the Arabs as might be expected. Whales occasionally enter the Persian Gulf from the Indian Ocean. Both sharks and sardines are caught in great numbers off the southern coast, and the Persian Gulf produces delicious shrimps.

The most disastrous plague visited upon Arabia by living creatures is that of the locusts (*djarād*). The solitary mitigating aspect of a locust invasion is that a number of the invaders themselves are eaten by the people they afflict. Minor plagues by comparison are those of flies, camel ticks, and similar vermin, which are no worse in Arabia than in many other countries, even though the Bedouin may describe his life as all *raml wa-ḳaml* (sand and lice). A more agreeable insect, even in spite of its sting, is the bee, kept for its honey.

(vi) Ethnography

In the study of the ethnography of the Peninsula an array of formidable problems remain unsolved. Who were the first inhabitants? Did they arise from the soil or did they come from abroad ?If immigrants, what was their original home? What was the environment in which they lived—did it differ greatly from the Arabia of today? What intrusive elements intermingled with the earliest dwellers as time went by? Who were the first people to deserve the name of Arab, and where did they come from?

A measure of progress has been made in the attempt to elicit answers to these and similar questions, but far more work must be done before any of the more likely hypotheses can achieve the status of historical fact. Much more needs to be known about the geology and geography of the Peninsula, many promising archaeological sites need to be excavated, and an exhaustive investigation must be made of the various segments of the present population and their history. Moreover, the solution of Arabian problems may well depend to a considerable degree on the success of work relating to other areas. The problem of the identity of the Arabs, for example, dovetails inextricably into the broader problem of the identity of the Semites, the host of people speaking languages of the family to which Arabic belongs.

Space does not permit a review of the numerous hypotheses receiving serious consideration with respect to the early history of man in Arabia. Suffice it to say that available evidence indicates that the highlanders of the Yaman may form the least adulterated large group anywhere in the world now representing what anthropologists call the Mediterranean race. East of the territory of these highlanders a Veddoid strain is said to appear, particularly among the tribe of Mahra and other tribes in the south speaking their own Semitic languages, which are distinct from Arabic. This Veddoid strain and other data suggest an ancient connection with lands farther east, perhaps India or Ceylon. The Bedouin of the north, to most Westerners the classic Arab type, is also basically Mediterranean, though not quite as characteristically so as the mountaineer of the Yaman. All along the coasts and with less frequency in the interior, other strains occur, sometimes in easily recognisable forms and at other times lying so far below the surface as almost to defy identification.

The unraveling of these mysteries is the concern of the archaeologist and the anthropologist [cf. also

BADW]. More important for the student of Islam is the concept the Arab—especially the Muslim Arab—has had, and in many cases still has, of his ethnographical development, a concept so prevalent and tenaciously held that it merits the careful consideration of the anthropologist as well.

The seeds of the Arab's own concept go far back into his past; how far can not be determined because of the relative lateness of the sources available, though the basic particulars of the concept had developed before the appearance of Islam. In weighing data pertaining to pre-Islamic times, however, one must use caution, bearing in mind the fact that most of the existing sources were recorded not only long after the event but also subsequent to the introduction of Islam with its new ways of looking at many aspects of life, so that the complete genuineness of these data may often be open to question. Furthermore, various refinements of the Arab concept were still being made in the time of the Prophet, and other refinements came even later. Finally, Islam with its doctrine of the brotherhood of Muslims and the equality of Arab and non-Arab presented a fundamental challenge to the validity of the Arab concept as a guiding principle for the life of the community.

Muslim genealogists have worked out an elaborate and ingenious system for the illustration and application of the Arab concept. Although this system has weaknesses—obscurities in the early stages, obvious gaps, unexplained riddles, inconsistencies, and contradictions—on the whole it hangs together well. Most important, its primary theses—the core of the Arab concept—have been by no means the exclusive property of scholars; they have belonged to the people, and their influence on the politics and social life of Arabia has been penetrating and pervasive.

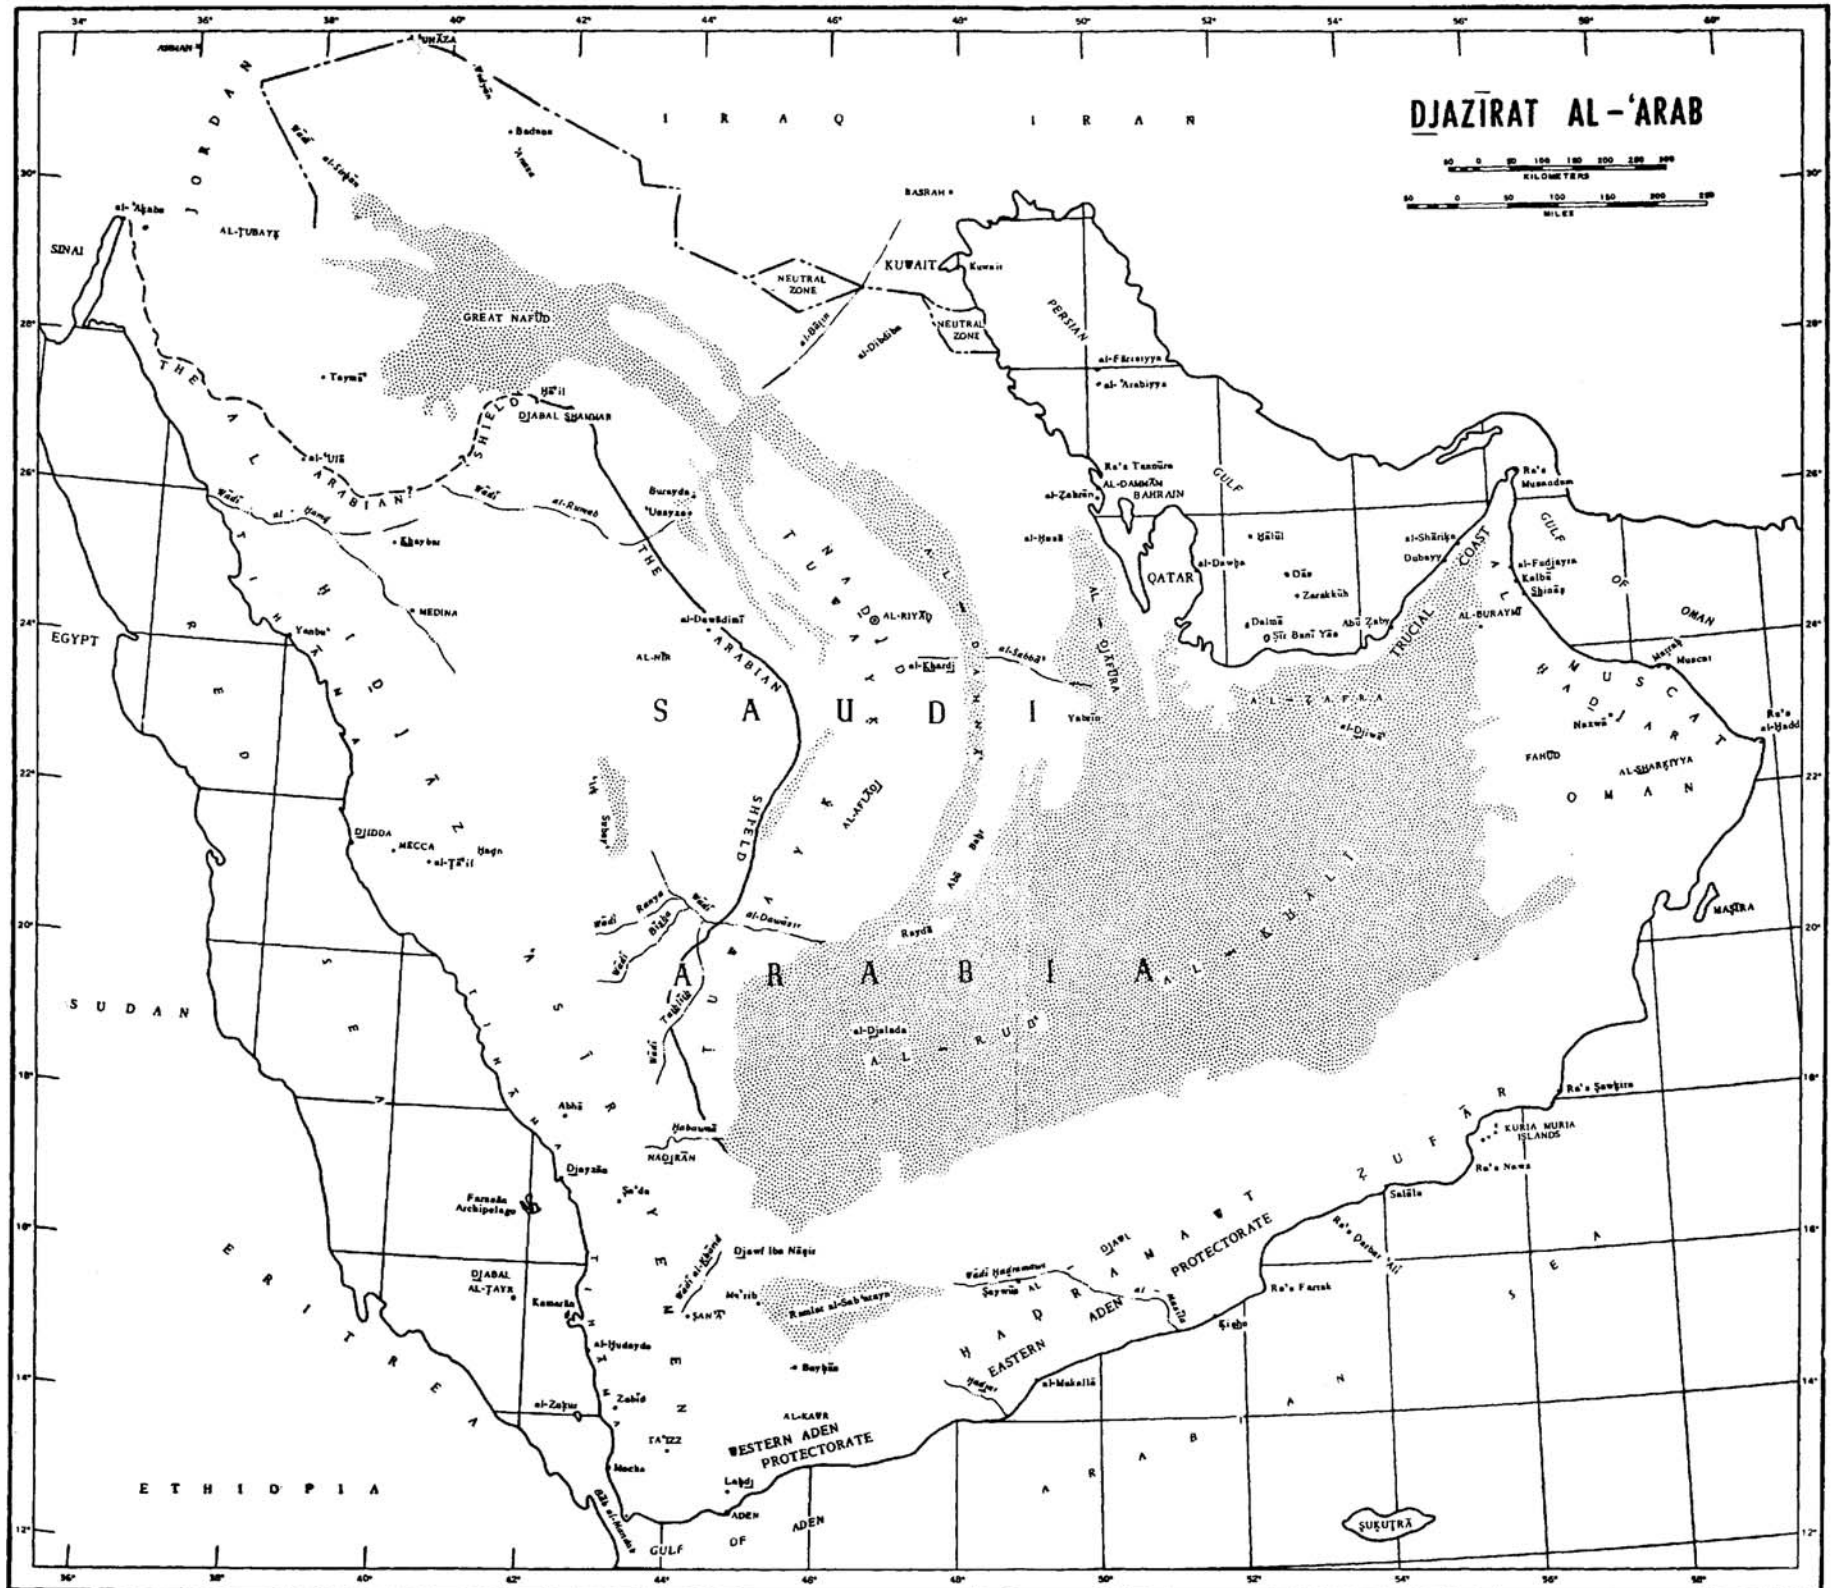
According to the Arab concept, the Arabs constitute a race, not simply a community of people speaking the same language. This race is made up of innumerable men and women each descending in a direct line from one or the other of two ancestors, who probably were not closely related (the connection between these two eponyms is one of the major unresolved aspects of the system). Greater homogeneity could have been attained only by insisting on the descent of all Arabs from a single ancestor. That the Arabs recognized in their clear and undisputed tradition the duality of their origin is a significant fact, and its effect on the history of the Arabs and Islam has been far-reaching.

The system of the genealogists begins with a nod at those whom the Arabs regarded as the original inhabitants of the Peninsula, tribes such as ʿĀd, Thamūd, Iram, Djurhum, Ṭasm, and Djadīs [*qq.v.*], all of which are believed to have disappeared before the beginning of Islam. Some of these, such as ʿĀd and Iram, may well have been entirely legendary, while the historicity of others, such as Thamūd, is not in doubt. Nothing certain is known about the identity of these tribes, though they are generally reckoned to have been Arabs, the Lost Arabs (*al-ʿarab al-bāʾida*). Sometimes they are even called the True Arabs (*al-ʿarab al-ʿāriba*), though this has little meaning, as in the Arab concept they are mainly a historical curiosity and an example of the terrible fate visited on people who heeded not their prophets. Although in later times there were men who claimed descent from these ancients or even tribes reputed to have sprung from them, the conclusion of the genealogist Ibn Ḥazm (d. 456/1064) was that "on the face of the earth there is no one whose descent from them is verified" (ed. Lévi-Provençal, 8).

Disposing of the autochthons in this fashion, the Arab concept concentrates on the two great ancestors—Ḳaḥṭān and ʿAdnān [*qq.v.*]—and the two great divisions of the Arab race they fathered. As all men go back to Adam, these two must have been at least remotely related. The question of a closer relationship depends on whether Ḳaḥṭān was a descendant of Ismāʿīl, who was recognised as an ancestor of ʿAdnān. One opinion commonly held opposes such a descent for Ḳaḥṭān, whose presumed line from Noah's son Shem (Sām b. Nūḥ) is separately traced. Ḳaḥṭān's offspring are generally denominated the True Arabs (*al-ʿarab al-ʿāriba* or *al-ʿarbāʾ*) and ʿAdnān's the Arabised Arabs (*al-ʿarab al-mutaʿarriba* or *al-mustaʿriba*), though the uncertainty of this classification is revealed by the existence of other versions, one of which brackets the Lost Arabs with Ḳaḥṭān as the True Arabs, while another reserves the title of True Arabs for the Lost Arabs, designating the people of Ḳaḥṭān as *mutaʿarriba* and those of ʿAdnān as *mustaʿriba*. In any event, Ḳaḥṭān clearly comes out closer than ʿAdnān to genuine Arabness.

The descendants of Ḳaḥṭān are the Southern Arabs, Ḳabāʾil al-Yaman, whose origin is traditionally assigned to the south-western corner of the Peninsula, while the descendants of ʿAdnān are the Northern Arabs, held to have made their first appearance in the northern half of the Peninsula. Whether this traditional division has a basis in truth is open to question. Certain data, for example, suggest that Sabaʾ came from the north into the Yaman, though in the scheme of the Arab genealogists Sabaʾ is the great-grandson of Ḳaḥṭān and the father of Ḥimyar and Kahlān, the eponyms of the two main branches of the Southern Arabs.

The peoples of the ancient South Arabian states—Sabaeans, Minaeans [*qq.v.*], and others—were regarded as descendants of Ḥimyar, so that Ḥimyar in Arabic became the comprehensive term embracing the civilisation of these states. Few of those recognised without qualification as descendants of Ḥimyar played an important role during the Islamic period, the centre of the stage having by then been occupied by the sons of Kahlān, among whom were numbered Ṭayyiʾ, Madhḥidj, Hamdān, and al-Azd. Among the subdivisions of al-Azd were al-Aws and al-Khazradj, residents of Medina who rose to fame in Islam as the Prophet's Anṣār. Lakhm, Ghassān, Kinda, and other tribes of Kahlān became solidly established in the north and centre long before the beginning of Islam, so that a tribal map of Arabia in the 6th and early 7th centuries reveals a curious patchwork in which the ranges of many Arabs of Southern descent lie north of those belonging to Arabs of Northern descent.

ʿAdnān, the putative progenitor of the Northern Arabs, appears to have been even more of a misty figure than Ḳaḥṭān, so that the Northern Arabs in popular practice often trace their descent back no further than ʿAdnān's son Maʿadd or even his grandson Nizār. Muḍar and Rabīʿa, sons of Nizār, were the eponyms of the two main branches of the Northern Arabs, the descendants of a third son, Iyād, having largely sunk out of sight by the time of Islam. Ḳays ʿAylān, one of the two major divisions of Muḍar, was of such importance that the term Ḳaysī was often used for all Northern Arabs. This division embraced Hawāzin and Sulaym, and Hawāzin alone included such notable tribes as Thaḳīf and the whole group of ʿĀmir b. Ṣaʿṣaʿa


(Kushayr, ʿUkayl, Djaʿda, Kilāb, and Hilāl). Khindif, the other major division of Muḍar, numbered in its ranks Hudhayl and Tamīm and above all Kināna, the tribe of which Kuraysh formed a subdivision. Although the Northern Arabs by origin lacked the same identification with Arabdom that their Southern cousins enjoyed, the fact that the Seal of the Prophets came from the Northern tribe of Kuraysh has redeemed their prestige under Islam in ample measure.

From Rabīʿa sprang the tribes of ʿAnaza, ʿAbd al-Kays, al-Namir, Taghlib, and the strong group of Bakr b. Wāʾil, one of whose members was Ḥanīfa. Well before Islam the original groups of Muḍar and Rabīʿa dissolved, early folk of Muḍar moving to the territory on the Euphrates called after them Diyār Muḍar and early folk of Rabīʿa to the territory on the Tigris called Diyār Rabīʿa. Many of their offshoots, however, remained behind in the Peninsula: Hudhayl in the vicinity of al-Ṭāʾif; Sulaym in the mountains between Mecca and Medina; Tamīm and Ḥanīfa and various members of ʿĀmir b. Ṣaʿṣaʿa in the center; and ʿAbd al-Kays in the east.

An attitude of hostility between Kaḥṭān and ʿAdnān, which went far back into the past, was enhanced by the rivalry that developed between the Anṣār of Medina and Kuraysh of Mecca, so that it became a factor of extraordinary significance in the history of the early Islamic dynasties, the effect of which extended as far afield as Spain. The struggle between South and North finally faded away into an affair of dwindling consequence with the eclipse of the Arab element in the Islamic world. Only in one section of the Peninsula—ʿUmān—has the ancient hostility endured down to the present as a vital force. For centuries the Northerners were known in ʿUmān as Nizārīs, and the Southerners as Yamanīs. As the result of a civil war there in the early 18th century, the Northerners came to be called Ghāfirīs and the Southerners Hināwīs, a distinction which still carries weight.

A major anomaly in the system appears in the case of Kuḍāʿa. A number of tribes—Bahrāʾ, Djuhayna, Balī, Tanūkh, Kalb, and others—recognised a common ancestor named Kuḍāʿa, but agreement was lacking as to whether he was a Southerner or a Northerner. Some said he was a son of ʿAdnān, while others said he was a grandson or later descendant of Ḥimyar. The genealogists also resorted to the device of declaring that all the Arabs were descended from three men—Kaḥṭān, ʿAdnān, and Kuḍāʿa—but without the suggestion that Kuḍāʿa represented a third element, neither Southerner nor Northerner. In the conflicts between the Southerners and the Northerners during the early period of Islam, the tribes of Kuḍāʿa tended to side with the Southerners; genealogy was used for political purposes, the attribution to Kuḍāʿa of a descent from Kaḥṭān through Ḥimyar prevailed, and the tribe of Kalb of Kuḍāʿa advanced to the fore as champions of the Southern Arabs in the days of the Umayyads.

In studying the history of Arabia from ʿAbbāsid times to the present, one encounters great difficulty in determining the links between the tribes of a thousand years ago and the tribes of today. Oppenheim, Bräunlich, and Caskel in their work *Die Beduinen* have made the most ambitious attempt so far with respect to the tribes of northern and central Arabia, but much remains to be done in spite of the laudable degree of success they have achieved. Information on the tribes during the time when the government of Islam was in or near Arabia is fairly abundant, and the same is true of the last two centuries or so, but for hundreds of years in between their story remains for the most part concealed from view. Great migrations took place of which only trifling records have been recovered. Elements broke off from one tribe to join another, or whole tribes reshuffled themselves into new groupings. Popular tradition among the Bedouins has preserved some recollection of the changes, but this tradition is often far from trustworthy. In the 4th/10th century al-Hamdānī remarked on the tendency of tribes bearing a given name to associate themselves with stronger or more renowned tribes of the same name, and this tendency still holds true. In the time of the Caliph Abū Bakr the appearance of the false prophet Musaylima among Ḥanīfa brought this tribe into disrepute; descendants of Ḥanīfa in Nadjd today prefer to name as their ancestor Rabīʿa, from whom Ḥanīfa sprang, but so many other tribes have been named Rabīʿa and popular knowledge of the traditional genealogical system is so scant that the result is often complete confusion. The modern tribe of al-Dawāsir has a tradition that its ancestor was named ʿUmar; the ordinary Dawsarī today glibly identifies him as ʿUmar b. al-Khaṭṭāb without knowing who ʿUmar b. al-Khaṭṭāb was. The modern tribe of Banī Ghāfir in al-Bāṭina of ʿUmān provides an example of the often unstable status of the tribes; although the Northern Arabs of ʿUmān are now called Ghāfirīs after this tribe, the tribe itself is notorious for the way in which it has shifted its allegiance back and forth between the Northerners and the Southerners.

Some of the great tribes of the present, such as Tamīm in the centre and Hamdān in the southwest, apparently represent in a generally faithful manner the ancient entities which bore these names, though many members of each have in the course of time broken away and lost their identity, while outsiders have attached themselves to this tribe or that and become completely absorbed into the community. The modern tribe of Kaḥṭān may be the residue of one or more segments of the original nation of Southern Arabs, or the connexion may be even more tenuous than this, despite the fact that the Bedouins of Arabia still associate this tribe with the father of all Southerners. To follow the vicissitudes of the tribe of Kuraysh since the beginning of Islam, one would have to investigate—among other things—the history and current status of the many thousands of real and reputed *sayyid*s and *sharīf*s scattered not only throughout Arabia, but from one end of the Islamic world to the other.

Members of one modern tribe may tenaciously insist on their homogeneity in descent from a single ancestor, while members of another tribe readily admit that they are a confederation of diverse elements. The tribes of al-ʿUdjmān and Āl Murra, which migrated from the vicinity of Nadjrān to Eastern Arabia about two centuries ago, maintain that they share a common descent from Hamdān of the Southern Arabs through Yām. Their physical characteristics, their speech, and other facets of their life and history lend credence to this claim. On the other hand, large tribes such as ʿUtayba and Muṭayr in Inner Arabia are closely knit composites the original components of which probably first coalesced not more than five or six centuries ago. These confederations may be transitory, e.g., the confederation of Nuʿaym in ʿUmān appears at present to be in the process of breaking down into its two

main constituents, Āl Bū Khuraybān and Āl Bū Shāmis, with the old name of Nuʿaym frequently being applied to Āl Bū Khuraybān alone, while other members of Nuʿaym, living c. 500 km. to the west, are no longer in close contact with the main body.

Despite all the genealogical vagaries and uncertainties, it is impressive how much importance is attached by most of the Arabs of Arabia to purity of descent. Mankind is divided into those whose race is universally recognised as purely Arab (*aṣīl*) and those of a lower category whose blood is mixed or impure (*ghayr aṣīl*). The Bedouin who knows his immediate forebears through no more than six or eight generations is still profoundly convinced of his own nobility; his membership in a tribe of acknowledged purity of descent is sufficient guarantee that the line further back is without taint. Purity of blood is preserved by strict rules governing marriage, which among the Bedouins at least are seldom violated. The distinction between pure and impure, strongest among the Bedouins, is carried over to a considerable extent into the oases and towns, particularly those away from the coasts, where many of the townspeople keep alive their sense of affiliation with one tribe or another. Other townspeople are grouped together in Nadjd under the appellation of Banī Khaḍīr, a generic term for those whose origin can not be traced back to a specific tribe.

In the desert a few nomadic tribes by general consent bear the stigma of non-Arab descent. Among these is the tribe of al-Ṣulaba [*q.v.*] in the north, the physical characteristics of whose members, as well as the popular traditions regarding them, suggest an origin hidden in an unusual aura of mystery, though there is no foundation for the oft-repeated legend that they are the offspring of wandering Crusaders. Others of this category in the north are Hutaym and al-Sharārāt. The tribe of al-ʿAwāzim in the east has succeeded in rising somewhat above its inferior status as a result of its prowess in battle during the past forty years in the ranks of King ʿAbd al-ʿAzīz of Saudi Arabia.

Along the coasts, in the seaports, and in towns not far inland are found the greatest infusions of foreign or nondescript racial elements. In some cases these are well defined types from abroad, such as Somalis and Indians along the southern coast and on the Red Sea; banians or Indian merchants are also numerous in the ports of the Sultanate of Muscat and on the Persian Gulf. In other cases people of obscure origin are classified primarily on the basis of their occupations, such as the servants in Southern Arabia called Ṣibyān and Akhdām. Because many Muslims from distant lands desire to live and die on hallowed ground, Mecca contains a strikingly heterogeneous population, in which the so-called Javanese and Bukhāran colonies (made up respectively of settlers from Indonesia and Central Asia) are among the largest. Certain foreign elements, such as the Abyssinians from the west and the Persians from the east, have a history in Arabia going back two millennia or more, yet they have never immigrated in great force and few are the places where the majority of the population has not retained its basic Arab character, at least in such important aspects as language and religion. Other foreign elements, such as some of the Baluchis settled in the interior of ʿUmān, have become so thoroughly Arabised that they are now considered by their Arab neighbors as *aṣīl*.

Racial matters in Arabia are often intermingled with religious considerations. Descendants of the Prophet, who usually bear the title of *sharīf* in al-Ḥidjāz and *sayyid* in the Yaman and Ḥaḍramawt, sometimes form a privileged caste in the community, while at other times they lead the life of simple nomads in the desert. The numerous *sayyid*s of Ḥaḍramawt, who enjoy exceptional prestige, all claim descent from a small group of families who emigrated from ʿIrāḳ to Ḥaḍramawt in the first half of the 4th/10th century. In ʿUmān the title *sayyid* is popularly accorded to the Sultan of Muscat, who does not claim descent from the Prophet, and in Nadjd the incidence of *sharīfs* is remarkably low. In Eastern Arabia most of the *sayyid*s are found among the Shīʿites, a fact which prompts the Sunnite Bedouins to question the authenticity of their descent. The Jews, whose history in Arabia goes back well into the pre-Islamic period, may have been in the beginning Israelites who moved southwards or Arabs converted to the Judaic religion or a combination of the two. Once fairly numerous in the south-west, almost all of the Jews have departed within the last few years for Israel.

Slavery as an institution sanctioned by Islam flourished in the Peninsula until very recent times, though now it appears to be slowly dying out. The great majority of the slaves came from Central Africa, and Negro blood is found even in villages of al-Aflādj in the heart of Arabia. Like other Islamic lands, Arabia has remained uncursed by a colour bar, and emancipated slaves have on occasion attained positions of influence in society. Another Negro element exists in the so-called Takārina, who come halfway across Africa, often on foot, to make the pilgrimage; some of these stay on to eke out a living in the Holy Land, where their huts stand in the outskirts of Djidda.

Although migrations of persons and tribes from place to place within the Peninsula and from the Peninsula to the fertile lands farther north have been common throughout the centuries, only a relatively small proportion of the Arabs of Arabia have shown a fondness for crossing the seas to settle in foreign lands. Chief among these have been the people of ʿUmān, who since ancient times have moved down along the coast of East Africa and into southern islands such as Zanzibar, and the people of Ḥaḍramawt, many of whom have more recently established themselves in the Indonesian Archipelago, the Malay Peninsula, and India, where they have been influential in the domains of the Niẓām of Ḥaydarābād. Arabs of Eastern Arabia have moved across the Persian Gulf to occupy much of the Iranian coast, and seafarers from the Yaman have founded tiny colonies in such distant spots as Cardiff in Wales.

(vii) HISTORY

1. — *Pre-Islamic*

Arabia before the First Millennium B.C. — The Arabian Peninsula has as yet no history earlier than the first millennium B.C., though future investigations will certainly bring many new facts to light. Excavations have been few and limited in extent, and even the surface in many regions has not been scrutinised by trained searchers.

Scattered finds indicate that the Peninsula was inhabited in both Palaeolithic and Neolithic times, but nothing is known about who the people were or where they came from. The problem of the site of the original home of the Semites is still a matter of speculation. The Semitic nomads who began filtering into the Fertile Crescent from the adjacent deserts in the fourth millennium B.C. relied chiefly on the donkey, a beast not as well adapted as the camel to wide ranging in waterless tracts.

The cuneiform inscriptions of Mesopotamia contain numerous references to Magan, Melukhkha, and Dilmun, places which may have lain in Arabia, though much of the geography of the time remains vague. The Egyptian records relating to Punt are similarly imprecise. Egypt's connections with Sinai and the Red Sea are very ancient, and the availability of frankincense in Southern Arabia led to indirect or even direct intercourse at an early period.

A development of vast importance in the later history of Arabia and the Islamic world occurred, probably in the early second millennium B.C., with the devising of a system of alphabetic writing from which later Semitic alphabets, including South Arabic and North Arabic, derived. Tribal migrations about which little is yet known took place inside Arabia; in this millennium many of the "sons of Ḳaḥṭān" may have gone south to their new homes. The last centuries of this millennium were a time of change, with the Iron Age beginning in the Near East and the Semitic Aramaeans entering the Fertile Crescent in strength. The domestication of the camel appears to have been achieved during this period in Arabia, the first contribution of the Peninsula to the material progress of mankind.

Arabia during the First Millennium B.C. — The tenth chapter of Genesis, believed to belong to about the 10th century B.C., mentions Joktan and Hazarmaveth, who may be identified with Ḳaḥṭān and Ḥaḍramawt. In the same century Solomon sent vessels into the Red Sea from the port of Ezion-geber, while his caravans traded with Northern Arabia. The location of Ophir, from which Solomon received gold and other products, continues to be a mystery. From the 9th century on, Assyrian and Babylonian inscriptions make frequent mention of the Aribi, camel-owning inhabitants of Northern Arabia who paid tribute to the masters of Mesopotamia.

In recent years knowledge of the ancient civilisation of Southern Arabia has expanded tremendously. So many new inscriptions and other traces are coming to hand that current conclusions must often be regarded as tentative. An intensive review of the chronology is in progress, with the general tendency favoring a downward revision of dates. Available information suggests that organised states came into being in Southern Arabia during the second half of the first millennium B.C.

The four chief states—Sabaʾ of the Sabaeans, Maʿīn of the Minaeans, Ḳatabān, and Ḥaḍramawt—throve on agriculture and commerce. The Mārib dam in Sabaʾ was the most imposing structure in an elaborate system of irrigation. For centuries the Southern Arabian merchants monopolised the frankincense trade and controlled traffic between India and the West, sending their goods by overland routes which traversed Arabia from south to north. Colonies were established in Northern Arabia, and evidence of business activity has been found in Egypt, the Aegaean, and the Persian Gulf region. Strong Graeco-Roman influence on Southern Arabian culture is shown by archaeological discoveries. Southern Arabians migrated to Abyssinia, to which they gave its name, and their influence reached along the eastern coast of Africa.

Many impressive buildings in Southern Arabia were temples dedicated to pagan deities. The earlier rulers of Sabaʾ, who bore the title of Mukarrib, combined the functions of prince and priest; later they gave way to the more secular rule of kings. [For details see AL-YAMAN.]

In the north, Aramaean influence was strong in the oasis of Taymāʾ, briefly the capital of the Neo-Babylonian Empire under Nabonidus (regn. B.C. 556-539). Dedan, near modern al-ʿUlā, became the center of a culture now called Liḥyānitic, using an

alphabet derived from South Arabic. Thamūd, mentioned as a tribe in an Assyrian inscription of the 8th century B. C., held Egra (al-Ḥidjr or Madāʾin Ṣāliḥ) just north of Dedan. The recent finding of widely dispersed Thamūdic inscriptions has raised new questions regarding the spread of this derivative of the South Arabic script and those who used it.

After the Persian capture of Babylon in B. C. 539, a short-lived satrapy called Arabāyā was created in Northern Arabia. Darius I (regn. 521-485), who sought to stimulate trade via the Persian Gulf, sent out Scylax of Caryanda, who sailed from India to the northern end of the Red Sea. The world's knowledge of Arabia increased through Alexander's expeditions and the reconnaissance of the Persian Gulf carried out by Nearchus the Cretan. Alexander died in 323 just as he was planning the circumnavigation of the Peninsula and the subjugation of its peoples. Not long afterwards the Greek naturalist Theophrastus wrote an account of Southern Arabia and its products.

The Ptolemies of Egypt, who often pursued a forward policy in the Red Sea, threatened the trade monopoly held by the Arabs, while the Seleucids of Syria promoted the use of the northern routes from India. The establishment of the Parthian state in the mid-3rd century B. C. weakened the Seleucids, but Antiochus III was still strong enough to conduct an expedition in 205-204 against Gerrha on the Arabian shore of the Persian Gulf.

Late in the millennium the Nabataeans, a people of Arab stock with their capital at Petra, began playing a considerable role in the affairs of Syria, and Arabs appeared as rulers in various places in the Fertile Crescent, such as Charax Spasini at the head of the Persian Gulf. Arab vassal chiefs enjoyed a large measure of autonomy under Parthian rule, and the immigration of Arabs into Mesopotamia went steadily on.

Towards the end of the 2nd century B. C. Eudoxus of Cyzicus sailed from Egypt to India, and in time Westerners learned the secret of using the south-west and north-east monsoons for voyaging across open water. The growing competition of the West seriously undermined the commercial dominance of the Southern Arabians, in whose homeland radical changes were taking place. An important event near the close of the 2nd century, later taken as the starting point of the "Sabaean era", has been plausibly connected with the assumption of royal power in Sabaʾ by the mountain tribe of Hamdān. Both the kingdoms of Maʿīn and Ḳatabān came to an end in the 1st century B. C., and the Ḳatabānian capital Timnaʿ in Bayḥān was destroyed. Rome, which had made a client state of Petra in B. C. 60, coveted the wealth of Arabia Felix. Augustus sent the Prefect of Egypt, Aelius Gallus, supported by Nabataeans from Petra, on a long march in B. C. 24 towards the incense country, but the expedition, finding the deserts inhospitable and its Arab allies treacherous, did not get beyond Sabaʾ. [For details see AL-YAMAN.]

Arabia during the First Six Christian Centuries. — About A. D. 50 an unknown author wrote in Greek the Periplus of the Erythraean Sea, an invaluable account of trade in the Red Sea and along the southern coast of Arabia. The King of Ḥaḍramawt in his capital Shabwa controlled the whole territory from Bayḥān in the west to Ẓufār in the east, while the "King of Sabaʾ and of Dhū Raydān" (a recently assumed title) sat in Ẓafār in the mountains of the Yaman, where the power of Ḥimyar was growing.

In A. D. 105 or 106 the Roman province of Arabia was created in the old Nabataean domain, stretching from Ayla (al-ʿAḳaba) in the south to al-Namāra in the northeast, with its capital first at Petra and later at Bostra. Merchants were encouraged to trade via the Red Sea through the port of Ayla, and Bedouin raids were warded off by the building of a limes along the desert borders. Roman knowledge of the Peninsula in the mid-2nd century was summarized by the geographer Claudius Ptolemy.

Ardashīr I, the first Sāsānid (d. A. D. 241), is said to have founded a city in Eastern Arabia and to have induced the tribe of al-Azd to settle in ʿUmān. Sāsānid authority on one flank of Northern Arabia and Roman authority on the other were challenged by the Arab rulers of Palmyra, but the Roman Emperor Aurelian defeated Queen Zenobia and captured her desert stronghold in 272.

Something of the old glory of Sabaʾ and Dhū Raydān was regained by Shammar (or Shāmir) Yuharʿish, who signified his triumphs about the end of the 3rd century by adding the names of Ḥaḍramawt and Yamanat to his royal title. His reign was followed by a relapse into weakness, during which Nadjrān on the northern border was besieged by the Lakhmid Marʾ (= Imruʾ) al-Ḳays, extravagantly described as "King of all the Arabs" in the oldest North Arabic inscription known (al-Namāra 328). Later Kings of Sabaʾ made their title even longer by appending "and of their Arabs in the mountains and the lowlands".

One of the most obscure periods in Arabian history fell in the 4th and 5th centuries. The decline and impoverishment of the Roman Empire affected the Peninsula, where urban civilisation waned and the simpler ways of nomadism attracted more adherents. Christianity with its promise of a better life in the hereafter made headway in Arabia as elsewhere. The Arabs proved particularly susceptible to the doctrines of Nestorianism, coming from Mesopotamia, and Monophysitism, coming from Egypt and Abyssinia. The Abyssinians occupied the Yaman for a brief period in the 4th century, with ʿĒzānā, the first Christian King of Aksum, proclaiming himself ruler of Ḥimyar, Raydān, Sabaʾ, etc. Shāpūr II (regn. 310-79), called Dhū 'l-Aktāf by the Arabs, subjugated Eastern Arabia; the Sāsānid yoke was later removed, only to be reimposed shortly before the dawn of Islam. Judaism also made a successful appeal in Arabia, among its reputed converts being the King of Sabaʾ in the early 5th century, Abkarib Asʿad, known to Arab tradition as Tubbaʿ Asʿad Kāmil, and one of its centres being the oasis of Yathrib (later Medina).

Both the Sāsānids and the Byzantine successors of Rome found it necessary to protect their territories from the unruly folk of Arabia by relying on buffer states ruled by Arab princes, the Lakhmids [*q.v.*] standing guard on the edge of Mesopotamia and the Ghassānids [*q.v.*] shielding Syria. The two client states, like their suzerains, often came into conflict. In the first half of the 6th century al-Ḥārith b. Djabala, the greatest of the Ghassānids, proved stronger than al-Mundhir b. Māʾ al-Samāʾ, the most famous of the Lakhmids. In the late 5th century the chief of the Southern Arab tribe of Kinda [*q.v.*], Ḥudjr Ākil al-Murār, assumed the leadership of a confederacy of tribes in Central Arabia, but this loosely knit Kingdom of Kinda lasted only about half a century before it was overthrown by al-Mundhir the Lakhmid.

In the 6th century Southern Arabia lay open to

attack by the Christian Kings of Aksum and the Sāsānid Khusraw I Anūshirwān (regn. A. D. 531-79). Persecution of the Christians of Nadjrān by the Judaising Arab Dhū Nuwās [q.v.] led to a new Abyssinian occupation of the Yaman c. 521. The Abyssinian Abraha [q.v.] as ruler of the Yaman carried out the last repair of the dam of Mārib before its final abandonment, marched into the heart of Nadjd on a campaign against the Arabs of Maʿadd, clients of the Lakhmids, and, according to Islamic tradition, undertook an unsuccessful expedition against Mecca in the Year of the Elephant (c. 570). Under Khusraw the Persians evicted the Abyssinians, and the Yaman was Persian territory at the rise of Islam.

Mecca, a town of some antiquity on the main route paralleling the Red Sea, achieved greater prominence and prosperity in the late 6th century, aided by foreign domination of the Yaman and chaotic conditions along the northern routes resulting from the long drawn out wars between Persia and Byzantium. The Meccan merchants of Ḳuraysh showed astuteness and industry in profiting from their participation in international trade.

The last centuries of this period gave birth to the form of Arabic now called classical, the dialectal sources and the exact process of the development of which remain uncertain. Used by the poets of the *djāhiliyya*, many of whom were Bedouins and some Christians or Jews by faith, this language became the instrument of expression for the supreme masterpiece of Islam, the Ḳurʾān, and the great works of Arabic literature in succeeding ages (see ʿARABIYYA).

2. — *Islamic Middle Ages*

Muḥammad and the Rise of Islam (A. D. c. 570-632). — About A. D. 570 Muḥammad [q.v.] b. ʿAbd Allāh of Ḳuraysh was born in Mecca, then a principal centre of pagan worship. Only traditional accounts survive of Muḥammad's early years, during which he became well acquainted with the tribal structure of both urban and nomadic life and saw something of the world outside Arabia while accompanying merchant caravans to Syria. About 610 he received his first revelation; two or three years later he began preaching in public, after which the nature of Islam was elaborated upon in a series of revelations during the rest of his career as God's Messenger and Prophet.

The men in authority in Mecca did not welcome Muḥammad's message. A small body of Muslims went into exile in Christian Abyssinia; later the whole Muslim community migrated northwards from Mecca to Yathrib, an event taken afterwards as having marked the beginning of the Islamic era (A. H. 1/A. D. 622). During the ten years Muḥammad maintained his capital at Medina, he erected a state guided in all its functions by the precepts of Islam. Two revolutionary concepts emerged which transformed the face of Arabia. The Ḳurʾān, as emphasised by the divine revelations of which it consisted, was Arabic, a standard under which all Arabs could unite. Arabia had never before known an entity larger than relatively petty states or independent tribes and tribal confederations, usually at loggerheads with each other if not openly at war. At the same time, the Ḳurʾān and Islam were not limited to the Arabs: the Ḳurʾān is a revelation to all men, and under Islam the noblest man is the most Godfearing, not the one of highest lineage. This universal appeal opened the way for Islam to go far beyond the borders of Arabia.

Muḥammad's efforts during the Medinan period were devoted in large measure to settling affairs with Mecca, which was finally incorporated in the Islamic state in 8/630. Before this a fair number of tribes had been won over to Islam, but the great flood of applications to join Islam from tribes all over the Peninsula did not come until 9/630-1, the Year of the Delegations. Muḥammad died in 11/632, before there had been time to anchor the Ḳurʾānic religion in the hearts of all who had taken the name of Muslim. Neither had there been time to carry Islam abroad, though a halting attempt had been made in that direction, and the moment was indeed ripe for shattering the fragile shells of Byzantine and Sāsānid defences in the Fertile Crescent.

The First Three Caliphs (11-35/632-56). — Soon after Abū Bakr (regn. 11-13/632-4) succeeded Muḥammad as head of the Islamic state, many tribes reasserted their independence, with prophets in several cases preaching doctrines contrary to Islam. Abū Bakr reacted vigorously, dispatching Muslim columns to Central Arabia, Baḥrayn, ʿUmān, and the Yaman. When Ḥaḍramawt, which held out the longest, was subdued, the Arabian Peninsula for the first and last time in history was effectively united throughout its length and breadth.

The other great achievement of Abū Bakr's brief rule was the inauguration of the grand programme of Muslim conquests outside Arabia. After invading ʿIrāḳ Khālid b. al-Walīd marched across the Syrian Desert in 13/634 to participate in a victory over the Byzantines.

The conquests started by Abū Bakr were carried forward with verve during the rule of ʿUmar (13-23/634-44). ʿIrāḳ was taken from the Sāsānids, and Arabs from both the Northern and the Southern tribes peopled the newly founded military settlements of al-Baṣra and al-Kūfa. After a decisive victory over the Byzantines at al-Yarmūk and the capture of Jerusalem, ʿUmar came to visit this holy city, the first journey of a Caliph beyond the confines of Arabia. Islam next advanced into Egypt, the occupation of which brought about stronger economic and cultural ties with Western Arabia. Although ʿUmar is reputed to have ordered the expulsion of all Christians and Jews from the Peninsula, numbers of them lived on there for a long time to come.

In the days of ʿUthmān (regn. 23-35/644-56) of the House of Umayya, wealth and luxury abounded in Medina and Mecca, into which poured booty from the lands recently subdued. ʿUthmān had no ear for the voice of Abū Dharr decrying the decay of the stern and frugal virtues of earlier Islam. Even more dangerous to the future of Arabia and Islam was the rift developing between the most powerful figures in the state, which led to the murder of ʿUthmān in Medina.

The Struggle over the Caliphate (35-73/656-692). — The rift in high circles widened into a chasm when ʿAlī, Muḥammad's son-in-law and cousin, came to the fore as Caliph on the death of ʿUthmān. Muḥammad's wife ʿĀʾisha and his Companions al-Zubayr and Ṭalḥa rose in opposition to ʿAlī, who left Medina to march against them in 36/656. In the Battle of the Camel ʿAlī overthrew his rivals and won ʿIrāḳ, only to find himself faced with a more formidable adversary in ʿUthmān's Umayyad kinsman Muʿāwiya, the governor of Syria. When ʿAlī fixed his capital at al-Kūfa in order to marshal strength against Muʿāwiya, Medina lost

the preeminence it had held since the Prophet's migration.

ʿAlī's tactics against Muʿāwiya so exacerbated the extremists among his own followers that they turned against him as the Khawāridj. Despite the crushing victory ʿAlī gained over these seceders at al-Nahrawān in 38/659, their party survived, Arabia long providing a fertile field for its propaganda. Muʿāwiya was proclaimed rival Caliph in Jesuralem, and his forces clashed with ʿAlī's in Western Arabia from Medina to Nadjrān and the Yaman. When a Khāridjī assassinated ʿAlī in 40/661, the ʿAlids set up his son al-Ḥasan as Caliph in al-Kūfa, but he soon renounced his claims in favor of Muʿāwiya, who thus temporarily reunited the community of Islam.

For the rest of Muʿāwiya's life no serious rising took place against the new Syrian Caliphate, but resentment was stirred up by his advocacy of hereditary succession. After the accession of Yazīd b. Muʿāwiya (regn. 60-4/680-3), ʿAlī's second son al-Ḥusayn left Mecca to rally support in ʿIrāḳ, only to fall a martyr at Karbalāʾ in 61/680. His death cleared the field for a stronger candidate, ʿAbd Allāh b. al-Zubayr, the foremost representative of the sons of the Prophet's Companions. Yazīd's army defeated the rebellious Medinans in the battle of Ḥarrat Wāḳim and laid siege to Mecca, Ibn al-Zubayr's stronghold, where the Kaʿba caught fire, but Yazīd's death brought a pause in the hostilities. Ibn al-Zubayr won recognition as Caliph in nearly every quarter of Islam; in fact, had he proceeded to Syria immediately, he might well have destroyed the Umayyad power forever. While Ibn al-Zubayr lingered on in Mecca, ʿAbd al-Malik (regn. 65-86/685-705) of the Marwānid branch of the Umayyads gradually regained ground outside Arabia. The Khawāridj, who had at first leagued themselves with Ibn al-Zubayr, turned against him, the Khāridjī Nadjda b. ʿĀmir of Banū Ḥanīfa making himself master of much of Arabia, only to be overthrown by another Khāridjī, Abū Fudayk. ʿAbd al-Malik gave al-Ḥadjdjādj b. Yūsuf command of an army which captured Mecca in 73/692 after a long siege. Ibn al-Zubayr fell in the struggle, leaving the Holy Land of Islam in the hands of the Umayyads. Another Umayyad army marched to Eastern Arabia and put an end to Abū Fudayk.

Arabia under the Umayyads (73-132/692-750). — The Umayyads of Syria regularly appointed governors for Medina and Mecca, and exercised a measure of control, often shadowy, over other parts of Arabia. Powerful Umayyad governors of al-Baṣra such as al-Ḥadjdjādj and Yazīd b. al-Muhallab made their word law in the Persian Gulf and along its Arabian shore.

The Umayyad Caliphs honoured the sanctity of the Holy Cities in Arabia and lavished large sums on their shrines, even while favouring at times the claim of Jerusalem, which was easier of access, to an equal or higher rank. During much of this period Western Arabia was at peace, enjoying a prosperity such as it was not to know among the dissensions of later ages. The Umayyads developed the irrigation system, and many personages of Islam lived in their days of retirement on estates near Medina, Mecca, or al-Ṭāʾif. The Holy Cities became renowned not only for Islamic learning but also for indulgent living, poetry, and singing.

The intense rivalry in Umayyad politics between the Northern Arabs and the Southern Arabs had its repercussions in Arabia, where Kalb, the principal tribe among the Southerners, owned land in Wādī al-Ḳurā near Medina.

Towards the end of the Umayyad period an alliance of Khawāridj was formed under the leadership of ʿAbd Allāh b. Yaḥyā Ṭālib al-Ḥaḳḳ of Kinda and Abū Ḥamza of al-Azd. Abū Ḥamza took Mecca, won a victory at Ḳudayd in 130/747, and then entered Medina, while Ṭālib al-Ḥaḳḳ supported him from their base in Ḥaḍramawt and the Yaman. Despite the waning might of the Umayyads, Marwān II summoned sufficient strength to overcome these Khāridjī chiefs, but only after they had contributed to his final undoing. Mecca was also used by the ʿAbbāsids as a centre for their plot aiming at the supersession of the Syrian Caliphs.

Arabia under the Early ʿAbbāsids (132-266/750-879). — The ʿAbbāsid transfer of the Caliphate to ʿIrāḳ enhanced the importance of the Persian Gulf as a seaway for trade reaching out to China and East Africa. Wares bound to and from the ʿAbbāsid capital passed through al-Baṣra, while in the Gulf itself Sīrāf on the Persian side in the 3rd/9th century became the busiest port.

ʿAbbāsid authority in Arabia kept its strength for not much over a century, during which time governors were sent to the Holy cities and the Yaman, and on occasion to the central and eastern regions. The earlier Caliphs, notably al-Mahdī and Hārūn, and their wives, notably Zubayda, were diligent in making the pilgrimage and encouraging their subjects to do so by improving communications and the amenities of the route.

A sect of the Khawāridj known as the Ibāḍiyya set up its own Imamate in ʿUmān under al-Djulandā b. Masʿūd of al-Azd, but an ʿAbbāsid expedition under Khāzim b. Khuzayma defeated and killed al-Djulandā in 134/752. Soon afterwards this Imamate was revived to endure with few interruptions for the next four centuries. ʿUmān, however, was an out of the way region, and the Khawāridj on the whole gave the ʿAbbāsids little trouble. [Cf. ʿUMĀN.]

Taking the place of the Khawāridj as a thorn in the Caliphs' flesh were the ʿAlids [*q.v.*], both Ḥasanids and Ḥusaynids. Through skilful propaganda the ʿAbbāsids in their campaign against the Umayyads had forestalled the ʿAlids and usurped the leadership they regarded as rightfully theirs. For this the ʿAlids never forgave them, and one after another they contested the ʿAbbāsid title to rule. Even though the ʿAbbāsids themselves came from a Meccan ancestor close to the Prophet, the ʿAlids almost invariably found ready followers in Arabia; in the Holy Cities their rallying cry inspired the hope of regaining the place lost to Damascus and Baghdad.

The first ʿAlid pretender in Arabia was the Ḥasanid Muḥammad al-Nafs al-Zakiyya, who appeared as the Mahdī in Medina and had his claim to the Caliphate certified by no less a scholar than Mālik b. Anas, but all to no avail when he fell in 145/762 before the troops of al-Manṣūr.

A major split took place among the ʿAlids following the death of their sixth Imam, Djaʿfar al-Ṣādiḳ, c. 148/765. The main body, giving loyalty to Djaʿfar's son Mūsā al-Kāẓim and five of his descendants, came to be known as the Twelvers. Others, the Seveners, advocated the cause of Ismāʿīl b. Djaʿfar and his son Muḥammad, for which they worked, often in secret, in the movement of Ismāʿīlism. As time went by the Ismāʿīlīs in particular tended to attract to their side the discontented and oppressed elements of society, enemies of the ruling classes.

Another Ḥasanid pretender, al-Ḥusayn b. ʿAlī, met a martyr's death fighting against an ʿAbbāsid army at Fakhkh near Mecca in 169/786. The ʿAlid cause, however, made progress in the Yaman, where it received the support of the great jurist al-Shāfiʿī, who finally won a pardon after being delivered as a prisoner to Hārūn's presence.

The end of the 2nd century H. saw a new upsurge of ʿAlid strength in Western Arabia: in Mecca the Ḥusaynid al-Ḥusayn al-Afṭas put forward Muḥammad al-Dībādj, a son of Djaʿfar al-Ṣādiḳ, while the Ḥasanid Muḥammad b. Sulaymān established himself in Medina. These pretenders did not hold their ground against the ʿAbbāsids, but greater success was achieved by Ibrāhīm al-Djazzār, a grandson of Djaʿfar al-Ṣādiḳ, in the Yaman. Yielding to the tide of pro-ʿAlid sentiment, the Abbāsid Caliph al-Maʾmūn designated ʿAlī al-Riḍā, the eighth Imam of the Twelvers, as his heir apparent and substituted ʿAlid green for ʿAbbāsid black as the royal colour, but this change evaporated with ʿAlī's death in 203/818.

To cope with the ʿAlid threat in the Yaman, al-Maʾmūn appointed as his governor there one Muḥammad, who claimed descent from Muʿāwiya's lieutenant Ziyād b. Abīh. Refounding the city of Zabīd in 204/820 and carving out a domain for himself, Muḥammad established the dynasty of the Ziyādids [*q.v.*], which, while according nominal allegiance to the ʿAbbāsids, was actually the first of the numerous independent dynasties to spring up in Arabia as the Caliphate disintegrated.

Although not a strong Caliph, al-Wāthiḳ (regn. 227-232/842-847) executed a vigorous policy in Arabia. When Bedouins of Sulaym made the region around the Holy Cities unsafe with their depredations, al-Wāthiḳ dispatched the Turkish general Bughā the Elder to bring the culprits to heel. For the next two years Bughā campaigned against other tribes, climaxing his operations in 232/847 with a hard won victory over Numayr at Baṭn al-Sirr deep in the interior, after which a man of Udākh in Nadjd was appointed governor of al-Yamāma, Eastern Arabia, and the pilgrim route to Mecca.

Following the death of al-Mutawakkil in 247/861, the career of the ʿAbbāsids both at home and in Arabia took a turn for the worse. The dynasty of the Yaʿfurids [*q.v.*], claiming descent from the ancient Tubbaʿs of Ḥimyar, arose in the highlands of the Yaman with Ṣanʿāʾ as capital. Ḥaḍramawt secured its independence, and local rulers set themselves up in the east, where ʿAlī b. Muḥammad—either a genuine Ḥusaynid, as he gave himself out to be, or a member of ʿAbd al-Ḳays—began an agitation among the nomadic tribes. Another Ḥasanid revolt in Mecca, inaugurated by Ismāʿīl b. Yūsuf al-Ukhayḍir, led to the establishment under Ismāʿīl's brother Muḥammad of a new state in al-Yamāma, where these Ukhayḍirids maintained themselves until submerged by the onrush of Ḳarmaṭianism.

Another blow was dealt the ʿAbbāsid empire by the recalcitrant governor of Egypt, Aḥmad b. Ṭūlūn, who by occupying Syria broke down the control once exercised over the tribes of the Syrian Desert. The most direct menace to the empire, however, came from the agitator in Eastern Arabia, ʿAlī b. Muḥammad, who transferred his activities to Southern ʿIrāḳ, where he stirred up the Zandj, the negro slaves laboring in the salt marshes, in a massive insurrection (255-70/863-83) extending as far as the Holy Cities.

Ismāʿīlīs and Ḳarmaṭians in Arabia (266-567/879-1171). — At this juncture in ʿAbbāsid affairs the rapidly spreading movement of Ismāʿīlism (see ISMĀʿĪLIYYA) took full advantage of its opportunities. Ismāʿīlī missionaries carried out a well laid plan of penetration, with the Persian Gulf coast and the Yaman as the principal foci for their activity in Arabia. As these two parts of Arabia remained relatively isolated from each other, the connexion between later developments in them was slight.

Ismāʿīlism was first introduced into the Yaman by Ibn Ḥawshab (Manṣūr al-Yaman) and ʿAlī b. al-Faḍl in 266/879-80. Collaborating closely, these two won many followers, and ʿAlī occupied both Ṣanʿāʾ and Zabīd for brief periods. The Ziyādids and the Yaʿfurids fought the Ismāʿīlīs, and a new opponent arose against them in 280/893 with the arrival in the Yaman of the first Zaydī Imam, al-Hādī Yaḥyā, a grandson of the Ḥasanid al-Ḳāsim al-Rassī (d. 246/860), who had fashioned legal foundations for a Zaydī government closer to Sunnism than to the extreme Shīʿism of the Ismāʿīlīs. The two Ismāʿīlī leaders eventually fell out, and by 303/915 both were dead, but their doctrines did not die with them.

Ismāʿīlism appeared c. 286/899 in Eastern Arabia, where under Abū Saʿīd al-Ḥasan al-Djannābī and his son Abū Ṭāhir Sulaymān a strong state was organised. The name Ḳarmaṭian, the origin and meaning of which are still in doubt, remains the popular designation for this particular aspect of Ismāʿīlism, though its application is not restricted to this region. The ʿAbbāsids were too feeble to prevent these Ḳarmaṭians from sacking al-Baṣra and al-Kūfa, and in 317/930 they entered Mecca and carried off the Black Stone to their new capital al-Aḥsāʾ (al-Ḥasā). With the conquest of ʿUmān soon thereafter the Ḳarmaṭians held the greater part of Arabia. These disturbances prompted the Ḥusaynid Aḥmad b. ʿĪsā, the most famous ancestor of the *sayyids* of Southern Arabia, to leave al-Baṣra on a migration ending in Ḥaḍramawt, where Ibāḍīs from ʿUmān then held the upper hand.

New threats to the ʿAbbāsids came from the Būyids of Iran and the Ikhshīdids of Egypt, who reached out at times to Mecca, though neither got a lasting foothold there. The Būyids, who by taking Baghdād in 334/945 assumed *de facto* authority over the ʿAbbāsid realm, also brought ʿUmān within their sphere.

Abū Ṭāhir died in 332/944, and the Ḳarmaṭians at the behest of the Ismāʿīlī Fāṭimids of North Africa restored the Black Stone to Mecca in 339/950-1. Under al-Ḥasan al-Aʿṣam, a nephew of Abū Ṭāhir, the Ḳarmaṭians joined the Fāṭimids in a pincer movement on Syria and Egypt, the former exerting pressure from the east as the latter advanced from the west. However, after the Fāṭimids occupied Egypt in 358/969, the Ḳarmaṭians broke with them and sided with the Būyids in resisting their designs on Syria. Damascus was captured by al-Ḥasan in 360/971, but he was repulsed on two expeditions against Egypt before reaching the newly founded Fāṭimid city of Cairo.

Following the death of al-Ḥasan, the Ḳarmaṭian government was placed in the hands of a Council of six *sayyids*. The Fāṭimids won a military victory over the Ḳarmaṭians, but had to pay a large sum to induce them to return to al-Aḥsāʾ. The Ḳarmaṭians lost ʿUmān in 375/985-6, were checked by the Būyids in ʿIrāḳ and defeated in their own territory by a chief of al-Muntafiḳ, who plundered al-Ḳaṭīf. [Cf. also ḲARMAṬIANS.]

About the mid-4th/10th century the Sharīfate of Mecca [for which see MAKKA], destined to last a thousand years, was established by a family of Ḥasanids known as the Mūsāwids. The most prominent member of this family was Abū al-Futūḥ al-Ḥasan, who in 402/1011-2 tried to make himself Caliph, only to be thwarted by the Fāṭimids, liege lords of the *sharīfs*. Contemporary with the early Mūsāwids were Ḥusaynids descended from al-Ḥusayn al-Aṣghar, a younger brother of the fifth Shīʿite Imam, who began ruling as *amīrs* of Medina. This line, which lasted until the 9th/15th century, came later to be known as the House of Muhannā.

An offshoot of Ismāʿīlism was the Druze movement, which had its origins during the reign of the Fāṭimid al-Ḥākim. The Druze al-Muḳtanā sent a letter to the Ḳarmaṭian *sayyids* of Eastern Arabia, proposing that they combine forces on the basis that they shared a common doctrine, but nothing concrete came of this.

Early in the 5th/11th century the Maʿnids [*q.v.*] came to power in Aden and Ḥaḍramawt, and the Ziyādids in the Yaman gave way before the Nadjāḥids [*q.v.*], originally their own Abyssinian slaves. Ismāʿīlism in the Yaman enjoyed a revival under the Ṣulayḥids [*q.v.*], rulers sprung from the tribe of Yām who held Ṣanʿāʾ as nominal vassals of the Fāṭimids, while the Zaydī Imams kept their base at Ṣaʿda.

In 443/1051 Nāṣir-i Khusraw visited al-Aḥsāʾ, where he found the Council of Six still in control. The details of his eyewitness account of the Ḳarmaṭian state in its later days are unfortunately not supported by corroborating testimony.

The Shīʿism of the Būyids, Ḳarmaṭians, and Fāṭimids aroused a Sunnite reaction championed by the Saldjūḳ Turks, whose leader Ṭughril took Baghdad in 447/1055. A Saldjūḳ of Kirmān, Ḳāwurd Ḳarā Arslān, brought ʿUmān under his sway. About this time Sīrāf was yielding its place as the chief port of the Persian Gulf to the island of Ḳays, the rulers of which made themselves also lords of ʿUmān, where in the mid-5th/11th century a break came in the line of Ibāḍī Imams. For the next three and a half centuries records survive of only one Imam.

The Ṣulayhids of the Yaman seized Aden from the Maʿnids and also expanded northwards, the authority of the Mūsāwid *sharīfs* over Mecca having faded away. In 455/1063 the Ṣulayḥid ʿAlī b. Muḥammad installed an agnate branch of *sharīfs*, the Hāshimids, in Mecca. Under Malik Shāh in Baghdād the Saldjūḳs reached the zenith of their power, and thanks to him the shadowy ʿAbbāsid of the day had lipservice paid to him in the Holy Cities as the Caliph of Islam. Malik Shāh and his minister Niẓām al-Mulk concerned themselves with the affairs of the pilgrimage, spending freely to put them to rights.

About 470/1077-8 the Ḳarmaṭians of al-Aḥsāʾ met their final defeat at the hands of a native dynasty, the ʿUyūnids [*q.v.*] of the tribe of ʿAbd al-Ḳays. There is no trace of Ḳarmaṭianism left today among the Arabian people. The Shīʿites of al-Ḳaṭīf and modern al-Ḥasā, sometimes described as the remnants of the Ḳarmaṭians, are in fact orthodox Djaʿfarīs of the Twelver persuasion or Shaykhīs.

In 461/1068-9 Aden was granted as a dowry to a remarkable woman of the Ṣulayḥid house, Sayyida bint Aḥmad, upon her marriage to al-Mukarram Aḥmad b. ʿAlī al-Ṣulayḥī, and soon afterwards the government of the town was transferred from the Maʿnids to the Zurayʿids [*q.v.*], who like the Ṣulayḥids were Ismāʿīlīs of the stock of Yām. The Zurayʿids ruled Aden for nearly a century, gradually acquiring a larger measure of independence. Under Sayyida, into whose hands al-Mukarram placed the authority of the state so that she was recognized by the Fāṭimid Imam as Suzerain of the Kings of the Yaman, the Ṣulayḥids enjoyed their last days of real dominion. Her death in 532/1137-8 marked the effective end of the dynasty, the succeeding representatives of which were a feckless lot.

Upon the death of the Fāṭimid Imam of Egypt al-Mustanṣir in 487/1094, two parties arose among the Ismāʿīlīs which have persisted to the present day. From the party supporting al-Mustanṣir's eldest son Nizār descended the Ismāʿīlī Assassins of Alamūt and the Khōdjas, the head of many of whom is now the Āghā Khān. The party favoring al-Mustanṣir's youngest son al-Mustaʿlī Aḥmad, allied with the Ṣulayḥids through Queen Sayyida, was strong in the Yaman.

The rule of Aḥmad b. Sulaymān, one of the greatest of the earlier Zaydī Imams, ran from 532 to 566/1137-71, during which time he held Ṣaʿda, Nadjrān, and al-Djawf, occupied Ṣanʿāʾ and Zabīd, and made his influence felt as far north as Khaybar and Yanbuʿ.

Like the Ṣulayḥids, the Nadjāḥids also produced a queen to rule during the dynasty's declining years, ʿAlam, originally a slave girl, whose death in 545/1150-1 was followed about a decade later by the ephemeral sway of the Mahdids [*q.v.*], who called themselves Ḥimyarites and were accused of being Khawāridj.

The Fāṭimids of Egypt succumbed to the Ayyūbids in 567/1171, and a plot to restore them was nipped in the bud in 569/1174 by Saladin, who executed the poet and historian ʿUmāra b. ʿAlī al-Ḥakamī of the Yaman. The center of the Mustaʿlian party was transferred from Egypt to the Yaman, where it stayed until the 10th/16th century, when it shifted to India, after which a split divided the party into the Dāʾūdīs of India and the Sulaymānīs of Southern Arabia [see BOHORĀ]. Extensive secular dominion in Arabia eluded the grasp of the Ismāʿīlīs until the reign of the Sulaymānī Makramids [*q.v.*] of Nadjrān in the 12th/18th century.

Arabia in the Later Middle Ages (567-end of 9th Century/1171-end of 15th Century). — The advent of the Ayyūbids meant the triumph of Sunnism over Shīʿism in Arabia as well as in Egypt. Saladin, recognized as sovereign in Mecca, sent his brother Tūrān Shāh to depose the third and last Mahdid and occupy the Yaman in 569/1173. During the half century or so of Ayyūbid rule there members of collateral branches of the dynasty sat on this southern throne. Ḥaḍramawt was conquered, but did not become an integral part of the Ayyūbid domains. Closer home the Ayyūbids had their hands full with the Crusaders from the West, one of the boldest of whom, Renaud de Châtillon, raided Taymāʾ, sent his men cruising against the Muslims in the Red Sea, and even thought of attacking Medina.

About 598/1200 the Ḥasanid Ḳatāda b. Idrīs moved from Yanbuʿ to Mecca, where he founded the dynasty of all the later *sharīfs*. Endeavoring to build a strong independent state in al-Ḥidjāz, he found the rivalries of the day too great to overcome. Ḳatāda died in 617/1220-1, and soon afterwards al-Malik al-Masʿūd Yūsuf, the last Ayyūbid in the Yaman, took Mecca and appointed the founder of the Rasūlids, who claimed descent from the Ghassānids, his governor there.

On the other side of the Peninsula the Salghurid Atābeg of Fārs, Abū Bakr b. Saʿd, the patron of the poet Saʿdī of Shīrāz, annexed islands in the Persian Gulf and set foot on the mainland at al-Ḳaṭīf and al-Ḥasā. The local dynasty of the ʿUyūnids gave way before the Salghurid pressure and that of the tribe of ʿĀmir of ʿUḳayl, which supplied a new dynasty in the ʿUṣfūrids [*q.v.*].

Succeeding the Ayyūbids, the Rasūlids [*q.v.*] reigned in Taʿizz and Zabīd from 625 to 850/1228-1446 as the most illustrious house in mediaeval Yaman. Islamic architecture reached one of its higher points, and scholars received the stimulus of royal approbation, some of the Rasūlid Sultans themselves being authors of note. Embassies came to the court from China and other distant lands. ʿUmar b. ʿAlī (regn. 626-47/1229-50) ruled from Mecca to Ḥaḍramawt, and after Hūlāgū executed the last ʿAbbāsid in Baghdad in 656/1258 ʿUmar's son Yūsuf styled himself Caliph of Islam, but full enjoyment of such rank lay beyond the capabilities of the Rasūlid state.

Baybars, the first great Mamlūk Sultan of Egypt, assumed nominal overlordship of the Holy Cities, leaving Meccan affairs in charge of the *sharīf* Abū Numayy I Muḥammad (regn. 652-701/1254-1301), who strengthened the foundations of Ḳatādan rule. Bedouins of Āl Mirā and other tribes roamed through the Syrian Desert, exacting large fees from pilgrim caravans and penetrating into Nadjd on their raids. In Damascus the religious reformer Ibn Taymiyya (d. 728/1328) laid the theological basis for the Wahhābī movement of the 12th/18th century.

About the beginning of the 8th/14th century the port of Hormuz on the Persian mainland at the entrance to the Persian Gulf was moved to a nearby island, after which it grew apace and in time surpassed its rival the island of Ḳays in attracting to its warehouses the merchandise of the East.

Political disturbances in Mecca during the reign of the *sharīf* ʿAdjlān b. Rumaytha (746-77/1345-75) provoked interference by the Mamlūks of Egypt, who took the Rasūlid Sultan of the Yaman prisoner in a battle at ʿArafa in 751/1351. Rasūlid fortunes were temporarily recouped by Aḥmad b. Ismāʿīl (regn. 803-27/1400-24), who held the Red Sea coast as far north as Ḥaly, but after his death the state swiftly disintegrated. The later Rasūlids carried on a lively competition with merchants in Egypt for Indian trade via the Red Sea.

In the early years of the 9th/15th century the Ibāḍī community of ʿUmān returned to its old practice of electing Imams, who succeeded one another in a series lasting over 150 years. About the same time the House of Kathīr under ʿAlī b. ʿUmar set out on its long course through the tortured politics of Ḥaḍramawt and Ẓufār, while Ḥaḍramī missionaries carried the gospel of Islam into Somaliland.

In the mid-9th/15th century Māniʿ b. Rabīʿa al-Muraydī, the ancestor of Āl Saʿūd, migrated from the vicinity of al-Ḳaṭīf to Nadjd, where he settled in Wādī Ḥanīfa. In the latter half of the century Adjwad Āl Zāmil of the Djabrid branch of the ʿUṣfūrids ruled as lord of al-Ḳaṭīf and Baḥrayn, making his name a byword for generosity in Eastern Arabia. Mecca prospered under the *sharīf* Muḥammad b. Barakāt and the Mamlūk Sultan Ḳāʾitbāy, who erected many buildings there, while the Ṭāhirids [*q.v.*] in Zabīd and Aden supplanted the Rasūlids in the south.

3. — *The Making of Modern Arabia (from the 10th/16th century to the present).*

In the late 9th/15th century Portuguese explorers made their way from the Mediterranean down the Red Sea, and in 903/1498 Vasco da Gama, after rounding the Cape of Good Hope, was guided to India by an Arab pilot, probably the Nadjdī Aḥmad b. Mādjid. Portuguese vessels soon appeared in the Red Sea, and under Afonso de Albuquerque the invaders seized Arabian ports on the Gulf of ʿUmān and the great mart of Hormuz. Pedro, Afonso's nephew, toured the Persian Gulf in 920/1514, but Afonso died the following year without having achieved his ambitions of reducing Aden and launching an expedition against Mecca.

About 912/1506-7 a new line of Zaydī Imāms was inaugurated by Sharaf al-Dīn Yaḥyā, and from then onwards the Zaydīs tended to fix their capital, if possible, at Ṣanʿāʾ. Coffee appears to have been introduced into the Yaman from Abyssinia about this time, and the use of *ḳāt* and tobacco spread among the people.

Badr Abū Ṭuwayriḳ of Āl Kathīr (regn. 922-76/1516-68), whose authority in his palmier days reached from the land of al-ʿAwāliḳ through Ḥaḍramawt to Sayḥūt, did not hesitate to offer fealty to the Ottoman Sultan. Before Badr died he lost all his territories and suffered long imprisonment at the hands of his Ḥaḍramī enemies.

Salīm I, the Ottoman conqueror of Egypt in 923/1517, assumed the high title of Servant of the Holy Cities, and the reign of Sulaymān the Magnificent (926-74/1520-66) fenced other regions within the empire. The Portuguese in alliance with the King of Hormuz attacked Baḥrayn, where Muḳrin, the uncle and successor of Adjwad the Djabrid, lost his life defending the island in 927/1521. Reacting to the aggressive policy of the Portuguese, the Turks bestirred themselves in the Persian Gulf and the Red Sea. Sulaymān at Baghdād in 941/1534 received the homage of the Arab chiefs of al-Ḳaṭīf and Baḥrayn, and later his troops pressed up into the mountains of the Yaman. Aden and Muscat were occupied briefly, and an Ottoman governor was installed in al-Ḥasā.

For a period of some sixty years after c. 968/1560 there were no Ibāḍī Imams in ʿUmān, where the secular Nabhānid [*q.v.*] princes in their mountain fastnesses reached the climax of their power.

The slow receding of the Ottoman tide from the highwater mark reached under Sulaymān was observable in Arabia as elsewhere. The diversion of trade from the overland routes to the sea route round Africa contributed to the serious economic depression which beset the Near East during the early modern age. Besides the Austrians and other foes in Europe, the Turks had to face the Ṣafawids, the strongest of whom, Shāh ʿAbbās I, pursued an expansionist policy in the Persian Gulf, where he subjected Baḥrayn in 1011/1602. In the Yaman the Zaydī Imams kept alive resistance to the Turks, and al-Muʾayyad Muḥammad succeeded in expelling them completely in 1045/1635.

The formation of the East India Company in 1009/1600 was the prelude to a burst of activity by English traders in the Red Sea and the Persian Gulf. Allying themselves with the Persians, the newcomers drove the Portuguese out of Hormuz in 1031/1622. Once the Portuguese monopoly had been broken, the English found themselves involved in competition with the Dutch, who secured commercial

preeminence during the second half of the 11th/17th century.

After the election of Nāṣir b. Murshid of the Yaʿrubids of al-Azd c. 1034/1624 as Ibāḍī Imām, this Imāmate remained in his family for more than a century. The Yaʿrubids in their early days drove the Portuguese out of Muscat and all other *pieds-à-terre*, and in their later days extended their authority overseas to Mombasa, Pemba, and Kilwa in East Africa.

Ḥusayn b. ʿAlī, the third and last Pasha of the House of Afrāsiyāb, under whom al-Baṣra in the early 11th/17th century had become virtually independent of Ottoman rule, incited Āl Ḥumayd of the tribe of Banū Khālid to overthrow the Ottoman governor of al-Ḥasā in 1074/1663-4. These Bedouin chiefs kept the oases and grazing grounds of Eastern Arabia subject to their will until the Wahhābīs advanced to the Persian Gulf in the early 13th century H.

In Ḥaḍramawt the Zaydīs of the Yaman encouraged the spread of their version of Islam at the expense of Shāfiʿism. About 1070/1660 Aḥmad b. al-Ḥasan, a nephew of the reigning Zaydī Imam, led into the main valley of Ḥaḍramawt a terrifying force known as the Night Flood (*sayl al-layl*) which undermined the position of the House of Kathīr, but Zaydism failed to secure a permanent triumph over Shāfiʿism in this region.

In the 12th/18th century a new era began in Arabia with the spread of the reforming movement inspired by Muḥammad b. ʿAbd al-Wahhāb of Nadjd. In a sense this also marked the beginning of the modern history of the whole Near East. Placing the unity of God above all else and demanding that the popular faith be cleansed of innovations, Ibn ʿAbd al-Wahhāb's call reverberated throughout the Islamic world from West Africa to the East Indies and moved the spirits of the modernists of the Salafiyya in Muslim countries closer than Arabia to the encroaching lands of the West. As an Arab movement opposed to the remote and vitiated rule of the Ottomans, Wahhābism [*q.v.*] influenced the nationalistic tendencies developing among the Arabs in the 19th and 20th centuries. Within Arabia political unity supplanted petty particularism, and orderly Islamic government functioned as it seldom had before.

Soon after first preaching in public in 1153/1741, Ibn ʿAbd al-Wahhāb concluded a basic alliance with Muḥammad b. Saʿūd, ruler of the insignificant town of al-Dirʿiyya. When Muḥammad died, his son ʿAbd al-ʿAzīz carried on, and by 1202/1788 all Nadjd had accepted the doctrines and sway of the reformers, who had withstood three expeditions directed against them by the Ismāʿīlī Makramids of Nadjrān, then a power in their corner of Arabia. [Cf. also SAʿŪDIDS.]

In 1156/1743 the Yaʿrubid line of Imams died out in ʿUmān while the Persians were trying to establish themselves there. Aḥmad b. Saʿīd of Āl Bū Saʿīd expelled the invaders from the Bāṭina coast and won election as Imam. After Aḥmad's death the electors chose his son, but he proved such an obscure figure that even the date of his death is unknown. Later rulers of Āl Bū Saʿīd [*q.v.*] made Muscat their capital and gave up the title of *imām*, calling themselves at first simply *sayyid* (though they claimed no descent from the Prophet) and afterwards *sulṭān*. The Persians also held suzerainty over Baḥrayn for about thirty years until the occupation of the islands by Āl Khalīfa in 1197/1783, since which date no part of Arabia has been subject to Persian dominion.

The rapidly expanding puritan state of Nadjd came into conflict with the *sharīf*s of Mecca in a war lasting fifteen years (1205-1220/1791-1806), with the Saʿūdīs occupying Mecca for the first time in 1218/1803. Shortly after the death of Ibn ʿAbd al-Wahhāb (1206/1792) Saʿūdī authority flowed eastwards to the Persian Gulf, along which it extended to ʿUmān. In the south the reformers reached the Yaman and Ḥaḍramawt, while in the north their forces threatened to overrun Syria and Iraq. The Ottoman government, unable itself to dam the flood, turned in desperation to the new Viceroy of Egypt, Muḥammad ʿAlī.

In the 13th/19th century foreign intervention in Arabia, both Muslim and Western, became more effective and extensive than ever before. Muḥammad ʿAlī annihilated the first Saʿūdī state when his army captured al-Dirʿiyya in 1233/1818. The British, at first welcoming and then fearing the advent of the Egyptians, carried out military actions against the Persian Gulf Arabs and in Inner ʿUmān and occupied Aden in 1254/1839, after which their influence gradually advanced along the southern and eastern coasts and penetrated into the hinterland.

Saʿīd b. Sulṭān, the most famous ruler of Āl Bū Saʿīd (regn. 1221-1273/1806-1856), wielded little or no authority in Inner ʿUmān, where he was hard pressed by the Saʿūdīs, to whom he often paid tribute. In the latter part of his reign he devoted most of his attention to his East African possessions, but five years after his death the British established Zanzibar as a Sultanate independent of Muscat. The only Ibāḍī Imam elected during the century, ʿAzzān b. Ḳays, failed to win recognition by the British and was overthrown in 1287/1871 after two years of rule. The Sultans who followed him depended upon British support for the maintenance of their position in Muscat in the face of the hostile Ibāḍī tribes of the interior.

During the century internecine warfare was common in Ḥaḍramawt, where much power rested in the hands of mercenaries imported from the mountains behind Aden, particularly of the tribe Yāfiʿ. In 1283/1867 the Ḳuʿayṭīs of this tribe occupied al-Shiḥr and fourteen years later acquired full possession of al-Mukallā.

Proving resilient in recovering from disastrous blows struck by Muḥammad ʿAlī's forces, the Saʿūdī state rebuilt its strength under Turkī b. ʿAbd Allāh, who fixed his capital at al-Riyāḍ, and later his son Fayṣal, though al-Ḥidjāz was not occupied again. Civil war between Fayṣal's sons after his death in 1282/1865 caused another decline in Saʿūdī fortunes, facilitating the reimposition of Ottoman sovereignty over part of Eastern Arabia and the rise of Āl Rashīd [*q.v.*] of Ḥāʾil to dominance in Nadjd, where al-Riyāḍ itself was made subject. The Ottomans also reestablished themselves in the highlands of the Yaman with headquarters at Ṣanʿāʾ, but they failed to crush the resistance of the Zaydī Imams. The opening of the Suez Canal in 1286/1869, making communications between Istanbul and Djidda easier and faster, helped the Turks to exercise more control in al-Ḥidjāz.

Āl Saʿūd, thrice crushed to earth, rose once more under the leadership of Faysal's grandson ʿAbd al-ʿAzīz, who took al-Riyāḍ from its Rashīdī governor in 1319/1902. ʿAbd al-ʿAzīz fought for twenty years before finally overcoming Āl Rashīd in the north. In 1331/1913 he drove the Turks out of al-Ḥasā and then lent the British sympathetic support during the First World War. Although the Ḥidjāz Railway from Damascus to Medina had been inaugurated in

1326/1908, the Turks had to yield Mecca when *sharīf* al-Ḥusayn b. ʿAlī, encouraged by the British, proclaimed the Arab Revolt in 1334/1916. The end of the war brought the end of Ottoman sovereignty in Arabia, the Zaydī Imam al-Mutawakkil Yaḥyā b. Muḥammad becoming fully independent in the Yaman.

In 1331/1913 a new Ibāḍī Imam was elected in Inner ʿUmān in opposition to the Sultan of Muscat. Two years later the British intervened to forestall the capture of Muscat by the Imam's army. Through British mediation a treaty was concluded at al-Sīb in 1339/1920 providing that the people of ʿUmān and the Sultan's government should abstain from interference in each other's internal affairs, but in 1373-4/1954-5 the Sultan's forces, trained and led by British officers, occupied points not held before, hemming the Imamate in on all sides.

Although homage was paid to *sharīf* al-Ḥusayn as King of the Arabs and later as Caliph of Islam, successor of the Ottomans, he was defeated by ʿAbd al-ʿAzīz Āl Suʿūd when war broke out between the two. Following the conquest of al-Ḥidjāz, ʿAbd al-ʿAzīz annexed the territories of the minor dynasties of Āl ʿĀʾiḍ and the Idrīsids in ʿAsīr and its Tihāma, received the title of King of Saudi Arabia in 1351/1932, and defeated Imam Yaḥyā of the Yaman in a brief war in 1353-4/1934, as a result of which Nadjrān was recognized as belonging to Saudi Arabia.

Killed in an abortive insurrection in 1367/1948, Imam Yaḥyā was succeeded by his son Aḥmad. Dying in 1373/1953, ʿAbd al-ʿAzīz was succeeded by his son Saʿūd. Thus passed from the scene two monarchs who did far more than simply bequeath their names to the realms they wrought and guided for half a century.

ARABA. I. — The Turkish word *araba* (*arba*, *abra*), meaning "wagon" or "cart", is as old as the 14th cent. A.D., but it does not look like a pure Turkish word; neither does it have an obvious Arabic or Persian etymology. In Osmanli the usual spelling was *ʿaraba* with an *ʿayn*; and although Sāmī Frasheri in his *Ḳāmūs-i-Turkī* (Istanbul 1318), in an effort to prove the purely Turkish nature of the word, described this spelling as a "shocking solecism", it is in fact the more correct. The etymology of the word was correctly explained in the (18th cent.) *Sanglakh* of Mīrzā Mahdī Khān (folio 36 v. of the Gibb Memorial Trust MS.) in the following words: "*arāba*, which rhymes with *kharāba*, is a corruption (*muḥarraf*) of *ʿarrāda*, also called *ʿadjala*, in Arabic". *ʿArrāda* means "a ballista, a military siege weapon". Admittedly a ballista is not a wagon, but the word came to mean "a gun, a mobile gun, a carriage carrying a gun", from which the transition to "wagon, cart" was an easy one. The transitional stage is seen in the Emperor Babur's *Memoirs* (Gibb Memorial

Series, i, fol. 336 v., l. 7), where the phrase *ḍarbu-djanlïk arabalarï* ("culverin carts" in Beveridge's translation) occurs. There is at present no direct evidence of the date of the transition from *ʿarrāda* to *araba*, but the guess may be hazarded that the word was adopted as a technical term in the Mongol army during the invasion of Persia early in the 13th cent. and that the change took place there. It had certainly taken place before the 14th cent., since there is no trace of *ʿarrāda* in Turkish at that date and *araba* occurs in both the Italian and the German sections of the Codex Cumanicus (early 14th cent., with a late 13th cent. substratum); on the other hand there is no trace of either word in such 11th cent. authorities as Kāshgharī's *Dīwān Lughāt al-Turk* or the *Kutadhghu Bilig*. It is interesting to note that *araba*, in one form or another, occurs in practically every modern Turkish dialect, except apparently Yakut and Čuvash, which corroborates the general belief that these dialects had broken away from "common Turkish" before the 13th cent., and establishes the less generally accepted fact that the other peripheral dialects in Siberia, Chinese Turkestan and Europe had not yet broken away by that date. (G. L. M. CLAUSON)

II. — It appears that the plains and steppes of Central Asia, inhabited by the Turco-Mongols, were the centre where, about the beginning of the Christian era, a type of vehicle with two wheels and with shafts (carts), earlier developed in China, was furnished with a yoke of modern type relying on traction by the shoulders (A. G. Haudricourt and M. Jean-Brunhes Delamarre, *L'homme et la charrue*, Paris 1955, 173 ff.). From there the use of this vehicle spread in both directions, towards China and towards Europe. These carts play an important part in the history of the peoples of the Steppe, particularly in the period of the Mongol empire.

The word *ʿaraba* appears in the 8th/14th century in the *Codex Comanicus*, where it is glossed by *currus*, and in Ibn Baṭṭūṭa. The latter describes, in the Crimea, a vehicle called by the inhabitants *ʿaraba*, which had four wheels, carried a *yurt*, was pulled by two or more horses, by oxen or by camels, and controlled by a driver mounted on one of the animals. He travelled from Sarā to Khʷārizm on an *ʿaraba* pulled by camels (ii, 361-2; 385; 389, 451 etc.; iii, 1 ff.). This is therefore a different vehicle, at least in the first case, from those of Central Asia, and is of a type (waggon) which probably had a pole (with old-fashioned yoke; traction by the neck), invented in the Danube region of Europe or in the Ukraine in pre-historic era, and perpetuated among the Tatars of the same region under the same name (P. S. Pallas, *Bemerkungen auf einer Reise in die südlichen Statthalterschaften des russischen Reichs* ..., Leipzig, 1799-1801, i, 144 s. and pl. 6). In the 14th century also, *ʿarabas* appeared in the Mamlūk Empire as a "Turkish custom" (al-Maḳrīzī, *Sulūk*, ed. M. M. Ziyāda, ii 1, Cairo 1941, 232, concerning an event in 721/1321). The word, in the form *ʾaraba* or *ʿaraba*, considered to be Ottoman by Ibn Iyās (*Die Chronik* ...., ed. P. Kahle, etc., v = *Bibl. Islamica*, v 5, Istanbul-Leipzig 1932, 131; trans. by W. H. Salmon, London 1921, 100 ff.), was introduced into Arabic and denoted wooden vehicles, on wheels, pulled by camels, horses, mules or oxen, used to transport people and principally, it seems, articles, and possessing an astonishing turn of speed (al-Nuwayrī, *Nihāyat al-Arab*, *apud* Habīb Zayyāt, article quoted below). The Mamlūk army sent against Selīm I included one hundred wooden *ʿarabas*, each carrying a culverin and pulled by two oxen (Ibn Iyās, *loc. cit*).

In Central Asia, where wheeled transport lost its importance after the 15th century as a result of the economic decline of the nomad world, the word *araba*, *arba* denotes chiefly a vehicle with two extremely large spoked wheels (diameter from 2 m. to 2 m. 30 cm.), with a reed floor which acts to some extent as a shock absorber; the vehicle is often covered with a sort of hood, decorated in varying degree, and is pulled by a horse between two shafts (sometimes by an ox or camel). Often one of the wheels is fixed to the axle while the other revolves on it, a factor which facilitates turning. It is considered to be extremely practical because its height from the ground enables it easily to cross fords, canals, and rivers in spate (the best description, with excellent photographs, is to be found in O. Olufsen, *The Emir of Bokhara and his Country*, Copenhagen 1911, 351-3; on the wood used in its construction, see *Aziatskaya Rossija*, St. Petersburg 1914, ii, 402, with a good photo of a Sart *ʿaraba*, i, 166; cf. A. Woeikof, *Le Turkestan russe*, Paris 1914, 139-40 and pl. IXa). When heavy loads are carried, the number of horses is increased (F. Grenard, *Géographie universelle*, viii, 326). There are two distinct types of *ʿaraba*: the *ʿaraba* of Khʷārizm and Kāshghar, in which the driver sits in the vehicle and steers with reins, and the common *ʿaraba* of Turkistān, called the Khoḳand, in which the driver sits on the horse's withers, his feet resting on the end of the shafts, and steers with a short bridle (A. D. Kalmykov, *Protokoly zasedanii i soobshčenija členov Turkestanskago kruzhka arkheologii*, xiii, 1908, Tashkent, 1909, 41). At Touva, the *ʿaraba* is described as having four wheels (A. A. Palʾmbakh, *Russko-tuvinskii slovar*, Moscow 1953, 25), and in Kirghiz the word is so common that a locomotive is termed "fire *ʿaraba*" (*ot araba*) (K. K. Yudahin, *Kırgız sözlügü*, tr. A. Taymaş, Ankara 1945, 39).

The word has infiltrated into the Slav and Balkan languages: Rumanian *(h)araba*; Russian *arba*; Ukrainian *harba*; Bulgarian, Serbian *araba* (K. Lokotsch, *Etymologisches Wörterbuch der europ. Wörter orient. Ursprungs*, Heidelberg 1927, no. 90). The word has also been borrowed by Iranian: Persian *ärabe*, Tādjīk *aroba*.

In Ottoman Turkish, the word, usually written *ʿaraba* in Arabic characters, is the generic term for all types of carriage. In Ottoman Istanbul, people always went about the town on horseback. This was also the normal mode of travel for the sultans when they left their residences. When they were indisposed, however, and on various other occasions they travelled by *ʿaraba*. Sulaymān the Magnificent, an invalid at the time of his departure for his last campaign, passed through Istanbul on horseback, but had to transfer to an *ʿaraba* in the plain of Dāʾūd Pāshā and never left this vehicle (with four wheels and a pole), the driver remaining seated on one of the two horses even during the sultan's conferences with his viziers (Hammer-Purgstall, iii, 439; illustration based on a MS. in the article in *Cumhuriyet* quoted in the bibl.), etc. etc. The *ʿarabas* of the sultans, princes and important personnages were highly decorated (*ibid.*, v, 413; cf. the vehicle of the *sulṭān wālide* depicted in F. Taeschner, *Alt-Stambuler Hof- und Volksleben, ein Türkisches Miniaturenalbum aus dem 17. Jhrdt.*, Hanover 1925, pl. 28). They were especially used in royal marriage processions. In 1048/1638, the guild of *ʿaraba*-makers at Istanbul numbered 40 members and possessed 15 shops (Ewliyā Čelebi, I, 628; tr. Hammer, I, 231).

In the 18th century, the drivers' corporation at Istanbul was organised on regular lines. The profusion of vehicles was at its height at the beginning of the 18th century during the "tulip epoch" (*lāle dewri*) (Aḥmed Refīḳ, *Lāle dewri*[2], Istanbul 1331, 47). Later the sumptuary laws restricted this luxury, and the vogue of the *ʿaraba* declined (Ahmed Refik, *Hicri on ikinci asırda Istanbul hayati*, Istanbul 1930, 175, no. 210).

Apart from these luxury vehicles, the rural type of *ʿaraba* drawn by oxen (*ot ʿarabasi*) circulated in the streets of the capital. It was a disgrace for a high personage to ride in one, and the Grand Vizier ʿAlī Pas̲h̲a (1102-3/1691-2) was surnamed *ʿArabad̲j̲ī* because he inflicted this ignominious treatment on his political enemies, a treatment to which he himself was in the end subjected (Hammer-Purgstall, vi, 566 ff.).

Up to the beginning of the 19th century, the right to use *ʿarabas* in Istanbul was restricted to very important functionaries (*S̲h̲eyk̲h̲ ül-Islām*, Grand Vizier; D̲j̲ewdet, *Taʾrīk̲h̲*, x, Istanbul 1309, 185 ff.). At this period the importation of European carriages was in its initial stages. The number of vehicles increased, and they were increasingly adapted to conform to European fashions. In 1852 Théophile Gautier wrote: "Paris and Vienna send the masterpieces of their coach-builders to Constantinople, from whose streets the *talikas* with their brightly-painted and gilded coachwork, the typical *arabas* (carriages with shafts used by ladies for their drives in company and properly called *ḳočū*) pulled by huge grey oxen, will soon completely disappear" (*Constantinople*, Paris 1853, 318). But in 1863 Emmanuel Scherer, living at Ḥamīdiyye, a suburb of Istanbul, built coupés, victorias, omnibuses and every kind of carriage to order (*Taṣwīr-i Efkār*, no. 193, 3 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1280/26 April 1864). Standing-places for *ʿarabas* were provided at many points. Their number, combined with the narrowness of the streets, caused congestion. The *Taṣwīr-i Efkār* of 19 November 1909 complains about this, and demands that the constitutional régime should no longer tolerate the inconvenience caused by the arrogance of the pashas and the beys.

ʿArabas made their appearance in Turkish literature with the exile to Kes̲h̲ān of ʿIzzet Molla in 1238/1823; his celebrated poem *Miḥnet-kes̲h̲ān* was composed in the *ʿaraba* which conveyed him there, the author conversing with his reflection in the mirrors which decorated its interior (Gibb, *Ottoman Poetry*, iv, 308, 314). In his novel *ʿAraba sewdāsi* (1895), Red̲j̲āʾīzāde Maḥmūd Ekrem describes a snob with a passionate love of carriages. To-day the rural four-wheeled vehicles are divided into *yaylı* "with (double) springs", and *yarım yaylı* "semi-sprung", that is to say with a single spring for each axle-tree (cf. *Inönü Ansiklopedisi*, iii, Ankara 1949, 194-6); they are framed by wooden uprights, covered by a semi-circular tilt; as they are not provided with seats, a mattress is used to sit on. Freight vehicles (*yük arabası*) are often unsprung (but some are "semi-sprung"; this category in particular is subject to decoration in various styles. The *ṭāliḳa* (sometimes written *taʿlīḳa* by false Arabic etymology, but in fact from the Slav word *taliga*, *telega*, etc., itself derived from the Mongol *tārgān*) provided greater amenities for the comfort of passengers. This carriage, widely used in the 19th century and still in use, especially on the Asiatic coast of the Bosphorus, is a sort of open fiacre; it has no door, but a footboard, surmounted by a small platform; the equally comfortable "long carriage" (*uzun ʿaraba*), a sort of benched carriage, is also open, with a door to the rear, and is equipped with curtains and two benches placed lengthwise inside.

Bibliography: See the article ʿAD̲J̲ALA above. In addition, *Arabalar* (in the supplement to the journal *Cumhuriyet*, 17 şubat 1955 = *Asırlar Boyunca Istanbul*, 97-100); M. Rodinson, *Araba*, in *JA* (printing). (M. RODINSON)

ʿARABA, (WĀDĪ ʿARABA), is the southern extension of the Jordan fault, which includes the deep depression of the Dead Sea. The term ʿAraba in the Old Testament refers also to the Jordan Valley. From approximately three to five miles in width, the Wādī ʿAraba extends for about 110 miles between the south end of the Dead Sea and the north end of the Gulf of ʿAḳaba, which is the east arm of the Red Sea. Along much of its length are numerous ancient copper mining and smelting sites. They were probably worked by the Ḳenites and were intensively exploited in King Solomon's times. There are also extensive haematite deposits in the Wādī ʿAraba.

The route of the Exodus led in part through the Wadī ʿAraba. The few springs in the Wadī ʿAraba attracted settlements as early as Middle Bronze I (21st-19th centuries B.C.), Iron II (10th-6th centuries B.C.) and particularly in Nabataean, Roman and Byzantine times. Near the centre of the north shore of the Gulf of ʿAḳaba, at the south end of the Wadī ʿAraba, is Tell el-K̲h̲eleyife, which has been identified with Solomon's port-city and industrial center of Ezion-geber: Elath. The Nabataean to Byzantine site of Ayla [*q.v.*] is situated near the east side of this shore, with the modern village of ʿAḳaba [*q.v.*] immediately east of it, and the modern Israeli town of Elath is located on the west side of the shore.

ARABESQUE. For a long time this term was used in literature devoted to art to designate several kinds of typical Islamic ornament: geometric, vegetal, calligraphic and even figural. In the first edition of the *EI*, E. Herzfeld still took into account this wider interpretation of the arabesque, which however was already antiquated since the time when A. Riegl had defined in his *Stilfragen* its distinctive character as being a particular, and exclusively Islamic, form of denaturalised vegetal ornament consisting of shoots or split or bifurcated leaves on inorganic tendrils. The leaves may be flat or curved, pointed or round or rolled, smooth or rough, feathered or pierced, but never isolated and always joined to the stalk for which it serves as an adjunct or a terminal. The stalk itself may be undulating, spiral or interlaced, going through the leaf or issuing again from it, but always intimately connected with it. To quote Herzfeld's definition: stalk and leaf are completely grown into each other, the leaves forming additions growing from the main stalk.

The principles which regulate the arabesque are reciprocal repetition, the formation of palmette or calice forms by pairs of split leaves, the insertion of geometric interlacings, medallions or cartouche compartments. In every instance, two aesthetic rules are scrupulously observed: the rhythmical alternation of movement always rendered with harmonious effect, and the desire to fill the entire surface with ornament. By its balanced and serene

Fig. 2. Mosque of Sīdī ʿUḳba in al-Ḳayrawān (after G. Marçais, *Coupole et Plafonds de la Grande Mosquée de Kaironan*, Paris 1925)

Fig. 3. From a Ḳurʾān, Granada 15th century (in the Islamische Abteilung, Berlin Museum)
Fig. 4. Wood-carving, Egypt 13th century (after Bourgoin, *Précis de l'Art arabe*, Paris 1892, iii, pl. 88)

convolution, the arabesque avoids the dynamic excitement, the restless whirling and violent twisting of the nordic ornament with which it otherwise has much in common. The effect of contrast is obtained by
Fig. 5. Fayence mosaic in the *türbe* of Fakhr al-Dīn ʿAlī, Ḳonya, 13th century (after F. Sarre, *Denkmäler persischer Baukunst*, Berlin 1910, fig. 185)

differences in density, the stalk sometimes nearly disappearing beneath an abundance of foliage, at other times vigorously dominating the pattern.

The denaturalised vegetal ornament conforming to the rules described above is termed "arabesque"
Fig. 6. Stucco tile, Persia 12th century (in Islamische Abteilung, Berlin)

with good reason, because its invention was certainly the outcome of a particular Arab attitude and parallel developments occur in Arabic poetry and music. The Arabic term *tawrīḳ* [*q.v.*] clearly implies that the description was restricted to foliage; it is preserved in *ataurique*, a term commonly used by Spanish authors to designate the genuine arabesque as understood by Riegl.

Fig. 7. Wood carving, Egypt 11th century (in Arab Museum, Cairo)

The arabesque may be combined with every kind of geometric decoration. In epigraphy, it may form a background to the calligraphy, or the letters
Fig. 8. H. Holbein the Younger, 1537 (after Jessen, *Der Ornamentstich*, Berlin 1920, fig. 72)

may terminate in arabesques, or letters and arabesque may be interwoven. Animals may be drawn in the form of arabesques, which may also be combined

with human figures; the animals and the human figures may then be rendered more, or less, recognizable. Sometimes, an Islamic "grotesque" decoration occurs in which masks and protomes of animals are combined with an arabesque scheme. It seems unnecessary to emphasise that the arabesque never has any symbolic significance but is merely one ornament from a large stock which includes other vegetal forms such as palmettes, rosettes and naturalistic flowers, and abstract forms such as cloud-bands. At certain periods, however, it played a predominant role.

The arabesque has its prototype in certain acanthus, vine leaf and cornucopia forms of late antiquity which tend to progress in undulations or with bifurcations. It is not yet completely developed in the Umayyad period, acquires its typical shape in the 9th century under the ʿAbbāsids and in Islamic Spain and appears fully developed in the 11th century under the Saldjūḳs, Fāṭimids and Moors. From then on it occurs throughout the Islamic world in countless variations, so that it is impossible to classify the various forms according to a chronological order or according to national or dynastic predilections. Persian, Turkish and Indian artists understood the language of the arabesque quite as well as Arabic-speaking artists, and through the centuries they competed one against the other in creating ever more varieties and combinations. Its use is not restricted to any one material, but is used in architectural decoration as well as carved or painted decoration, in pottery and glass and metalwork, and above all in book illumination.

In Hispano-Mauresque art of the 12th century and later the arabesque predominates almost to the exclusion of other ornamental forms, and from Islamic Spain it found its way in the late 15th century to the Christian countries. Known as ***moresque*** it became fashionable in the first half of the 16th century and was introduced into Italy by Francesco Pellegrino, into France by the unknown master G. J., and into Germany by Hans Holbein and Peter Flettner. Like them, other artists tried to imitate, with more or less understanding, the particular character of the arabesque, principally in their pattern-books for jewellers and armourers (e.g. the *Livre de moresques*, Paris 1546).

ʿARABFAḲIH, Shihāb al-Dīn Aḥmad b. ʿAbd al-Ḳādir, chronicler of 16th century Muslim Ethiopia. He personally took part in the war between the imām Aḥmad b. Ibrāhīm, lord of Harar, and the Negus Lebna Denghel; but, when he wrote his chronicle, he had already left Ethiopia for Djizān in Arabia. His (Harari) surname ʿArab-Faḳīh "the Arab doctor" can be explained either as the sobriquet of an Ethiopian who was particularly well-versed in the Arabic language and *fiḳh*, or as the local *laḳab* of an Arab who emigrated at first to Ethiopia (and who later returned to his native country). His chronicle bears the title (in the colophon) of *Tuḥfat al-Zamān*, but it is given in the MSS. as *Futūḥ al-Ḥabasha* ("Conquests of Ethiopia"). The narrative closes with the events of the year 1537; but the colophon describes the work as the "First Part". A second part, however, has never been found, and it is quite possible that the author was never able to complete his work as planned.

The *Futūḥ al-Ḥabasha*, of which we possess only a few MSS., all recent, is also quoted and to a large extent summarised in the (Arabic) Chronicle of Gujarat (*Ẓafar al-Wālih bi-Muẓaffar wa-Ālihi*) by al-Ulugh-Khānī, also an Arab writer, who emigrated to Muslim India during the second half of the 16th century.

Bibliography: René Basset, *Histoire de la Conquête de l'Abyssinie* (Arabic text and French translation) 2 vols., Paris 1897; E. Denison Ross, *An Arabic History of Gujarat*, 2 vols., London 1910-28.

ʿARĀBĪ PASHA [see ʿURĀBĪ PASHA].

ARABIAN NIGHTS [see ALF LAYLA WA-LAYLA].

ARABIC WRITING [see KHAṬṬ].

ʿARABISTĀN, 'the Arab country', a term much in use until recently to denote the Persian province of Khūzistān; the latter name was revived during the reign of Riḍā Shāh Pahlawī. Fur further particulars see KHŪZISTĀN. Following Persian usage, ʿArabistān denotes occasionally the Arabian peninsula. In Ottoman administrative documents from the 16th century it is occasionally applied to the Arabic-speaking provinces of the Empire, more especially to Syria. (ED.)

ʿARABIYYA. ARABIC LANGUAGE AND LITERATURE.

A. The Arabic Language (al-ʿArabiyya).

(i) Pre-classical Arabic.

(1) The position of Arabic among the Semitic languages; (2) Old Arabic ("Proto-Arabic"); (3) Early Arabic (3rd-6th centuries A.D.).

(ii) The Literary Language.

(1) Classical Arabic; (2) Early Middle Arabic; (3) Middle Arabic; (4) Modern Arabic.

(iii) The Vernaculars.

(1) General survey; (2) The Eastern dialects; (3) The Western Dialects.

B. Arabic Literature.

Al-ʿarabiyya, sc. *lugha*, also *lisān al-ʿarab*, is: (1) The Arabic language in all its forms. This use is pre-Islamic, as is shown by the appearance of *lāshōn ʿărābhī* in third-century Hebrew sources, *arabica lingua* in St. Jerome's *Praefatio in Danielem*; this probably is also the sense of *lisān ʿarabī* (*mubīn*) in Ḳurʾān, xvi, 103 (105); xxvi, 195; xlvi, 12 (11). (2) Technically, the Classical Arabic language (Cl. Ar.) of early poetry, Ḳurʾān, etc., and the Literary Arabic of Islamic literature. This may be distinguished from *ʿarabiyya* in the wider sense as *al-ʿarabiyya al-faṣīḥa* or *al-ʿarabiyya al-fuṣḥā*, from *faṣuḥa* "to be clear, pure" (cf. Assyr. *piṣū* "pure, bright", Aram. *paṣṣīḥ* "bright, radiant"); it means "clear", i.e. "(universally) intelligible" Arabic, not "pure Arabic", as is shown by *afṣaḥa* (*al-kalāma*) "to speak clearly" (*LA*, iii, 377), cf. also *aʿraba* "to speak clearly, intelligibly" and "to use correct Arabic".

Cl. Ar. is the chief literary dialect of Arabic, though not the only written one (cf. Old Arabic and some modern colloquials, notably Maltese). The other forms of Arabic known to us belong to three distinct stages: 1) Old Arabic, also called Proto-Arabic (though this term would better be reserved for the hypothetical common ancestor of all Arabic dialects), German *altnordarabisch.* 2) The Early Dialects (*lughāt*). 3) The Colloquials (medieval *lughat al-ʿāmma*, modern *al-lugha al-ʿāmmiyya* or *al-dāridja*, or *lahadjāt*).

(i) Pre-classical Arabic

(1) The Position of Arabic among the Semitic Languages

Arabic belongs to the Semitic language family, which is part of a wider Hamito-Semitic family

including, inter alia, also Ancient Egyptian. Within that family, it belongs to the South-Semitic or South-West-Semitic branch, which includes two further sub-groups: (a) South-Arabian (comprising ancient Sabaean, Minaean, Ḳatabanian, Ḥaḍramitic, etc. in Yaman and Southern Ḥaḍramawt and modern Mehri, Shkhauri etc. in Northern Ḥaḍramawt and the language of the island of Soḳoṭra); contrary to a widespread assumption, ancient South-Arabian is a language-group quite different from Arabic; (b) Ethiopian (comprising ancient Ethiopic or Geʿez, modern Tigre, Tigrinya, Amharic, Harari, Gurage, etc.); it is not yet quite clear whether Ethiopian originally derived from some form of South-Arabian (cf. E. Ullendorff, *Sem. Languages of Ethiopia*, 1955). The common traits of the S.-Sem. branch (partly obscured in the modern forms) are: almost complete preservation of the proto-Sem. sound system, except for *p* becoming *f* and *sh* coalescing with *s* (Arabic ش is proto-Sem. *ś*); plural of nouns formed by internal vowel changes; *fāʿala* and *istafʿala* patterns in the verb. S.-Ar. and Eth., however, have some features in common with Accadian which Arabic does not share (W. Leslau, in *JAOS*, 1944, 53-8).

On the other hand Arabic shares with North-West Semitic (Hebrew, Ugaritic, Aramaic) certain traits not found in S.-Ar. and Eth.: the pl. masc. suffix *-ī*ⁿ/ₘ*a*, the internal passive (W. Christian, in *WZKM*, 1927, 263; for S.-Ar. see M. Höfner, *Altsüdarab. Gramm.*, 82), and the *puʿayl* diminutive (F. Praetorius, in *ZDMG*, 1903, 524-9), see also I. al-Yasin, *Lexical Relation between Ugaritic and Arabic*, 1952. Some forms of Arabic had closer connection with N.W.-Sem.: Old Arabic had, like Hebrew, a definite article *ha-* with doubling of the following consonant (as in Αμμασιχος); names like Αβισιλα (3rd cent. B.C.) and Αβινουν (3rd cent. A.D.) show that *ab* had the construct *abī* in all cases, as in Hebrew. Among the Early Dialects, the Ṭayyiʾ rel. pron. *dhū* corresponds to poetical Hebrew *zū*, while the *dhī* of other Western dialects has its equivalent in older Aramaic; the W. dialects also sounded long *a* as *ō*, like Canaanite and W.-Syriac, and changed *iya* to *ā*, like Hebrew. The Eastern dialects, on the other hand, had *i*-prefixes with the *a*-imperfect, like Canaanite and W.-Syriac (cf. C. Rabin, in *Journal of Jewish Studies*, 1950, 22-6).

Arabic as a whole thus stands between S.-Sem. and N.W.-Sem., having contacts with both. There existed perhaps dialects intermediate between N.W.-Sem. and Arabic: this has been claimed for the local dialect which influenced the Hebrew book of Job (cf. B. Moritz, in *ZATW* 1926, 81-93; Foster, in *Am. Journ. of Sem. Lang.*, 1932, 21-45).

(2) Old Arabic ("Proto-Arabic")

The oldest record of Arabic are some 40 proper names in Assyrian accounts of fighting against the Aribi (Arubu, Urbi, cf. O'Callaghan, *Aram Naharaim*, 95) during the years 853-626 B.C., collected by T. Weiss-Rosmarin, in *JSOR*, 1932, 1-37, and F. Hommel, *Ethnologie u. Geogr. d. alten Orients*, 1926, 578-89. Almost all can be identified as Arabic: the view of Landsberger and Bauer (in *ZA*, 1927, 97-8) that the Aribi were Aramaeans has as little foundation as that of B. Moritz (*Or. Studies ... Paul Haupt*, 1926, 184-211) that the Arammu mentioned in texts of the same period were Arabs. The Gambulu were closely allied with the Aribi (Assurbanipal's Rassam Prism iii, 65); among their chiefs (Sargon's Annals 254-5) were Hamdanu, Zabidu, and Ḥazaʾilu, as well as some bearing Aramaic names. Most had Assyrian names, however, showing that some of these tribes had undergone the influence of the higher culture.

Assyrian influence also marks the earliest texts written by Arabs, in the 8th-7th cent. B.C., in a North-Arabian script close to the Dedanite, but in the Accadian language, except for the mixed form *yzbl*, which is Accadian *izbil* "he carried" with West-Semitic *y*-prefix. These include two short inscriptions found at Ur (Burrows, in *JRAS* 1927, 795-806) and some seal cylinders (W. F. Albright, in *Bull. Am. School f. Or. Res.*, no. 128, 39-45). Albright identified the group from which these texts originated as the Chaldaeans.

The Dedanite inscriptions at al-ʿUlā are probably only slightly later (H. Grimme, *Buch u. Schrift*, iv, 19-28; id., in *OLZ*, 1932, 753-8). At the same locality, but later, are the Liḥyānite inscriptions. The latest are about 150 A.D., and show Early Arabic features. About this time (see, however, Boneschi, in *RSO*, 1951, 1-15) "Masʿūd king of Liḥyān" put up inscriptions in archaic Nabataean Aramaic.

Bibliography: Texts: Jaussen & Savignac, *Mission archéol. en Arabie*, 1904-14, ii, 363-534. Grammar: Winnett, *Study of the Lihy. and Thamudic Inscr.*, 1937; id., in *Mus.*, 1938, 299-310; W. Caskel, *Liyhan u. Lihyanisch*, 1954.

Grave inscriptions in Lihyanic script exist in al-Ḥaṣā (G. Ryckmans, in *Mus.* 1937, 239; Cornwall, in *GJ*, 1946, 43-4; Winnett, *Bull. Am. School for Or. Res.*, no. 102, 4-6); S. Smith (in *BSOS* 1954, 442) thinks they emanate from the people of al-Ḥīra.

Thamūdic is represented by graffiti in northern Hidjāz, Sinai, Transjordan, southern Palestine (3,000 in A. v.d. Branden, *Inscriptions thamoudéennes*, 1924; 524 in Harding & Littmann, *Some Th. Inscr. from ... Jordan*, 1952), Asir (9,000 discovered by G. Ryckmans in 1952), and Egypt (Kensdale, in *Mus.*, 1952, 285-90). For grammar see v. d. Branden, op. cit.; E. Littmann, *Thamūd u. Ṣafā*, 1943; id., in *ZDMG* 1950, 168-80. The latest Thamūdic texts occur in conjunction with Early Ar.: one line on the stele of Ḥedjrā of 267 A.D. (in Nabataean script), some graffiti on the temple of Ramm in Sinai, ca. 300 A.D., next to the oldest graffiti in Arabic script. The language hardly changed during the 600 years of its use; this suggests some literary tradition.

Ṣafātene or Safaitic graffiti are found in the Ṣafā, Ḥarra, and Ledjā east of Damascus (for texts outside that area, see E. Littmann, in *Mélanges Dussaud*, 1939, 661-71; G. Ryckmans, *ib.*, 507-20). Around al-Namāra there are some graffiti intermediate between Ṣafātene and Thamūdic. Historical allusions provide dates as far as the 3rd cent. A.D. (G. Ryckmans, in *Comptes Rend. Ac. Inscr.* 1942, 127-36; M. Rodinson, in *Sumer*, 1946, 137-55), according to Winnett (in *JAOS*, 1953, 41) even until 614 A.D. One Thamūdic text may be Christian (E. Littmann, in *MW*, 1950, 16-8; against this v. d. Branden, in *Mus.*, 1950, 47-51).

Bibliography: Texts: 396 in M. de Vogüé, *Syrie Centrale: Inscr. Sémit.*, 1868-77; 904 in Dussaud & Macler, *Mission dans ... Syrie moyenne*, 1903; 136 in E. Littmann, *Public. Amer. Arch. Exp.* iv, *Semitic Inscriptions*, 1904; 390 in H. Grimme, *Texte u. Untersuchungen zur Saf.-arab. Religion*, 1929; 1302 in E. Littmann, *Safaitic Inscr. = Syria, Publ. of the Princeton Archeol. Exp.* iv, C, 1943, with best sketch of grammar, cf. also id., *Thamūd u. Ṣafā*; 5380 in *Corp. Inscr. Sem.*, v/1, 1950. See also R. Dussaud, *Arabes en Syrie avant*

l'Islam, 1907; id., *Pénétration des Arabes en Syrie avant l'Islam*, 1955.

For further bibliography, cf. G. Ryckmans, in *Revue Biblique*, 1932, 89-95; idem, in *Med. Kon. Vlaamsche Acad.*, 1941, 12-13; idem, in *Mus.*, 1948, 137-213.

Since graffiti mostly consist of names, our knowledge of all these idioms is scanty. It is probable that the method of elucidating them by reference to the Arabic lexicon makes them appear more similar to Cl. Ar. than they really were. The transliteration of the Aribi names shows that *ʿayn* was sounded weakly, *d̲j̲īm* was like Accadian *g*, *ḳāf* like *k*, *t̲h̲āʾ* like *t*, and *fāʾ* like *p*. Greek transliterations of names from the Safatene area show a vowel-system reminiscent of Hebrew or Colloquial Arabic, e.g. Οσεδου = *Usayd*. Spellings like *bny* = بنى and *ngy* = نجا suggest that all defective verbs ended in *-iya*, as in Hebrew.

While all these peoples wrote their own languages in varieties of a script closely related to Old S.-Arabian, the Nabataeans (100 B.C.-4th cent. A.D.) and the Palmyrenians (1st-3rd cent. A.D. used local varieties of Imperial Aramaic (the *lingua franca* of the Achaemenian empire) and Aramaic script, but their names show that the Nabataeans were wholly Arab, and at Palmyra there was an important Arab element (cf. Goldmann, *Palmyr. Personennamen*, 1937). In Palmyrenian, Arabic words are few (J. Cantineau, *Gr. du Palm. épigr.*, 1935, 150-1; even fewer in F. Rosenthal, *Sprache d. palmyr. Inschr.*, 1937, 94-6). Nabataean has many Arabisms; their number increases sharply in later texts (Cantineau, *op. cit.*, ii, 171-80; id., *AIEO*, 1934, 77-97; see also F. Rosenthal, *Aramaistische Forschung*, 1939, 89-92). This Arabic substrate—which was probably different in various regions—includes Thamudic *ʾṣdḳ* "legitimate heir"; in contrast to the epigraphic Old Arabic dialects it had the *al-* article (*S̲h̲yʿ ʾlḳwm* against Safat. *S̲h̲yʿ hḳwm*, name of a god; *ʾlhgrw* = *ḥgrā*); long *a* was sounded *ô* as in the Early Western Dialects.

A source of Old Arabic hardly tapped is the study of the personal names, thousands of which are known. These show a striking continuity from the Aribi to present-day bedouins and form a common stock in various Old Arabic idioms (instructive diagram in Harding & Littmann, *op. cit.*, 50). They preserve obsolete forms into Cl. Ar., as in *Udad* (al-Ṭabarī, iii, 2360) = Αυδαδου, Safat. *ʾdd* (i.e. *Ôdadu*), which in Cl. Ar. would be **Awadd*, and give valuable information on the vocabulary of Old Arabic.

Bibliography: G. Ryckmans, *Noms propres sud-sémitiques*, 1934; Wuthnow, *Semit. Menschennamen i. d. griech. Inschr. u. Papyri d. Vorderen Orients*, 1930; Gratzl, *Arab. Frauennamen*, 1906; Bräu, *Altnordar. kultische Personennamen*, *WZKM*, 1925, 31-59, 85-115.

Another valuable source for reconstructing the phonetic history of Arabic is the geographical names preserved in texts in Accadian (cf. under Aribi above), Hebrew (J. A. Montgomery, *Arabia and the Bible*, 1934; idem, in *Haverford Symposium on Archeol. and Bible*, 1938, 188-201), and Greek and Latin (A. Sprenger, *Alte Geogr. Arabiens*, 1875; Glaser, *Skizze* etc., 1889-90; A. Musil, *Topographical Itineraries*, ii, Appendix 3; cf. on all the material F. Hommel, *Ethnologie* etc., 538-634). O. Blau, *Altarab. Sprachstudien*, *ZDMG*, 1871, 525-92, is methodically unsatisfactory.

Possibly Old Arabic was the dialect of D̲j̲urhum, from which Abū ʿUbayd (d. 223/838) gives ca. 30 words in his monograph on dialect words in the Ḳurʾān (cf. Rabin, *Ancient West-Arabian*, 7; ed. by S. al-Munad̲j̲d̲j̲ad as a work of Ismaʿīl b. ʿAmr al-Muḳriʾ, Cairo 1946). The D̲j̲urhum, of course, belong to the *ʿArab al-ʿāriba* [*q.v.*] or *al-bāʾida*, from whom, according to the Arab historians, the *ʿArab al-mustaʿriba*, the tribes making up the bulk of the population in the 6th cent. A.D., took over the country and the language. More specifically we learn that the Ṭayyiʾ adopted the language of the Ṣuḥār (Yāḳūt, i, 127). We must ask (1) whether the *ʿĀriba* tribes were identical with the known speakers of Old Arabic, 2) what language the *mustaʿriba* tribes spoke before they adopted Arabic. To neither question have we any answer. The matter is further bound up with the cleavage between Eastern and Western Early dialects: on the whole the latter appear to have been somewhat closer to Old Arabic, but it is likely that the real successor of Old Arabic were the Ḳuḍāʿa dialects, spoken over the same area as the former, our knowledge of which is practically nil; on the other hand we possess practically no epigraphic material from those areas where either the Eastern or the Western dialects were spoken, and the speech of those regions during the Old Arabic period may have been quite different from the Old Ar. dialects perpetuated by inscriptions.

(3) Early Arabic (3rd-6th centuries A.D.)

Following precedents in the nomenclature of English and German, we may give this name to the period from the 3rd to the 6th cent. A.D., when over a large part of Arabia dialects quite distinct from Old Arabic, but approaching Cl. Ar. were spoken, and during which Cl. Ar. itself must have evolved.

Outside evidence for this period is scarce, but we possess a number of quotations in contemporary Jewish sources (partly coll. by A. Cohen, in *JQR*, 1912/13, 221-33), including even sentences, e.g. מבעד לצמתך = *mabʿad li-dammatika* "make room for thy throng" (*Midrash Rabba* on Canticles, iv, 1).

This is the period during which hundreds of Aramaic loan-words entered the language through Christian and Jewish contacts (S. Fraenkel, *Aram. Fremdwörter im Arab.*, 1886); their phonological study throws some light on the Arabic of the period. Thus there is an older layer where Aram. *s̲h̲* = س, and a younger one where it = ش, due no doubt to a sound-change in Arabic (D. H. Müller, *Acts VII Or. Congr.*, 1888, 229-48; Brockelmann, *Grundr. Vergl. Gr.*, i, 129-30). Other words penetrated during this period from South-Arabian (H. Grimme, in *ZA*, 1912, 158-68; cf. also F. Krenkow, in *WZKM*, 1931, 127-8) and Ethiopic (Nöldeke, *Neue Beiträge*, 31-66; but see Rabin, *Ancient West-Arabian*, 109, on *tābūt* and *mis̲h̲kāt*) — owing to our restricted knowledge of S.-Ar., the two sources cannot always be clearly distinguished. Some Persian loan-words, found in the Ḳurʾān and poetry, entered during this period, though the great influx of Persian words took place in the first Islamic centuries (A. Siddiqi, *Studien über d. pers. Fremdwörter*, 1919). Greek words entered mainly via Aramaic, Latin words via Greek and Aramaic: thus *ḳinṭār* < Syr. *ḳanṭīrā* < Lat. *centenarius*; *mandīl* < Syr. *mandīlā* < Gk. μανδήλη (with typical late Gk. soundchange) < Lat. *mantele*. Some military terms, e.g. *ṣirāṭ* < *strata* or *ḳaṣr* < *castra* (cf., however, Palest. Jew. Aram. *ḳaṣrā*) may have come directly from Latin.

Bibliography: Djawālīḳī, *Muʿarrab* (Sachau), 1867; Nöldeke, *Neue Beiträge*, 23-30; A. Jeffery, *Foreign Vocabulary of the Qur'ān*, 1938; A. Salonen, *Alte Substrat- und Kulturwörter im Arab.*, 1950 (= *St. Or. Soc. Or. Fennica*, xvii, 2).

It must be assumed that these words originally entered some specific dialect area in contact with the culture in question and then spread into Cl. Ar. We hear of foreign words used only at Medina (Rabin, *op. cit.*, 96; Fück, *Arabiya*, 10.

Arab philological literature preserves much material about the Early Dialects of Nadjd (Tamīm, Asad, Bakr, Ṭayyiʾ, Ḳays), Ḥidjāz and the highland area of the South-west (Hudhayl, Azd, Yaman), very little about those of other areas. The information seems to have been gathered during the 2nd-3rd Islamic centuries—when these dialects were probably rapidly disintegrating—partly from tribesmen in the *amṣār*; it is distorted by the scholastic approach and by the use made of it for elucidating difficulties in texts which had nothing to do with the dialects cited. Interest in the dialects for their own sake developed only late, and many data are preserved only in late works whose sources we cannot check.

A sharp cleavage clearly emerges between an Eastern group centred on the Persian Gulf, and a Western one, including besides the south-western and Ḥidjāz dialects also that of Ṭayyiʾ. Within the latter the characteristic features are most clearly marked in Yaman and Ṭayyiʾ, while Hudhayl and Ḥidjāz show evidence of Eastern influence. The differences are in rhythm (vowel-elisions and assimilations in the East), phonetics (e.g. West distinguished *ā*—sounded *ō*—and *ē*, while in the East both coalesced into one *ā*, sounded *ǣ*; *hamza* was strongly sounded in East and even became *ʿayn*, but was completely elided in the West,) grammar (e.g. Eastern *alladhī*: Western *dhū*, *dhī*; E. passive *ḳūla*: W. *ḳīla*; E. imper. *ruddu/i*: W. *urdud*), syntax (e.g. the "Ḥidjāzī *mā*"; E. *djāʾa(ti) 'r-ridjālu*: W. *djāʾū 'r-ridjālu*) and vocabulary.

It cannot be determined whether this cleavage had but recently developed or was old-inherited; the possibility must be taken into account that the inhabitants of Arabia had come from different parts of the Semitic world and that the common "Arabic" features were produced by mutual influence or by a common substrate after their settlement in Arabia.

The dialects of Yaman hold a special place: owing to the lexica of Ibn Durayd and Nashwān b. Saʿīd information is plentiful, and can be evaluated because the modern colloquial here continues the ancient dialect (cf. data in C. de Landberg, *Daṯina*, 1905-13; idem, *Glossaire Daṯinois*, 1920-47). The dialect of "Ḥimyar" as described by the philologists was an archaic Western Arabic idiom strongly influenced by South-Arabian. We possess some rhymes and sayings in it, as well as a number of "inscriptions" (*Musnads*) forged by Nashwān and al-Hamdānī in the belief that the South-Arabian kings of ancient Ḥimyar and Saba spoke the language of the 7th-cent. A.D. "Ḥimyar".

Bibliography: Older literature (to be used with caution): G. W. Freytag, *Einführung* etc., 1861, 65-125; P. Anastase Marie, in *Mash.*, vi, 529-36; Nāṣīf al-Yāzidjī, in *Acts VII Or. Congr.*, 1888, ii, 69-104; K. Vollers, *Volkssprache*, 1906. Modern research begins with Sarauw, *Die altarab. Dialektspaltung*, *ZA*, 1908, 31-49; H. Kofler, *Reste altarab. Dialekte*, *WZKM*, 1940, 61-130, 233-62; 1941, 52-88, 247-74; 1942, 15-30, 234-56; I. Anīs, *Al-Lahadjāt al-ʿArabiyya*, ca. 1946; E. Littmann, *B. Fac. Ar.*, 1948, 1-56; C. Rabin, *Ancient West-Arabian*, 1951; K. Petráček, *ArO*, 1954, 460-6.

To the Early Arabic period belong two inscriptions in Nabataean characters but practically pure Arabic language: One is at *Ḥigrā* (Arabic *al-Ḥidjr*, now *Madāʾin Ṣāliḥ*), northern Ḥidjāz, dated 267 A.D. (M. Lidzbarski, in *ZA*, 1909, 194-7; Jaussen & Savignac, in *Rev. Biblique*, 1908, 241-50; Chabot, in *Comptes Rend. Ac. Inscr.*, 1908 269-72; I. Cantineau, *Nabatéen*, ii, 38), with a line in Thamūdic; the other the inscription of Imraʾ al-Ḳays "king of all Arabs" at al-Namāra, dated 328 A.D. (R. Dussaud, in *Rév. Archéol.*, 1902, 409-21; id., *Mission ... Syrie Moyenne*, 314; M. Lidzbarski, *Ephemeris*, ii, 34; (*Rép. Epigr. Sém.*, no. 483; Cantineau, ii, 49). M. Hartmann (*OLZ* 1906, 573; *Arab. Frage* i, 1908, 501; now also Dussaud, *Pénétration* etc., 64 sqq.) thought Imraʾ al-Ḳays to have been a king of al-Ḥīra, but the language of the inscription is shown to be a Western dialect by the pronouns *ty* fem. sg. demonstr. and *dhū* relat.

(ii) The literary language

(1) Classical Arabic

The oldest texts in Arabic script are three graffiti on the wall of the temple of Ramm in Sinai, dating from ca. 300 A.D. (H. Grimme, *Rev. Bibl.*, 1935, 270; 1936, 90-5). Christian inscriptions, accompanied by Greek versions, are at Zabad, dated 512 A.D. (E. Sachau, in *Mitth. Pr. Ak. W.*, 1881, 169-90; id., in *ZDMG*, 1882, 345-52), and at Ḥarrān in the Ledjā dated 568 A.D. (Schröder, in *ZDMG*, 1884, 34; Dussaud, *Mission... Syrie Moyenne*, 324; Cantineau, *Nabatéen*, ii, 50; on both inscrr. E. Littmann, in *RSO* 1911/12, 193-8). The text of an inscription on the church of Hind at al-Ḥīra, about 560 A.D., is recorded by Muslim historians (al-Bakrī, 364; G. Rothstein, *Laḥmiden*, 1899, 24). An undated graffito is at Umm al-Djimāl (E. Littmann, in *ZS*, 1929, 197-204). All four inscriptions in N. Abbott, *Rise of the North-Arabian Script*, 1939, plate I.

The Christian character of the dated inscriptions suggests that the Arabic script was invented by Christian missionaries, as were so many Eastern alphabets. Abbott (op. cit. 5) localises its invention, with much probability, at Ḥīra or Anbār.

It is probable that at least partial Bible translations into Arabic existed before Islam. Stylistic reminiscences of the Old and New Testaments are found in the Ḳurʾān (W. Rudolph, *Abhängigkeit d. Ḳ. v. Judentum u. Christentum*, 1922; T. Andrae, *Ursprung d. Islams u. d. Christentum*, 1926; A. Mingana, *Bull. J. Rylands Library*, 1927, 77-89; Ahrens, in *ZDMG*, 1930, 15-68, 148-90). A. Baumstark claimed pre-Islamic date for the text of some Arabic Bible MSS (*Islamica*, 1931, 562-75; *BZ* 1929/30, 350-9; *OC*, 1934, 55-66; against this Graf, *Gesch. d. Chr.-Arab. Lit.*, i, 142-6). There also is a fragment of the Psalms in Arabic in Greek characters (Violet, in *OLZ*, 1901, 384-403). Examination of this and of two of Baumstark's texts (B. Levin, *Griech.-Arab. Evang. Uebers.*, 1938) shows a language slightly deviating from Cl. Ar. towards the colloquials. This is typical for Chr.-Arab. literature (Graf, *Sprachgebrauch d. älteren Chr.-Arab. Liter.*, 1905), for early papyri and for the language of scientific writing; it may be early colloquial influence, but also a Cl. Ar. not yet standardised by grammarians.

The Arabian Jews are less likely to have participated in the literary formation of Cl. Ar., since

at that period written translations of the O.T. were not being made by Jews (though a Jewish translation is mentioned Bu**kh**ārī iii, 198). The Jewish traditions in Umayya b. Abi 'l-Ṣalt (J. W. Hirschberg, *Jüd. u. Chr. Lehren im vor- u. frühislam. Arabien*, 1939) and in the Ḳur'ān (cf., e.g., Torrey, *Jewish Foundations of Islam*, 1933; A. Katsh, *Judaism in Islam*, 1954), show all signs of oral transmission. Jews, however, used Cl. Ar. before Islam, as e.g Samawʿal b. ʿĀdiyā' (cf. also I. Guidi, *Arabie antéisl.*, 1921, 145-6; Hirschberg, *Dīwān des as-S. b. 'Ā.*, 1931, Introd.), and are said to have taught the Muslims to write at Medina (Balā**dh**urī, *Futūḥ*, 473).

Wellhausen (*Reste arab. Heidentums*², 1927, 232) plausibly suggested that Cl. Ar. was developed by Christians at al-Ḥīra. Muslim tradition names among the first persons who wrote Arabic Zayd b. Ḥamād (ca. 500 A.D.) and his son, the poet ʿAdī, both Christians of Ḥīra (*Aghānī*³, ii, 100-2). ʿAdī's language was not considered fully *faṣīḥ*, which may be taken as meaning that Cl. Ar. was still in course of evolution. Al-Mufaḍḍal (*apud* al-Marzubānī, *Muwa**sh**shaḥ*, Cairo 1343, 73) says that ʿAdī drew on many tribal dialects, a procedure alleged by other scholars to account for the excellence of the Ḳuray**sh** dialect. This statement gains in substance if we recall that nowadays the poetry of settled Arabs is often couched in bedouin dialects, and that the oldest genuine bits of poetry, those connected with the War of Bāsūs, come from the Euphrates region. The court of Ḥīra remained a centre for bedouin poets: this helped in developing and unifying the language of poetry; its written use at Al-Ḥīra also furthered its standardisation.

As to the origins of that poetical language itself, earlier Muslim tradition sought it in various tribes, while later scholars, no doubt for theological reasons, identified it with the dialect of Ḳuray**sh**. This view was accepted by Grimme (*Mohammed*, 1904, 23), Ṭaha Ḥusayn (*Al-Adab al-Djāhilī*, 1927), and Dhorme (*Langues et écritures sémit.*, 1930, 53). Most western scholars agree in seeking its home among the bedouins of Nadjd—as did in practice the Muslim philologists of the 2nd-4th centuries who would only accept Nadjdī bedouins as authoritative informants. Some believe it to have been originally the language of one definite tribe, others a compromise between various dialects; others again think it acquired some purely artificial characteristics. An important feature is its archaic character, both in phonetics (it lacks the contractions typical for the Eastern Dialects) and in syntax, where it keeps alive constructions lost in early prose (Bloch, *Vers und Sprache im Altarab.*, 1946). It is beyond doubt, however, that in the late 6th cent. A.D. it was a purely literary dialect, distinct from all spoken idioms and super-tribal. It is today often referred to as the "poetical *koinē*". Its continuity was assured by the professional reciters, or *rāwīs*. The language was practically uniform throughout Arabia: even allegedly local features like the *dhū Ṭā'iyya* and *mā Ḥidjāziyya* occur in poetry from outside those regions. There may have been differences in the choice of words: Prof. F. Krenkow, in a letter to the present writer, suggested that northern poets used *asad* for "lion", southern ones *layth*. The main differences, as in the case of other standard languages, were no doubt in pronunciation; it is interesting that Abu 'l-Aswad al-Du'alī of ʿAbd al-Ḳays chose from thirty men an ʿAbḳasī as the one with the best pronunciation (al-Anbārī, *Nuzha*, 11) and the Ḥidjāzī ʿU**th**mān thought a Hu**dh**alī the best person to dictate to a scribe (*Gesch. d. Qor.*, iii, 2). It is, however, likely that some regionalisms and archaisms in the poems were eliminated by editors, for it is not rare to find that a verse is quoted by a grammarian for some peculiarity which is absent in the *dīwān* of the poet, the verse being slightly recast.

Our sources for the investigation of Cl. Ar. proper are: (1) pre-Islamic and early Islamic poetry; (2) the Ḳur'ān; (3) the official correspondence of Muḥammad and the first caliphs, as recorded by historians, and the early papyri; (4) the Ḥadī**th**; (5) the prose portions of the *Ayyām al-ʿArab.*

Utilisation of pre-Islamic poetry for the study of Arabic would, of course, be pointless if we were to reject all these poems as forged, as did A. Mingana (*Odes and Psalms of Solomon*, ii, 1920, 125) and D. S. Margoliouth (in *JRAS*, 1925, 415-49)—Ṭaha Ḥusayn, who in *al-Adab al-Djāhilī* rejects most of them, admits at least those by Ḥidjāzīs as genuine—, though even then the language of the earlier Islamic poets would still be evidence of a bedouin tradition distinct from the Ḳur'ān.

In assessing the language of the Ḳur'ān, we must distinguish between the consonantal skeleton, unaltered since the revision under ʿU**th**mān, and the vowels, inserted considerably later. The genuine Ḳur'ān spelling (*Gesch. d. Qor.*, iii, 19-57)—unfortunately "corrected" in the Flügel edition—differs in some respects from the current orthography; the difference was already felt in the time of Mālik b. Anas (al-Suyūṭī, *Itḳān*, *nawʿ*, 76/2). Some of these peculiarities are no doubt pure spelling archaisms (e.g. the omission of *alif* when = *ā*), others probably represent grammatical deviations (P. Schwarz, in *ZA*, 1915/6, 46-59), not always amenable to interpretation, e.g. تقتل for *tataḳattalu*, which some Readers pronounce *taḳḳattalu*, others *taḳattalu*. The diacritic points and vowels differ according to the *ḳirā'āt* [*q.v.*]. Readers differ not only in interpreting the polysemous consonantal outline, but also in grammar and pronunciation. Some readings agree, or are said by commentators to agree, with Early Dialects (cf. Ḥammūda, *al-Ḳirā'āt wa 'l-Lahadjāt*, 1948), others resemble the colloquials.

In 1906 K. Vollers (*Volkssprache u. Schriftsprache im alten Arabien*) asserted that these colloquial readings represented the townsman's speech of Muḥammad, while the *faṣāḥa* of the official, "canonical" reading systems was the result of a

revision in accordance with bedouin language. This theory found little acceptance; it has partly been revived by P. Kahle (in *Goldziher Memorial Volume*, i, 1948, 163-82, etc.) who sees in a saying of al-Farrāʾ promising reward to those reciting the Ḳ. with *iʿrāb* support for Vollers' view that the original Ḳurʾān had no *iʿrāb*. Fück (*Arabiya*, 2-3) cites verses which would have been ambiguous without *iʿrāb*; the dialect variants prove that Readers sometimes did not have command of Cl. Ar. or were slovenly. There is thus no proof for a revision by adding *iʿrāb*, though we know of another revision: the introduction of the *hamza* into a spelling based on its absence. We learn, however, that the *hamza* sign was added later than the vowels and at first written in a different colour (al-Dānī, *al-Nuḳaṭ* (Pretzl), (133-4) and there was opposition to it (*TA*, iii, 553), while we hear of no hesitation with regard to *iʿrāb*.

As far as we can see, the language of the Ḳurʾān stands somewhere between the poetical standard *koinē* and the Ḥidjāzī dialect. A slightly different mixture of the same elements marks the style of the Meccan poet ʿUmar b. Abī Rabīʿa (P. Schwarz, *Diwan des U. b. A.R.*, iv, 1909). Either their command of the ʿArabiyya was not perfect, or Muhammad used Meccan dialect, but was influenced by the Cl. Ar. used by the *kāhins* or soothsayers (Brockelmann, in *Handb. d. Orient.*, iii/2/3, 216)—not of the poets whom he detested—, or there existed already before Muḥammad a Meccan variety of Cl. Ar., used perhaps in writing (*e.g.*, commercial accounts and letters) and public speaking. The differences from the poetical language may be partly due to the needs of prose expression; here, too, some of the developments may well antedate Muḥammad.

Fragepartikeln im K.*, 1914; T. Sabbagh, *La métaphore dans le K.*, 1943; Zayat, *Les néologismes arabes au début de l'Islam*; R. Blachère, *Introduction au Coran*, 1947, 156-81; G. E. v. Grunebaum, in *WZKM*, 1937, 29-50.

The language of Ḥadīth, especially in dialogue, often deviates from Cl. Ar., mostly in the direction of colloquial Arabic, but sometimes in that of the Ḥidjāzī dialect. In traditions invented about 100 AH such features may show, at best, that at that time a more "popular" variety of Cl. Ar. existed (cf. our remarks above on Christian Arabic), but in fact the earliest recordings of traditions, in Ibn Wahb and Mālik, are much freer from these peculiarities: unless we assume that they corrected the style of the texts they noted down, we must admit the likelihood that these stylistic artifices were introduced later in order to create "atmosphere". The value of Ḥ. for linguistic research is thus a complex problem.

The language of the *Ayyām al-ʿArab*, which were handed down by philologists, shows only few aberrant features (W. Caskel, in *Islamica*, 1931, 43).

Cl. Ar. had an extremely rich vocabulary, due partly to the bedouin's power of observation and partly to poetic exuberance; some of the wealth may be due to dialect mixture. It was not rich in forms or constructions, but sufficiently flexible to survive the adaptation to the needs of a highly urbanised and articulate culture without a disruption of its structure.

Already in Pre-Islamic Arabia, the *koinē* had to be learnt, and the men who preserved and taught it, the *rāwīs*, were ready when the need arose for non-Arabs to acquire it under the Umayyads and Abbasids. Abu 'l-Aswad ad-Duʾalī and Khalīl b. Aḥmad belonged to that class, but they were soon joined by men who had inherited the habits of thinking taught in the Hellenistic Schools of Rhetoric, and who systematised the traditional lore of the *rāwīs* and applied the science thus created not only to poetry but also to the Ḳurʾān, harmonising wherever the texts "deviated" from the rules. Before turning into the Literary Arabic of the Islamic period, Cl. Ar. thus underwent a process of sifting and systematisation, with subsequent refurbishing of the old sources, poetry and Ḳurʾān, according to the new stricter standards.

Bibliography: (see J. Fück, *Arab. Studien, in Europa vom 12. bis . . . 19. Jahrh.*, *Beiträge zur Arabistik*, Leipzig 1944, 85-253).

The history of the European study of Arabic is at first one of increasingly effective utilisation of the Arab philologists' work. The first grammars, by Postel (1538) and Erpenius (1613), were based on late school manuals. The first systematically to use older and more advanced Arabic works was S. de Sacy (1810). C. P. Caspari (1848) was based on Zamakhsharī; in the 3rd edition of W. Wright's translation (1896 and reprints) this base is much enlarged. D. Vernier (1891-2) utilized Sībawayh; M. S. Howell (1880-1911) digested all Arab grammarians. In lexicography, the evolution goes from Raphelengius (1613) and Giggeius (1632, based on the *Ḳāmūs* of al-Fīrūzābādī), via Golius (1653, based on the *Ṣaḥāḥ* of al-Djawharī) to E. W. Lane's gigantic translation and rearrangement of the *TA* (1883-93; parts 6-8, ed. by S. Lane Poole, are less useful) and the practical dictionaries of Belot and Hava, based on *LA*.

In its second stage, European scholarship attempted to improve on the achievements of the Arabs by direct reference to texts and independent analysis. In grammar, the process begins with H. L. Fleischer's notes on S. de Sacy (*Kleinere Schriften* i-ii, 1886-8); further of special importance Th. Nöldeke, *Zur Gramm. d. klassischen Arabisch, SBAk. Wien*, 1897, ii; H. Reckendorf, *Syntaktische Verhältnisse d. Arab.*, 1895-8; id., *Arabische Syntax*, 1921; C. Brockelmann, *Grundr. d. vergl. Gramm.* ii, 1913; M. Gaudefroy-Demombynes and R. Blachère, *Gramm. de l'Arabe Classique*, 1937. In lexicography, the principal fault of the Arab works is that—apart from some specialist vocabularies and al-Fayyūmī's *Miṣbāḥ al-Munir*—they largely neglect the post-classical accretions to the language. Texts were utilised already by G. W. Freytag (1830-7) and A. de Biberstein-Kazimirski (1860). In spite of the *Supplément* of R. Dozy (1881), the *Additions* of E. Fagnan (1923), the glossaries added to the Leiden Ṭabarī edn. (1901) and vols. iv, v, viii of the *BGA*, etc., the vocabulary of medieval Arabic is still far from fully recorded. I. Krachkovsky, Neustadt and Shusser (1947), and H. Wehr (1952) deal with modern Arabic. Yet even for Cl. Ar. there is still much work to be done. Some gaps are closed by glossaries with editions of poems, e.g. that of A. Müller to Nöldeke's *Delectus* etc. (1890), A. A. Bevan to C. J. Lyall's edn. of the *Mufaḍḍaliyyāt* (ii, 1924), and those added by Ch. Lyall to *ʿAbīd and ʿĀmir b. Ṭufail* (1913) and F. Krenkow to *Ṭufail and Ṭirimmāḥ* (1927). The Hebrew University of

Jerusalem has prepared a card-index concordance to Pre-Islamic poetry. Publication is planned at Cairo of the lexicon of A. Fischer; the edition by J. Kraemer of Nöldeke's *Belegwörterbuch* (incorporating collections by Bevan and others) began in 1952. No scientific dictionary exists as yet for the Ḳur'ān, those by F. Dieterici (1881) and Penrice (1873) being unsatisfactory.

(C. RABIN)

(2) Early Middle Arabic

The Arabic literary language has been academically standardised since the 3rd/9th and 4th/10th centuries. Its grammar, syntax, vocabulary and literary usages were clearly defined after systematic and laborious research. Since that time and down to the present it has had a continuous and uninterrupted existence. Although every Arabic-speaking country has developed its own colloquial language for everyday life, they have all continued to use the standard literary language for purposes of writing.

The scholars of the early centuries of Islam—who were responsible for that remarkable achievement of linguistic standardisation—made their starting point the historically authentic text of the Ḳur'ān which described itself as a "Clear Arabic Book", and which was recorded, put together, and officially circulated in the 1st/7th century. Collections of the traditions, epistles and speeches of the Prophet; sayings and speeches of the Caliphs and the famous orators of the early Islamic period, and anthologies of Arabic poetry were also used as references and textual examples of the literary language. But the greatest efforts of the scholars in the 2nd/8th, 3rd/9th and 4th/10th centuries were directed towards the collecting, reviving and verifying what was still kept in the memories of rāwīs and bedouins of pre-Islamic literature. The poetry as well as proverbs and speeches of the last hundred and fifty years of the *dj̲āhiliyya* period were collected, studied and commented upon, and were used as explanations of Ḳur'ānic usages and as proofs of linguistic and literary correctness.

The assumption on which this work of reconstruction and standardisation was built was the identity of pre-Islamic and post-Islamic literary language. This assumption is borne out by many historical and literary data. The Ḳur'ān claimed to have spoken to the Arabs in their own tongue as was God's way with every Divine mission ("We have never sent any messenger except in his people's tongue"; xiv, 4). When the Arabs heard the Ḳur'ān they understood it, appreciated its literary excellences, and were greatly struck by its superior eloquence (Ibn His̲h̲ām, Cairo 1914, I, 201, 216-7).

Many references could be quoted to strengthen the claim to authenticity of what was retrieved of the *dj̲āhiliyya* poetry, and the identity of its construction, style and language with the text of the Ḳur'ān and the manner of composition of post-Islamic poetry. The second fact upon which historical references are agreed is that the *dj̲āhiliyya* poetry as it has been collected and handed down to us was recited and appreciated all over Arabia. The poetic language heard in the courts of the Lak̲h̲mids in al-Ḥīra and the G̲h̲assānids in Syria was the same as that heard and applauded in Nad̲j̲d and Hid̲j̲āz.

Claims for priority in evolving the literary language were advanced for different tribes. A statement often quoted in Islamic books advances the theory that pre-Islamic poetry began in Rabī'a with Muhalhil; then shifted to Ḳays where the two Nābig̲h̲as and Zuhayr flourished, and finally reached Tamīm where it remained till the days of Islam (*al-Muzhir*, II, 476, 477). Light on the subject may be sought in the many attempts at explaining the tradition "The Ḳur'ān was revealed in seven *aḥruf* (tongues or languages)". According to Ibn 'Abbās those were the seven dialects of Upper Hawāzin and Lower Tamīm. This may be taken to mean that these seven dialects, being the clearest and the most eloquent, contributed largely to the formation of the literary language (al-Suyūṭi, *al-Itḳān*[2], Cairo 1935, 47). Al-Ṭabari raises the question as to whether the Ḳur'ān was revealed in all or some only of the Arab dialects, and uses the tradition referred to above to argue that the Ḳur'ān was revealed in some only (seven) as the Arab dialects were too numerous to count. (*Tafsīr*, Cairo 1323, I, 15).

The second stage in the development and spread of literary Arabic begins with the rise of Islam. The new religion chose to make its challenge to the poetically-minded Arabs through a literary composition. The new Holy Book, by its excellence, proved to the Arabs as miraculous as the turning of a stick into a snake, or the healing of the sick was to former peoples. The whole revolution in the life, belief and practical philosophy of the Arabs was embodied in the chapters of this new Book. From the beginning of its revelation it was being learnt by heart by the Muslims and recorded in writing by the special scribes employed by the Prophet (al-D̲j̲ahshiyārī, *al-Wuzarā' wa 'l-Kuttāb*, ed. Saḳḳā and others, Cairo 1938).

The general practice was that a Muslim would learn a few verses (ten for example) and would not exceed them until he knew their meaning and followed their precepts in practical life (al-Ṭabarī, *D̲j̲āmi' al-Bayān*, I, 27, 28). It was not long before a group of companions (e.g. Ibn 'Abbās. Ibn Mas'ūd, 'Ikrima, and 'Alī) became specialists in the interpretation of the Ḳur'ānic text. Thus a new branch of literary and linguistic learning started which became later an important factor in the standardisation of literary Arabic. But there was another important aspect of Ḳur'ānic reading which had some bearing on the development of literary Arabic, namely the variants which caused concern to many a faithful believer.

The danger of this variation in the reading of the Ḳur'ānic text was removed only by the preparation of standard copies at the command of the third Caliph, 'Ut̲h̲mān (see ḲUR'ĀN).

Thus the first and foremost Islamic literary work in the Arabic language became the most authentic model for literary usage. Wherever the Islamic faith went in its rapid spread, it carried with it this religious and literary constitution. Every believer learnt part -or all, of it by heart, and was influenced in his literary activities by its diction and modes of expression.

Many of the variant readings of the Ḳur'ān, however, were preserved to us through the *Ḳirā'āt* literature and have proved valuable in the reconstruction of Arabic dialects.

The Ḳur'ān had, yet, another aspect in which it influenced the course of the literary language, namely its miraculous unsurpassable excellence. The literary Arab celebrities admitted impotence before its challenge, and Muslims down the ages looked up to it as their literary guide and linguistic authority. The study of the secrets of Ḳur'ānic eloquence (*i'dj̲āz*) has given Arabic literary criticism a special approach and a wealth of material (see M. Khala-

fallah, *Qur'ānic Studies as an Important Factor in the Development of Arabic Literary Criticism, Faculty of Arts' Bulletin*, Alexandria 1953).

During the Prophet's life-time and some time after, poetical activities among the Arabs gave way to the propagation of the new faith by word and by sword. Some devout Muslims found better occupation in learning the Ḳur'ān and pondering on the beauty of its style, others joined the invading Muslim armies in Syria, ʿIrāḳ and Persia. The art of public speaking, for a period, took the place of the art of poetry. The literary language now was turning more and more into a language of religious guidance, moral uplifting and legislation for the new order. New shades of meaning and literary usages began to develop within the framework of the pre-Islamic literary language. "The Arabs in their *d̲j̲āhiliyya* days", says Ibn Fāris, "had inherited from their ancestors a heritage of dialects, literature, rituals and sacrificial practices. But when Islam came conditions changed, religious beliefs were discarded, practices abolished, some linguistic terms were shifted from one usage to another, because of matters added, commandments imposed, and rules established". (Examples of these changes are given by as-Suyūṭi, Ibn K̲h̲ālawayh, al-T̲h̲aʿālibī and Ibn Durayd, see, *al-Muzhir*, i, 294, 295, 296, 298, 301, 302).

Thus the second stage in the development of the Arabic literary language has brought in new important factors, religious and social, and introduced many necessary linguistic changes. But that was not all. The scene was considerably widening and shifting. The Arabs were no longer contained in their Peninsula, but were spreading out with the rapidly sweeping conquests of Islam. Wherever they went they carried with them not only their new Arabic Holy Book with its polished and appealing language, but they carried also their tribal linguistic characteristics, and their traditionally inherited literature (poetry, proverbs, narratives, and oratorial speeches) which they stored in their memories.

These conquests were an important factor in the process of Arab linguistic unification. Several of the big invading armies were composed of mixtures of tribes, many of whom were accompanied by their women and children. Thus a good deal of intermixing and intermarriage between the tribes took place in the conquered cities. Newly established settlements—such as *al-Kūfa*—had in them elements from North as well as from South-Arabia, and from Ḥid̲j̲āz as well as from Nad̲j̲d.

The Arabs were now passing from the tribal stage to the stage of cities and countries. Their social units were no longer tribal, but urban, as in Baṣra or Kūfa, and regional, as in Syria or Egypt. This new regrouping of the Arabs must have reduced considerably the differences of the dialects, and reinforced the unifying processes already begun in pre-Islamic times.

With those conquests, Arabic was now spreading to new non-Arab territories. Its fortunes in the different units of the vast Islamic empire were varied. In some countries like Syria and Egypt it became—and is still at the present time—the national language of the country. In others like Persia it remained for a few centuries the language of culture, but with time it gave way to the native Persian language. The story of this spread in its early stages, and the emergence of the colloquial languages in the Arabic-speaking countries is a long and interesting one. (See, S. Fayṣal, *al-Mud̲j̲tamaʿāt al-Islamiyya*, Cairo 1952, Vol. II). The spread and establishment of Arabic in some countries as a national language was aided by various factors. In Syria Arab elements had already settled, Arabic poetry had been welcomed at the G̲h̲assānids' courts, and many of the inhabitants spoke Aramaic, a kindred language. In ʿIrāḳ, too, Arab tribes had already settled from pre-Islamic times, and an Arab state had established itself in al-Ḥīra. In those regions of ʿIrāḳ where Persian was prevalent, the long-established neighbourhood of Arabs and Persians paved the way for the conquering language. Some Persian kings—such as Bahrām Gūr—are said to have been brought up in the Arabic courts and to have composed Arabic poetry. H. C. Woolner (in *Language in History and Politics*) states that Persian was influenced in the seventh century A.D. by a strong Aramaic current which prepared the way for the spread of Arabic. Another form of that influence came through Syriac which occupied an important position as a cultural medium in Persia.

In Egypt, Greek had been, since Ptolemaic times, the language of culture, politics, administration, and later of the Church, while Coptic was the vehicle for daily intercourse among the population. Yet the adoption of classical Arabic as a state language, and of colloquial Arabic as a conversational medium among the Egyptians was accomplished within a century after the conquest. Authorities state that Coptic disappeared almost completely after that period from most parts of Egypt, and could only be found among the scholars who specialised in studying it (A. Amīn, *Fad̲j̲r al-Islām*[3], 259). When Islam entered North Africa it found three languages there; Latin, which was the language of administration and culture; a mixed language composed of Greek, Latin and semitic elements which was bequeathed by Carthage; and Berber in the interior of the country. Arabic became the dominant language in the cities through the spread of the new religion and the arrival of wave after wave of Arab settlers. The Berber language, however resisted the spread of Arabic in its strongholds in the interior.

These conquests, then acted as carriers of Arabic both as a literary and as a colloquial language in many different lands. As many Arabs migrated to these new territories, taking their language with them, so did great numbers of non-Arabs migrate in the opposite direction; many as slaves and clients (*mawālī*), and they settled in the big Arab centres of Mecca, Medina, al-Baṣra and al-Kūfa. They naturally adopted Arabic as their medium of intercourse, and some of them mastered literary Arabic and became famous writers and poets. Some of the Persian *mawālī* found in the two capitals of Ḥid̲j̲āz a fertile soil for their music and singing. Thus a movement of interaction between Arabs and non-Arabs was taking place all through the Islamic empire during the 1st/7th century. This movement produced a great civilisation which became known as Arab-Islamic civilisation. The contribution of the conquered races to this civilisation consisted in culture, learning, and administration, while the purely Arabian contribution lay in the linguistic and the religious fields. The ancient Aramaic and Iranian cultures, under the aegis of the Caliphate, were woven into a new pattern and expressed through the medium of the Arabic tongue. Arabic was thus invigorated by new elements of ideas and images, stimulated with fresh conceptions of excellence and eloquence, and enriched even with a new vocabulary. Persian, in particular, was responsible for the introduction

of new terms in the fields of luxury, ornaments, handicrafts, fine arts, government administration, and public registers (A. Amin, *Fadjr al-Islam*, Section iii). (M. Khalafallah)

(3) Middle Arabic

The creation of an Arabic Empire stretching at the height of its power from the Pyrenees and the Atlantic to the shores of the Sīr Daryā and the Indus had far-reaching consequences on the development of the Arabic language. Arabic, hitherto spoken in Arabia proper and its immediate neighbourhood, went with the Muslim armies to the farthest ends of the far-flung empire. Life in camp and on expedition brought men of different tribes into close contact and the vicinity of the tribal quarters (*khiṭaṭ*) in the great cities soon led to a levelling of their dialects. In addition to these dialects, some forms of interdialectal speech were in existence, notably the language of oratory used by the tribal spokesman (*khaṭīb*) in his harangues, and the poetical language, both of which had been cultivated in pre-Islamic days and were now enriched by the language of the Ḳurʾān. The poetical language was characterised by certain peculiarities of metre and rhyme, vocabulary and phraseology, figures of speech and imagery inherited from the ancient bards, but otherwise it was presumably still close to the language of everyday conversation; verses were still improvised on the spur of the moment, nor did their understanding require any sort of education on the part of their hearers.

It is only in the latter half of the first century that we find new linguistic traits in the love-poetry of the Ḥidjāz. These poets, whose surroundings gave them leisure to reflect upon their emotional experiences, felt the conventions of bedouin poetry inadequate for their purposes and began to use the conversational style of the new aristocracy, which was modified by the Ḥidjāzī dialect as well as by the exigencies of settled city-life (see Paul. Schwarz, *Der Diwan des ʿUmar b. abī Rabīʿa*, iv, 1909, 94-172).

In the new provinces—except perhaps Syria—the Arabs were considerably outnumbered by the indigenous population who continued to use their mother-tongues, but had in their dealings with government to adapt themselves to the idiom of the conquerors, though at the beginning they used some sort of makeshift language. Then there were those non-Muslims who had been taken prisoner and were brought into the houses and harems of their Arab masters. They quickly adopted Arabic and as a rule embraced Islam. Many of them or their descendants were freed from bondage and played as freedmen (*mawālī*) an important rôle in the economic life of the empire, especially in the cities where they formed the bulk of the population. They spoke Arabic with many alterations, due partly to the influence of the language of their forebears, partly to the dialect of their Arab patrons and neighbours, and last but not least to the rapid changes in their economic and social environment. These widely differing idioms were the forerunners of the Middle-Arabic local dialects, which were spoken by the lower classes in the towns of the various provinces. They were characterised by a simplified pronunciation; the glottal stop was dropped; *ḳ*, voiced in bedouin speech became voiceless; emphatic and non-emphatic sounds and also *ḍād* and *ẓāʾ* were confused; in the areas where Aramaic was formerly dominant, the interdental spirants were replaced by the corresponding occlusives. But the most telling feature of Middle Arabic was the weakening and loss of the short final vowels and along with it the abandonment of the desinential inflexion (*iʿrāb*), which had momentous consequences for the structure of the language (J. Cantineau, *Bulletin de la société linguistique*, 1952, 112). The old system of inflexion fell into disuse; cases, status, moods were no longer distinguished. Their functions had to be taken over by word order, periphrastic expressions, and other means common in languages of an analytical type. Middle-Arabic was also adopted by the Christians of Palestine, Syria, and Mesopotamia and by the oriental Jews, and from the 2nd/8th century onwards used by them for literary purposes, whilst with the Arab Muslims the classical language remained the proper medium for literary activities. In this appreciation of the language of the Ḳurʾān and of the ancient Arabic poetry they were followed by the *mawālī*, who from the first tried to conform to the higher standards of Arabic and were already in the 1st/7th century contributing to Arabic poetry (e.g. Ziyād al-Aʿdjam). By the end of the 1st/7th century the *mawālī* felt the necessity for some sort of training in the classical language, thus giving an impetus to the beginnings of grammatical studies, whilst the Arabs grew apprehensive of unidiomatic speech and realized the necessity for preserving the purity of their language.

Once taken up by the *mawālī*, the classical language survived the downfall of the Umayyad dynasty and continued to be the medium of Islamic culture throughout the Muslim world, not only in those provinces where Arabic was dominant or gaining ground but even in countries where it was never to gain a firm footing. In the schools of Baṣra and Kūfa the rules of the "*ʿarabiyya*" were standardised according to the idioms of those bedouins who were credited with the purest language. This standard language was used at court and in good society, and to master it was one of the first accomplishments of a man of letters or learning. Its application to literary purposes shows a great variety of types. All narratives referring to Arabic and bedouin life (e.g. the *amthāl al-ʿArab*, *ayyām al-ʿArab*, but also the *maghāzī* and the *sīra*) preserved to some extent the uncouth originality and artless naïveté of the old language. In the literature of *ḥadīth* (traditions) and *fiḳh* (jurisprudence) the social and economic changes left their marks on the vocabulary, phraseology, and even morphology. Of a quite different type is the language of the secular prose-writers of the early ʿAbbāsid period (e.g. Ibn al-Muḳaffaʿ). Here the changes in Muslim society brought about by the ascendancy of the non-Arab races, the pre-Islamic heritage and the revival of Oriental Hellenism, took full effect. It is polished, lucid, flexible and well adapted to the expression of thought in a precise manner; its vocabulary, though lacking the exuberant abundance of the bedouin language (as witnessed e.g. by the *urdjūza*-poetry), is rich and expressive, and its grammatical structure free from the cumbersome overgrowth of nominal and verbal forms so conspicuous in the bedouin language. The same simplicity and smoothness is found also in the verses of the so-called "modern" (*muḥdath*) poets of the same period (e.g. Abu 'l-ʿAtāhiya), although in poetry as a rule the imitation of the old patterns has always been closest.

On the language of every-day life and the dialects spoken by the different strata of Muslim society during this period very little is known. How complicated the linguistic situation had grown by the

end of the 2nd/8th century we can gather from occasional remarks of al-Djāḥiẓ (165-255) not only about the correct language of true bedouins, its gradual corruption through the vicinity of towns and intercourse with the peasantry, about the patois of the lower orders, the cant of pedlars, the argot of beggars, the technical terms of trades and professions, but also about mispronunciation and faulty speech on the one hand and euphemism and mannerism on the other.

These divergent tendencies soon affected the written language. The translators and scientists who made the legacy of Greek philosophy, medicine, mathematics, and other sciences accessible to the Muslim world, enriched the vocabulary considerably by innumerable technical terms. But they were often Christians (e.g. Ḥunayn b. Isḥāḳ) or Jews, and had neither a good grounding in Arabic grammar nor any aptitude for literary perfection and accomplished style. Their translations, therefore, show as a rule some Middle Arabic features (see G. Bergsträsser, *Ḥunain b. Isḥāḳ und seine Schule*, Leiden 1913, 28-53).

The decline of the ʿAbbāsid power and the ascendancy of the Turkish soldiery in the course of the 3rd/9th century led to a general lowering of the standards of education; even the court-language no longer preserved its former purity but became marred by vulgarisms. About the year 300/912 the classical language ceased to be used in the conversation of good society, in the law-courts and colleges, and froze into a literary idiom; to stick to the rules of the *iʿrāb* was considered a sign of pedantry and affectation. At the same time the former enthusiasm for the bedouins began to wane, and their language—the dialects of which had in the meantime undergone many changes—was no longer looked upon as the best representative of Arabic speech. The classical language was spoken only on solemn occasions, otherwise its use was restricted to the domain of literature. Here its application was mainly a problem of style. Henceforward the term *ʿarabiyya* meant an unalterable system of words, phrases, grammatical forms and syntactical structures, which was strictly regulated by the rules of grammarians and lexicographers and could not—at least theoretically—be improved upon. In applying this artistic language to his theme—which in its turn he had to select from a limited number of topics (*maʿānī*)—an author had a choice between different styles, differing in the employment of rhyme, rhythm, figures of speech and other embellishments. But once he had chosen his theme and its style he was committed to the traditional patterns (see G. E. von Grunebaum, *The Aesthetic Foundation of Arabic Literature*, *Comparative Literature*, 1952, 323-40). It is for this reason that a writer had not only to possess a thorough knowledge of the intricacies of Arabic grammar and lexicography, but had also to study and learn by heart the best pieces of classical prose and poetry (though the question as to what authors were of classical rank was often hotly debated). In these circumstances the *ʿarabiyya* was bound to become a learned medium and its study was cultivated by Arabs and non-Arabs alike. The non-Arab races contributed even some of the best prose-writers (e.g. al-Khʷārazmī, and Badīʿ al-Zamān) and philologists (e.g. Abū Hilāl al-ʿAskarī). High literature was the privilege of an élite and required sometimes a commentary either by the author (e.g. Abu 'l-ʿAlāʾ al-Maʿarrī) or by his admirers (e.g. al-Mutanabbī) in order that it might be understood by the hearers. Occasionally vulgarisms were used for artistic purposes (in *muwashshaḥ*, *zadjal*) and even the argot of the beggars and swindlers was made use of by Abū Dulaf in his *al-Ḳaṣīda al-Sāsāniyya*; but on the whole the vocabulary of high literature was choice and exquisite.

These high standards, however, were required in high poetry and ornate prose only. In the other branches of literature there is a great variety in language and style. Often it is only the preface which is written in rhymed prose and in choice wording, whilst the bulk of the book betrays the Middle-Arabic character of the author's speech. In books written for practical purposes the technical terms of the subject had to be used. If the author had no proper knowledge of the grammar, faulty speech was unavoidable; the worst example is perhaps the *Kitāb ʿAdjāʾib al-Hind* by Buzurg b. Shahriyār al-Rāmhurmuzī written after 342/953 (*Le Livre des Merveilles de l'Inde*, éd. par P. A. van der Lith et L. M. Devic, Leiden 1883-6). It is full of vulgarisms (see de Goeje's remarks in van der Lith's edition, 205), some of which are common in Middle-Arabic whilst others are probably due to the author's non-Arab mother-tongue and his profession.

These disrupting tendencies were fostered by the disintegration of the ʿAbbāsid empire. Already in 375/985 al-Maḳdisī could in his description of the Muslim world attempt to characterise each country by the peculiarities of its language. It appears from his account that in his days in all Arabic-speaking countries the conversational language of the upper classes had suffered considerably under the inroads of local dialects and that the most correct Arabic was heard in the Eastern (Iranian) countries where much attention was paid to the study of grammar.

Already in the days of al-Maḳdisī the increasing independence of the Sāmānid dynasty led to the revival of New-Persian literature, which had momentous consequences on the position of Arabic as the Islamic language in the Eastern regions. Outside the Arabic-speaking world, Arabic was in the dominions of the Saldjūḳs gradually superseded by New-Persian not only as the language of court, society, diplomacy and administration, but also in poetry, belles-lettres and other branches of secular —and later on even religious—literature. At the same time the rise of independent dynasties in the Arabic-speaking countries gave a new impetus to the development of the dialects spoken in their dominions and increased the already existing tension between literary language and colloquial. Thus the picture of the Arabic language as reflected in the literature of the Saldjūḳ period (5th/11th-7th/13th centuries) is of a bewildering complexity. There are masterpieces of ornate prose, written in a faultless style like the Maḳāmāt of al-Ḥarīrī (d. 516/1122), which could be appreciated only by a small group of connoisseurs. In high poetry the imitation of the time-honoured patterns continued, but some poets succeeded in modernising the poetical diction by adapting it to the conversational style of their contemporaries, e.g. Bahāʾ al-Dīn Zuhayr (d. 656/1253). Others even made use of the local dialects, e.g. Ibn Ḳuzmān (d. 555/1160) and Ibn Dāniyāl (c. 693/1294). Usāma b. Munḳidh (d. 584/1188) composed verses in the conventional fashion, but his famous memoirs are written in an unpretentious style which savours of the dialect of Syria. Some grammarians grew lenient in admitting expressions which were formerly excluded from correct speech,

whilst others, like Ibn Yaʿīsh (d. 643/1245) (see G. Jahn in the preface to his edition, i, 10-12) wrote in a slovenly style, without regard for the rules of grammar they were expounding. In ordinary prose, offences against grammar are rather the rule than the exception, as witnessed by the works of Yāḳūt (d. 626/1229) (see Wüstenfeld in vol. v, 58-65 of his edition) and al-Ḳazwīnī (d. 682/1283) (see Wüstenfeld in vol. ii, ix of his edition). Works written outside the Arabic-speaking countries sometimes betray the fact that their authors had not a full command over the language; Persian (and later Turkish) writers e.g. Ibn al-Mudjāwir (d. 690/1291) (see Löfgren, *Arab. Texte zur Kenntnis der Stadt Aden im Mittelalter*, ii/2, 21) were apt to disregard the differences of gender, the concord of gender and number, and the rules concerning the article. There are further works of a popular character, such as the epic romances (e.g. the *Sīrat ʿAntar, Sīrat Banī Hilāl*), the *Maghāzī*-legends (e.g. by Abu 'l-Ḥasan al-Bakrī, c. 693/1294) and the mystic poems of the religious orders; they were destined for the edification and entertainment of the middle and lower classes and were therefore written in a rather vulgar language and style. Similar vulgarisms are found in the writings of the Druzes (see de Sacy, *Chrestomathie Arabe* ii, 236, n. 9, etc.) and the religious poetry of the Yazīdīs (see R. Frank, *Scheich ʿAdi*, 107 ff.). Naturally the writers of other denominations, as e.g. the Christians, the Jews (see J. Friedlaender, *Der Sprachgebrauch der Maimonides*, i, Frankfurt a.M. 1902) and the Samaritans (see Abu 'l-Fatḥ, *Annales Samaritani*, ed. E. Vilmar 1865) had no part in the literary traditions of the Arabs, though men like Maimonides were otherwise deeply imbued with Islamic culture. But many more inquiries into the language of individual authors will have to be made before the development of literary Arabic in these centuries can be elucidated. For these studies a perusal of autographs or at least of contemporary manuscripts will be necessary, for our editions are as likely as not "corrected" by oriental printers (see August Müller in the preface to his Ibn Abī Uṣaybiʿa, Königsberg 1884, VII-VIII) or European editors (see S. L. Skoss in the preface to his edition of al-Fāsī, *Djāmiʿ al-Alfāẓ*, i, 1936, CXL-CXLIII).
